# Intermediate Release Notes

### Omni Switch 6624/6648/7700/7800/8800

## Release 5.1.6.578.R02

The following is a list of issues that have been identified and corrected in AOS software release. This document is intended to be used as a preupgrade guide and does not replace the Release Notes which are created for every GA release of software.

**Important Notice:** For a copy of software release not posted on the Web or if you have any question or concern please contact Alcatel's Technical Support Department.

Problems Fixed Between Builds 199 and 225 Problems Fixed Between Builds 226 and 243 Problems Fixed Between Builds 244 and 292 Problems Fixed Between Builds 293 and 338 Problems Fixed Between Builds 339 and 346 Problems Fixed Between Builds 347 and 370 Problems Fixed Between Builds 371 and 394 Problems Fixed Between Builds 395 and 416 Problems Fixed Between Builds 417 and 436 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 459 and 474 Problems Fixed Between Builds 459 and 474 Problems Fixed Between Builds 482 and 485 Problems Fixed Between Builds 486 and 493 Problems Fixed Between Builds 494 and 498 Problems Fixed Between Builds 499 and 502 Problems Fixed Between Builds 503 and 508 Problems Fixed Between Builds 509 and 513	Problems Fixed Between Builds 88 and 131	3
Problems Fixed Between Builds 199 and 225 Problems Fixed Between Builds 226 and 243 Problems Fixed Between Builds 244 and 292 Problems Fixed Between Builds 293 and 338 Problems Fixed Between Builds 339 and 346 Problems Fixed Between Builds 347 and 370 Problems Fixed Between Builds 371 and 394 Problems Fixed Between Builds 395 and 416 Problems Fixed Between Builds 437 and 436 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 459 and 474 Problems Fixed Between Builds 475 and 481 Problems Fixed Between Builds 482 and 485 Problems Fixed Between Builds 486 and 493 Problems Fixed Between Builds 494 and 498 Problems Fixed Between Builds 499 and 502 Problems Fixed Between Builds 503 and 508 Problems Fixed Between Builds 509 and 513	Problems Fixed Between Builds 132 and 170	8
Problems Fixed Between Builds 199 and 225 Problems Fixed Between Builds 226 and 243 Problems Fixed Between Builds 244 and 292 Problems Fixed Between Builds 293 and 338 Problems Fixed Between Builds 339 and 346 Problems Fixed Between Builds 347 and 370 Problems Fixed Between Builds 371 and 394 Problems Fixed Between Builds 395 and 416 Problems Fixed Between Builds 437 and 436 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 459 and 474 Problems Fixed Between Builds 475 and 481 Problems Fixed Between Builds 482 and 485 Problems Fixed Between Builds 486 and 493 Problems Fixed Between Builds 494 and 498 Problems Fixed Between Builds 499 and 502 Problems Fixed Between Builds 503 and 508 Problems Fixed Between Builds 509 and 513	Problems Fixed Between Builds 171 and 198	13
Problems Fixed Between Builds 226 and 243 Problems Fixed Between Builds 244 and 292 Problems Fixed Between Builds 293 and 338 Problems Fixed Between Builds 339 and 346 Problems Fixed Between Builds 347 and 370 Problems Fixed Between Builds 371 and 394 Problems Fixed Between Builds 395 and 416 Problems Fixed Between Builds 417 and 436 Problems Fixed Between Builds 437 and 458 Problems Fixed Between Builds 459 and 474 Problems Fixed Between Builds 482 and 481 Problems Fixed Between Builds 483 and 485 Problems Fixed Between Builds 484 and 493 Problems Fixed Between Builds 494 and 498 Problems Fixed Between Builds 499 and 502 Problems Fixed Between Builds 503 and 508 Problems Fixed Between Builds 509 and 513	Problems Fixed Between Builds 199 and 225	16

### Alcatel-Lucent ESD - IP Networking - Service Release - 5.1.6.578.R02 - 3/3/2011

Problems Fixed Between Builds 518 and 521	39
Problems Fixed Between Builds 522 and 527	40
Problems Fixed Between Builds 528 and 541	40
Problems Fixed Between Builds 550 and 552	41
Problems Fixed Between Builds 553 and 560	41
Problems Fixed Between Builds 561 and 566	42
Problems Fixed Between Builds 567 and 571	43
Problems Fixed Between Builds 572 and 578	43
Under Verification	44
Known Issues	46

#### Problems Fixed Between Builds 88 and 131

PR 93053 Build: 5.1.6.88.R02

Tagged packets on mobile ports malformed when going through a stack of Summary:

OS6600's

Explanation: Restore original frame length for 802.1q tagging across stacks

PR 92859 Build: 5.1.6.89.R02

Summary: WebView showed incorrect root bridge id for AOS devices

Explanation: Fixed snmp return for designated root bridge

PR 5.1.6.89.R02 93168 Build:

AMAP does not display link on OmniVista Server when the remote end has Summary:

no IP address

PR 93063 Build: 5.1.6.90.R02

If enable and disable a 802.1X port, the port is unable to send out arp Summary:

broadcast

Explanation: If we enable an 802.1x port and then disable it, the port is unable to receive

any ping traffic.

PR 93099 Build: 5.1.6.91.R02

Summary: Excessive number of ARP request sent from an AOS Router

PR 89576 Build: 5.1.6.92.R02

WebView OSPF interfaces page shows a wrong value for the Router Summary:

Priority

In WebView, Networking > IP > OSPF > Interfaces > Area page shows Explanation:

wrong value for "Priority" on the table.

PR 92877 Build: 5.1.6.93.R02

Summary: Issues after the reboot when using "Any" keyword in QOS configuration Explanation: Before this fix, when you were using "Any" in a QOS configuration, "Mask

0.0.0.0" was automatically added in the configuration which was generating

error during the boot sequence.

Example: You were typing: "policy condition test source ip any destination

PR 93337 Build: 5.1.6.94.R02

WebView displays an incorrect variable state in IP Multicast state webpage: Summary:

"N/C"

PR 5.1.6.95.R02 89263 Build:

Multicast forwarding problem when PIMSM and IPMRM are not Summary:

synchronized

PR Summary:	93388 Spanning tree int	Build:	5.1.6.95.R02 ection changes (port to 5.1.6.R02)
Summary.	Spanning tree in	ternarioop prote	ection changes (port to 3.1.0.102)
PR	89335	Build:	5.1.6.96.R02
Summary:	Switch sends IGI	MP Membership	o query V3 instead of V2
PR	93213	Build:	5.1.6.99.R02
Summary:			ou might not be able to telnet to the switch
Explanation:	return default pro	ompt without dis	and cs_syst em.pmd" took a few seconds to splaying anything. Then if you tried to telnet ect to the system anymore.
	This fix addresse	es this problem.	
PR	93523	Build:	5.1.6.100.R02
Summary:			1x1 mode to reconverge
Explanation:			I, flat mode STP is disabled. 1x1 STP mode is disabled.
PR	92687	Build:	5.1.6.103.R02
Summary:	Unicast Traffic al admin down/up	lowed on 802.1	x port before MAC authentication after
Explanation:	On an 802.1x po		cated clients are present and if admin down
		n 802.1x softwa	en egress traffic is allowed to go out on that re by identifying the port up event and
PR	93732	Build:	5.1.6.103.R02
Summary:	Partial index get	Next requests to	slMacAddressTable fail to index properly
PR	92562	Build:	5.1.6.104.R02
Summary:	Unable to modify	the syslog serv	ver IP address
PR	93360	Build:	5.1.6.104.R02
Summary:	•		nnot receive an IP address with DHCP
Explanation:	switch - DHCP se	erver. The L2 sv	owing configuration: Client - L2 switch - L3 witch does not forward the DHCP offer -address has been flushed.
PR	93166	Build:	5.1.6.106.R02
Summary:	IPC Depletion or	Primary CMM	when the secondary CMM is rebooted
PR	93867	Build:	5.1.6.106.R02

QoS rules are not applied after configuring DHCP rule

Summary:

PR **91493** Build: 5.1.6.107.R02

Summary: "Write memory" & "write terminal" may not work after insertion, reload or

takeover of secondary CMM

Explanation: Insertion, reload or takeover of the secondary CMM might cause a QoS

task failure and prevent the configuration manager from writing or printing the switch's configuration using "write memory", "write terminal" or "show

configuration snapshot".

PR **92933** Build: 5.1.6.107.R02

Summary: Broadcast-Unicast Traffic forwarded when changing 802.1x parameter to

force-unauthorized

Explanation: When port is changed from forced -authorized to forced-unauthorized, MAC

address that are learned when the port was force -authorized are not flush and thus traffic can still go through as usual. Please note when switching

from auto to forced-unauthorized,

PR **93977** Build: 5.1.6.107.R02

Summary: IPC initialization may fail after a takeover

PR **94091** Build: 5.1.6.108.R02

Summary: WebView: install will remove all of the .img files from the working directory

Explanation: Simplified WebView's installation

PR **91213** Build: 5.1.6.109.R02

Summary: Unable to get an IP address for client after getting authenticated by 802.1X

PR **93093** Build: 5.1.6.109.R02

Summary: 802.1x user and mac-address remains learned on Auth VLAN even after

Auth vlan is deleted

Explanation: When a vlan is deleted, 802.1x is not notified and thus will not clean up the

clients that are authenticated and classified on that vlan. Show 802.1x users will still show that they are authenticated even the client's MAC is not

learned any more after th

PR **93740** Build: 5.1.6.110.R02

Summary: OS7-GNI2-U12 link failed after switch power off and on

PR **93633** Build: 5.1.6.113.R02

Summary: Mobile port loose the VPA, after a new ip rule is configured on the switch

PR **92876** Build: 5.1.6.114.R02

Summary: "ip service avlan-http-proxy" command in the boot.cfg is detected as

erroneous entry during bootup

Explanation: When disabling any IP service, automatically other services are added to

the configuration as enable. Before this fix, an unsupported IP service was added "ip service avlan-http-proxy" which generated an error during the

boot sequence.

PR **93741** Build: 5.1.6.114.R02

Summary: Connectivity drop across Link Aggregation when CMM failed over with

policy server statement

Explanation: When you have a link aggregation together with the policy server

statement, when CMM fail over, the connect ion across a link aggregation

will drop for few seconds.

PR **94488** Build: 5.1.6.114.R02

Summary: "Show health <slot/port>" displays transmit/receive at twice the rate of rx/tx Explanation: This is to fix the incorrect calculation of RxTx (RxTx out put of 'show health'

This is to fix the incorrect calculation of RxTx (RxTx out put of 'show health' command) for Full-duplex ports. It was calculated by considering only Tx,

so fixed to consider both Tx and Rx.

PR **92733** Build: 5.1.6.115.R02

Summary: CLI command "interface slot/port flood rate 0" is not taking effect after a

reboot.

PR **93153** Build: 5.1.6.116.R02

Summary: Traffic matching QoS policy and destined for link aggregation will reset the

NI

Explanation: Traffic matching QoS priority stamping rules (802.1p, TOS or DSCP) that is

destined for a link aggregate will no longer cause a divide by zero exception

on the NI.

PR **94087** Build: 5.1.6.117.R02

Summary: DHCP Discover packet from the Client PC is not forwarded to the switch

after 802.1x ReAuthentication

Explanation: After re-authentication if the PC is moved into a vlan other than the

previously authenticated vlan there was some sync issue with onex and source learning events and the client remains in the previous vlan.

Resolved source learning timing issues during 8

PR **94277** Build: 5.1.6.117.R02

Summary: Impossible to configure a policy condition on OS6600 when the name

includes only letters a to f

PR **91943** Build: 5.1.6.118.R02

Summary: "rls" "rcp" "rrm" changes the running configuration

Explanation: The commands "rls", "rcp" & "rrm" c hange the running configuration.

PR **94644** Build: 5.1.6.118.R02

Summary: Webview: Change ASA family page to show bitmap values for easy copy

and pasting.

PR **72390** Build: 5.1.6.120.R02

Summary: Power Supply failed trap is occasionally not sent out

Explanation: After take over, the new primary will not send out a trap when a power

supply is extracted. This is an informational message, no effect to the

system.

5.1.6.120.R02

Explanation: Before this fix, authentication failures were sent via SNMP to the management station but not logged into the swlog file. Now, both are done. PR 85864 Build: 5.1.6.121.R02 CLI inactivity Timer does not work using SSH Summary: PR 94329 Build: 5.1.6.122.R02 High CPU when we hotswap module in chassis with "Static mac -address" Summary: on the Linkagg port After NI hotswap, when the OTHER NI (NI 3) is inserted CMM is trying to Explanation: send Static MAC of LA agg port (NI 6) configuration as DA address to OTHER NI 3. CMM hangs inside a while loop, when it tries to send static MAC configured only for logical ports duri PR 91505 Build: 5.1.6.123.R02 Unsolicited Takeover: 2ndary NOT revd PRIMARY A NSWER last good Summary: Request: Under very specific circumstances, the secondary CMM might not be able Explanation: to communicate with the primary and issue a takeover. PR Build: 5.1.6.123.R02 Summary: Need a way to log which user or application accesses the boot.cfg file Explanation: Contact Alcatel Customer Service for instructions on how to configure this.

Build:

Authentication failures are not logged into the swlog

94660 Build: 5.1.6.124.R02

"Show health slot/port" transmit/receive incorrect calculation on Half -Duplex Summary:

94248

PR

PR

Summary:

Explanation: This is to fix the incorrect calculation of RxTx (RxTx output of 'show health'

command) for Half-duplex ports. By default the port was taken as Full duplex ports, so the calculation is made based on the current configuration

of the port.

PR 94612 Build: 5.1.6.125.R02

Summary: No communication between the 802.1Q port and a mobile -tag enabled port Fix is done to set the TSP tagged bit in the hardware when tag mobile is Explanation:

enabled.

PR 92890 Build: 5.1.6.126.R02 NTP Daemon crash - Floating-Point Exception IEEE -754 Summary:

This is to fix the floating point exception caused by rootdelay and Explanation:

rootdispersion parameters received from the NTP server.

PR 93752 Build: 5.1.6.127.R02

OS6: after receiving the first packet: the mac is learned, but the packet is Summary:

dropped

Fix is done to flood the first packet from the software. Explanation:

PR 94951 Build: 5.1.6.128.R02 Summary: Remote host device shows as unknown device for 9700 PR Build: 5.1.6.129.R02 95257 Using dhcp-mac + mac rules combo causes PC to dis-join from mobile vlan Summary: randomly PR 95318 Build: 5.1.6.130.R02 Summary: 6600 is not flooding multicast packets randomly PR 95025 Build: 5.1.6.131.R02 Summary: Mismatch in the IP route count reported by CLI and WebView Explanation: While getting the object value for alalpRouteCount, we need to reduce by one for local and all routes to match what happens in the CLI.

#### Problems Fixed Between Builds 132 and 170

PR **94213** Build: 5.1.6.132.R02

Summary: Remove "ip multicast max-ingress-bandwidth" command from CLI and user

guide

Explanation: Removed the command "ip multicast max-ingress-bandwidth" as the Omni

Switch 6600 does not support it.

PR **95479** Build: 5.1.6.133.R02

Summary: The port based ACL stopped working after upgrading from 5.1.5.125.R02 to

5.1.6.125.R02.

Explanation: Issues related to port based ACL's. Design changes have been done to

ensure proper condition/actions are reflected in hardware

PR **95676** Build: 5.1.6.133.R02

Summary: UDP relay statistics counters don't work

Explanation: The UDP Statistics counters were not being updated for non -bootp generic

UDP service packets

PR **91654** Build: 5.1.6.135.R02

Summary: DHCP Relay agent IP address does not correspond to vlan router ip

Explanation: DHCP Relay agent set giaddr for broadcast DHCP Request on the basis of

VLAN information.

PR **96063** Build: 5.1.6.136.R02

Summary: Policy rules applied in running configuration do not get a ctivated on the

switch

PR 95717 Build: 5.1.6.138.R02

Packets are dropping during file transfer using multicast file transfer Summary:

application.

Explanation: OmniSwitch, by design, used to drop the first few packets (learning -phase

> packets) until a multicast flow was learnt into the hardware. This was causing certain applications to fail because of the functional requirement of

the first few multicast packets

PR 96165 5.1.6.138.R02 Build:

Issue after reboot with policy network group "Any" (0.0.0.0 mask 0.0.0.0) Summary:

PR 93715 Build: 5.1.6.139.R02

Summary: catchCpuHog does not log to swlog on 6600

Explanation: Fix for logging cpuHog info into swlog.

PR 92053 Build: 5.1.6.140.R02

error [CLISHELL 28] Error on select (851971) followed by memMon dump Summary: Explanation:

Resolved timing problems with continuous telnet session establishments

and exit.

PR 96048 Build: 5.1.6.140.R02

Summary: dshell session terminated when exiting from telnet

Explanation: When multiple telnet sessions to a switch are active, and if dshell is opened

in one of the telnet windows, the active dshell session will be terminated if

any telnet session to the switch is closed.

PR 95617 Build: 5.1.6.142.R02

"No aaa authentication http" creates "boot.cfg.1.err" during the boot Summary:

sequence

When the default aaa configuration is removed, there is no need to put "no Explanation:

aaa authentication x" in the snapshot and boot.cfg.

PR 96176 5.1.6.142.R02 Build:

Summary: Unable to change STP 32 bit path cost mode dynamically

PR 95650 Build: 5.1.6.143.R02

"Error [CLISHELL 8] fd = 149, select err at passwd" if the login timeout Summary:

expires before login in

This is to fix the severity of the telnet related log msg, changed from "error" Explanation:

to "info".

PR 95991 5.1.6.144.R02 Build:

6600 does not boot up if the privileges on the boot.slot.cfg file are changed Summary:

to read only.

When opening the file containing the slot number, previo usly it was trying to Explanation:

> open in read and write mode and since the file is in read only mode this operation got failed, now code is changed to open the file in read only

mode, so while opening the boot.

PR **96753** Build: 5.1.6.144.R02

Summary: IP directed-broadcast is not working

PR **95712** Build: 5.1.6.145.R02

Summary: "show active policy rule" matches don't increment properly.

PR **96299** Build: 5.1.6.145.R02

Summary: Issue with policy reflexive rule and Link Agg.

PR **96787** Build: 5.1.6.147.R02

Summary: With QoS enabled, when one port is disconnected, the traffic on another

port is blocked

PR **96890** Build: 5.1.6.148.R02

Summary: Dynamic ARP entry of the VIP not removed when a VRRP router becomes

master

Explanation: Delete the dynamic ARP entry for a vip when a static entry is being created,

also resolve timing related problems in arp cache refresh events by adding a check in arp refresh handling whether a proxy arp entry already available

for the vip.

PR **88230** Build: 5.1.6.150.R02

Summary: tBgp crashed with Data Access Exception -- Crash.PMD file generated

PR **95383** Build: 5.1.6.150.R02

Summary: Allow dynamic routes to have higher priority over static routes.

Explanation: To give dynamic routes higher precedence, add the following line to the file

called AlcatelDebug.cfg:

debug set iprmStaticLowest 1

PR **92723** Build: 5.1.6.151.R02

Summary: No indication when an echo request times out

Explanation: Ping timeout indication 'T' displayed when the ping request times out.

PR **96520** Build: 5.1.6.153.R02

Summary: OS6600 "show gos queue" should be removed as it does not return

expected information

Explanation: show gos queue command removed for OS6600 cli

PR **97322** Build: 5.1.6.154.R02

Summary: Mobile-tag port strips the tag on the egress

Explanation: Setting hardware bit when handling Tagged DHCP frames.

PR 97017 Build: 5.1.6.155.R02

Add flash space check to flash-synchro command to prevent synchro when Summary:

space is low

Explanation: While doing a "copy flash-synchro", the switch will start doing the

> synchronization between the primary & secondary CMM assuming that the secondary will have enough memory for synchronization. This was leading

to failures whenever there was not enough me

PR 97317 Build: 5.1.6.155.R02

Summary: ACL configuration on OS6600 does not work properly

Explanation: For bridged IP packets ,Layer4 classifications based upon IP protocol and

UDP ports combo had some logical error. Layer4 classification s has been

modified to accommodate the IP proto and UDP port combo rules also.

PR 97564 Build: 5.1.6.156.R02

Summary: CPU utilization goes high when upgrading to 5.1.5.R04 & QoS enabled Explanation:

Due to logical error, for non matching policy rules also we have utilized hardware resources . This unwanted utilization of hardware resource made the CPU utilization go high. Logic has been changed to take care of these

scenarios.

PR 97615 Build: 5.1.6.156.R02

Summary: Incorrect flood rate display when primary port of link agg goes down/up Explanation:

While handling a port leave message for a LA group, the primary portid was retrieved wrongly from join structure instead of leave structure. Now the primary port id is retrieved from leave struc ture. Previously the primary port

status of the interface lea

PR 96898 Build: 5.1.6.159.R02

6600 64 bit Flash - need to update the "show hardware info" to display flash Summary:

size to 64MB

PR 97460 5.1.6.160.R02 Build:

Summary: Client PC is unable to ping the switch after removing the vlan mac rule Explanation: After removing MAC rule the dynamic vlan port association setting is not

getting flushed when switch received a packet in the default vlan. Fix is done for Flushing previous VLAN PPP setting when new flow is learnt in

Default vlan and the previous Mobile

PR 5.1.6.161.R02 97958 Build:

ERROR: esmDrv\_findlfIndex<< GlobalPort > when trying to print the port Summary:

structure of an unknown port

While getting the Ifindex in the ESM driver, there is no check to see Explanation:

whether the module type returned is valid for the slot for which the CLI is

executed.

Added a check for the verification of the module type and returning without

further processing if

PR 96675 Build: 5.1.6.162.R02

Img files shown in WebView even after removing the file from the switch Summary:

directory.

WebView was reading the files from Frelease.img which contains the list of Explanation:

files present while images were built. So we changed the switch code, to

look in flash to find out what files are available on the switch.

PR 97746 5.1.6.163.R02 Build:

Summary: Unexpected AMAP state changes on AOS

Explanation: Slight delay in common timeout in order to avoid unnecessary generat ion of

AMAP traps of STP blocked ports. Added 40 secs in Common timeout

value.

PR 94907 Build: 5.1.6.164.R02

Summary: "Show 802.1x 1/1" command doesn't display anything. Other ports are OK. Explanation:

Fixed Display Issue with showing 802.1x information on the first port (1/1)

using command "show 802.1x 1/1" caused due to a wrong interpretation of

index for the port number 1/1.

PR 97691 Build: 5.1.6.165.R02

Summary: Loss of config in the boot.cfg when saving to working with OV This is to fix the loss of configuration in boot.cfg when the command Explanation:

"Saving to Working" is issued from OV continuously. Before the fix, some of

the configuration in boot.cfg would be lost when doing so.

PR 98218 Build: 5.1.6.167.R02

Show cmm command not displaying " Module in slot CMM -A-2 " ( Summary:

PROCESSOR card)

A subroutine function which is to be called to display the details of CMM -A-Explanation:

2 Processor Card was not called. So we made the code changes to do

PR 86714 Build: 5.1.6.168.R02

Summary: Http Re-direct is not working with a proxy server

PR 98292 5.1.6.169.R02 Build:

CS Debug: STR NON FATAL message during copy working certified -Summary:

cs csm main.c

Explanation: The reason for the FATAL error was that the message

> CSM\_CSM\_CERTIFIED was not handled and considered as default message. The fix is to handle this message to avoid the FATAL message,

but no processing as it is not required.

PR 98269 Build: 5.1.6.170.R02

Summary: All the traffic sent out a mobile port is tagged

Explanation: Fix is done to set the hardware tagging bit for a specific mobile tag enabled

vlan for sending tagged packets through mobile ports.

PR **98408** Build: 5.1.6.170.R02

Summary: OSPF ECMP over P2P interfaces does not work when the route originates

from the same RouterID

Explanation: OSPF ECMP gateways are not correctly computed when there is more than

one point-to-point or point-to-multipoint interface between a pair of OSPF

routers.

#### Problems Fixed Between Builds 171 and 198

PR **95307** Build: 5.1.6.171.R02

Summary: Multicast clients were not able to join the server located on other switch. Explanation: In some cases Multicast Flow information maintained in Software was not

removed properly and hence when the multicast traffic flow comes back after sometime, duplicate flow entry was created in software and the flow

which eventually got removed from Hardw

PR **99199** Build: 5.1.6.172.R02

Summary: PIM-SM is not processing fragmented bootstrap mes sages

Explanation: When a router is sending more than 100 Rendez -Vous points, he needs to

fragment the information in multiple packets. The problem was that AOS was only taking care of the first packet. So a lot of Rendez -Vous points

were missing. With this version, AOS is

PR **99323** Build: 5.1.6.173.R02

Summary: Issues with aggregating and redistributing local routes through RIP. Explanation: RIP redistributes aggregate routes configured in boot.cfg after restart

PR **98954** Build: 5.1.6.174.R02

Summary: Switch crashed due to floating point error Exception IEEE -754

Explanation: The expression causing the floating point error is fixed by modifying the

expression

PR **97851** Build: 5.1.6.175.R02

Summary: High ports scan makes Telnet, FTP ports unreachable

Explanation: At a very high rate of TCP port scan on the AOS switch using nmap tool,

TELNET, FTP and SSH tcp ports go into CLOSE\_WAIT state and are never reclaimed back to the system and after sometime all the TCP sockets

for telnet, ftp and ssh go in such state and t

PR **99573** Build: 5.1.6.176.R02

Summary: CPU shooting to 100% with 64 bytes pkts @ line rate on mobile ports

Explanation: With 64 bytes packets coming in at line rate on a mobile port, some of the

ASIC registers holding group mobility information were disturbed causing

the

ASIC to send up the packet continuously to the software though the mac -

address was programmed in th

PR 96220 Build: 5.1.6.178.R02 OS6602 running on BPS only can reset and gen erate pmd file Summary: Explanation: The Alcatel OmniSwitch 6602 may send wrong error messages regarding the Backup Power Supply (BPS) presence when running on BPS only (the main Power Supply is turned off). This can sometimes cause the switch to reboot. PR 96782 Build: 5.1.6.178.R02 Cannot open a telnet, ftp, ssh session on 6602 via 4024 connected over a Summary: Tag Giga fiber link Explanation: OS6600 forwards/floods packets of sizes less than 64 bytes (runt packets) when packets come in as tagged and are forwarded as untagged. Added software fix for padding any runt frame, either received from an adjacent switch or which is generated from the s PR 99814 Build: 5.1.6.181.R02 Information about linkagg is not recorded in the swlog files when using Summary: R5.1.5.227.R04. SWLOG messages has been added during trap generation of the Agg Explanation: up/down and port join/leave events. PR 99632 5.1.6.182.R02 Build: CLI unavailable after exiting telnet without answering to a confirm reload Summary: query Explanation: If a telnet session is opened to an AOS switch (OS6 - OS7 - OS8) and the command "reload all in 1" is executed \*without answering to the confirm query\* the telnet application is closed, then the system seems to be locked. The switch seems to be able to sw PR 99842 Build: 5.1.6.183.R02 Port path cost parameter of MSTP configuration file do not apply on 10Gig Summary: port of 8800 when rebooted Code is added in MST Port configuration function for handling 10 Gig ports. Explanation: Get the proper "external port id" of the 10 Gig port and retrieve the port parameter values which is configured already for that 10 Gig port id and send those values to NI. PR 100016 Build: 5.1.6.183.R02 Summary: Problems with using network group wildcard 0.0.0.0 in QoS PR 90581 Build: 5.1.6.184.R02 Summary: httpServerDoSAttackTrap contains no src IP of the attack

PR

Summary: Explanation:

99634

fixed.

Build:

5.1.6.185.R02

System Crash if the character \* is used at the end of an rcp command

The use of "\*" character in file system commands causing system crash is

PR 99845 Build: 5.1.6.185.R02
Summary: BPDUs are not sent out from BPDUSHUTDown Ports

Explanation: BPDU shutdown feature is slightly modified to send out BPDUs through the

BPDU shutdown ports.

PR **100082** Build: 5.1.6.186.R02

Summary: A LinkAgg port within an aggregate may prevent any traffic to be sent out or

received after a reboot

Explanation: Fix for resolving the racing condition of link agg events in NI STP module.

PR **100275** Build: 5.1.6.187.R02

Summary: Error Data Access Exception on QoS task

Explanation: Invalid buffer handling was not proper in QoS socket path. Fix has been

done.

PR **99886** Build: 5.1.6.188.R02

Summary: NI Task suspended TaskName: talpni followed by NI reboot Explanation: Added invalid memory check at lower boundary of memPools

PR **100171** Build: 5.1.6.189.R02

Summary: OS6 stalled with QDISPATCHER warnings and Invalid Address used

during a memory free with MemMon dump

Explanation: IPC Receive logic in 6600 had couple of flaws which resulted in bad

memory reference, bad receive and memory double free errors. Resolved these by improving the IPC receive logic and fixing some of the loopholes in

transmit functions.

PR **92522** Build: 5.1.6.191.R02

Summary: Show system recommends cleanup when it's not needed to do it

Explanation: On an OS8800 running 5.1.6.R01, the "show system" command will recommend to cleanup the flash because there is little space remaining

recommend to cleanup the flash because there is little space remaining after the installation. This message is informational only, and cleanup is not

mandatory.

PR **99354** Build: 5.1.6.194.R02

Summary: AOS switch doesn't recognize an OS6200 in AMAP neighborship

Explanation: OS6200 variants device identifiers have been properly defined in AOS for

displaying the device name correctly.

PR **82076** Build: 5.1.6.195.R02

Summary: Power Down/Up traps not sent to the NMS station if the redundant power

supply isnt on primary unit

PR **100272** Build: 5.1.6.195.R02

Summary: Impossible to modify NTP configuration - Internal Error returned by CLI Explanation: In some cases Address Family in received NTP packet was modified to

In some cases Address Family in received NTP packet was modified to AF\_UNSPEC because of which sendto failures were encountered and NTP

configuration was failing. Resolved sendto failures by avoiding change of

address family for udp packets sent through t

PR 100358 Build: 5.1.6.195.R02

OS6602 doesn't respect IP mobility rule when MAC rule is removed. Summary:

Impacts Quarantine Manager QM

Explanation: VLAN port hardware setting is not flushed properly when MAC rule is

getting deleted. So fix is done to flush the VLAN port hardware setting of

that specific VLAN configured in that rule.

PR 100422 Build: 5.1.6.195.R02

Summary: No Trap are sent to the NMS when a stacking link is disconnected

PR 100453 Build: 5.1.6.195.R02

Need debugging commands on 6600 Switch to understand the reason for Summary:

the DNS query rejection

Explanation: Present authentication page for a known mac not yet authenticated

PR 100661 Build: 5.1.6.196.R02

Summary: socket NI:2/0: invalid buf 0 message recorded on console upon NI reboot Explanation: Qos log buffer gets corrupted when invalid socket messages are handled in

Qos task.Rootcause for the corruption has been fixed.

PR 97475 Build: 5.1.6.197.R02

Coronado modules IN OS7 OS7-GNI-U12 are displayed wrongly on Summary:

OmniVista

Explanation: The type in OmniVista is now returning for the OS7 -GNI2-U12 is

.1.3.6.1.4.1.6486.800.1.1.2.1.1.4. 2.2.4 Please update in OV 301.

OmniVista was returning correctly what the mib was supplying for that

device.

PR 99735 Build: 5.1.6.198.R02

SSH crash when commands with long output run on SSH session with slow Summary:

link to switch

Explanation: Under certain conditions when long show commands are issued on a ssh

session, ssh task crash is observed and the switch reboots with a pmd. Avoided ssh crash by adding suitable defense checks in ssh software which

validate a memory address before accessin

#### Problems Fixed Between Builds 199 and 225

PR 5.1.6.199.R02

Summary: CPU spikes caused by TaGmnCtrl when changing VLAN port assignment Explanation: Issue is due to the task stuck up in the for loop for 2-3 seconds. So CPU

hikes to 100% utilization. Proper defense checks are added for reducing the

for loop. Now 100% CPU usage is avoided.

PR 99868 Build: 5.1.6.200.R02 Switch is sending IGMP V1 and V2 query on a port with ONLY V1 client Summary: PR 5.1.6.201.R02 99548 Build: Summary: Interface uptime is wrongly displayed on AOS switches PR 101176 Build: 5.1.6.201.R02 AOS switches go to unsaved state when trap replay turned on OV Summary: PR 100217 Build: 5.1.6.202.R02 Summary: OS6 in stack: No STP convergence and STP Loop after a switch reboots PR 100871 Build: 5.1.6.204.R02 Summary: Apply OpenSSH patch. PR 101359 Build: 5.1.6.205.R02 CMM is not learning any MAC addresses on the LINKAGG after STP Summary: reconvergence PR 101421 5.1.6.206.R02 Build: OS6: Slow Management Telnet-Ping upon Linkagg Up-Down depending on Summary: the Up-Down order PR 97748 5.1.6.207.R02 Build: DHCP Frames are not bridged with alvan default traffic enable Summary: Fixed flooding of DHCP Packets originating from Clients on a port which is Explanation: avlan enabled. Also when flooding failed due to some reasons the packet buffer is released properly. PR 101219 Build: 5.1.6.209.R02 OS6600 seems to replicate IGMPv2 membership reports when streaming Summary: video PR 101593 Build: 5.1.6.209.R02 Mirrored port loses connection to VRRP VIP address, Its DGW. Can't go Summary: outside its VLAN. PR 101676 Build: 5.1.6.211.R02 Summary: OS6 QoS depleting the IPC Pools IPC pool depletion issue in QoS Solved. Explanation: PR 98796 5.1.6.212.R02 Build: AOS switch is generating ICMP host unreachable when arp entry is not in Summary: the arp table PR 101522 Build: 5.1.6.213.R02 Summary: LSA from 64th neighbor not been pro grammed into the kernel routing table

PR **101753** Build: 5.1.6.213.R02

Summary: 6800 Switch: Auth ip responding to Client DNS query before login

PR **101672** Build: 5.1.6.214.R02

Summary: No static route added when receiving IP address and gate way from DHCP

with IP helper boot-up enabled

PR **101475** Build: 5.1.6.215.R02

Summary: 100% CPU load as soon as port network cable on mobile port is un -

plugged and re-plugged

PR **100512** Build: 5.1.6.216.R02

Summary: ALL SNMP traffic (traps + replies) outgoing the switch should use

Loopback0 as IP-SA

Explanation: All SNMP traffic should use Loopback0 as IP -SA if configured

PR **101991** Build: 5.1.6.220.R02 Summary: Crashes on AOS switches after turning on IPMS

PR **102090** Build: 5.1.6.220.R02

Summary: OS7 LinkAgg port is not learning/sending any traffic via one port on one

VLAN

Summary:

PR **102212** Build: 5.1.6.221.R02 Summary: MAC learned on Linkagg are not aging out in CMM

outlinely. The real flow of Enthagg are flow aging out in enth

PR 102303 Build: 5.1.6.222.R02
2nd stack switch gets IP address with source MAC address

00:00:00:01:00:00

PR **101487** Build: 5.1.6.224.R02

Summary: On OS68, IPMS is blocked when linkagg port disconnects

#### Problems Fixed Between Builds 226 and 243

PR **82076** Build: 5.1.6.226.R02

Summary: Power Down/Up traps not sent to the NMS station if the redundant power

supply isnt on primary unit

PR **92693** Build: 5.1.6.227.R02

Summary: DHCP request is getting flooded in VLAN -1 even if ip helper configured on

the switch.

Explanation: Flood DHCP on def vlan controlled by a flag

PR **102397** Build: 5.1.6.228.R02 Summary: Webview is not displaying GNI2-U2 NI module

Alcatel·Lucent 1

PR **100359** Build: 5.1.6.229.R02

Summary: OS66: SecureView ACL "Rule will never be valid" but should be

PR **90090** Build: 5.1.6.230.R02

Summary: Enhancement for Ingress flood limit

PR **101253** Build: 5.1.6.231.R02

Summary: Webview task is running at 100% when logging using http

Explanation: When an AVLAN client connects from a PC running Windows Vista, there

might be a CPU spike in the switch or in the Windows PC. Also the webview pages might take a long time to download. In such situations the

value of the flag 'taskdelaytransmitpend' shoul

PR **99748** Build: 5.1.6.232.R02

Summary: CLI lock up if the telnet session to the switch is lost when trying to read a

pmd file

Explanation: Mismatch between the MIB file & trap manager file is fixed

PR **102718** Build: 5.1.6.233.R02

Summary: Renew AVLAN java applets

PR **103096** Build: 5.1.6.234.R02

Summary: L3SrcUnicast L3DestBroad DHCP packets are not relayed if the L3 src is in

the DHCP server network

PR **101577** Build: 5.1.6.235.R02

Summary: The mac-address of the client shows up in the Avlan and Default Vlan even

after getting de-authen.

Explanation: Corrected Mac-address comparison for avlan client mac-address in a

specific scenario.

PR **102483** Build: 5.1.6.235.R02

Summary: VRRP ARP entry not updated after removing one NI from a Link agg

PR **102979** Build: 5.1.6.237.R02

Summary: Unable to display switch log file in WebView

PR **103093** Build: 5.1.6.237.R02

Summary: After canceling the scheduled reload it affects the configuration status;

Need fix.

PR **104222** Build: 5.1.6.239.R02

Summary: Unable to save MD5 ospf configuration

PR **101544** Build: 5.1.6.240.R02

PR **97572** Build: 5.1.6.329.R02

Summary: Error Message# Socket failed wdbConfig: error configuring WDB

communication interface

Explanation: The error message "Socket failed wdbConfig: error configuring WDB

communication" was displayed during the boot up of the switch. While looking at the code, we understood that the switch is trying to enable WDB

during the bootup, which is not possible & u

PR **109997** Build: 5.1.6.330.R02 Summary: OS-7000 showing many PORT-MGR messages

PR **109140** Build: 5.1.6.331.R02

Summary: 7700 uptime reset after 497 days

Explanation: sysUpTime is not wrapped up after 497 days.

PR **111033** Build: 5.1.6.332.R02

Summary: Learned Port-Security with mac-range blocks valid and invalid mac-

addresses

PR **93822** Build: 5.1.6.334.R02

Summary: Connectivity Issue in 10G Links between OS8800s

Explanation: Problem was discovered to be pre-production release hardware, either the

XFP or the 10G NI. Once all hardware that was below proper rev was

replaced issues were resolved

PR **111567** Build: 5.1.6.334.R02

Summary: STP crash while hotswaping 10 gigabit module

Explanation: Check added to avoid crash during SNMP get on STP tables.

PR **111693** Build: 5.1.6.334.R02

Summary: IpEdr Task taking ipc resources

Explanation: Retry counters introduced to avoid infinite retry of messages from CMM to

NI when congestion is detected on the control sockets.

PR **112256** Build: 5.1.6.337.R02

Summary: NI remained down after CMM takeover

PR **110374** Build: 5.1.6.338.R02

Summary: IGMP Report Messages are duplicated, proxy behavior is not clear

Problems Fixed Between Builds 339 and 346

PR **110080** Build: 5.1.6.339.R02

Summary: 7700 crash with memory exception

PR 92679 Build: 5.1.6.340.R02 Summary: Task tpimsm suspended after some configuration changes

Explanation: Using Static-RP Configuration and then changing the max-rps may cause

tpimsm to suspend.

PR 108012 Build: 5.1.6.342.R02

OSPF LSDB routes not being processed Summary:

PR Build: 5.1.6.343.R02 91941

Wrong telnet AVLAN address when enable AVLAN and get internal error Summary:

when try to correct

Explanation: When user configures a vlan as an authentication vlan before assigning an

IP address to the vlan, the vlan gets an invalid AVLAN add ress needed for

telnet and web authentication

PR 92104 Build: 5.1.6.343.R02

Summary: webview and cli doesn't have the same ip interface forwarding state

Explanation: Webview or SNMP incorrectly shows the forwarding state of an IP interface

as "forwarding", even though the IP interface is

administratively/operationally down.

PR 92314 Build: 5.1.6.343.R02

WebView layer2 static link agg add invalid port and the error message is Summary:

behind the window.

Explanation: In WebView, Layer 2 > Link Aggregation > Static > Port add page

whenever there's an error and the error message layer appears the select

boxes block the error message.

PR 112381 Build: 5.1.6.344.R02

Summary: UDP relay does not forward broadcast UDP packets

Explanation: Supporting subnet broadcast at vlan level.

PR 5.1.6.345.R02 107673 Build:

task taQoS was suspended on NI-8 and pmd file created need to analyze Summary:

the same:

PR 111025 Build: 5.1.6.345.R02

802.1x failure result in PC grabbing wrong IP address. Summary:

PR 109011 Build: 5.1.6.346.R02

When PC moved from one vlan to another the PC still pulls up the same IP Summary:

as earlier vlan subnet

#### Problems Fixed Between Builds 347 and 370

PR 111238 5.1.6.347.R02

OS9700 Cannot rip peer with other vend router. RIP updates received only Summary:

once after interface is up.

PR	<b>113129</b> Build: 5.1.6.347.R02		
Summary:	Certain AVLAN client cant get log off from switch		
Explanation:	The avlan auth ip structure gets corrupted, when a vlan is deleted.		
	The corruption is prevented by using the new vlan instead of previous index while initializing the auth-ip to zero.		
PR	<b>110678</b> Build: 5.1.6.348.R02		
Summary:	Issue with 802.1x acquiring DHCP IP address(8800 and 7800 switche s)		
PR	<b>113556</b> Build: 5.1.6.348.R02		
Summary:	6600 running 5.1.6.R02 creates extra policy rules while creating a policy using OneTouch voice/data		
PR	<b>110000</b> Build: 5.1.6.349.R02		
Summary:	PMD analysis required as Takeover happened in the core 88 00 switch and pmd files created.		
PR	<b>106638</b> Build: 5.1.6.352.R02		
Summary:	System crash upon creating a new VLAN with CS excep handler: exception 768 in task 0x89b4a40		
PR	<b>108236</b> Build: 5.1.6.352.R02		
Summary:	6648 reporting ipms memory allocation		
PR	<b>112742</b> Build: 5.1.6.352.R02		
Summary:	Admin down/up on 10G, random Vlan stops learning/forwarding after reconvergence		
PR	<b>114577</b> Build: 5.1.6.352.R02		
Summary:	PORT MIRRORING IS NOT WORKING ON OS7700.		
PR	<b>114504</b> Build: 5.1.6.353.R02		
Summary:	OSPF Border Routers aging out on 2nd hop router, 1st router not flooding LSA		
PR	<b>113585</b> Build: 5.1.6.354.R02		
Summary:	7800 switch does not respond to SNMP query for GNI2 -U2 module		
PR	<b>113940</b> Build: 5.1.6.355.R02		
Summary:	OS7800: PMD file analysis. slo2sli0ver1.pmd formed due to NI monitoring timeout.		
PR	<b>105907</b> Build: 5.1.6.356.R02		
Summary:	OS8800 rebooted creating cs_system.pmd file.error Task: 0x5014f60 "UdpRly" seen in logs.		

PR **114168** Build: 5.1.6.358.R02

Summary: SNMPWalk on vlan interfaces of OS8800 (5.1.6.270R02) doesnot update

correctly when vlan is deleted

PR **114746** Build: 5.1.6.359.R02

Summary: 6200 :: %BRG\_AMAP-N-AMAP\_STATUS: AMAP status: Port g1 data

changed.

Explanation: Initialize the buffer used for filling system name so that AMAP status

change messages are not displayed wrongly.

PR **108934** Build: 5.1.6.360.R02

Summary: Telnet session ending issue

PR **115064** Build: 5.1.6.360.R02

Summary: Port status is Forwarding without a cable attached.

PR **108177** Build: 5.1.6.361.R02

Summary: Unable to create ipms forwarding entry

PR **108600** Build: 5.1.6.363.R02

Summary: Lpower ->suspended on stack of 6600 and created dump file

PR **109555** Build: 5.1.6.364.R02

Summary: AOS 6800 24L - Webview displays flash-synchro completed while

synchronization is still running

PR **111412** Build: 5.1.6.365.R02

Summary: OS9700 creates dump file and NI 2 hangs up for 5 minutes after upgrading

the code.

Explanation: Process linkAgg Marker PDU's on the ports only where linkagg is enabled.

If marker PDU's are received on non-linkAgg ports discard those packets.

PR 112456 Build: 5.1.6.365.R02

Summary: When STP is disabled able to see the RP and NBRP

Explanation: Resetting the Spanning Tree parameters if the Spanning tree is disabled.

PR **115297** Build: 5.1.6.366.R02

Summary: NETWORK INSTABILITY WHEN CHANGING THE PORT BLOCKING

PR **115736** Build: 5.1.6.367.R02

Summary: Show aaa avlan auth-ip <vlan#> shows unexpected results.

PR **115828** Build: 5.1.6.368.R02

Summary: Error when Switch is getting a DHCP address

PR **111585** Build: 5.1.6.369.R02

Summary: OmniVista Showing High CPU Traps

PR 115340 Build: 5.1.6.369.R02

Summary: Reboots with unknown cause in 66xx stack.

Explanation: PMD enhancement to include the NI history buffer information

Problems Fixed Between Builds 371 and 394

PR 115499 Build: 5.1.6.372.R02

Summary: SNMP "get" returns wrong values for some AOS mibs

PR 115941 Build: 5.1.6.372.R02

SNMP object entLastChangeTime is not returning the right value Summary:

PR 116191 Build: 5.1.6.383.R02

Show vlan [instance] port and show spantree ports, display different results Summary:

in 6602 with 5.1.6.353

PR 116786 Build: 5.1.6.383.R02

OSPF issue: In NSSA redistributed RIP routes are not learned with correct Summary:

destination IP

PR 117241 Build: 5.1.6.385.R02

Summary: Explain the details that could be observed and collected on a spy output

PR **120132** Build: 5.1.6.430.R02

Summary: OS7 need not to route packets arriving with destination m ac address =

router mac of another vlan

Explanation: Allow to add router mac in the L2DA Table using a coomand excuted only

during bootup

PR **120451** Build: 5.1.6.432.R02

Summary: Multicast Delay after VRRP Takeover between OS -7000 Switches.

PR **118864** Build: 5.1.6.433.R02

Summary: SNMPagt crashed need dump analysis

PR 120667 Build: 5.1.6.434.R02

100% CPU SPIKE ON OS6602-48. SNMPAGENT TASK IS CONSUMING Summary:

HIGH PERCENTAGE.

PR 120670 Build: 5.1.6.435.R02 Summary: Multicast problem on 6602 running 5.1.6.416.R02,

#### Problems Fixed Between Builds 437 and 458

PR 119761 Build: 5.1.6.438.R02 Summary: Cpu spikes up due to the IPmem process on 8800.

Explanation: Changes made to report message should not be transmitted to the

> neighbor port if the port on which the report has been received and the neighbor connected is same. We dont generate a report message if the

client port is same as the querier port.

PR 120398 Build: 5.1.6.438.R02

MemDump:Invalid Address used during a memory free (0x312ac) on Summary:

OS6602 stack-5.1.6.315R02

Explanation: Dump the task Name & task ID (in swlog) of the task which did a invalid

free, & dump its tt in the memmon dmp file.

120652 PR Build: 5.1.6.442.R02

Summary: Received packet loss on GNI-U12 Explanation: Fix to dispaly rx lost frms in cli

PR 120335 Build: 5.1.6.443.R02

It takes long time for Windows Vista Avlan client to download the java Summary:

applet after web authenticati

We currently Support Java- SE Runtime Environment 6 update 3. Explanation:

Java version 1.6.0\_03

jre-6u3-windows-i586-p-s.exe

Notes: Other Java versions may not have been tested and nor supported.

PR 120915 Build: 5.1.6.445.R02

Summary: Slow avlan authentication, ip reassigning using window vista client Explanation: We currently Support Java - SE Runtime Environment 6 update 3.

Java version 1.6.0\_03

jre-6u3-windows-i586-p-s.exe

Notes: Other Java versions may not have been tested and nor supported.

PR **121054** Build: 5.1.6.446.R02

Summary: After STP changes, Mulicast devices do not respond to Multicast query,

and hence query timeout

Explanation: Avoid flooding of Multicast Packets after IP-PORT Movement. Handle

packets coming through unresolved channel in IPMS aft er IP-PORT

Movement.

PR **121079** Build: 5.1.6.447.R02

Summary: Linkagg getting stuck after several admin up/down port states. Explanation: Modified to get the queue info from correct structure to avoid link

aggregation getting stuck after multiple admin up/down port states.

PR **120574** Build: 5.1.6.451.R02

Summary: Network 10 alone not getting redistributed; OS6800

PR **121290** Build: 5.1.6.452.R02

Summary: Wake on Lan on 802.1x port does not work properly on OS6800 running

6.3.1R01.

Explanation: Fixed the issue in opening the egress logic of a 802.1x enabled port

PR **96223** Build: 5.1.6.454.R02

Summary: OSPF RIP aggregate default route is not learned by OSPF

Explanation: Ospf installs the alternate redistributed route into external database by

looking into the FDB and inserting the current active route.

PR **119726** Build: 5.1.6.455.R02

Summary: Cannot disable ip multicast proxying

Explanation: Save multicast no proxying command into boot.cfg

PR **121547** Build: 5.1.6.456.R02

Summary: Port Shutdown feature CPU Timeout -Seconds does not work properly OS

6600 AOS release 5.1.6.R02.435

Explanation: Fix to shut the port based on the configured timeout

PR **121908** Build: 5.1.6.457.R02

Summary: OS6600 crashed due to QOS stack overflow.

PR **120738** Build: 5.1.6.458.R02

Summary: Non-contiguous mask in a static route getting changed in "Show ip route".

Explanation: Validation done to check non contiguous mask in a static route.

#### Problems Fixed Between Builds 459 and 474

PR **120990** Build: 5.1.6.460.R02

Summary: OS7700: TCP packet sequence stops Broadcast/Multicast on OS7 -GNI2-

C12 port

Explanation: Code changes to avoid layer2 switching asic flood queue lockup issue

PR **120581** Build: 5.1.6.461.R02

Summary: User authentication failed using LDAP server

Explanation: Use nonblocking LDAP API calls to avoid lockup between the LDAP Main

task and the LDAP client task.

PR **119874** Build: 5.1.6.464.R02

Summary: 1 hr max CPU value not showing correct value on OS7800 Explanation: Display 1 hour Maximum Value correctly in "show health"

PR **123159** Build: 5.1.6.465.R02

Summary: 6850 reboots after scanning it using Qualys

Explanation: To fix Emweb server crash when the QualysScan tool is used to scan the

switch.

PR **122693** Build: 5.1.6.467.R02

Summary: Functionality issue with "ip ospf redist-filter RIP 0.0.0.0 0.0.0.0 redist-control

aggregate" cmd

Explanation: Update the external link state database on route changes, when different

routes are present for the same network

PR **123708** Build: 5.1.6.468.R02

Summary: FTP authentication failed.

Explanation: Ignore authentication only if user is NI

PR **121836** Build: 5.1.6.469.R02

Summary: OS7800 crashed with Hardware Failure type 4 and memory buffer depletion

exception

PR **122781** Build: 5.1.6.471.R02

Summary: OS8800 - Switch Crash. PMD file analysis required.

Explanation: UDP packets in NI are rate limited to 256 pkts/ sec and 1024 pkts/ sec on

the CMM. This is to ensure a storm of UDP broadcast traffic does not chew

up all the system buffers.

#### Problems Fixed Between Builds 475 and 481

PR **119133** Build: 5.1.6.475.R02

Summary: Stack of 6600 is learning MAC addresses as static instead of dynamic in

5.4.1.234.R01

PR 123713 Build: 5.1.6.475.R02

Summary: PMD File analysis. Failed to flash synchro after upgrade

Explanation: Defense fix made to avoid floating point exception in Bgp task.

PR **124343** Build: 5.1.6.476.R02

Summary: 6648 .PMD DUMP Analysis

Explanation: Validity check introduced for URL lookup in file system

PR **123052** Build: 5.1.6.477.R02

Summary: show spantree cist ports displays wrong primary port for linkagg

Explanation: Changes done to display the primary port field correctly for linkagg ports in

"show spantree cist ports active" cmd

PR **124524** Build: 5.1.6.479.R02

Summary: To configure ACL to drop LLDP pkts.

Explanation: Feature for dropping the LLDP packets on 7700 & 8800

PR **124550** Build: 5.1.6.479.R02

Summary: INTIP card not able to download image from TFTP server when 6602 is

WRRP Primary

Explanation: Dropping packet from unresolved channel to CPU to avoid duplicate ICMP

reply in case of VRRP VIP and VLAN interface IP are different.

PR **123413** Build: 5.1.6.481.R02

Summary: BBUS resets during the takeover affecting the communication of the

Primary and Secondary CMM.

Explanation: Enabled auto hello answer and BBUS reset on Primary during secondary's

hello inactivity, to stabilize the BBUS and avoid ta keover.

#### Problems Fixed Between Builds 482 and 485

PR **125229** Build: 5.1.6.482.R02

Summary: OSPF Entry not flushed

Explanation: Message to Registered Modules is triggered when a Route Del Event

happens during Redistribution

PR **126097** Build: 5.1.6.484.R02

Summary: NI HW problem. HW fail type: 4

Explanation: Avoid learning 224.0.0.x control multicast range as group updates in the

switch.

#### Problems Fixed Between Builds 486 and 493

PR **124132** Build: 5.1.6.487.R02

Summary: Prepend values are not displayed for the Secondary IP of the vlan

Explanation: Check for Number of AS Prepanded when Queued attribute found for route

PR **125939** Build: 5.1.6.488.R02

Summary: Unable to associate a name with a static arp

Explanation: Slot/Port value not overridden when arp-name configured for a static arp

PR 127107 Build: 5.1.6.488.R02

Summary: arp name incorrectly displayed Explanation: arp name display corrected

PR 126429 5.1.6.490.R02 Build:

Switches are learning neighbor even though they are not connected Summary:

directly.

Explanation: Enhanced source learning debugs to track AMAP mac addition/deletion.

### Problems Fixed Between Builds 494 and 498

PR 127484 Build: Summary: To merge restricted TCN feature from 6.3.1 to 5.1.6

Explanation: Feature for restricting the TCN in 5x.

PR 127658 5.1.6.495.R02 Build:

Stack OS6600: Disabling Port Flapping feature is taken into account by Summary:

only PRIMARY unit

Explanation: Send PortFlap Config to the NIs after they are up

PR 128001 Build: 5.1.6.496.R02

BBUS Hardware timeout error on the swlog Ni one reset causes all other Summary:

NIs router MAC flush

Explanation: Prevention of special DA Mac deletion after NI 1 reset.

# Problems Fixed Between Builds 499 and 502

PR 128187 Build: 5.1.6.499.R02

Summary: OS7800 - error Exception: Mem Address Not Aligned for task VlanMgr Explanation: Handled "Mem Address Not Aligned" exception in task 'VlanMgr'.

PR 128104 Build: 5.1.6.502.R02

Even there are no changes in the configuration, exit command prompts so -Summary:

in 6.3.1 R01

Whenever the show tech-support command is executed without any Explanation:

change in the configuration the switch is exited normally.

PR 5.1.6.502.R02 128338 Build:

OS8800 - alert Socket ID: 0x143, Task : 0x4b548b0(Ipedr), APPID: 15, Summary:

SNAPID: 8 MESSAGES.

Defence fix to avoid EAGAIN errno looping infinite times in ipedr send task Explanation:

### Problems Fixed Between Builds 503 and 508

PR **128844** Build: 5.1.6.504.R02

Summary: OS7700 crash & lost the LACP configurations in Cornado 1 NIs and CMM -

B down

Explanation: More debug information has been added to provide the name of the file

opened and the reason for which fopen() has failed. Retry counter has been

added, to set the severity of error message.

PR **128328** Build: 5.1.6.505.R02

Summary: Command to change the source of SNMP replies.

Explanation: New CLI introduced to control the Source IP of the SNMP packets

originating from the switch

PR **129515** Build: 5.1.6.505.R02

Summary: On 6602-48 stack , ports 1-18 or 33-50 missing when we poll the OID

1.3.6.1.2.1.17.1.4 through mib b

Explanation: Code changes to prevent same bridgePort numbers created for ports in

OS6648 (48 port) stack of switches.

PR **127546** Build: 5.1.6.506.R02

Summary: Removing mobility rule for a vlan blocks all ports for that vlan Explanation: Default vlan association wont be deleted upon deleting a GM rule.

PR **127622** Build: 5.1.6.506.R02

Summary: "show amap" returns unknown when remote switch is a 6400

Explanation: Included OS6400 and OS6855 Devices in AMAP

## Problems Fixed Between Builds 509 and 513

PR **130525** Build: 5.1.6.509.R02

Summary: second line (+++ The working version is us ed ) should represent the status

of the "MAC address range

Explanation: Corrected the trap number for Mac range check. This will display the

correct error msg instead of the second erroneous line mentioned in the

problem statement.

PR **130718** Build: 5.1.6.510.R02

Summary: vlan manager - correct the retries so that ipc buffers are not locked up in

socket queues

Explanation: Corrected the retry & delay values to avoid buffers getting stuck in socket

queue of vlan msg task

PR **130379** Build: 5.1.6.511.R02

Summary: "tOspf-: ospfRecvLSUpdate: NBR ... sent LSA ... too soon" message

generated by a down OSPF Interface

Explanation: Ospf Isupdate received should be checked against the local ip interface

only if it is up.

PR **129591** Build: 5.1.6.512.R02

Summary: FPGA upgrade fails often with latest 5.1.6.498.R02 AOS

Explanation: Additional logs to the console after FPGA upgrade completed successfully

Problems Fixed Between Builds 514 and 517

PR **122231** Build: 5.1.6.514.R02

Summary: Cannot configure more than 10 ip udp relay instances on 6850 running

6.3.1.931r01 and 6.1.5R01

Explanation: Increased the total number of UDP relay services supported to 32 which

includes 7 standard UDP services and 25 other User UDP services.

PR **129950** Build: 5.1.6.515.R02

Summary: OS6850 does not support LDAP authentication when DEREF value is other

than 0.

Explanation: Code change to let the admin control the Idap deref value being sent to the

server

PR **131461** Build: 5.1.6.516.R02

Summary: analysis of dump file on a 6602 -48. Equipment genereted pmd files

Explanation: Retrieve miniboot version from cached values on OS6

PR **132027** Build: 5.1.6.517.R02

Summary: 7000-516-485-R01 only supports 64 ngbrs per Router,

Explanation: Support larger number of ospf nbrs per area (>= 128) upto max of 255 nbrs

per system

Problems Fixed Between Builds 518 and 521

PR **131697** Build: 5.1.6.518.R02 Summary: PMD enhancement for webView buffer leakage

Explanation: Dumps will be generated if webView is in problematic condition with

webView buffer monitoring information.

PR **132369** Build: 5.1.6.520.R02

Summary: OS7800 NIs crashed: - Urgent pools depletion. "+++ Buffer: Urgent Perc

used: 99 Perc allowed: 75"

Explanation: Added swlog message to indicate freeing of DMA buffers when NI goes

down

PR **130571** Build: 5.1.6.521.R02

Summary: High OPSF task tospf due to an unnormal high OSPF LSA activity

Explanation: Flush the invalid LSA.

PR 131814 Build: 5.1.6.521.R02

Mobile ports shows blocking even though STP is disabled and bpdu ignore Summary:

is enabled on the mobile por

Explanation: Fix timing issue on mobile VPAs during takeover

Problems Fixed Between Builds 522 and 527

PR 133643 Build: 5.1.6.522.R02

Summary: Enhance the swlog message when port shutdown due to receive BPDU Explanation: Enhanced swlog message during port shutdown due to receive bpdu

PR 133688 Build: 5.1.6.523.R02

Throwing "ERROR: internal error" when -> no ntp server x.x.x.x issued on Summary:

6602.

NTP Control Packet Path fixed Explanation:

PR 5.1.6.524.R02 133937 Build:

Summary: SSH Authentication with DSA public keys did not work on OS -6600.

Explanation: Added public key authentication to ssh session

PR 133677 Build: 5.1.6.525.R02

Summary: OS 7800 crashed "exception 33 in task tOspf"and generated a dump file

Explanation: changes done to prevent invalid floating point exception.

PR 5.1.6.526.R02 134184 Build:

OS7800 crashed with slot .pmds: "alarm sendPmMsg: sendTo 42:0:d:2 Summary:

failed!!"

Explanation: Decrease retries and increase delay while sending messages in VLAN Mgr

and HSM

PR 134406 Build: 5.1.6.527.R02

Summary: System reboot with FATAL error when copy flash -synchro

Explanation: Check for available flash space of the CMM before starting flash synchro.

Note that the new code with the fix has to present in both the CMMs for the

fix to work.

Problems Fixed Between Builds 528 and 541

PR 127798 Build: 5.1.6.529.R02

FLASH SYNCHRO Aborted. Due to SIMPLEX CMM or 2ndary State Summary: Explanation: Code changes to correct error messages shown during Flash synchro

failures in a duplex setup

PR 134897 Build: 5.1.6.530.R02

Summary: Debug command "debug set allowed\_ssh\_s ession" does not work. Maximum number of ssh session when set using debug command is Explanation:

retained when there is no attack

40 / 53

PR **136393** Build: 5.1.6.533.R02

Summary: mac address is not getting aged out if ip relay not able to receive an DHCP

address

PR **136069** Build: 5.1.6.536.R02

Summary: Slot 1 module reset with pmd several times on the 8800. "Freed the buffers

in DMA for timeout slot 1

Explanation: validity check for prevention of data corruption

PR **134364** Build: 5.1.6.539.R02

Summary: 6600 and 7700 not sending genral query report when a topology change is

detected.

Explanation: Learn the same client on different ports.

PR **103520** Build: 5.1.6.541.R02

Summary: Webview is granting access the second time without asking the password

### Problems Fixed Between Builds 550 and 552

PR **140231** Build: 5.1.6.551.R02

Summary:

BBUS resets during the takeover and it is affecting the comm between the

CMMs

Explanation: False suspension alarm for tasks handled, preventing sw itch crash

#### Problems Fixed Between Builds 553 and 560

PR **141232** Build: 5.1.6.553.R02

Summary: Change in Default Flood Rate Value

Explanation: Default flood rate setting for 7700, 7800, 8800 is 47M for 100M and 497M

for 1G and in 66xx it is 49M and 496M for 100M and 1G respectively

PR **141388** Build: 5.1.6.554.R02

Summary: CS excep handler: exception 52 in task 0x5762390 -- Dump analysis

needed

Explanation: Added Defense check in STP to avoid cash on invalid memory

PR **131482** Build: 5.1.6.555.R02

Summary: 6600: if we apply a deny rule with a destination ip "any" no traffic passes

through.

Explanation: Destination ip any rules are programmed correctly in the Hardware.

PR 139238 Build: 5.1.6.555.R02
Summary: OS8800 Ni crashed "roma: error creating falsock buffer"
Explanation: IP Directed Broadcast Packets is not processed by the Switch.

Controlled using a flag "ipedrSubnetBcastDrop" disabled by default.

"ipedrSubnetBcastDrop" needs to be enabled (set to 1) using AlcatelDebug.cfg

NOTE:

Dynamic changes of "ipedrSubnetBca

PR 118093 Build: 5.1.6.556.R02
Summary: Loopback0 is not part of network group Switch
Explanation: Loopback0 ip address was not added to Switch group

PR **140717** Build: 5.1.6.557.R02

Summary: Emweb buffer leakage

Explanation: Fix the Buffer leakage issue and introduce additional dshell commands

PR **132514** Build: 5.1.6.559.R02

Summary: IPC Debug and Logging Improvements

Explanation: IPC debug enhancements

PR **142329** Build: 5.1.6.560.R02

Summary: 8800 crash with "alert Buffer: Normal Perc used: 79Perc allowed: 75" logs Explanation: CMM Pools moving to DMA Queue, due to NI Pools depletion avoided.

### Problems Fixed Between Builds 561 and 566

PR 144033 Build: 5.1.6.561.R02 Summary: OS8800 :: ARP or Gateway being not resolved

Explanation: 1) Drop entry removed on receiving ARP ADD from another NI.

2) Correct ARP entry checked for flags.

PR **143938** Build: 5.1.6.562.R02

Summary: 6602-48 stack of 2 units rebooted with cs\_sytem pmd file on Feb 4th

Explanation: Release buffer once it is used

PR **143652** Build: 5.1.6.563.R02

Summary: Swith crashed and not accessible. Cold start recovered the operations. Explanation: Debug enhancement for BBUS buffer desc riptor pool corruption

PR **144501** Build: 5.1.6.565.R02

Summary: Issues when enable the flag of webMgtBugFix

Explanation: Debug cli's have been introduced to cleanup the Emweb buffers

PR 145192 Build: 5.1.6.566.R02

Summary: MS Vista (as DHCP client) not getting IP address.

Explanation: Flags controlling Reply Packet when Snooping / Agent Info not enabled

>>>> dhcp\_relay\_unset\_bcast\_flag DEFAULT 1

This is to contol the setting of BCAST FLAG, by default AOS

Does not set the Flag. The field is copied from the Serve

## Problems Fixed Between Builds 567 and 571

PR 146089 Build: 5.1.6.567.R02 Summary: 6600: Mac-address entries not seen for most devices Explanation: Set correct hardware bits for ipv6 mac address ag ing.

PR 131771 Build: 5.1.6.568.R02

Switch crashed while putting 32 backward characters or password via open Summary:

Explanation: Proper validation maximum password length is done. Max password length

allowed in 32.

PR 135681 Build: 5.1.6.570.R02

Summary: Error: Couldn't get buffer to send lldpdu out of zUport

Cleaning up the hardware buffers properly. Explanation:

PR 147129 Build: 5.1.6.571.R02

Summary: 8800 advertising route with higher cost to ospf neighbor

Explanation: Install the lowest metric LSA, even if both the LSA forwarding address are

same, but orginating ASBRs are different in NSSA area

### Problems Fixed Between Builds 572 and 578

PR 132031 Build: 5.1.6.572.R02

Summary: Issue with the Feasible status related to the "show ip bgp path" command Explanation: show ip bgp command display modified to show incomplete origin for

redistributed routes.

PR 150479 Build: 5.1.6.573.R02

Summary: OS6600 memory leak issue

Explanation: Corrected the Stack trace buffer allocation

PR 5.1.6.574.R02 152488 Build:

OS6600: pethPsePortOnOffNotification,Severity: Critical,Synopsis: Pse Summary:

Port Detection: ?.

PR 153834 Build: 5.1.6.577.R02

Summary: Query on whether healthMonModuleTrap is sent when NI CPU goes high

**Under Verification** 

PR 88463 Build: 5.1.6.179.R02 Summary: Source IP is changed to default gateway of DHCP server

Explanation: Source IP Address of bootp relayed packets set as the IP Address of the

interface on the BOOTP client side.

PR 107419 Build: 5.1.6.298.R02

Port is not moving to mobile when all the rules are of Ethernet II and Summary:

ethertype alone varies

Explanation: Code changes done in GMN for handling unknown prototype

PR 107496 Build: 5.1.6.339.R02

Summary: Correct level for systrace messages which are filling up the systrace buffer Explanation: Severity level of the systrace buf of the message which fills the system

trace buffer reduced.

PR 119895 Build: 5.1.6.484.R02

Summary: OS 9800 running on 6.1.3.838.R01 crashed and generated Dump files. Explanation: Fix to avoid corrupting one byte of next block while configuring vlan tag

description

PR 99718 Build: 5.1.6.491.R02

Summary: rls command fails with 'Attempt to lock LS table faile d' after an rls timeout Explanation:

When the command "rls" is executed from the primary CMM while the secondary CMM is rebooting, the command fails with a timeout. After this the "rls" cmd never gives the o/p (just throws an error), even after the

secondary CMM comes up. Code change done to

PR 121438 Build: 5.1.6.506.R02

Radius agent not to use loopback0 address as its source interface when it's Summary:

present

Explanation: Use Loopback0 Address as source IP for radius agent packets, if

Loopback0 Address is configured.

PR 128686 5.1.6.506.R02 Build:

Boot.cfg.1.err is created on secondary CMM for correct configuration of Summary:

802.1x

Explanation: Fix done to stop creating boot.cfg.err for proper 802.1x configuration.

PR 128556 5.1.6.508.R02 Build:

OS7: HandleNIExtraBBD: NI passed bad length Ni Trouble Report Summary:

Received NI HW problem.HW fail type: 4

Explanation: Ratelimting packets to CPU.

PR **130168** Build: 5.1.6.509.R02

Summary: 8800 Switch crashed took over occur

PR **130720** Build: 5.1.6.510.R02

Summary: ipedr - correct the retries so that ipc buffers are not locked up in socket

queues

Explanation: Added retry counters to return back when buf create fails for more that 10

retries, so that ipedr atleast processes the incoming packets.

PR **130719** Build: 5.1.6.513.R02

Summary: ipms - correct the retries so that ipc buffers are not locked up in socket

queue

Explanation: corrected the retry counters to avoid buffers getting stuck in socket queue

of ipms task

PR **131694** Build: 5.1.6.514.R02

Summary: CSM-CHASSIS (103) info message: This CMM is Primary

Explanation: Display the name of the CMM, along with the CMM role during bootup in

chassis based products

PR **116738** Build: 5.1.6.532.R02

Summary: A stack of 4\* OS 6850 crashed running code 6.1.3.805.R01

Explanation: Validity check made

PR **131245** Build: 5.1.6.533.R02

Summary: OS 6850 stack has not rebooted once the queue as maxed out in

CSM\_REQ state.

Explanation: Fix the ipc buffer leak scenario during bootup

PR **110473** Build: 5.1.6.535.R02

Summary: Many "LANPOWER error lpSocketSend: zcBufCreate Failed!" followed by a

crash with dumps

Explanation: Found 256 byte memory leak in health monitor task

PR **133987** Build: 5.1.6.538.R02

Summary: Stack 6850 : Crash after upgrade

Explanation: Handle one off duplicate slot scenario issue.

PR **131813** Build: 5.1.6.549.R02

Summary: Need to have Port status as UP/DOWN instead of "+" and " -" in Syslogs

Explanation: Changed the log message for Interface status change to be UP/ DOWN

instead of +/-

PR 136761 Build: 5.1.6.549.R02

AOS switches( OS9000,6850) when trying to set the level for the swlog Summary:

appid 0 internal error is seen

Explanation: "Diagnostics module" log level will be configured properly upon configuring

swlog appid 0

PR 5.1.6.569.R02 122226 Build:

OS6850 running code version 6.3.1.894R01 in stand alone mode rebooted Summary:

and generated pmd files

A data access exception had occurred and a defense check has been Explanation:

added in the VxWorks api.

PR 147610 Build: 5.1.6.571.R02

Summary: Low path cost routes not prefered in OSPF route selection

Explanation: Forwarding address for an area is selected based on the ospf interface

cost. The interface which is active and with lowest metric is selected as the

forwarding address for the NSSA area

PR 147610 Build: 5.1.6.571.R02

Summary: Low path cost routes not prefered in OSPF route selection

Explanation: Forwarding address for an area is selected based on the ospf interface

cost. The interface which is active and with lowest metric is selected as the

forwarding address for the NSSA area

PR 152383 Build: 5.1.6.575.R02 7700 Gigabit port is going up/down on U-12 module Summary:

Explanation: Port Flap Monitoring changes made for FIRENZE Boards

PR 5.1.6.576.R02 148114 Build:

Stack of 2x6850 switches reported continuous 100% CPU utilization with Summary:

sftp\_s0 task showing highest

Explanation: Code changes to eliminate CPU spike by stale SFTP tasks after an

abnormal SFTP session termination.

PR 155074 Build: 5.1.6.578.R02

SLB server operational status goes into "retrying" causes clients to jump Summary:

cluster server.

### **Known Issues**

PR

AMAP Adjacencies Remote Host Device field value sometimes shows Summary:

\*\*ERR("12")\*\* or \*\*ERR("204")\*\*.

Workaround: None

Summary: Incorrect auto bridge detection on OS7700/OS7800 at NI Startup

Explanation: If a local OS7700/OS7800 port is configured to use 802.1W and a remote

OS7700/OS7800 port is configured to use 802.1D, then migrate times on the local port prevents the use of 802.1D bpdu and a loop is created for 2

seconds.

Workaround: There is no known workaround at this time.

PR **83127** 

Summary: +++ [CLISHELL 46] Error on setting tty options at login(851971) DoS

attack: bncex on port 23

Explanation: A DoS attack on port 23(Telnet) results in "[CLISHELL 32] Error on setting

tty options at password(851971)"

Workaround: The issue is cosmetic and does not affect performance of the switch.

PR **84031** 

Summary: Webview "Reload On" Timing Issue on OS6600

Explanation: WebView's "Reload On" function for OS6600 does not function according to

specification.

Workaround: No workaround at this time.

PR **86669** 

Summary: IPv6 router advertisement does not support decrementing. timers

Explanation: IPv6 Router Advertisement decrementing timers are not supported for

prefix valid lifetimes or prefix preferre d lifetimes.

Workaround: Use IPv6 Router Advertisement fixed timers.

PR **90193** 

Summary: Console hang after execute copy working certified flash -s when cmm

contain 2files w/same substring

Explanation: If the name of a file (1) is the substring of another file (2) on the remote

CMM, then we may get into an endless flash synchro situation.

Workaround: Inspect the contents of directories from both CMM, and remove file (2) from

another CMM.

PR **90574** 

Summary: STR message in swlog when "copy working certified"

Explanation: A status message is sent when the csm certification is done.

Workaround: There is no known workaround. There is no impact to the execution code,

only the message 0x222 is logged in the swlog. Users can ignore this

message.

PR **91437** 

Summary: Some violating traffic fails to get dropped / filtered for user -defined rules.

Traffic gets bridged

Explanation: Certain user defined mobile rules end up classifying non matching traffic

patterns on the user defined vlan i nstead of default vlan.

Workaround: There is no known workaround at this time.

Summary: "Internal Error" message by applying snapshot file for aaa" feature & it

won't create some servers

Explanation: Server information displayed with show configuration snapshot aaa

command or saved with configuration snapshot aaa <file\_name> command contains hashed (encrypted) password/key information. In order for a file

created with the latter command to be used

Workaround: Always edit password/key information before applying a snapshot file

PR **91850** 

Summary: WV IPX statistics do not display until CLI cmd 'show ipx traffic' is keyed

Explanation: IPX statistics are not correct with Webview or SNMP.

Workaround: A "show ipx traffic" needs to be done on the CLI so that the statistics can be

retrieved from the NIs.

PR **91898** 

Summary: ip6edr allows multiple tunnels to use the same ipv4 address pair

Explanation: It is possible to add two IPv6 configured tunnels with the same source and

destination IPv4 addresses. This is discouraged since it may have some

unusual consequences.

Workaround: Only create a single IPv6 configured tunnel with the same source and

destination IPv4 addresses. Since multiple IPv6 addresses may be

assigned to a single tunnel, more than one with the same IPv4 addresses is

never necessary.

PR **91961** 

Summary: on BGP4->Network page unable to modify community as a none

Explanation: In WebView, Networking > IP > BGP4 > Neighbors > Configuration modify

page the Local Interface Name cannot be changed back to None.

Workaround: Delete the neighbor and add again w/out specifying a Local Interface

Name.

PR **91962** 

Summary: on BGP4->Neighbors->Administration page setting some value

sets(enables) remove private AS

Explanation: In WebView, Networking > IP > BGP4 > Neighbors > Administration modify

page the field "Remove Private AS" has the wrong drop -down options.

Workaround: None.

PR **91979** 

Summary: Unable to set a ipx address to a vlan using snmp with 5.1.6

Explanation: IPX network address cannot be set through SNMP.

Workaround: Use either CLI or Webview to set IPX network address.

PR **92215** 

Summary: RIPng is not notified when ripv6 interface mtu changes when i/f is toggled Explanation: Modification of IPv6 interface MTU does not change MTU size in Ripng and

hence RIPng update packet size also does not change.

Workaround: None

PR 92225
Summary: Cannot break out of a traceroute6 probe when probe transmission fails
Explanation: The traceroute command can usually be stopped while in progress by

The traceroute command can usually be stopped while in progress by pressing any key from the console session. However, if a probe returns an error `probe transmission failed the command will not exit until the

configured timeout has expired.

PR **92270** 

Summary: ipv6 static and local routes are marked up even when interface is down Explanation: IPv6 static and local routes will remain in the up state even when the

interface is used to reach their destination is down.

PR **92286** 

Summary: User with permission ipms, ipmr is eventually viewing show ip protocols

then not returning console

Explanation: Command prompt may disappear after attempting "show" command not

allowed for user.

Workaround: Type exit and then login again. The p rompt will come back.

PR **92311** 

Summary: WebView missing ability to add an eui -64 address to an ipv6 interface Explanation: In WebView, Networking > IPv6 > Addresses page is missing the ability to

add an EUI-64 Address to an IPv6 Interface.

Workaround: None.

PR **92663** 

Summary: ipv6 duplicate adr detection is not logged to swlog on OS6600

Explanation: If a duplicate address is detected, the error message will only be shown on

the console screen. It will not appear on a telnet session or be saved in the

swlog log file.

PR **92718** 

Summary: Mac Address of IP-Port violated binding rule don't get flush incase of mobile

vlan deletion

Explanation: Upon VLAN deletion, there is a sufficient delay for the Group Mobility

message to get from the CMM to NI for the deletion of rules associated with this NI. If the switch has live traffic, it continues to apply these rules and

classify the frames.

If th

Workaround: There are two workarounds:

 After VLAN deletion, the traffic needs to be stopped which will age out the MACs from the source learning table based n source learning aging time

2) User can issue the "no mac-address-table learned" command which fl

Not recommended to change "router-id" during production due to Net-LSA Summary:

will be flushed

Explanation: The netLSA with the previous rtrld will be flushed (if these netLSA IsIDs

> equal one of the router's OSPF interface addresses) and a new netLSA generated with the new rtrld. AOS OSPF is behaving correctly in this

scenario (allowing for OSPF convergence tim

PR 92791

RIP is not disabled when snapshot applied with RIP loaded but disabled -Summary:

all tables accessible

Explanation: Redistributed routes get added to the RIP routing table even thou gh the

global rip status is disabled.

Workaround: Disable redistribution status

PR 92818

After enable force-authorized and then put it back on auto, guest vlan client Summary:

can't join

Explanation: If we change the 802.1x port port -control from force-authorized and then

change it back to auto, the guest vlan feature may not work.

Workaround: We need to manually admin down/up to reset the port.

PR 92863

Guest vlan PC unable to send/receive traffic if moved from a HUB to gue st Summary:

vlan port

Explanation: When an 802.1x guest vlan PC is moved from a Hub to a Guest Vlan port, it

may not be able to send/receive traffic until the mac address is aged out on

the hub port.

Workaround: None.

PR 93037

Some OSPF and BGP Help pages contain broken hyperlinks. Summary:

Explanation: Help pages need to be updated across many modules in OSPF, BGP,

DVMRP, L2 etc

Workaround: This issue does not affect performance of the switch. There is no known

workaround at this time.

PR 81531

OS6/OS7 are unable to forward Multicast flows if Link Aggregation ports Summary:

are added and removed

Explanation: Sometime Multicast flow stops when linkagg ports are added and deleted

multiple times.

Workaround: None.

PR 85341

\*\*\*Unable to complete I2c data transfer. Status Reg.xx\*\*\* Error appears in Summary:

6600-P24 logs

Explanation: A process is unable to access a status register, but it retries so this

message is considered as harmless and is now recorded in the switch log.

Summary: Nessus: alya.cgi (Backdoors) failure

Explanation: The following is noted when running a test called "alya.cgi (Backdoors)" in

the NESSUS test suite:

Security Note: Web mirroring - http (80/tcp)
The following CGI have been discovere d:
Syntax: cginame (arguments [default value])

Workaround: This is expected behavior for the login pages for WebView and Web -

AVLAN authentication. NESSUS is known for provide those bogus reports.

PR **92093** 

Summary: XP w/ SP 2 display "Attempting to authenticate" while loggin

Explanation: When using the XP service pack 2 native 802.1x client and some version of

Steelbelted RADIUS server, the XP 802.1x client will not always be able to

"successfully" authenticate.

Workaround: Use pure XP without any service pack or with Steel-belted RADIUS Service

Provider Edition 4.70.661.

PR **92317** 

Summary: HA vlan traffic is getting flooded on user vlan when no ha vlan is configured

on ingress NI

Explanation: Traffic with a High Availability VLAN m ac address as a destination address

on a port that is NOT configured for HA vlan is flooded to all ports of the

vlan following the standard flooding path.

Workaround: There is no known workaround at this time.

PR **92405** 

Summary: HA vlan traffic dropped for 10 sec after takeover

Explanation: If High Availability (HA) vlan is configured in the switch and HA traffic is

flowing through it, HA traffic might get dropped for 5 -10sec during takeover.

Workaround: None

PR **92573** 

Summary: HAVLAN bandwidth limit is global on switch, not per vlan

Explanation: The configured High Availability VLAN bandwidth is global on switch, not

per vlan even though the CLI command is on a per vlan basis. The latest High Availability VLAN bandwidth configured d etermines the global

bandwidth.

Workaround: There is no known workaround at this time.

PR **92575** 

Summary: HAVLAN bandwidth is per ingress slot, tx on egress port can be higher than

bandwidth config

Explanation: The High Availability VLAN Bandwi dth is granted on a per ingress slot

basis. When ingress ports are on different slots, the transmit rate on

egress ports can be higher than the configured bandwidth.

Workaround: There is no known workaround at this time.

Summary: HAVLAN MAC learnt as filtering if seen as source address

Explanation: MAC addresses configured for High Availability Vlan are learnt as filtering if

seen as source addresses

Workaround: There is no known workaround at this time.

PR **92628** 

Summary: A port on slot is added to the ingress port list or tagged for ha vlan, the slot

becomes HA enable

Explanation: Once a port is added to ingress list or tagged for a High Availability Vlan, all

other ports in the same slot behaves like "ingress ports"

Workaround: There is no known workaround at this time.

PR **95256** 

Summary: Documentation for Metric of Static Route needs to be corrected

Explanation: The user guides and WebView help incorrectly state that static routes

always have priority over dynamic routes. The user guides and WebView help should state that Static routes have priority over dynamic routes

regardless of the metric value.

Workaround: There is no workaround at this time.

PR **95308** 

Summary: Temporary loop on changing bridge priority or port down in RSTP with Link

Agg

Explanation: Temporary traffic loops could happen under the following scenarios:

1. Reloading of a non root bridge.

This happens when the bridge is going down and is due to the sequential bringing down of NIs during a reload process .It is purely temporary in nat

For items 1 and 2 above there is no work around presently.

For item 3 the following work around could be applied:

1. Tune the max age (and or max hops in the case of MSTP) parameter

to a lower value that is optimal for the network. This will reduce t

PR **95717** 

Workaround:

Summary: Packets are dropping during file transfer using multicast file transfer

application.

Explanation: OmniSwitch, by design, used to drop the first few packets (learning-phase

packets) until a multicast flow was learnt into the hardware. This was causing certain applications to fail because of the functional requirement of

the first few multicast packets

PR **123304** 

Summary: OS6600 cannot create policymap to map tos or dscp to 802.1q

Explanation: As per the current implementation and design in OS6600, mapping of 802.1p

to 802.1p is only supported and not the rest combinations.

That is, TOS/DSCP to 802.1p and 802.1p - to TOS/DSCP are NOT

supported.

Summary: DHCP does not relay to the 2nd DHCP server

Explanation: The agent infomation value i.e, option 82 is checked only once prior to all

the DHCP servers configured. Previously it was checked for all the servers

seperately.

PR **130665** 

Summary: OS7 - 5.1.6.498.R02 - "Admin down" is not completly shuting down the port

on OS7-ENI-FM12

Explanation: Admin down on OS7-ENI-FM12 port will not bring the remote end link

down.

Workaround: There is no known workaround.

PR **151202** 

Summary: 7800: ip multicast static-member does not check port STP state before

forward out the packet

Explanation: Ip multicast static-member does not check port STP state before forward

out the packet.

Workaround: Static multicast memberships are not intended to be used on intra-

switch/uplink ports. Static-member functionality should be limited to access

ports only.
