- To enforce anti-spoofing, a VLAN/service must have an IP address associated with it. If there is no IP address associated with the VLAN/service, no packets will be dropped.
- Anti-spoofing on service is supported only on SPB SAP ports and is supported on OmniSwitch 6860N, and OmniSwitch 6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2 where inline routing is supported.

Examples

```
-> qos user-port filter spoof bpdu
-> qos user-port shutdown spoof bgp ospf
-> qos no user-port shutdown
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[policy port group](#)

Configures a port group and its associated slot and port numbers.

[show qos config](#)

Displays QoS configuration information.

MIB Objects

```
alaQoSConfigTable  
  alaQoSConfigUserportFilter  
  alaQoSConfigAppliedUserportFilter  
  alaQoSConfigUserportShutdown  
  alaQoSConfigAppliedUserportShutdown
```

qos dei

Configures the global Drop Eligible Indicator (DEI) bit mapping and marking setting for all QoS ports. The DEI setting applies to packets marked yellow (non-conforming) as the result of Tri-Color Marking (TCM) or other rate limiting mechanisms.

qos dei {ingress | egress}

qos no dei {ingress | egress}

Syntax Definitions

ingress	Maps the DEI/CFI bit to yellow (non-conforming) if this bit is set for ingress traffic. <i>DEI mapping is not supported on the OmniSwitch 6465.</i>
egress	Marks the DEI/CFI bit for egress packets if the packets were marked yellow as a result of the rate limiting process.

Defaults

By default, no DEI bit marking or mapping is done.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the global DEI bit mapping (ingress) or marking (egress) configuration for the switch.
- Use the **qos port dei** command to set the DEI bit mapping and marking configuration for a specific port. Note that the port setting takes precedence over the global DEI setting.
- Packets marked yellow by rate limiting are still transmitted when there is no congestion on the egress port queues. Setting the DEI bit for yellow egress packets (**qos dei egress**) ensures that an upstream switch is made aware that the packet was marked yellow.
- When a switch receives a yellow packet with the DEI bit set and ingress DEI bit mapping is enabled (**qos dei ingress**), the packet is mapped to an internal drop precedence or yellow color marking for the switch.
- DEI bit mapping is not supported on the OmniSwitch 6465. As a result, packets are processed as follows on that switch:
 - When packets are received on a trusted port, the DEI bit is retained only if the packets were not subject to a meter. If the port is untrusted, however, the DEI bit is always reset.
 - When a meter is set and DEI egress is configured on a trusted port, the DEI bit is reset to 0 for green

packets. Yellow–red packets egress with the DEI bit set to 1.

Examples

```
-> qos dei ingress
-> qos dei egress
-> qos no dei ingress
-> qos no dei egress
```

Release History

Release 7.2.1; command was introduced.

Related Commands

qos port	Configures a physical port for QoS.
qos port dei	Configures the Drop Eligible Indicator (DEI) bit mapping and marking setting for the specified QoS port.
policy action cir	Configures a Tri-Color Marking policy action.
show qos config	Displays global information about the QoS configuration.
show qos port	Displays information about QoS ports.

MIB Objects

```
alaQoSConfigTable
  alaQoSConfigDEIMapping
  alaQoSConfigDEIMarking
```

debug qos

Configures the type of QoS events that will be displayed in the QoS log.

```
debug qos [info] [config] [rule] [main] [port] [msg] [sl] [ioctl] [mem] [mapper] [slot] [l2] [l3]
[classifier] [nat] [sem] [pm] [ingress] [egress]
```

```
debug no qos
```

```
debug no qos [info] [config] [rule] [main] [port] [msg] [sl] [ioctl] [mem] [mapper] [slot] [l2] [l3]
[classifier] [nat] [sem] [pm] [ingress] [egress]
```

Syntax Definitions

info	Logs basic information about the switch.
config	Logs information about the global configuration.
rule	Logs events for rules configured on the switch.
main	Logs information about basic program interfaces.
port	Logs events related to QoS ports.
msg	Logs QoS messages.
sl	Logs information about source learning.
mem	Logs information about memory.
mapper	Logs information about mapping queues.
slot	Logs events related to slots.
l2	Logs Layer 2 QoS events on the switch.
l3	Logs Layer 3 QoS events on the switch.
classifier	Logs information whenever the switch classifies a flow; more details are provided if the log level is higher.
nat	<i>Not supported in this release.</i>
sem	Logs information about semaphore, process locking.
pm	Logs events related to the Policy Manager.
ingress	Logs information about packets arriving on the switch.
egress	Logs information about packets leaving the switch.

Defaults

By default basic information messages are logged (**info**). Error messages are always logged.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to change the type of messages that will be logged or to return debugging to its default state.
- Use this command to troubleshoot QoS events on the switch.

Examples

```
-> debug qos flows queue
-> qos debug no flows no queue
-> debug no qos
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos forward log	Enables the switch to send events to the PolicyView application in real time.
qos log lines	Configures the number of lines in the QoS log.
qos log level	Configures the level of log detail.
show qos log	Displays the log of QoS events.

MIB Objects

```
alaQoSConfigTable
  alaQoSConfigDebug
```

debug qos internal

Displays debugging information for QoS internal to the switch.

debug qos internal [*slice slot/slice*] [**flow**] [**queue**] [**port**] [**l2tree**] [**l3tree**] [**vector**] [**pending**] [**verbose**] [**mapper**] [**pool**] [**log**] [**pingonly** | **nopingonly**]

Syntax Definitions

<i>slot/slice</i>	The slot number and slice to view debugging information. A <i>slice</i> is a logical section of hardware that corresponds to particular ports on a network interface module.
flow	Displays information about QoS flows.
queue	Displays information about QoS queues.
port	Displays information about QoS ports.
l2tree	Displays information about Layer 2 flows.
l3tree	Displays information about Layer 3 flows.
vector	Displays information about vectors.
pending	Displays information about pending QoS objects.
verbose	Sets the output to verbose mode for more detailed information.
mapper	Displays information about QoS mapping flows to queues.
pool	Displays information about the buffer pool.
log	Displays information about QoS information that is logged.
pingonly	Specifies that any policies configured with an ICMP protocol condition apply only to ICMP echo-requests and echo-replies.
nopingonly	Configures the switch so that any policies configured with an ICMP protocol condition apply to any ICMP packets.

Defaults

Debugging is disabled by default.

parameter	default
pingonly nopingonly	nopingonly

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	No	No	No

Usage Guidelines

- Use the **debug qos** command to configure the type of QoS events that will be displayed in the QoS log.
- Use the **qos log level** command to set the level of log detail in the QoS log.

Examples

```
-> debug qos internal "verbose log"
```

Release History

Release 7.1.1; command was introduced.

Related Commands

debug qos	Configures the type of QoS events that will be displayed in the QoS log.
qos log level	Configures the level of log detail.

MIB Objects

N/A

clear qos log

Clears messages in the current QoS log.

```
clear qos log
```

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

This command is useful for clearing messages from a large log file so that the file is easier to view. Logs can get large if invalid rules are configured on the switch, or if a lot of QoS events have taken place. Clearing the log makes the file easier to manage.

Examples

```
-> clear qos log
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[qos log lines](#)

Configures the number of lines in the QoS log.

[show qos log](#)

Displays the log of QoS events.

MIB Objects

alaQoSConfigTable

alaQoSConfigClearLog

qos apply

Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

qos apply

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is required to activate all QoS and policy commands. This is the only command that causes current changes to be written to flash.
- Rules are configured through the **policy rule** command, but are not active on the switch until you enter **qos apply**.

Examples

```
-> qos apply
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos revert	Removes any policies configured through policy rule but not applied to the current configuration through the qos apply command.
qos reset	Resets the QoS configuration to its default values.
qos flush	Deletes all pending policy information.

MIB Objects

alaQoSConfigTable
 alaQoSConfigApply

qos revert

Deletes any QoS configuration that has not been applied to the configuration through the **qos apply** command.

qos revert

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use this command to remove currently configured policies that have not yet been activated through the **qos apply** command.

Examples

-> qos revert

Release History

Release 7.1.1; command was introduced.

Related Commands

policy rule	Configures a policy rule and saves it to the current configuration but does not make it active on the switch.
qos apply	Applies all QoS settings configured on the switch to the current configuration.
qos reset	Resets the QoS configuration to its defaults.

MIB Objects

alaQoSConfigTable
alaQoSConfigRevert

qos flush

Deletes all pending policy information. This command is different from **qos revert**, which returns the pending policy configuration to its last applied settings.

qos flush

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If you enter this command, the pending policy configuration is completely erased. If you then enter **qos apply**, the erased configuration *overwrites the applied policies and you will erase all of your policy configuration*.

Do not use this command unless you want to erase all of your policy configuration and start configuring new policies.

- Use the **qos revert** command to return the pending policy configuration to its last applied value.
- Policy configuration includes the following commands:

base commands

policy rule	policy mac group
policy network group	policy port group
policy service	policy condition
policy service group	policy action

Examples

```
-> qos flush
```

Release History

Release 7.1.1; command was introduced.

Related Commands**qos revert**

Deletes any QoS configuration that has not been applied to the configuration through the **qos apply** command.

qos apply

Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

policy server flush

Removes all cached LDAP policy data from the switch.

MIB Objects

alaQoSConfigTable

alaQoSConfigFlush

qos reset

Resets the global QoS configuration to its defaults.

```
qos reset
```

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is independent of the **qos apply** command.
- This command resets the global QoS configuration (i.e. trust, dei) parameters back to their defaults.
- This command does not impact ACL configuration. Use the **qos flush**, **qos revert** and **qos apply** commands for ACL modifications.

Examples

```
-> qos reset
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply

Applies all QoS settings configured on the switch to the current configuration.

qos revert

Deletes any QoS configuration that has not been applied to the configuration through the **qos apply** command.

MIB Objects

alaQoSConfigTable

alaQoSConfigReset

qos stats reset

Resets QoS statistic counters to zero.

qos stats reset

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use this command to reset global QoS statistics to zero. Statistics may be displayed with the **show qos statistics** command.

Examples

```
-> qos stats reset
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[show qos statistics](#) Displays statistics about the QoS configuration.

MIB Objects

```
alaQoSConfigTable  
  alaQoSConfigStatsReset
```

qos switch-group

Changes how the switch handles IP addresses configured on the switch to help reduce the number of hardware entries required for QoS policies that use an IP address configured on the switch.

qos switch-group {expanded | compact}

Syntax Definitions

expanded	Uses the expanded method for populating the hardware routing table. This method requires a hardware entry for each individual IP interface belonging to either the built-in 'Switch' or 'Switch6' network groups.
compact	Uses the compact method for populating the hardware routing table by programming a single next hop entry for all IP interfaces belonging to either the built-in 'Switch' or 'Switch6' network groups.

Defaults

parameter	default
expanded compact	expanded

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

- The **expanded** method can be used to reduce the hardware entries required and allow for a single hardware entry to be programmed for all the IP interfaces belonging to either the built-in 'Switch' or 'Switch6' network groups instead of a hardware entry for each individual IP address.
- The built-in policy network group 'Switch' contains all the IPv4 interfaces configured on the switch.
- The built-in policy network group 'Switch6' contains all the IPv6 interfaces configured on the switch.
- It is required to reboot the switch for the switch group setting to take effect. The current setting will always be shown, with the modified setting in parentheses in the **show qos config** command.

Examples

```
-> qos switch-group compact
-> qos switch-group expanded
```

Release History

Release 8.4.1 R02; command introduced.

Related Commands

[show qos config](#) Displays global information about the QoS configuration.

MIB Objects

alaQoSConfig

alaQoSConfigSwitchGroup

qos port reset

Resets all QoS port configuration to the default values.

```
qos port chassis/slot/port[-port2] reset
```

Syntax Definitions

chassis The chassis identifier.

slot/port[-port2] A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The QoS port configuration parameters that are reset include:

parameter	default
default queues	8
trusted	not trusted

Examples

```
-> qos port 1/3/1 reset
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[show qos port](#) Displays information about QoS ports.

MIB Objects

alaQoSPortTable

 alaQoSPortSlot

 alaQoSPortPort

 alaQoSPortReset

qos port

Configures QoS parameters for a physical port. This section describes the base command with a single required option (*slot/port*).

In lieu of these options, the base command (**qos port**) may be used with other keywords to set up a QoS configuration on a per port basis. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a **no** form to remove the parameter or return it to its default.

```
qos port chassis/slot/port[-port2]
  [trusted]
  [maximum egress-bandwidth bps]
  [maximum ingress-bandwidth bps]
  [maximum {ingress | egress}-depth bytes]
  [default 802.1p value]
  [default dscp value]
  [default classification {802.1p | tos | dscp}]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

Defaults

- All ports are untrusted.
- By default, QoS ports do not preempt queues of lower priority.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **trusted** option to change the trust mode for the port.

Examples

```
-> qos port 1/3/1 trusted
-> qos port 1/4/2 no trusted
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
qos port trusted	Configures whether the default mode for QoS ports is trusted or untrusted.
show qos port	Displays information about QoS ports.

MIB Objects

```
alaQoSPortTable
  alaQoSPortSlot
  alaQoSPortPort
  alaQoSPortTrusted
  alaQoSPortMaximumBandwidth
  alaQoSPortMaximumBandwidthStatus
  alaQoSPortMaximumIngBandwidth
  alaQoSPortMaximumIngBandwidthStatus
  alaQoSPortMaximumDefaultDepth
  alaQoSPortMaximumDefaultDepthStatus
  alaQoSPortDefault8021p
  alaQoSPortDefaultDSCPalaQoSPortDefaultClassification
```

qos port trusted

Configures whether an individual port is trusted or untrusted. Trusted ports can accept the 802.1p and ToS/DSCP values in incoming packets; untrusted ports will set any 802.1p or ToS/DSCP values to zero in incoming packets, unless a default 802.1p or ToS/DSCP value is configured.

qos port chassis/slot/port[-port2] trusted

qos port chassis/slot/port no trusted

Syntax Definitions

chassis The chassis identifier.

slot/port[-port2] A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).

Defaults

By default, all ports are untrusted.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **qos trust-ports** command to set the default trust mode for all QoS ports. The **qos port trusted** command may be used to override the default.
- The setting applies only to ports with incoming traffic.
- Use the **qos port default 802.1p** or **qos port default dscp** commands to specify that a value other than zero should be applied to the incoming packets. Note that this value is overridden if a policy exists that specifies a different 802.1p or ToS/DSCP value for such packets.

Examples

```
-> qos port 1/3/1 trusted
-> qos port 1/4/2 no trusted
```

Release History

Release 7.1.1; command was introduced.

Related Commands**qos apply**

Applies configured QoS and policy settings to the current configuration.

qos port

Configures a physical port for QoS.

qos trust-ports

Configures the global trust mode for QoS ports.

show qos port

Displays information about QoS ports.

MIB Objects

alaQoSPortTable

 alaQoSPortTrusted

qos port maximum egress-bandwidth

Configures the maximum rate at which the traffic is sent on the specified QoS port.

qos port *chassis/slot/port[-port2]* **maximum egress-bandwidth** *bps* [**k** | **m** | **g** | **t**]

qos port *chassis/slot/port[-port2]* **no maximum egress-bandwidth**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
<i>bps</i> [k m g t]	The maximum amount of bandwidth, in bits-per-second, for all traffic that egresses on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m , 1g , 1t).

Defaults

By default, the maximum bandwidth is the maximum allowed for the interface type on which the port resides.

parameter	default
k m g t	k

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a configured maximum egress bandwidth value from a port.
- If the maximum egress bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number **10** is specified, **10K** is the maximum bandwidth value used. However, if **10G** is specified, the maximum bandwidth value applied is **10** gbps.
- The maximum egress bandwidth value cannot exceed the maximum bandwidth of the interface type associated with the port.
- Modifying the maximum egress bandwidth is most useful for low-bandwidth links.

Examples

```
-> qos port 1/3/1 maximum egress-bandwidth 10
-> qos port 1/4/1-8 maximum egress-bandwidth 10g
-> qos port 1/3/1 no maximum egress-bandwidth
-> qos port 1/4/1-8 no maximum egress-bandwidth
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos port maximum ingress-bandwidth	Configures the rate at which traffic is received on a QoS port.
qos apply	Applies configured QoS and policy settings to the current configuration.

```

qos port maximum ingress-bandwidth

Configures the maximum rate at which traffic is received on a QoS port.

qos port *chassis/slot/port[-port2]* **maximum ingress-bandwidth** *bps* [**k** | **m** | **g** | **t**]

qos port *chassis/slot/port[-port2]* **no maximum ingress-bandwidth**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
<i>bps</i> [k m g t]	The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m , 1g , 1t).

Defaults

By default, the maximum bandwidth is the maximum allowed for the interface type on which the port resides.

parameter	default
k m g t	k

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No	Yes

Usage Guidelines

- Use the **no** form of this command to remove a configured maximum ingress bandwidth value from a port.
- If the maximum ingress bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number **10** is specified, **10K** is the maximum bandwidth value used. However, if **10G** is specified, the maximum bandwidth value applied is **10** gbps.
- The maximum ingress bandwidth value cannot exceed the maximum bandwidth of the interface type associated with the port.
- Modifying the maximum ingress bandwidth is most useful for low-bandwidth links.

Examples

```
-> qos port 1/3/1 maximum ingress-bandwidth 10
-> qos port 1/4/1-8 maximum ingress-bandwidth 10g
-> qos port 1/3/1 no maximum ingress-bandwidth
-> qos port 1/4/1-8 no maximum ingress-bandwidth
```

Release History

Release 7.1.1; command introduced.

Related Commands

qos port maximum egress-bandwidth	Configures the rate at which traffic is sent on a QoS port.
qos apply	Applies configured QoS and policy settings to the current configuration.
qos port	Configures a physical port for QoS.
show qos port	Displays information about QoS ports.

MIB Objects

```

  alaQoSPortSlot
  alaQoSPortPort
  alaQoSPortMaximumIngBandwidth
  alaQoSPortMaximumIngBandwidthStatus
```

qos port maximum depth

Configures the maximum queue depth or bucket size assigned to this action, in bytes, used for traffic metering. The queue depth or bucket size determines the amount of buffer allocated to each queue. When the queue depth or bucket size is reached, the switch starts dropping packets.

qos port *chassis/slot/port[-port2]* maximum {ingress | egress}-depth bytes [k | m | g | t]

qos port *chassis/slot/port[-port2]* no maximum {ingress | egress}-depth

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports.
<i>bytes</i> [k m g t]	The maximum bucket size, in bytes. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m).

Defaults

parameter	default
k m g t	k
<i>bytes</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This QoS port parameter is configured in conjunction with the maximum bandwidth parameters. When the bucket size is reached, the switch starts to drop packets.
- Use the **no** form of the command to remove the maximum depth setting from a port.
- If the maximum depth value is specified as an integer, without an abbreviated unit designation, the value is applied in Kbytes by default. For example, if the number **10** is specified, **10K** is the maximum depth value used. However, if **1M** is specified, the maximum depth value applied is 1 Mbyte.
- Modifying the maximum depth is most useful for low-bandwidth links.

Examples

```
-> qos port 1/3/1 maximum ingress-depth 10
-> qos port 1/4/1-8 maximum egress-depth 1m
-> qos port 1/3/1 no maximum ingress-depth
-> qos port 1/4/1-8 no maximum egress-depth
```

Release History

Release 7.1.1; command was introduced.

Related Commands

  alaQoSPortMaximumIngressDepth
  alaQoSPortMaximumIngressDepthStatus
```

qos port default 802.1p

Configures the 802.1p value to be inserted in flows ingressing on an untrusted port.

qos port chassis/slot/port[-port2] default 802.1p value

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
<i>value</i>	The priority value to be set. Values range from 0 (lowest priority) to 7 (highest priority).

Defaults

parameter	default
<i>value</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- By default untrusted ports will set the 802.1p bit to zero on incoming flows. Use this command to specify that a different 802.1p value should be applied to the flow.
- The default 802.1p value is not used if there is a matching QoS policy rule that sets the priority.
- Note that the 802.1p bit for tagged packets received on untrusted ports is set with the default 802.1p value, which is configured using the **qos port default 802.1p** command. If the packet is untagged, however, then the DSCP bit is set with the default DSCP value, which is configured using the **qos port default dscp** command.

Examples

```
-> qos port 1/3/1 default 802.1p 5
-> qos port 1/4/1-8 default 802.1p 7
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
qos port	Configures a physical port for QoS.
show qos port	Displays information about QoS ports.

MIB Objects

```
alaQoSPortTable  
  alaQoSPortDefault8021p
```

qos port default dscp

Configures the ToS/DSCP value to be inserted in flows ingressing on an untrusted port.

qos port *chassis/slot/port[-port2]* **default dscp** *value*

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
<i>value</i>	The ToS/DSCP value. The range is 0–63.

Defaults

parameter	default
<i>value</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The value configured by this command sets the upper byte (precedence) and therefore configures the ToS/DSCP value for the port.
- The default DSCP value is not used if there is a matching QoS policy rule that sets the priority.
- Note that on the 802.1p bit for tagged packets received on untrusted ports is set with the default 802.1p value, which is configured using the **qos port default 802.1p** command. If the packet is untagged, however, then the DSCP bit is set with the default DSCP value, which is configured using the **qos port default dscp** command.

Examples

```
-> qos port 1/3/1 default dscp 63
-> qos port 1/4/1-8 default dscp 33
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
qos port	Configures a physical port for QoS.
show qos port	Displays information about QoS ports.

MIB Objects

alaQoSPortTable
alaQoSPortDefaultDSCP

qos port default classification

Specifies the default egress priority value to use for IP traffic ingressing on trusted ports.

qos port *chassis/slot/port[-port2]* default classification {tos | 802.1p | dscp}

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
tos	Specifies that the ToS value of the flow will be used to prioritize flows coming in on the port.
802.1p	Specifies that the 802.1p value of the flow will be used to prioritize flows coming in on the port.
dscp	Specifies that the DSCP value of the flow will be used to prioritize flows coming in on the port.

Defaults

parameter	default
tos 802.1p dscp	dscp

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The egress priority assigned to an IP packet received on a trusted port is based on the DSCP value of the packet unless 802.1p is specified using this command.
- The default classification priority is not used if there is a matching QoS policy rule that sets the egress priority value.
- This command does not affect Layer 2 traffic, which is always classified with 802.1p.
- In some network situations, some IP traffic may be dropped before any QoS rules can take effect for the traffic.

Examples

```
-> qos port 1/8/24 default classification dscp
-> qos port 1/4/1-8 default classification dscp
-> qos port 1/7/1 default classification 802.1p
-> qos port 1/5/1-8 default classification 802.1p
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
qos port	Configures a physical port for QoS.
show qos port	Displays information about QoS ports.

MIB Objects

```
alaQoSPortTable
  alaQoSPortDefaultClassification
```

qos port dei

Configures the Drop Eligible Indicator (DEI) bit mapping and marking setting for the specified QoS port. The DEI setting applies to packets marked yellow (non-conforming) as the result of Tri-Color Marking (TCM) or other rate limiting mechanisms.

```
qos port chassis/slot/port dei {ingress | egress}
```

```
qos port chassis/slot/port no dei {ingress | egress}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5).
ingress	Maps the DEI/CFI bit to yellow (non-conforming) if this bit is set for ingress traffic. <i>DEI mapping is not supported on the OmniSwitch 6465.</i>
egress	Marks the DEI/CFI bit for egress packets if the packets were marked yellow as a result of the rate limiting process.

Defaults

By default, no DEI/CFI bit mapping or marking is done.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the DEI bit mapping (ingress) or marking (egress) configuration for the specified port
- Use the **qos dei** command to set the global DEI bit mapping and marking configuration for all QoS switch ports. Note that the port-level setting takes precedence over the global DEI setting.
- Packets marked yellow by rate limiting are still transmitted when there is no congestion on the egress port queues. Setting the DEI bit for yellow egress packets (**qos port dei egress**) ensures that an upstream switch is made aware that the packet was marked yellow.
- When a switch receives a yellow packet with the DEI bit set and ingress DEI bit mapping is enabled (**qos port dei ingress**), the packet is mapped to an internal drop precedence or yellow color marking for the switch.

- DEI bit mapping is not supported on the OmniSwitch 6465. As a result, packets are processed as follows on that switch:
 - When packets are received on a trusted port, the DEI bit is retained only if the packets were not subject to a meter. If the port is untrusted, however, the DEI bit is always reset.
 - When a meter is set and DEI egress is configured on a trusted port, the DEI bit is reset to 0 for green packets. Yellow–red packets egress with the DEI bit set to 1.
- When the port is untrusted, DEI ingress is not supported on the OmniSwitch 6560 and OmniSwitch 6570M.

Examples

```
-> qos port 1/1/10 dei ingress
-> qos port 1/1/20 dei egress
-> qos port 1/1/10 no dei ingress
-> qos port 1/1/20 no dei egress
```

Release History

Release 7.2.1; command was introduced.

Related Commands

qos port	Configures a physical port for QoS.
qos dei	Configures the global Drop Eligible Indicator (DEI) bit mapping and marking setting for all QoS ports.
policy action cir	Configures a Tri-Color Marking policy action.
show qos config	Displays global information about the QoS configuration.
show qos port	Displays information about QoS ports.

MIB Objects

```
alaQoSPortTable
  alaQoSPortDEIMapping
  alaQoSPortDEIMarking
```

qos qsp import

Imports a predefined QSet profile (QSP) to a new or previous custom profile.

```
qos qsp {qsp_id | qsp_name} import qsp {import_qsp_id | import_qsp_name}
```

```
no qos qsp {qsp_id | qsp_name}
```

Syntax Definitions

<i>qsp_id</i>	A QSet custom profile ID. The valid custom profile ID range is 6–16.
<i>qsp_name</i>	The QSet profile name.
<i>import_qsp_id</i>	The ID of the QSet profile to import.
<i>import_dcp_name</i>	The name of the QSet profile to import.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	X72	Yes	Yes	Yes

Usage Guidelines

- The new QSet profile must be unique and not contain the same name and ID of an existing QSet profile.
- Use the **no** form of the command to remove an existing custom QSet profile from the switch configuration.
- On the OmniSwitch 6360, OmniSwitch 6860N, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8, the custom profile ID range is 3–8.
- On the OmniSwitch 6465, the custom profile ID range is 6–8.
- The following table lists which predefined QSPs can be used to import as a base for custom profiles:

OmniSwitch	Base QSP for Custom QSP
OS6360	QSP1, QSP2
OS6465	QSP1, QSP5
OS6560	QSP1, QSP5
OS6860/6865	QSP1, QSP5
OS6860N	QSP1, QSP2
OS6900-X72	QSP1, QSP5
OS6900-V72/C32	QSP1, QSP2
OS6900-X48C6/T48C6/ X48C4E/V48C8/C32E/ T24C2/X24C2	QSP1, QSP2
OS9900	QSP1, QSP5

- The predefined QSet profiles cannot be removed from the switch configuration.
- A custom profile can be assigned to any port or link aggregate, but not to a VFL link.
- A custom profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.

Examples

```
-> qos qsp 12 import qsp 1
-> qos qsp qsp-16 import qsp 5
-> no qsp 12
```

Release History

Release 8.3.1.R02; command was introduced.

Related Commands

- qos qsi qsp** Configures the QSet profile association for the QSet instance.
- show qos qsp** Displays the QSet profile attributes.

MIB Objects

```

  alaVfcQSPId
  alaVfcQSPName
  alaVfcQSPTemplateId
  alaVfcQSPTemplateName
  alaVfcQSPRowStatus
```

qos qsp qp

Modifies the Committed Information Rate (CIR), Peak Information Rate (PIR), scheduler, WFQ weight attributes for an individual queue profile (QP) associated with a custom QSet profile (QSP).

```
qos qsp {qsp_id | qsp_name} qp qp_id {cir % | pir % | weight weight | scheduler {sp | wrr | wrr2}}
```

Syntax Definitions

<i>qsp_id</i>	A QSet custom profile ID. The valid custom profile ID range is 6–16.
<i>qsp_name</i>	The QSet custom profile name.
<i>qp_id</i>	The queue profile number in the QSet custom profile.
cir %	The Committed Information Rate to apply to queue traffic. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900.</i>
pr %	The Peak Information Rate limit to apply to queue traffic.
<i>weight</i>	The queue weight that is used to determine the amount of shared bandwidth allocated for queue traffic. The valid range is 1–100.
sp	Selects the Strict Priority (SP) scheduler. <i>This parameter is supported only on the OmniSwitch 6360 and OmniSwitch 6465.</i>
wrr	Selects the Weighted Round Robin scheduler (WRR). <i>This parameter is supported only on the OmniSwitch 6360 and OmniSwitch 6465.</i>
wrr2	<i>This parameter is not supported.</i>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The queue weight value is only used when WRR is the scheduler for the queue.
- The **cir**, **pir**, and **weight** attributes are only configurable for individual queues that are associated with a custom QSet profile. Changing the scheduler attribute is not supported.
- Changing the scheduler attribute is supported only on the OmniSwitch 6360 and OmniSwitch 6465.

- When a custom profile is modified, the changes are applied to all ports that are associated with that custom profile. To apply specific changes to a single port (QSet instance), import a predefined profile into a new custom profile, make the necessary changes, then apply the new custom profile to the port.
- Custom QSet profile supports a combination of SP and WRR schedulers configuration in the same QSet profile. For example, a custom QSet profile can have SP applied to one queue, and WRR scheduler to another queue.

Examples

```
-> qos qsp 6 qp 1 weight 2 pir 100
-> qos qsp 6 qp 2 weight 1 pir 100
-> qos qsp 6 qp 3 weight 3 pir 100
-> qos qsp 6 qp 4 weight 4 pir 100
-> qos qsp 6 qp 5 weight 2 pir 100
-> qos qsp 6 qp 6 cir 10 pir 50
-> qos qsp 6 qp 7 weight 2 pir 100
-> qos qsp 6 qp 8 scheduler sp
ERROR: scheduler change is not supported.
```

The following example shows the custom QSet profile configured with a combination of strict priority and WRR schedulers applied to different queues of the same QSet profile.

```
-> qos qsp "ale-qsp-5" import qsp "qsp-5"
-> qos qsp "ale-qsp-5" qp 1 weight 15
-> qos qsp "ale-qsp-5" qp 3 pir 20 scheduler sp
-> qos qsp "ale-qsp-5" qp 8 weight 4
```

Release History

Release 8.3.1.R02; command was introduced.

Release 8.7R1; **scheduler** parameter deprecated.

Release 8.8R2; **scheduler** parameter supported on OmniSwitch 6360 and OmniSwitch 6465.

Related Commands

qos qsp import	Creates a custom QSet profile.
show qos qsp	Displays the QSet profile attributes.

  alaVfcQPPIRBandwidthLimitValue
  alaVfcQPWFqWeight
  alaVfcQPWFqMode
```

qos qsi qsp

Configures the QSet profile (QSP) association for the specified QSet instance (QSI). A QSI is a set of eight queues that is automatically associated with each port, link aggregate, and virtual fabric link (VFL).

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2] | vf-link vfl_id} qsp {qsp_id | qsp_name}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).
<i>vfl_id</i>	The VFL link ID (1/0). <i>This parameter option is supported only on the OmniSwitch 6860, OmniSwitch 6860N, and OmniSwitch 6865.</i>
<i>qsp_id</i>	An existing QSet profile (QSP) ID number to assign to this instance. Refer to the table in the “Usage Guidelines” section of this command page for a list of the supported QSP IDs.
<i>qsp_name</i>	An existing QSet profile name (for example, qsp-1) to assign to this instance.

Defaults

By default, QSP 1 is assigned to each QSet instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- There is only one QSI for each port, link aggregate, and VFL and only one QSP associated with each QSI.
- A QSI hierarchy exists consisting of parent/child relationships. For example, all member ports of a link aggregate will import the QSI/QSP settings of the parent link aggregate. When a member port moves out of the link aggregate, the QSI/QSP settings for that port are reset to the default settings.
- The number of children supported for a LAG ID is 8.
- Use the following table to determine which QSP IDs a specific switch platform supports and whether configuring a custom QSP is supported on that platform:

OmniSwitch	QSP1 (All-SP)	QSP2	QSP3	QSP4	QSP5 (All-WRR)	Custom QSP	Base QSP for Custom QSP
OS6360	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6465	Yes	No	No	No	Yes	Yes	QSP1, QSP5
OS6560	Yes	No	No	No	Yes	Yes	QSP1, QSP5
OS6570M	Yes	No	No	No	No	No	N/A
OS6860/6865	Yes	Yes	Yes	Yes	Yes	Yes	QSP1, QSP5
OS6860N*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6900	Yes	Yes	Yes	Yes	No	No	N/A
OS6900-X72	Yes	Yes	Yes	Yes	Yes	Yes	QSP1, QSP5
OS6900-V72/C32*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6900-X48C6/T48C6/ X48C4E/V48C8*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS9900	Yes	No	No	No	Yes	Yes	QSP1, QSP5

* QSP2 has all WRR schedulers.

- On an OmniSwitch 6860, OmniSwitch 6860N, or OmniSwitch 6865, changing the QSP assignment for one VFL instance automatically changes the QSP assignment for all of the other VFL instances to the same QSP. For example, if QSP 2 is assigned to VFL 1/0, then the QSP assignment for VFL 2/0 is also changed to QSP 2. It is not necessary to configure the QSP assignment separately for each VFL on the switch.

Examples

```
-> qos qsi port 1/1/2 qsp 2
-> qos qsi port 1/2/1-10 qsp 3
-> qos qsi slot 3 qsp 4
-> qos qsi linkagg 10 qsp 2
```

The following command examples show that when the QSP assignment for VFL 1 is changed to QSP 2, the QSP for VFL 2 is automatically changed as well:

```
-> qos qsi vf-link 1/0 qsp 2
WARNING: configuration change applied to all VFLs in the system
```

```
-> show qos qsi vf-link 1/0 summary
Legends: * indicates port is misconfigured.
```

```

      Profile
Port   #   Name           Mode Parent
-----+---+-----+-----+-----
vfl-1/0  2   qsp-2             NDCB vfl-1/0
```

```
-> show qos qsi vf-link 2/0 summary
Legends: * indicates port is misconfigured.
```

```

      Profile
Port   #   Name           Mode Parent
-----+---+-----+-----+-----
vfl-2/0  2   qsp-2             NDCB vfl-2/0
```

Release History

Release 7.2.1.R02; command introduced.

Release 8.3.1; **vf-link** parameter added.

Related Commands

Changes the default QSet profile (QSP) that is assigned to each port, link aggregate ID, and virtual fabric link (VFL).

```
qos qsp system-default {qsp_id | qsp_name}
```

Syntax Definitions

qsp_id An existing QSet profile (QSP) ID number to use as the default QSP. The valid range is 1–4.

qsp_name An existing QSet profile name (qsp-1, qsp-2, qsp-3, qsp-4) to use as the default QSP.

Defaults

By default, QSP 1 is assigned to each QSet instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	No	No	No	No

Usage Guidelines

- When this command is used, the specified QSP is assigned to all ports, link aggregates, and VFLs on the switch.
- Changing the system default profile is only allowed when the switch is running in the non-Data Center Bridging (NDCB) mode. This mode is active by default when there is no OmniSwitch Data Center software license installed on the switch.
- A QSP assigned through the **qos qsi qsp** command overrides the system default QSP assignment. For example, if the system default QSP is set to 1 and the **qos qsi qsp** command is used to change the QSP to 2 on port 1/1/20, the QSP 2 settings are applied to port 1/1/20.

Examples

```
-> qos qsp system-default 2
-> qos qsp system-default qsp-4
```

Release History

Release 8.3.1; command introduced.

Related Commands

- qos qsi qsp** Configures the QSet profile association for the QSet instance.
- show qos qsp system-default** Displays the name and ID of the default QSP for the switch.

MIB Objects

```
alcatelIND1VfcMIB  
  alaVfcSystemDefaultQsetQSPName  
  alaVfcSystemDefaultQsetQSPId
```

qos qsi stats

Configures the administrative status and interval for statistics collection for the specified QSet instance (QSI). A QSI is a set of eight queues that is automatically associated with each port and link aggregate (LAG) ID.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats {admin-state {enable | disable} | interval interval_time}}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).
enable	Enables statistics collection for the instance.
disable	Disables statistics collection for the instance.
<i>interval_time</i>	The time interval for statistics gathering. The valid range is 10–300 seconds.

Defaults

By default, statistics collection is disabled and the time interval is set to 10 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- There is only one QSI per port or LAG ID and only one QSet profile (QSP) or DCB profile (DCP) associated with the QSI.
- Changing the statistics collection status for a QSI only changes the status for the port or link aggregate to which the QSI is associated.

Examples

```
-> qos qsi port 1/1/2 stats admin-state enable
-> qos qsi port 1/1/2 stats interval 30
-> qos qsi port 1/2/1-10 stats admin-state enable
-> qos qsi linkagg 10 stats admin-state enable interval 120
```

Release History

Release 7.2.1.R02; command introduced.

Related Commands

qos qsi qsp	Configures the QSet profile association for the QSet instance.
show qos qsi	Displays the QSet instance configuration.
show qos qsi stats	Displays statistics for one or more QSet instances.

```

show qos port

Displays information about all QoS ports or a particular port.

show qos port [*chassis/slot/port*]

Syntax Definitions

chassis The chassis identifier.
slot/port[-port2] The slot and port number (3/1).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all ports is displayed unless a particular port is specified.
- Use the **qos port** command to configure port parameters.
- For ports that are trusted (**Yes** displays in the Trust field), the Trust field includes one of the following characters:

character	definition
+	Indicates that the port is manually configured as trusted through the qos port trusted command; the port setting takes precedence over the global trust setting configured through the qos trust-ports command.
*	Indicates that the port is automatically trusted regardless of the global setting set through the qos trust-ports command. (Applies to mobile ports and ports configured for 802.1Q.)

- Dash ('-') in the **Bandwidth** signifies the ingress/egress default value, which is equal to the port physical bandwidth. This means, the maximum ingress/egress bandwidth is not explicitly configured.

Examples

```
-> show qos port
```

Slot/ Port	Active	Trust	Default P/DSCP	Default Classification	Bandwidth Physical	Ingress	Egress	DEI Map/Mark	Type
1/1/1	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/2	Yes	No	0/ 0	DSCP	1.00G	-	-	No / No	ethernet-1G
1/1/3	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/4	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/5	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/6	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/7	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/8	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/9	No	No	0/ 0	DSCP	0K	-	-	No / No	ethernet
1/1/10	No	No	0/ 0	DSCP	0K	50K	-	No / No	ethernet
1/1/11	No	*Yes	0/ 0	*802.1P	0K	-	-	No / No	ethernet
1/1/12	No	*Yes	0/ 0	*802.1P	0K	-	-	No / No	ethernet

```
-> show qos port 1/1/2
```

Slot/ Port	Active	Trust	Default P/DSCP	Default Classification	Bandwidth Physical	Ingress	Egress	DEI Map/Mark	Type
1/1/2	Yes	No	0/ 0	DSCP	1.00G	-	-	No / No	ethernet-1G

output definitions

Slot/Port	The slot and physical port number.
Active	Whether or not the port is sending/receiving QoS traffic.
Trust	Whether the port is trusted or not trusted. Configured through the qos port trusted command.
Default P	The default 802.1p setting for the port. Configured through the qos port default 802.1p command.
Default DSCP	The default ToS/DSCP setting for the port. Configured through the qos port default dscp command.
Default Classification	The default classification setting for the port (802.1p , ToS , or DSCP). Configured through the qos port default classification command.
Physical Bandwidth	The amount of physical bandwidth available on the port.
Ingress Bandwidth	The amount of ingress bandwidth configured for the port. Configured through the qos port maximum ingress-bandwidth command.
Egress Bandwidth	The amount of egress bandwidth configured for the port. Configured through the qos port maximum egress-bandwidth command.
DEI Map/Mark	The Drop Eligible Indicator (DEI) bit mapping and marking setting for the port. Configured through the qos port dei command.
Type	The interface type, ethernet or wan .

Release History

Release 7.1.1; command was introduced.

show qos slice

Displays rule availability and usage information for QoS slices of QoS slots. A *slice* is a logical section of hardware and corresponds to particular ports on the interface.

show qos slice [*slot/slice*]

Syntax Definitions

slot/slice The slot number and slice for which you want to view information. The number of slices per module varies depending on the type of module.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	Yes	No	No	No

Usage Guidelines

- Information for all slots/slices is displayed unless a particular slot/slice is requested.
- This command is useful for monitoring switch resources required for policy rules.
- On the following switch platforms, use the **show tcam utilization** command instead of the **show qos slice** command:
 - OmniSwitch 6360
 - OmniSwitch 6465
 - OmniSwitch 6560
 - OmniSwitch 6570M
 - OmniSwitch 6860N
 - OmniSwitch 6900-V72/C32
 - OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8
 - OmniSwitch 9900

Examples

```
-> show qos slice

			2	256/256	256/256	256/256
			3	256/256	256/256	256/256

output definitions

Slot/Unit	The slot and slice number.
Type	The type of slice.
Ranges Total	The total number of TCP/UDP port ranges supported per slot/slice.
Ranges Free	The number of TCP/UDP port ranges that are still available for use.
CAM	The CAM number.
Rules Total	The total number of rules supported per CAM.
Rules Free	The number of rules that are still available for use. On startup, the switch uses 27 rules.
Counters Total	The total number of counters supported per CAM.
Counter Free	The number of counters that are still available for use.
Meters Total	The total number of meters supported per CAM.
Meters Free	The number of meters that are still available for use.

Release History

Release 7.1.1; command was introduced.

Related Commands**policy rule**

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

  DEI Mapping          = Disabled,
  DEI Marking          = Disabled,
  Pending changes      = none
```

output definitions

Admin	Whether or not QoS is enabled or disabled. Configured through the qos command.
Switch Group	Whether the expanded or compact method is used to populate the hardware routing table. Configured through the qos switch-group command.
Trust Ports	The default trusted mode for switch ports. Configured through the qos trust-ports command.
Phones	Whether or not IP Phone traffic is automatically trusted or assigned a priority value. Configured through the qos phones command.
Log lines	The number of lines included in the QoS log. Configured through the qos log lines command.
Log level	The level of log detail. Configured through the qos log level command.
Log console	Whether or not log messages are sent to the console. Configured through the qos log console command.
Forward log	Whether or not logged events are sent to the policy server software in the switch in real time. Configured through the qos forward log command.
Stats interval	How often the switch polls network interfaces for statistics about QoS events. Configured through the qos stats interval command.
User-port filter	The type of traffic that is filtered on ports that are members of the UserPorts group. Configured through the qos user-port command.
User-port shutdown	The type of traffic that will trigger an administrative shutdown of the port if the port is a member of the UserPorts group. Configured through the qos user-port command.
Debug	The type of information that will be displayed in the QoS log. A value of info indicates the default debugging type.
DEI Mapping	The status (enabled or disabled) of Drop Eligible Indicator (DEI) bit mapping for ingress traffic. Configured through the qos dei command.
DEI Marking	The status (enabled or disabled) of DEI bit marking for egress traffic. Configured through the qos dei command.
Pending changes	QoS changes not yet applied to the configuration.

Release History

Release 7.1.1; command was introduced.

Related Commands

output definitions

Events	The number of Layer 2 or Layer 3 flows transmitted on the switch.
Matches	The number of Layer 2 or Layer 3 flows that match policies.
Drops	The number of Layer 2 or Layer 3 flows that were dropped.
L2	The number of Layer 2 events, matches, and drops.
L3 Ingress	The number of Layer 3 ingress events, matches, and drops.
L3 Egress	The number of Layer 3 egress events, matches, and drops.
IGMP join	The number of multicast events, matches, and drops.
Fragments	The number of fragments dropped.
Bad Fragments	The number of fragments received with an offset of 1.
Unknown Fragments	The number of out-of-order fragments received.
Sent NI messages	The number of messages sent to network interfaces.
Received NI messages	The number of messages received by network interfaces.
Failed NI messages	The number of failed message attempts to network interfaces.
Load balanced flows	The number of Server Load Balance flow entries.
Reflexive flows	The number of reflexive flows.
Reflexive correction	The number of reflexive flow corrections.
Flow lookups	The number of flow table lookups.
Flow hits	The number of flow table lookup hits.
Max PTree nodes	The highest number of nodes in the classifier tree.
Max Ptree depth	The length of the longest path in the classifier tree.
Spoofed Events	The number of spoofed events.
Nonspoofed Events	The number of non-spoofed events.
DropServices	The number of TCP/UDP flows dropped.

Release History

show qos auto mac-range

Displays the default and user configured mac-ranges of the alaPhones policy group.

show qos auto mac-range

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the [policy mac group](#) command to add MAC addresses to the alaPhones MAC address group.
- User configured MAC ranges will be displayed under the AlaPhones MAC address group heading.

Examples

```
OS6560-> show qos auto mac-range
```

```

Mac Range  Start Mac Addr          End Mac Addr
-----+-----+-----
01          00:80:9f:00:00:00      00:80:9f:ff:ff:ff

show qos qsi summary

Displays a list of switch ports showing the QoS or DCB profile assigned to each port.

show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] summary

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

Defaults

By default, a summary of all ports is displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Enter a port or link aggregate ID with this command to display information for a specific port or link aggregate.

Examples

```
-> show qos qsi summary
Legends: * indicates port is misconfigured.
```

```

      Profile
Port   #   Name           Mode Parent
-----+-----+-----+-----
1/1/1   1   qsp-1             NDCB 1/1/1
1/1/2   1   qsp-1             NDCB 1/1/2
1/1/3   1   qsp-1             NDCB 1/1/3
1/1/4   1   qsp-1             NDCB 1/1/4
1/1/5   7   qsp-7             NDCB 1/1/5
1/1/6   1   qsp-1             NDCB 1/1/6

```

```
-> show qos qsi port 1/1/1-5 summary
Legends: * indicates port is misconfigured.
```

```

      Profile
Port   #   Name           Mode Parent

```

```

-----+---+-----+---+-----
1/1/1      1   qsp-1      NDCB 1/1/1
1/1/2      1   qsp-1      NDCB 1/1/2
1/1/3      1   qsp-1      NDCB 1/1/3
1/1/4      1   qsp-1      NDCB 1/1/4
1/1/5      7   qsp-7      NDCB 1/1/5

```

output definitions

Port	Configured DCB ports.
Profile #	Identifies the DCB profile assigned to the port.
Profile Name	Name of the DCB profile assigned to the port.
Mode	Indicates if the port is DCB or NDCB.
Parent	Lists the parent of the port.

Release History

Release 7.3.1; command was introduced.

Related Commands

- show qos qsi dcb dcbx** Displays the configured ports in the system and the related DCBX information.
- qos qsi qsp dcb** Assigns a DCB profile to a port or link aggregate.

MIB Objects

```

  alaVfcQsetId
  alaVfcQsetQSPID
  alaVfcQsetQSPName
  alaDcbxPortInstanceTable
  alaVfcQsapParent

```

show qos qsp

Displays the QSet profile (QSP) configuration for the switch.

```
show qos qsp [qsp_id | qsp_name] [brief | detail [port chassis/slot/port[-port2]] | linkagg agg_id[-agg_id2]]
```

Syntax Definitions

<i>qsp_id</i>	A QSet profile (QSP) ID number. Refer to the table in the “Usage Guidelines” section for a list of the supported QSP IDs.
<i>qsp_name</i>	The name of a QSP profile.
brief	Displays a summary of the QSP configuration.
detail	Displays QSP configuration details for a specific profile, port, slot, or link aggregate.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	A physical slot and port number. Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

Defaults

By default, displays the configuration for all of the QSet profiles.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the *qsp_id* or the *qsp_name* parameter to display information for a specific profile.
- Use the **detail** parameter in combination with the **port slot/port** and **linkagg agg_id** parameters to display profile information associated with specific ports or link aggregates.
- Configuring a QSP assignment for a virtual fabric link (VFL) is supported only on the OmniSwitch 6860, OmniSwitch 6860N, and OmniSwitch 6865.
- The following QSPs are supported on the specified switch platforms:

OmniSwitch	QSP1 (All-SP)	QSP2	QSP3	QSP4	QSP5 (All-WRR)	Custom QSP	Base QSP for Custom QSP
OS6360	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6465	Yes	No	No	No	Yes	Yes	QSP1, QSP5
OS6560	Yes	No	No	No	Yes	Yes	QSP1, QSP5
OS6570M	Yes	No	No	No	No	No	N/A
OS6860/6865	Yes	Yes	Yes	Yes	Yes	Yes	QSP1, QSP5
OS6860N*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6900	Yes	Yes	Yes	Yes	No	No	N/A
OS6900-X72	Yes	Yes	Yes	Yes	Yes	Yes	QSP 1, QSP 5
OS6900-V72/C32*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS6900-X48C6/T48C6/ X48C4E/V48C8*	Yes	Yes	No	No	No	Yes	QSP1, QSP2
OS9900	Yes	No	No	No	Yes	Yes	QSP1, QSP5

* QSP2 has all WRR schedulers.

Examples

output definitions

QSP	The QSet profile (QSP) ID number and name.
#Ports	The number of ports to which this profile is attached.
#Queues	The number of queues associated with this QSet. Currently there are eight queues for each QSet.
BW%	The bandwidth percentage for the QSet. The bandwidth is shared between all the queues.
WRP	<i>Not supported in this release.</i>
Name	<i>Not supported in this release.</i>
Scheduler	The type of scheduler, such as queue specific priority (Qspec) or strict priority.
Type	Whether the QSP is static (predefined) or dynamic (user-configured). Refer to the table in the “Usage Guidelines” section for a list of the predefined QSPs and to determine whether user-configured QSPs are supported.
QP 1...8	The queue profile configuration for each QSet queue. The configuration for each of the individual queue profiles is defined by the QSP in use. For example, QSP 1 applies a different queue configuration than QSP 2, 3, or 4.

```
-> show qos qsp brief
```

Profile	Name	#Ports	#Queues	BW(%)	Type	Base Profile
1	qsp-1	58	8	100	Static	qsp-1
5	qsp-5	0	8	100	Static	qsp-5
6	qsp-6	0	8	100	Dynamic	qsp-5

output definitions

Profile	The QSet profile (QSP) ID number.
Name	The QSP name.
#Ports	The number of ports to which this profile is attached.
#Queues	The number of queues associated with this QSet. Currently there are eight queues for each QSet.

output definitions (continued)

BW%	The bandwidth percentage for the QSet. The bandwidth is shared between all the queues.
Type	Whether the QSP is static (predefined) or dynamic (user-configured). Refer to the table in the “Usage Guidelines” section for a list of the predefined QSPs and to determine whether user-configured QSPs are supported.
Base Profile	The profile on which the QSP is based. The profile number will differ for user-configured profiles.

```
-> show qos qsp detail
```

QSAP Port	QSAP Type	dQSI	ID Name	QSAP Parent	BW (%) Admin	BW (%) Oper	T
1/1/12	Phy	Port 1/1/12	1 qsp-1	Port 1/1/12	100	100	S

output definitions

QSAP Port	The port number, link aggregate ID, or virtual fabric link (VFL) ID for the QSet attachment point (QSAP). A QSAP is a logical entity generated internally by the switch to identify the association between a QSet instance and a port, link aggregate, and VFL. The QSAP is not configurable at this time.
QSAP Type	The type of QSAP port; Phy = physical (slot/port), Log = logical (linkagg ID or VFL ID).
dQSI	The default QSet instance (dQSI) ID number. This number is generated internally by the switch to identify the QSI that is automatically assigned to each port, link aggregate, and VFL.
ID	The QSet profile (QSP) ID number.
Name	The QSP name.
QSAP Parent	The QSAP parent ID number. If the parent ID is different than the QSAP ID, then the port is a member of a link aggregate or a VFL.
BW (%) Admin	The administrative bandwidth percentage for the QSet. The administrative percentage is not configurable at this time.
BW (%) Oper	The operational percentage of bandwidth as determined by the port speed. For a link aggregate, this value is the sum of the operational bandwidth percentages for the member ports.
T	Whether the QSP type is static (S) or dynamic (D). Refer to the table in the “Usage Guidelines” section for a list of the static (predefined) QSPs and to determine whether dynamic (user-configured) QSPs are supported.

Release History

Release 7.2.1; command was introduced.

Related Commands

qos qsi qsp	Changes the QSet profile association for a QSet instance.
show qos qsi	Displays the QSet instance configuration.

show qos wrp

Displays the Weighted Random Early Detection (WRED) profile (WRP) configuration for the switch.

```
show qos wrp [wrp_id | wrp_name] [detail [port chassis/slot/port[-port2]] | slot slot | linkagg agg_id[-agg_id2]]
```

Syntax Definitions

<i>wrp_id</i>	A WRED profile (WRP) ID number. The valid range is 1.
<i>wrp_name</i>	A WRED profile name.
detail	Displays WRED profile configuration details for a port, slot, or link aggregate.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number of a non-DCB (Data Center Bridging) port. Use a hyphen to specify a range of ports (1/5-10).
<i>slot</i>	A slot number. Displays information for all non-DCB ports on the slot.
<i>agg_id[-agg_id2]</i>	The link aggregate ID for a non-DCB aggregate. Use a hyphen to specify a range of IDs (10-15).

Defaults

N/A

Platforms Supported

Not supported in this release.

Usage Guidelines

- This command is not supported on OmniSwitch 6900 DCB ports.
- Use the *wrp_id* or the *wrp_name* parameter to display information for a specific profile.
- Use the **detail** parameter to display additional profile information, such as the profile configuration associated with queues and ports.
- Use the **port** *slot/port*, **slot** *slot*, and **linkagg** *agg_id* parameters to display profile information associated with specific ports or link aggregates. These parameters are used in combination with the **detail** parameter.

Examples

```
-> show qos wrp
WRP 1 (wrp-1)
  #Ports: 480, MTU: 1540
  Red
    Min-Th: 10, Max-Th: 50, Max-Pb: 36, Gain: 9
  Yellow
    Min-Th: 50, Max-Th: 90, Max-Pb: 30, Gain: 9
  Green
    Min-Th: 90, Max-Th: 100, Max-Pb: 24, Gain: 9
```

output definitions

WRP	The WRED profile (WRP) ID number and name.
#Ports	The number of ports to which this profile is attached.
MTU	The MTU size.
Min-Th	The minimum queue threshold percentage for red, green, and yellow packets.
Max-Th	The maximum queue threshold percentage for red, green, and yellow packets.
Max-Pb	The maximum drop probability percentage for red, green, and yellow packets.
Gain	The gain value to smooth out the queue (1–15).

```

```

output definitions

Port	The physical slot and port number (or link aggregate ID for a logical port).
QSAP	The QSet attachment point (QSAP). This is a logical entity used internally by the switch to identify the association between a QSet instance and a port or link aggregate. The QSAP is not configurable at this time.
Parent	The QSAP ID for the parent QSAP, if any.
WRP Name Admin	The WRED profile (WRP) ID number, name, and administrative status.
QSI	The switch port associated with the QSet instance (QSI).
QSP Name Admin	The QSet profile (QSP) ID number, name, and administrative status.
QI 1..8	The WRP information for each of the QSet queues.

Release History

Release 7.2.1; command was introduced.

Related Commands

show qos qsi

Displays the QSet instance (QSI) configuration for the switch. A QSI is a logical set of eight egress queues associated with each port, link aggregate (LAG) ID, and virtual fabric link (VFL).

show qos qsi [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg_id*[-*agg_id2*] | **vf-link** *vfl_id*] [**detail** | **summary**]

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i>]	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id</i> [- <i>agg_id2</i>]	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
<i>vfl_id</i>	The VFL ID (1/0). <i>This parameter option is supported only on the OmniSwitch 6860 and OmniSwitch 6865.</i>
detail	Displays additional queue information for the instance.
summary	Displays summary information for the instance.

Defaults

By default, displays the entire QSI configuration for the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **port** *slot/port*, **slot** *slot*, **linkagg** *agg_id*, and **vf-link** *vfl_id* parameters to display the QSI information associated with specific ports, link aggregates, or VFLs. These parameters can also be combined with the **detail** or **summary** parameters.

```

output definitions

QSAP	The port number, link aggregate ID, or virtual fabric link (VFL) ID for the QSet attachment point (QSAP). A QSAP is a logical entity generated internally by the switch to identify the association between a QSet instance and a port, link aggregate, and VFL. The QSAP is not configurable at this time.
Parent	The parent QSAP ID. If the parent ID is different than the QSAP ID, then the port is a member of a link aggregate or VFL.
QSI	The QSet instance (QSI) ID number, internally generated by the switch.
QSP, Name	The QSet profile (QSP) ID number and name associated with the QSI.
WRP, Name, Admin, Oper	<i>Not supported in this release.</i>
Stats, Admin, Oper, Interval	The QSI administrative status, operational status, and time interval for statistics collection.
BW Admin (%)	The administrative percentage of bandwidth (currently not user-configurable).

output definitions (continued)

BW Oper (%)	The operational percentage of bandwidth as determined by the port speed. For a link aggregate, this value is the sum of the operational bandwidth percentages for the member ports.
QI 1–8	The queue scheduling and bandwidth configuration for each QSI queue. These values are determined by which one of the QSet profiles (QSP 1–4) is associated with the QSI.

```
-> show qos qsi port 1/1/20 summary
Legends: * indicates port is misconfigured.
```

Port	Profile		Mode	Parent
	#	Name		
1/1/20	1	qsp-1	NDCB	1/1/20

```
-> show qos qsi vf-link 1/0 summary
Legends: * indicates port is misconfigured.
```

Port	Profile		Mode	Parent
	#	Name		
vf1-1/0	2	qsp-2	NDCB	vf1-1/0

output definitions

Port	The physical slot and port number (or link aggregate ID or VFL ID for a logical port).
Profile #, Name	The QSet profile (QSP) ID number and name associated with the QSI.
Mode	The QSI operating mode (NDCB or DCB). This mode determines whether Data Center Bridging (DCB) profiles or QSet profiles (non-DCB) are applied to the QSI instance. DCB and QSet profiles are mutually exclusive in that if the OmniSwitch Data Center software license is installed, only DCB profiles are applied.
Parent	The parent QSAP ID. If the parent ID is different than the QSAP ID, then the port is a member of a link aggregate or VFL.

Release History

Release 7.1.1; command was introduced.
 Release 7.2.1; output display modified for the OmniSwitch 6900.
 Release 7.2.1.R02; output display modified for the OmniSwitch 6900.
 Release 8.3.1; **vf-link** and **summary** parameters added.

Related Commands

qos qsi qsp	Changes the QSet profile association for a QSet instance.
show qos qsi stats	Displays packet count statistics collected for a specific QSet instance.

show qos qsi stats

Displays statistics for the QSet instance (QSI) queues that are associated with non-DCB (NDCB) ports.

```
show qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats [bytes | rate [bytes]]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-15).
bytes	Displays the total number of bytes (instead of packets) that flow through the QSI queues.
rate	Displays the number of packets-per-second that flow through the QSI queues.

Defaults

parameter	default
bytes rate	bytes

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The specified port or link aggregate must have statistics collection enabled.
- Use the **port** *slot/port* or **linkagg** *agg_id* parameters to display QSI statistics associated with specific ports or link aggregates.
- It is possible to combine the **bytes** parameter with the **rate** parameter to display the number of bytes-per-second that flow through the QSI queues. For example, **show qos qsi port 1/20 stats rate bytes**.
- Statistics are displayed on a per-queue basis for each port. There are eight queues associated with a single QSet instance. Each queue is identified with a queue ID (1–8). Each port and link aggregate is associated with one QSet instance.

Examples

```
-> show qos qsi port 1/1/20 stats
```

Port	Q	Total	
		Tx	Drop
1/1/20	1	0	0
1/1/20	2	0	0
1/1/20	3	0	0
1/1/20	4	0	0
1/1/20	5	0	0
1/1/20	6	0	0
1/1/20	7	0	0
1/1/20	8	9984	0

```
-> show qos qsi port 1/1/20 stats bytes
```

Port	Q	Total	
		Tx	Drop
1/1/20	1	0	0
1/1/20	2	0	0
1/1/20	3	0	0
1/1/20	4	0	0
1/1/20	5	0	0
1/1/20	6	0	0
1/1/20	7	0	0
1/1/20	8	987424	0

```
-> show qos qsi port 1/1/20 stats rate
```

Port	Q	Average	
		Tx/s	Drop/s
1/1/20	1	0	0
1/1/20	2	0	0
1/1/20	3	0	0
1/1/20	4	0	0
1/1/20	5	0	0
1/1/20	6	0	0
1/1/20	7	0	0
1/1/20	8	7	0

```
-> show qos qsi port 1/1/20 stats rate bytes
```

Port	Q	Average	
		Tx/s	Drop/s
1/1/20	1	0	0
1/1/20	2	0	0
1/1/20	3	0	0
1/1/20	4	0	0
1/1/20	5	0	0
1/1/20	6	0	0
1/1/20	7	0	0
1/1/20	8	694	0

output definitions

Port	The slot and port number.
Q	The QSet queue ID number (1–8) associated with the QoS (non-DCB) port.
Total Tx	Total packets or bytes transmitted.
Total Drop	Total packets or bytes dropped.

Release History

Release 7.3.1; command was introduced.

Related Commands

qos qsi stats	Enables or disables statistics collection for a DCB or non-DCB port.
clear qos qsi stats	Clears statistics collected for one or more QSet instances.

MIB Objects

```
alaVfcQInstanceTable  
  alaVfcQInstancePacketsEnqueued  
  alaVfcQInstanceBytesEnqueued  
  alaVfcQInstancePacketsDropped  
  alaVfcQInstanceBytesDropped
```

show qos qsi ecn-stats

Displays the Enhanced Congestion Notification (ECN) statistics of a port or linkagg.

```
show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2] ecn-stats [bytes | rate [bytes]]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-15).
bytes	Displays the total number of bytes (instead of packets) that flow through the QSI queues.
rate	Displays the number of packets-per-second that flow through the QSI queues.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	No	Yes	No	No

Usage Guidelines

- The specified port or link aggregate must have statistics collection enabled.
- Use the **port** *slot/port* or **linkagg** *agg_id* parameters to display QSI statistics associated with specific ports or link aggregates.
- It is possible to combine the **bytes** parameter with the **rate** parameter to display the number of bytes-per-second that flow through the QSI queues. For example, **show qos qsi port 1/20 ecn-stats rate bytes**.
- Statistics are displayed on a per-queue basis for each port. There are eight queues associated with a single QSet instance. Each queue is identified with a queue ID (1–8). Each port and link aggregate is associated with one QSet instance.
- ECN Marked, Q-Full Drop packet statistics are not available.
- ECN Marked, WRED Drop, Q-Full Drop bytes statistics are not available.

Examples

```
-> show qos qsi linkagg 100 ecn-stats rate
```

Legends: ECN Marked, Q-Full Drop stats are not available

Linkagg	Q	Tx	ECN Marked Tx	WRED Drop	Q-Full Drop
0/100	1	21	-	-	-
0/100	2	0	-	-	-
0/100	3	0	-	-	-
0/100	4	0	-	-	-
0/100	5	3	-	80	-
.					
.					

```
-> show qos qsi port 1/1/2A ecn-stats bytes
```

Legends: ECN Marked, WRED Drop, Q-Full Drop bytes stats are not available

Port	Q	Tx	ECN Marked Tx	WRED Drop	Q-Full Drop
1/1/2A	1	1708940	-	-	-
1/1/2A	2	0	-	-	-
1/1/2A	3	0	-	-	-
1/1/2A	4	0	-	-	-
.					
.					

output definitions

Linkagg	The link aggregate ID.
Port	The port number.
Q	The egress queue ID (1-8) associated with the port.
Tx	The total packets or bytes transmitted.
ECN Marked Tx	The number of ECN marked packets or bytes transmitted. ECN Marked Tx packets and bytes statistics are not available.
WRED Drop	The number of WRED (Non ECT) packets/bytes dropped. WRED drop bytes statistics are not available.
Q-Full Drop	(Total packets/bytes dropped) - (WRED packets/bytes dropped). Q-Full drop packets and bytes statistics are not available.

Release History

Release 8.7R2; command introduced.

Related Commands

[qos ecnp import ecnp](#)

Creates a custom Enhanced Congestion Notification (ECN) profile in a non-Data Center Bridging (NDCB) mode.

MIB Objects

N/A

show qos qsi wred-stats

Displays the Weighted Random Early Detection (WRED) statistics for the QSet instance.

```
show qos qsi {port chassis/slot/port[-port2] | slot slot | linkagg agg_id[-agg_id2]} wred-stats [rate | bytes]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number of a non-DCB (Data Center Bridging) port. Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number of a non-DCB aggregate. Use a hyphen to specify a range of IDs (10-15).
rate	Displays the number of packets per second.
bytes	Displays the total number of bytes.

Defaults

By default, displays the total number of packets for all the QSI queues.

Platforms Supported

Not supported in this release.

Usage Guidelines

- This command is not supported on OmniSwitch 6900 DCB ports.
- Use the **port chassis/slot/port**, **slot slot**, and **linkagg agg_id** parameters to display QSI statistics associated with specific ports or link aggregates.
- This command displays the total number of packets or bytes.

Examples

```
-> show qos qsi port 1/1/2 wred-stats
* OS6900 WRED Per Q stats not supported, Tx stats not supported
Port          Green          Yellow          Red
           Q Drop          Drop          Drop
-----+-----+-----+-----+-----
Port 1/1/2  - 0              0              0

-> show qos qsi port 1/1/1 wred-stats rate
* OS6900 WRED Per Q stats not supported, Tx stats not supported
Port          Green          Yellow          Red
           Q Drop/s          Drop/s          Drop/s
-----+-----+-----+-----+-----
1/1/1        - 0              0              0
```

```

-> show qos qsi port 1/1/1 wred-stats bytes
* OS6900 WRED Per Q stats not supported, Tx stats not supported
          Green          Yellow          Red
Port      Q Drop          Drop          Drop
-----+-----+-----+-----
1/1/1    - 0              0              0

```

output definitions

Port	The switch port.
Q	The egress queue ID (1–8) associated with the port.
Green TX, Green Drop	The number of green packets or bytes transmitted and dropped.
Yellow TX, Yellow Drop	The number of yellow packets or bytes transmitted and dropped.
Red TX, Red Drop	The number of red packets or bytes transmitted and dropped.

Release History

Release 7.2.1.R01; WRED per Q stats not supported; Tx stats not supported.

Related Commands

show qos qsi	Displays the QSet instance configuration.
clear qos qsi stats	Clears statistics collected for one or more QSet instances.

```

show qos qsp system-default

Displays the name and ID of the QSet profile (QSP) that serves as the default system QSP. when the switch is running in the non-DCB (NDCB) mode.

show qos qsp system-default

Syntax Definitions

N/A

Defaults

By default, QSP 1 is assigned to each QSet instance.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	No	No	No	No

Usage Guidelines

- The switch is operating in the NDCB mode when the OmniSwitch Data Center software license is *not* installed on the switch.
- The switch is operating in the Data Center Bridging (DCB) mode when the OmniSwitch Data Center software license is installed on the switch. Configuring the system default profile is not supported in the DCB mode.

Examples

```
-> show qos qsp system-default
NDCB Default QSP profile      : 1    (qsp-1)
```

Release History

Release 8.3.1; command introduced.

Related Commands

qos qsp system-default Configures the default QSet profile for the switch.

MIB Objects

```
alcatelIND1VfcMIB  
  alaVfcSystemDefaultQsetQSPName  
  alaVfcSystemDefaultQsetQSPId
```

clear qos qsi stats

Clears QSet instance (QSI) statistics.

```
clear qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} stats
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **port** *slot/port* and **linkagg** *agg_id* parameters to clear QSI statistics associated with specific ports or link aggregates.
- QSI statistics can only be cleared on ports or link aggregates that have statistics collection enabled.

Examples

```
-> clear qos qsi port 1/1/2 stats
-> clear qos qsi port 1/1/10-15 stats
-> clear qos qsi linkagg 5 stats
-> clear qos qsi linkagg 10-15 stats
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[show qos qsi stats](#)

Displays QSet instance statistics.

MIB Objects

```
alcatelIND1VfcMIB  
alaVfcQsapTable  
  alaVfcQsapClearStats  
  alaVfcQsapQpId
```

qos qsp dcb import

Imports a Data Center Bridging profile (DCB) to a new or previous custom profile.

```
qos qsp dcb {dcp_id | dcp_name} import qos dcb {import_dcp_id | import_dcp_name} [802.3x-pause]
```

```
no qos qsp dcb {dcp_id | dcp_name}
```

Syntax Definitions

<i>dcp_id</i>	A DCB custom profile ID. The valid custom profile ID range is 12 through 128.
<i>dcp_name</i>	The DCB profile name.
<i>import_dcp_id</i>	The ID of the DCB profile to import. The valid profile ID range is 1–11 to specify a predefined profile and 12–128 to specify a custom profile.
<i>import_dcp_name</i>	The name of the DCB profile to import.
802.3x-pause	Makes the profile pause-ready. When enabled, the Priority based Flow Control (PFC) is lossy for all traffic classes in the profile and they cannot be changed to lossless.

Defaults

By default the **802.3x-pause** flag is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- The new DCB profile must be unique and not contain the same name and ID of an existing DCB profile.
- On an OmniSwitch 6900-Q32, only import DCB profile 8 to create a custom profile. Do not use any of the other pre-defined profiles to create a custom profile.
- Use the **no** form of the command to remove an existing custom DCB profile from the switch configuration.
- The pre-defined DCB profiles from 1 to 11 cannot be removed from the switch configuration.
- A custom profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.

- Use the **802.3x-pause** tag to enable pause-ready on the profile. When enabled, the PFC is lossy for all traffic classes in the profile and they cannot be changed to lossless. This type of custom profile is created to support legacy PAUSE frames on ports to which the profile is applied. However, before applying the custom profile to a port, disable PFC TLV and PFC willing on the port.

Examples

```
-> qos qsp dcb 33 import qsp dcb 8
-> qos qsp dcb lossyETS import qsp 10
-> qos qsp dcb 34 import qsp dcb 7 802.3x-pause
-> no qsp dcb 33
```

Release History

Release 7.3.1; command was introduced.

Related Commands

show qos qsp dcb	Displays the configured DCB profile and the traffic classes associated to the DCB profile.
show qos qsi stats	Displays the queue statistics for DCB and Non-DCB (NDCB) ports.
clear qos qsi dcb pfc stats	Clears the port statistics.

MIB Objects

```
alaDcbxDCProfileTable
  alaDcbxDCPId
  alaDcbxDCPName
  alaDcbxDCPTemplateDCPId
  alaDcbxDCPTemplateDCPName
  alaDcbxDCP8023xPauseReady
  alaDcbxDCPRowStatus
```

qos qsp dcb tc

Modifies the Data Center Bridging (DCB) traffic class attributes of a DCB profile.

```
qos qsp dcb {dcp_id | dcp_name} tc tc_num {pfc flow-type { ll | nll} | pfc link-delay allowance | min-bw % | max-bw % | recommended bw %}
```

Syntax Definitions

<i>dcp_id</i>	A DCB custom profile ID. The valid custom profile ID range is 12 through 128.
<i>dcp_name</i>	The DCB custom profile name.
<i>tc_num</i>	The traffic class number in the DCB profile.
ll	Designates traffic class as lossless.
nll	Designates traffic class as non-lossless (lossy).
<i>allowance</i>	Link delay allowance value for PFC.
min-bw %	Sets the minimum bandwidth guaranteed for the Enhanced Transmission Selection (ETS) traffic class.
max-bw %	Sets the maximum bandwidth guaranteed for the Strict Priority (SP) traffic class.
recommended bw %	Sets the recommended minimum bandwidth for the traffic class.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- The **pfc flow-type** option is used to change a traffic class from lossless (ll) to lossy (nll) or from lossy (nll) to lossless (ll).
- The **pfc link-delay** option sets the actual headroom for the traffic class. An incorrect setting can result in traffic loss.
- The **min-bw** option sets the minimum bandwidth guaranteed for the ETS traffic class.
- The **max-bw** option sets the maximum bandwidth guaranteed for the SP traffic class.
- The **recommended bw** option sets the recommended minimum bandwidth for the traffic class.

Examples

```
-> qos qsp dcb 11 tc 0 min-bw 3
-> qos qsp dcb lossyETS tc 1 min-bw 12
-> qos qsp dcb lossyETS tc 2 pfc flow-type 11
-> qos qsp dcb 11 tc 0 recommended bw 3
```

Release History

Release 7.3.1; command was introduced.

Related Commands

[show qos qsp dcb](#)

Displays the configured DCB profiles and the traffic classes associated to the DCB profile.

MIB Objects

  alaDcbxDCPTCMaximumBandwidth
  alaDcbxDCPTCRecommendedBandwidth
```

qos qsp dcb tc-numbering

Modifies the traffic class (TC) numbering for custom profiles.

```
qos qsp dcb {dcp_id | dcp_name} tc-numbering tc_num
```

Syntax Definitions

<i>dcp_id</i>	A DCB custom profile ID. The valid custom profile ID range is 12 through 128.
<i>dcp_name</i>	The DCB custom profile name.
<i>tc_num</i>	Enter the traffic class numbering sequence for the DCB profile.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- The command can be used to modify the traffic class numbering for the custom profiles.
- The numbering must be assigned in ascending order. For example, a profile with TCs numbered 0, 1, 2, can be changed to 1, 5, 7.
- The number of TCs specified must match the number of TCs in the profile.

Examples

```
-> qos qsp dcb 11 tc-numbering 1 5 7 9
```

Release History

Release 7.3.1; command was introduced.

Related Commands

`show qos qsp dcb`

Displays the configured DCB profiles and the traffic classes associated to the DCB profile.

MIB Objects

```
alaDcbxDCProfileTable  
  alaDcbxDCPTDCPName  
  alaDcbxDCPTCsPresent
```

qos qsi qsp dcb

Assigns a DCB profile to a port or link aggregate.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} qsp dcb {dcp_id | dcb_name}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
<i>dcp_id</i>	DCB profile ID. DCB profile ID 11 through 128 refers to the custom profiles. DCB profile ID 1 through 10 refers to the predefined profiles.
<i>dcb_name</i>	DCB profile name.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- When a DCB profile is assigned to a link aggregate, the profile is applied to all the ports associated with the linkagg.
- Avoid configuring different profiles for each port of the link aggregate.
- The command will not work if the link aggregate is associated with 1Gig port. Different combination of ports (10G and 40G) are allowed in a link aggregate.

Examples

```
-> qos qsi port 1/1/11 qsp dcb lossyETS
-> qos qsi port 1/1/11 qsp dcb 7
```

Release History

Release 7.3.1; command was introduced.

Related Commands

`show qos qsp dcb`

Displays the configured DCB profiles and the traffic classes associated with the DCB profile.

MIB Objects

```
alaDcbxPortInstanceEntry  
  alaDcbxPIAdminDCPId  
  alaDcbxPIAdminDCPName
```

qos qsi dcb dcbx version

Selects the version of the DCB Exchange protocol (DCBX) to apply to the specified DCB port.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx version {ieee | cee | auto}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
ieee	Selects IEEE 802.1Qaz DCBX.
cee	Selects Converged Enhanced Ethernet DCBX 1.01.
auto	Automatically detects the DCBX version used by the peer switch.

Defaults

By default, the DCB port is configured to automatically use the DCBX version detected from the peer.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

Initially, the IEEE version of DCBX is run on the port until the switch detects the peer is running the CEE version. At that point, the switch will stop IEEE DCBX and start to run the CEE version.

Examples

```
-> qos qsi port 1/1/10 dcb dcbx version ieee
-> qos qsi port 1/1/10 dcb dcbx version cee
-> qos qsi port 1/1/11 dcb dcbx version auto
```

Release History

Release 7.3.3; command was introduced.

Related Commands

qos qsi dcb dcbx admin-state	Enables or disables DCBX functionality on the port.
qos qsi dcb dcbx ets	Enables or disables application Type, Length, Value (TLV) transmission on a per-port basis.
qos qsi dcb dcbx pfc	Enables or disables config-TLV, defense mode, and willing bit for PFC on a per-port basis.
show qos qsi dcb dcbx	Displays the DCBX configuration and status for the specified port.

MIB Objects

```
alaDcbxPortInstanceEntry  
  alaDcbxPIDCBXVersion
```

qos qsi dcb dcbx admin-state

Enables or disables DCB exchange protocol (DCBX) functionality on a per port basis.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx admin-state {enable | disable}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
enable	Enables the DCBX functionality on the port.
disable	Disables the DCBX functionality on the port.

Defaults

parameter	default
dcbx admin-state	enable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

The DCBX admin-state, enables or disables DCBX TLVs and negotiation on a port.

Examples

```
-> qos qsi port 1/1/10 dcb dcbx admin-state enable
-> qos qsi port 1/1/10 dcb dcbx admin-state disable
```

Release History

Release 7.3.1; command was introduced.

Related Commands

qos qsi dcb dcbx version	Selects the version of DCBX to apply to the specified DCB port.
qos qsi dcb dcbx ets	Enables or disables application Type, Length, Value (TLV) transmission on a per port basis.
qos qsi dcb dcbx pfc	Enables or disables config-TLV, defense mode, and willing bit for PFC on a per port basis.
show qos qsi dcb dcbx	Displays the configured ports in the system and the related DCBX information.

MIB Objects

```
alaDcbxPortInstanceEntry  
  alaDcbxPIIfIndex  
  alaDcbxPIDCBXAdmin
```

qos qsi dcb dcbx ets

Enables or disables config-TLV, recommended-TLV, and the willing bit for ETS on a per-port basis.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx ets [config-tlv {enable | disable} | recommend-tlv {enable | disable} | willing {yes | no}]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
config-tlv enable	Enables the transmission of ETS configuration TLVs.
config-tlv disable	Disables the transmission of ETS configuration TLVs.
recommend-tlv enable	Enables the transmission of ETS recommended TLVs.
recommend-tlv disable	Disables the transmission of ETS recommended TLVs.
yes	Sets the willing bit to on in the TLVs.
no	Sets the willing bit to off in the TLVs.

Defaults

parameter	default
config-tlv {enable disable}	enable
ets recommend-tlv {enable disable}	enable
willing {yes no}	yes

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the option **ets config-tlv** to enable or disable the transmission of ETS configuration TLVs. To use this option, DCBX must be enabled on the port.
- Use the option **ets recommended-tlv** to enable or disable the transmission of ETS recommended TLVs. To use this option, DCBX must be enabled on the port.

- Use the option **ets willing** to set the willing bit on the TLVs. This option is used when the DCBX is enabled on the port and the ETS configuration TLV is sent on the port.

Examples

```
-> qos qsi port 1/1/1-10 dcb dcbx ets config-tlv disable
-> qos qsi port 1/1/11 dcb dcbx ets recommended-tlv disable
-> qos qsi linkagg 5 dcb dcbx ets willing no
```

Release History

Release 7.3.1; command was introduced.

Related Commands

  lldpXdot1dcbxConfigETSRecommendationTxEnable
  lldpXdot1dcbxLocETSConWilling
```

qos qsi dcb dcbx pfc

Enables or disables config-TLV, defense mode, and willing for PFC on a per port basis.

```
qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb dcbx pfc [config-tlv {enable |
disable} | defense {enable | disable} | willing {yes | no}]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
config-tlv enable	Enables the transmission of PFC configuration TLVs.
config-tlv disable	Disables the transmission of PFC configuration TLVs.
defense enable	Enables the defense mode for the PFC.
defense disable	Disables the defense mode for the PFC.
willing yes	Allows the PFC to negotiate with the network.
willing no	Stops the PFC from negotiating with the network.

Defaults

parameter	default
pfc config-tlv	enable
pfc defense	enable
pfc willing	yes

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the option **pfc config-tlv** to enable or disable the transmission of PFC configuration TLVs. To use this option, DCBX must be enabled on the port.
- Use the option **ets willing** to allow the PFC to negotiate with the network.

Examples

```
-> qos qsi port 1/1/1-10 dcb dcbx pfc config-tlv disable
-> qos qsi port 1/1/11 dcb dcbx pfc defense disable
-> qos qsi linkagg 5 dcb dcbx pfc willing no
```

Release History

Release 7.3.1; command was introduced.

Related Commands

show qos qsp dcb

Displays the configured DCB profiles and the traffic classes associated with the DCB profile.

show qos qsp dcb [*dcp_id* | *dcp_name*] [**tc** *tc_num*]

Syntax Definitions

<i>dcp_id</i>	DCB profile ID. DCB profile ID 11–128 refers to the custom profiles. DCB profile ID 1–0 refers to the predefined profiles.
<i>dcp_name</i>	DCB profile name.
<i>tc_num</i>	The traffic class associated to the DCB profile. The valid range is 0–7.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- This command displays the details of the configured DCB profile.
- Use the **tc** option to display the traffic classes associated to the DCB profile.

Examples

```
-> show qos qsp dcb
```

Legends: Prio TC Map:

Represents the priority to traffic class mapping;
begins with priority 0 on the left and displays the
traffic class it belongs to.

#	Name	Priority TC Map	PFC Cap	ETS Max TC	Template-DCP #	Name	802.3x Pause-Ready
1	dcp-1	00001122	8	8	1	dcp-1	No

20	dcp-20	10234567	8	8	10	dcp-10	No

output definitions

#	Indicates a DCB profile entry.
Name	Name of the DCB profile.
Priority TC Map	Indicates the priority of the traffic class.
PFC Cap	Indicates the number of traffic classes on the local device that have simultaneously PFC enabled.
ETS Max TC	Indicates the number of traffic classes supported.
Template-DCP #	Identifies the template DCB profile.
Template-DCP Name	Name of the template DCB profile.
802.3x Pause-Ready	Indicates if pause-ready is enabled for the profile.

-> show qos qsp dcp tc

Legends: Linkdelay shown in KB.

1	Dft_1	2	01	50	100	ETS	50	ETS	LL	60

output definitions

#	Indicates a DCB profile entry.
Name	Name of DCB profile.
TC	Indicates the traffic class.
Priorities	Indicates the priorities assigned to the traffic class.
ETS Min BW	Indicates the minimum bandwidth assigned to the traffic class.
ETS Max BW	Indicates the maximum bandwidth assigned to the traffic class.
ETS Sched	Indicates the traffic class scheduler assigned to the traffic class.
ETS Reco BW	Indicates the recommended minimum bandwidth assigned to the traffic class.
ETS Reco Sched	Indicates the recommended traffic class scheduler assigned to the traffic class.
PFC Mode	Indicates if PFC traffic flow is enabled on the traffic class.
PFC LinkDelay	Indicates the delay in the PFC link.

Release History

Release 7.3.1; command was introduced.

Related Commands

show qos qsi dcb dcbx

Displays the DCBX port configuration and status.

```
show qos qsi [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] dcb dcbx [status]
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
status	Displays the DCBX operational status for the port.

Defaults

By default, the DCBX configuration is displayed for all ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **port** *chassis/slot/port* or **linkagg** *agg_id*, parameters to display information for a specific port or link aggregate.
- Use the **status** option to display the status information of the DCBX related to the port.

Examples

```
-> show qos qsi port 1/1/1-5 dcb dcbx
```

```

```

output definitions

Port	The DCB slot and port number or link aggregate ID.
DCP	The DCB profile ID assigned to the port.
Name	The name of the DCB profile assigned to the port.
DCBX Ver	The version of DCBX running on the port (CEE , IEEE , or AUTO).
DCBX Admin	Indicates the administrative status of DCBX on the port.
Stats Admin	Indicates if statistics collection is enabled or disabled on the port.
PFC Defense	Indicates the status of PFC defense (Ena or Dis). Applies when PFC negotiation fails. If enabled then PFC becomes disabled but traffic still flows. If disabled then the PFC local configuration remains on the port.
PFC TLV	Indicates whether the IEEE 802.1 organizationally defined PFC TLV transmission is allowed on a given LLDP transmission capable port.
PFC Will	Indicates whether or not the port is willing to accept the PFC configuration from a remote peer.
Cfg TLV	Indicates whether or not ETS configuration TLV transmission is allowed on a port.
Reco TLV	Indicates whether or not ETS configuration TLV transmission is allowed on a port.
ETS Will	Indicates whether or not the port is willing to accept the recommended ETS configuration from a remote peer.

show qos qsi dcb ets

Displays the configured ports in the system and the related DCBX ETS and ETS traffic class information.

show qos qsi {port *chassis/slot/port*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **dcb ets** [*tc* [*tc_num*]]

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i>]	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id</i> [- <i>agg_id2</i>]	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
<i>tc_num</i>	Enter the traffic class for which the information needs to be displayed. The valid range is 0–7.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

Use the *tc_num* option to display the DCBX ETS information for a specific traffic class.

Examples

```
-> show qos qsi port 1/1/1 dcb ets
```

Legends: Prio TC Map:

Represents the priority to traffic class mapping;
begins with priority 0 on the left and displays the
traffic class it belongs to.

output definitions

Port	Configured DCB ports.
Loc-Adm Prio TC Map	Indicates the traffic class to which the priority is to be assigned.
Loc-Adm Max TC	Indicates the number of traffic classes supported.
Loc-Adm CBS	Indicates the status of the credit-based shaper traffic support.
Loc-Adm Will	Indicates if the local system is willing to accept the ETS configuration recommended by the remote system.
Loc-Oper Prio TC Map	Indicates the traffic class to which the priority belongs.
Loc-Oper Max TC	Indicates the number of traffic classes supported in the local system.
Loc-Oper CBS	Indicates if the credit-based shaper traffic is supported on the local system.
Loc-Oper Will	Indicates if the credit-based shaper traffic selection is supported on the local system.
Rem-Oper Prio TC Map	Indicates the priority that is assigned to a traffic class.
Rem-Oper Max TC	Indicates the number of traffic classes supported in the remote system.
Rem-Oper CBS	Indicates if the credit-based shaper traffic selection is supported on the remote system.
Rem-Oper Will	Indicates if the remote system is willing to accept the ETS configuration recommended by the remote system.

show qos qsi dcbx pfc

Displays the configured ports in the system and the related DCBX PFC information.

```
show qos qsi {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} dcb pfc
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

If there is no PFC TLV received from the remote end, then the remote information will be blank.

Examples

```
-> show qos qsi port 1/4/1-2 dcb pfc
```

Legends: * indicates port oper status is different than the configured status

show qos pfc-lossless-usage

Displays the usage of the PFC lossless traffic class on the switch.

```
show qos pfc-lossless-usage
```

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

This command displays the PFC lossless traffic class usage on the switch.

Examples

```
-> show qos pfc-lossless-usage
Lossless Priorities in use      : 55,
Lossless Priorities reserved   : 60,
Lossless Priorities available  : 73
```

output definitions

Lossless Priorities in use	Indicates the number of PFC lossless priorities in use in the system.
Lossless Priorities reserved	Indicates the number of PFC lossless priorities in reserve in the system.
Lossless Priorities available	Indicates the number of priorities available to be configured as PFC lossless.

Release History

Release 7.3.1; command was introduced.

show qos qsi dcb pfc stats

Displays the Priority Flow Control (PFC) statistics for the specified DCB port.

show qos qsi [port chassis/slot/port[-port2] dcb pfc stats

Syntax Definitions

chassis The chassis identifier.

slot/port[-port2] The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

Statistics are displayed on a per-traffic class (TC) basis.

Examples

```
-> show qos qsi port 1/1/11 dcb pfc stats
```

Legends: displays packet count

Port	Q	PFC			PFC RX (ind)
		TC	TX (req)		
1/1/11	0	0	0	0	
1/1/11	1	0	0	0	
1/1/11	2	0	0	0	
1/1/11	3	0	0	0	
1/1/11	4	1	0	0	
1/1/11	5	1	0	0	
1/1/11	6	2	0	0	

1/1/11 7 2 0 0

output definitions

Port	The DCB port number.
Q	The 802.1p priority number (0–7). This number is mapped to a traffic class (TC) based on the DCB profile assigned to the port.
TC	Indicates the traffic class to which the priority belongs.
Priority	Indicates the priority of the DCB port.
PFC TX (req)	Total count of PFC packets transmitted.
PFC RX (ind)	Total count of PFC packets received.

Release History

Release 7.3.1; command was introduced.

qos ecnp import ecnp

Creates a custom Enhanced Congestion Notification (ECN) profile in a non-Data Center Bridging (NDCB) mode.

```
qos ecnp {cust_ecnp_id | cust_ecnp_name} import ecnp {ecnp_id | ecnp_name}
```

```
no qos ecnp {cust_ecnp_id | cust_ecnp_name}
```

Syntax Definitions

<i>cust_ecnp_id</i>	ECN custom profile ID. The valid custom profile ID range is 2–16.
<i>cust_ecnp_name</i>	The custom ECN profile name.
<i>ecnp_id</i>	The ID of the ECN profile to import. Only ECN profile ID 1 can be used to create a custom profile.
<i>ecnp_name</i>	The name of the ECN profile to import. Only ECNP profile name ecnp-1 can be used to create a custom profile.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	No	Yes	No	No

Usage Guidelines

- Only ECNP profile ID: 1, name: ecnp-1 can be used to create a custom profile.
- Use the **no** form of the command to remove an existing custom ECN profile from the switch configuration.
- A custom ECN profile attached to a port cannot be removed from the switch configuration. In this case, the profile must be disassociated from the port before being removed.
- Ensure no ECN profile is being used by any QSI (Qset Instance) before deleting it. Detach the ECN profile from QSI before deleting it.
- ECN is supported only for IP unicast traffic flows.

Examples

```
-> qos ecnp 3 import ecnp 1
-> qos ecnp ecnptest import ecnp-1
-> no qos ecnp 3
```

Release History

Release 8.7R2; command introduced.

Related Commands

qos ecnp value

Configures the minimum and maximum queue threshold value of a custom Enhanced Congestion Notification Profile (ECNP).

```
qos ecnp {cust_ecnp_id | cust_ecnp_name} {min-threshold min_threshold_value | max-threshold max_threshold_value} value
```

Syntax Definitions

<i>cust_ecnp_id</i>	ECN custom profile ID.
<i>cust_ecnp_name</i>	The custom ECN profile name.
<i>min_threshold_value</i>	The minimum queue threshold value of a custom ECNP. The range is 0–100.
<i>max_threshold_value</i>	The maximum queue threshold value of a custom ECNP. The range is 0–100.

Defaults

parameter	default
<i>min_threshold_value</i>	50
<i>max_threshold_value</i>	100

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	No	Yes	No	No

Usage Guidelines

Minimum threshold value cannot be greater the configured maximum threshold value.

Examples

```
-> qos ecnp ecnptest min-threshold 10
-> qos ecnp 3 max-threshold 90
-> qos ecnp 3 min-threshold 20 max-threshold 75
```

Release History

qos qsi qp ecn

Enables or disables ECN functionality for the queue of a port or linkagg.

```
qos qsi {port chassis/slot/port[-port2] | slot slot | linkagg agg_id[-agg_id2]} qp q_num ecn admin-state
{enable | disable}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number to associate with the QSet. Use a hyphen to specify a range of ports (3/1-10).
slot	The slot number.
<i>agg_id[-agg_id2]</i>	The link aggregate ID to associate with the QSet. Use a hyphen to specify a range of IDs (10-20).
<i>q_num</i>	The queue number. The range is 1–8.
enable	Enables the ECNP for the queue.
disable	Disables the ECNP for the queue.

Defaults

parameter	default
admin-state	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	No	Yes	No	No

Usage Guidelines

When enabled, marking of ECT congested packets on the selected egress queue is enabled on the configured port only. ECN can only be activated for lower priority queues 5–8.

Examples

```
-> qos qsi port 1/1/31 qp 5 ecn admin-state enable
-> qos qsi port 1/1/31 qp 5 ecn admin-state disable
```

Release History

Release 8.7R2; command introduced.

```

output definitions

ECNP	The ECN profile (ECNP) ID and name.
#Ports	The number of ports to which this profile is attached
Min-Th	The minimum queue threshold for packets.
Max-Th	The maximum queue threshold for packets.
Max-Pb	The maximum drop probability percentage for packets.
Gain	The queue gain (a numeric value used to determine the instantaneous average queue length)
Port/Linkagg	The physical slot and port number (or link aggregate ID for a logical port)
QSAP	The QSet Attachment Point (QSAP). This is a logical entity used internally by the switch to identify the association between a QSet instance and a port or link aggregate.

output definitions (continued)

Parent	The QSAP ID for a parent QSAP, if any.
QSI	The switch port associated with the QSet Instance (QSI).
QSP Name	The QSet profile (QSP) ID number, name.
QI	The ECNP information for each of the QSet queues.
Admin	The ECN admin state for a QSet queue (Enable/Disable).

39 QoS Policy Commands

This chapter describes the CLI commands used for policy management in the switch. The Quality of Service (QoS) software in the switch uses policy rules for classifying incoming flows and deciding how to treat outgoing flows. A policy rule is made up of a policy condition and a policy action. Policy rules may be created on the switch through CLI or SNMP commands, or they may be created through the PolicyView GUI application on an attached LDAP server.

Rules created through PolicyView cannot be modified through the CLI; however, you can create policies in the CLI that take precedence over policies created through PolicyView.

Refer to [Chapter 36, “QoS Commands,”](#) for information about commands used to configure QoS software.

MIB information for the QoS policy commands is as follows:

Filename: ALCATEL-IND1-QOS-MIB.mib
Module alaQoS MIB

Some of the commands listed here are not currently supported on one or more platforms. See command descriptions in this chapter and check release notes for information about commands that are not supported.

The QoS Policy commands are listed here:

Policy commands	policy rule iec message-type priority policy list policy list rules policy condition policy action show policy action show policy condition show active policy rule show policy rule show policy validity period show active policy list show policy list show policy ipv4-summary show policy ipv6-summary show policy vrf-summary
------------------------	--

Group commands

policy network group
policy service
policy service group
policy mac group
policy port group
policy map group
show policy network group
show policy mac group
show policy port group
show policy map group
show policy service
show policy service group

Condition commands

policy condition
policy condition source ip
policy condition source ipv6
policy condition destination ip
policy condition destination ipv6
policy condition multicast ip
policy condition source network group
policy condition destination network group
policy condition multicast network group
policy condition source ip-port

policy condition source vlan
policy condition inner source-vlan
policy condition destination vlan
policy condition 802.1p
policy condition inner 802.1p
policy condition source port
policy condition destination port
policy condition source port group
policy condition destination port group
policy condition vrf
policy condition fragments
policy condition app-mon-application-group
policy condition app-mon-application-name
policy condition appfp-group

Action commands	<p> policy action policy action disposition policy action shared policy action priority policy action maximum bandwidth policy action maximum depth policy action cir policy action cpu priority policy action tos policy action 802.1p policy action dscp policy action map policy action permanent gateway-ip policy action permanent gateway-ipv6 policy action port-disable policy action redirect port policy action redirect linkagg policy action no-cache policy action mirror </p>
------------------------	---

Types of policies are generally determined by the kind of traffic they classify (policy conditions) and how the policy is enforced (policy actions). Commands used for particular types of policies are listed here. See the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about creating these types of policies and information about valid condition/action combinations.

Access Control Lists	<p> policy condition policy action disposition policy rule </p>
Traffic prioritization/shaping	<p> policy action shared policy action priority policy action maximum bandwidth policy rule </p>

Policy based port mirroring	<p> policy action mirror </p>
VLAN Stacking	<p> policy condition inner source-vlan policy condition inner 802.1p </p>
VXLAN Snooping	<p> policy condition vxlan policy condition vxlan inner source mac policy condition vxlan inner source mac-group policy condition vxlan inner source ip policy condition vxlan inner source ipv6 policy condition vxlan inner ip-protocol policy condition vxlan inner l4-port policy condition vxlan vxlan-port </p>

policy rule

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

```
policy rule rule_name [enable | disable] [precedence precedence] [condition condition] [action action]
[validity-period name] [save] [log [log-interval seconds]] [count {packets | bytes}] [trap] [default-list]
```

```
policy rule rule_name no {validity-period | save | log | trap | default-list}
```

```
no policy rule rule_name
```

Syntax Definitions

<i>rule_name</i>	The name of the policy rule, any alphanumeric string.
enable	Enables the policy rule.
disable	Disables the policy rule.
<i>precedence</i>	The precedence value in the range 0–65535. This value determines the order in which rules are searched for a matching condition. A higher number indicates higher precedence. Typically the range 30000–65535 is reserved for PolicyView.
<i>condition</i>	The condition name that is associated with this rule. Conditions are configured through the policy condition command.
<i>action</i>	The name of the action that is associated with this rule. Actions are configured through the policy action command.
<i>name</i>	The name of a user-defined validity period that is associated with this rule. Validity periods are configured through the policy validity period command.
save	Marks the policy rule so that it may be captured as part of the switch configuration.
log	Configures the switch to log messages about specific flows coming into the switch that match this policy rule. <i>This parameter is supported only on the OmniSwitch 6860, OmniSwitch 6865, and OmniSwitch 6900.</i>
<i>seconds</i>	Configures how often to look for packets that match this policy rule when rule logging is applied (in the range from 0–3600 seconds). A value of 0 specifies to log as often as possible.
packets	Counts the number of packets that match the rule. <i>This parameter is supported only on the OmniSwitch 6860(E), OmniSwitch 6865, and OmniSwitch 6900-X72.</i>
bytes	Counts the number of bytes that match the rule. <i>This parameter is supported only on the OmniSwitch 6860(E), OmniSwitch 6865, and OmniSwitch 6900-X72.</i>
trap	Enables or disables traps for the rule.
default-list	Adds the rule to the QoS default policy list.

Defaults

parameter	default
enable disable	enable
<i>precedence</i>	0
log	no
<i>seconds</i>	60
packets bytes	packets
trap	enable
default-list	adds rule to the default list

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Any rule configured through this command is not active on the switch until the **qos apply** command is issued.
- A policy rule configured through the PolicyView application may not be edited in the CLI. You may, however, create a rule using the CLI with a higher precedence that will override a rule created through PolicyView.
- Use the **no** form of the command to remove the rule from the configuration or to remove parameters from a particular rule. The change will not take effect, however, until the **qos apply** command is issued.
- Only one validity period is associated with a policy rule. Each time this command is entered with a validity period name specified, the existing period name is overwritten with the new one.
- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.
- The **save** option marks the policy rule so that the rule will be captured in an ASCII text file (using the **configuration snapshot** command), saved to the working directory after the **write memory** command or **copy running-config working** command is entered, or saved after a reboot. Rules are saved by default. If **no save** is entered for the rule, the policy rule will not be written to the configuration. The **save** option should be disabled only if you want to use a policy rule temporarily.
- The **default-list** option adds the rule to the default policy list. Rules are added to this list by default when the rule is created. A rule can belong to multiple policy lists. As a result, the rule remains a

member of the default list even when it is subsequently assigned to additional lists. Consider the following recommendations regarding the default policy list:

- If the rule is going to belong to a QoS policy list for a Universal Network Profile (UNP), use the **no default-list** option when creating the rule. Doing so will give the rule precedence over default list rules when the policy list is applied to UNP device traffic.
 - Note that each time a rule is assigned to a policy list, an instance of that rule is created and each instance is allocated system resources. Use the **no default-list** option with this command to exclude the rule from the default policy list.
 - When creating a policy rule with a destination port condition on an OmniSwitch 9900, specify the **no default-list** option to ensure that this type of condition is supported on the OmniSwitch 9900. See the [policy condition destination port](#) command.
- The **log** option is useful for determining the source of attacks on the switch firewall.
 - The **log** option is not supported for service domain traffic.
 - If traps are enabled for the rule, a trap is only sent when a port disable action or UserPort shutdown operation is triggered.
 - If the **configuration snapshot** command is entered after the **policy rule** command is configured, the resulting ASCII file will include the following additional syntax for the **policy rule** command:

from {cli | ldap | blt}

This syntax indicates how the rule was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in rule, this setting is not configurable.

Examples

```
-> policy rule rule2 condition c2 action a2
-> policy rule rule3 condition c3 action a3 no default-list
-> policy rule rule2 precedence 65535
-> policy rule rule2 validity-period vp01
-> policy rule rule2 no precedence
-> policy rule rule2 no validity-period
-> policy rule rule3 no default-list
-> no policy rule rule2
```

Release History

Release 7.1.1; command was introduced.

Release 8.8R2; **trap** keyword deprecated.

Related Commands

iec message-type priority	Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.
policy condition	Configures condition parameters.
policy action	Configures action parameters.
qos apply	Applies configured QoS and policy settings to the current configuration.
show policy rule	Displays information for policy rules configured on the switch.
show active policy rule	Displays only those policy rules that are currently being enforced on the switch.

iec message-type priority

Configures a QoS priority for the specified IEC 61850 message type. This command runs a python script that programs QoS rules that will apply traffic prioritization to IEC 61850 message packets.

iec message-type *message* **priority** *string*

Syntax Definitions

<i>message</i>	The message type for which a QoS rule is configured. Specify one of the supported IEC 61850 message types: goose, gse, sv, ptp, sntp, mms, all.
priority <i>string</i>	Sets the priority level. The priority string value must be set to one of the following: <ul style="list-style-type: none"> “high” (maps to QoS priority queue 7) “medium” (maps to QoS priority queue 4) “low” (maps to QoS priority queue 1) “default” (sets the priority to the default value for the message type)

Defaults

By default, the priority for all the supported IEC 61850 message type is set to default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	Yes	No	No	No	No	Yes	No	No	No	No

Usage Guidelines

- To set the priority for all message types at once, specify “all” as the message type value.
- A message type can be configured with only one priority.
- Use the “default” option to restore the default priority as shown in the table:

Message Type	Default Priority
GOOSE	High
GSE	Medium
SV	High
MMS	Low
SNTP	Medium
PTP	Medium

- The QoS policy condition, action, and rule names that are used to prioritize IEC 61759 traffic are predefined. The following reserved names must not be used for user policy configuration:

Function	Message Type	Condition	Action	Rule
1A. Trip	GOOSE	iec_goose_c	iec_goose_a	iec_goose_r
1B. Other	GSE	iec_gse_c	iec_gse_a	iec_gse_r
Raw Data	SV	iec_sv_c	iec_sv_a	iec_sv_r
Time Sync	PTP	iec_ptp_c	iec_ptp_a	iec_ptp_r
Time Sync	SNTP	iec_sntp_c	iec_sntp_a	iec_sntp_r
File Transfer	MMS	iec_mms_c	iec_mms_a	iec_mms_r

- Use the **iec message-type flush** CLI command to remove the prioritization for message type.

Examples

```
-> iec message-type goose priority high
-> iec message-type gse priority low
-> iec message-type mms priority medium
-> iec message-type all priority high
```

Release History

Release 8.7 R1; command was introduced.

Related Commands

iec message-type flush Removes the rule applied for the IEC 61850 message priority.
iec show Displays the priority configured for the IEC 61850 message types.

MIB Objects

N/A

iec message-type flush

Removes the rule applied for the IEC 61850 message priority.

iec message-type message flush

Syntax Definitions

message The message type for which rule must be flushed. Specify one of the supported IEC 61850 message types: goose, gse, sv, ptp, sntp, mms, all.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	Yes	No	No	No	No	Yes	No	No	No	No

Usage Guidelines

- This command runs a python script that programs the QoS rules for traffic prioritization.
- The “all” option flushes the priority rule for all the message types at once.

Examples

```
-> iec message-type goose flush
-> iec message-type gse flush
-> iec message-type mms flush
-> iec message-type all flush
```

Related Commands

[iec message-type priority](#) Configures IEC 61850 message priority.

MIB Objects

N/A

policy validity-period

Configures a validity period that specifies the days and times in which a policy rule is in effect.

policy validity-period *name* [**days** *days*] [**months** *months*] [**hours** *hh:mm to hh:mm*] [**interval** *mm:dd:yy hh:mm to mm:dd:yy hh:mm*]

policy validity-period *name* **no** {**hours** | **interval**}

no policy validity-period *name*

Syntax Definitions

<i>name</i>	The name of the validity period (up to 31 alphanumeric characters).
<i>days</i>	The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., monday , tuesday , wednesday , etc.).
<i>months</i>	The month(s) in which the validity period is active. Enter the actual month (e.g., january , february , march , etc.).
<i>hh:mm</i>	The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).
<i>mm:dd:yy hh:mm</i>	An interval of time during which a rule is in effect. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).

Defaults

By default, no validity period is in effect for a policy rule.

parameter	default
<i>days</i>	no restriction
<i>months</i>	no restriction
<i>hh:mm</i>	no specific time
<i>mm:dd:yyyy hh:mm</i>	no interval

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a validity period from the configuration, or to remove parameters from a particular validity period. Note that at least one parameter must be associated with a validity period.
- Any combination of days, months, hours, and interval parameters is allowed. The validity period is only in effect when all specified parameters are true.
- Use the **policy rule** command to associate a validity period with a rule.
- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.
- If the **configuration snapshot** command is entered after the **policy validity-period** command is configured, the resulting ASCII file will include the following additional syntax for the **policy validity-period** command:

from {cli | ldap | blt}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy validity-period vp01 days tuesday thursday months january february
-> policy validity-period vp01 hours 13:00 to 19:00
-> policy validity-period vp02 interval 01/01/05 12:01 to 02/01/05 11:59
-> policy validity-period vp01 no days thursday
-> no policy-validity period vp02
```

Release History

Release 7.1.1; command was introduced.

policy list

Configures a QoS policy list. There are four types of lists available: a Universal Network Profile (UNP) policy list, an egress policy list, an Application Fingerprinting policy list, and a default policy list.

policy list *list_name* **type** {**unp** | **egress** | **appfp** | **empacl**} [**enable** | **disable**]

no policy list *list_name*

Syntax Definitions

<i>list_name</i>	The name to assign to the policy list. Note that the list name is case sensitive.
unp	Applies the list of policy rules to traffic classified into the User Network Profile to which the list is assigned
egress	Applies the list of policy rules to traffic egressing on switch ports. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560, and OmniSwitch 6570M.</i>
appfp	Applies the list of policy rules to an Application Fingerprinting interface. <i>This parameter is supported only on the OmniSwitch 6900.</i>
empacl	Specifies the list type as an ACL applied to the EMP port on the switch. It can be applied only for IP condition in PBR policy rule.
enable	Enables the policy list.
disable	Disables the policy list.

Defaults

A default policy list is available when the switch boots up; all policy rules belong to this list unless otherwise specified (see the [policy list rules](#) and [policy rule](#) commands for more information).

parameter	default
enable disable	enable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a policy list from the configuration.
- Once a policy list is created, use the [policy list rules](#) command to add rules to the list.

- Any policy list configured through this command is not active on the switch until the **qos apply** command is issued.
- If the **configuration snapshot** command is entered after the **policy list** command is configured, the resulting ASCII file will include the following additional syntax for the **policy list** command:

from {cli | ldap | blt}

This syntax indicates how the list was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy list unpl type unp
-> policy list unpl disable
-> policy list unpl enable
-> no policy list unpl
```

policy list rules

Assigns existing QoS policy rules to the specified QoS policy list.

policy list *list_name* **rules** *rule_name* [*rule_name2*...]

policy list *list_name* **no rules** *rule_name* [*rule_name2*...]

Syntax Definitions

<i>list_name</i>	The name of an existing QoS policy list. Note that the list name is case sensitive.
<i>rule_name</i>	The name of an existing QoS policy rule to include in the policy list.
<i>rule_name2</i>	Optional. The name of another QoS policy rule to include in the policy list. Separate each rule name specified with a space.

Defaults

A default policy list is available when the switch boots up. This list has no name and is not configurable. All QoS policy rules are assigned to the default list unless the **no default-list** option of the **policy rule** command is used.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a policy rule from an existing list.
- The QoS policy list and rule names specified with this command must already exist in the switch configuration.
- A rule may belong to a Universal Network Profile (UNP) list, the default list, and an egress policy list at the same time. By default, a rule is assigned to a default policy list when the rule is created. If the rule is subsequently assigned to another policy list, it still remains associated with the default list.
- If a rule is a member of multiple policy lists but one or more of these lists are disabled, the rule is still active in those lists that are enabled.
- If the QoS status of a policy rule is disabled, then the rule is disabled for all lists even if a list to which the policy rule belongs is enabled.
- If a policy rule is going to be assigned to a UNP policy list, make sure the rule was created using the **no default-list** option of the **policy rule** command. This will ensure that the rule will take precedence over other default list rules when the UNP policy list is applied to device traffic.

- A QoS policy list that is assigned to an Application Fingerprinting interface must contain policy rules with the **appfp-group** condition.
- Only those rules that are assigned to an egress policy list are applied to egress traffic. When configuring egress policy lists, consider the following:
 - Egress policy lists are *not* supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 and OmniSwitch 6570M.
 - Only one egress policy list per switch is supported, to which IPv4 and IPv6 rules can be added.
 - Applying egress policy lists to SPB or VXLAN SAP ports is not supported.
 - Only the following policy conditions and actions are supported when creating rules for an egress policy list:

policy conditions	policy actions
Destination port	Disposition (drop/accept)
Destination VLAN	
Source IPv4 address	
Source IPv6 address	
IPv6 (qualifier for traffic types)	

- On an OmniSwitch 9900, a destination port condition is supported only when the condition is part of a policy rule that was configured using the **no default-list** option (for example, **policy rule r1 condition c1 action a1 no default-list**). See the **policy condition destination port** command.
- Using policy lists that contain rules with a source port condition are not supported when applied to 10G ports on an OmniSwitch 6560 and OmniSwitch 6570M.
- On the OmniSwitch 6360 and OmniSwitch 6465, policy rules containing the following conditions are not supported in a UNP policy list:
 - Source port group
 - Source IPv6 address
 - IPv6 flow label
 - Source MAC/MAC group
 - Destination MAC/ MAC group
 - Ethertype for IPV6
- On the OmniSwitch 6360, OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900, only policy rules with the following conditions can be assigned to a UNP policy list:
 - Destination MAC
 - EtherType
 - Source VLAN
 - SIP
 - DIP / DIPv6
 - Layer 4 Protocol
 - Layer 4 source port
 - Layer 4 destination port
 - Source port
- Any policy list configured through this command is not active on the switch until the **qos apply** command is issued.

Examples

```
-> policy list unpl rules r1 r2 r3
-> policy list unpl no rules r2
```

Release History

Release 7.2.1; command was introduced.

Related Commands

policy list	Configures a QoS policy list.
policy rule	Configures a policy rule on the switch and optionally associates that rule with a validity period.

```

policy network group

Configures a network group name and its associated IP addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the network group.

policy network group *net_group ip_address [mask net_mask] [ip_address2 [mask net_mask2]...]*

no policy network group *net_group*

policy network group *net_group no ip_address [mask netmask] [ip_address2 [mask net_mask2]...]*

Syntax Definitions

<i>net_group</i>	The name of the network group (up to 31 alphanumeric characters).
<i>ip_address</i>	An IPv4 or IPv6 address included in the network group.
<i>net_mask</i>	The mask for the IPv4 or IPv6 address. If no mask is entered, the address is assumed to be a host address.
<i>ip_address2</i>	Optional. Another IPv4 or IPv6 address to be included in the network group. Multiple IP addresses may be configured for a network group. Separate each address/mask combination with a space.
<i>net_mask2</i>	Optional mask for the IPv4 or IPv6 address. If no mask is entered, the natural mask for the address will be used.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use this command to configure a group of IP addresses to which you want to apply QoS rules. Rather than create a condition for each IP address, group the addresses together. Use the **policy condition** command to associate a condition with the network group.
- Use the **no** form of the command to remove a network group from the configuration, or to remove an IP address from a network group.

- If the **configuration snapshot** command is entered after the **policy network group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy network group** command:

from {cli | ldap | blt}

This syntax indicates how the network group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in network group, this setting is not configurable.

Examples

```
-> policy network group webgroup1 10.10.12.5 10.50.3.1
-> policy network group webgroup1 no 10.10.12.5
-> no policy network group webgroup1

-> policy network group webgroup2 2001:db8:4132:86::19a 2002:c633:6489::35
-> policy network group webgroup2 no 2002:c633:6489::35
-> no policy network group webgroup2
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy condition	Configures a policy condition. A network group may be configured as part of a policy condition.

policy service group

Configures a service group and its associated services. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the service group.

policy service group *service_group service_name1 [service_name2...]*

no policy service group *service_group*

policy service group *service_group no service_name1 [service_name2...]*

Syntax Definitions

<i>service_group</i>	The name of the service group (up to 31 alphanumeric characters).
<i>service_name1</i>	The service name is configured through the policy service command and includes information about protocol, source port, and destination port.
<i>service_name2...</i>	Optional. Additional service names may be configured for a service group. Separate each service name with a space.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use this command to configure a group of services to which you want to apply QoS rules. Rather than create a condition for each service, group services together. Use the **policy condition** command to associate a condition with the service group.
- Use the **no** form of the command to remove a service group from the configuration, or to remove a service from a service group.
- To drop packets destined to specific TCP and UDP ports, create port services for the traffic that you want dropped and add these services to a service group. Then create a condition for this service group and a source port group, which can then be used in a deny rule. Refer to the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about ACL security enhancements.

- If the **configuration snapshot** command is entered after the **policy service group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service group** command:

from {cli | ldap | blt}

This syntax indicates how the service group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in service group, this setting is not configurable.

Examples

```
-> policy service group servgroup2 telnet ftp
-> policy service group servgroup2 no telnet
-> no policy service group servgroup2
```

Release History

Release 7.1.1; command was introduced.

policy mac group

Configures a MAC group and its associated MAC addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the MAC group.

policy mac group *mac_group mac_address [mask mac_mask] [mac_address2 [mask mac_mask2]...]*

no policy mac group *mac_group*

policy mac group *mac_group no mac_address [mask mac_mask] [mac_address2 [mask mac_mask2]...]*

Syntax Definitions

<i>mac_group</i>	The name of the MAC group (up to 31 alphanumeric characters).
<i>mac_address</i>	The MAC address associated with the group (for example, 00:20:da:05:f6:23).
<i>mac_mask</i>	The mask of the MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.
<i>mac_address2</i>	Optional. Additional MAC addresses may be configured for a MAC group. Separate each address with a space.
<i>mac_mask2</i>	The mask of an additional MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use this command to configure a group of source or destination MAC addresses to which you want to apply QoS rules. Rather than create a condition for each MAC address, group MAC addresses together. Use the **policy condition** command to associate a condition with the MAC group.
- Use the **no** form of the command to remove a MAC group from the configuration, or to remove a MAC address from a MAC group.

- The MAC group name “alaPhones” is a reserved group name used to identify the MAC addresses of IP phones. See the [qos phones](#) command for more information.
- If the **configuration snapshot** command is entered after the **policy map group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy map group** command:

from {cli | ldap | blt}

This syntax indicates how the map group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy mac group mac_group1 00:20:da:05:f6:23 00:20:da:05:f6:24
-> no policy mac group mac_group1
```

Release History

Release 7.1.1; command was introduced.

Related Commands

```

policy port group

Configures a port group and its associated slot and port numbers. A port group may be attached to a policy condition. The action associated with that policy will be applied to all members of the port group.

```
policy port group group_name {chassis//slot/port[-port2] | agg_id[-agg_id2]} [chassis//slot/port[-port2] | agg_id[-agg_id2]]
```

```
no policy port group group_name
```

```
policy port group group_name no {chassis//slot/port[-port2] | agg_id[-agg_id2]} [chassis//slot/port[-port2] | agg_id[-agg_id2]]
```

Syntax Definitions

<i>group_name</i>	The name of the port group (up to 31 alphanumeric characters).
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port (or port range) to be included in the group. At least one slot/port combination must be specified. Additional combinations may be included in the group; each combination should be separated by a space.
<i>agg_id[-agg_id2]</i>	A link aggregate ID to be included in the group. Use a hyphen to specify a range of IDs (10-15). Additional combinations may be included in the group; each combination should be separated by a space.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use this command to configure a group of ports or link aggregates to which you want to apply QoS rules. Rather than create a condition for each port, group ports together. Use the **policy condition** command to associate a condition with the port group.
- Configuring ports and link aggregates in the same port group is allowed.
- Adding link aggregate member ports to a QoS port group is not recommended; doing so may cause undesired results when the port group is used in a QoS policy, particularly if only a subset of member ports is added to the port group.

- Use the **no** form of the command to remove a port group from the configuration, or to remove a slot/port from a port group.
- If a range of ports is specified using the syntax *chassis/slot/port-port2* (that is, 1/2/1-8), a single port within that range cannot be removed on its own. The entire range must be deleted as it was entered.
- If a range of link aggregates is specified using the syntax *agg_id[-agg_id2]* (that is, 10-15), a single aggregate within that range cannot be removed on its own. The entire range must be deleted as it was entered.
- When a port group is used as part of a policy rule and a policy action specifies a maximum bandwidth, each interface in the port group will be allowed the maximum bandwidth.
- To prevent IP source address spoofing, add ports to the port group called **UserPorts**. UserPorts name is case sensitive. This port group does not need to be used in a condition or rule to be effected on flows and applies to both VLAN domain and service domain for both bridged and routed traffic. Ports added to the UserPorts group will block spoofed traffic while still allowing normal traffic on the port. Refer to the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about ACL security enhancements.
- Anti-spoofing on service is supported only on SPB SAP ports and is supported on OmniSwitch 6860N, and OmniSwitch 6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2 where inline routing is supported.
- Link aggregate addition is not supported in QoS **UserPorts** port group.
- Use the **qos user-port** command to configure the option to filter or administratively disable a port when a specific type of traffic (Spoof, RIP, BPDU, OSPF, and/or BGP) is received on a port that is a member of the pre-defined UserPorts group.
- If the **configuration snapshot** command is entered after the **policy port group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy port group** command:

from {cli | ldap | blt}

This syntax indicates how the port group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy port group port_group4 3/1/1-2 4/3/1 5/4/1
-> policy port group port_group4 no 3/1/1-2
-> policy port group UserPorts 4/1/1-8 5/1/1-8
```

Release History

Release 7.1.1; command was introduced.

Release 8.3.1; *agg_id* parameter added.

Related Commands

policy condition	Configures a policy condition. A port group may be configured as part of a policy condition.
qos apply	Applies configured QoS and policy settings to the current configuration.
policy action maximum bandwidth	Configures a maximum bandwidth value for a policy action.
show policy port group	Displays information about policy port groups.

  alaQoSAppliedPortGroupsName
  alaQoSAppliedPortGroupSlot
  alaQoSAppliedPortGroupPort
  alaQoSAppliedPortGroupPortEnd
```

policy map group

Configures a map group and its associated mappings for 802.1p, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values. A map group may be referenced in a policy action with the **map** keyword.

policy map group *map_group* {*value1:value2...*}

no policy map group *map_group*

policy map group no {*value1:value2...*}

Syntax Definitions

<i>map_group</i>	The name of the map group (up to 31 alphanumeric characters).
<i>value1</i>	The 802.1p, ToS, or DSCP value to be mapped to another value. May be a value or a range of values (for example, 1-2).
<i>value2...</i>	The 802.1p, ToS, or DSCP value to be used in place of <i>value1</i> . Additional mapping pairs may be included.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a mapping pair or to remove the map group entirely.
- The map group may contain more than one mapping pair.
- If the **configuration snapshot** command is entered after the **policy map group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy map group** command:

from {**cli** | **ldap** | **blt**}

This syntax indicates how the map group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy map group tosGroup 1-4:3 5-6:5 7:6
-> policy map group tosGroup no 7:6
-> no policy map group tosGroup
```

Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedMapGroupValue
```

policy service

Configures a service that may be used as part of a policy service group or included as part of a policy condition. A service is a source and/or destination TCP or UDP port or port range.

This overview section describes the base command. *At least one option must be configured with the base command.* Some options may be used in combination; some options are shortcuts for keyword combinations (see the Usage Guidelines). Options are described as separate commands. See the command descriptions and usage guidelines for valid combinations.

Use the **no** form for keywords to remove a parameter from a service.

```
policy service service_name
  [protocol protocol]
  [source ip-port port[-port]]
  [destination ip-port port[-port]]
  [source tcp-port port[-port]]
  [destination tcp-port port[-port]]
  [source udp-port port[-port]]
  [destination udp-port port[-port]]
```

```
no policy service service_name
```

Syntax Definitions

<i>service_name</i>	The name of the service (up to 31 alphanumeric characters).
<i>protocol</i>	The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported. This value must be specified for source ip-port or destination ip-port ; it cannot be specified for source tcp-port , destination tcp-port , source udp-port , or destination udp-port .
<i>port</i>	The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. Specify a range of ports using a hyphen (for example, 22-23).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- The command options offer alternate ways of configuring TCP or UDP ports for a service. Note that port types (TCP or UDP) cannot be mixed in the same service. The following table shows how the keywords are used:

To configure:	Use keywords:	Notes
TCP or UDP ports for a service	protocol source ip-port destination ip-port	<i>The protocol must be specified with at least one source or destination port.</i>
TCP ports for a service	source tcp-port destination tcp-port	<i>Keywords may be used in combination.</i>
UDP ports for a service	source udp-port destination udp-port	<i>Keywords may be used in combination.</i>

- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

from {cli | ldap | blt}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

The following two commands show two different ways of configuring the same service:

```
-> policy service telnet2 protocol 6 destination ip-port 23
-> policy service telnet3 destination tcp-port 23
```

Release History

Release 7.1.1; command was introduced.

Related Commands

```

policy service protocol

Configures a service with a protocol and IP port or port range that may be used as part of a policy service group or included as part of a policy condition.

```
policy service service_name protocol protocol {[source ip-port port[-port]] [destination ip-port port[-port]]}
```

```
no policy service service_name
```

```
policy service service_name no {source ip-port | destination ip-port}
```

Syntax Definitions

<i>service_name</i>	The name of the service (up to 31 alphanumeric characters).
<i>protocol</i>	The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported.
<i>port</i>	The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, 22-23).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a service from the configuration or to remove parameters from a particular service. (A protocol value cannot be removed from a service.)
- Shortcut commands for the **policy service protocol** command include the following: **policy service source tcp-port**, **policy service destination tcp-port**, **policy service source udp-port**, and **policy service destination udp-port**.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

```
from {cli | ldap | blt}
```

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy service telnet2 protocol 6 destination ip-port 23 source ip-port 22
-> policy service telnet2 no source ip-port
```

Release History

Release 7.1.1; command was introduced.

policy service source tcp-port

Configures a service with a source TCP port or port range that may be used as part of a policy service group or included as part of a policy condition.

policy service *service_name* **source tcp-port** *port[-port]*

no policy service *service_name*

policy service *service_name* **no source tcp-port**

Syntax Definitions

service_name

The name of the service (up to 31 alphanumeric characters).

port

The well-known port number (or port range) for the desired TCP service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, **22-23**).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- Ports associated with a particular service must all be of the same type. (The **destination tcp-port** keyword may be used with this command; other keywords for the command are not allowed.)
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

from {cli | ldap | blt}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy service serv_5 source tcp-port 21-22  
-> policy service serv_5 no source tcp-port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy service destination tcp-port

Configures a service with a destination TCP port or port range that may be used as part of a policy service group or included as part of a policy condition.

policy service *service_name* **destination tcp-port** *port[-port]*

no policy service *service_name*

policy service *service_name* **no destination tcp-port**

Syntax Definitions

service_name

The name of the service (up to 31 alphanumeric characters).

port

The well-known port number (or port range) for the desired TCP service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, **22-23**).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a service from the configuration, or to remove parameters from a particular service.
- This command is a shortcut for the **policy service protocol** command.
- A policy service may be grouped in a policy group using the **policy service group** command. A policy condition may then be associated with the service group.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

from {cli | ldap | blt}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy service service4 destination tcp-port 23
-> policy service service4 no destination tcp-port
```

Release History

Release 7.1.1; command was introduced.

```

policy service source udp-port

Configures a service with a source UDP port or port range that may be used as part of a policy service group or included as part of a policy condition.

policy service *service_name* **source udp-port** *port*[-*port*]

no policy service *service_name*

policy service *service_name* **no source udp-port**

Syntax Definitions

service_name

The name of the service (up to 31 alphanumeric characters).

port

The well-known port number (or port range) for the desired UDP service. Specify a port range with a hyphen (for example, **22-23**).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- Ports associated with a particular service must all be of the same type. (The **destination tcp-port** keyword may be used with this command; other keywords for the command are not allowed.)
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

from {**cli** | **ldap** | **blt**}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```

policy service destination udp-port

Configures a service with a destination UDP port or port range that may be used as part of a policy service group or included as part of a policy condition.

policy service *service_name* **destination udp-port** *port[-port]*

no policy service *service_name*

policy service *service_name* **no destination udp-port**

Syntax Definitions

service_name

The name of the service (up to 31 alphanumeric characters).

port

The well-known port number (or port range) for the desired UDP service. For example, a port number for NETBIOS is 137. A port range should be separated by a hyphen (for example, **137-138**).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- A policy service may be grouped in a policy group using the **policy service group** command. A policy condition may then be associated with the service group.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

from {cli | ldap | blt}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

Examples

```
-> policy service service4 destination udp-port 137
-> policy service service4 no destination udp-port
```

Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedServiceDestinationUdpPort
  alaQoSAppliedServiceDestinationUdpPortEnd
```

policy condition

Creates a QoS policy condition. The condition determines what parameters the switch uses to classify incoming flows. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove a parameter from the condition.

Some condition parameters may not be supported depending on the platform you are using. Also some condition parameters may not be supported with some action parameters. See the condition/action tables in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

policy condition *condition_name*

```
[source ip ip_address [mask netmask]]
[source ipv6 {any | ipv6_address [mask netmask]}]
[destination ip ip_address [mask netmask]]
[destination ipv6 {any | ipv6_address [mask netmask]}]
[multicast ip ip_address [mask netmask]]
[source network group network_group]
[destination network group network_group]
[multicast network group multicast_group]
[source ip-port port[-port]]
[destination ip-port port[-port]]
[source tcp-port port[-port]]
[destination tcp-port port[-port]]
[source udp-port port[-port]]
[destination udp-port port[-port]]
[ethertype etype]
[established]
[tcpflags {any | all} flag [mask flag]]
[service service]
[service group service_group]
[icmptype type]
[icmpcode code]
[ip-rotocol protocol]
[ipv6]
[flow-label flow_label_value]
[tos tos_value tos_mask]
[dscp {dscp_value[-value] [dscp_mask]}]
[source mac mac_address [mask mac_mask]]
[destination mac mac_address [mask mac_mask]]
[source mac group group_name]
[destination mac group mac_group]

```

```

[inner 802.1p 802.1p_value]
[source port chassis/slot/port[-port2]]
[source port group group_name]
[destination port chassis/slot/port[-port2]]
[destination port group group_name]
[vrf {vrf_name | default}]
[fragments]
[appfp-group group_name]
[app-mon-application-group group_name]
[app-mon-application-name app_name]

```

no policy condition *condition_name*

Syntax Definitions

condition_name The name of the condition. Any alphanumeric string.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- A policy condition and a policy action are combined to make a policy rule. See the [policy rule](#) command.
- Use the [qos apply](#) command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.
- Use the **no** form of the command to remove a condition from a policy rule.
- At least one parameter must be associated with a condition.
- If the **configuration snapshot** command is entered after the **policy condition** command is configured, the resulting ASCII file will include the following additional syntax for the **policy condition** command:

```
from {cli | ldap | blt}
```

This syntax indicates how the condition was created. The **cli** and **ldap** options may be changed by a

user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in condition, this option is not configurable.

Examples

```
-> policy condition cond4 source port 3/1/1
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Configures a policy action.
policy rule	Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable  
    alaQoSConditionName  
    alaQoSConditionSource  
alaQoSAppliedConditionTable  
    alaQoSAppliedConditionName  
    alaQoSAppliedConditionSource
```

policy condition source ip

Configures a source IP address for a policy condition.

policy condition *condition_name* **source ip** {**any** | *ip_address* [**mask** *netmask*]}

policy condition *condition_name* **no source ip**

Syntax Definitions

<i>condition_name</i>	The name of the condition.
any	Any source IPv4 address.
<i>ip_address</i>	The source IP address of the Layer 3 flow.
<i>netmask</i>	The mask for the source IP address.

Defaults

parameter	default
<i>netmask</i>	IP address class

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A source IP address and a source IP network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a source IP address from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond3 source ip 173.201.18.3
-> policy condition cond4 source ip any
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about a particular policy condition configured on the switch.

MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionSourceIpAddr
  alaQoSConditionSourceIpMask
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceIpAddr
  alaQoSAppliedConditionSourceIpMask
```

policy condition source ipv6

Configures a source IPv6 address for a policy condition.

```
policy condition condition_name source ipv6 {any | ipv6_address [mask netmask]}
```

```
policy condition condition_name no source ipv6
```

Syntax Definitions

<i>condition_name</i>	The name of the condition.
any	Any source IPv6 address.
<i>ipv6_address</i>	A specific source IPv6 address.
<i>netmask</i>	The mask for the source IPv6 address.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- If a mask is not specified, the IPv6 address is assumed to be a host address.
- On the OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900, a source IPv6 address policy condition is supported only for *egress* IPv6 ACLs.

Examples

```
-> policy condition cond3 source ipv6 ::1234:531F:BCD2:F34A
-> policy condition cond4 source ipv6 any
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about a particular policy condition configured on the switch.

  alaQoSAppliedConditionSourceIpMask
```

policy condition destination ip

Configures a destination IP address for a policy condition.

policy condition *condition_name* **destination ip** *ip_address* [**mask** *netmask*]

policy condition *condition_name* **no destination ip**

Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>ip_address</i>	The source IP address of the Layer 3 flow.
<i>netmask</i>	The mask for the source IP address.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A destination IP address and a destination IP network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a destination IP address from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond4 destination ip 208.192.21.0 mask 255.255.255.0
```

Release History

Release 7.1.1; command was introduced.

Related Commands

```

policy condition multicast ip

Configures a multicast IP address for a policy condition.

policy condition *condition_name* **multicast ip** *ip_address* [**mask** *netmask*]

policy condition *condition_name* **no multicast ip**

Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>ip_address</i>	The multicast IP address.
<i>netmask</i>	Optional. The mask for the multicast IP address.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A multicast IP address and a multicast network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a multicast IP address from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond4 multicast ip 224.1.1.1
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy condition source network group

Associates a source network group with a policy condition.

policy condition *condition_name* **source network group** *network_group*

policy condition *condition_name* **no source network group**

Syntax Definitions

condition_name

The name of the condition.

network_group

The name of the source network group. Network groups are configured through the [policy network group](#) command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source network group from a condition; however, at least one classification parameter must be associated with a condition.
- A source IP address and a source IP network group cannot be specified in the same condition.
- On the OmniSwitch 6560, OmniSwitch 6570M and OmniSwitch 9900, a source network group policy condition with an IPv6 address (includes user-configured and the built-in “Switch6” group) is supported only for *egress* IPv6 ACLs,

Examples

```
-> policy condition cond5 source network group webgroup1
```

Release History

Release 7.1.1; command was introduced.

```

policy condition multicast network group

Associates a multicast group with a policy condition.

policy condition *condition_name* **multicast network group** *multicast_group*

policy condition *condition_name* **no multicast network group**

Syntax Definitions

condition_name

The name of the condition.

multicast_group

The multicast group name. Multicast groups are configured through the **policy network group** command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a multicast group from a condition; however, at least one classification parameter must be associated with a condition.
- A multicast address and a multicast network group cannot be specified in the same condition.

Examples

```
-> policy condition cond3 multicast group video2
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
policy network group	Configures a network group name and its associated IP addresses.
show policy condition	Shows information about policy conditions configured on the switch.
show policy network group	Displays information about policy network groups.

  alaQoSAppliedConditionName
  alaQoSAppliedConditionMulticastNetworkGroup
```

policy condition source ip-port

Configures a source IP port number for a policy condition.

policy condition *condition_name* **source ip-port** *port[-port]*

policy condition *condition_name* **no source ip-port**

Syntax Definitions

condition_name

The name of the condition.

port

The TCP or UDP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source IP port from a condition; however, at least one classification parameter must be associated with a condition.
- The protocol (TCP or UDP) must be specified in the condition, either on the same command line or in a previous command. Use the **ip-protocol** keyword. See the [policy condition ip-protocol](#) command.
- The same condition cannot specify a source IP port with a source TCP port, source UDP port, service, or service group.

Examples

```
-> policy condition cond1 ip-protocol 6 source ip-port 137
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition ip-protocol	Configures an IP protocol for a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```

  alaQoSConditionName
  alaQoSConditionSourceIpPort
  alaQoSConditionSourceIpPortEnd
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceIpPort
  alaQoSAppliedConditionSourceIpPortEnd
```

policy condition destination ip-port

Configures a destination IP port number for a policy condition.

policy condition *condition_name* **destination ip-port** *port[-port]*

policy condition *condition_name* **no destination ip-port**

Syntax Definitions

condition_name

The name of the condition.

port

The TCP or UDP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a destination IP port from a condition; however, at least one classification parameter must be associated with a condition.
- The protocol (TCP or UDP) must be specified in the same condition, either on the same command line or in a previous command. Use the **ip-protocol** keyword. See the [policy condition ip-protocol](#) command.
- The same condition cannot specify a destination IP port with a service or service group.

Examples

```
-> policy condition cond2 ip-protocol 6 destination ip-port 137-138
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition ip-protocol	Configures an IP protocol for a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionDestinationIpPort
  alaQoSConditionDestinationIpPortEnd
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName

  alaQoSAppliedConditionDestinationIpPortEnd
```

policy condition source tcp-port

Configures a source TCP port number for a policy condition.

policy condition *condition_name* **source tcp-port** *port[-port]*

policy condition *condition_name* **no source tcp-port**

Syntax Definitions

condition_name

The name of the condition.

port

The TCP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source TCP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition source ip-port** command, which requires that the protocol also be specified. Rather than specifying **source ip-port** and **ip-protocol**, use **source tcp-port**.
- The same condition cannot specify a source TCP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

Examples

```
-> policy condition cond3 source tcp-port 137
-> policy condition cond4 ipv6 source tcp-port 21
-> policy condition cond3 no source tcp-port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.

  alaQoSAppliedConditionSourceTcpPortEnd
```

policy condition destination tcp-port

Configures a destination TCP port number for a policy condition.

policy condition *condition_name* **destination tcp-port** *port*[-*port*]

policy condition *condition_name* **no destination tcp-port**

Syntax Definitions

condition_name

The name of the condition.

port

The TCP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a destination TCP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition destination ip-port** command, which requires that the protocol also be specified. Rather than specifying **destination ip-port** and **ip-protocol**, use **destination tcp-port**.
- The same condition cannot specify a destination TCP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

Examples

```
-> policy condition cond4 destination tcp-port 137-138
-> policy condition cond5 ipv6 destination tcp-port 140
-> policy condition cond4 no destination tcp-port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

  alaQoSAppliedConditionDestinationTcpPortEnd
```

policy condition source udp-port

Configures a source UDP port number for a policy condition.

policy condition *condition_name* **source udp-port** *port*[-*port*]

policy condition *condition_name* **no source udp-port**

Syntax Definitions

condition_name

The name of the condition.

port

The UDP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source UDP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition source ip-port** command, which requires that the protocol also be specified. Rather than specifying **source ip-port** and **ip-protocol**, use **source udp-port**.
- The same condition cannot specify a source UDP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

Examples

```
-> policy condition cond5 source udp-port 1200-1400
-> policy condition cond6 ipv6 source udp-port 1000
-> policy condition cond5 no source udp-port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

  alaQoSAppliedConditionSourceUdpPortEnd
```

policy condition destination udp-port

Configures a destination UDP port number for a policy condition.

policy condition *condition_name* **destination udp-port** *port[-port]*

policy condition *condition_name* **no destination udp-port**

Syntax Definitions

condition_name

The name of the condition.

port

The UDP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a destination UDP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition destination ip-port** command, which requires that the protocol also be specified. Rather than specifying **destination ip-port** and **ip-protocol**, use **destination udp-port**.
- The same condition cannot specify a destination UDP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

Examples

```
-> policy condition cond4 destination udp-port 137-138
-> policy condition cond5 ipv6 destination udp-port 140
-> policy condition cond4 no destination udp-port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```

  alaQoSAppliedConditionName
  alaQoSAppliedConditionDestinationTcpPort
  alaQoSAppliedConditionDestinationTcpPortEnd
```

policy condition ethertype

Configures an ethertype value to use for traffic classification.

policy condition *condition_name* **ethertype** *etype*

policy condition *condition_name* **no ethertype**

Syntax Definitions

condition_name The name of the condition.

etype The ethertype value, in the range 1536–65535 or 0x600–0xffff hex.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove an ethertype value from a condition; however, at least one classification parameter must be associated with a condition.
- Enter a numeric or equivalent hex value for the *etype*.
- On the OmniSwitch 6465, an ethertype value is not supported in policy conditions for IPv6 packets.

Examples

```
-> policy condition cond12 ethertype 8137
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionEthertype
  alaQoSConditionEthertypeStatus
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionEthertype
  alaQoSAppliedConditionEthertypeStatus
```

policy condition established

Configures an established TCP connection as a policy condition. A connection is considered established if the **ack** or **rst** flags in the TCP header of the packet are set.

policy condition *condition_name* **established**

policy condition *condition_name* **no established**

Syntax Definitions

condition_name The name of the condition.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove **established** from a condition; however, at least one classification parameter must be associated with a condition.
- When an initial TCP connection packet is received only the **syn** flag is set. As a result, TCP packets are only examined if they are not the starting packet.
- Typically this condition is used in combination with **source ip**, **destination ip**, **source port**, **destination port**, **source tcp-port**, or **destination tcp-port** conditions.
- Note that even though **established** can be used with most action parameters, it is mainly intended for ACL use.

Examples

```
-> policy condition cond2 source ip 192.168.5.10 established
-> policy condition cond3 destination ip 10.255.11.40
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable  
  alaQoSConditionTcpEstablished  
alaQoSAppliedConditionTable  
  alaQoSAppliedConditionTcpEstablished
```

policy condition tcpflags

Configures a specific TCP flag value or combination of flag values as a policy condition.

```
policy condition condition_name tcpflags [any | all] {f | s | r | p | a | u | e | w} mask {f | s | r | p | a | u | e | w}
```

```
policy condition condition_name no tcpflags
```

Syntax Definitions

<i>condition_name</i>	The name of the condition.
any	Match on any of the specified TCP flags.
all	Match all specified TCP flags.
f s r p a u e w	TCP flag value to match (f =fin, s =syn, r =rst, p =psh, a =ack, u =urg, e =ecn, and w =cwr). <i>The e and w flags are currently not supported.</i>

Defaults

parameter	default
any all	all

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove **tcpflags** from a condition; however, at least one classification parameter must be associated with a condition.
- Use the **any** option to indicate that a match on any one of the specified TCP flags qualifies as a match for the condition. Use the **all** option to indicate that a match on all specified TCP flags is required to qualify as a match for the condition.
- Enter one or more TCP flags after the **any** or **all** keyword to indicate that the value of the flag bit must be set to one to qualify as a match.
- Enter one or more TCP flags after the **mask** keyword to indicate which TCP flags to match.
- If a TCP flag is specified as part of the **mask** but does not have a corresponding match value specified with the **any** or **all** options, then zero is assumed as the match value. For example, **tcpflags all f s mask f s a** looks for the following bit values to determine a match: **f**=1, **s**=1, **a**=0.

- Typically this condition is used in combination with **source ip**, **destination ip**, **source port**, **destination port**, **source tcp-port**, or **destination tcp-port** conditions.
- Note that even though **tcpflags** can be used with most action parameters, it is mainly intended for ACL use.
- Use **tcpflags** in combination with the IPv6 condition to configure an IPv6 TCP flag policy (for example, **policy condition ipv6 tcpflags**). *Note that IPv6 TCP flag conditions are not supported on the OmniSwitch 6560 and OmniSwitch 6570M.*

Examples

```
-> policy condition tcp-flag tcpflags all f s mask f s a
-> policy condition tcp-flag-ar tcpflags any a r mask a r
-> policy condition tcp-flag-f destination network group Allowed_Resources source
tcp-port 1982 tcpflags any f mask f ipv6
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

```

policy condition service

Configures a service for a policy condition.

policy condition *condition_name* **service** *service_name*

policy condition *condition_name* **no service**

Syntax Definitions

condition_name The name of the condition.

service_name The service name, configured through the **policy service** command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a service group from a condition; however, at least one classification parameter must be associated with a condition.
- A policy condition that specifies a service cannot also specify a service group, IP protocol, source IP port, or destination IP port.

Examples

```
-> policy condition cond12 service serv2
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[policy service](#)

Configures a service that may be used as part of a policy service group.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of the command to remove an ICMP code value from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond12 icmpcode 150
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy condition icmptype	Configures an ICMP type value for traffic classification.
policy condition	Creates a policy condition.
qos apply	Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionIcmpCode
  alaQoSConditionIcmpCodeStatus
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionIcmpCode
  alaQoSAppliedConditionIcmpCodeStatus
```

policy condition ip-protocol

Configures an IP protocol for a policy condition.

policy condition *condition_name* **ip-protocol** *protocol*

policy condition *condition_name* **no ip-protocol**

Syntax Definitions

condition_name The name of the condition.

protocol The protocol associated with the flow. The range is 0–255.

Defaults

parameter	default
<i>protocol</i>	6

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a protocol from a condition; however, at least one classification parameter must be associated with a condition.
- If a source or destination port is specified (through the **policy condition source ip-port** or **policy condition destination ip-port** commands), the protocol must be specified.
- The same condition cannot specify an IP protocol with a service or service group.

Examples

```
-> policy condition cond4 ip-protocol 6
```

Release History

Release 7.1.1; command was introduced.

Related Commands

- policy condition source ip-port** Configures a source IP port number for a policy condition.
- policy condition destination ip-port** Configures a destination IP port number for a policy condition.
- qos apply** Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).
- show policy condition** Shows information about policy conditions configured on the switch.

MIB Objects

```

  alaQoSConditionName
  alaQoSConditionIpProtocol
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionIpProtocol
```

policy condition ipv6

Configures a policy condition to classify IPv6 traffic.

policy condition *condition_name* **ipv6**

policy condition *condition_name* **no ipv6**

Syntax Definitions

condition_name The name of the condition.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove IPv6 traffic as a condition; however, at least one classification parameter must be associated with a condition.
- When the **ipv6** keyword is used in a condition, a policy that uses the condition is considered an IPv6 policy. IPv6 policies are effected only on IPv6 traffic. All other IP policies are considered IPv4 policies and are effected only on IPv4 traffic.
- IPv6 Layer 4 policies are supported and are configured using the **ipv6** keyword in a condition that specifies Layer 4 information, services, or service groups. Note that IPv6 Layer 4 policies only work with packets that contain a single header.
- The **icmptype** and **icmpcode** keywords in an IPv6 policy imply the ICMPv6 protocol, not the ICMPv4 protocol.

Examples

```
-> policy condition cond4 ipv6
-> policy condition cond5 ipv6 tos 7
-> policy condition cond6 ipv6 source port 1/1/1
-> policy condition cond7 ipv6 source tcp-port 21
-> policy condition cond8 ipv6 source tcp-port 0-1024
-> policy condition cond6 no ipv6
```

Release History

Release 7.1.1; command was introduced.

policy condition flow-label

Configures an IPv6 flow label value as a policy condition. This value is compared to the flow label value in the IPv6 header.

policy condition *condition_name* **flow-label** *flow_label_value*

policy condition *condition_name* **no flow-label**

Syntax Definitions

condition_name The name of the condition.
flow_label_value The flow-label value (0–1048575).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of the command to remove the flow label value as a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond4 flow-label 1500
-> policy condition cond4 no flow-label
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply

Applies configured QoS and policy settings to the current configuration.

show policy condition

policy condition tos

Configures the precedence bits in the Type of Service (ToS) byte value for a policy condition.

policy condition *condition_name* **tos** *tos_value* [**mask** *tos_mask*]

policy condition *condition_name* **no tos**

Syntax Definitions

condition_name The name of the condition. May be an existing condition name or a new condition.

tos_value The Type of Service bits value included in the IP header. The three most significant bits of the byte determine the precedence (i.e, priority) of the frame (0 is the lowest, 7 is the highest).

tos_mask The mask for the ToS bits, in the range 0–7.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a ToS value from a condition; however, at least one classification parameter must be associated with a condition.
- If a ToS value is specified, a DSCP value may not be specified.

Examples

```
-> policy condition cond2 tos 7
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[policy condition](#)

Creates a policy condition.

[qos apply](#)

Applies configured QoS and policy settings to the current configuration.

policy condition dscp

Configures the Differentiated Services Code Point (DSCP) for a policy condition. The DSCP value defines the six most significant bits of the DS byte in the IP header.

policy condition *condition_name* **dscp** {*dscp_value*[-*value*]} [**mask** *dscp_mask*]

policy condition *condition_name* **no dscp**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>dscp_value</i> [- <i>value</i>]	The DiffServ Code Point value, in the range 0–63. Use a hyphen to specify a range of DSCP values for the condition (for example, 10-20).
<i>dscp_mask</i>	The mask for the DiffServ Code Point, in the range 0–63. <i>Specifying a DSCP mask for a policy condition is not supported on an OmniSwitch 6360 or OmniSwitch 6465.</i>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a DSCP value from a condition; however, at least one classification parameter must be associated with a condition.
- If a DSCP value is specified, a ToS value may not be specified.
- When a DSCP policy condition is configured on one of these switches, QoS automatically calculates the appropriate mask value.

Examples

```
-> policy condition cond4 dscp 10
-> policy condition cond5 dscp 20-30
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy condition

Creates a policy condition.

qos apply

policy condition source mac

Configures a source MAC address for a policy condition.

policy condition *condition_name* **source mac** *mac_address* [**mask** *mac_mask*]

policy condition *condition_name* **no source mac**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>mac_address</i>	The source MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23)
<i>mac_mask</i>	Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a source MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- A source MAC address and a source MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a source MAC address is not supported in policy conditions for IPv6 packets.

Examples

```
-> policy condition cond2 source mac 00:20:da:05:f6:23
```

Release History

Release 7.1.1; command was introduced.

Related Commands

```

policy condition destination mac

Configures a destination MAC address for a policy condition.

Specifying a destination MAC address and mask of all zeros (00:00:00:00:00:00) as a policy condition can result in the switch dropping all traffic. Only use this type of condition in combination with other policies that will allow desired traffic and/or if a source or destination slot/port is also part of the destination MAC condition.

policy condition *condition_name* **destination mac** *mac_address* [**mask** *mac_mask*]

policy condition *condition_name* **no destination mac**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>mac_address</i>	The destination MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23).
<i>mac_mask</i>	Optional. The mask for the destination MAC address (for example, ff:ff:ff:ff:ff:ff).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a destination MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- A destination MAC address and a destination MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a destination MAC address is not supported in policy conditions for IPv6 packets.

Examples

```
-> policy condition cond3 destination mac 00:20:da:05:f6:23
```

Release History

Release 7.1.1; command was introduced.

```

policy condition inner source-vlan

Configures an inner source VLAN ID as a policy condition. This condition applies to double-tagged VLAN Stacking traffic and is used to classify such traffic based on the inner VLAN ID tag, also known as the customer VLAN ID.

policy condition *condition_name* **inner source-vlan** *vlan_id*

policy condition *condition_name* **no inner source-vlan**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>vlan_id</i>	The inner source VLAN ID (customer VLAN ID) to match on double-tagged packets.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove an inner source VLAN from a policy condition; however, at least one classification parameter must be associated with a condition.
- Policies that use the inner source VLAN condition are referred to as QoS VLAN Stacking policies. These are separate policies from those configured through the VLAN Stacking Service application.

Examples

```
-> policy condition cond5 inner source-vlan 3
-> policy condition cond5 no inner source-vlan
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.

  alaQoSAppliedConditionInnerSourceVlanStatus
```

policy condition destination vlan

Configures a destination VLAN (multicast only) for a policy condition.

policy condition *condition_name* **destination vlan** *vlan_id*

policy condition *condition_name* **no destination vlan**

Syntax Definitions

condition_name The name of the condition. May be an existing condition name or a new condition.

vlan_id The destination VLAN ID for the flow.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a destination VLAN from a condition; however, at least one classification parameter must be associated with a condition.
- Note that this condition is supported for multicast only policies.

Examples

```
-> policy condition cond4 destination vlan 3 multicast ip any
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.

```

policy condition source port

Configures a source port number for a policy condition. Use the **no** form of the command to remove a source port number from a condition.

policy condition *condition_name* **source** {**port** *chassis/slot/port[-port2]* | **linkagg** *agg_id[-agg_id2]*}

policy condition *condition_name* **no source** {**port** | **linkagg**}

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number on which the frame is received. Use a hyphen to specify a range of ports (1/5-10). <i>Specifying a range of ports for a policy condition is not supported on an OmniSwitch 6360 or OmniSwitch 6465.</i>
<i>agg_id[-agg_id2]</i>	The link aggregate ID on which the frame is received. Use a hyphen to specify a range of IDs (10-15). <i>A link aggregate policy condition is not supported on the OmniSwitch 6360, 6465, 6560, 6860N, 6900-V72/C32/X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2, 9900.</i>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of the command to remove a source port from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond2 source port 3/1/1
-> policy condition cond3 source port 3/2/1-4
-> policy condition cond3 no source port
-> policy condition cond3 source linkagg 10
-> policy condition cond3 source linkagg 15-20
-> policy condition cond3 no source linkagg
```

Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **linkagg** parameter added.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionSourceSlot
  alaQoSConditionSourcePort
  alaQoSConditionSourcePortEnd
  alaQoSConditionSourceChassis
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceSlot
  alaQoSAppliedConditionSourcePort
  alaQoSAppliedConditionSourcePortEnd
  alaQoSAppliedConditionSourceChassis
```

policy condition destination port

Configures a destination port number for a policy condition.

```
policy condition condition_name destination {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

```
policy condition condition_name no destination {port | linkagg}
```

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number for which the frame is destined. Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID for which the frame is destined. Use a hyphen to specify a range of IDs (10-15). <i>A link aggregate policy condition is not supported on the OmniSwitch 6360, 6465, 6560, 6860N, 6900-V72/C32/X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2, 9900.</i>

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a destination port from a condition; however, at least one classification parameter must be associated with a condition.
- The destination port condition does not apply to routed traffic. Only bridged unicast traffic is supported (bridged multicast and broadcast traffic is not supported).
- On an OmniSwitch 9900, a destination port condition is supported only when the condition is part of a policy rule that was configured using the **no default-list** option (for example, **policy rule r1 condition c1 action a1 no default-list**) and the rule is assigned to an egress policy list.

Examples

```
-> policy condition cond3 destination port 4/2/1
-> policy condition cond4 destination port 4/3/1-4
-> policy condition cond4 no destination port
```

```
-> policy condition cond4 destination linkagg 10
-> policy condition cond4 destination linkagg 15-20
-> policy condition cond4 no destination linkagg
```

On the OmniSwitch 9900, a destination port condition is supported only with the following configuration of the policy rule:

```
-> policy condition cond5 destination port 1/3/1
-> policy action a1
-> policy rule r1 condition cond5 action a1 no default-list
-> policy list list1 type egress
-> policy list list1 rules r1
-> qos apply
```

Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **linkagg** parameter added.

```

policy condition source port group

Associates a source port group with a policy condition. Use the **no** form of the command to remove a source port group from a condition.

policy condition *condition_name* **source port group** *group_name*

policy condition *condition_name* **no source port group**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>group_name</i>	The name of the source port group. Port groups are configured through the policy port group command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of the command to remove a source port group from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond6 source port group portgr4
```

Release History

Release 7.1.1; command was introduced.

 alaQoSAppliedConditionName

 alaQoSAppliedConditionDestinationPortGroup

policy condition vrf

Associates a Virtual Routing and Forwarding (VRF) instance with a policy condition.

policy condition *condition_name* **vrf** {*vrf_name* | **default**}

policy condition *condition_name* **no vrf**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>vrf_name</i>	The name of the VRF instance to which the QoS policy condition applies.
default	Specifies the default VRF instance.

Defaults

By default, QoS policy conditions are not associated with any VRF instance. The policy applies across all instances.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a VRF instance from a condition; however, at least one classification parameter must be associated with a condition.
- VRF policies are configured in the default VRF, similar to how all other QoS policies are configured. If the VRF name specified does not exist, the policy is not allocated any system resources.
- Policies that do not specify a VRF name are considered global policies and are applied across all VRF instances and VLANs.
- Policies that specify the default VRF apply only to traffic in the default VRF instance.
- Policies that specify a VRF name apply only to traffic in the VRF instance associated with that name.
- The **switch** network group is supported only in VRF policies that specify the default VRF instance. If this group is specified in a global policy (no VRF specified) then the policy is applied across all VRF instances.

Examples

```
-> policy condition cond6 vrf engr-vrf
-> policy condition cond7 vrf default
-> policy condition cond6 no vrf
```

Release History

Release 7.1.1; command was introduced.

Related Commands

```

policy condition fragments

Associates TCP packet fragments with a policy condition.

policy condition *condition_name* **fragments**

policy condition *condition_name* **no fragments**

Syntax Definitions

condition_name The name of the condition. May be an existing condition name or a new condition.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of the command to remove TCP packet fragments from a condition; however, at least one classification parameter must be associated with a condition.

Examples

```
-> policy condition cond6 fragments
-> policy condition cond7 no fragments
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.

```

policy condition app-mon-application-group

Associates an Application Monitoring and Enforcement (AppMon) application group with a policy condition.

policy condition *condition_name* **app-mon-application-group** *group_name*

policy condition *condition_name* **no app-mon-application-group**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>group_name</i>	The name of the AppMon application group to which the QoS policy condition applies.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	No	No	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove an AppMon group name from a condition; however, at least one classification parameter must be associated with a condition.
- The **app-mon-application-group** policy condition is used in the rules associated with QoS default policy lists or UNP policy lists.
- Policy condition command will not support any other native QoS policy condition keywords along with AppMon application group or name keyword.
- For more information about AppMon, see the “Configuring Application Monitoring and Enforcement” chapter in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

Examples

```
-> policy condition cond6 app-mon-application-group web
-> policy condition cond6 no app-mon-application-group
```

Release History

Release 8.2.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```

  alaQoSConditionDpiAppGroup  
  alaQoSConditionDPIAppGroupStatus
```

policy condition app-mon-application-name

Associates an Application Monitoring and Enforcement (AppMon) application name with a policy condition.

policy condition *condition_name* **app-mon-application-name** *app_name*

policy condition *condition_name* **no** **app-mon-application-name**

Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>app_name</i>	The name of the AppMon application to which the QoS policy condition applies.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	No	No	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove an AppMon application name from a condition; however, at least one classification parameter must be associated with a condition.
- The **app-mon-application-group** policy condition is used in the rules associated with QoS default policy lists or UNP policy lists.
- Policy condition command will not support any other native QoS policy condition keywords along with AppMon application group or name keyword.
- For more information about AppMon, see the “Configuring Application Monitoring and Enforcement” chapter in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

Examples

```
-> policy condition cond6 app-mon-application-name whatsapp
-> policy condition cond6 no app-mon-application-name
```

Release History

Release 8.2.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable  
  alaQoSConditionDPIAppName  
  alaQoSConditionDPIAppNameStatus
```

policy condition appfp-group

Associates an Application Fingerprinting (AFP) application signature group with a policy condition.

policy condition *condition_name* **appfp-group** *group_name*

policy condition *condition_name* **no appfp-group**

Syntax Definitions

condition_name The name of the condition. May be an existing condition name or a new condition.

group_name The name of the AFP application group to which the QoS policy condition applies.

Defaults

N/A.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove an AFP group name from a condition; however, at least one classification parameter must be associated with a condition.
- The **appfp-group** policy condition is used in rules associated with QoS policy lists that are applied to AFP ports running in either the QoS or UNP mode.

Examples

```
-> policy condition cond6 appfp-group my-p2p
-> policy condition cond6 no appfp-group
```

Release History

Release 7.3.2; command was introduced.

Related Commands

[qos apply](#)

MIB Objects

alaQoSConditionTable

alaQoSConditionAppFpGroup

alaQoSConditionAppFpGroupStatus

policy condition vxlan

Creates a VXLAN Snooping policy condition to determine the parameters the switch uses to classify incoming encapsulated Virtual eXtensible Local Area Network (VXLAN) packets. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove a parameter from the condition.

```
policy condition condition_name vxlan vni vxlan_id
  [inner source mac mac_address [mask mac_mask]]
  [inner source mac-group mac_group]
  [inner source ip ip_address [mask netmask]]
  [inner source ipv6 ip6_address [mask netmask]]
  [inner ip-protocol protocol]
  [inner l4-port {src src_port | dest dest_port}]
  [vxlan-port udp_port]
```

```
no policy condition condition_name
```

Syntax Definitions

<i>condition_name</i>	The name of the VXLAN condition. Any alphanumeric string.
<i>vxlan_id</i>	A 24-bit numerical value that identifies traffic for a VXLAN segment. The valid range is 1– 2147483647.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- A policy condition and a policy action are combined to make a policy rule. See the [policy rule](#) command.
- Use the [qos apply](#) command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.

- Use the **no** form of the command to remove a condition from the switch configuration.
- The **vni** (VXLAN Network Identifier) parameter is required to configure a VM Snooping policy condition. The VXLAN header contains the VNI that is associated with the source MAC address of the Ethernet frame that is encapsulated in a VXLAN packet. The VNI represents the VXLAN segment ID to which the packet belongs.
- The **vxlan-port** condition parameter applies only to the outer header of an encapsulated VXLAN packet. All other **inner** condition parameters apply only to the inner header of the Ethernet frame that was encapsulated in a VXLAN packet.
- When a VXLAN Snooping policy condition is used in a policy rule, the rule is then applied only to traffic on ports that have the VM Snooping feature enabled.
- All existing policy actions are supported in combination with VXLAN Snooping policy conditions; there are no specific policy actions required for policy rules containing VXLAN Snooping policy conditions. Policy actions are applied to the outer header of an encapsulated VXLAN packet.
- See the “Configuring VXLAN Snooping” chapter in the *OmniSwitch AOS Release 8 Data Center Switching Guide* for more information about using VXLAN Snooping policy rules.

Examples

```
-> policy condition cond4 vxlan vni 23000
```

The following is an example of using VM Snooping policy conditions in a policy rule that is added to a UNP policy list:

```
-> policy condition c1 vxlan vni 1234 udp-port 4789
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c1 vxlan inner source ip 10.10.10.10
-> policy action a1 disposition dscp 45
-> policy rule r1 condition c1 action a1 no default-list
-> policy list list1 type UNP
-> policy list list1 rule r1
-> qos apply
```

Release History

Release 7.3.4; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Configures a policy action.
policy rule	Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

policy condition vxlan inner source mac

Configures a source MAC address as a policy condition for a VM Snooping policy rule. This type of condition applies to the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet.

policy condition *condition_name* **vxlan inner source mac** *mac_address* [**mask** *mac_mask*]

policy condition *condition_name* **vxlan no source mac**

Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>mac_address</i>	The source MAC address of a VM (inner MAC address of an encapsulated VXLAN frame).
<i>mac_mask</i>	Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the VM source MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VM Snooping ports.

Examples

```
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c2 vxlan inner source mac 00:20:da:05:f6:23 mask
ff:ff:ff:ff:ff:ff
-> policy condition c2 vxlan no source mac
```

Release History

Release 7.3.4; command was introduced.

```

policy condition vxlan inner source mac-group

Configures a source MAC address group as a policy condition for a VXLAN Snooping policy rule. This type of condition checks to see if the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet matches any of the MAC addresses specified in the MAC address group.

policy condition *condition_name* **vxlan inner source mac-group** *group_name*

policy condition *condition_name* **vxlan no source mac-group**

Syntax Definitions

condition_name The name of an existing policy condition.

group_name The name of the source MAC group, configured through the **policy mac group** command.

Defaults

N/A.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the source MAC address group name from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan inner source mac-group vm-macs
-> policy condition c1 vxlan no source mac-group
```

Release History

Release 7.3.4; command was introduced.

policy condition vxlan inner source ip

Configures a source IPv4 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

policy condition *condition_name* vxlan inner source ip *ip_address* [**mask** *netmask*]

policy condition *condition_name* vxlan no source ip

Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>ip_address</i>	A specific source IP address.
<i>netmask</i>	The network mask for the source IP address (for example, 255.0.0.0, 255.255.0.0).

Defaults

parameter	default
<i>netmask</i>	IP address class

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the source IP address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan inner source ip 10.1.1.2
-> policy condition c2 vxlan inner source ip 10.1.1.3 mask 255.0.0.0
-> policy condition c1 vxlan no source ip
```

Release History

Release 7.3.4; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy condition vxlan	Creates a policy condition.
show policy condition	Shows information about policy conditions configured on the switch.

MIB Objects

```
alaQoSConditionTable  
  alaQoSConditionVmSourceIpAddr  
  alaQoSConditionVmSourceIpAddrStatus  
  alaQoSConditionVmSourceIpMask
```

policy condition vxlan inner source ipv6

Configures a source IPv6 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

policy condition *condition_name* **vxlan inner source ipv6** *ipv6_address* [**mask** *netmask*]

policy condition *condition_name* **vxlan no source ipv6**

Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>ipv6_address</i>	A specific source IPv6 address.
<i>netmask</i>	The network mask for the source IPv6 address.

Defaults

parameter	default
<i>netmask</i>	IPv6 address class

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the source IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan inner source ipv6 ::1234:531F:BCD2:F34A
-> policy condition c1 vxlan no source ipv6
```

Release History

Release 7.3.4; command was introduced.

Related Commands

```

policy condition vxlan inner ip-protocol

Configures a an IP protocol number as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the IP protocol of the inner Ethernet frame of an encapsulated VXLAN packet.

policy condition *condition_name* vxlan inner ip-protocol *protocol*

policy condition *condition_name* vxlan no ip-protocol

Syntax Definitions

condition_name The name of an existing policy condition.

protocol The IP protocol number. The range is 0–255.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the IP protocol number from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan inner ip-protocol 6
-> policy condition c1 vxlan no ip-protocol
```

Release History

Release 7.3.4; command was introduced.

 alaQoSConditionVmIpProtocolStatus

policy condition vxlan inner l4-port

Configures a Layer 4 (UDP or TCP) source port and/or destination port as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the Layer 4 port of the inner Ethernet frame of an encapsulated VXLAN packet.

policy condition *condition_name* **vxlan inner l4-port** {**src** *src_port* | **dest** *dest_port*}

policy condition *condition_name* **vxlan no l4-port**

Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>src_port</i>	The source port number. The valid range is 0–65535
<i>dest_port</i>	The destination port number. The valid range is 0–65535

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the Layer 4 port number from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan inner l4-port dest 9445
-> policy condition c1 vxlan inner l4-port src 4000
-> policy condition c2 vxlan inner l4-port dest 8100 inner l4-port src 3000
-> policy condition c1 vxlan no l4-port
```

Release History

Release 7.3.4; command was introduced.

Related Commands

```

policy condition vxlan vxlan-port

Configures a UDP destination port number as a policy condition for a VXLAN Snooping policy rule. This number is found in the outer IP header of an encapsulated VXLAN packet.

policy condition *condition_name* vxlan vxlan-port *udp_port*

policy condition *condition_name* vxlan no vxlan-port

Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>udp_port</i>	The UDP destination port number of the VXLAN packet. The valid range is 0–65535.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	Yes	No	No	No

Usage Guidelines

- Use the **no** form of the command to remove the VXLAN port number from a condition; however, at least one classification parameter must be associated with a condition.
- VXLAN packets use the well-known UDP destination port 4789 by default.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

Examples

```
-> policy condition c1 vxlan vxlan-port 6000
-> policy condition c1 vxlan 7000
-> policy condition c1 vxlan no vxlan-port
```

Release History

Release 7.3.4; command was introduced.

policy action

Configures or deletes a QoS action. A QoS action describes how traffic that matches a particular QoS condition should be treated. It may specify a particular set of bandwidth and queue parameters, or it may simply specify whether the flow is allowed or denied on the switch.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove the parameter from the action.

Note that some action parameters may not be supported depending on the platform you are using. Also some action parameters may not be supported with some conditions. See the condition in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

policy action *action_name*

```

[disposition {accept | drop | deny}]
[shared]
[priority priority_value]
[maximum bandwidth bps]
[maximum depth bytes]
[cir bps [cbs bytes] [pir bps] [pbs bytes] [color-only]
[cpu priority priority]
[tos tos_value]
[802.1p 802.1p_value]
[dcsp dcsp_value]
[map {802.1p | tos | dscp} to {802.1p | tos| dscp} using map_group]
[permanent gateway ip ip_address]
[permanent gateway ipv6 ipv6_address]
[port-disable]
[redirect port chassis/slot/port]
[redirect linkagg link_agg]
[no-cache]
[{ingress | egress | ingress egress | no} mirror {chassis/slot/port | session session_id}

```

policy no action *action_name*

Syntax Definitions

action_name A name for the action, any alphanumeric string.

Defaults

By default, no drop algorithm is configured for the action, and any queues created by the action are not shared.

parameter	default
accept drop deny	accept

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Any condition parameters that the hardware supports will be used to classify the traffic; any condition parameters that are not supported by the hardware will not be used to classify traffic, and the event will be logged in the QoS log.
- Bandwidth parameters may be specified when the action is created or may be specified as separate commands.
- Use the **qos apply** command to activate configuration changes.
- Use the **no** form of the command to remove a QoS action from the configuration.
- If the **configuration snapshot** command is entered after the **policy action** command is configured, the resulting ASCII file will include the following additional syntax for the **policy action** command:

from {cli | ldap | blt}

This syntax indicates how the action was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in action, this setting is not configurable.

- Policy action port-disable is not supported for service domain traffic.

Examples

```
-> policy action action1 accept
```

Release History

Release 7.1.1; command was introduced.

Release 8.6R1; **session** keyword added.

Related Commands

policy condition

Configures a condition associated with the action.

qos apply

Applies configured QoS and policy settings to the current configuration.

show policy action

Displays information about policy actions.

MIB Objects

```

policy action disposition

Configures a disposition for a policy action.

policy action *action_name* **disposition** {**accept** | **drop** | **deny**}

Syntax Definitions

<i>action_name</i>	The name of the action.
accept	Specifies that the switch should accept the flow.
drop	Specifies that the switch should silently drop the flow.
deny	Specifies that the switch should drop the flow and issue an ICMP message indicating the flow was dropped for administrative reasons. Currently this option will provide the same result as drop ; that is, the flow is silently dropped.

Defaults

parameter	default
accept drop deny	accept

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of this command to remove a disposition from an action.

Examples

```
-> policy action a3 disposition deny
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```

policy action priority

Configures the priority for queuing a flow to which the QoS action applies.

policy action *action_name* **priority** *priority_value*

policy action *action_name* **no priority**

Syntax Definitions

action_name

The name of the action.

priority_value

The priority given to scheduling traffic on the output port. Values range from 0 (lowest) to 7 (highest).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a priority value from an action.
- This priority value is independent of 802.1Q, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values.

Examples

```
-> policy action action1 priority 1
-> policy action action1 no priority
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

  alaQoSAppliedActionPriority
  alaQoSAppliedActionPriorityStatus
```

policy action maximum bandwidth

Configures a maximum bandwidth value for a policy action.

policy action *action_name* **maximum bandwidth** *bps*[k | m | g | t]

policy action *action_name* **no maximum bandwidth**

Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bps</i> [k m g t]	The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m , 1g , 1t).

Defaults

parameter	default
k m g t	k

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a maximum bandwidth value from an action.
- If the maximum bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number **10** is specified, **10K** is the maximum bandwidth value used. However, if **10G** is specified, the maximum bandwidth value applied is **10** gbps.
- Use the **shared** policy action to enabling sharing of bandwidth across policy rules that specify the same maximum bandwidth action.

Examples

```
-> policy action action3 maximum bandwidth 10000
-> policy action action4 maximum bandwidth 10k shared
-> policy action action5 maximum bandwidth 10k shared
-> policy action action4 no maximum bandwidth
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionMaximumBandwidth
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionMaximumBandwidth
```

policy action maximum depth

Configures the maximum queue depth or bucket size assigned to this action, in bytes. The queue depth or bucket size determines the amount of buffer allocated to each queue. When the queue depth or bucket size is reached, the switch starts dropping packets.

policy action *action_name* **maximum depth** *bytes* [**K (kilo)** | **M (mega)** | **G (giga)** | **T (tera)**]

policy action *action_name* **no maximum depth**

Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bytes</i> [K M G T]	The maximum queue depth in bytes. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m , 1g). If the value is entered as an integer, the switch uses the default unit of K(kilo) .

Defaults

parameter	default
K M G T	K
<i>bytes</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a maximum depth value from a policy action.
- If the maximum depth value is specified as an integer, without an abbreviated unit designation, the value is applied in Kbytes by default. For example, if the number **10** is specified, **10K** bytes is the maximum depth value used. However, if **10G** is specified, the maximum depth value applied is **10G** bytes.
- A maximum depth action is used in combination with a maximum bandwidth action.

Examples

```
-> policy action action2 maximum depth 100
-> policy action action2 no maximum depth
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionMaximumDepth
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionMaximumDepth
```

policy action cir

Configures a Tri-Color Marking (TCM) policy action. This type of action includes parameters for Committed Information Rate (CIR), Committed Burst Size (CBS), Peak Information Rate (PIR), and Peak Burst Size (PBS). The TCM policier meters and marks packets red, green, or yellow based on the parameter values of this policy action.

policy action *action_name* **cir** *bps* [**cbs** *bytes*] [**pir** *bps*] [**pbs** *bytes*] [**color-only**]

policy action *action_name* **no cir**

policy action *action_name* **no pir**

Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bps</i> [k m g t]	The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, 10) or with abbreviated units (for example, 10k , 5m , 1g , 1t).
<i>bytes</i>	The desired value for maximum bucket size, in bytes.
color-only	Disables TCM rate limiting based on the metering results. Packets are only marked the specific color that applies to the level of packet conformance.

Defaults

parameter	default
cir pir <i>bps</i>	0
cbs pbs <i>bytes</i>	10K
k m g t	k

By default, this action enables rate limiting based on TCM marking and metering.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the TCM parameter values.

- If the **color-only** parameter is specified with this command, the TCM action will only mark packet color; packets are not rate limited based on the metering results. In this case, packets are then subject to any rate limiting specifications as defined in the queue management configuration for the switch.
- This implementation of TCM supports two rate limiting modes: Single-Rate (srTCM) and Two-Rate (trTCM). The srTCM mode marks packets based only on the CIR and the two burst sizes: CBS and PBS. The trTCM mode marks packets based on both the CIR and PIR and their associated CBS and PBS values.
- There is no explicit CLI command to configure the mode (srTCM or trTCM) in which the TCM meter operates. Instead, the mode is determined by the CIR and PIR values configured for the policy action. If the PIR value is greater than the CIR value, trTCM is used. If the PIR value is less than the CIR value, srTCM is used.
- Configuring CIR and CBS is similar to configuring a maximum bandwidth. Configuring CIR and PIR is similar to configuring maximum depth.
- The number of packets counted as a result of the counter color mode setting is displayed using the **show active policy rule** command. These statistics are only shown for those rules that are configured with a TCM policy action.

Examples

The following command examples configure srTCM (the default):

```
-> policy action A3 cir 10M
-> policy action A4 cir 10M cbs 4k
-> policy action A5 cir 10M cbs 4k pir 10M
-> policy action A6 cir 10M cbs 4k pir 10M pbs 4k
-> policy action a7 cir 5M cbs 2k color-only
-> policy action A3 no cir
-> policy action A5 no pir
```

The following command examples configure trTCM (note that PIR is greater than CIR):

```
-> policy action A7 cir 10M cbs 4k pir 20M
-> policy action A8 cir 10M cbs 4k pir 20M pbs 40M
-> policy action a9 cir 5M cbs 1M pbs 10M pbs 2M color-only
-> policy action A7 no cir
```

Release History

Release 7.1.1; command was introduced.

policy action cpu priority

Configures a CPU priority policy action.

policy action *action_name* **cpu priority** *priority*

policy action *action_name* **no cpu priority**

Syntax Definitions

action_name

The name of the action.

priority

The CPU queue on which packets destined for the CPU are received.
The valid range is 0–31.

Defaults

By default, the CPU priority is set to zero.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

Use the **no** form of this command to remove the CPU priority parameter value.

Examples

```
-> policy action A7 cpu priority 15
-> policy action A8 cpu priority 31
-> policy action A7 no cpu priority
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy action tos

Configures a Type of Service (ToS) bits value to be applied to packets in outgoing flows to which the specified policy applies.

policy action *action_name* **tos** *tos_value*

policy action *action_name* **no tos**

Syntax Definitions

action_name

The name of the action.

tos_value

The three-bit priority value in the IP header that should be set on outgoing frames in flows that match the specified policy. Values range from 0 (lowest priority) to 7 (highest priority).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a ToS value from a policy action.
- Note that specifying both ToS and DSCP in the same action is *not* allowed.

Examples

```
-> policy action action3 tos 4
-> policy action action3 no tos
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionTos
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionTos
```

policy action 802.1p

Configures a value to be set in the 802.1p bits of the 802.1Q byte of an outgoing frame for traffic that matches a policy with this action.

policy action *action_name* **802.1p** *802.1p_value*

policy action *action_name* **no 802.1p**

Syntax Definitions

action_name

The name of the action.

802.1p_value

The priority value to be set in 802.1Q frames. Values range from 0 (lowest priority) to 7 (highest priority).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove an 802.1p value from a policy action.
- Note that specifying both ToS and DSCP in the same action is not allowed.

Examples

```
-> policy action action4 802.1p 7
-> policy action action4 no 802.1p
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSAction8021p
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedAction8021p
```

policy action dscp

Configures a Differentiated Services Code Point (DSCP) value to be set in an outgoing flow for traffic that matches rules with this action.

policy action *action_name* **dscp** *dscp_value*

policy action *action_name* **no dscp**

Syntax Definitions

action_name The name of the action.

dscp_value The DSCP value to be set, in the range 0–63.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a DSCP value from a policy action.
- Note that specifying both ToS and DSCP in the same action is *not* allowed.

Examples

```
-> policy action action2 dscp 61
-> policy action action2 no dscp
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionDscp
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionDscp
```

policy action map

Configures a mapping group for a policy action.

policy action map {802.1p | tos | dscp} to {802.1p | tos | dscp} using *map_group*

policy action no map

Syntax Definitions

<i>action_name</i>	The name of the action.
802.1p	Indicates that an 802.1p value should be mapped.
tos	Indicates that a ToS value should be mapped.
dscp	Indicates that a DSCP value should be mapped.
<i>map_group</i>	The name of the map group, configured through the policy map group command.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- When remapping is configured with this command and a flow matches a policy with this remapping action, and the 802.1p, ToS, or DSCP setting in the incoming flow is specified by the map group, the value will be remapped in the outgoing flow according to the map group.
- If the 802.1p, ToS, or DSCP setting in the incoming flow is not a value specified in the map group, the switch will do one of two things:

If the *remap from* and *remap to* types are the same (802.1p to 802.1p, ToS to ToS, or DSCP to DSCP), the values in the outgoing flow will be unchanged. If the *remap from* and *remap to* types are not the same (for example: 802.1p to ToS), the switch will determine the outgoing 802.1p and ToS based on whether or not the port is trusted or untrusted).

- Use the **no** form of the command to delete the map group from the configuration.

Examples

```
-> policy action a1 map 802.1p to 802.1p using mapGroup2
-> policy action a2 map 802.1p to tos using mapGroup3
```

Release History

Release 7.1.1; command was introduced.

Related Commands

policy map group	Configures a map group and its associated mappings for 802.1p, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values.
qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

  alaQoSAppliedActionMapFrom
  alaQoSAppliedActionMapToalaQoSAppliedActionMapGroup
```

policy action permanent gateway-ip

Used for Policy Based Routing (PBR). Routed flows to which this action is applied will be directed to the IP address specified in the action regardless of whether or not a route already exists in the switch routing table.

policy action *action_name* **permanent gateway-ip** *ip_address*

policy action *action_name* **no permanent gateway-ip**

Syntax Definitions

action_name The name of the action.
ip_address The destination IP address to which packets will be routed.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a gateway IP address from a policy action.
- If the gateway goes down, the traffic to be routed over the gateway will be dropped.
- This action can be combined with a condition based on a VRF on the OS6860N, OS6900-V72/C32/X48C6/T48C6/X48C4E/V48C8/ C32E/T24C2/X24C2 models.

Examples

```
-> policy action pbr2 permanent gateway-ip 10.10.2.1
-> policy action pbr2 no permanent gateway-ip
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable

```

policy action permanent gateway-ipv6

Used for Policy Based Routing (PBR). Routed flows to which this action is applied will be directed to the IPv6 address specified in the action regardless of whether or not a route already exists in the switch routing table.

policy action *action_name* **permanent gateway-ipv6** *ipv6_address*

policy action *action_name* **no permanent gateway-ipv6**

Syntax Definitions

action_name The name of the action.
ipv6_address The destination IPv6 address to which packets will be routed.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a gateway IPv6 address from a policy action.
- If the gateway goes down, the traffic to be routed over the gateway will be dropped.

Examples

```
-> policy action pbr2 permanent gateway-ipv6 2607:f0d0:2001:000a:0000:0000:0010
-> policy action pbr2 no permanent gateway-ipv6
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```

```

policy action port-disable

Administratively disables the source port of the traffic to which this action is applied.

policy action *action_name* **port-disable**

policy action *action_name* **no port-disable**

Syntax Definitions

action_name The name of the action.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove **port-disable** from the policy action.
- An SNMP trap is sent when a port is administratively disabled through a port disable action or a UserPorts shutdown function.
- To enable a port disabled by this action, use the [interfaces](#) or [interfaces port break-out](#) command to administratively enable the port, or physically disconnect and reconnect the port cable.

Examples

```
-> policy action pd01 port-disable  
-> policy action pb02 no port-disable
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.
interfaces	Administratively enables or disables a port.
interfaces wait-to-restore	Administratively clears the violation that disabled the port or link aggregate and restores the port to enabled status.

MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionPortdisable
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionPortdisable
```

policy action redirect port

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified port instead of the port to which the traffic was destined.

policy action *action_name* **redirect port** *chassis/slot/port*

policy action *action_name* **no redirect port**

Syntax Definitions

<i>action_name</i>	The name of the action.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number that will receive the redirected traffic.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove **redirect port** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect port must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect port is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified port or link aggregate and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will *not* trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port must belong to VLAN A (tagged or default VLAN).

Examples

```
-> policy action rp01 redirect port 1/12/1  
-> policy action rp01 no redirect port
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.
policy action	Creates a policy action.
show policy action	Displays information about policy actions.

MIB Objects

```
alaQoSActionTable  
    alaQoSActionName  
    alaQoSActionRedirectSlot  
    alaQoSActionRedirectPort  
alaQoSAppliedActionTable  
    alaQoSAppliedActionName  
    alaQoSAppliedActionRedirectSlot  
    alaQoSAppliedActionRedirectPort
```

policy action redirect linkagg

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified link aggregate ID instead of the link aggregate to which the traffic was destined.

policy action *action_name* **redirect linkagg** *agg_id*

policy action *action_name* **no redirect linkagg**

Syntax Definitions

action_name

The name of the action.

agg_id

The link aggregate ID number (0–32) to assign to the specified VLAN. See the “Link Aggregation Commands” chapter in this guide.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove **redirect linkagg** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect link aggregate ID must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect link aggregate ID is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified link aggregate ID and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will *not* trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port or link aggregate ID to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port or link aggregate ID must belong to VLAN A (tagged or default VLAN).

Examples

```
-> policy action rp01 redirect linkagg 2
-> policy action rp01 no redirect linkagg 2
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply	Applies configured QoS and policy settings to the current configuration.

```

policy action no-cache

Disables logging of rule entries to the hardware cache.

policy action *action_name* **no-cache**

policy action *action_name* **no no-cache**

Syntax Definitions

action_name The name of the action.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove **no-cache** from the policy action.
- Recommended for use when applied to traffic going to the switch.

Examples

```
-> policy action nc01 no-cache
-> policy action nc01 no no-cache
```

Release History

Release 7.1.1; command was introduced.

Related Commands

qos apply

Applies configured QoS and policy settings to the current configuration.

policy action

Creates a policy action.

show policy action

Displays information about policy actions.

MIB Objects

alaQoSActionTable

 alaQoSActionName

 alaQoSActionNocache

alaQoSAppliedActionTable

 alaQoSAppliedActionName

 alaQoSAppliedActionNocache

policy action mirror

Mirrors ingress, egress, or both ingress and egress packets that match a mirroring policy to the specified port.

policy action *action_name* [**ingress** | **egress** | **ingress egress**] **mirror** {*chassis/slot/port* | **session** *session_id*}

policy action *action_name* **no mirror** {*chassis/slot/port* | **session** *session_id*}

Syntax Definitions

<i>action_name</i>	The name of the action.
ingress	Mirrors ingress packets.
egress	Mirrors egress packets.
ingress egress	Mirrors ingress and egress packets.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number that will receive the mirrored traffic.
<i>session_id</i>	Mirroring session identifier. <i>This parameter is supported only on the OmniSwitch 9900.</i>

Defaults

parameter	default
ingress egress ingress egress	ingress

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

- Use the **no** form of the command to remove **mirror** from the policy action.
- Use this command to configure a mirror-to-port (MTP) and mirror-to-session action used for policy based mirroring.
- Only one policy-based MTP session is supported at any given time either port-based policy mirroring or session-based policy mirroring. As a result, all mirroring policies must specify the same destination port or same port mirroring session ID.
- Policy based mirroring and the port based mirroring feature can run simultaneously on the same switch.

Examples

```
-> policy action a1 mirror 1/7/1 (default ingress)
-> policy action a1 ingress mirror 1/7/1
-> policy action a1 egress mirror 1/7/1
-> policy action a1 ingress egress mirror 1/7/1
-> policy action a1 no mirror
-> policy action a1 mirror session 1
```

Release History

Release 7.1.1; command was introduced.
Release 8.6R1; **session** keyword introduced.

Related Commands

```

show policy network group

Displays information about pending and applied policy network groups.

show [applied] policy network group [*network_group*]

Syntax Definitions

applied Displays only network groups that have been applied.

network_group The name of the policy network group for which you want to display information; or a wildcard sequence of characters for displaying information about network groups with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Information for all policy network groups displays unless *network_group* is specified.

Examples

```
-> show policy network group
Group Name      : netg1
State           = new,
Entries         = 198.206.10.1

-> show policy network group
Group Name      : group1
Entries         = 203.185.129.0 mask 255.255.255.0,
                203.185.131.192 mask 255.255.255.192,
                203.185.132.0 mask 255.255.252.0,
                204.226.0.0 mask 255.255.0.0
```

output definitions

Group Name	The name of the port group, configured through the policy network group command.
State	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Entries	The IP addresses associated with the network group.

Release History

```

show policy service

Displays information about pending and applied policy services.

show [applied] policy service [*service_name*]

Syntax Definitions

applied Displays only policy services that have been applied.

service_name The name of the service for which you want to display information; or a wildcard sequence of characters for displaying information about services with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Information about all policy services is displayed unless *service_name* is specified.

Examples

```
-> show policy service
Service name           : s1
State                  = new,
Destination UDP port   = 1001-2004
```

output definitions

Service Name	The name of the port group, configured through the policy service command.
State	This field appears if the service was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
IPProto	The IP protocol associated with the service.
SrcPort	A source port associated with the service.
DstPort	A destination port associated with the service.

Release History

Release 7.1.1; command was introduced.

Related Commands

                 ssh,
                 telnet
```

output definitions

Group Name

The name of the port group, configured through the **policy service group** command.

output definitions

State	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Entries	The services associated with the group. Services are configured through the policy service command.

Release History

Release 7.1.1; command was introduced.

Related Commands

policy service group Configures a service group and its associated services. A service group may be attached to a policy condition.

```

show policy mac group

Displays information about pending and applied MAC groups.

show [**applied**] **policy mac group** [*mac_group*]

Syntax Definitions

applied Displays only MAC groups that have been applied.

mac_group The name of the MAC group for which you want to display information; or a wildcard sequence of characters for displaying information about MAC groups with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Information for all policy MAC groups displays unless *mac_group* is specified.

Examples

```
-> show policy mac group
Group Name      : mg1
State           = new,
Entries         = 00:02:9A:44:5E:10 mask 00:00:00:FF:FF:FF,
                00:11:01:00:00:01 mask 00:00:00:FF:FF:FF
                00:02:9A:44:5E:20
```

output definitions

Group Name	The name of the port group, configured through the policy mac group command.
State	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Entries	The MAC addresses associated with the group.

Release History

Release 7.1.1; command was introduced.

show policy port group

Displays information about pending and applied policy port groups.

show [**applied**] **policy port group** [*group_name*]

Syntax Definitions

applied Displays only policy port groups that have been applied.

group_name The name of the policy port group for which you want to display information; or a wildcard sequence of characters for displaying information about port groups with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Information for all policy port groups displays unless *group_name* is specified.

Examples

```
-> show policy port group
Group Name      : pg1
State           = new,
Entries         = 1/2/1,
                1/3/1,
                1/4/1,
                3/1/11
```

output definitions

Group Name	The name of the port group, configured through the policy port group command or built-in port groups automatically set up by the switch (Slot01 , Slot02 , Slot03 , etc.).
State	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Entries	The slot/port combinations associated with the port group.

Release History

```

show policy action

Displays information about pending and applied policy actions configured on the switch.

show [applied] policy action [action_name]

Syntax Definitions

applied	Displays only actions that have been applied to the QoS configuration for the switch.
<i>action_name</i>	The name of the action for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all policy actions displays unless *action_name* is specified.
- When the optional **applied** parameter is used, pending QoS actions are not displayed.

Examples

```
-> show policy action
Action name           : a1
  Committed Information Rate   = 10.0M,
  Committed Burst size        = 5.00M,
  Peak Information Rate        = 20.0M,
  Peak Burst size             = 5.00M

Action name           : a2
  State                  = new,
  Disposition            = deny

Action name           : a3
  State                  = new,
  Priority                = 7,
```

```

-> show applied policy action
Action name                : a1
  Committed Information Rate = 10.0M,
  Committed Burst size     = 5.00M,
  Peak Information Rate    = 20.0M,
  Peak Burst size         = 5.00M

```

output definitions

Action Name	The name of the action, configured through the policy action command.
State	This field appears if the action was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Policy Action Parameters	Displays the configured policy action parameters.

Release History

Release 7.1.1; command was introduced.

Related Commands

policy action Creates a policy action. A QoS action is a particular set of bandwidth and queue parameters that may be applied to a flow matching particular QoS conditions.

MIB Objects

```

show policy condition

Displays information about pending and applied policy conditions.

show [applied] policy condition [*condition_name*]

Syntax Definitions

applied Displays only conditions that have been applied to the QoS configuration for the switch.

condition_name The name of the condition for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all policy conditions displays unless *condition_name* is specified.
- When the optional **applied** parameter is used, pending QoS conditions are not displayed.

Examples

```
-> show policy condition
Condition name      : c1
Source VLAN        = 1001

Condition name      : c2
State               = new,
Source IP           = 10.2.2.1,
Destination UDP port = 17

-> show applied policy condition
Condition name      : c1
Source VLAN        = 1001
```

```

-> show policy condition
Condition name           : c1
Application group       = apg1

Condition name           : c2
State                   = new,
Application name        = "jabber -init sequence",
Destination UDP port    = 17

```

output definitions

Condition Name	The name of the condition, configured through the policy condition command.
State	This field appears if the condition was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Source VLAN	The source VLAN.
Destination UDP port	The destination UDP port.
Application group	Name of the AppMon application group to which the QoS policy condition is applied.
Application name	Name of the AppMon application to which the QoS policy condition applied.

Release History

Release 7.1.1; command was introduced.

Related Commands

[policy condition](#) Creates a policy condition. The condition determines what parameters the switch uses to classify incoming flows.

show active policy rule

Displays information about pending and applied policy rules that are active (enabled) on the switch.

show active policy rule [*rule_name*]

Syntax Definitions

rule_name

The name of the rule for which you want to display information; or a wildcard sequence of characters for displaying information about rules with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **show policy rule** command to display inactive as well as active policy rules.
- Information for all rules is displayed unless *rule_name* is specified.
- Applied rules may or may not be active on the switch. Applied rules are inactive if they have been administratively disabled with the **disable** option in the **policy rule** command.

Examples

```
-> show active policy rule
Rule name           : r1
Condition name      = c1,
Action name         = a1,
Packets             = 4166772,
Bytes               = 266665728
```

output definitions

Rule name	The name of the policy rule, configured through the policy rule command.
Condition name	The name of the condition configured for this rule.
Action name	The name of the action configured for this rule.

output definitions (continued)

Packets	The number of packets that match this rule.
Bytes	The number of bytes that match this rule.

Release History

Release 7.1.1; command was introduced.

Related Commands

policy rule Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

```

show policy rule

Displays information about pending and applied policy rules.

show [applied] policy rule [*rule_name*]

Syntax Definitions

applied Displays only policy rules that have been applied.

rule_name The name of the rule for which you want to display information; or a wildcard sequence of characters for displaying information about rules with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all rules is displayed unless *rule_name* is specified.
- Use the [show active policy rule](#) command to display only active rules that are currently being enforced on the switch.

Examples

```
-> show policy rule
Rule name           : r1
  Condition name    = c1,
  Action name       = a1

Rule name           : r2
  State             = new,
  Condition name    = c2,
  Action name       = a1

Rule name           : r3
  State             = new,
  Condition name    = c2,
  Action name       = a2

-> show applied policy rule
Rule name           : r1
  Condition name    = c1,
  Action name       = a1
```

output definitions

Rule name	The name of the policy rule, configured through the policy rule command.
State	This field appears if the rule was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.
Condition name	The name of the condition configured for this rule.
Action name	The name of the action configured for this rule.

Release History

Release 7.1.1; command was introduced.

Related Commands

```

show policy validity period

Displays information about policy validity periods.

show policy validity period [*name*]

Syntax Definitions

name The name of the validity period.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all validity periods is displayed unless *name* is specified.
- Use the [show policy rule](#) command to display the validity period that is associated with a policy rule.

Examples

```
-> show policy validity-period
Validity period name      = tuesday
State                    = new,
Days                    = tuesday

Validity period name      = february
Months                   = february

-> show applied policy validity-period
Validity period name      = february
Months                   = february
```

output definitions

Validity period name	The name of the policy validity period, configured through the iec message-type priority command.
State	This field appears if the validity period was created or modified but not yet applied to the QoS configuration. When the qos apply command is issued, this field no longer displays.

output definitions

Days	The days of the week the validity period is active, configured through the iec message-type priority command. If this field does not appear, then the validity period is not restricted to specific days.
Months	The months during which the validity period is active, configured through the iec message-type priority command. If this field does not appear, then the validity period is not restricted to specific months.
Hours	The time of day the validity period begins and ends, configured through the iec message-type priority command. If this field does not appear, then the validity period is not restricted to a specific time.
Interval	The date and time a validity period interval begins and ends, configured through the iec message-type priority command. If this field does not appear, then the validity period is not restricted to a specific date and time interval.

Release History

Release 7.1.1; command was introduced.

Related Commands

iec message-type priority Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.

show active policy list

Displays information about applied policy lists that are active (enabled) on the switch.

show active policy list [*list_name*]

Syntax Definitions

list_name

The name of the list for which you want to display information; or a wildcard sequence of characters for displaying information about lists with similar names. Use an asterisk (*) to indicate a wildcard character.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Information for all active rules is displayed unless a *list_name* is specified.
- Use the **show policy list** command to display inactive as well as active policy lists.
- Applied lists may or may not be active on the switch. Applied lists are inactive if they have been administratively disabled with the **disable** option in the **policy list** command.
- The display may include any of the following characters:

character	definition
+	Indicates that the policy list has been modified or has been created since the last qos apply .
-	Indicates the policy list is pending deletion.
#	Indicates that the policy list differs between the pending/applied lists.

Examples

```
-> show active policy list
```

Group Name	From	Type	Enabled	Entries
list1	cli	unp	Yes	r1 r2
+list2	cli	unp	Yes	r3
egress_list1	cli	egress	Yes	r1 r2 r3

output definitions

Group Name	The name of the policy list. Configured through the policy list command. A plus sign (+) preceding a policy list name indicates that the list was modified or created since the last qos apply .
From	Where the list originated.
Type	The type of rule (unp , egress , appfp). Configured through the policy list command. Note that the default policy list is not shown. Use the show policy rule command to display rules that are members of the default policy list.
Enabled	Whether or not the rule is enabled. Configured through the policy list command.
Entries	The QoS policy rules that are grouped together in this policy list. Configured through the policy list command.

Release History

Release 7.2.1; command was introduced.

Related Commands

-> show applied policy list
Group Name           From  Type   Enabled  Entries
-----+-----+-----+-----+-----
list1                cli  unp   Yes     r1
                    r2

```

output definitions

Group Name	The name of the policy list. Configured through the policy list command. A plus sign (+) preceding a policy list name indicates that the list was modified or created since the last qos apply .
From	Where the list originated.
Type	The type of rule (unp , egress , appfp). Configured through the policy list command. Note that the default policy list is not shown. Use the show policy rule command to display rules that are members of the default policy list.
Enabled	Whether or not the rule is enabled. Configured through the policy list command.
Entries	The QoS policy rules that are grouped together in this policy list. Configured through the policy list command.

Release History

Release 7.2.1; command was introduced.

Related Commands

show active policy list	Displays only those policy lists that are currently being enforced on the switch.
show policy rule	Displays information about pending and applied policy rules

show policy ipv4-summary

Displays all the IPv4 networks that are currently matched by ACLs on the system.

show policy ipv4-summary [*rule rule_name*]

Syntax Definitions

rule_name The name of the policy rule.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Specifying the rule name displays the detailed summary for the corresponding rule. If no rule name is specified, then the summary for each rule is displayed in a tabular form.
- If there is an explicit default rule that is set to deny, the same is displayed in the output.

Examples

```
-> show policy ipv4-summary
```

Legends:

P= Protocol

Act= Action (d = deny, a = accept)

Rule	P	Source IP/ Source Group	Destination IP/ Destination Group	VRF Name	Act	Hit Count
rle-rule3	IP	224.0.0.0/4	224.0.0.0/4	default	a	30129
rle-rule4	UDP	0.0.0.0/0	0.0.0.0/0	default	d	10202020
rle-rule1	IP	192.168.10.0/*	192.168.20.0/24	guest	a	458723011
rle-rule2	IP	192.168.30.0/24	192.168.10.0/24	enterpr*	a	458723011

```
-> show policy ipv4-summary rule rle-rule2
```

```
Rule name           : rle-rule2,
Protocol            : IP,
Source IP           : 192.168.30.0/24,
Destination IP      : 192.168.10.0/24,
VRF Name            : enterprise,
Action              : Accept,
Hit Count           : 458723011
```

output definitions

Rule	Name of the rule.
P	The associated IP protocol.
Source IP/ Source Group	The IPv4 address of the source or source group.
Destination IP/Destination Group	The IPv4 address of the destination or destination group.
VRF Name	The name of the VRF.
Act	The name of the action.
Hit Count	The sum of packet counts from all NIs matching the corresponding rule.

40 Policy Server Commands

This chapter describes CLI commands used for managing policies downloaded to the switch from an attached LDAP server. Policy rules can be created on an attached server through the PolicyView GUI application. Policy rules can also be created on the switch directly through CLI or SNMP commands. This chapter describes commands related to managing LDAP policies only. See [Chapter 38, “QoS Commands,”](#) for information about commands for creating and managing policies directly on the switch.

The policy commands are based on RFC 2251 and RFC 3060.

MIB information for policy server commands is as follows:

Filename: ALCATEL-IND1-POLICY-MIB.mib
Module: alcatelIND1PolicyMIB

The policy server commands are summarized here:

[policy server load](#)
[policy server flush](#)
[policy server](#)
[show policy server](#)
[show policy server long](#)
[show policy server statistics](#)
[show policy server rules](#)
[show policy server events](#)

policy server load

Downloads policies from an LDAP server. These policies are created through the PolicyView management application.

policy server load

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

Policies are downloaded to the switch from the directory server with the highest preference setting; this server must be enabled and operational (able to bind).

Examples

```
-> policy server load
```

Release History

Release 7.1.1; command introduced.

Related Commands

[policy server flush](#)

Removes all cached LDAP policy data from the switch.

MIB Objects

```
serverPolicyDecision
```

policy server flush

Removes all cached LDAP policy data from the switch.

policy server flush

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

Use this command to remove LDAP policies. Policies configured through the CLI or SNMP are not removed.

Examples

```
-> policy server flush
```

Release History

Release 7.1.1; command introduced.

Related Commands

[policy server load](#)

Downloads policies from a LDAP server. These policies are created through the PolicyView management application.

MIB Objects

serverPolicyDecision

policy server

Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

policy server *ip_address* [**port** *port_number*] [**admin-state** {**enable** | **disable**}] [**preference** *preference*] [**user** *user_name* **password** *password*] [**searchbase** *search_string*] [**ssl** | **no ssl**]

no policy server *ip_address* [**port** *port_number*]

Syntax Definitions

<i>ip_address</i>	The IP address of the LDAP-enabled directory server.
<i>port_number</i>	The TCP/IP port number used by the switch to connect to the directory server.
enable	Enables the specified policy server to download rules to the switch. The policy servers are up by default.
disable	Prevents the specified policy server from downloading rules to the switch.
<i>preference</i>	Determines which directory server is used for policy downloads when multiple servers are configured. The range is 0–255. The server with the highest value is used as the policy server. If that server becomes unavailable, the server with the next highest preference value is used for policy downloads.
<i>user_name</i>	The user name for accessing the database entries on the directory server. When spaces are used in the user name, quotation marks must be included: (e.g. “Directory Manager”).
<i>password</i>	The password associated with the user name. The password must match the password defined on the directory server.
<i>search_string</i>	The root of the directory required for searching the policy information. Typically, the <i>search_string</i> includes o=organization and c=country . For example, o=company and c=country .
ssl	Enables a Secure Socket Layer between the switch and the policy server.
no ssl	Disables a Secure Socket Layer between the switch and the policy server.

Defaults

parameter	default
admin	up
<i>port_number</i>	389 (SSL disabled) 636 (SSL enabled)
<i>preference</i>	0
ssl no ssl	no ssl

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

If you change the port number, another entry is added to the policy server table; the existing port number is not changed. To remove a port number, use the **no** form of this command with the relevant policy server IP address and the port number you want to remove.

Examples

```
-> policy server 222.22.22.2 port 345 user dirmgr password secret88 searchbase
ou=qos,o=company,c=country
```

Release History

Release 7.1.1; command introduced.

Related Commands

[show policy server](#)

Displays information about policies downloaded from an LDAP server.

MIB Objects

```

  directoryServerPassword
  directoryServerSearchbase
  directoryServerEnableSSL
```

show policy server

Displays information about servers from which policies can be downloaded to the switch.

show policy server

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

This command displays basic information about policy servers. Use the **show policy server long** command to display more details about the servers.

Examples

```
-> show policy server
```

```
Server  IP Address  port  enabled  status  primary
-----+-----+-----+-----+-----+-----
  1    208.19.33.112  389    Yes     Up      X
  2    208.19.33.66   400    No      Down    -
```

output definitions

Server	The index number corresponding to the LDAP server.
IP Address	The IP address of the LDAP server.
port	The TCP/IP port number used by the switch to connect to the policy server.
enabled	Whether or not the policy server is enabled.
status	The state of the policy server, Unkn , Up or Down .
primary	Indicates whether the server is the primary server; this server can be used for the next download of policies; only one server is a primary server.

Release History

Release 7.1.1; command introduced.

Related Commands

show policy server long

Displays more detailed information about an LDAP policy server.

show policy server long

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

This command displays detailed information about policy servers. Use the **show policy server** command to display basic information about policy servers.

Examples

```
-> show policy server long
LDAP server 0
  IP address           : 155.132.44.98,
  TCP port             : 16652,
  Enabled              : Yes,
  Operational status   : Unkn,
  Preference           : 99,
  Authentication       : password,
  SSL                  : Disabled,
  login DN             : cn=Directory Manager,
  searchbase           : ou:4.1, cn=policyRoot, o=company.fr
  Last load time       : 09/13/01 16:38:18
LDAP server 1
  IP address           : 155.132.48.27,,
  TCP port             : 21890,
  Enabled              : Yes,
  Operational status   : Unkn,
  Preference           : 50,
  Authentication       : password,
  SSL                  : Disabled,
  login DN             : cn=Directory Manager,
  searchbase           : o=company.fr
  Last load time       : 00/00/00 00:00:00
```

output definitions

IP address	The IP address of the policy server.
TCP port	The TCP/IP port number used by the switch to connect to the policy server.
Enabled	Displays whether the policy server is enabled through the PolicyView application.
Operational status	The state of the policy server, Up or Down .
Preference	Determines which directory server is used for policy downloads when multiple servers are configured. The range is 0–255. The server with the highest value is used as the policy server. If that server becomes unavailable, the server with the next highest preference value is used for policy downloads.
Authentication	Displays password if a user name and password was specified for the server through the policy server command. Displays anonymous if a user name and password are not configured.
login DN	The directory user name.
searchbase	The searchbase name, which is the root of the directory that can be searched for policy download information.
Last load time	The date and time that policies were last downloaded. Values of zero indicate that no policies have been downloaded.

Release History

Release 7.1.1; command introduced.

Related Commands

show policy server statistics

Displays statistics about policy directory servers.

show policy server statistics

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

This command displays statistics about server downloads. For information about server parameters, use the **show policy server** command.

Examples

```
-> show policy server statistics
Server  IP Address      port  accesses  delta  successes delta  errors  delta
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
  1     155.132.44.98 16652    793     793     295     295     0       0
  2     155.132.48.27 21890     0       0       0       0     0       0
```

output definitions

Server	The index number corresponding to the server.
IP Address	The IP address of the LDAP server.
port	The TCP/IP port number used by the switch to connect to the policy server.
accesses	The number of times the server was polled by the switch to download policies.
delta	The change in the number of accesses since the last time the policy server was accessed.
successes	The number of times the server was polled by the switch to download policies and the policies were successfully downloaded.

output definitions

delta	The change in the number of successful policy downloads since the last time the policy server was accessed.
errors	The number of errors returned by the server.
delta	The change in the number of errors returned by the server since the last time the policy server was accessed.

Release History

Release 7.1.1; command introduced.

Related Commands

[policy server](#) Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

```

show policy server rules

Displays the names of policies originating from a directory server, that have been downloaded to the switch.

show policy server rules

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

This command displays information about policies created on directory servers only. [Chapter 38, “QoS Commands,”](#) for information about configuring and displaying policies directly on the switch.

Examples

```
-> show policy server rules
Num      name          prio      scope      status
-----+-----+-----+-----+-----
1         QoSRule1      0         Provisioned Active
2         QoSrule2      0         Provisioned Active
```

output definitions

Num	An index number corresponding to the policy rule.
name	The name of the policy rule; only rules configured through PolicyView are displayed in this table.
prio	The priority or preference of the rule. Indicates the order in which rules can be checked to match to the incoming traffic. If two or more rules apply to the traffic, the rule with the highest preference is applied. Preference is determined when the rule is created.
scope	The type of rule. Provisioned is the only type valid for the current release.

output definitions (continued)

status	The status of the rule: Active indicates that the rule is available in the QoS software on the switch and is available to be applied to the traffic; notInService means the rule can be pushed to the QoS software in the future but is not available yet (typically because of a variable validity period); notReady indicates that the rule can never be pushed to the QoS software because its validity period has expired or because it has been disabled through SNMP.

show policy server events

Displays any events related to a directory server on which policies are stored.

show policy server events

Syntax Definitions

N/A

Defaults

The display is limited to 50 events.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

The Policy Manager initialization event is always the first event logged.

Examples

```
-> show policy server events
Event Time                event description
-----+-----
09/13/01 16:38:15 Policy manager log init

41 AAA Commands

This chapter includes descriptions for authentication, authorization, and accounting (AAA) commands. The commands are used for configuring the type of authentication as well as the AAA servers and the local user database on the switch.

- **Authenticated Switch Access.** Authenticates users into the switch to manage the switch. User information is stored on a RADIUS, TACACS+, LDAP or information may be stored locally in the switch user database.
- **Local user database.** User information may be configured for Authenticated Switch Access. For functional management access, users may be allowed to access specific command families or domains.

MIB information for the AAA commands is as follows:

Filename: ALCATEL-IND1-AAA-MIB.mib
Module: alcatelIND1AAAMIB

Filename: ALCATEL-IND1-SYSTEM-MIB.mib
Module: alcatelIND1SystemMIB

A summary of the available commands is listed here:

Authentication servers	aaa radius-server aaa radius-server health-check aaa radius unprofile-precedence aaa test-radius-server aaa tacacs+-server aaa tacacs command-authorization aaa ldap-server show aaa server show aaa server statistics aaa radius-server clear-statistics
Federal Information Processing Standards (FIPS)	system fips admin-state show system fips
Authenticated Switch Access	aaa authentication aaa console admin-only aaa authentication default aaa accounting session aaa accounting command show aaa authentication show aaa accounting

Port-based Network Access Control (Access Guardian)	<code>aaa device-authentication</code> <code>aaa accounting</code> <code>aaa accounting radius calling-station-id</code> <code>aaa 802.1x re-authentication</code> <code>aaa interim-interval</code> <code>aaa session-timeout</code> <code>aaa session console</code> <code>aaa inactivity-logout</code> <code>aaa radius nas-port-id</code> <code>aaa radius nas-identifier</code> <code>aaa radius nas-ip-address</code> <code>aaa radius mac-format</code> <code>aaa profile</code> <code>show aaa device-authentication</code> <code>show aaa accounting</code> <code>show aaa config</code> <code>show aaa radius config</code> <code>show aaa radius health-check-config</code> <code>show aaa profile</code> <code>show aaa session console config</code>
Local User Database and Partitioned Management	<code>user</code> <code>password</code> <code>super-password</code> <code>user password-size min</code> <code>user password-expiration</code> <code>user allow-ssh</code> <code>show user</code> <code>show aaa priv hexa</code>
Password Policy	<code>super-password</code> <code>user password-expiration</code> <code>user password-policy cannot-contain-username</code> <code>user password-policy cannot-contain-consecutive-characters</code> <code>user password-policy min-uppercase</code> <code>user password-policy min-lowercase</code> <code>user password-policy min-digit</code> <code>user password-policy min-nonalpha</code> <code>user password-history</code> <code>super-password</code> <code>user password-min-age</code> <code>user password-expiration</code> <code>show user</code> <code>show user password-policy</code>
User Lockout Settings	<code>user lockout-window</code> <code>user lockout-threshold</code> <code>user lockout-duration</code> <code>user lockout unlock</code> <code>show user</code> <code>show user lockout-setting</code>

Authenticated Switch Access - Enhanced Mode	<pre> aaa switch-access mode aaa switch-access ip-lockout-threshold aaa switch-access banned-ip release aaa switch-access priv-mask aaa switch-access management-stations admin-state aaa switch-access management-stations show aaa switch-access mode show aaa switch-access ip-lockout-threshold show aaa switch-access banned-ip show aaa switch-access priv-mask show aaa switch-access management-stations show aaa switch-access hardware-self-test show aaa switch-access process-self-test </pre>
Switch Supplicant	<pre> aaa switch-supplicant aaa certificate update-supplicant-certificate no aaa certificate update-supplicant-certificate aaa certificate update-supplicant-ca-cert aaa certificate install-certificate webview show aaa switch-supplicant status </pre>
Common Criteria	<pre> aaa common-criteria admin-state show aaa common-criteria config aaa certificate update-ca-certificate aaa certificate update-crl aaa certificate generate-rsa-key key-file aaa certificate generate-self-signed aaa certificate view aaa certificate verify ca-certificate aaa certificate delete aaa certificate generate-csr </pre>
Public Key Infrastructure (PKI)	<pre> ssl pki client validate-certificate admin-state ssl pki client mutual-authentication admin-state ssl pki server mutual-authentication admin-state ssl pki tls version show ssl pki config </pre>
Cipher Security Level	<pre> ssl cipher show ssl ciphers all show ssl ciphers config </pre>
Kerberos Snooping	<pre> kerberos inactivity-timer kerberos ip-address kerberos server-timeout kerberos authentication-pass policy-list-name kerberos authentication-pass domain clear kerberos statistics show kerberos configuration show kerberos users show kerberos statistics </pre>
Joint Interoperability Test Command (JITC)	<pre> aaa jitc admin-state show aaa jitc config </pre>

aaa radius-server

Configures a RADIUS server for Authenticated Switch Access and device authentication.

```
aaa radius-server server_name host {hostname | ip_address | ipv6_address} [hostname2 | ip_address2 | ipv6_address2] {key secret | hash-key hash_secret | prompt-key} [salt salt | hash-salt hash_salt] [retransmit retries] [timeout seconds] [auth-port auth_port] [acct-port acct_port] [vrf-name name] [ssl | no ssl]
```

```
no aaa radius-server server_name
```

Syntax Definitions

<i>server_name</i>	The name of the RADIUS server.
<i>hostname</i>	The host name (DNS name) of the primary RADIUS server. The host name or IP address is required when creating a server.
<i>ip_address</i> <i>ipv6_address</i>	The IPv4 or IPv6 address of the primary RADIUS server. An IP address or host name is required when creating a server.
<i>hostname2</i>	The host name (DNS name) of an optional backup RADIUS server.
<i>ip_address2</i> <i>ipv6_address2</i>	The IPv4 or IPv6 address of an optional backup RADIUS server.
<i>secret</i>	The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but MUST match the secret configured on the server. The secret is case-sensitive. Required when creating a server.
<i>hash_secret</i>	A shared secret that the switch saves with a hashing algorithm.
prompt-key	This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both entries match, the command is accepted. The key provided in this mode is not displayed on the CLI as text.
<i>salt</i>	The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, system time will be taken as default salt value.
<i>hash-salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
<i>retries</i>	The number of retries the switch makes to authenticate a user before trying the backup server (<i>hostname2</i> or <i>ip_address2</i>).
<i>seconds</i>	The timeout for server replies to authentication requests.
<i>auth_port</i>	The UDP destination port for authentication requests.
<i>acct_port</i>	The UDP destination port for accounting requests.
<i>name</i>	The name of the VRF to be used to access the server.
ssl	Enables Transport Layer Security (TLS) between the switch and the RADIUS server.
no ssl	Disables Transport Layer Security (TLS) between the switch and the RADIUS server.

Defaults

parameter	default
<i>retries</i>	3
<i>seconds</i>	2
<i>auth_port</i>	1812
<i>acct_port</i>	1813
ssl no ssl	no ssl

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- A host name (or IP address) and a secret are required when configuring a server.
- The server and the backup server must both be RADIUS servers.
- Use the **no** form of the command to remove a RADIUS server from the configuration. Only one server can be deleted at a time.
- A host name (or IP address) and a secret key are required when configuring a server.
- If **key** and **hash-key** parameters are both configured, the **hash-key** value is given priority over **key**.
- The user configured or default salt along with the server name will be combined with 'key' and encrypted as a whole, the output of which will be displayed under 'hash-key'.
- If **salt** and **hash-salt** parameters are both configured, the **hash-salt** value is given priority over **salt**.
- The special character '!' and pure integers will not be accepted as a valid input for both the **salt** and **hash-salt** parameters.
- To use special characters in the salt value, enter the special character between "" double quotes.
- The input given through **salt** and **hash-salt** is encrypted and will be displayed as "hash-salt" in **show configuration snapshot** command.
- Backward compatibility for **salt** and **hash-salt** is not supported. In case of an accidental downgrade, a boot.cfg error is generated for that particular configuration, and re-configuration is required.
- RADIUS server can be configured on any VRF instance or the default VRF instance. However, all the RADIUS servers must reside on the same VRF instance.
- Enabling the RADIUS server health check feature is recommended for each RADIUS server to help improve the user authentication time. Use the [aaa radius-server health-check](#) command to enable this

feature and the **show aaa server** command to determine the reachability status of each RADIUS server on which health check is enabled.

Examples

```
-> aaa radius-server pubs2 host 10.10.2.1 key wwwtoe timeout 5
-> no aaa radius-server pubs2

-> aaa radius-server radsrv1 host rad1_ipaddr key rad1_secret vrf-name rad_vrf
-> aaa radius-server "Rad1" host 10.10.10.2 key myorg salt mysalt
-> aaa radius-server "Rad1" host 10.10.2.1 key myorg hash-salt
c7f5eee2c0f9b33e72e3482673fb6059

-> aaa radius-server rad1 prompt-key host 10.10.2.1
Enter Key: *****
Confirm Key: *****
```

Release History

Release 7.1.1; command was introduced.
Release 8.3.1; **prompt-key** parameter added.
Release 8.4.1; **IPv6** and **SSL support** for radius server added.
Release 8.6R1; **salt** and **hash-salt** parameters added.

Related Commands

show aaa server	Displays information about AAA servers.
aaa authentication	Specifies the AAA servers to be used for Authenticated Switch Access.
aaa device-authentication	Specifies the AAA servers to use for Access Guardian device authentication.
aaa accounting session	Specifies the accounting servers to be used for Authenticated Switch Access.

```

aaa radius-server health-check

Enables or disables the RADIUS server health check configuration for the specified RADIUS server. When this feature is enabled, individual RADIUS servers are polled at the specified time interval to determine whether the server is up or down.

aaa radius-server *server_name* **health-check** [**poling-interval** *seconds* | **username** *user_name* | **password** *password* | **hash-key** *hash_secret* | **failover**]

no aaa radius-server *server_name* **health-check** [**failover**]

Syntax Definitions

<i>server_name</i>	The name of the RADIUS server for which a health check session is configured.
<i>seconds</i>	The number of seconds after which a health check request is sent to the specified RADIUS server. The valid range is 60–600 seconds.
<i>user_name</i>	The user name (up to 32 characters) to use in polling requests to the server.
<i>password</i>	The password (up to 64 characters) to use in polling requests to the server.
<i>hash_secret</i>	A shared secret that the switch saves with a hashing algorithm.
failover	Triggers an attempt to re-authenticate users assigned to the authentication server down profile when the RADIUS server comes back up before the authentication server down timeout expires.

Defaults

By default, RADIUS server health check is disabled. When health check is enabled without specifying any of the optional parameters, the following default health check parameter values are set for the specified RADIUS server:

parameter	default
<i>seconds</i>	60
<i>user_name</i>	alcatel
<i>password</i>	alcatel
failover	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Make sure the specified RADIUS server is defined on the switch before attempting to enable a health check session for that server. See the [aaa radius-server](#) command for more information on RADIUS server configuration.
- Each RADIUS server with health check enabled is polled at regular intervals (instead of checked sequentially) to determine if the server is up or down. Notification of the server status is then provided to help expedite the authentication process.
- User devices are typically assigned to a UNP authentication server down profile when the authentication server is down (unreachable).
 - If the **failover** option is disabled (the default) for the health check session, re-authentication is not attempted for the profile devices until the authentication server down timeout value expires.
 - If the **failover** option is enabled for the health check session, there is no waiting for the authentication server down timeout value to expire. When the health check session receives notification that a server has transitioned from down to up, a re-authentication attempt is immediately triggered for the profile devices.
- Use the **no** form of this command to disable health check.
- Use the **no** form of this command with the **failover** parameter to disable the failover operation.

Examples

```
-> aaa radius-server rad1 health-check
-> aaa radius-server rad1 health-check polling-interval 300
-> aaa radius-server rad1 health-check username admin password switch failover
-> no aaa radius-server rad1 health-check failover
-> no aaa radius-server rad1 health-check
```

Release History

Release 8.5R4; command introduced.

Related Commands

aaa radius-server	Configures or modifies a RADIUS server for Authenticated Switch Access and device authentication.
show aaa radius health-check-config	Displays the health check configuration for each RADIUS server.
show aaa server	Displays information about AAA servers configured for the switch.

```

aaa radius unprofile-precedence

This command can be used to set the precedence to filter ID or tunnel private group ID attributes for selection of UNP profile in the event of both these attributes being returned from the RADIUS server.

```
aaa radius unprofile-precedence {tunnel-private-group-id | filter-id}
```

Syntax Definitions

tunnel-private-group-id The tunnel private group ID attribute.
filter-id The filter ID RADIUS attribute.

Defaults

By default, filter ID will be given precedence over the tunnel private group ID.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

N/A

Examples

```
-> aaa radius unprofile-precedence tunnel-private-group-id
-> aaa radius unprofile-precedence filter-id
```

Release History

Release 8.5R4; command introduced.

Related Commands

aaa radius-server Configures or modifies a RADIUS server for Authenticated Switch Access and device authentication.
show aaa radius config Displays the global AAA attribute values and MAC address format.

MIB Objects

alaAaaRadUnpProfilePrecedence

aaa test-radius-server

RADIUS test tool allows the user to test the RADIUS server reachability from the OmniSwitch. Use this command to start the authentication or accounting test for the specified user name and password.

```
aaa test-radius-server server_name type {authentication user user_name password password [method {md5 | pap}] | accounting user user_name}
```

Syntax Definitions

<i>server_name</i>	RADIUS server name for which test has been configured.
authentication accounting	Type of test to run.
<i>user_name</i>	User name configured on the server.
<i>password</i>	Password for the given user name.
md5 pap	Authentication method for the test.

Defaults

By default, MD5 is used as the authentication method.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No	Yes

Usage Guidelines

- RADIUS server must be configured on the switch to test the tool.
- The switch must have the following RADIUS server configuration before starting the test tool: RADIUS server name, acct-port, auth-port, secret key, retransmit count, and timeout. See the [aaa radius-server](#) command for more information on RADIUS server configuration.
- Supports multiple sessions (console, telnet, SSH) to test multiple RADIUS servers.
- The CLI of the user session (console, telnet, SSH) goes in the blocking state when the test is started. In the blocking state, no other command (CLI) is accepted. The blocking state of the CLI prompt of the switch can be terminated by pressing any key.
- Two IP addresses are configurable for a RADIUS server. When the test starts, the requests are sent to the first address. When all the requests to the first address time out, then the requests are sent to the second address.

Examples

```
-> aaa test-radius-server rad1 type authentication user admin password switch
method MD5
-> aaa test-radius-server rad2 type authentication user admin password switch
method pap
-> aaa test-radius-server rad1 type accounting user admin
```

Release History

Release 8.1.1; command introduced.

Related Commands

aaa authentication	Servers for authenticated switch access.
show aaa server	Displays information about AAA servers configured for the switch.

MIB Objects

aaa tacacs+-server

Configures or modifies a TACACS+ server for Authenticated Switch Access.

```
aaa tacacs+-server server_name host {hostname | ip_address | ipv6_address1} [hostname2 | ip_address2 | ipv6_address2] {key secret | prompt-key} [salt salt | hash-salt hash_salt] [timeout seconds] [port port] [vrf-name name]
```

```
no aaa tacacs+-server server
```

Syntax Definitions

<i>server_name</i>	The name of the TACACS+ server.
<i>hostname</i>	The host name (DNS name) of the primary TACACS+ server. The host name or IP address is required when creating a server.
<i>ip_address</i>	The IP address of the primary TACACS+ server. An IP address or host name is required when creating a server.
<i>ipv6_address1</i>	The IPV6 address of the primary TACACS+ server.
<i>hostname2</i>	The host name (DNS name) of an optional backup TACACS+ server.
<i>ip_address2</i>	The IP address of an optional backup TACACS+ server.
<i>ipv6_address2</i>	The IPV6 address of an optional backup TACACS+ server.
<i>secret</i>	The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but MUST match the secret configured on the server. The secret is case-sensitive. Required when creating a server.
<i>salt</i>	The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters, and must be in clear text format. By default, the system time will be taken as default salt value.
<i>hash_salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
prompt-key	This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both the entries match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.
<i>seconds</i>	The timeout for server replies to authentication requests.
<i>port</i>	The port number for the primary TACACS+ server.
<i>name</i>	The name of the VRF to be used to access the server.

Defaults

parameter	default
<i>seconds</i>	2
<i>port</i>	49

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a TACACS+ server from the configuration. Only one server may be deleted at a time.
- A host name (or IP address) and a secret are required when configuring a server.
- If **key** and **hash-key** parameters are both configured, the **hash-key** value is given priority over **key**.
- The user configured or default salt along with the server name will be combined with the key and encrypted as a whole, the output of which will be displayed under 'hash-key'.
- If **salt** and **hash-salt** parameters are configured, the **hash-salt** value is given priority over **salt**.
- The special character '!' and pure integers will not be accepted as a valid input for both salt and hashesalt.
- To use special characters in the salt value, enter them in between "" double quotes.
- The input given through **salt** and **hash-salt** is encrypted and will be displayed as 'hash-salt' in the **show configuration snapshot command**.
- Backward compatibility for **salt** and **hash-salt** is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- The server and the backup server must both be TACACS+ servers.
- TACACS+ server can be configured on any VRF instance or the default VRF instance. However, all the TACACS+ servers must reside on the same VRF instance.

Examples

```

-> aaa tacacs+-server tpub host 10.10.2.2 key otna timeout 10
-> no aaa tacacs+-server tpub
-> aaa tacacs+-server T1 host 10.10.10.3 key myorg salt salt@123
-> aaa tacacs+-server tacsv1 host tac1_ipaddr key tac1_secret vrf-name tac_vrf

-> aaa tacacs+-server tac1 prompt-key host 10.10.2.2
Enter Key:  *****
Confirm Key:  *****
-> aaa tacacs+-server T1 host 2001:400:f00::2 key testing123 timeout 2
-> aaa tacacs+-server T2 host 2001:400:f00::2 2001:400:f00::9 key testing123
timeout 2
-> aaa tacacs+-server T3 host "tac.aos.com" key testing123

```

Release History

Release 7.1.1; command was introduced.
Release 7.3.1; **vrf-name** parameter added.
Release 8.3.1; **prompt-key** parameter added.
Release 8.6R1; **salt** and **hash-salt** parameters added.
Release 8.7 R3; support for IPv6 added for TACACS+

Related Commands

show aaa server	Displays information about AAA servers.
aaa authentication	Specifies the AAA servers to be used for Authenticated Switch Access.
aaa accounting session	Specifies the accounting servers to be used for Authenticated Switch Access.

MIB Objects

```
aaaServerTable

```

aaa tacacs command-authorization

Configures a command based authorization in TACACS+ server for authenticated switch.

```
aaa tacacs command-authorization {enable | disable}
```

Syntax Definitions

enable	Enable command based authorization in TACACS+ server.
disable	Disable command based authorization. This enables partition-management family based authorization in TACACS+ server.

Defaults

parameter	default
enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

Usage Guidelines

- This command is applicable only for CLI commands.
- If this command is enabled, then in the TACACS+ server the authorization of every command executed on the switch is command based. CLI commands executed on the switch are sent for authorization to the TACACS+ server along with mode of operation (read or read-write). After authorization, the server will send the response message to the TACACS+ client.
- If the command is disabled, then in the TACACS+ server the authorization is partition-management family based.
- Use **show configuration snapshot aaa** command to view the configuration details of this command.

Examples

```
-> aaa tacacs command-authorization enable
-> aaa tacacs command-authorization disable
```

Release History

Release 8.3.1; command was introduced.

Related Commands

alaAaaTacacsServerCmdAuthorization

aaa ldap-server

Configures or modifies an LDAP server for Authenticated Switch Access.

```
aaa ldap-server server_name host {hostname | ip_address | ipv6_address} [hostname2 | ip_address2 | ipv6_address2] dn dn_name {password super_password | prompt-password} [salt salt | hash-salt hash_salt] [base search_base] [retransmit retries] [timeout seconds] [ssl | no ssl] [port port] [vrf-name name]
```

```
no aaa ldap-server server_name
```

Syntax Definitions

<i>server_name</i>	The name of the LDAP server.
<i>hostname</i>	The host name (DNS name) of the primary LDAP server. The host name or IP address is required when creating a server.
<i>ip_address</i> <i>ipv6_address</i>	The IPv4 or IPv6 address of the primary LDAP server.
<i>hostname2</i>	The host name (DNS name) of the backup LDAP server.
<i>ip_address2</i> <i>ipv6_address2</i>	The IPv4 or IPv6 address of a backup host for the LDAP server.
<i>dn_name</i>	The super-user or administrative distinguished name in the format recognized by the LDAP-enabled directory servers. For example: cn=manager . Must be different from the <i>search-base</i> name and must be in a format supported by the server. Required when creating a new server.
<i>super_password</i>	The super-user password recognized by the LDAP-enabled directory servers. The password may be clear text or hexadecimal format. Required when creating a new server.
prompt-password	This option enters the super-user password in a obscured format rather than as clear text. When this option is selected, press the Enter key. A password prompt appears asking for the super-user password. Re-enter the password and only if both the passwords match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.
<i>salt</i>	The input given through 'salt' will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, the system time will be taken as default salt value.
<i>hash-salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
<i>search_base</i>	The search base recognized by the LDAP-enabled directory servers. For example, o=company or c=country . Must be different from the <i>dn_name</i> . Required when creating a new server.
<i>retries</i>	The number of retries the switch makes to the LDAP server to authenticate a user before trying the backup server.
<i>seconds</i>	The timeout in seconds for server replies to authentication requests from the switch.

ssl	Enables Transport Layer Security (TLS) between the switch and the LDAP server.
no ssl	Disables Transport Layer Security (TLS) between the switch and the LDAP server.
<i>port</i>	The port number for the primary LDAP server and any backup server. Must match the port number configured on the server.
<i>name</i>	The name of the VRF to be used to access the server.

Defaults

parameter	default
<i>port</i>	389 (SSL disabled) 636 (SSL enabled)
<i>retries</i>	3
<i>seconds</i>	2
ssl no ssl	no ssl

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The *dn_name* must be different from the *search_base* name.
- Use the **no** form of the command to remove an LDAP server from the configuration. Only one server may be removed at a time.
- The port number configured on the switch must match the port number configured for the server.
- If ‘salt’ and ‘hash-salt’ parameters are configured at a time, hash-salt value is given priority over salt.
- The special character ‘!’ and pure integers will not be accepted as a valid input for both salt and hashesalt.
- If you want to provide special characters in salt value, give it in between “” double quotes.
- The input given through ‘salt’ and ‘hash-salt’ is encrypted and will be displayed as ‘hash-salt’ in ‘show configuration snapshot’ command.
- Backward compatibility for ‘salt’ and ‘hash-salt’ is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- LDAP server can be configured on any VRF instance or the default VRF instance. However, all the LDAP servers must reside on the same VRF instance.

- For IPV6 address, IPV6 LDAP host and interface must be configured in the switch.

Examples

```
-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager password tpub base c=us
retransmit 4
-> aaa ldap-server omnivista host 1.2.3.4 dn "cn=DirMgr, o=alcatel.com" password
somepass base "ou=People, o=alcatel.com" vrf-name ldap_vrf
-> no aaa ldap-server topanga5

-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager prompt-password base c=us
retransmit 4
Enter Password: ******
Confirm Password: ******

-> aaa ldap-server L1 host 10.10.10.5 dn cn=manager password tpub base c=us salt
mysalt
```

Release History

Release 7.1.1; command was introduced.
Release 7.3.1; **vrf-name** parameter added.
Release 8.3.1; **prompt-password** parameter added.
Release 8.6R1; **salt** and **hash-salt** parameters added.
Release 8.7 R1; **IPv6** support added.

Related Commands

show aaa server	Displays information about AAA servers.

system fips admin-state

Enable or disable the Federal Information Processing Standards (FIPS) mode on the switch.

```
system fips admin-state {enable | disable}
```

Syntax Definitions

enable | disable Enables or disables the FIPS mode.

Defaults

By default, the FIPS mode is disabled on the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Enabling or disabling FIPS mode takes effect only after a switch reboot. The FIPS mode configuration is persistent across reboots.
- When FIPS mode is disabled, all other existing cryptographic algorithms will be supported.
- A FIPS supported client is required to access the switch in FIPS enabled mode. For example, Absolute Telnet.
- Other unsecured management interfaces, such as Telnet or FTP, have to be manually disabled after FIPS mode is enabled to achieve a completely secure device.

Examples

```
-> system fips admin-state enable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

```
-> system fips admin-state disable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

Release History

Release 8.1.1; command introduced.

Related Commands**show system fips**

Show the configured and running status of the FIPS mode on the Switch.

MIB Objects

systemFipsAdminState

aaa authentication

Configures the interface for Authenticated Switch Access and specifies the server(s) to be used. This type of authentication gives users access to manage the switch.

aaa authentication {console | telnet | ftp | http | snmp | ssh | default} *server1* [*server2...*] [local]

no aaa authentication [console | telnet | ftp | http | snmp | ssh | default]

Syntax Definitions

console	Configures Authenticated Switch Access through the console port.
telnet	Configures Authenticated Switch Access for any port used for Telnet.
ftp	Configures Authenticated Switch Access for any port used for FTP.
http	Configures Authenticated Switch Access for any port used for Web-based management.
snmp	Configures Authenticated Switch Access for any port used for SNMP.
ssh	Configures Authenticated Switch Access for any port used for Secure Shell.
default	Configures Authenticated Switch Access for any port using any service (telnet , ftp , etc.). Note that SNMP access is enabled only if an LDAP or local server is specified with the command.
<i>server1</i>	The name of the authentication server used for Authenticated Switch Access. At least one server is required. The server may be a RADIUS, TACACS+, LDAP, or the local user database. RADIUS, TACACS+, and LDAP server names are set up through the aaa radius-server , aaa tacacs+-server , and aaa ldap-server commands.
<i>server2...</i>	The names of backup servers for Authenticated Switch Access. Up to 3 backups may be specified (including local). These backups are used if <i>server1</i> becomes unavailable or contains no user information. They are polled in the order they are listed in this command. The first available server becomes the authentication server.
local	Specifies that the local user database will be a backup for the authentication servers. If you want to use the local user database as the only authentication server, specify local for <i>server1</i> .

Defaults

- At switch startup, Authenticated Switch Access is available through console port via the local database. Authentication for other management interfaces (Telnet, FTP, etc.) is disabled.
- The default user on the switch is **admin**, and **switch** is the password.
- Remote authentication is not supported on secondary CMMs or Slave chassis. Use local authentication on secondary CMMs and Slave chassis.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The server type may be RADIUS, TACACS+, LDAP, or the local user database. Up to 4 servers may be configured for an interface type; at least one is required. Each server name should be separated by a space.
- The switch may use multiple servers in the list to check for user information. For example, if *server1* is not available or no user information is found, the switch will poll the next server in the list.
- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the [aaa radius-server](#), [aaa tacacs+-server](#), and [aaa ldap-server](#) commands.
- If the local switch database will be used as the only authentication server, specify **local** for *server1*. If **local** is specified as a backup server, it should be entered last in the list of servers. The local user database is always available if the switch is up.
- Only LDAP or the local database may be used for authenticated SNMP management.
- If Secure Shell (**ssh**) is enabled, Telnet and FTP should be disabled.

Examples

```
-> aaa authentication telnet pubs1
-> no aaa authentication telnet
-> aaa authentication default pubs2 pubs3
```

Release History

Release 7.1.1; command was introduced.

```

aaa console admin-only

Enables or disables the user restriction for all users except the user “admin” from accessing the switch through the secure console session.

aaa console admin-only {enable | disable}

Syntax Definitions

enable Restricts all users from accessing the switch through the secure console session except the user “admin”. Only user “admin” can access the switch through the secure console session.

disable Disables the user restrictions.

Defaults

By default, console admin-only is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Enable this feature to restrict all users except user “admin” from accessing the switch through the secure console session.

Examples

```
-> aaa console admin-only enable
-> aaa console admin-only disable
```

Release History

Release 8.3.1 R02; command was introduced.

MIB Objects

aaaAsaAccessConsoleAdminOnly

aaa authentication default

Sets the authenticated switch access type to the default server setting.

aaa authentication {console | telnet | ftp | http | snmp | ssh} default

Syntax Definitions

console	Configures the default Authenticated Switch Access server setting for the console port.
telnet	Configures the default Authenticated Switch Access server setting for Telnet.
ftp	Configures the default Authenticated Switch Access server setting for FTP.
http	Configures the default Authenticated Switch Access server setting for Web-based management.
snmp	Configures the default Authenticated Switch Access server setting for any port used for SNMP.
ssh	Configures the default Authenticated Switch Access server setting for any port used for Secure Shell.

Defaults

By default, the default Authenticated Switch Access server setting does not include any servers.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **aaa authentication** command to set the default servers.

Examples

```
-> aaa authentication telnet default
-> aaa authentication default default
```

Release History

```

aaa accounting session

Configures an accounting server or servers for authenticated switch sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

aaa accounting session *server1* [*server2...*] [**local**]

no accounting session

Syntax Definitions

<i>server1</i>	The name of the RADIUS, TACACS+, or LDAP server used for accounting of authenticated switch sessions. At least one server is required. RADIUS, TACACS+, and LDAP server names are set up through the aaa radius-server , aaa tacacs+-server , and aaa ldap-server commands.
<i>server2...</i>	The names of backup servers. Up to 3 backups may be specified (including local); each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
local	Local accounting is done through the Switching Logging feature on the switch.

Defaults

Accounting is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to disable accounting for Authenticated Switch Access.
- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The servers may be RADIUS, TACACS+, LDAP servers, and/or the local Switch Logging facility.
- If **local** is specified as *server1*, the switch will **only** use the local Switching Logging facility for accounting.
- If **local** is specified as a backup, it should be entered last in the list of servers. The Switch Logging facility is always available if the switch is up.

- The switch uses *only the first available server* in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.
- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the [aaa radius-server](#), [aaa tacacs+-server](#), and [aaa ldap-server](#) commands.

Examples

```
-> aaa accounting session ldap1 radius2 local  
-> no aaa accounting session
```

Release History

```

aaa accounting command

Enables or disables the server for command accounting. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

aaa accounting command *server1* [*server2...*] [**local**]

no accounting command

Syntax Definitions

<i>server1</i>	The name of the TACACS+ server used for command accounting. At least one server is required. TACACS+ server names are set up through the aaa tacacs+-server commands.
<i>server2...</i>	The names of TACACS+ backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
local	Local accounting is done through the Switching Logging feature on the switch.

Defaults

Accounting is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to disable command accounting.
- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The servers can be only TACACS+ servers.
- The switch uses **only the first available server** in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.
- TACACS+ server may each have an additional backup specified through the [aaa tacacs+-server](#) command.

Examples

```
-> aaa accounting command tacacs1 tacacs2 tacacs3  
-> no aaa accounting command
```

Release History

Release 7.1.1; command was introduced.

Related Commands

[show aaa accounting](#)

```

aaa device-authentication

Configures the switch to use RADIUS servers for 802.1X, MAC, and Captive Portal device authentication.

```
aaa device-authentication {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]
```

```
no device-authentication {802.1x | mac | captive-portal}
```

Syntax Definitions

802.1x	Use the specified RADIUS server to authenticate 802.1X users.
mac	Use the specified RADIUS server for MAC authentication.
captive-portal	Use the specified RADIUS server for Captive Portal authentication.
<i>server1</i>	The name of the RADIUS authentication server to use for the specified type of authentication. (<i>Note that only RADIUS servers are supported for these types of authentication.</i>) At least one server is required. RADIUS server names are configured through the aaa radius-server command.
<i>server2...server4</i>	The names of backup servers used for authentication. Up to 3 backups may be specified; include a space between each server name. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the authentication server.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a RADIUS server assignment for a specific authentication type.
- Up to 4 RADIUS servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The switch uses **only the first available server** in the list to check for user information. For example, if *server1* is not available, the switch will poll *server2*. If user information is not found on the first available server, the authentication request will fail.

- RADIUS servers may each have an additional backup specified through the **aaa radius-server** command.
- Configuring the RADIUS servers to use for 802.1X, MAC, and Captive Portal authentication is required to support authentication and classification of devices connected to Universal Network Profile (UNP) ports.

Examples

```
-> aaa device-authentication 802.1x rad1
-> aaa device-authentication 802.1x rad1 rad2
-> no aaa device-authentication 802.1x

-> aaa device-authentication mac rad1
-> aaa device-authentication mac rad1 rad2
-> no aaa device authentication mac

-> aaa device-authentication captive-portal rad1
-> aaa device-authentication captive-portal rad1 rad2
-> no aaa device-authentication captive-portal
```

Release History

Release 7.2.1; command was introduced.
Release 7.3.4; **802.1x** parameter added.
Release 8.1.1; **captive-portal** parameter added.

Related Commands

  aaaDaName2
  aaaDaName3
  aaaDaName4
```

aaa accounting

Configures RADIUS server accounting or local Switch Logging (syslog) accounting for 802.1X, MAC, and Captive Portal authenticated device sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

```
aaa accounting {802.1x | mac | captive-portal} {server1 [server2...]} | syslog ip_address [port udp_port]}
```

```
no accounting {802.1x | mac | captive-portal}
```

Syntax Definitions

802.1x	Enables the specified RADIUS or syslog server to log accounting of 802.1X authenticated sessions.
mac	Enables the specified RADIUS or syslog server to log accounting for MAC authenticated sessions.
captive-portal	Enables the specified RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.
<i>server1</i>	The name of the RADIUS server used for accounting of authenticated switch sessions. At least one server is required. RADIUS server names are configured through the aaa radius-server command.
<i>server2...</i>	The names of backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
<i>ip_address</i>	The IP network address for syslog accounting.
<i>udp_port</i>	The UDP port number for syslog accounting.

Defaults

By default, no RADIUS server or syslog accounting is configured for the switch.

parameter	default
<i>udp_port</i>	514

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to disable accounting for device authentication sessions.
- Up to 4 RADIUS accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The switch uses *only the first available server* in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.
- Accounting with the local syslog facility is not allowed if RADIUS accounting is already configured. In other words, configure either RADIUS *or* syslog accounting.
- RADIUS servers may each have an additional backup specified through the [aaa radius-server](#) command.

Examples

```
-> aaa accounting 802.1x rad1
-> aaa accounting 802.1x rad1 rad2 rad3 rad4
-> aaa accounting 802.1x syslog 10.135.67.99 port 8000
-> no aaa accounting 802.1x

-> aaa accounting mac rad1
-> aaa accounting mac rad1 rad2
-> aaa accounting mac syslog 10.135.67.99 port 8000
-> no aaa accounting mac

-> aaa accounting captive-portal rad1
-> aaa accounting captive-portal rad1 rad2 rad3
-> aaa accounting captive-portal syslog 10.135.67.99 port 8000
-> no aaa accounting captive-portal
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show aaa accounting](#) Displays the accounting server configuration for the switch.

MIB Objects

```

aaa accounting radius calling-station-id

Configures the RADIUS Calling-Station-Id attribute for the specified accounting session type.

```
aaa accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}
```

Syntax Definitions

802.1x	Configures the attribute for 802.1X accounting sessions.
mac	Configures the attribute for MAC accounting sessions.
captive-portal	Configures the attribute for Captive Portal accounting sessions.
mac-address	Sets the Calling Station ID to the MAC address of the user.
ip-address	Sets the Calling Station ID to the IP address of the user.

Defaults

By default, the RADIUS Calling -Station-Id attribute value is set to the MAC address of the user.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Configuring the Calling-Station-Id attribute is not allowed if the accounting server configuration is set to use local Switch Logging (syslog) for the specified accounting session type (802.1x, MAC, or Captive Portal).
- The Calling Station ID attribute is defined in a RADIUS Accounting-Request message that is sent to the RADIUS accounting server.

Examples

```
-> aaa accounting 802.1x radius calling-station-id ip-address
-> no aaa accounting 802.1x radius calling-station-id ip-address
-> aaa accounting 802.1x radius calling-station-id mac-address

-> aaa accounting mac radius calling-station-id ip-address
-> no aaa accounting mac radius calling-station-id ip-address
-> aaa accounting mac radius calling-station-id mac-address

-> aaa accounting captive-portal radius calling-station-id ip-address
-> no aaa accounting onex radius calling-station-id ip-address
-> aaa accounting captive-portal radius calling-station-id mac-address
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show aaa accounting](#) Displays the AAA accounting configuration.

MIB Objects

```
aaaAcctDatable
  aaacdInterface
  aaacdCallingStationId
```

aaa 802.1x re-authentication

Configures the automatic re-authentication of authenticated 802.1X users.

```
aaa 802.1x re-authentication {enable | disable | interval seconds | trust-radius {enable | disable}}
```

Syntax Definitions

enable	Enables re-authentication of 802.1X users.
disable	Disables re-authentication of 802.1X users.
<i>seconds</i>	The amount of time the switch waits before triggering re-authentication of 802.1X users. The valid range is 600–7200 seconds.
trust-radius enable	Directs the switch to use the Session-Timeout attribute value for the re-authentication time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.
trust-radius disable	Directs the switch to use the locally configured re-authentication time interval value.

Defaults

By default, 802.1X re-authentication is disabled for the switch. When re-authentication is enabled, the following default values apply:

parameter	default
<i>seconds</i>	3600
trust-radius enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The re-authentication time interval is triggered when 802.1X re-authentication is enabled.
- When the re-authentication time interval is changed, the new value does not apply to existing authenticated 802.1X users until the user is flushed out or when the user is authenticated again. Any new 802.1X users are re-authenticated based on the current time interval setting.
- When the trust RADIUS option is enabled, the Session-Timeout attribute value received from the RADIUS server overrides the locally configured value for the switch.

- AAA profile settings for 802.1x re-authentication take precedence over global 802.1x re-authentication settings configured with this command. For example, if the global trust RADIUS option is enabled and the AAA profile trust RADIUS option is disabled (the default), the trust RADIUS status is disabled on the UNP port when the AAA profile is assigned to that port.

Examples

```
-> aaa 802.1x re-authentication enable
-> aaa 802.1x re-authentication enable interval 7200
-> aaa 802.1x re-authentication enable trust-radius enable
-> aaa 802.1x re-authentication enable interval 7200 trust-radius enable
-> aaa 802.1x re-authentication interval 7200 trust-radius disable
-> aaa 802.1x re-authentication disable
```

Release History

Release 8.1.1; command was introduced.

```

aaa interim-interval

Configures the amount of time between each interim accounting update for any given session.

```
aaa {802.1x | mac | captive-portal} interim-interval seconds [trust-radius {enable | disable}]
```

Syntax Definitions

802.1x	Configures the interim interval value for 802.1X accounting sessions.
mac	Configures the interim interval value for MAC accounting sessions.
captive-portal	Configures the interim interval value for Captive Portal accounting sessions.
<i>seconds</i>	The amount of time between each interim accounting update. The valid range is 60–1200 seconds.
trust-radius enable	Directs the switch to use the Acct-Interim-Interval attribute value for the interim time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.
trust-radius disable	Directs the switch to use the locally configured interim time interval value.

Defaults

By default, the accounting interim interval value is set to 600 seconds.

parameter	default
trust-radius enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- When the trust RADIUS option is enabled, the accounting interim interval value received from the RADIUS server overrides the locally configured value for the switch.
- When the accounting interim interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.

Examples

```
-> aaa 802.1x interim-interval 1200
-> aaa 802.1x interim-interval 1200 trust-radius enable
```

```
-> aaa 802.1x interim-interval 1200 trust-radius disable
-> aaa mac interim-interval 1200
-> aaa mac interim-interval 1200 trust-radius enable
-> aaa mac interim-interval 1200 trust-radius disable

-> aaa captive-portal interim-interval 1200
-> aaa captive-portal interim-interval 1200 trust-radius enable
-> aaa captive-portal interim-interval 1200 trust-radius disable
```

Release History

Release 8.1.1; command was introduced.

```

aaa session-timeout

Configures whether or not an authenticated user is automatically logged out of the network based on a session timeout value.

aaa {mac | captive-portal} session-timeout {enable | disable} [interval *seconds*] [trust-radius {enable | disable}]

Syntax Definitions

mac	Configures the session timeout parameter for authenticated MAC users.
captive-portal	Configures the session timeout parameter for authenticated Captive Portal users.
session-timeout enable	Enables the session timeout timer for authenticated user sessions.
session-timeout disable	Disables the session timeout timer for authenticated user sessions.
<i>seconds</i>	The session timeout value. The valid range is 300–172800 seconds.
trust-radius enable	Directs the switch to use the Session-Timeout attribute returned from the RADIUS server in an Accept-Accept message.
trust-radius disable	Directs the switch to use the locally configured timeout interval value.

Defaults

By default, the session timer is disabled for the switch.

parameter	default
<i>seconds</i>	43200 seconds (12 hours)
trust-radius enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The session timeout parameter is configurable only for MAC and Captive Portal authentication sessions. When 802.1x re-authentication is enabled, the session timeout is set to 43200 seconds by default.
- The timeout interval is triggered when the session timeout parameter is enabled for the switch.

- When the trust RADIUS option is enabled, the timeout interval value received from the RADIUS server overrides the locally configured value for the switch.
- When the session timeout interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- When the session timeout value is reached, the authenticated users are logged out and the MAC address for each logged out user device is flushed.

Examples

```
-> aaa mac session-timeout enable interval 13000
-> aaa mac session-timeout enable interval 14000 trust-radius enable
-> aaa mac session-timeout disable

-> aaa captive-portal session-timeout enable interval 13000
-> aaa captive-portal session-timeout enable interval 14000 trust-radius enable
-> aaa captive-portal session-timeout disable
```

Release History

Release 8.1.1; command was introduced.

```

aaa session console

Enables or disables switch access through the console port of the switch.

aaa session console {enable | disable}

Syntax Definitions

enable	Enables the switch access through the console port through the CLI shell.
disable	Disables the switch access through the console port through the CLI shell.

Defaults

parameter	default
enable disable	enable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- It is recommended to create a back-up of the configuration file before using this command. Contact customer support to recover the switch.
- Before disabling the CLI console shell, configuration for telnet or SSH access with proper user privilege must be made.
- When the CLI console shell is disabled, the switch log output to the console is also disabled.
- When the CLI console shell is disabled, the switch can be accessed through SSH or telnet or WebView session.
- The command can be stored to the configuration file using **write memory**.
- If the console access is disabled through configuration (on both working and certified directory) and the telnet/SSH/WebView session is also not available to the switch, contact customer support to recover the switch.

Note. Deleting the configuration file will also delete the other configurations. Hence, it is recommended to create a back-up of the configuration file before deleting the configuration file.

- In a virtual chassis, the command must be used only on the master chassis; the console on master and all slaves will be disabled/enabled accordingly.

Examples

```
-> session console disable  
-> session console enable
```

Release History

Release 8.6R2; command introduced.

Related Commands

[show aaa session console config](#) Displays Session Manager information, such as banner file name, session timeout value, and default prompt value.

MIB Objects

```
alaAaaConsoleAccessConfig

```

aaa inactivity-logout

Configures whether or not an authenticated user is automatically logged out of the network after a specific period of inactivity.

```
aaa {mac | captive-portal} inactivity-logout {enable | disable} [interval seconds]
```

Syntax Definitions

mac	Configures the inactivity logout timer for authenticated MAC users.
captive-portal	Configures the inactivity logout timer for authenticated Captive Portal users.
enable	Enables the inactivity logout timer for the specified authentication type.
disable	Disables the inactivity logout timer for the specified authentication type.
seconds	The inactivity logout time. The valid range is 60–1200 seconds, or enter 0 to indicate that an authenticated user should never be logged out.

Defaults

By default, the inactivity logout timer is disabled for the switch.

parameter	default
seconds	600 seconds

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The inactivity logout timer is configurable only for MAC and Captive Portal authentication sessions.
- The timer is triggered when the inactivity logout parameter is enabled for the switch.
- Make sure the configured inactivity logout time is set to a value greater than the MAC address aging time for the switch.
- If a specific time is configured for the inactivity logout timer, the user is *not* logged out of the network even if the MAC address for the user device ages out before the inactivity logout timer value expires.
- Setting the inactivity logout time to zero helps prevent silent devices from getting automatically logged out; the silent device will always remain logged in.
- When the inactivity logout time is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.

- If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values is applied to the device.

Examples

```
-> aaa mac inactivity-logout enable
-> aaa mac inactivity-logout enable interval 600
-> aaa mac inactivity-logout enable interval 0
-> aaa mac inactivity-logout disable

-> aaa captive-portal inactivity-logout enable
-> aaa captive-portal inactivity-logout enable interval 600
-> aaa captive-portal inactivity-logout enable interval 0
-> aaa captive-portal inactivity-logout disable
```

Release History

Release 8.1.1; command was introduced.

Release 8.4.1.R02; setting the inactivity logout time to zero is supported (user is never logged out).

```

aaa radius nas-port-id

Configures the RADIUS client NAS-Port attribute for authentication and accounting sessions.

```
aaa radius nas-port-id {user-string string | default}
```

Syntax Definitions

string A text string (up to 31 characters) used to define a NAS-Port identifier for the NAS-Port attribute.

default Sets the NAS-Port attribute value to the chassis/slot/port of the user.

Defaults

By default, the NAS-Port attribute is set to the user port (chassis/slot/port).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The NAS-Port attribute value specified with this command is used in Account-Request messages and in Accounting-Request messages.

Examples

```
-> aaa radius nas-port-id default
-> aaa radius nas-port-id user-string nasport
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show aaa radius config](#) Displays the global RADIUS client attribute configuration.

alaAaaClientAttrGroup
  alaAaaRadNasPortId
```

aaa radius nas-identifier

Configures the RADIUS client NAS-Identifier attribute for authentication and accounting sessions.

```
aaa radius nas-identifier {user-string string | default}
```

Syntax Definitions

string A text string (up to 31 characters) used to identify the switch (RADIUS client) in the NAS-Identifier attribute.

default Sets the NAS-Identifier attribute to the system name of the switch.

Defaults

By default, the NAS-Identifier attribute is set to the system name of the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The NAS-Identifier attribute value specified with this command is used in both Account-Request and Accounting-Request messages.

Examples

```
-> aaa radius nas-identifier default
-> aaa radius nas-identifier user-string os6860
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show aaa radius config](#) Displays the global RADIUS client attribute configuration.

MIB Objects

```
alaAaaClientAttrGroup
  alaAaaRadNasIdentifier
```

aaa radius nas-ip-address

Configure the RADIUS client NAS IP address attribute for the outgoing RADIUS packets.

```
aaa radius nas-ip-address {default | local-ip [ip_address]}
```

Syntax Definitions

default	Sets the NAS IP address attribute value to the source IP address of the interface used to send the RADIUS packet. In OmniVista Cirrus it will be the VPN IP address.
local-ip	Sets the NAS IP address attribute value with the DHCP-Client interface IP address as the device identifier.
<i>ip_address</i>	The IPv4 address for NAS IP address attribute in RADIUS packets.

Defaults

By default, the value of NAS IP address is default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The NAS IP address attribute value configured will be used in all Authentication-Request messages and in Accounting-Request messages.
- If the Local IP is configured without the optional IP address, then the NAS IP address attribute value will be the DHCP-Client interface IP address.
- If there is no DHCP IP address configured on the switch, then NAS IP address attribute will contain the IP address as per the default behavior.
- If Local IP option is configured with an IP address, then this configured IP address value will be used in the NAS IP address attribute.

Examples

```
-> aaa radius nas-ip-address default
-> aaa radius nas-ip-address local-ip
-> aaa radius nas-ip-address local-ip 12.12.12.12
```

Release History

Release 8.5R4; command was introduced.

  alaAaaRadNasIpAddressType
  alaAaaRadNasIpAddress
```

aaa radius mac-format

Configures the MAC address format to use in the specified RADIUS client attributes.

```
aaa radius mac-format {username | password | calling-station-id | called-station-id} delimiter {char | none} case {uppercase | lowercase}
```

Syntax Definitions

username	Configures the MAC address format for the User-Name attribute.
password	Configures the MAC address format for the User-Password attribute.
calling-station-id	Configures the MAC address format for the Calling-Station-Id attribute.
called-station-id	Configures the MAC address format for the Called-Station-Id attribute.
<i>char</i>	The delimiter character to use to separate the octets within a MAC address. The valid characters are a space (“ ”), a hyphen (“-”), or a colon (“:”). For example, “e8 e7 32 a4 63 23”, “e8-e7-32-a4-63-23”, or “e8:e7:32:a4:63:23”.
none	No delimiter is used in the MAC address format.
uppercase	Uses uppercase characters in the MAC address format.
lowercase	Uses lowercase characters in the MAC address format.

Defaults

By default, no delimiter is used and the MAC address characters are in uppercase.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The MAC address format configured for the User-Name and User-Password attributes is only applied for MAC authentication and accounting, where these attributes are set to the MAC address of the user. The configured format is not applied for 802.1X or Captive Portal authentication and accounting.
- The MAC address format configured for the Called-Station-Id and Calling-Station-Id attributes is applied for MAC, 802.1X, and Captive Portal authentication and accounting sessions when these attributes are set to a MAC address value.
- The Called-Station-Id attribute is set to the base MAC address of the switch.
- The Calling-Station-ID attribute is configurable and can be set to the MAC address or IP address of the user.

Examples

```
-> aaa radius mac-format username delimiter none case lowercase
-> aaa radius mac-format username delimiter ":" case lowercase

-> aaa radius mac-format password delimiter none case lowercase
-> aaa radius mac-format password delimiter ":" case lowercase
-> aaa radius mac-format calling-station-id delimiter none case lowercase
-> aaa radius mac-format calling-station-id delimiter ":" case lowercase

-> aaa radius mac-format called-station-id delimiter none case lowercase
-> aaa radius mac-format called-station-id delimiter ":" case lowercase
```

Release History

Release 8.1.1; command was introduced.

Related Commands

aaa accounting radius calling-station-id Sets the Calling-Station-Id attribute to the MAC address or IP address of the user for accounting sessions.

show aaa radius config Displays the global RADIUS client attribute configuration.

```

aaa profile

Configures an AAA profile that is used to define and apply specific AAA parameter values to Universal Network Profile (UNP) Edge ports, link aggregates, or an Access Guardian Captive Portal profile. This section describes the base command (**aaa profile *profile_name***) along with the other command keywords that are used to configure AAA parameter values that are applied when the profile is assigned to a UNP port or link aggregate.

aaa profile *profile_name*

```
[device-authentication {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]]
[accounting {802.1x | mac | captive-portal} {server1 [server2...]} | syslog ip_address
[port udp_port]]]
[accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}]
[802.1x re-authentication {enable | disable} [interval seconds] [trust-radius {enable | disable}]]
[{802.1x | mac | captive-portal} interim-interval seconds [trust-radius {enable | disable}]]
[{mac | captive-portal} session-timeout {enable | disable} [interval seconds] [trust-radius
{enable | disable}]]]
[{mac | captive-portal} inactivity-logout {enable | disable} [interval seconds]]]
[radius nas-port-id {user-string string | default}]
[radius nas-identifier {user-string string | default}]
[radius nas-ip-address {default | local-ip [ip_address]}]
[radius mac-format {username | password | calling-station-id | called-station-id} delimiter
{char | none} case {uppercase | lowercase}]
```

no aaa profile *profile_name*

Syntax Definitions

profile_name The name to associate with the AAA configuration profile.

Defaults

The AAA profile parameters are set to the same default values that are set when the explicit AAA command is used to configure the parameter value. See the **show aaa profile** command output example in the “Examples” section of this command page to determine default values for AAA profile parameters.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the AAA profile from the switch configuration.
- Creating the template name with the base command (**aaa profile profile_name**) is required before attempting to configure profile parameter values.
- When an AAA profile is assigned to a UNP port, the parameter values defined in the profile will override any existing global AAA configuration for users authenticating on that port.
- When an AAA profile is assigned to a Captive Portal profile, the parameters values defined in the AAA profile will override any existing global AAA configuration for users authenticated through the Captive Portal profile configuration.
- For more information about specific AAA parameter values, refer to the following explicit AAA configuration commands for each profile parameter option:

AAA Profile Parameter	Explicit Port Configuration Command
[device-authentication {802.1x mac captive-portal} server1 [server2] [server3] [server4]]	aaa device-authentication
[accounting {802.1x mac captive-portal} {server1 [server2...]} syslog ip_address [port udp_port]]	aaa accounting
[accounting {802.1x mac captive-portal} radius calling-station-id {mac-address ip-address}]	aaa accounting radius calling-station-id
[802.1x re-authentication {enable disable} [interval seconds] [trust-radius {enable disable}]]	aaa 802.1x re-authentication
[{802.1x mac captive-portal} interim-interval seconds [trust-radius {enable disable}]]	aaa interim-interval
[{mac captive-portal} session-timeout {enable disable} [interval seconds] [trust-radius {enable disable}]]	aaa session-timeout
[{mac captive-portal} inactivity-logout {enable disable} [interval seconds]]	aaa inactivity-logout
[radius nas-port-id {user-string string default}]	aaa radius nas-port-id
[radius nas-identifier {user-string string default}]	aaa radius nas-identifier
[radius nas-ip-address {default local-ip [ip_address]}]	aaa radius nas-ip-address
[radius mac-format {username password calling-station-id called-station-id} delimiter {char none} case {uppercase lowercase}]	aaa radius mac-format

Examples

```

user

Configures or modifies user entries in the local user database. Use the **no** form of the command to remove the user from the local database.

user *username*

```
{password password | password-prompt}
[expiration {day | date}]
[read-only | read-write [families... | domains...] all | none | all-except [families | domains... |
|macsec]]
[no snmp | no auth | sha | md5 | sha+des | md5+des | sha+aes | sha224 | sha256 | sha384 |
sha224+aes | sha256+aes | sha384+aes]
[console-only {enable | disable}]
[priv-password password | prompt-priv-password]
```

no user *username*

Syntax Definitions

<i>username</i>	The name of the user. Used for logging into the switch. Required to create a new user entry or for modifying a user. Maximum 63 characters.
<i>password</i>	The user's password in clear text or hexadecimal (corresponding to encrypted form). Required to create a new user entry. Maximum 30 characters.
password-prompt	This option allows to enter the password in a obscured format rather than as clear text. Select this option with the 'user' command to configure the password for the user. When this option is selected, a password prompt appears and the password can be provided. Password needs to be re-entered, and only if both the passwords match, command is accepted. The password provided in this mode is not displayed on the CLI as text.
<i>day</i>	The number of days before this user's current password expires. The range is 1 to 150 days.
<i>date</i>	The date (in the format <i>mm/dd/yyyy</i>) that the user's current password will expire.
read-only	Specifies that the user will have read-only access to the switch.
read-write	Specifies that the user will have read-write access to the switch.
<i>families</i>	Determines the command families available to the user on the switch. Each command family should be separated by a space. Command families are subsets of domains.
<i>domains</i>	Determines the command domains available to the user on the switch. Each domain should be separated by a space.
all	Specifies that all command families and domains are available to the user.
none	Specifies that no command families or domains are available to the user.
all-except	Specifies that functional privileges for families or domains followed by 'all-except' are disabled to the user.

macsec	Determines the MACsec commands available to the user on the switch.
no snmp	Denies the specified user SNMP access to the switch.
no auth	Specifies that the user has SNMP access without any required SNMP authentication and encryption protocol.
sha	Specifies that the SHA authentication algorithm should be used for authenticating SNMP PDU for the user.
md5	Specifies that the MD5 authentication algorithm should be used for authenticating SNMP PDU for the user.
sha+des	Specifies that the SHA authentication algorithm and DES encryption standard should be used for authenticating and encrypting SNMP PDU for the user.
md5+des	Specifies that the MD5 authentication algorithm and the DES encryption standard should be used for authenticating and encrypting SNMP PDU for the user.
sha+aes	Specifies that the SHA authentication algorithm and AES encryption standard is used for authenticating and encrypting SNMP PDU for the user.
sha224	Specifies that the SHA224 authentication algorithm used for storing the user passwords.
sha256	Specifies that the SHA256 authentication algorithm used for storing the user passwords.
sha384	Specifies SHA384 authentication and no privacy must be used for authenticating the SNMP PDU for the user.
sha224+aes	Specifies SHA224 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
sha256+aes	Specifies SHA256 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
sha384+aes	Specifies SHA384 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
console-only enable	Enables console only access for the user <i>admin</i> .
console-only disable	Disables console only access for the user <i>admin</i> .
priv-password	Separate password that is used for SNMPv3 encryption. (8-30 characters)
prompt-priv-password	This option allows to enter the privacy password in a obscured format rather than as clear text. When this option is selected, press the Enter key. Select this option with the 'user' command to configure the privacy password for the user. When this option is selected, a password prompt appears and the privacy password can be provided. Password needs to be re-entered, and only if both the passwords match, command is accepted. The password provided in this mode is not displayed on the CLI as text.

Defaults

- By default, if a user is created without indicating the read and write privileges and SNMP access, the user will be given privileges based on the *default user account*. The **default** user account may be modified.

- By default, the password will be encrypted using SHA for all non SNMP users.
- For SNMP users without authentication, password will be encrypted with SHA.
- For SNMP users with authentication, it will be encrypted with the authentication method set for the user. If user is created with MD5, then it will be still encrypted with MD5.
- Users created with SHA2 authentication algorithm cannot be used for SNMP authentication.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- At least one user with SHA/MD5 authentication and/or DES encryption must be configured on the switch for SNMPv3 communication with OmniVista.
- Specifying an asterisk (*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, **password **123456**** is allowed; **password ******* is not allowed.
- Some special characters are interpreted as a Linux shell variable by the switch when being used in a password. They can still be used in a password but they must be escaped ('\') or the entire password enclosed in single quotes. For example, to use the '\$' as part of a password the following should be entered:

```
-> user test password test\$1234
```

or

```
-> user test password `test$1234`
```

these passwords will be interpreted as **test\$1234**.

- An alternative method is to use the **password-prompt** parameter when using special characters in a password. The **password-prompt** parameter exits the Linux shell and special characters are no longer interpreted as shell variables. The following characters are the majority of characters considered special characters by the switch [" " (white space), \$, "", \#, [], >, <, |, ;, {, }, ~, `].
- A password expiration for the user's current password may be configured with the **expiration** option. However, if the password is changed, or the global password expiration setting is configured with the **user password-expiration** command, the user's password expiration will be configured with the global expiration setting.
- When modifying a user's SNMP access, the user password must be re-entered (or a new one configured). This is required because the hash algorithm used to save the password in the switch depends on the SNMP authentication level.
- At initial startup, the default user on the switch is **admin** with a password of **switch**. The switch will not recreate this user at any successive startup as long as there exists at least one user defined with

write access to all commands. (Note that if password expiration is configured for the **admin** user, or configured globally through the **user password-expiration** command, when the **admin** user's password expires, the **admin** user will have access only through the console port.)

- New users or updated user settings are saved *automatically*.
- After changing the **priv-password** it could take up to 5 minutes to become effective.
- The priv-password token is accepted only when SNMP level with encryption is configured for the user. If SNMP level with encryption is not selected and **priv-password** is configured, then CLI command is rejected with error.
- If priv-password is not configured for the user with encryption SNMP level, then the user password parameter is used for priv-password (both for authentication/encryption).
- Password policy is not applicable for the new optional parameter **priv-password**.
- For authenticating switch access through other access types such as telnet, FTP, SSH the existing user password will be used irrespective of whether **priv-password** is configured or not.
- When the SNMP level for an existing user with priv-password configured is changed from one encryption level to another encryption level, then the previously configured priv-password will not be used with the new SNMP level. Priv-password needs to be configured again when SNMP level is changed for an existing user.
- Only users with MACsec read-write privilege can configure MACsec. Use **'user'** command to enable MACsec read-write permissions to the users. The privilege can be configured by family or by security domain.

Examples

```
-> user techpubs password writer_pass read-only config
-> user techpubs password-prompt
Enter Password: *****
Confirm Password: *****

-> user techpubs password writer_pass read-write all sha256
```

The following example creates a user with read-write privileges for all families except aaa.

```
-> user techpubs password writer_pass read-write all-except aaa
-> no user techpubs

-> user snmpv3user password pass1pass1 priv-password priv1priv1 read-write all
sha+aes

-> user snmpv3user password pass1pass1 prompt-priv-password
Enter Priv-Password: *****
Confirm Priv-Password: *****
```

Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **password-prompt**, **all-except**, **priv-password**, **prompt-priv-password** parameter added, **sha224** and **sha256** algorithm support added.

Release 8.7 R01; Support for **sha384**, **sha224+aes**, **sha256+aes**, and **sha384+aes** added.

Release 8.9R1; **macsec** keyword added.

super-password

Configures the password to grant more privileges to the other non-secureadmin user in the secureadmin mode.

enable super-password

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The super-password can be set only by the **secureadmin** user.
- If the **snapshot** command is used to capture the switch configuration, the text of the password is not displayed in the file. Instead an authentication key is included in the file.
- A new password cannot be identical to the current password; it cannot be identical to any of the three passwords that preceded the current password.
- Specifying an asterisk (*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, **password **123456**** is allowed; **password ******* is not allowed.
- Password settings are saved *automatically*.

Examples

```
-> enable super-password
enter super-password: *****
reenter super-password: *****
```

Release History

Release 8.8R1; command was introduced.

Related Commands

MIB Objects

```
aaaUserTable  
  alaAaaSuperPassword
```

user password-size min

Configures the minimum number of characters required when configuring a user password.

`user password-size min` *size*

Syntax Definitions

size The number of characters required when configuring a user password through the **password** command or when setting up a user password through the **user** command. The range is 1 to 30 characters. For the secureadmin user the range is 9 to 20 characters.

Defaults

parameter	default
<i>size</i>	8

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

N/A

Examples

```
-> user password-size min 9
```

Release History

Release 7.1.1; command was introduced.

Release 8.9R4; password range modified to 9 to 20 for secureadmin user.

Related Commands

[user](#)

Configures entries in the local user database. May be used by a system administrator to change any user's password in addition to configuring user privileges.

[show user password-policy](#)

Displays the global password policy configuration for the switch.

MIB Objects

```

```

user password-expiration

Configures an expiration date for all user passwords stored locally on the switch or disables password expiration.

user password-expiration {*day* | **disable**}

Syntax Definitions

day The number of days before locally configured user passwords will expire. The range is 1 to 150 days.

disable Disables password expiration for users configured locally on the switch.

Defaults

parameter	default
<i>day</i> disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The **user password-expiration** command sets a default password expiration for users configured locally on the switch.
- Password expiration may be configured on a per-user basis through the **user** command; the user setting overrides the **user password-expiration** setting until the user password is changed or the **user password-expiration** command is entered again.

Examples

```
-> user password-expiration 2
-> user password-expiration disable
```

Release History

Release 7.1.1; command was introduced.

Related Commands

user allow-ssh

This command enables or disables SSH access to the switch to a specific user.

```
user username allow-ssh {enable | disable}
```

Syntax Definitions

<i>username</i>	The name of the user. Used for logging into the switch. Required to create a new user entry or for modifying a user. Maximum 63 characters.
enable	Enable SSH access to the switch.
disable	Disables SSH access to the switch.

Defaults

parameter	default
enable disable	enable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

When the SSH access option is disabled, user cannot access the switch through SSH.

Examples

```
-> user test allow-ssh enable
-> user test allow-ssh disable
```

Release History

Release 8.8R2; command introduced.

show user

Displays the global password policy configuration for the switch.

MIB Objects

aaaUserTable
aaauAllowSsh

user password-policy cannot-contain-username

Specifies whether or not a user can configure a password that contains the username for the account.

`user password-policy cannot-contain-username {enable | disable}`

Syntax Definitions

enable Does not allow the password to contain the username.
disable Allows the password to contain the username.

Defaults

parameter	default
enable disable	enable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The status of this function is specified as part of a global password policy that is applied to all passwords when they are created or modified.
- When this function is enabled, a check is done at the time the password is created or modified to ensure that the username is not specified as part of the password text.
- For secureadmin user this cannot be disabled.

Examples

```
-> user password-policy cannot-contain-username enable
-> user password-policy cannot-contain-username disable
```

Release History

Release 7.1.1; command was introduced.

user password-policy cannot-contain-consecutive-characters

Specifies whether or not a user can configure a password that contains consecutive characters or three or more consecutive identical characters.

`user password-policy cannot-contain-consecutive-characters {enable | disable}`

Syntax Definitions

enable Does not allow the password to contain the consecutive-characters.
disable Allows the password to contain the consecutive-characters.

Defaults

parameter	default
enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The status of this function is specified as part of a global password policy that is applied to all passwords when they are created or modified.
- When this function is enabled, a check is done at the time the password is created or modified to ensure that the password does not contain consecutive-characters or three or more identical characters.
- For secureadmin user, by default this is enabled and cannot be disabled.

Examples

```
-> user password-policy cannot-contain-consecutive-characters enable
-> user password-policy cannot-contain-consecutive-characters disable
```

Release History

Release 8.9R2; command was introduced.

user password-history

Configures the maximum number of old passwords to retain in the password history.

user password-history *number*

Syntax Definitions

number The maximum number of old passwords to retain. The range is 0–24.

Defaults

parameter	default
<i>number</i>	4

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Specify **0** with this command to disable the password history function.
- The user is prevented from specifying any passwords that are recorded in the password history and fall within the range configured through this command.
- The password history value is specified as part of a global password policy that is applied to all passwords when they are created or modified.

Examples

```
-> user password-history 2
-> user password-history 0
```

Release History

Release 7.1.1; command was introduced.

user password-min-age

Configures the minimum number of days during which a user is prevented from changing a password.

`user password-min-age days`

Syntax Definitions

days The number of days to use as the minimum age of the password. The range is 0–150.

Defaults

parameter	default
<i>days</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Specify **0** with this command to disable the minimum number of days requirement.
- Configure the minimum age of a password with a value that is less than the value configured for the password expiration.
- The password minimum age value is specified as part of a global password policy that is applied to all passwords when they are created or modified.

Examples

```
-> user password-min-age 7
```

```
-> user password-min-age 0
```

Release History

Release 7.1.1; command was introduced.

user lockout-window

Configures a moving period of time (observation window) during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts. The number of failed login attempts is decremented by the number of failed attempts that age beyond the observation window time period.

user lockout-window *minutes*

Syntax Definitions

minutes The number of minutes the observation window remains active. The range is 0–99999.

Defaults

parameter	default
<i>minutes</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- Specify **0** with this command to disable the observation window function. This means that failed login attempts will never age out; the number of failed attempts is never decremented.
- Do not configure an observation window time period that is greater than the lockout duration time period.
- If the number of failed login attempts exceeds the number of failed attempts allowed before the observation window time expires, then the user account is locked out of the switch.
- The observation window time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved automatically.

Examples

```
-> user lockout-window 500
```

-> user lockout-window 0

Release History

Release 7.1.1; command was introduced.

Related Commands

user lockout-duration	Configures the amount of time a user account remains locked out of the switch.
user lockout-threshold	Configures the number of failed password attempts allowed before the user account is locked out of the switch.
user lockout unlock	Manually locks or unlocks a user account on the switch.
show user lockout-setting	Displays the global user lockout settings for the switch.

MIB Objects

aaaAsaConfig
aaaAsaLockoutWindow

user lockout-threshold

Configures the number of failed password login attempts allowed during a certain period of time (observation window). If the number of failed attempts equals the lockout threshold number before the observation window period expires, the user account is locked out.

user lockout-threshold *number*

Syntax Definitions

number The number of failed login attempts allowed. The range is 0–999.

Defaults

parameter	default
<i>number</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- If the lockout threshold is set to zero (the default), there is no limit to the number of failed login attempts allowed.
- A user account remains locked out for the length of the lockout duration time period; at the end of this time, the account is automatically unlocked.
- If the lockout duration time period is set to zero, only the **admin** user or a user with read/write AAA privileges can unlock a locked user account. An account is unlocked by changing the user account password or with the **user lockout unlock** command.
- The lockout threshold time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*; that is, these settings do not require the **write memory**, **reload slot**, or **configuration snapshot** command to save user settings over a reboot.

Examples

```
-> user lockout-threshold 3
```

```
-> user lockout-threshold 0
```

Release History

Release 7.1.1; command was introduced.

Related Commands

user lockout-window	Configures a window of time during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts.
user lockout-duration	Configures the length of time a user account remains locked out of the switch.
user lockout unlock	Manually locks or unlocks a user account on the switch.
show user lockout-setting	Displays the global user lockout settings for the switch.

MIB Objects

```
aaaAsaConfig  
aaaAsaLockoutThreshold
```

user lockout-duration

Configures the length of time a user account remains locked out of the switch. At the end of this time period, the user account is automatically unlocked.

user lockout-duration *minutes*

Syntax Definitions

minutes The number of minutes the user account remains locked out. The range is 0–99999.

Defaults

parameter	default
<i>minutes</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- Note that if the lockout duration time period is set to zero (the default), then locked user accounts are never automatically unlocked.
- Only the **admin** user or a user with read/write AAA privileges can unlock a locked user account when the lockout duration time is set to zero. An account is unlocked by changing the user password or with the **user lockout unlock** command.
- Do not configure a lockout duration time period that is less than the amount of time configured for the observation window.
- The lockout duration time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*; that is, these settings do not require the **write memory**, **reload slot**, or **configuration snapshot** command to save user settings over a reboot.

Examples

```
-> user lockout-duration 60
```

-> user lockout-duration 0

Release History

Release 7.1.1; command was introduced.

Related Commands

user lockout-window	Configures a window of time during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts,
user lockout-threshold	Configures the number of failed password attempts allowed before the user account is locked out of the switch.
user lockout unlock	Manually locks or unlocks a user account on the switch.
show user lockout-setting	Displays the global user lockout settings for the switch.

MIB Objects

aaaAsaConfig
aaaAsaLockoutDuration

user lockout unlock

Manually locks or unlocks a user account on the switch.

```
user username {lockout | unlock}
```

Syntax Definitions

<i>username</i>	The username of the account to lock or unlock.
lockout	Locks the user account out of the switch.
unlock	Unlocks a locked user account.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is only available to the **admin** user or a user with read/write AAA privileges.
- The **admin** user account is protected from any type of lockout attempt.
- User lockouts and unlocks are saved *automatically*.

Examples

```
-> user j_smith lockout
-> user j_smith unlock
```

Release History

Release 7.1.1; command was introduced.

Related Commands

show user	Displays information about all users or a particular user configured in the local user database on the switch.
show user lockout-setting	Displays the global user lockout settings for the switch.

MIB Objects

aaaUserTable
 aaauPasswordLockoutEnable

show aaa server

Displays information about a particular AAA server or AAA servers.

show aaa server [*server_name*]

Syntax Definitions

server_name The server name, which is defined through the **aaa radius-server**, **aaa tacacs+-server**, or **aaa ldap-server** commands.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

If a server name is not included with this command, information for all of the servers is displayed.

Examples

```
-> show aaa server
Server name = ldap2
  Server type      = LDAP,
  Host name 1     = ors40535,
  Retry number    = 3,
  Timeout (sec)   = 2,

  Port            = 389,
  Domain name     = manager,
  Search base     = c=us,
  VRF             = default

```

output definitions

Server name	The name of the server. A RADIUS, TACACS+ or LDAP server name is defined through the aaa radius-server , aaa tacacs+-server , and aaa ldap-server commands respectively.
Server type	The type of server (LDAP, TACACS+, or RADIUS).

output definitions

Host name	The name of the primary LDAP, TACACS+, or RADIUS host.
IP address	The IP address of the server.
Retry number	The number of retries the switch makes to authenticate a user before trying the backup server.
Timeout	The timeout for server replies to authentication requests.
Port	The port number for the primary LDAP or TACACS+ server.
Encryption enabled	The status of the encryption.
Domain name	The super-user or administrative distinguished name in the format recognized by the LDAP-enabled directory servers.
Search base	The search base recognized by the LDAP-enabled directory servers.
Authentication port	The UDP destination port for authentication requests.
Accounting port	The UDP destination port for accounting requests.
SSL enable	The SSL enable field is displayed for the RADIUS server only when the SSL is enabled for RADIUS server.
VRF	Name of the VRF associated with the server.
Health Check	Whether a health check session is enabled or disabled for the RADIUS server.
Primary Server	The operational status, up time, down time, and the number of transitions from down to up for the primary RADIUS server. This field displays information gathered when RADIUS health check is enabled for the server.
Backup Server	The operational status, up time, down time, and the number of transitions from down to up for the back-up RADIUS server. This field displays information gathered when RADIUS health check is enabled for the server.

Release History

Release 7.1.1; command was introduced.

Release 8.4.1; **SSL enable** output field added for RADIUS server.

Release 8.5R4; **Health Check**, **Primary Server**, and **Backup Server** fields added for RADIUS server.

Related Commands

aaa radius-server	Configures or modifies a RADIUS server for Authenticated Switch Access.
aaa ldap-server	Configures or modifies an LDAP server for Authenticated Switch Access.
aaa tacacs+-server	Configures or modifies an TACACS+ server for Authenticated Switch Access.
aaa radius-server health-check	Defines the RADIUS server health check configuration for a specific RADIUS server.
show aaa radius health-check-config	Displays the RADIUS server health check configuration.

show aaa server statistics

Displays the authorization, authentication, accounting, and BYOD statistics for the specified RADIUS server.

show aaa server *server_name* statistics

Syntax Definitions

server_name The name of the RADIUS server for which statistics will be displayed.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command applies only to RADIUS servers known to the switch (servers are identified through the [aaa radius-server](#) command).
- All statistics displayed for authorization, authentication, and accounting are displayed as an aggregate of the primary and back-up RADIUS server; separate statistics are not displayed for the primary server and the back-up server.
- Use the [aaa radius-server clear-statistics](#) command to reset all the statistics counters to zero.

Examples

```
-> show aaa server rad2 statistics
Statistics for rad2:
Authorization:
  Total No of Access-Request      : 2
  Total No of Access-Response    : 2
  Total No of Timedout Request   : 0
  Min RTT of Access Req/Res      usec: 938

```

```

-> show aaa server auth-serv1 statistics
ERROR: Statistics are supported only for RADIUS servers

```

output definitions

Authorization	The statistics information displayed for authorization.
Total No of Access-Request	The total number of authorization access requests sent to the server.
Total No of Access-Response	The total number of authorization access responses received from the server.
Total No of Timedout Request	The total number of authorization access requests that timed out.
Min RTT of Access Req/Res	The minimum RTT of authorization access requests or responses for the last seven days.
Avg RTT of Access Req/Res	The average RTT of authorization access requests or responses for the last seven days.
Max RTT of Access Req/Res	The maximum RTT of authorization access requests or responses for the last seven days.
Last RTT of Access Req/Res	The last RTT of authorization access requests or responses.
Authentication	The statistics information displayed for authentication.
Total No of Access-Request	The total number of authentication access requests sent to the server.
Total No of Access-Response	The total number of authentication access responses received from the server.
Total No of Access-Accept	The total number of authentication access accepts received from the server.
Total No of Access-Reject	The total number of authentication access rejects received from the server.
Total No of Access-Challenge	The total number of authentication access challenges received from the server.

output definitions

Total No of Timedout Request	The total number of authentication access requests that timed out.
Min RTT of Access Req/Res	The minimum RTT of authentication access requests or responses for the last seven days.
Avg RTT of Access Req/Res	The average RTT of authentication access requests or responses for the last seven days.
Max RTT of Access Req/Res	The maximum RTT of authentication access requests or responses for the last seven days.
Last RTT of Access Req/Res	The last RTT of authentication access requests or responses.
Accounting	The statistics information displayed for accounting.
Total No of Acct -Request	The total number of accounting access requests sent to the server.
Total No of Acct -Response	The total number of accounting access responses received from the server.
Total No of Timedout Request	The total number of accounting access requests that timed out.
Min RTT of Acct Req/Res	The minimum RTT of accounting access requests or responses for the last seven days.
Avg RTT of Acct Req/Res	The average RTT of accounting access requests or responses for the last seven days.
Max RTT of Acct Req/Res	The maximum RTT of accounting access requests or responses for the last seven days.
Last RTT of Acct Req/Res	Displays the last RTT of accounting access requests or responses.
BYOD	Displays the BYOD statistics.
Total No of COA Request	The total number of Change of Authorization (CoA) requests received from the server.
Total No of COA ACK Sent	The total number of CoA-ACKs sent to the server.
Total No of COA NACK Sent	The total number of CoA-NACKs sent to the server.
Total No of DM Request	The total number of disconnect request messages received from the server.
Total No of DM ACK Sent	Displays the total number of disconnect ACKs sent to the server.
Total No of DM NACK Sent	Displays the total number of disconnect NACKs sent to the server.
Time of last statistics clear	The date and time the AAA statistics were last cleared for the server.

aaa radius-server clear-statistics

Clears the AAA statistics collected for the specified RADIUS server.

aaa radius-server *server_name* **clear-statistics**

Syntax Definitions

server_name The name of the RADIUS server on which the AAA statistics will be cleared.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the [show aaa server statistics](#) command to display the statistics collected for the specified server.

Examples

```
-> aaa radius-server rad1 clear-statistics
-> aaa radius-server rad2 clear-statistics
```

Release History

Release 8.5R4; command introduced.

Related Commands

```

show aaa authentication

Displays information about the current authenticated switch session.

show aaa authentication

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **show aaa authentication** command to display authentication information about switch management services (Telnet, FTP, console port, Secure Shell, etc.).

Examples

```
-> show aaa authentication
Service type = Default
  1st authentication server = RadiusServer
  2nd authentication server = local
Service type = Console
  1st authentication server = local
Service type = Telnet
  Authentication = Use Default,
  1st authentication server = RadiusServer
  2nd authentication server = local
Service type = FTP
  Authentication = Use Default,
  1st authentication server = RadiusServer
  2nd authentication server = local
Service type = Http
  Authentication = Use Default,
  1st authentication server = RadiusServer
  2nd authentication server = local
Service type = Snmp
  Authentication = Use Default,
  1st authentication server = RadiusServer
  2nd authentication server = local
```

```
Service type = Ssh
Authentication = Use Default,
1rst authentication server = TacacsServer
2nd authentication server = local
```

output definitions

Authentication	Displays denied if the management interface is disabled. Displays Use Default if the management interface is configured to use the default configuration.
1st authentication server	The first server to be polled for authentication information.
2nd authentication server	The next server to be polled for authentication information.

Release History

Release 7.1.1; command was introduced.

Related Commands

aaa authentication Configures the interface for Authenticated Switch Access and specifies the server(s) to be used.

```

show aaa device-authentication

Displays a list of RADIUS servers assigned to provide 802.1X, MAC, or Captive Portal authentication.

show aaa device-authentication [802.1x | mac | captive-portal]

Syntax Definitions

802.1x	Displays the servers used for 802.1X authentication.
mac	Displays the servers used for MAC authentication.
captive-portal	Uses the servers used for Captive Portal authentication.

Defaults

By default, all assigned servers are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the optional **802.1x**, **mac**, or **captive-portal** parameters to display the servers assigned to provide the specified type of authentication.

Examples

```
-> show aaa device-authentication
Authentication type = mac
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1
    3rd authentication server = rad2,
    4th authentication server = rad3

Authentication type = 802.1x
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1

Authentication type = captive-portal
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1
```

output definitions

Authentication type	The type of authentication the server is assigned to provide (802.1x , mac , or captive-portal)
1st authentication server	The first server to be polled for authentication information. Any backup servers are also displayed on subsequent lines.

Release History

Release 7.2.1; command was introduced.

Release 7.3.4; **802.1x** and **mac** parameters added.

Release 8.1.1; **captive-portal** parameter added.

show aaa accounting

Displays information about accounting servers configured for authenticated switch access and device authentication sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

show aaa accounting [802.1x | mac | captive-portal]

Syntax Definitions

802.1x	Displays the RADIUS or syslog server used to log accounting for 802.1X authenticated sessions.
mac	Displays the RADIUS or syslog server used to log accounting for MAC authenticated sessions.
captive-portal	Displays the RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.

Defaults

By default, the accounting server configuration is displayed for TACACS+ commands and management sessions (Telnet, FTP, console port, HTTP, or SNMP).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **802.1x**, **mac**, or **captive-portal** parameters to display the accounting server configuration for a specific type of device authentication.
- If no parameters are entered with this command, the accounting server configuration for authentication sessions and TACACS+ commands is displayed.

Examples

```
-> show aaa accounting mac
Accounting type = mac
  Accounting Server:
    1st Acct Server = rad1,
    2nd Acct Server = rad2

-> show aaa accounting 802.1x
Accounting type = 802.1x
  Syslog Acct Server:
```

```
        IP Address = 135.254.163.110,  
        UDP port   = 514  
-> show aaa accounting captive-portal  
Accounting type = captive-portal  
  Syslog Acct Server:  
    IP Address = 135.254.163.110,  
    UDP port   = 514  
-> show aaa accounting  
Session (telnet, ftp, ...)  
  1st accounting server = rad1  
Command accounting server  
  1st accounting server = server1
```

Release History

Release 7.1.1; command was introduced.

Release 8.1.1; **802.1x**, **mac**, and **captive-portal** parameters added.

Related Commands

aaa accounting session	Configures an accounting server for authenticated switch access sessions.
aaa accounting command	Enables or disables the TACACS+ server for command accounting
aaa accounting	Configures RADIUS server accounting or local Switch Logging (syslog) accounting for device authentication sessions.

  aaacdSyslogUdpPort  
  aaacdRowStatus
```

show aaa config

Displays the AAA parameter configuration for 802.1X, MAC, and Captive Portal sessions.

```
show aaa {802.1x | mac | captive-portal} config
```

Syntax Definitions

802.1x Displays the parameter configuration for 802.1X authenticated sessions.

mac Displays the parameter configuration for MAC authenticated sessions.

captive-portal Displays the parameter configuration for Captive Portal authenticated sessions.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **802.1x**, **mac**, or **captive-portal** parameters to display the parameter configuration for a specific type of device authentication.

Examples

```
-> show aaa 802.1x config
Authentication type = 802.1x
  Re-Authentication Timeout:
    Status                = enable,
    Interval (sec)        = 3600,
    Trust Radius           = disable

  Accounting Interim:
    Interval (sec)        = 600,
    Trust Radius           = disable

-> show aaa mac config
Authentication type = mac
  Session Timeout:
    Status                = disable,
    Interval (sec)        = 43200,
    Trust Radius           = disable
```

```

Inactivity Timeout:
  Status                = disable,
  Interval (sec)        = 600
Accounting Interim:
  Interval (sec)        = 600,
  Trust Radius          = disable

-> show aaa captive-portal config
Authentication type = captive-portal
  Session Timeout:
    Status                = disable,
    Interval (sec)        = 43200,
    Trust Radius          = disable

  Inactivity Timeout:
    Status                = disable,
    Interval (sec)        = 600

  Accounting Interim:
    Interval (sec)        = 600,
    Trust Radius          = disable

```

output definitions

Authentication type	The type of authentication (802.1x , mac , or captive-portal).
Session Timeout	The parameter values for the AAA session timeout parameter. Does not apply to 802.1X authentication. Configured through the aaa session-timeout command.
Inactivity Logout	The parameter values for the AAA inactivity logout parameter. Does not apply to 802.1X authentication. Configured through the aaa inactivity-logout command.
Accounting Interim	The parameter values for the AAA accounting interim parameter. Configured through the aaa interim-interval command.
Re-authentication Timeout	The parameter values for the AAA 802.1X re-authentication timeout parameter. Does not apply to MAC or Captive Portal authentication. Configured through the aaa 802.1x re-authentication command.

Release History

Release 8.1.1; command was introduced.

Related Commands

show aaa device-authentication	Displays the device authentication server configuration.
show aaa accounting	Displays the accounting server configuration.
show aaa profile	Displays the AAA parameter profile configuration.

show aaa radius config

Displays the global AAA attribute values and MAC address format.

show aaa radius config

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The MAC address format determines the delimiter character used between MAC address octets and whether or not characters are in uppercase or lowercase. This format is applied only when the RADIUS attribute value is set to a MAC address.

Examples

```
-> show aaa radius config
RADIUS client attributes:
  NAS port id          = default,
  NAS identifier       = default
  NAS IP address       = default
  MAC format delimiter:
    Username           = none, UserNameCase = uppercase,
    Password           = none, PasswordCase = uppercase,
    calling station id = none, ClgStaIdCase = uppercase,
    called station id  = none, CldStaIdCase = uppercase
Unp Profile Precedence = Filter-Id
```

output definitions

NAS port id	The RADIUS client NAS-Port attribute for authentication and accounting sessions.
NAS identifier	The RADIUS client NAS-Identifier attribute for authentication and accounting sessions.

output definitions

NAS IP address	The RADIUS client NAS-IP address attribute for authentication and accounting sessions.
MAC format delimiter	The MAC address format used in the specified RADIUS client attributes.
UNP Profile Precedence	The UNP profile precedence: Filter-ID or Tunnel-Private-Group-ID

Release History

Release 8.1.1; command was introduced.

Release 8.5R4; UNP Profile Precedence and NAS IP address field added.

Related Commands

show aaa device-authentication	Displays the device authentication server configuration.
show aaa accounting	Displays the accounting server configuration.
show aaa profile	Displays the AAA parameter profile configuration.
aaa radius nas-ip-address	Configure the RADIUS client NAS IP address attribute for the outgoing RADIUS packets.

show aaa radius health-check-config

Displays the RADIUS server health check configuration for each RADIUS server.

show aaa radius health-check-config

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

This command displays the health check configuration for all RADIUS servers defined on the switch.

Examples

```
-> show aaa radius health-check-config
```

```
Server      Health      Polling      Failover      Username
Name        Check       Interval     Status
-----+-----+-----+-----+-----
RAD1        DISABLED    60           DISABLED      alcatel
RAD2        ENABLED     90           ENABLED       alcatel
```

output definitions

Server Name	The name of the RADIUS server.
Health Check	The operational status of the RADIUS health check feature for the server.
Polling Interval	The configured polling interval for the RADIUS server.
Failover Status	The status of the failover operation. When enabled, the re-authentication of users assigned to the authentication server down profile is triggered when the RADIUS server comes back up before the authentication server down timeout value expires).
Username	The configured user name for RADIUS server polling.

Release History

Release 8.5R4; command was introduced.

Related Commands

[aaa radius-server health-check](#) Configures RADIUS health check for the specified RADIUS server.

show aaa profile

Displays the AAA profile configuration.

show aaa profile [*profile_name*]

Syntax Definitions

profile_name The name of an existing AAA profile.

Defaults

By default, all profiles are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Enter an AAA profile name with this command to display information about a specific profile.

Examples

```
-> show aaa profile ap2
```

```
AAA profile name = ap2
Authentication type = mac
  Authentication Server:
    1st Auth Server   = rad1,
    2nd Auth Server   = rad2

  Accounting Server:
    1st Accnt Server  = rad1,
    2nd Accnt Server  = rad2

  Session Timeout:
    Status             = disable,
    Interval (sec)     = 43200,
    Trust Radius       = disable

  Inactivity Timeout:
    Status             = disable,
    Interval (sec)     = 600

  Accounting Interim:
    Interval (sec)     = 600,
```

```

    Trust Radius      = disable
Authentication type = 802.1x
  Re-Authentication Timeout:
    Status           = disable,
    Interval (sec)   = 3600,
    Trust Radius     = disable

Accounting Interim:
  Interval (sec)    = 600,
  Trust Radius     = disable

Authentication type = captive-portal
  Session Timeout:
    Status          = disable,
    Interval (sec)  = 43200,
    Trust Radius    = disable

  Inactivity Timeout:
    Status          = disable,
    Interval (sec)  = 600

Accounting Interim:
  Interval (sec)    = 600,
  Trust Radius     = disable

RADIUS client attributes:
  NAS port id      = default,
  NAS identifier   = default,
  NAS ip address   = default,
  MAC format delimiter:
    Username       = none, UserNameCase = uppercase,
    Password       = none, PasswordCase = uppercase,
    calling station id = none, ClgStaIdCase = uppercase,
    called station id = none, CldStaIdCase = uppercase

```

output definitions

Authentication type	The type of authentication (802.1x , mac , or captive-portal) configured through the profile.
Session Timeout	The profile values defined for the AAA session timeout parameter. Does not apply to 802.1X authentication.
Inactivity Logout	The profile values defined for the AAA inactivity logout parameter. Does not apply to 802.1X authentication.
Accounting Interim	The profile values defined for the AAA accounting interim parameter.
Re-authentication Timeout	The profile values defined for the AAA re-authentication timeout parameter. Does not apply to MAC or Captive Portal authentication.
RADIUS client attributes	The profile values defined for the NAS-Port, NAS-Port-Identifier and the NAS-IP address attributes and the format to use when the specified attribute value is set to a MAC address.

Release History

Release 8.1.1; command was introduced.
 Release 8.5R4; **NAS IP address** output field added.

show aaa session console config

Displays the current administrative state of the session console configuration.

show aaa session console config

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

N/A

Examples

```
-> show aaa session console config
Console access admin-state: disabled
```

Release History

Release 8.6R2; command introduced.

Related Commands

[aaa session console](#)

Enables or disables switch access through the console port of the switch

MIB Objects

N/A

show user

Displays information about all users or a particular user configured in the local user database on the switch.

show user [*username*]

Syntax Definitions

username The name of the user. Used for logging into the switch.

Defaults

By default, all users are displayed if the *username* parameter is not specified with this command.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use this command to display information about read/write access and partitioned management access (domains and families).

Examples

```
-> show user
User name = Customer1,
  Password expiration      = 10/27/2010 11:01 (30 days from now),
  Password allow to be modified date = 9/30/2010 10:59 (3 days from now),
  Account lockout         = Yes (Automatically unlocked after 19 minute(s)from now),
  Password bad attempts   = 3,
  Read Only for domains   = None,
  Read/Write for domains  = Admin System Physical Layer2 Services policy Security ,
  Read/Write for families = ip rip ospf bgp vrrp ip-routing ipx ipmr ipms ,
  Snmp allowed            = YES,
  Snmp authentication     = SHA,
  Snmp encryption        = DES
  Console-Only           = Disabled,
  SSH allowed            = NO,
User name = admin,
  Password expiration      = 10/27/2010 11:01 (30 days from now),
  Password allow to be modified date = 9/30/2010 10:59 (3 days from now),
  Account lockout         = None,
  Password bad attempts   = 0,
  Read Only for domains   = None,
  Read/Write for domains  = All ,
  Snmp allowed            = NO
  Console-Only           = Disabled,
  SSH allowed            = NO,
```

output definitions

User name	The user name for this account.
Password expiration	The date and time on which the password will expire. This field only displays if the password expiration is configured specifically for a user, or a default password expiration is configured globally on the switch through the user password-expiration command. (Note that the date/time are based on the switch's default system date/time or the system date/time configured through the system date and system time commands.)
Password allow to be modified date	The earliest date and time on which the user may change the password. Configured through the user password-min-age command.
Account lockout	Indicates if the user account is locked out (Yes or No) and how many minutes remain until the user account is automatically unlocked. If no remaining time is displayed, the admin user or a user with admin privileges must manually unlock the account. Configured through the user lockout-duration and user lockout unlock commands.
Password bad attempts	The number of failed password login attempts for this user account.
Read Only for domains	The command domains available with the user's read-only access. See the table on the next page for a listing of valid domains.
Read/Write for domains	The command domains available with the user's read-write access. See the table on the next page for a listing of valid domains.
Read Only for families	The command families available with the user's read-only access. See the table on the next page for a listing of valid families.
Read/Write for families	The command families available with the user's read-write access. See the table on the next page for a listing of valid families.
Snmp allowed	Indicates whether or not the user is authorized to use SNMP (YES or NO). SNMP is allowed for the user account when SNMP authentication is specified for the account.
Snmp authentication	The level of SNMP authentication, if any, configured for the user. This field only displays if the user is authorized to use SNMP.
Snmp encryption	The level of SNMP encryption, if any, configured for the user. This field only displays if the user is authorized to use SNMP.
Console-Only	Indicates whether or not console only access is enabled or disabled for the user admin.
SSH allowed	Indicates whether or not SSH access to the switch is enabled or disabled for a specific user.

Possible values for command domains and families are listed here:

Domain	Corresponding Families
domain-admin	file telnet dshell debug
domain-system	system aip snmp rmon webmgt config
domain-physical	chassis module interface pmm health
domain-network	ip rip ospf bgp vrrp ip-routing ipx ipmr ipms
domain-layer2	vlan bridge stp 802.1q linkagg ip-helper

domain-service	dns
domain-policy	qos policy slb
domain-security	session avlan aaa

Release History

Release 7.1.1; command was introduced.
Release 8.8R2; **SSH allowed** field added.

Related Commands

user	Configures user entries in the local user database.

```

show user password-policy

Displays the global password settings configured for the switch.

show user password-policy

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The password policy contains parameter values that define configuration requirements for all passwords that are created on the switch. Use this command to display the current parameter values for the password policy.

Examples

```
-> show user password-policy
Password Policy:
Password cannot contain username: Yes
Minimum number of English uppercase characters: 6
Minimum number of English lowercase characters: 4
Minimum number of base-10 digit: 2
Minimum number of non-alphanumeric: 3
Minimum size : 8
Password history: 4
Password minimum age: 20 (days)
Password expiration: 100 (days)
```

output definitions

Password cannot contain username	Indicates if the username is included with the password check (Enable or Disable). Configured through the user password-policy cannot-contain-username command.
Minimum number of English uppercase characters	The minimum number of uppercase characters required in a password. Configured through the user password-policy cannot-contain-consecutive-characters command.
Minimum number of English lowercase characters	The minimum number of lowercase characters required in a password. Configured through the user password-policy min-lowercase .
Minimum number of base-10 digit	The minimum number of digits required in a password. Configured through the user password-policy min-digit command.
Minimum number of non-alphanumeric	The minimum number of non-alphanumeric characters required in a password. Configured through the user password-policy min-nonalpha command.
Minimum size	The minimum number of characters required for the password size. Configured through the super-password command.
Password history	The maximum number of old passwords retained in the password history. Configured through the user password-history command.
Password minimum age	The number of days a password is protected from any modification. Configured through the user password-min-age command.
Password expiration	The default expiration date applied to all passwords. Configured through the user password-expiration command.

Release History

Release 7.1.1; command was introduced.

Related Commands

show user password-policy Displays the expiration date for passwords configured for user accounts stored on the switch.

  aaaAsaDefaultPasswordExpirationInDays

```

show user lockout-setting

Displays the global user lockout settings for the switch.

show user lockout-setting

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The global lockout settings include parameter values that determine the length of a user observation window, the amount of time a locked user remains locked, and the number of failed password login attempts allowed.

Examples

```
-> show user lockout-setting
Lockout Setting:
Observation window: 30 (minutes)
Duration: 200 (minutes)
Threshold: 20
```

output definitions

Observation window	The amount of time, in minutes, during which the number of failed password login attempts are counted. Configured through the user lockout-window command.
Duration	The amount of time, in minutes, that a locked user account remains locked out of the switch. Configured through the user lockout-duration command.
Threshold	The maximum number of failed password login attempts allowed before the user is locked out of the switch. Configured through the user lockout-threshold command.

Release History

Release 7.1.1; command was introduced.

show aaa priv hexa

Displays hexadecimal values for command domains/families. Useful for determining how to express command families in hexadecimal; hexadecimal values are used in configuring user privileges in attributes on an external LDAP or RADIUS authentication server.

show aaa priv hexa [*domain or family*]

Syntax Definitions

domain or family

The CLI command domain or particular command family for which you want to display hexadecimal values. See table in Usage Guidelines.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Valid values for the family parameter are listed in the Corresponding Families column of the following table:

Domain	Corresponding Families
domain-admin	file telnet dshell debug
domain-system	system aip snmp rmon webmgt config
domain-physical	chassis module interface pmm health
domain-network	ip rip ospf bgp vrrp ip-routing ipx ipmr ipms
domain-layer2	vlan bridge stp 802.1q linkagg ip-helper
domain-service	dns
domain-policy	qos policy slb
domain-security	session avlan aaa

- Note that some command families may not be supported depending on the hardware platform you are running.
- If you do not specify a command family, hexadecimal values for all commands sets will display.
- The 'lanpower' commands were moved from the 'module' family to the 'lanpower' family in 8.8R1.

Examples

```

-> show aaa priv hexa
file                = 0x00000001 0x00000000,
telnet              = 0x00000008 0x00000000,

0x00100000 0x00000000

```

Release History

Release 7.1.1; command was introduced.

Related Commands

[user](#)

Configures or modifies user entries in the local user database.

MIB Objects

N/A

show system fips

Displays the administrative and operational status of the FIPS mode on the switch.

show system fips

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The **show system fips** command is the only command that can be used to view the FIPS mode status. The FIPS status is not shown in the **show configuration snapshot** command output.

Examples

```
-> show system fips
Admin State: Enabled
Oper State: Enabled
```

Release History

Release 8.1.1; command introduced.

Related Commands

[aaa authentication](#)

Enable or disable the FIPS mode on the switch.

MIB Objects

```

systemFipsOperState
```

aaa switch-access mode

Globally sets the access mode as enhanced or default.

```
aaa switch-access mode {default | enhanced}
```

Syntax Definitions

default Sets the access mode as default.

enhanced Sets the access mode as enhanced.

Defaults

parameter	default
default enhanced	default

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

It is recommended to save configuration and reboot the switch when the ASA access mode is configured.

Example

```
-> aaa switch-access mode default
```

```
-> aaa switch-access mode enhanced
```

WARNING: Recommended to save configuration and reload the switch upon switch access mode change.

Release History

Release 8.3.1; command introduced.

Related Commands

show aaa switch-access mode Displays the access mode configuration.

MIB Objects

aaaAsaConfig
aaaAsaAccessMode

aaa switch-access ip-lockout-threshold

Configures the threshold value for failed login attempts from an IP address after which the IP address will be banned from switch access.

aaa switch-access ip-lockout-threshold *number*

Syntax Definitions

number Set the threshold value for login attempts in the range 0 to 999.

Defaults

parameter	default
<i>number</i>	6

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The command is applicable only if ASA enhanced mode is enabled.
- Set the IP threshold value to '0' to disable the IP lockout thresholds.
- IP address is permanently blocked/banned if the number of authentication failures from a particular IP reaches IP lockout threshold limit within two times of the user lockout window.
- Only the switch access will be restricted from the banned IP address. Any IP packet (with monitored port number) destined to a switch IP interfaces will be discarded. IP packets normally bridged/routed by the switch will not be discarded.
- A maximum of 128 IP addresses can be added to the banned list. When the maximum limit has reached, oldest entry from the list is removed to accommodate the new entries.
- User lockout window ([user lockout-window](#)) is applicable for IP lockout threshold as well.
- IP lockout threshold shall share the same window as user lockout window, and by default, IP lockout threshold shall be two times that of user lockout window. Since user lockout is giving more priority, the IP lockout threshold must be greater than the user lockout threshold value.
- The IP address will remain blocked until it is released using the command [aaa switch-access banned-ip release](#).

Example

```
-> aaa switch-access ip-lockout-threshold 2
```

Release History

Release 8.3.1; command introduced.

Related Commands

aaa switch-access mode	Globally sets the access mode as enhanced or default.
show aaa switch-access ip-lockout-threshold	Displays the lockout threshold configured for the remote IP addresses.

  aaaAsaAccessIpLockoutThreshold
```

aaa switch-access banned-ip release

Releases the banned IP addresses that are blocked due to failed login attempts.

aaa switch-access banned-ip {all | *ip_address*} release

Syntax Definitions

all Release all banned IP addresses from the banned list.

ip_address Release a specific IP address from the banned list.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

The IP addresses are banned if the failed login count reaches IP lockout threshold limit.

Example

```
-> aaa switch-access banned-ip all release
-> aaa switch-access banned-ip 100.2.45.56 release
```

Release History

Release 8.3.1; command introduced.

Related Commands

[show aaa switch-access banned-ip](#) Displays the list of banned ip addresses.

MIB Objects

```
aaaSwitchAccessBannedIpTable
  aaaSwitchAccessBannedIpAddress
  aaaSwitchAccessBannedIpRowStatus
```

aaa switch-access priv-mask

Configure the functional privileges mask for the switch access based on the access type on top of the user privilege.

```
aaa switch-access priv-mask {console | telnet | ssh | http | https} {read-only | read-write} [families... | domains...] all | none | all-except families...
```

Syntax Definitions

read-only	Specifies that the user will have read-only access to the switch through a specific access type.
read-write	Specifies that the user will have read-write access to the switch through a specific access type. The read-write access is allowed only for http, https access types. For other access types (console, telnet, and ssh only) read-only access is allowed.
<i>families</i>	Determines the command families available to the user on the switch for a specific access type. Each command family should be separated by a space. Command families are subsets of domains. See <i>Usage Guidelines</i> for more details.
<i>domains</i>	Determines the command domains available to the user on the switch for a specific access type. Each domain should be separated by a space. See the <i>Usage Guidelines</i> for more details.
all	Specifies that all command families and domains are available to the user for a specific access type.
none	Specifies that no command families or domains are available to the user for a specific access type.
all-except	Specifies that functional privileges for families followed by 'all-except' are disabled for a specific access type.

Defaults

By default, the access types are enabled with read-write privileges for all the families.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- The access privileges for the SSH, TELNET, Console, HTTP, HTTPS can be defined.

- The read-write privilege can be applied only for HTTP and HTTPS access types.
- For SSH, TELNET, and Console, only read-only privilege can be applied.
- Possible values for domains and families are listed in the following table:

Domain	Corresponding Families
domain-admin	file telnet debug
domain-system	system aip snmp rmon webmgt config
domain-physical	chassis module interface pmm health
domain-network	ip rip ospf bgp vrrp ip-routing ipmr ipms
domain-layer2	vlan bridge stp 802.1q linkagg ip-helper
domain-service	dns
domain-policy	qos policy slb
domain-security	session avlan aaa
domain-mpls	mpls
domain-datacenter	fips, auto-fabric
domain-afn	sip-snooping, dpi, app-mon

Example

```
-> aaa switch-access priv-mask ssh read-only webmgt vrrp vrf vlan uddl
-> aaa switch-access priv-mask telnet read-write tftp-client telnet system stp ssh
-> aaa switch-access priv-mask ssh read-only all-except vlan
-> aaa switch-access priv-mask telnet read-write all-except ip
```

If privileges for specific families need to be applied, then remove the existing privilege using the **no** command, and re-apply the required family privilege.

```
-> no aaa switch-access priv-mask telnet read-write all
-> aaa switch-access priv-mask telnet read-write vlan aaa
```

Release History

Release 8.3.1; command introduced.

Related Commands

- aaa switch-access mode** Globally sets the access mode as enhanced or default.
- show aaa switch-access priv-mask** Displays the privilege details for the access types.

  aaaSwitchAccessWriteRight4
```

aaa switch-access management-stations admin-state

Enables or disables the IP management station feature in a switch.

aaa switch-access management-stations admin-state {enable | disable}

Syntax Definitions

enable Enables the IP management station feature in the switch.

disable Disables the IP management station feature in the switch.

Defaults

The IP management station feature is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- When the IP management station is disabled, switch access from any IP address shall be allowed. If there is a login failure (based on the **ip-lockout threshold** value), the IP address will be banned/ blocked and added to the banned IP address list.
- When the IP management station is enabled, the switch access will be allowed only from those IPs configured in the management station list and only if those are not in banned list.
- It is recommended to enable this command from console since this may terminate the existing session, if enabled through telnet or SSH.

Example

```
-> aaa switch-access management stations admin-state enable
-> aaa switch-access management stations admin-state disable
```

Release History

Release 8.3.1; command introduced.

Related Commands

aaa switch-access mode

Globally sets the access mode as enhanced or default.

**aaa switch-access
management-stations**

Configure the management station in the switch, with or without mask value for the corresponding IP of the management station.

**show aaa switch-access
management-stations**

Displays the list of configured management stations.

MIB Objects

aaaSwitchAccessMgmtStationTable

aaaSwitchAccessMgmtStationRowStatus

aaa switch-access management-stations

Configure the management station in the switch, with or without mask value for the corresponding IP of the management station. The remote access is allowed only from these IP addresses if management station feature is enabled.

aaa switch-access management-stations [*ip_address* | *ip_address /mask*]

no aaa switch-access management-stations *ip_address*

Syntax Definitions

ip_address IP address and the mask of the management station.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The command is configurable when **aaa switch-access management-stations admin-state** is enabled.
- A maximum of 64 management stations can be configured.
- Removing an IP address from the management station list will not remove the IP from the banned list.
- Whenever an IP address is removed from the management station, switch will stop responding to that IP. However, the existing sessions are not terminated automatically.

Example

```
-> aaa switch-access management stations 100.15.9.8
-> aaa switch-access management stations 100.15.9.9 255.255.255.0
```

MIB Objects

N/A

aaa switch-suppliant

Enables the supplicant feature support on OmniSwitch. Additionally, you have the option to set up the port or linkagg designated for the exchange of EAP messages with the NAS Switch.

```
aaa switch-suppliant {[port <c/s/p>] [linkagg lag_id]}
```

```
[no] aaa switch-suppliant
```

Syntax Definitions

c/s/p

Port to be used for supplicant authentication of switch.

lag_id

Linkagg to be used for supplicant authentication of switch.

Defaults

By default, supplicant feature will be disabled on the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The Port or Linkagg parameter has to be provided as a required configuration.
- Use **no** form of the CLI command to disable supplicant feature on switch.
- Any alteration to a previously configured port or linkagg will result in the reset of the authentication status. This action will subsequently initiate the authentication process of the switch.
- When this feature is enabled, all user ports except port or linkagg provided in the CLI command will be put to violation Shutdown. This will bring down the management IP interfaces configured on user ports on the switch. This will not impact the EMP interfaces and console to the switch.
- The switch has to be connected to an authenticator NAS switch which can authenticate Suppliant devices. If NAS switch is an AOS device, the port on NAS switch has to be enabled with UNP port configuration.
- When switch fails supplicant authentication, the switch will be moved to restricted state, ie, all user interfaces will be in Violation shutdown state. In this state, the supplicant switch will attempt to get authenticated 5 times after every 300secs, post these re-tries are exhaust switch will be put to permanent restricted state.
- The switch has to be pre-configured with required Client and CA certificates required for Switch Authentication. If not configured, the authentication process will use default certificates present on the switch.

Example

```
-> aaa switch-suppliant port 1/1/5  
-> aaa switch-suppliant linkagg 10  
-> no aaa switch-suppliant
```

Release History

Release 8.9R3; command introduced.

MIB Objects

N/A

aaa certificate update-supplicant-certificate

This command updates the custom certificate, identity and password to be used for authentication. The “default” certificate option of this CLI will replace with default certificate to be used for switch authentication.

```
aaa certificate update-supplicant-certificate {default | [<cert_file>] [key-file <key_file>] [identity <user-name>] [key-passwd <password>]}
```

Syntax Definitions

<i>cert_file</i>	The path on the switch, which has a valid certificate to be used for switch authentication.
<i>key_file</i>	The path on the switch, which has a valid key to be used for switch authentication.
<i>user-name</i>	The identity which is used as user name field during switch authentication
<i>password</i>	The key which is used to encrypt the <i>client.key</i> file.

Defaults

By default, supplicant feature will make use of the default certificate present on the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Upon bootup, a default certificate will be loaded onto the switch, which will be available for use in switch authentication.
- The "default" certificate option of this command will be replaced with the default certificate designated for switch authentication.
- This command will additionally verify whether the provided X509 certificate is valid for supplicant authentication. If the certificate does not meet the required criteria, the command will show an error.
- To configure a custom certificate, it is necessary to have a valid certificate and key placed within the directory "**/flash/switch/cert.d**".
- After configuring a certificate, administrators can use the [aaa certificate view](#) command to access the details of the custom certificate.

Example

```
-> aaa certificate update-supplicant-certificate identity "username" myCliCert.pem  
key-file myCliPrivate.key key-passwd "password"
```

```
-> aaa certificate update-supplicant-certificate default
```

Release History

Release 8.9R3; command introduced.

Related Commands

MIB Objects

N/A

no aaa certificate update-suppliant-certificate

This command will update the ca certificate to be used for switch suppliant authentication. The “no” option of this CLI will remove the use of the current ca certificate.

no aaa certificate update-suppliant-ca-cert <ca-certificate>

Syntax Definitions

ca-certificate

The path on the switch, which has a valid ca certificate to be used for switch authentication.

Defaults

By default, the switch do not have a ca certificate for switch suppliant authentication.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- There is no ca certificate for switch suppliant authentication by default.
- The “no” option of this CLI will remove the use of the current ca certificate.
- This CLI will also validate if it is a valid X509 certificate which can be used for suppliant authentication. Any non-compliance the CLI result in error.
- To configure a ca certificate, a valid certificate must be placed in “/flash/switch/cert.d”.
- Once a certificate is configured, admin can use [aaa certificate view](#) CLI to view the certificate details of custom-certificate.

Example

```
-> aaa certificate update-suppliant-ca-cert myCliCert.pem"
```

```
-> no aaa certificate update-suppliant-ca-cert
```

Release History

Release 8.9R3; command introduced.

Syntax Definitions

N/A

Defaults

By default, the status of switch authentication is displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use this command to display the authentication status of the switch.

Example

```
-> show aaa switch-suppliant status
suppliant-status           : Enabled,
Port/LAG                   : 1/1/10,
MAC                        : 2C:FA:A2:94:D1:EB,
Authentication-state       : Init,
Authentication-Time        : 01/01/1970 00:00:00,
Certificate Used           : Custom,
CA-Certificate             : -,
Client-Certificate         : "/flash/switch/cert.d/myCliCert.pem",
Client-Key                 : "/flash/switch/cert.d/myCliPrivate.key",
Identity                   : "username",
Private-key-passwd        : "password"
```

output definitions

suppliant-status	Displays the suppliant feature status on the switch
port/LAG	The port or Linkagg to be used for authentication of the switch.
Authentication-state	The status of Switch authentication state.
Authentication-Time	Timestamp of the result of last switch authentication.
Certificate-Used	Certificate used for switch authentication; default-certificate loaded on the switch of custom certificate

MIB ObjectsN/A

aaa certificate install-certificate webview

Use this command to update the customer CA-signed certificate intended for webview authentication. By using this command, you can replace the default Webview certificate that is originally included within the AOS images.

The **no** option of this command will remove the use of the current webview certificate. After that webview server will generate the own self-sign certificate and restart automatically.

```
aaa certificate install-certificate webview <web-certificate>
```

```
no aaa certificate install-certificate webview <web-certificate>
```

Syntax Definitions

web-certificate Path or name of certificate on the switch, which has a valid web certificate to be used for webview authentication.

Defaults

By default, the switch will use the webview self-sign certificate that comes as part of the image..

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- To update a web certificate, it is necessary to have a valid certificate placed within the directory “/flash/switch”.
- Upon the successful configuration of the web certificate, the webview server will automatically restart and use the updated certificate for webview functions.
- The **no** option of this command will remove the use of the current webview certificate. After that webview server will generate the own self-sign certificate and restart automatically..

Example

```
-> aaa certificate install-certificate webview web.pem
-> no aaa certificate install-certificate webview
```

```
Web-certificate format (*.pem)
-----BEGIN PRIVATE KEY-----

<private-key>

-----END PRIVATE KEY-----

MIB Objects

N/A

aaa certificate update-ca-certificate

Updates the CA-bundle with the custom CA server certificate provided by CA.

aaa certificate update-ca-certificate *ca_file*

Syntax Definitions

ca_file The custom CA server certificate (in PEM format) provided by the CA.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The custom CA server certificate should be copied in PEM format to **/flash/** via SFTP and then the CA certificate file can be copied from **/flash/** to **/flash/switch/cert.d** in the "su" (root) shell.
- This command appends the existing CA bundle (**certs.pem**) and the custom CA server certificate provided as input.
- The update of custom CA server certificates needs to be done before corresponding server configurations are done on the switch. If the update is done post server configuration, then a switch reboot needs to be done for the changes to take effect.

Examples

```
-> aaa certificate update-ca-certificate ca.pem
```

Release History

Release 8.3.1; command introduced.

Release History

Release 8.3.1; command introduced.

Related Commands

[aaa certificate generate-self-signed](#) Generates the X.509 self-signed certificate for TLS client authentication.

[aaa certificate delete](#) Deletes the X.509 certificate.

MIB Objects

N/A

aaa certificate verify ca-certificate

Verifies the contents of the X.509 certificate.

aaa certificate verify ca-certificate *ca_cert_file* **certificate** *cert_file*

Syntax Definitions

ca_cert_file The X.509 certificate file (in PEM format) to be displayed.

cert_file The X.509 certificate file (in PEM format) to be displayed.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

N/A

Examples

```
-> aaa certificate verify ca-certificate ca_cert certificate cert_file
```

Release History

Release 8.3.1; command introduced.

Related Commands

aaa certificate delete

Deletes the X.509 certificate.

aaa certificate delete *cert_file*

Syntax Definitions

cert_file The X.509 certificate file (in PEM format) to be deleted.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

N/A

Examples

-> aaa certificate delete clientcert.pem

Release History

Release 8.3.1; command introduced.

Related Commands

[aaa certificate generate-self-signed](#) Generates the X.509 self-signed certificate for TLS client authentication.

[aaa certificate view](#) Displays the contents of the X.509 certificate.

MIB Objects

N/A

aaa certificate generate-csr

Generates the CSR (Certificate Signing Request) to be sent to get a CA signed certificate for TLS client authentication.

```
aaa certificate generate-csr {csr_file} key {key_file} [dn domain_name] {cn common_name} {on
org_name} {ou org_unit} {l locality} {st state} {c country}
```

Syntax Definitions

<i>csr_file</i>	The name of the CSR certificate file to be created.
<i>key_file</i>	The name of the key file under which the RSA 2048 bit key is stored.
<i>domain_name</i>	Domain name to be used in the CSR.
<i>common_name</i>	Common Name used in X.509 certificate.
<i>org_name</i>	The Organization Name used in X.509 certificate.
<i>org_unit</i>	The Organization Unit used in X.509 certificate.
<i>locality</i>	The Locality used in X.509 certificate.
<i>state</i>	The State used in X.509 certificate.
<i>country</i>	The Country used in X.509 certificate.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Generates <csr_file>.pem file in **/flash/switch** directory. The <csr_file>.pem file created should be sent to CA signing authority to get the CA certificate.
- Default values will be taken for all other optional parameters while generating the CSR.
- The CSR needs to be created, sent to CA authority and the corresponding CA certificate (obtained from CA authority) should be uploaded to the **/flash/switch** directory before corresponding server configurations are done on the switch. If the CA certificate is uploaded post server configuration, then a switch reboot needs to be done for the changes to take effect.

Examples

```
-> aaa certificate generate-csr myCliCert.pem key clientkey.key cn client.ale.com
```

on ALE ou ESD l BAN st KAR c IN

Release History

Release 8.3.1; command introduced.

Related Commands

[show aaa common-criteria config](#) Displays the common criteria status on the switch.

MIB Objects

N/A

ssl pki client validate-certificate admin-state

Enables or disables the server's certification validation when the application on the switch acts as TLS client.

`ssl pki client validate-certificate admin-state {enable | disable}`

Syntax Definitions

enable	Enables the server's certification validation for the client application on the switch.
disable	Disables the server's certification validation for the client application on the switch.

Defaults

By default, the feature is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- When the feature is enabled, TLS client (LDAP, RADIUS, and SYSLOG) applications validate server certificate based on:
 - TLS mutual authentication using X.509 certificates.
 - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
 - X.509 certificate validation using OCSP and CRL.

Examples

```
-> ssl pki client validate-certificate admin-state enable
-> ssl pki client validate-certificate admin-state disable
```

Release History

Release 8.6R1; command introduced.

Related Commands[show ssl pki config](#)

Displays the Public Key Infrastructure (PKI) configuration.

MIB Objects

```
systemSslPki
  systemSslPkiClientCertificateValidation
```

ssl pki client mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS client applications on the switch.

```
ssl pki client mutual-authentication admin-state {enable | disable}
```

Syntax Definitions

enable	Enables the mutual authentication for the TLS client applications on the switch. When mutual-authentication is enabled, TLS client applications will need to load myCliCert.pem , myCliPrivate.key files in /flash/switch/cert.d and provide the certificate to server.
disable	Disables the mutual authentication for the TLS client applications on the switch.

Defaults

By default, the feature is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- Enable this feature when the TLS client (LDAP, RADIUS, SYSLOG) applications needs to load the certificate **myCliCert.pem** and **myCliPrivate.key** file in **/flash/switch/cert.d/** directory and provide the certificate file to server while establishing TLS connection.
- If the server certificate does not meet the validation criteria, the TLS client application connection is terminated.

Examples

```
-> ssl pki client mutual-authentication admin-state enable
-> ssl pki client mutual-authentication admin-state disable
```

Release History

Release 8.6R1; command introduced.

Related Commands

[show ssl pki config](#)

Displays the Public Key Infrastructure (PKI) configuration.

[ssl pki server mutual-authentication admin-state](#)

Enables or disables the mutual authentication for the TLS server applications on the switch.

[aaa certificate update-ca-certificate](#)

Updates the CA-bundle with the custom CA server certificate provided by CA.

MIB Objects

```
systemSslPki  
  systemSslPkiClientMutualAuthentication
```

ssl pki server mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS server applications on the switch.

```
ssl pki server mutual-authentication admin-state {enable | disable}
```

Syntax Definitions

enable	Enables the mutual authentication for the TLS server applications on the switch. When mutual-authentication is enabled, the TLS server (SNMP) application will require clients to provide their certificate to server while establishing TLS connection.
disable	Disables the mutual authentication for the TLS server applications on the switch.

Defaults

By default, the feature is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- Enable this feature when the TLS server (SNMP) application must require clients to provide their certificate to server while establishing TLS connection.
- When the feature is enabled, TLS server (SNMP) application validates client certificate based on:
 - TLS mutual authentication using X.509 certificates.
 - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
 - X.509 certificate validation using OCSP and CRL.
- If the client certificate does not meet the validation criteria, the TLS server application connection is terminated.

Examples

```
-> ssl pki server mutual-authentication admin-state enable
-> ssl pki server mutual-authentication admin-state disable
```

Release History

Release 8.6R1; command introduced.

Related Commands

[show ssl pki config](#)

MIB Objects

```
systemSslPki  
  systemSslPkiServerMutualAuthentication
```

ssl pki tls version

Configures the TLS version for both TLS client and server applications.

```
ssl pki tls version {1.0 | 1.1 | 1.2}
```

Syntax Definitions

- 1.0 Sets the TLS version for client and server to 1.0.
- 1.1 Sets the TLS version for client and server to 1.1.
- 1.2 Sets the TLS version for client and server to 1.2.

Defaults

By default, the SSL PKI TLS version is 1.0.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The switch must be rebooted for the changes to be applied.
- When the TLS version is configured, TLS client and server applications will deny all SSL and TLS versions which are lower than the configured version.
- The command is applicable only for LDAP, RADIUS, SYSLOG and SNMP applications.

Examples

```
-> ssl pki tls version 1.0
-> ssl pki tls version 1.2
```

Release History

Release 8.6R1; command introduced.

Related Commands[show ssl pki config](#)

Usage Guidelines

N/A

Examples

```
-> show ssl pki config
SSL PKI Global Configuration:
Client Validate Certificate = enabled
Client Mutual Authentication = enabled
Server Mutual Authentication = enabled
TLS version = 1.2
```

Release History

Release 8.6R1; command introduced.

Related Commands

ssl pki client validate-certificate admin-state

Enables or disables the server's certification validation when the application on the switch acts as client.

ssl pki client mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS client applications on the switch.

ssl pki server mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS server applications on the switch.

ssl pki tls version

Configures the TLS version for both TLS client and server applications.

MIB Objects

```
systemSslPki
  systemSslPkiClientCertificateValidation
  systemSslPkiClientMutualAuthentication
  systemSslPkiServerMutualAuthentication
  systemSslPkiTlsVersion
```

ssl cipher

Selects the cipher security level for the applications using the OpenSSL.

```
ssl cipher {[level {all | high | medium | low}] | [custom {string | file string}]}
```

Syntax Definitions

all	Includes all the cipher suites, including NULL-SHA.
high	Includes only AES-256 with SHA-2 ciphers (Applicable only for TLSv1.2).
medium	Includes all ciphers suites, except NULL-SHA, DES-CBC-SHA, and RC4-MD5.
low	Includes all cipher suites, except NULL-SHA.
<i>string</i>	Name of the cipher suite. It can be list of ciphers or a collective cipher file name. The custom cipher can have a maximum length of 255 characters in CLI and the cipher file can be of maximum 1024 bytes in size.

Defaults

By default, the SSL cipher security level is set to medium in default switch operation mode and high in common criteria mode.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- To apply the new SSL cipher security level, switch must be rebooted.
- The command is applicable only for LDAP, Syslog, RADIUS, SNMP, and Captive Portal applications.
- Custom ciphers cannot be more than 255 characters. Hence, the cipher files can be used to configure ciphers more than 255 characters.
- The cipher file can be created by copying the required ciphers in the notepad and saving it as a cipher file with “.cipher” as the file extension.
- The ciphers for the custom cipher and cipher file must be from the supported list of ciphers. To view the supported ciphers, use the [show ssl ciphers all](#) command.
- The cipher file must be copied to the flash directory of the switch before using this command.

- In chassis based model, the cipher file needs to be copied in both the primary and secondary unit flash directory. In VC based models, the cipher file must be copied to all the flash directory of all the modules.

Examples

```
-> ssl cipher level all
-> ssl cipher level low
-> ssl cipher level medium
-> ssl cipher level high
-> ssl cipher custom AECDH-AES256-SHA
-> ssl cipher custom file /flash/abc.cipher
```

Release History

Release 8.6R1; command introduced.

Related Commands

systemSslCipherSuite

kerberos inactivity-timer

Configures global inactivity timer on the switch for Kerberos users.

kerberos inactivity-timer *num*

Syntax Definitions

num Time interval in minutes.

Defaults

By default, inactivity timer is set to 300 minutes.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The valid range of inactivity timer is 10–600 minutes.
- Whenever a Kerberos user becomes inactive, then the inactivity timer will be started for that user. If Kerberos user becomes active before inactivity timer expiry, then timer will be stopped. User entry will be removed from the Kerberos user database on timer expiry.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> kerberos inactivity-timer 30
```

Release History

Release 8.6R2; command introduced.

Related Commands[kerberos server-timeout](#)

Configures global server reply time-out timer value on the switch for Kerberos users.

[show kerberos configuration](#)

Displays Kerberos global configuration.

MIB Objects`alaDaKerberosGlobalConfig``alaDaKerberosGlobalInactivityTimer`

kerberos ip-address

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

kerberos ip-address *ip_address* [**port num**]

no kerberos ip-address *ip_address*

Syntax Definitions

ip_address The IP address of the Kerberos server. (KDC)

num UDP or TCP port number of the Kerberos application running on the Kerberos server. UDP port range is 1–65535.

Defaults

Default value of the port is 88.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- At least one Kerberos server and one Kerberos enabled port must be configured on the switch for Kerberos snooping to function.
- A maximum of two Kerberos server IP addresses can be configured on a switch
- Server IP address cannot be configured as 0.0.0.0, and the octet value in the IP address cannot be greater than 255 (for example, 1.256.2.3).
- Use the **port** keyword to configure both UDP and TCP protocol port number.
- Use the **no** form of this command to delete the Kerberos server IP address. Only one server can be deleted at a time.
- The UDP/TCP port number is not required to remove the Kerberos server IP address configuration.
- If all the authentication servers are removed from the switch, then all the Kerberos users learned so far on all the ports are not removed from the database.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> kerberos ip-address 172.21.160.102 port 2001
-> kerberos ip-address 172.21.160.103 port 2003
-> no kerberos ip-address 172.21.160.102
```

Release History

Release 8.6R2; command introduced.

Related Commands

[kerberos inactivity-timer](#)

Configures a global inactivity timer on the switch for Kerberos users.

[kerberos server-timeout](#)

Configures a global server reply time-out timer value on the switch for Kerberos users.

[show kerberos configuration](#)

Displays the Kerberos global configuration.

MIB Objects

```
alaDaKerberosServerTable
  alaKerberosIpAddress
  alaDaKerberosUdpPort
  alaDaKerberosRowStatus
```

kerberos server-timeout

Configures global server reply time-out timer value on the switch for Kerberos users.

kerberos server-timeout *seconds*

Syntax Definitions

seconds Server reply time-out time interval in seconds in the range 1 second to 30 seconds.

Defaults

By default, reply-timeout is 2 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- All the users trying to get authenticated from a specific server will have the same value for reply-timeout timer.
- Whenever a Kerberos request packet is sent to the server, the server reply time-out starts. If the timer expires before receiving the reply from the server, the user authentication is marked as server-time-out and a trap is generated.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> kerberos server-timeout 20
```

Release History

Release 8.6R2; command introduced.

Related Commands**show kerberos configuration**

Displays Kerberos global configuration.

MIB Objects

kerberos authentication-pass policy-list-name

Configures a global classification QoS policy list on the switch for Kerberos users.

kerberos authentication-pass policy-list-name *policy_list*

no kerberos authentication-pass policy-list-name

Syntax Definitions

policy_list Name of the QoS policy list.

Defaults

By default, there is no Kerberos global QoS policy list configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The QoS policy list must be created prior to this configuration.
- Per-user Kerberos policy list configuration is not supported.
- Use the **no** form of this command to remove the global classification QoS policy list from the switch.
- There is no validation done for QoS policy list in Kerberos. It is the user's responsibility to associate the correct QoS policy list with Kerberos.
- If the QoS policy list is deleted from the system, then the corresponding configuration in Kerberos will be removed and no error message will be thrown.
- If a domain level policy list is configured in the switch and any user belonging to that domain gets authenticated from the Kerberos server, then the domain level policy list is applied to the user over the global policy list.
- If a user gets authenticated from the Kerberos server and the domain level policy list is not configured on the switch for the authenticated user, then the global policy list is applied to the user if the global policy list is configured on the switch.
- If a user gets authenticated from the Kerberos server and neither the domain level policy list (for that user domain) nor the global policy list is configured, then the user traffic is classified on the basis of already applied non-suppliant authentication classification.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.

- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> kerberos authentication-pass policy-list-name p2
```

The following example shows that the **p2** is configured as the global classification QoS policy list on the switch for Kerberos users.

```
-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),
Global QoS Policy List   :p2,

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88

Per Domain QoS policy List :
Domain-Name                Policy-List-Name
-----+-----+-----
EXAMPLE.COM                p11
```

When the QoS policy list **p2** is removed from the system, the corresponding configuration in Kerberos is shown as below.

```
-> no policy list p2
-> qos apply

-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88

Per Domain QoS policy List :
Domain-Name                Policy-List-Name      Status
-----+-----+-----
EXAMPLE.COM                p11                  active
```

The following command removes the global classification QoS policy list from the switch:

```
-> no kerberos authentication-pass policy-list-name
```

Release History

Release 8.6R2; command introduced.

Related Commands

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

[kerberos authentication-pass domain](#)

Configures "per domain" classification policy for the Kerberos users.

[show kerberos configuration](#)

Displays Kerberos global configuration.

MIB Objects

```
alaDaKerberosGlobalConfig  
  alaDaKerberosGlobalPolicy
```

kerberos authentication-pass domain

Configures a per-domain classification policy for the Kerberos users.

kerberos authentication-pass domain *domain_name* **policy-list-name** *policy_list*

no kerberos authentication-pass domain *domain_name*

Syntax Definitions

domain_name Domain name on which the QoS policy is applied. Domain name length can be a maximum of 32 characters. Domain name is case sensitive.

policy_list Name of the QoS policy list already configured.

Defaults

By default, there is no Kerberos global QoS policy list configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the per-domain classification policy for Kerberos users.
- Domain name is case sensitive.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> kerberos authentication-pass domain EXAMPLE.COM policy-list-name p11
```

The following example shows that the **p11** is configured as the policy list associated with the domain EXAMPLE.COM:

```
-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88
```

```

Per Domain QoS policy List :
Domain-Name                Policy-List-Name
-----+-----
EXAMPLE.COM                p11

```

When the QoS policy list **p11** is removed from the system, the corresponding configuration in Kerberos is shown as below.

```

-> no policy list p11
-> qos apply

-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88

Per Domain QoS policy List :
Domain-Name                Policy-List-Name
-----+-----
EXAMPLE.COM                p11

```

The following command removes the per-domain classification policy for Kerberos users:

```
-> no kerberos authentication-pass domain EXAMPLE.COM
```

show kerberos users

Displays the learned Kerberos users information.

show kerberos users [port chassis/slot/port [linkagg agg_id | mac-address mac_address | count]

Syntax Definitions

<i>chassis</i>	The Chassis Identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module (for example, 3/1 specifies port 1 on slot 3).
<i>agg_id</i>	Enter a link aggregate ID number.
<i>mac_address</i>	MAC address of the Kerberos user.
count	Displays the number of Kerberos users.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If a *chassis/slot/port* is specified, the Kerberos users learned on that port are displayed.
- If *agg_id* is specified, the Kerberos users learned on that link aggregate are displayed.
- If a MAC address is specified, then the information related to that Kerberos user is displayed.
- If none of the parameters are specified (*chassis/slot/port*, MAC address), then the information related to all the Kerberos users learned on the switch is displayed.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> show kerberos users
Port      Username      MAC Address      Auth Status      QOS Policy Domain
-----+-----+-----+-----+-----+-----+-----
2/1/18   root/admin    00:11:22:33:44:55 tgs-authenticated pl1              AP01.ORG

```

```
-> show kerberos users port 2/1/18
```

Port	Username	MAC Address	Auth Status	QOS	Policy	Domain
2/1/18	root/admin	00:11:22:33:44:55	tgs-authenticated		p11	AP01.ORG

output definitions

Port	The Kerberos chassis, slot, and port number.
Username	User name of the client.
MAC Address	MAC address of the Kerberos user.
Auth Status	Kerberos authentication process involves exchange of two requests (AS_REQ and AS_REP) and two response (AS_REP and TGS_REP). This field indicates up to which level the authentication has reached. On successful authentication, "tgs-authenticated" is displayed.
QoS Policy	QoS policy list configured on the switch for the Kerberos user.
Domain	Per-domain classification policy configured for the Kerberos user.

```
-> show kerberos users mac-address 00:11:22:33:44:55
```

```
Detail User Information:
```

```
MAC Address       : 00:11:22:33:44:55
Port              : 1/1/1
Authentication Status : tgs-authenticated
QoS Policy        : p11
Domain Name       : EXAMPLE.COM
User Name         : root\admin
User Entry State  : active
Inactivity Timer Left : NA
```

output definitions

MAC Address	MAC address of the Kerberos user.
Port	The Kerberos chassis, slot, and port number.
Authentication Status	Kerberos authentication process involves exchange of two requests (AS_REQ and AS_REP) and two response (AS_REP and TGS_REP). This field indicates up to which level the authentication has reached. On successful authentication, "tgs-authenticated" is displayed.
QoS Policy	QoS policy list configured on the switch for the Kerberos user.
Domain Name	Per-domain classification policy configured for the Kerberos user.
User Name	User name of the client.
User Entry State	The current state of the user.
Inactivity Timer Left	The amount of time left, in seconds, of the inactivity timer value.

Release History

Release 8.6R2; command introduced.

Related Commands

```

show kerberos statistics

Displays global Kerberos statistics.

show kerberos statistics

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use this command to display the global Kerberos statistics.
- On OS6465 and OS6900, Kerberos is supported only in bridge mode.
- On OS6860N, Kerberos is supported in bridge mode and access port on SPB.

Examples

```
-> show kerberos statistics
Total Client Packet Rx      : 52
Total Server Packet Rx     : 13
Total KRB-AS-REQ Packet Rx : 47
Total KRB-AS-REP Packet Rx : 8
Total KRB-TGS-REQ Packet Rx : 5
Total KRB-TGS-REP Packet Rx : 5
Total KRB-ERROR Packet Rx  : 0
Total Client Packet Sw Discard : 0
Total Server Packet Sw Discard : 2
```

output definitions

Total Client Packet Rx	Total client request packets received.
Total Server Packet Rx	Total server response packets received.
Total KRB-AS-REQ Packet Rx	Total AS-REQ request packets received.
Total KRB-AS-REP Packet Rx	Total AS-REP response packets received.

output definitions (continued)

Total KRB-TGS-REQ Packet Rx	Total TGS-REQ request packets received.
Total KRB-TGS-REP Packet Rx	Total TGS-REP response packets received.
Total KRB-ERROR Packet Rx	Total error packets received from the server.
Total Client Packet Sw Discard	Total client's request packets discarded at software by Kerberos module.
Total Server Packet Sw Discard	Total server's response packets discarded at software by Kerberos module.

aaa jitc admin-state

Enables or disables Joint Interoperability Test Command (JITC) mode on the switch.

aaa jitc admin-state {enable | disable}

Syntax Definitions

enable | disable Enables or disables the JITC (Joint Interoperability Test Command) mode.

Defaults

parameter	default
enable disable	disable

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The configuration is applied only after a reload of the switch.
- The JITC mode is mutually exclusive of Common Criteria mode and Enhanced-mode. If the switch is already running in Common Criteria or enhanced-mode (NIS) it must be disabled before enabling JITC mode and vice versa.

Examples

```
-> aaa jitc admin-state enable
WARNING: JITC mode configuration is applied only after reload
```

Release History

Release 8.4.1; command introduced.

42 Access Guardian Commands

Access Guardian refers to a set of OmniSwitch security functions that work together to provide a dynamic, proactive network security solution. This chapter provides information about the commands that are used to configure the following Access Guardian features through the Command Line Interface (CLI):

- **Universal Network Profile (UNP)**—Access Guardian is configured and applied through the framework of the UNP feature. UNP is enabled on switch ports to activate Access Guardian functionality that is used to authenticate and classify users into UNP profiles. Each profile is mapped to a VLAN ID or Service Access Point (SAP) to which the user is dynamically assigned. Specific UNP port configurations help to simplify and easily replicate the same configuration across multiple ports.
- **Bring Your Own Device (BYOD) - OmniSwitch / UPAM or ClearPass Integration:** The OmniSwitch leverages Access Guardian functionality along with the OmniVista Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) to provide an overall BYOD solution.
 - Configurable UNP port and profile attributes are used to redirect traffic from the OmniSwitch to the UPAM or CPPM server.
 - Configurable GRE tunnels allow the OmniSwitch to intercept and tunnel Multicast Domain Name System (mDNS) and Simple Service Discovery Protocol (SSDP) packets to or from a WLAN controller in a BYOD network.
- **Captive Portal**—Internal and external Captive Portal Web-based authentication. Internal Captive Portal authentication is provided through an internal Web server on the OmniSwitch that presents default or customized Web pages to the user. A post-authentication and/or post-classification process to validate user credentials and dynamically assign a new role (policy list) to enforce user access to the network. External, guest Captive Portal authentication is provided through the OmniSwitch Access Guardian interaction with the OmniVista Unified Policy Access Manager or the ClearPass Policy Manager.
- **Quarantine Manager and Remediation (QMR)**—QMR is a switch-based application that restricts the network access of known quarantined users and provides a remediation path to allow quarantined users to regain their network access.
- **IoT Device Profiling IoT**—Device Profiling allows the network administrators to support and manage smart phones, Tablets and other devices connecting to the network. The IoT Device Profiling uses DHCP FingerPrinting and MAC OUI (MAC Vendors) to identify IoT devices.

For commands used to configure device authentication, authorization, and accounting parameters that are used to support Access Guardian functionality, see [“Chapter 41, “AAA Commands.”](#)

For commands used to configure Learned Port Security (LPS), which is used by Access Guardian to help ensure that only certain devices are allowed to connect to the switch, see [“Chapter 49, “Learned Port Security Commands.”](#)

MIB information for the UNP commands is as follows:

Filename: ALCATEL-IND1-DA-MIB.mib
Module: alcatelIND1DaMIB

Filename: ALCATEL-IND1-UDP-RELAY-MIB.mib
Module: alcatelIND1UDPRelayMIB

A summary of the available commands is listed here:

unp dynamic-vlan-configuration

Configures the UNP status for dynamic VLAN configuration. When this functionality is enabled and a VLAN mapping is configured with a VLAN ID that does not exist, the switch will dynamically create the necessary VLAN ID.

unp dynamic-vlan-configuration

no unp dynamic-vlan-configuration

Syntax Definitions

N/A

Defaults

By default, dynamic VLAN configuration is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Note. Dynamic VLANs are not saved in the VLAN section of the **boot.cfg** file. However, the **unp** commands to enable dynamic VLAN configuration and create a UNP are saved in the UNP section of the **boot.cfg** file. As a result, the VLAN is created again on the next switch bootup.

- Use the **no** form of this command to disable dynamic VLAN configuration.
- When dynamic VLAN configuration is disabled, configuring a VLAN mapping with a VLAN ID that does not exist in the switch configuration is not allowed.
- The VLAN status and other port (non-UNP port) assignments for a dynamic UNP VLAN are configurable using standard VLAN commands. In addition, the STP status is configurable and enabled by default when the dynamic VLAN is created.
- A dynamic VLAN cannot be deleted using standard VLAN commands (**no vlan *vlan_id***).
- UNP dynamic VLANs are identified as a separate type of VLAN. The **show vlan** command will display this type with the default name of “UNP-DYN-VLAN” and the designated type as “UNP Dynamic Vlan”.

Examples

```
-> unp dynamic-vlan-configuration
```

-> no unp dynamic-vlan-configuration

Release History

Release 7.2.1; command was introduced.

Related Commands

[unp profile](#) Configures a UNP in the switch configuration.

[show unp global configuration](#) Displays the dynamic VLAN configuration status for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPDynamicVlanConfigFlag

unp dynamic-profile-configuration

Configures the UNP status for dynamic profile configuration. When this functionality is enabled, a UNP profile is dynamically created based on specific traffic conditions.

unp dynamic-profile-configuration

no unp dynamic-profile-configuration

Syntax Definitions

N/A

Defaults

By default, dynamic profile configuration is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable dynamic profile configuration.
- When dynamic profile configuration is enabled, a UNP profile is dynamically created when the trust VLAN tag option is enabled on the UNP port or link aggregate and one of the following conditions occurs:
 - A tagged packet received on the UNP port contains a VLAN tag that matches an existing MVRP VLAN in the switch configuration that is not assigned to a profile.
 - There is no matching VLAN in the switch configuration.
- Dynamically created profiles are saved in the **boot.cfg** file for the switch.
- By default, dynamically created profiles are automatically named **dynamic_profile_vlan_id**, where the VLAN ID is the ID of the VLAN contained in the packet tag.
- After the dynamic profile is created, changing the profile name, the associated VLAN ID, or the QoS policy list is allowed. To avoid any confusion, change the profile name if the VLAN ID associated with the profile has changed.
- If the dynamic profile configuration option is enabled along with the dynamic VLAN configuration option and a dynamically created profile refers to a VLAN that is an MVRP VLAN, then the MVRP VLAN is automatically converted to a dynamic UNP VLAN (UNP-DYN-VLAN).

Examples

```
-> unp dynamic-profile-configuration  
-> no unp dynamic-profile-configuration
```

Release History

Release 7.2.1.R02; command was introduced.

Related Commands

- | | |
|--|---|
| unp profile | Configures a UNP in the switch configuration. |
| unp dynamic-vlan-configuration | Configures the status of dynamic VLAN configuration. When enabled, UNP will create a VLAN at the time a VLAN mapping for a profile is created that specifies a VLAN ID that does not exist in the switch configuration. |
| show unp global configuration | Displays the dynamic profile configuration status for the switch. |

MIB Objects

```
alaDaUNPGlobalConfiguration  
alaDaUNPDynamicProfileConfigFlag
```

unp delay-learning

Configures the UNP delay learning time interval. This specifies the amount of time, in seconds, that UNP will delay learning packets received on UNP ports.

unp delay-learning *seconds*

Syntax Definitions

seconds The amount of time to wait before UNP learning starts. The valid range is 0–600 seconds.

Defaults

By default, the delay learning timer is disabled (timer value is set to 0).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- To disable the delay learning timer, set the timer value to zero (the default).
- The configured time interval is triggered when the switch boots up. During this time, any packets received on all UNP ports are dropped until the timer expires.
- Configuring a delay learning interval gives the switch time to bring up IP interfaces and for route convergence to complete before any attempt to reach an authentication server is made.

Examples

```
-> unp delay-learning 250
-> unp delay-learning 600
-> unp delay-learning 0
```

Release History

Release 8.5R2; command was introduced.

Related Commands

unp auth-server-down Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.

show unp global configuration Displays the UNP delay learning timer value for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPDelayLearning

unp auth-server-down

Configures a UNP profile to which a device is classified if authentication fails because the RADIUS server is unreachable.

```
unp auth-server-down [voice] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp auth-server-down [voice] [profile1] [profile2] [profile3]
```

Syntax Definitions

<i>profile_name</i>	The name of an existing profile to which the device is assigned when the authentication server is unreachable.
voice	Classifies the IP phone traffic from the data traffic when the authentication server is down.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove an authentication server down UNP profile.
- When a device is classified into the specified profile, a configurable authentication down timer is started for that device. When the timer runs out, the authentication process is performed again. If authentication fails again, the device is classified back into the authentication server down profile. The switch will repeat this process until the device authentication is completed.
- Configuring an authentication server down UNP is highly recommended when MAC or 802.1X authentication is enabled on any UNP port or link aggregate. This is because after a switch reload, the traffic from devices connected to UNP ports and link aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.
 - If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
 - If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- If the authentication server down UNP is removed, the authentication server down timer is also removed.

- Up to three different profile names are configurable as authentication server down UNP profiles. The profile applied to the traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to device traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to device traffic received on UNP access ports.
 - When multiple profiles are configured, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the device traffic.
- Configuring both a VLAN profile and a service profile ensures that an authentication server down UNP is available for device traffic received on both types of UNP ports (bridge and access).

Examples

```
-> unp auth-server-down profile1 unp1-vlan
-> no unp auth-server-down profile1
-> unp auth-server-down profile1 unp1-vlan profile2 unp2-vxlan
-> no unp auth-server-down profile1 profile2
```

Release History

Release 7.2.1; command was introduced.

Release 7.3.4; command syntax changed; **vxlan-profile** parameter added.

Release 8.3.1; **vlan-profile** and **vxlan-profile** parameters replaced with **profile1**, **profile2**, and **profile3** parameters.

Release 8.5R2; **voice** parameter added.

Related Commands

unp auth-server-down-timeout Configures the value for the authentication server down timer.

show unp global configuration Displays the profiles designated as the authentication server down UNP for the switch.

MIB Objects

```
alaDaUNPGlobalConfiguration
  alaDaUNPAuthServerDownUnp
```

unp auth-server-down port-bounce

Configures the port-bounce feature for all authentication server down users globally on all the UNP ports. The port-bounce command forces a re-authentication or a reset of the port when the device gets moved to the new profile.

unp auth-server-down port-bounce

no unp auth-server down port-bounce

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the port-bounce feature for Auth-server-down users.
- The port bounce action only applies to a MAC authenticated non-supPLICANT (non-802.1x device). If the device is a supplicant (802.1x device), then an EAP-Fail frame is sent instead. In both cases, re-authentication is triggered for both types of devices.

Examples

```
-> unp auth-server-down port-bounce
-> no unp auth-server-down port-bounce
```

Release History

Release 8.5R2; command was introduced.

Related Commands

show unp global configuration Displays the profiles designated as the authentication server down UNP for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPAuthServerDownPortBounce

unp auth-server-down-timeout

Configures the authentication server down timer value. This timer value is applied to devices that are learned in the authentication server down UNP.

unp auth-server-down-timeout *seconds*

no unp auth-server-down-timeout

Syntax Definitions

seconds The number of seconds the authentication server down timer is active. The valid range is 10–43200 seconds.

Defaults

By default, the timeout value is set to 60 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the timer value back to the default value (60 seconds).
- When this timer expires, devices learned in the authentication server down UNP are cleared from that UNP. The authentication and classification process is attempted again.
- When the authentication server down UNP is removed, the authentication server down timer is also cleared.

Examples

```
-> unp auth-server-down-timeout 500
-> unp auth-server-down-timeout 120
-> no unp auth-server-down-timeout
```

Release History

Release 7.2.1; command was introduced.

Release 7.3.4; command syntax changed; **vxlan-profile** parameter added.

Release 8.3.1; **vlan-profile** and **vxlan-profile** parameters deprecated.

Release 8.7R3; timeout value range increased to 43200 seconds.

Related Commands

- unp auth-server-down** Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.
- show unp global configuration** Displays the authentication server down timeout value for the switch.

MIB Objects

```
alaDaUNPGlobalConfiguration  
  alaDaUNPAuthServerDownTimeout
```

unp policy validity-period

Configures a UNP validity period policy that specifies the days and times during which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria.

```
unp policy validity-period policy_name [days days] [months months] [hours hh:mm to hh:mm]  
[interval mm:dd:yy hh:mm to mm:dd:yy hh:mm] [timezone zones]
```

```
no unp policy validity-period policy_name [days days | months months | hours | interval | timezone]
```

Syntax Definitions

<i>policy_name</i>	The name of the validity period policy (up to 31 alphanumeric characters).
<i>days</i>	The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., monday , tuesday , wednesday , etc.).
<i>months</i>	The month(s) in which the validity period is active. Enter the actual month (e.g., january , february , march , etc.).
<i>hh:mm</i>	The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).
<i>mm:dd:yy hh:mm</i>	An interval of time during which the validity period is active. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).
<i>zones</i>	The timezone in which the validity period is active (for example, pst , est , gmt , etc.)

Defaults

parameter	default
<i>days</i>	no restriction
<i>months</i>	no restriction
<i>hh:mm</i>	no specific time
<i>mm:dd:yyyy hh:mm</i>	no interval
<i>zones</i>	local timezone

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a UNP period policy from the configuration, or to remove parameters from a particular validity period policy.
- Any combination of the **days**, **months**, **hours**, **interval**, and **timezone** parameters is allowed. The validity period is only in effect when all specified parameters are true.
- Use the **unp profile period-policy** command to associate a period policy with a UNP profile.

Examples

```
-> unp policy validity-period Office-Time
-> no unp policy validity-period Office-Time

-> unp policy validity-period Office-Time days monday
-> unp policy validity-period Office-Time days monday time-zone IST
-> no unp policy validity-period Office-Time time-zone
-> no unp policy validity-period Office-Time days monday

-> unp policy validity-period Office-Time days all
-> unp policy validity-period Office-Time days all time-zone PST
-> no unp policy validity-period Office-Time days saturday sunday

-> unp policy validity-period Office-Time hours 9:00 to 17:00
-> unp policy validity-period Office-Time hours 9:00 to 17:00 time-zone IST
-> no unp policy validity-period Office-Time hours

-> unp policy validity-period Holiday months december january
-> no unp policy validity-period Holiday months january

-> unp policy validity-period Holiday months december time-zone IST
```

```
-> no unp policy validity-period Holiday time-zone
-> no unp policy validity-period Holiday months december

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
-> no unp policy validity-period Seminar interval

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
time-zone PST
-> no unp policy validity-period Seminar time-zone
-> no unp policy validity-period Seminar interval
```

Release History

Release 8.1.1; command introduced.

Related Commands

[unp profile period-policy](#) Assigns a UNP period policy to a profile.
[show unp policy validity-period](#) Displays information about the UNP period policy configuration.

MIB Objects

```
alaDaUNPValidityPeriodTable
  alaDaUNPValidityPeriodName
  alaDaUNPValidityPeriodDays
  alaDaUNPValidityPeriodDaysStatus
  alaDaUNPValidityPeriodMonths
  alaDaUNPValidityPeriodMonthsStatus
  alaDaUNPValidityPeriodHour

  alaDaUNPValidityPeriodIntervalStatus
  alaDaUNPValidityPeriodEndInterval
  alaDaUNPValidityPeriodTimezone
  alaDaUNPValidityPeriodTimezoneStatus
  alaDaUNPValidityPeriodActiveStatus
```

unp policy validity-location

Configures a UNP validity location policy that defines a specific location from which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria defined.

```
unp policy validity-location policy_name [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2] | system-name system_name] [system-location system_location] [domain domain_id]
```

```
no unp policy validity-location policy_name [port | linkagg | system-name | system-location | domain]
```

Syntax Definitions

<i>policy_name</i>	The name of the validity location policy (up to 31 alphanumeric characters).
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1) of a UNP port. Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number of a UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>system_name</i>	The configured system name for the switch from which the device can access the network.
<i>system_location</i>	The configured system location for the switch from which the device can access the network.
<i>domain_id</i>	The UNP customer domain ID as the condition for the location policy. Adds an existing UNP domain as condition to location policy. All the ports and Linkagg which are part of domain will be considered for condition check on policy.

Defaults

parameter	default
<i>chassis/slot/port[-port2]</i>	no restriction
<i>agg_id[-agg_id2]</i>	no restriction
<i>system_name</i>	no restriction
<i>system_location</i>	no restriction
<i>domain_id</i>	no domain is mapped to location-policy

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a UNP location policy from the configuration, or to remove parameters from a particular location policy.
- Any combination of the **port**, **linkagg**, **system-name**, **system-location**, and **domain** parameters is allowed. The location policy is only in effect when all specified parameters are true.
- Use the **unp profile location-policy** command to associate a location policy with a UNP profile.
- With domain as condition, if the policy does not exist; then the policy is created and the domain ID is mapped as a condition.
- The port and linkagg configured as condition in location-policy must not be part of the ports and linkaggs associated to the domain which is configured for the same location-policy.

Examples

```
-> unp policy validity-location ALU-NA
-> no unp policy validity-location ALU-NA

-> unp policy validity-location ALU-NA port 1/1/10
-> unp policy validity-location ALU-NA port 1/1/1-5
-> no unp policy validity-location ALU-NA port

-> unp policy validity-location ALU-NA linkagg 10
-> unp policy validity-location ALU-NA linkagg 1-5
-> no unp policy validity-location ALU-NA linkagg

-> unp policy validity-location ALU-NA system-name OS6860
-> no unp policy validity-location ALU-NA system-name OS6860
```

```
-> unp policy validity-location ALU-NA system-location US-West
-> no unp policy validity-location ALU-NA system-location

-> unp policy validity-location pl domain 256
-> no unp policy validity-location pl domain
```

Release History

Release 8.1.1; command introduced.
Release 8.9R3; **domain** parameter included.

Related Commands

unp profile location-policy	Assigns a UNP location policy to a profile.
show unp policy validity-location	Displays information about the UNP location policy configuration.

MIB Objects

```
alaDaUNPLocationPolicyTable
  alaDaUNPLocationPolicyName
  alaDaUNPLocationPolicyPort
  alaDaUNPLocationPolicyPortHigh
  alaDaUNPLocationPolicyPortStatus
  alaDaUNPLocationPolicySystemName
  alaDaUNPLocationPolicySystemLocation
  alaDaUNPLocationPolicyDomainId
```

unp domain description

Configures a customer domain ID to which UNP ports and classification rules are assigned.

unp domain *domain_id* [**description** *domain_description*]

no unp domain *domain_id* **description** *domain_description*

Syntax Definitions

domain_id A numerical customer domain ID.
domain_description An alphanumeric string (1–128 characters).

Defaults

By default, customer domain ID zero (0) is assigned to all UNP ports.

parameter	default
<i>domain_description</i>	Domain ID

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the customer domain ID from the switch configuration. When a domain ID is removed, the following actions are triggered:
 - All UNP ports assigned to that domain are moved to the default domain ID 0.
 - Any classification rules assigned to that domain are removed.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain (see the **unp domain** command page), classification rules associated with the same customer domain ID are applied only to UNP ports associated with the same domain ID.

Examples

```
-> unp domain 1
-> unp domain 2 description CustomerA
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp domain	Assigns a UNP port or link aggregate to the specified customer domain (UNP group) ID.
show unp domain	Displays the customer domain ID configuration for the switch.

  alaDaUnpCustomerDomainId  
  alaDaUnpCustomerDomainDesc
```

unp redirect pause-timer

Configures the global pause timer value for the switch. Use this command to configure the amount of time the switch filters traffic from a non-suppliant (non-802.1X device) on a UNP port. This is done to allow enough time for the switch to clear the authentication state of the non-suppliant, at which time the device is re-authenticated.

unp redirect pause-timer *seconds*

no redirect pause-timer

Syntax Definitions

seconds The pause timer value. The valid range is 60–65535

Defaults

By default, the pause timer is set to zero.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to reset the pause time back to the default (timer no set).
- The pause timer is triggered when a Change of Authorization (COA) request is received that requires a VLAN change for a non-suppliant (non-802.1X device) *and* the port bounce action is not triggered for the device.
- During the pause time period, it is expected that the DHCP lease of the client IP in the old VLAN will expire and the client device will re-initiate DHCP resulting in new authentication and a UNP VLAN assignment.
- This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

Examples

```
-> unp redirect pause-timer 180
-> no unp redirect pause-timer
```

Release History

Release 8.1.1; command was introduced.

alaDaUNPRedirectPauseTimer
```

unp redirect proxy-server-port

Configures the HTTP proxy port number to use for redirection to the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) server.

unp redirect proxy-server-port *proxy_port*

no unp redirect proxy-server-port

Syntax Definitions

proxy_port The HTTP proxy port number. The valid range is 1024–49151.

Defaults

By default, the redirect proxy port number is set to 8080 (traps HTTP 80, 8080, and 443).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the proxy port number back to the default (8080).
- Configuring the switch to interact with the UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

Examples

```
-> unp redirect proxy-server-port 8887
-> no unp redirect proxy-server-port
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp redirect allowed-name	Configures a list of additional IP addresses to which a host can access.
unp redirect server	Configures an IP network address to allow HTTP traffic redirection.
show unp global configuration	Displays the global UNP parameter settings for the switch.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPRedirectServerIP

unp redirect server

Configures an IP network address or a Fully Qualified Domain Name (FQDN) to allow redirection of HTTP traffic to the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server. Specify the address or domain name that is associated with the dynamic URL returned from the UPAM or CPPM server.

unp redirect server *{ip_address | domain_name}*

no unp redirect server

Syntax Definitions

ip_address The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.

domain_name An FQDN (e.g., upam.com) to which HTTP traffic is redirected.

Defaults

By default, no redirect server IP address or FQDN is specified.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the redirect server IP or FQDN from the switch configuration.
- If the redirect server IP address or FQDN does not match the UPAM or CPPM server configuration, then redirection to the URL will not work. This provides additional security.
- Configuring the switch to interact with UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

Examples

```
-> unp redirect server 10.0.0.20
-> no unp redirect server
-> unp redirect server upam.com
-> no unp redirect server
```

Release History

Release 8.1.1; command was introduced.

Release 8.5R1; *domain_name* parameter added.

Related Commands

MIB Objects

```
alaDaUNPGlobalConfiguration
  alaDaUNPRedirectServerIPType
  alaDaUNPRedirectServerIP
```

unp redirect allowed-auth-server

Configures allowed-auth-servers for BYOD web-redirection. This improves the performance of web-redirection at the switch.

unp redirect allowed-auth-server *name* {*fqdn string* | *ipv4-address*}

no unp redirect allowed-auth-server *name*

Syntax Definitions

<i>name</i>	Specify the name of the allowed server in the switch.
<i>fqdn string</i>	The host or DNS name of the allowed-auth-server.
<i>ip_mask</i>	The IPv4 address of the allowed -auth-server.

Defaults

By default, no allowed-auth-servers are configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	No	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the configured allowed-auth-servers.
- Each allowed-auth-servers is referenced using a name in the switch, and can be configured using either a FQDN name or by using its IPv4 address.
- A maximum of four allowed servers can be configured with 13 QOS rules depending on the TCAM entries available on the switch. For example if there are four allowed subnet configured then four TCAM entries out of 13 entries is used and only three allowed authentication server IPs can be configured.
- For using FQDN name, the DNS must be configured in the switch to resolve the configured allowed-auth-servers FQDN. To configure, use **ip domain-lookup** and **ip name-server** CLI.
- The FQDN name is resolved or refreshed during the configured polling interval (by default the polling interval is set to 30min). To configure, use **unp redirect allowed-auth-server polling-interval** CLI.
- If there are no allowed-auth-servers configured for redirection, the web-redirection during BYOD will behave normally. It will be applied on any web-traffic (which may be destined to any IP).
- If there are one or more allowed-auth-servers configured, the BYOD web-redirection is enforced only on those web-traffic destined to one of the configured allowed-auth-servers.

- The configured UNP BYOD allowed-subnet IPs will have more precedence than redirect allowed-auth-servers configuration list.

Examples

```
-> unp redirect allowed-auth-server WS1 ov2500-upam-cpor.weredirection.com
-> unp redirect allowed-auth-server WS2 10.15.31.20
-> no unp redirect allowed-auth-server WS1
```

Release History

Release 89R4; command was introduced.

Related Commands

- | | |
|---|---|
| show unp redirect allowed-auth-server | Displays the details (FQDN, server IPv4 address, FQDN resolved time and programmed IP) of the allowed-auth-servers configured for BYOD web-redirection. |
| show unp fqdn resolved-ip | Displays the allowed-auth-server FQDN resolved IP address. |

MIB Objects

```
alaDaUNPRedirectAllowedWebServerTable
  alaDaUNPRedirectAllowedWebServerName
  alaDaUNPRedirectAllowedWebServerIpAddressType
  alaDaUNPRedirectAllowedWebServerIpAddress
  alaDaUNPRedirectAllowedWebServerFQDN
  alaDaUNPRedirectAllowedWebServerRowStatus
  alaDaUNPRedirectAllowedWebServerIpAddrStatus
```

unp redirect allowed-auth-server polling-interval

Configures the polling interval to resolve the allowed-auth-servers configured using FQDN.

unp redirect allowed-auth-server {polling-interval *min*} | refresh

Syntax Definitions

min The time interval for polling in minutes. The interval value should be between 30 to 120.

refresh Allows to refresh the FQDN names at run time.

Defaults

By default, the polling interval is set to 30 minutes.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	No	No	No	No

Usage Guidelines

- The **refresh** option can be used to refresh the FQDN names at run time before the expiry of polling interval.
- Upon refresh or resolve after time out, all the resolved FQDN IP will be updated to FQDN resolved IP table. Only the programmed IP is displayed in allowed-auth-servers table.
- It is advised not to use the **refresh** option frequently to avoid any performance issues due to frequent triggering to refresh the FQDN names of all the allowed addresses.
- The **refresh** option is allowed to use only once during the polling interval. Hence it is dependent on the system time, if the system time is changed to advance the polling interval then the **refresh** option can be used. For example, the polling interval is set to 30 min and the system time is 1:00 am. The first refresh is done at 1:00 am, then the next refresh is allowed only after 1:30 am, but if the system time is changed in between to 1:30 am the refresh option is allowed again.

Examples

```
-> unp redirect allowed-auth-server polling-interval 50
-> unp redirect allowed-auth-server refresh
```

Release History

Release 89R4; command was introduced.

Related Commands

show unp redirect allowed-auth-server

Displays the details (FQDN, server IPv4 address, FQDN resolved time and programmed IP) of the allowed-auth-servers configured for BYOD web-redirectation.

show unp fqdn resolved-ip

Displays the allowed-auth-server FQDN resolved IP address.

MIB Objects

alaDaUNPGlobalConfiguration

alaDaUNPRedirectAllowedWebServerPollingInterval

alaDaUNPRedirectAllowedWebServerRefresh

unp redirect allowed-name

Configures an additional IP subnet to which a host can access. This allows traffic to reach an additional subnet other than that of the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server.

unp redirect allowed-name *name* **ip-address** *ip_address* **ip-mask** *ip_mask*

no unp redirect allowed-name *name*

Syntax Definitions

<i>name</i>	Specify a name to assign to the allowed IP network address.
<i>ip_address</i>	An IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>ip_mask</i>	The IP subnet mask for the allowed IP network address.

Defaults

By default, no allowed IP addresses are configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove an IP address from the allowed list.
- Explicitly configure and append the allowed IP list to the built-in "restrictedPolicyList" policy list.
- Only one IP subnet can be added.

Examples

```
-> unp redirect allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no unp redirect allowed-name server2
```

Release History

Release 8.1.1; command was introduced.

Related Commands

- unp redirect proxy-server-port** Configures the HTTP proxy port number to use for redirection.
- unp redirect server** Configures an IP network address to allow HTTP traffic redirection.
- show unp global configuration** Displays the global UNP configuration for the switch.

MIB Objects

```
alaDaUNPRedirectAllowedServerTable  
  alaDaUNPRedirectAllowedServerName  
  alaDaUNPRedirectAllowedServerIP  
  alaDaUNPRedirectAllowedMaskIP
```

unp force-l3-learning

Configures the status of UNP Layer 3 learning on the specified UNP port or globally on all UNP ports. When this functionality is enabled and IP-based classification rules are configured on the switch, only Layer 3 packets are used to learn devices connected to UNP ports. Layer 2 packets are not used for learning devices.

unp [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg_id*[-*agg_id2*]] **force-l3-learning** [**port-bounce**]

no unp [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg_id*[-*agg_id2*]] **force-l3-learning** [**port-bounce**]

Syntax Definitions

<i>chassis/slot/port</i> [- <i>port2</i>]	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
port-bounce	Resets the context in which the user device is learned after the device is re-classified with a new IP address. This option is not supported on UNP link aggregates.

Defaults

By default, UNP Layer 3 learning is disabled and the port bounce action is enabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- To disable Layer 3 learning for a specific port or link aggregate, use the **no** form of this command with the **port** or **linkagg** parameter. To globally disable Layer 3 learning, use the **no** form of this command without the **port** or **linkagg** parameter.
- When UNP Layer 3 learning is enabled and there is at least one IP-based classification rule configured, the first packet of the following types of packets is used to learn the device:
 - An IP packet with a non-zero source IP address.
 - A valid ARP/GARP request/reply.
 - DHCP packets, even if the source IP address is 0.0.0.0.

However, the first packet of the following types of packets is *dropped* and not used to learn the device:

- Layer 2 frames.
- Invalid ARP/GARP request/reply (one with sender IP address 0.0.0.0 or 169.254.0.0/16).

- IP packet with a source IP address of 0.0.0.0, except for DHCP packets where the source IP address is 0.0.0.0.
- When Layer 3 learning is enabled and a device is learned and assigned to a UNP profile, any subsequent change to the IP address for that device (for example, the device is assigned a leased IP address) will trigger UNP to re-classify the device based on the new IP address.
- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate would not undergo IP reclassification:
 - 802.1x (supplicant) and MAC authenticated (non-supplicant).
 - Users learned through a non-IP-based classification rule that has a higher precedence over IP-based classification rules (such as any UNP extended classification rule, binding rule, MAC address rule, or MAC address range rule).
- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate might undergo IP reclassification:
 - Users learned through a non-IP-based classification rule that has a lower precedence than IP-based classification rules (such as a VLAN rule).
 - IP-based classification rule.
- If the port bounce action is enabled for Layer 3 learning, IP reclassification for a user might result in obtaining a new UNP profile based on an IP-based classification rule, and the new UNP profile may assign a VLAN that is different from the initial UNP profile VLAN. If this occurs, the port would be toggled causing the user context to get flushed, and the subsequent packet from the user would then be used to relearn the user. It is assumed that user in this case would subsequently send either a valid ARP packet or an IP packet with a valid source IP address as the first packet, which would be used for re-learning the user directly into the final UNP profile.
- Note that the IP address update/change for an already learned UNP user can happen only when a valid ARP packet is sent from the user after the user is initially learned. As a result, Layer 3 enforcement relies on an ARP packet from the user.
- Whenever an additional port is configured as a UNP port, the Layer 3 learning status is derived from the global setting for the switch.
- When Layer 3 learning is changed at the global level, all port-level configurations are also changed unless a custom port template that configures this function is assigned to the port. For example, when Layer 3 learning is globally disabled, it is automatically disabled on any port that has Layer 3 learning enabled. However, if a port is assigned to a custom port template that enables this function, then the Layer 3 learning status for that port is not changed.
- The port-level setting of the Layer 3 learning function overrides the global setting for the switch. For example, if Layer 3 learning is globally disabled but enabled on port 1/1/20, then Layer 3 learning is active only on port 1/1/20.

Examples

```
-> unp force-l3-learning
-> unp force-l3-learning port-bounce
-> no unp force-l3-learning port-bounce
-> no unp force-l3-learning

-> unp port 1/1/20 force-l3-learning
-> unp port 1/1/20 force-l3-learning port-bounce
-> no unp port 1/1/20 force-l3-learning port-bounce
-> no unp port 1/1/20 force-l3-learning
```

Release History

Release 8.3.1; command was introduced.

Release 8.3.1.R02; **port**, **linkagg**, and **port-bounce** parameters added.

unp 802.1x-pass-through

Configures the global status of 802.1x pass through for the switch. When this functionality is enabled, 802.1x packets from supplicants attempting to authenticate are not processed on the local switch. Instead, the packets are passed along to another switch for authentication.

unp 802.1x-pass-through

no unp 802.1x-pass-through

Syntax Definitions

N/A

Defaults

By default, 802.1x pass through is disabled for the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable 802.1x pass through for the switch.
- Enabling 802.1x pass through on a switch that has an existing UNP or LPS configuration is not recommended. This functionality is intended for a local or intermediate switch when the supplicant device requires authentication through an upstream switch.
- If 802.1x pass through is enabled on a switch that has an existing UNP or LPS configuration, consider the following:
 - 802.1x authentication, 802.1x authentication bypass, and MAC authentication allow EAP functionality is not supported on UNP ports.
 - The initial frame for unknown 802.1x traffic is learned on the switch. If the frame is learned in the forwarding mode, subsequent frames with the same source MAC address are passed through to the next switch. If the frame is learned in the filtering mode, subsequent frames with the same source MAC address are dropped and not passed through.

Examples

```
-> unp 802.1x-pass-through
-> no unp 802.1x-pass-through
```

Release History

Release 8.4.1.R02; command was introduced.

Related Commands

```

unp ipv6-drop

Configures whether IPv6 packets received on UNP ports are learned or dropped. When this functionality is enabled, IPv6 packets are dropped by UNP on the local switch.

unp ipv6-drop

no unp ipv6-drop

Syntax Definitions

N/A

Defaults

By default, IPv6 packet drop is disabled. IPv6 packets are learned and processed by UNP.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of this command to disable IPv6 packet drop for the switch.

Examples

```
-> unp ipv6-drop
-> no unp ipv6-drop
```

Release History

Release 8.5R2; command was introduced.

Related Commands

[show unp global configuration](#) Displays the status of IPv6 packet drop for the switch.

MIB Objects

```
alaDaUNPGlobalConfiguration
alaDaUNPIpv6Drop
```

unp ap-mode

Configures the global status of the Access Point (AP) mode. The global AP mode status determines the default AP mode status that is applied when a port or link aggregate is configured as a UNP port. For example, if the global status is disabled, the port-level status defaults to disabled; if the global status is enabled, the port-level status defaults to enabled.

```
unp ap-mode {enable | disable}{secure [enable | disable]}
```

Syntax Definitions

enable	Sets the AP mode default status to enabled.
disable	Sets the AP mode default status to disabled.
secure	Sets the secure ap-mode configuration.

Defaults

By default, the AP mode is enabled for the switch.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Changing the global AP mode status at any given time is allowed but does not change the port-level status set for any existing UNP ports. If the AP mode is disabled for the port, it remains disabled after the global status change; if the AP mode is enabled for the port, it remains enabled after the global status change and any devices or clients learned on the port are not disrupted.
- To change the AP mode status for a specific UNP port, use the **unp port ap-mode** command.
- Use **secure** parameter to enable or disable the secure ap-mode.

Examples

```
-> unp ap-mode disable
-> unp ap-mode enable
-> unp ap-mode enable secure enable
-> unp ap-mode enable secure disable
```

Release History

Release 8.4.1.R02; command was introduced.

Release 8.8.R1; **secure** parameter added

Related Commands

- unp port ap-mode** Configures AP mode functionality for a UNP bridge port.
- show unp global configuration** Displays the status of UNP Layer 3 learning for the switch.

MIB Objects

```
alaDaUNPGlobalConfiguration  
  alaDaUNPAPMode  
  alaDaUNPPortApModeSecurity
```

unp mac-mobility

Configures the global status of MAC address mobility; any new UNP service profiles will inherit the global MAC mobility status when the profile is created. Enabling MAC address mobility for a UNP service profile supports VRRP router communication over a Shortest Path Bridging (SPB) service domain.

unp mac-mobility

no unp mac-mobility

Syntax Definitions

N/A

Defaults

By default, the global MAC address mobility status is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to globally disable UNP MAC address mobility.
- Although the MAC mobility status is configured for UNP profiles, it's functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.
- When a new UNP service profile is created, the MAC mobility status for the profile defaults to the global value. For example, if the global status is enabled, then the new service profile status is set to enabled by default; if the global status is disabled, then the new service profile status is set to disabled by default.
- If the global MAC mobility status is changed at any given time, it will not affect the MAC mobility status of any existing UNP service profiles; the global setting only applies at the time a service profile is created. Any subsequent profiles created will default to the new global MAC mobility status.
- To change the MAC mobility status for a specific UNP service profile, use the **unp profile mac-mobility** command.

Examples

```
-> unp mac-mobility
-> no unp mac-mobility
```

Release History

Release 8.6R1; command was introduced.

Related Commands

- unp profile mac-mobility** Configures the MAC mobility status for the specified UNP service profile.
- show unp global configuration** Displays the status of MAC mobility for the switch.

MIB Objects

alaDaUNPMacMobility

unp user flush

Performs a MAC address flush of Access Guardian users (devices learned on UNP ports) based on the specified port, link aggregate, authentication type, or MAC address.

unp user flush [**port** *chassis/slot/port1*[-*port2*] | **linkagg** *agg_id*[-*agg_id2*]] [**sap-id** [**linkagg**] *sap_id*] [**service-id** *service_id*] [**authentication-type** {**mac** | **802.1x** | **none**}] [**profile** *profile_name*] [**mac-address** *mac_address*]

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
[linkagg] <i>sap_id</i>	A Service Access Point (SAP) ID. Use the optional linkagg parameter if the SAP ID is for a link aggregate.
<i>service_id</i>	A service ID.
mac	Clears only the MAC authenticated users.
802.1x	Clears only the 802.1X authenticated users.
none	Clears only the users that have not been authenticated.
<i>mac_address</i>	A MAC address (e.g., 00:00:39:59:f1:0e).
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, all MAC addresses learned on all UNP ports are flushed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **port** or **linkagg** parameter to flush users on a specific port or link aggregate.
- Use the **sap-id** parameter to flush users learned on a specific SAP. A SAP ID is comprised of a device-facing port or link aggregate (referred to as a service access port) and an encapsulation value that is used to identify the type of device traffic to map to the associated service.
- Use the **service-id** parameter to flush users learned on a specific service.

- Use the **authentication-type** parameter with the **mac**, **802.1x**, or **none** options to flush users that were authenticated (MAC or 802.1X) or users that were not authenticated.
- Use the **mac-address** parameter to flush a specific device.
- Use the **profile** parameter to flush all users associated with the specified profile name. Combine this parameter with the **mac-address** parameter to flush a specific user associated with the specified profile name.
- Combine the **sap-id** or **service-id** parameter with the **profile** parameter option to flush only users on the SAP or service that are classified into the specified profile.
- Combine the **sap-id** or **service-id** parameter with the **authentication-type** parameter option to flush only users on the SAP or service that were authenticated with the specified authentication type.

Examples

```
-> unp user flush
-> unp user flush port 1/1/6
-> unp user flush linkagg 10
-> unp user flush sap-id 1/1/2:50
-> unp user flush service-id 10
-> unp user flush authentication-type mac
-> unp user flush mac-address 00:11:22:33:44:55
-> unp user flush profile unpl-vlan
-> unp user flush profile unpl-vlan mac-address 00:da:95:11:22:01
```

Release History

Release 8.3.1; command was introduced.

```

unp 802.1x eapol-version

Configures EAPoL version V1 or V3 globally on the switch for 802.1x authentication of users on UNP port.

unp 802.1x eapol-version {v1 | v3}

Syntax Definitions

v1 Configures EAPoL version V1 for 802.1x authentication.
v3 Configures EAPoL version V3 for 802.1x authentication.

Defaults

By default, EAPoL version V1 is configured for 802.1x authentication.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The EAPoL version V3 must be configured on the switch only to authenticate 802.suplicants, which could co-operate with NAS switch using EAPoL version V3.
- When the switch is configured with EAPoL version as V1 or V3, the EAPoL header would carry version 802.1X-2001 (1) or 802.1X-2010 (3) respectively.

Examples

```
-> unp 802.1x eapol-version v3
```

Release History

Release 8.7R1; command was introduced.

unp multi-untag-sap

Enable or disable the multiple untagged user association for UNP dynamic SAP with different services.

unp multi-untag-sap

no unp multi-untag-sap

Syntax Definitions

N/A

Defaults

By default, multiple untagged SAP association is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	Yes	No	No	Yes	Yes	No

Usage Guidelines

- This command allows classification of different untagged users to the same UNP dynamic untagged SAP, which can be associated to different services (like SPB, L2GRE, VPLS, and VXLAN). For example, MAC-1 on port 1/1/1 gets classified into service with ISID mapping to 1000. Another user MAC-2 on same port 1/1/1 will be allowed to classify into different service with ISID mapping to 2000. This way, SAP 1/1/1:0 would be associated to both ISID 1000 and ISID 2000.
- The untagged SAP creation on different services is supported only for UNP dynamic SAPs.
- UNP multi-untag SAP feature on UNP linkagg(s) will be supported for linkagg(s) that has a maximum of one member port from each NI.
- UNP multi-untag SAP feature and persistent profile are mutually exclusive if the persistent profile is associated with untag SAP.

Examples

```
-> unp multi-untag-sap
-> no unp multi-untag-sap
```

Release History

Release 8.9R1; command introduced.

Related Commands

show unp global configuration Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

MIB Objects

alaDaUNPMultiUntagSap

unp profile

Configures a classification profile that is used to provide role-based access to the switch. This type of profile determines the VLAN or service to which a device can join and applies any additional profile-defined attributes to the device.

When a profile is created with this command, the base command (**unp profile** *profile_name*) may be used with other command keywords to define attributes for the specified profile. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a **no** form to remove the parameter or return it to its default.

```
unp profile profile_name
  [qos-policy-list list_name]
  [location-policy policy_name]
  [period-policy policy_name]
  [captive-portal-authentication]
  [captive-portal-profile profile_name]
  [kerberos-authentication]
  [authentication-flag]
  [mobile-tag]
  [maximum ingress-bandwidth bps[k | m]]
  [maximum egress-bandwidth bps[k | m]]
  [maximum ingress-depth bps]
  [maximum egress-depth bps]
  [inactivity-interval seconds]
  [mac-mobility]
  [saa-profile profile_name]
```

```
no unp profile profile_name
```

Syntax Definitions

profile_name The name to assign to the UNP classification profile.

Defaults

When a profile is created without specifying any parameter values, the profile parameters are set to the following default values:

parameter	default
qos-policy-list <i>list_name</i>	No list assigned
location-policy	No policy assigned
period-policy	No policy assigned
captive-portal-authentication	disabled
captive-portal-profile	No profile assigned
kerberos-authentication	disabled
authentication-flag	disabled

parameter	default
mobile-tag	disabled
maximum ingress-bandwidth <i>bps[k m]</i>	None
maximum egress-bandwidth <i>bps[k m]</i>	None
maximum ingress-depth <i>bps</i>	None
maximum egress-depth <i>bps</i>	None
inactivity-interval <i>seconds</i>	10
mac-mobility	disabled
saa-profile <i>profile_name</i>	No profile assigned

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a profile from the switch configuration.
- Profiles are applied only to traffic received on UNP bridge and access ports or link aggregates.
- After a profile is created, use the **unp profile map** command to map the profile to a VLAN or service.
 - If the profile is mapped to a VLAN, the profile is used to classify traffic received on UNP bridge ports.
 - If the profile is mapped to service parameters, the profile is used to classify traffic received on UNP access ports.
- Any configuration change to a profile will flush all MAC addresses learned on that profile.

Examples

```
-> unp profile unp-profl
-> no unp profile unp-profl
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile qos-policy-list	Assigns a QoS policy list to an existing profile.
unp profile location-policy	Assigns a UNP location policy to the specified profile.
unp profile period-policy	Assigns a UNP time-based policy to the specified profile.
unp profile captive-portal-authentication	Configures the status of Captive Portal authentication for the specified profile.
unp profile captive-portal-profile	Assigns a Captive Portal configuration to the specified profile.
unp profile kerberos-authentication	Configures the status of Kerberos snooping for the specified profile.
unp profile authentication-flag	Configures whether the specified profile only allows authenticated devices into the profile.
unp profile mobile-tag	Configures whether a tagged VLAN-port association is created for a device port that is classified into the specified profile.
unp profile maximum-ingress-bandwidth	Configures a maximum ingress bandwidth value that is applied to UNP ports associated with the specified profile.
unp profile maximum-egress-bandwidth	Configures a maximum egress bandwidth value that is applied to UNP ports associated with the specified profile.
unp profile maximum-ingress-depth	Configures a maximum ingress depth value that is applied to UNP ports associated with the specified profile.
unp profile maximum-egress-depth	Configures a maximum egress depth value that is applied to UNP ports associated with the specified profile.
unp profile inactivity-interval	Configures the inactivity interval timer for the specified profile.
unp profile mac-mobility	Configures the MAC address mobility status for the specified UNP service profile to support VRRP router communication over an SPB service domain.
unp profile saa-profile	Assigns an existing Service Assurance Agent (SAA) profile to the specified profile.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName
```

unp profile qos-policy-list

Configures the QoS policy list attribute for the specified profile. Use this command to assign the name of an existing QoS policy list to the profile. A policy list contains QoS policy rules/ACLs that are applied to devices classified with the associated profile.

unp profile *profile_name* **qos-policy-list** *list_name*

no unp profile *profile_name* **qos-policy-list**

Syntax Definitions

profile_name The name of a UNP profile.

list_name The name of a QoS policy list to associate with the specified UNP.

Defaults

By default, no profile attributes are enabled or defined when the profile is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the QoS list name from the profile configuration.
- Specifying a QoS policy list name that is inactive or does not already exist in the switch configuration is allowed. However, the list will remain inactive for the UNP until the list is enabled or configured using the QoS **policy list** command.
- The QoS policy list is used to define the initial role for any UNP user learned in the profile.

Examples

```
-> unp profile unp-profl qos-policy-list unp-list1
-> no unp profile unp-profl qos-policy-list unp-list2
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP classification profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
policy list	Configures a QoS policy list.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileQoSPolicy
```

unp profile location-policy

Configures the location policy attribute for the specified profile. Use this command to assign the name of an existing UNP location policy to a profile. This type of policy defines criteria (such as the slot/port, system name and location) to determine if a device is accessing the network from a valid location.

unp profile *profile_name* **location-policy** *policy_name*

no unp profile *profile_name* **location-policy**

Syntax Definitions

profile_name The name of a UNP profile.
policy_name The name of an existing UNP location policy.

Defaults

By default, no profile attributes are enabled or defined when the profile is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the location policy name from the profile configuration.
- The location policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the location policy, the device role is changed to unauthorized.

Examples

```
-> unp profile unp-profl location-policy alu-na
-> no unp profile unp-profl location-policy
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
unp policy validity-location	Configures a UNP location policy.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileLocationPolicy
```

unp profile period-policy

Configures the period policy attribute for the specified profile. Use this command to assign the name of an existing UNP period policy to a profile. This type of policy specifies the days and times during which a device can access the network.

unp profile *profile_name* **period-policy** *policy_name*

no unp profile *profile_name* **period-policy**

Syntax Definitions

profile_name The name of a UNP profile.
policy_name The name of an existing UNP period policy.

Defaults

By default, no profile attributes are enabled or defined when the profile is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the period policy name from the profile configuration.
- The period policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the period policy, the device role is changed to unauthorized.

Examples

```
-> unp profile unp-profl period-policy office-time
-> no unp profile unp-profl period-policy
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
unp policy validity-period	Configures a UNP period policy.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfilePeriodPolicy
```

unp profile captive-portal-authentication

Configures the status of Captive Portal (CP) authentication for the specified UNP profile. When enabled, the Captive Portal authentication process is triggered for devices classified into the profile.

unp profile *profile_name* **captive-portal-authentication**

no unp profile *profile_name* **captive-portal-authentication**

Syntax Definitions

profile_name The name of a UNP profile.

Defaults

By default, Captive Portal authentication is disabled for the profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable Captive Portal authentication for the profile configuration.
- When CP authentication is enabled, the UNP user is assigned an implicit CP pre-login role to facilitate the CP authentication process with the configured CP RADIUS server.
- The CP profile associated with the UNP profile defines the CP RADIUS server to use for the CP authentication process. If a CP profile is not associated with the UNP profile, then the server defined in the global CP configuration for the switch is used instead.
- If CP authentication for the device is successful, the user role is automatically changed according to the CP pass policy list returned from the RADIUS server if it is the highest precedence role known for the user.
- If CP authentication for the device fails, the user role will be changed to the last known highest precedence role for the user.
- When successful CP authentication results in assigning the UNP user to a different profile, CP authentication does not need to be enabled for that profile. For example, if the user is initially assigned to a “Guest” profile and successful CP authentication assigns the user to the “Admin” profile, CP authentication must be enabled on the “Guest” profile but does not have to be enabled on the “Admin” profile.

- When CP authentication is disabled for the profile, BYOD redirection is automatically made available to devices assigned to the profile. When CP authentication is enabled, CP is enforced and BYOD redirection is not available.
- The CP authentication and BYOD redirection is allowed only for devices using TLS version 1.2 or above.

Examples

```
-> unp profile unp-profl captive-portal-authentication  
-> no unp profile unp-profl captive-portal-authentication
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileCPortalAuthentication
```

unp profile captive-portal-profile

Configures the Captive Portal (CP) profile attribute for the specified profile. Use this command to assign the name of an existing CP profile to a profile. This type of profile defines a CP configuration that is applied to devices when CP authentication is enabled for the profile.

unp profile *profile_name* **captive-portal-profile** *cp_profile_name*

no unp profile *profile_name* **captive-portal-profile**

Syntax Definitions

<i>profile_name</i>	The name of a UNP profile.
<i>cp_profile_name</i>	The name of an existing UNP Captive Portal profile.

Defaults

By default, no CP profile is assigned to a profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the CP profile name from the profile configuration.
- The CP profile name specified with this command must already exist in the switch configuration.
- The configuration defined in the CP profile overrides the global CP configuration for the switch.

Examples

```
-> unp profile unp-prof1 captive-portal-profile cp-prof
-> no unp profile unp-prof1 captive-portal-profile
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
captive-portal-profile	Configures a Captive Portal profile.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileCPortalProfile
```

unp profile kerberos-authentication

Enables or disables Kerberos snooping on UNP profile.

unp profile *profile_name* kerberos-authentication

no unp profile *profile_name* kerberos-authentication

Syntax Definitions

profile_name The name of a UNP profile.

Defaults

By default, Kerberos is disabled on UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	No	Yes	Yes	Yes	No	Yes	Yes	Yes	No	Yes

Usage Guidelines

- Use the **no** form of this command to disable Kerberos snooping on the UNP profile.
- When Kerberos is disabled on the UNP profile, all users learned in that profile are deleted.
- Although the status of Kerberos snooping is configurable for UNP profiles, it's functionality is supported only on profiles mapped to a VLAN.
- Kerberos is an L3 authentication. It will be available only after successful L2 authentication.
- Kerberos snooping will work only when the switch has at least one Kerberos server IP address configured.
- Kerberos snooping is supported on OS6860N on VLAN domain only.

Examples

```
-> unp profile p1 kerberos-authentication
-> no unp profile p1 kerberos-authentication
```

Release History

Release 8.6R2; command introduced.

Related Commands

[kerberos inactivity-timer](#)

Configures the global inactivity timer for Kerberos users.

[show kerberos configuration](#)

Displays the Kerberos global configuration.

[show unp profile](#)

Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable

 alaDaUNPProfileKerberosAuthentication

 alaDaUNPProfileRowStatus

unp profile authentication-flag

Configures the authentication flag status for the specified UNP profile. When enabled, only devices successfully authenticated are classified into the profile.

unp profile *profile_name* authentication-flag

no unp profile *profile_name* authentication-flag

Syntax Definitions

profile_name The name of a UNP profile.

Defaults

By default, the authentication flag is disabled for the profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the authentication flag for the profile configuration.
- When the authentication flag is enabled for a profile, devices that did not pass L2 authentication (802.1X or MAC) are not allowed into the profile. However, other configured classification options are applied to such devices to determine the appropriate network access control for that device.

Examples

```
-> unp profile unp-profl authentication-flag
-> no unp profile unp-profl authentication-flag
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile

Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

show unp profile

Displays the profile configuration for the switch.

MIB Objects

alaDaUNPProfileTable

alaDaUNPProfileName

alaDaUNPProfileAuthenticationFlag

unp profile mobile-tag

Configures the mobile tag status for the specified UNP profile. When enabled, the first user that is learned on a UNP port and classified into the specified UNP profile will cause the UNP port to be added as a tagged member of the VLAN associated with the profile. If the profile is mapped to a service, a tagged virtual port association is created.

unp profile *profile_name* **mobile-tag**

no unp profile *profile_name* **mobile-tag**

Syntax Definitions

profile_name The name of a UNP profile.

Defaults

By default, the mobile tag status is disabled for the profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the mobile tag status for the profile configuration.
- When the mobile tag status is disabled for a profile, any user device classified into the profile will remain learned in that profile. In this case, the tagged/untagged VLAN-port association would be determined based on the user traffic which was learned as tagged or untagged, respectively.
- If the device port is already an untagged member of the VLAN associated with the profile, then a tagged association is not created.

Examples

```
-> unp profile unp-profl mobile-tag  
-> no unp profile unp-profl mobile-tag
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile

```

unp profile maximum-ingress-bandwidth

Configures the maximum bandwidth limit allocated for ingress traffic on UNP ports assigned to the specified profile.

unp profile *profile_name* **maximum-ingress-bandwidth** *bps* [**k** | **m**]

no unp profile *profile_name* **maximum-ingress-bandwidth**

Syntax Definitions

profile_name

The name of a UNP profile.

bps[**k** | **m**]

The maximum amount of bandwidth, in bits-per-second. The valid range is 0–10485760. The value may be entered as an integer (for example, **10**) or with abbreviated units (for example, **10k**, **5m**).

Defaults

By default, the maximum ingress bandwidth value is not defined for the profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the maximum ingress bandwidth value for the specified profile. If a maximum ingress depth value is set for the same profile, then both the maximum ingress bandwidth and depth values must be removed together (on the same command line).
- If the maximum ingress bandwidth value is specified as an integer without an abbreviated unit designation, the value is applied in Kbps by default. For example, if the number **10** is specified, **10K** is the value applied.
- If the maximum ingress bandwidth value is set to zero, then all ingress traffic is allowed on the UNP port.
- The maximum ingress bandwidth, egress bandwidth, and depth values are applied to the port of a user device that is classified into the specified profile.
 - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
 - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

Examples

```
-> unp profile unp-profl maximum-ingress-bandwidth 100
-> unp profile unp-profl maximum-ingress-bandwidth 10m
-> no unp profile unp-profl maximum-ingress-bandwidth
-> unp profile unp-profl maximum-ingress-bandwidth 100
-> unp profile unp-profl maximum-ingress-depth 50
-> no unp profile unp-profl maximum-ingress-bandwidth maximum-ingress-depth
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile maximum-egress-bandwidth

Configures the maximum bandwidth limit allocated for egress traffic on UNP ports assigned to the specified profile.

unp profile *profile_name* **maximum-egress-bandwidth** *bps* [**k** | **m**]

no unp profile *profile_name* **maximum-egress-bandwidth**

Syntax Definitions

profile_name

The name of a UNP profile.

bps[**k** | **m**]

The maximum amount of bandwidth, in bits-per-second. The valid range is 0–10485760. The value may be entered as an integer (for example, **10**) or with abbreviated units (for example, **10k**, **5m**).

Defaults

By default, the maximum egress bandwidth value is not defined for the profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	No	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the maximum egress bandwidth value for the specified profile. If a maximum egress depth value is set for the same profile, then both the maximum egress bandwidth and depth values must be removed together (on the same command line).
- If the maximum egress bandwidth value is specified as an integer without an abbreviated unit designation, the value is applied in Kbps by default. For example, if the number **10** is specified, **10K** is the value applied.
- If the maximum egress bandwidth value is set to zero, then all egress traffic is allowed on the UNP port.
- The maximum ingress bandwidth, egress bandwidth, and depth values are applied to the port of a user device that is classified into the specified profile.
 - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
 - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

Examples

```
-> unp profile unp-profl maximum-egress-bandwidth 100
-> unp profile unp-profl maximum-egress-bandwidth 10m
-> no unp profile unp-profl maximum-egress-bandwidth
-> unp profile unp-profl maximum-egress-bandwidth 100
-> unp profile unp-profl maximum-egress-depth 50
-> no unp profile unp-profl maximum-egress-bandwidth maximum-egress-depth
```

Release History

Release 8.3.1; command was introduced.

MIB Objects

```
alaDaUNPProfileTable
  alaDaUNPProfileName
  alaDaUNPProfileMaxEgressBandwidth
```

unp profile maximum-ingress-depth

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

unp profile *profile_name* **maximum-ingress-depth** *bytes*

no unp profile *profile_name* **maximum-ingress-depth**

Syntax Definitions

profile_name The name of a UNP profile.

bytes The maximum ingress depth value in bytes. The valid range is 0–16384.

Defaults

By default, the maximum ingress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the maximum ingress depth value from the profile.
- The maximum ingress depth value is configured in conjunction with the maximum ingress bandwidth parameter. When the ingress depth value is reached, the switch starts to drop packets.
- Configure the maximum ingress bandwidth rate (**unp profile maximum-ingress-bandwidth**) before attempting to set the maximum ingress depth value.
- The maximum ingress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
 - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
 - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

Examples

```
-> unp profile unp-profl maximum-ingress-bandwidth 10
-> unp profile unp-profl maximum-ingress-depth 5
```

-> no unp profile unp-profl maximum-ingress-depth

Release History

Release 8.3.1; command was introduced.

unp profile maximum-egress-depth

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

unp profile *profile_name* **maximum-egress-depth** *bytes*

no unp profile *profile_name* **maximum-egress-depth**

Syntax Definitions

profile_name The name of a UNP profile.

bytes The maximum egress depth value in bytes. The valid range is 0–16384.

Defaults

By default, the maximum egress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the maximum egress depth value from the profile.
- The maximum egress depth value is configured in conjunction with the maximum egress bandwidth parameter. When the egress depth value is reached, the switch starts to drop packets.
- Configure the maximum egress bandwidth rate (**unp profile maximum-egress-bandwidth**) before attempting to set the maximum egress depth value.
- The maximum egress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
 - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
 - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

Examples

```
-> unp profile unp-profl maximum-egress-bandwidth 10
-> unp profile unp-profl maximum-egress-depth 5
```

```
-> no unp profile unp-profl maximum-egress-depth
```

Release History

Release 8.3.1; command was introduced.

  alaDaUNPProfileName  
  alaDaUNPProfileMaxEgressDepth
```

unp profile inactivity-interval

Configures whether or not an authenticated device is automatically logged out of the network after a specific period of inactivity (MAC address for the device has aged out). This timer value applies only to devices learned in the specified profile.

unp profile *profile_name* inactivity-interval *seconds*

Syntax Definitions

profile_name The name of a UNP profile.

seconds The inactivity timer value. The valid range is 10 to 600 seconds.

Defaults

By default, the inactivity interval value is set to 10 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Make sure the configured inactivity interval time is set to a value greater than the MAC address aging time for the switch.
- When a specific time is configured for the inactivity interval timer, the device is not logged out of the network if the MAC address aging time expires before the configured timer value.
- When the inactivity interval time is changed for the profile, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values returned is applied to the device.
- An inactivity logout timer value is also configurable through authentication, authorization, and accounting (AAA) commands. The value set through the AAA commands takes precedence over the inactivity interval value set for the UNP.

Examples

```
-> unp profile unp-profl inactivity-interval 500
-> unp profile unp-profl inactivity-interval 10
```

Release History

Release 8.3.1; command was introduced.

Related Commands

MIB Objects

alaDaUNPProfileTable

 alaDaUNPProfileName

 alaDaUNPProfileInactivityInterval

unp profile mac-mobility

Configures the MAC address mobility status for the specified UNP service profile. Enable MAC address mobility for a UNP service profile to support VRRP router communication over an SPB service domain.

unp profile *profile_name* **mac-mobility**

no unp profile *profile_name* **mac-mobility**

Syntax Definitions

profile_name The name of a UNP profile that is mapped to SPB service parameters.

Defaults

By default, the MAC mobility status for the SPB service-mapped profile is set to the global MAC mobility status when the profile is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the MAC mobility status for the profile configuration.
- When the MAC mobility status is disabled for a profile, VRRP MAC address movement that is required for the VRRP master/slave election process is disrupted. This may cause a VRRP configuration to generate two VRRP masters within the SPB service domain.
- Although the MAC mobility status is configured for UNP profiles, it's functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.
- To support VRRP router communication over an SPB service domain, the following configuration is required *before* the VRRP routers are configured:
 - Enable MAC address mobility for the SPB service-mapped UNP profile.
 - Assign the service profile to a UNP access port to create a persistent UNP SAP on which a VRRP router will communicate. A persistent SAP does not age out and will ensure an uninterrupted flow of VRRP advertisements between the VRRP master and slave routers.

Examples

```
-> unp profile unp-profl mac-mobility
-> no unp profile unp-profl mac-mobility
```

unp profile saa-profile

Assigns a Service Assurance Agent (SAA) profile to the specified UNP profile. Although an SAA profile can be assigned to a UNP profile with this command, an SAA profile is mainly used by the OmniVista network management application to monitor connections between virtual machines (VMs) in a data center network.

unp profile *profile_name* **saa-profile** *profile_name*

no unp profile *profile_name* **saa-profile**

Syntax Definitions

profile *profile_name* The name of a UNP profile.

saa-profile *profile_name* The name of the SAA profile to assign to the UNP profile.

Defaults

By default, no SAA profile is assigned to a UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	Yes	No	No	Yes	No	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove an SAA profile assignment from a UNP profile configuration.
- The SAA profile specified with this command must already exist in the switch configuration.

Examples

```
-> unp profile unp-prof1 saa-profile saal
-> no unp profile unp-prof1 saa-profile
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
unp saa-profile	Configures an SAA profile.
show unp saa-profile	Displays the SAA profile configuration for the switch.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileSaaProfile
```

unp profile map vlan

Configures the mapping of a standard VLAN to a UNP profile. When a device is assigned to a profile through authentication or classification, the device and the port on which the device was learned are dynamically assigned to the VLAN that is mapped to the profile.

```
unp profile profile_name map vlan vlan_id
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<i>vlan_id</i>	The VLAN ID number to associate with the specified profile name. Devices assigned to the profile are assigned to the associated VLAN.

Defaults

By default, no mapping configuration is applied to a profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Removing a VLAN mapping configuration requires deleting the entire profile from the switch configuration (**no unp profile *profile_name***).
- The VLAN associated with a profile must already exist in the switch configuration, unless one of the following conditions occur:
 - The dynamic VLAN configuration functionality is enabled for the switch.
 - The VLAN mapping to a profile is done when the switch boots up.
- Configuring a new VLAN mapping for a profile will overwrite the existing VLAN mapping for that profile. Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
 - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
 - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.

Examples

```
-> unp profile unp1-vlan map vlan 10
```

-> no unp profile unpl-vlan

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile.
unp dynamic-vlan-configuration	Configures the global UNP status for dynamic VLAN configuration.
unp profile map service-type spb	Maps SPB parameters to a profile. The parameters are used for creating an SPB service access point (SAP) to forward profile traffic.
unp profile map service-type vxlan	Maps VXLAN parameters to a profile. The parameters are used for creating a VXLAN service access point (SAP) to forward profile traffic.
unp profile map service-type static	Maps an existing SPB, VXLAN, or VPLS service ID to a profile.
show unp profile map	Displays the VLAN or service mapping configuration assigned to a UNP profile.

MIB Objects

```
alaDaUNPProfileTable  
    alaDaUNPProfileName  
alaDaUNPProfileMapVlanTable  
    alaDaUNPProfileMapVlanVlanID
```

unp profile map service-type spb

Configures the mapping of Shortest Path Bridging (SPB) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an SPB service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

```
unp profile profile_name map service-type spb tag-value {0 | ALL | outer_qtag:all | qtag |
outer_qtag:inner_qtag} isid instance_id bvlan bvlan_id [e-tree] [multicast-mode {headend | tandem}]
[vlan-xlation] [igmp-snooping [profile {default | ipms_profile}]] [mld-snooping [profile {default |
ipms_profile}]] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type spb [e-tree] [vlan-xlation] [igmp-snooping [profile]]
[mld-snooping [profile]] [remove-ingress-tag]
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
0	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>instance_id</i>	A service instance identifier (I-SID) that is used to identify an SPB service in a provider backbone bridge (PBB) network. The valid range is 256–16777214.
ALL	Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>outer_qtag:all</i>	An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>bvlan_id</i>	The VLAN ID number of an existing SPB backbone VLAN (BVLAN).
e-tree	Enable E-Tree service (point-to-multipoint service) on the SPB service. This will allow traffic to flow only between leaf SAPs and root SAPs of the service instance. <i>This parameter is supported only on the OmniSwitch 6860, OmniSwitch 6860N, and OmniSwitch 6900-C32/V72/ X48C6/X48C4E/V48C8/ X24C2 /T24C2.</i>
headend	Specifies the head-end replication mode for the service associated with this UNP.
tandem	Specifies the tandem replication mode for the service associated with this UNP.
vlan-translation	Configures egress VLAN translation for the service associated with this UNP.
igmp-snooping	Configures IGMP snooping for the service associated with this UNP.
mld-snooping	Configures MLD snooping for the service associated with this UNP.

<i>ipms_profile_name</i>	The name of an optional IP Multicast Switching profile to use when IGMP or MLD snooping is enabled.
default	Use default IPMS profile settings for IGMP or MLD snooping.
remove-ingress-tag	Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.

Defaults

By default, no mapping configuration is applied to a profile. When the SPB mapping is configured, the following default values are applied for the optional parameters:

parameter	default
multicast-mode {headend tandem}	headend
vlan-xlation	disabled
igmp-snooping	disabled
mld-snooping	disabled
default ipms_profile_name	default
remove-ingress-tag	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable VLAN translation, IGMP snooping, MLD snooping, or removing the ingress tag for the UNP service profile. To remove any other SPB mapping parameter requires deleting the entire profile from the switch configuration (**no unp profile profile_name**).
- Configuring a new SPB mapping for a profile will overwrite the existing SPB mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
 - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
 - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.

- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the SPB service that is dynamically created based on the specified I-SID and BVLAN values.
- Consider the following when configuring the profile tag value:
 - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
 - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
 - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.
- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and I-SID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.
- If the I-SID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- The BVLAN ID specified with this command must already exist in the switch configuration.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.
- When an SPB service is configured to use the head-end multicast mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.
- When an SPB service is configured to use the tandem multicast mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.
- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled. The exception to this is on an OmniSwitch 9900, where VLAN translation is configured only at the service level.
- When configuring the IGMP and MLD snooping mapping parameters, it is necessary to also configure the VLAN translation and multicast mode status for the profile mapping.
- The E-Tree or E-LAN option on an UNP profile mapped to an SPB service shall not be allowed to be modified if the profile is already being used in persistent profile configuration on UNP port or port-template.
- The E-Tree or E-LAN option on an UNP profile mapped to SPB service shall be allowed to be modified when such profile is not used in any persistent profile configuration on UNP port or port-template, however, any existing UNP users learnt in such profile shall be flushed, and the respective dynamic service deleted.
- When there exist multiple UNP profiles mapped to same SPB service (ISID) but different E-Tree or E-LAN option value, following will be the behavior with respect to persistent profile configuration and user learning into such UNP profiles.
 - When none of these UNP profiles are used in persistent profile configuration, users learnt in any of these profiles first will be learnt in Forwarding (Active), while the users classified to the other

- profile(s) (with conflicting E-tree or E-LAN option), will be learnt in Filtering (Block).
- Any first of these UNP profiles being configured as persistent profile on UNP port or port-template will be allowed, whereas persistent profile configuration on the UNP port or port-template using the other profile(s) (with conflicting E-Tree or E-LAN option) will be rejected.
 - When any first of the UNP profiles is used in persistent profile configuration on the UNP port or port-template, any user classified into other profile(s) (with conflicting E-Tree or E-LAN option) will be learnt in Filtering (Block).

Examples

```
-> unp profile unp1-spb map service-type spb tag-value 10 isid 1510 bvlan 4001

unp profile map service-type vxlan

Configures the mapping of Virtual eXtensible LAN (VXLAN) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, a VXLAN service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

```
unp profile profile_name map service-type vxlan tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vnid vxlan_id {far-end-ip-list ip_list_name [multicast-group mc_group_address] | multicast-group mc_group_address [far-end-ip-list ip_list_name]} [multicast-mode {tandem | headend | hybrid}] [vlan-xlation] [mac-orchestration] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type vxlan [far-end-ip-list | multicast-group] [vlan-xlation] [mac-orchestration] [remove-ingress-tag]
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
0	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
ALL	Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>outer_qtag:all</i>	An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>vxlan_id</i>	The VXLAN network identifier that identifies the VLAN segment form where the frames originate. This value is used to create the VXLAN service that is required to dynamically create the SAP.
<i>ip_list_name</i>	The name of an existing list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEPs). The valid range is 1–32 characters. The IP addresses in this list are used to dynamically create service distribution points (SDPs) for the VXLAN service.
<i>mc_group_address</i>	The multicast IP address of the group to which this service will join.
tandem	Specifies the tandem replication mode for the service associated with this UNP. This mode uses PIM routing and sends traffic through multicast SDPs.
headend	Specifies the head-end replication mode for the service associated with this UNP. This mode sends traffic through unicast SDPs.
hybrid	Specifies the hybrid replication mode for the service associated with this UNP. This mode uses both the head-end and tandem methods.
vlan-translation	Configures egress VLAN translation for the VXLAN service associated with this UNP.

mac-orchestration	This parameter is automatically configured through OmniSwitch integration with Open vSwitch Database (OVSD) protocols. See the "Web Services, CLI Scripting, OpenFlow, and AOS Micro Services (AMS)" chapter in the <i>OmniSwitch AOS Release 8 Switch Management Guide</i> for more information.
remove-ingress-tag	Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.

Defaults

By default, no mapping configuration is applied to a profile. When the VXLAN mapping is configured, the following default values are applied for the optional parameters:

parameter	default
multicast-mode {headend tandem hybrid}	hybrid
vlan-xlation {enable disable}	disabled
mac-orchestration	disabled
remove-ingress-tag	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2	9900
No	No	No	No	No	Yes	No	X72/Q32	Yes	Yes	No

Usage Guidelines

- Use the **no** form of this command to disable VLAN translation, remove a far-end IP list, remove a multicast group IP address, or disable removing the ingress tag for the profile. To remove any other VXLAN mapping parameter requires deleting the entire profile from the switch configuration (**no unp profile profile_name**).
- Configuring a new VXLAN mapping for a profile will overwrite the existing VXLAN mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
 - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
 - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.

- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the VXLAN service that is dynamically created based on the specified VXLAN ID value.
- Consider the following when configuring the profile tag value:
 - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
 - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP on which the traffic is forwarded.
 - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is forwarded on the SAP. If the traffic tags do not match, traffic is not forwarded on the SAP.
- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags). If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.
- If the VXLAN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- Configuring both a far-end IP list and a multicast group IP address is allowed for the same profile.
- The following multicast modes are supported for a VXLAN service:
 - **Tandem**: In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
 - **Headend**: In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.
 - **Hybrid**: In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.
- Configuring a VXLAN service on an OmniSwitch 6900-V72/C32 or OmniSwitch 6900-X48C6/T48C6 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.
- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled. The exception to this is on an OmniSwitch 9900, where VLAN translation is configured only at the service level.

Examples

```
-> unp profile unp1-vxlan map service-type vxlan tag-value 10:12 vnid 100
multicast-group 225.1.1.1
-> unp profile unp2-vxlan map service-type vxlan tag-value 15 vnid 200 far-end-ip-
list vtep-list1 vlan-xlation
-> unp profile unp3-vxlan map service-type vxlan tag-value 0 vnid 200 far-end-ip-
list vtep-list2 multicast-group 225.1.1.2 remove-ingress-tag
-> no unp profile unp3-vxlan map service-type vxlan vlan-xlation far-end-ip-list
remove-ingress-tag
-> no unp profile unp2-vxlan
```

Release History

Release 8.3.1; command was introduced.
 Release 8.7R1; **mac-orchestration** parameter added.
 Release 8.7R2; **remove-ingress-tag** parameter added.
 Release 8.8.R1; **ALL** and *outer_qtag:all* parameters added.

Related Commands

  alaDaUNPProfileMapVxlanRemoveIngressTag
```

unp vxlan far-end-ip-list

Configures a list of IP addresses, each of which is assigned to the Loopback0 interface of a far-end VXLAN node. The list name is assigned to a profile through the mapping of VXLAN service parameters to the profile. This allows multiple far-end nodes to be associated with the service created for the VXLAN Network ID (VNID) specified in the VXLAN profile.

```
unp vxlan far-end-ip-list ip_list_name ip_address [ip_address]
```

```
no unp vxlan far-end-ip-list ip_list_name [ip_address [ip_address]]
```

Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEP). The valid range is 1–32 characters.
<i>ip_address</i>	The IP address of the Loopback0 interface for the far-end VTEP node. The Loopback0 address is required on every VXLAN node that serves as a VTEP. Use a space to specify a list of IP addresses to assign to the list name.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	X72/Q32	Yes	No	No

Usage Guidelines

- Use the **no** form of this command to remove the far-end list from the switch configuration or to remove an individual IP address from the list.
- The reachability of a far-end IP address is not tested. Make sure the addresses are valid before adding them to the list.
- There is no limit to the number of IP addresses that can be assigned to a single list.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- The far-end IP list is used to build service distribution points (SDPs) for VXLAN services.
- When there is any change to the VXLAN profile, all users associated with that profile are flushed.

- Configuring VXLAN service on an OmniSwitch 6900-V72/C32 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.

Examples

```
-> unp vxlan far-end-ip-list vtep-list1 10.1.1.1 11.1.1.1 12.1.1.1 13.1.1.1
-> no unp vxlan far-end-ip-list vtep-list1 10.1.1.1
-> no unp vxlan far-end-ip-list vtep-list1
```

Release History

unp profile map service-type l2gre

Configures the mapping of a Layer 2 Generic Routing Encapsulation (L2 GRE) tunnel to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an L2 GRE Service Access Point (SAP) is dynamically created using the specified service parameters. Traffic from the device is then encapsulated and forwarded through an L2 GRE tunnel to a tunnel aggregation switch.

```
unp profile profile_name map service-type l2gre tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vpnid vpn_id {far-end-ip-list ip_list_name | far-end-ip ip_address} [vlan-xlation] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type l2gre [far-end-ip-list | far-end-ip] [vlan-xlation] [remove-ingress-tag]
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
0	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
ALL	Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>outer_qtag:all</i>	An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>vpn_id</i>	A GRE tunnel Virtual Private Network (VPN) ID. This is a unique value that is used in the header of a GRE encapsulated packet and should be the same at both ends of a Guest Tunnel.
<i>ip_list_name</i>	The name of an existing list that contains the IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch. The valid range is 1–32 characters. The IP address in this list is used to dynamically create the L2 GRE tunnel from the edge switch to the tunnel aggregation switch.
<i>ip_address</i>	The IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch.
vlan-xlation	Configures egress VLAN translation for the service associated with this UNP.
remove-ingress-tag	Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.

Defaults

By default, no mapping configuration is applied to a profile. When the L2 GRE tunnel service mapping is configured, the following default values are applied for the optional parameters:

parameter	default
vlan-xlation	disabled
remove-ingress-tag	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to do the following;
 - remove a far-end IP list or a far-end IP address for the profile.
 - disable VLAN translation for the dynamic SAP.
 - disable removing the ingress tag.
- To remove any other L2 GRE mapping parameters requires deleting the entire profile from the switch configuration (**no unp profile profile_name**).
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the L2 GRE tunnel that is dynamically created based on the specified VPN ID value.
- The same far-end IP address can be used for multiple L2 GRE tunnels that have to reach the same far-end tunnel aggregation switch.
- When L2GRE and VXLAN both are configured on a switch, these services must not use the same gateway.
- Configuring a new L2 GRE tunnel mapping for a profile will overwrite the existing tunnel mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
- A UNP L2 GRE profile is applied to users learned on UNP bridge and access ports.
 - Classifying users learned on UNP access ports into an L2 GRE profile is not supported on the OmniSwitch 6560; only users learned on UNP bridge ports are classified.
 - Classifying users learned on UNP bridge ports into an L2 GRE profile is not supported on the OmniSwitch 6900-T20/T40, OmniSwitch 6900-X20/X40, OmniSwitch 6900-V72/C32,

- OmniSwitch 6900-X48C6/T48C6/X48C4E/V48C8/C32E, OmniSwitch 6860N; only users learned on UNP access ports are classified. Port-isolation is also not supported on these platforms.
- Only one UNP L2 GRE profile (one L2 GRE service) can be applied to users learned on UNP bridge ports. The exception to this is on an OmniSwitch 6560 where up to eight UNP L2 GRE profiles (eight L2 GRE services) can be applied to users learned on UNP bridge ports.
 - Multiple UNP L2 GRE profiles (multiple L2 GRE services) can be applied to users learned on UNP access ports.
 - When users are learned on UNP bridge ports and classified into an L2 GRE profile, the VLAN translation status is not applied. VLAN translation only applies to user traffic learned on UNP access ports.
 - The mobile tag functionality is supported on UNP L2 GRE profiles and is applied when users learned on UNP access ports are dynamically assigned to the profile; this functionality is not supported for users learned on UNP bridge ports. Use the **unp profile mobile-tag** command to configure the mobile tag status for the profile.
 - There is no VLAN association with the SAP created for the L2 GRE tunnel, so all traffic egressing on the UNP bridge port will be untagged.
- Make sure that only one SAP is associated with the specified VPN ID for this profile.
 - UNP first checks the switch configuration to see if an L2 GRE tunnel SAP already exists for the expected VPN ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.
 - If the GRE tunnel VPN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
 - Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the UNP GRE tunnel profile are learned as filtering.
 - When a Guest Tunnel is established on an underlying physical port, there can be only one gateway supported on that port for carrying the GRE encapsulated traffic.
 - When L2GRE is used to tunnel guest traffic from edge switch to tunnel aggregation switch, configure only one L2GRE service on the edge switch. In other scenarios of L2GRE service, it is advised that the auto-discovery is disabled, and all required services and binds are manually configured.

Examples

```
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-  
ip 192.168.10.1  
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-  
ip-list l2greEndpoint  
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 200 far-end-  
ip 192.168.10.1 vlan-xlation remove-ingress-tag  
-> no unp profile guest-profile map service-type l2gre far-end-ip-list  
-> no unp profile guest-profile map service-type l2gre vlan-xlation  
-> no unp profile guest-profile map service-type l2gre remove-ingress-tag  
-> no unp profile guest-profile map service-type l2gre  
-> no unp profile guest-profile
```

Release History

Release 8.4.1.R02; command was introduced.
Release 8.6R1; **vlan-xlation** parameter added.

Release 8.7R2; **remove-ingress-tag** parameter added.
Release 8.8.R1; **ALL** and *outer_qtag:all* parameters added.

Related Commands

unp profile	Configures a UNP profile.

```

unp l2gre far-end-ip-list

Configures an IP address list that contains the IP address of the Loopback0 interface configured on the far-end L2 GRE tunnel aggregation switch. The list name is assigned to a profile through the mapping of L2 GRE tunnel parameters to the profile.

unp l2gre far-end-ip-list *ip_list_name* *ip_address*

no unp l2gre far-end-ip-list *ip_list_name* [*ip_address*]

Syntax Definitions

ip_list_name

The name of the list that contains the IP address for the far-end tunnel aggregation switch. The valid range is 1–32 characters.

ip_address

The IP address of the Loopback0 interface for the far-end tunnel aggregation switch.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the far-end list from the switch configuration or to remove the IP address from the list.
- Only one IP address can be assigned to a single list.
- The reachability of a far-end IP address is not tested. Make sure the IP address is valid before adding the address to the list.
- The same far-end IP list can be used on multiple L2 GRE tunnel access switches that have to reach the same tunnel aggregation switch.
- When L2GRE and VXLAN both are configured on a switch, these services must not use the same gateway.
- The far-end IP list is used to build L2 GRE tunnels to the tunnel aggregation switch.
- When there is any change to the L2 GRE profile associated with the far-end IP list, all users associated with that profile are flushed.

Examples

```
-> unp l2gre far-end-ip-list l2gre-ip-list 192.168.10.1
-> no unp l2gre far-end-ip-list l2gre-ip-list 192.168.10.1
-> no unp l2gre far-end-ip-list l2gre-ip-list
```

Release History

Release 8.4.1.R02; command was introduced.

Related Commands

```

unp profile map service-type static

Configures the mapping of an existing Shortest Path Bridging (SPB), Virtual eXtensible LAN (VXLAN), or Layer 2 Generic Routing Encapsulation (L2 GRE), or Virtual Private LAN Service (VPLS) service ID to the specified UNP profile. This type of profile mapping is only valid if the specified SPB, VXLAN, L2 GRE, or VPLS service is already configured; the switch does not dynamically create the service. The specified service ID is then used to dynamically create a service access point (SAP) based on the specified tag value.

```
unp profile profile_name map service-type static tag-value {0 | ALL | outer_qtag:all | qtag |
outer_qtag:inner_qtag |} service-id service_id
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
0	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
ALL	Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>outer_qtag:all</i>	An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>service_id</i>	An existing (statically configured) numerical value that identifies a specific SPB, VXLAN, L2 GRE, or VPLS service. The valid service ID range is 1–32767. <i>Specifying a VXLAN service ID is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.</i> <i>Specifying a VPLS service ID is supported only on the OmniSwitch 6860N.</i>

Defaults

By default, no mapping configuration is applied to a profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Removing a static service mapping configuration requires deleting the entire profile from the switch configuration (**no unp profile** *profile_name*).
- Configuring a new static service mapping for a profile will overwrite the existing static service mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
 - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
 - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the service ID value specified with this command.
- Consider the following when configuring the profile tag value:
 - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
 - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
 - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.
- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and service ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.
- When there is a MAC flush for all UNP users learned and forwarded on the static service ID:
 - UNP triggers the removal of all dynamic SAPs associated with the service ID.
 - The service ID is not removed because the service was statically created; not dynamically generated through UNP.
- A static service ID cannot be removed until all the UNP users learned and forwarded on that service and associated SAPs are deleted.

Examples

```
-> unp profile unp1-static map service-type static tag-value 10 service-id 1
-> unp profile unp2-static map service-type static tag-value 20 service-id 2
-> no unp profile unp1-static
```

Release History

Release 8.3.1; command was introduced.

Release 8.8.R1; **ALL** and *outer_qtag:all* parameters added.

Release 8.9R4; VPLS support added.

Related Commands

unp profile	Configures a UNP profile.
unp profile map vlan	Maps VLAN IDs to a UNP profile. Traffic assigned to the profile is forwarded on the associated VLAN IDs.
unp profile map service-type spb	Maps SPB parameters to a profile. The parameters are used for creating an SPB service access point (SAP) to forward profile traffic.
unp profile map service-type vxlan	Maps VXLAN parameters to a profile. The parameters are used for creating a VXLAN service access point (SAP) to forward profile traffic.
unp profile map service-type vpls	Maps VPLS parameters to a profile. The parameters are used for creating a VPLS service access point (SAP) to forward profile traffic.
show unp profile map	Displays the VLAN or service mapping configuration for the profile.

MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
alaDaUNPProfileMapStaticTable  
  alaDaUNPProfileMapStaticEncapVal  
  alaDaUNPProfileMapStaticServiceID
```

unp profile map service-type vpls

Configures the mapping of Virtual Private LAN Service (VPLS) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, a VPLS service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

```
unp profile profile_name map service-type vpls tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vpls vpls_id signaling {far-end-ip-list ip_list_name | bgp ve_id} [vlan-xlation] [remove-ingress-tag]
```

```
no unp profile profile_name map service-type vpls tag-value {0 | ALL | outer_qtag:all | qtag | outer_qtag:inner_qtag} vpls vpls_id [vlan-xlation] [remove-ingress-tag]
```

Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
0	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
ALL	Any outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>outer_qtag:all</i>	An outer VLAN ID tag and any inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>vpls_id</i>	The VPLS network identifier that identifies the VLAN segment form where the frames originate. This value is used to create the VPLS service that is required to dynamically create the SAP.
<i>ip_list_name</i>	The name of an existing list that contains the IP addresses for the far-end VPLS Tunnel End Points. The valid range is 1–32 characters. The IP addresses in this list are used to dynamically create service distribution points (SDPs) for the VPLS service.
<i>ve_id</i>	Configure an identifier to VPLS Edge (VE) device when BGP is selected as signaling. The valid range 1–1000. This should be unique among the VPLS peers for a VPLS instance.
vlan-xlation	Configures the egress VLAN translation for the VPLS service associated with this UNP.
remove-ingress-tag	Configures whether or not the customer VLAN tag is removed from ingress packets. Removing the customer VLAN tag is useful when forwarding packets to third-party devices that require untagged packets.

Defaults

By default, no mapping configuration is applied to a profile. When the VPLS mapping is configured, the following default values are applied for the optional parameters:

parameter	default
vlan-xlation	disabled
remove-ingress-tag	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	Yes	No	No	No	No	No

Usage Guidelines

- Use the **no** form of this command to disable VLAN translation, remove tag value, disable VLAN translation for the service or disable removing the ingress tag for the profile. To remove any other VPLS mapping parameter requires deleting the entire profile from the switch configuration (**no unp profile profile_name**).
- Configuring a new VPLS mapping for a profile will overwrite the existing VPLS mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN or service) is associated with a profile at any given time.
 - If a profile is mapped to service parameters, then the profile is applied to traffic received on UNP access ports.
 - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the VPLS service that is dynamically created based on the specified VPLS ID value.
- Consider the following when configuring the profile tag value:
 - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
 - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP on which the traffic is forwarded.
 - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value 10**), the VLAN tag values of the classified traffic are compared to

the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is forwarded on the SAP. If the traffic tags do not match, traffic is not forwarded on the SAP.

- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags). If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.
- If the VPLS ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VPLS tunnel endpoints.
- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled.

Examples

```
-> unp profile unpl-vpls map service-type vpls tag-value 0 vpls-id 1000 signaling
ldp far-end-ip-list list1 remove-ingress-tag
-> unp profile unpl-vpls map service-type vpls tag-value 0 vpls-id 1000 signaling
bgp ve-id 10 vlan-xlation
-> no unp profile unpl-vpls map service-type vpls tag-value 0 vpls-id 1000 remove-
ingress-tag
-> no unp profile unpl-vpls
```

Release History

Release 8.9R4; command introduced.

Related Commands

unp profile	Configures a UNP profile.

  alaDaUNPProfileMapVplsLdpFarEndIPList
  alaDaUNPProfileMapVplsBgpVeID
  alaDaUNPProfileMapVplsRowStatus
```

unp vpls far-end-ip-list

Configures a list of IP addresses, each of which is assigned to the Loopback0 interface of a far-end VPLS node. The list name is assigned to a profile through the mapping of VPLS service parameters to the profile. This allows multiple far-end nodes to be associated with the service created for the VPLS service ID (VPLS ID) specified in the VPLS profile.

```
unp vpls far-end-ip-list ip_list_name ip_address [ip_address]
```

```
no unp vpls far-end-ip-list ip_list_name [ip_address [ip_address]]
```

Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP addresses for the far-end VPLS tunnel end points. The valid range is 1–32 characters.
<i>ip_address</i>	The IP address of the Loopback0 interface for the far-end VPLS node. The Loopback0 address is required on every VPLS node that serves as a VPLS tunnel end point. Use a space to specify a list of IP addresses to assign to the list name.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	Yes	No	No	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the far-end list from the switch configuration or to remove an individual IP address from the list.
- The reachability of a far-end IP address is not tested. Make sure the addresses are valid before adding them to the list.
- There is no limit to the number of IP addresses that can be assigned to a single list.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- The far-end IP list is used to build service distribution points (SDPs) for VPLS services.
- When there is any change to the VPLS profile, all the users associated with that profile are flushed.

Examples

```
-> unp vpls far-end-ip-list vpls-list1 10.1.1.1 11.1.1.1 12.1.1.1 13.1.1.1
-> no unp vpls far-end-ip-list vpls-list1 10.1.1.1
-> no unp vpls far-end-ip-list vpls-list1
```

  alaDaUNPVplsFarEndIPAddressListRowStatus
```

unp system-default service-mod

Specifies the modulo number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value, VPLS Identifier (VPLS ID) value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

unp system-default service-mod {*mod_number* | **default**}

Syntax Definitions

<i>mod_number</i>	The modulo number to use for calculating an SPB I-SID, VNID value, or VPLS ID. The valid range is 1–4096.
default	Sets the modulo number value back to the default value.

Defaults

By default, modulo 512 is used for the System Default profile calculation.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service or VPLS service based on the dynamic service setting for the UNP access port on which the traffic is received (see the [unp dynamic-service](#) command). For example:
 - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
 - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.
 - If the dynamic service value is set to VPLS, then the System Default profile is dynamically created with attributes to define a VPLS SAP. A System Default profile for a VPLS SAP is supported only on the OmniSwitch 6860N.
- One of the attributes defined for a System Default profile is an SPB I-SID, VXLAN VNID, or VPLS ID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10000000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID, VXLAN VNID, or VPLS ID number:

$$10000000 + (10 * 10000) + (30 \% 512) = 10100030$$

Based on the above calculation, “10100030” is the resulting service instance value.

- Once the SPB I-SID, VXLAN VNID, or VPLS ID number is determined, that number is used to derive the System Default profile name. For example:
 - The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is 10100030, then the SPB profile “SystemDefault10100030” is created.
 - The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is 10000100, then the VXLAN profile “SystemDefault10001000” is created.
 - The name of a VPLS System Default profile is “SystemDefaultVPLSID”, where VPLS ID is the calculated attribute value for the profile. For example, if the calculated VPLS ID number is 10000100, then the VPLS profile “SystemDefault10001000” is created.
- When the modulo number value is changed, all users learned in System Default profiles are flushed (logged out of the network) and dynamic SAPs created for the profiles are cleared.

Examples

```
-> unp system-default service-mod 800
-> unp system-default service-mod default
```

Release History

  alaDaUNPServiceModule
```

unp system-default service-base

Specifies the base service number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value, or VPLS Identifier value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

unp system-default service-base {*base_number* | **default**}

Syntax Definitions

<i>base_number</i>	The base service number to use for calculating an SPB I-SID, VNID, or VPLS ID value. The valid range is 1–10000000.
default	Sets the base service number value back to the default value.

Defaults

By default, base service number 10,000,000 is used for the System Default profile calculation.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service, or VPLS service based on the dynamic service setting for the UNP access port on which the traffic is received (see the [unp dynamic-service](#) command). For example:
 - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
 - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.
 - If the dynamic service value is set to VPLS, then the System Default profile is dynamically created with attributes to define a VPLS SAP. A System Default profile for a VPLS SAP is supported only on the OmniSwitch 6860N.
- One of the attributes defined for a System Default profile is an SPB I-SID, VXLAN VNID, or VPLS ID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10,000,000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID or VXLAN VNID number:

$$10,000,000 + (10 * 10,000) + (30 \% 512) = 10,100,030$$

Based on the above calculation, “10,100,030” is the resulting service instance value.

- Once the SPB I-SID, VXLAN VNID number, or VPLS ID number is determined, that number is used to derive the System Default profile name. For example:
 - The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is “10,100,030”, then the SPB profile “SystemDefault10100030” is created.
 - The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is “10,001,000”, then the VXLAN profile “SystemDefault10001000” is created.
 - The name of a VPLS System Default profile is “SystemDefaultVPLSID”, where VPLS ID is the calculated attribute value for the profile. For example, if the calculated VPLS ID number is 10000100, then the VPLS profile “SystemDefault10001000” is created.
- When the base service number value is changed, subsequent System Default profiles are created with the new value while profiles created with the previous base value are retained.

Examples

```
-> unp system-default service-base 5000  
-> unp system-default service-base default
```

Release History

Release 8.5R1; command was introduced.

Release 8.9R4; VPLS support added.

alaDaUNPServiceBase
```

unp system-default multicastmode

Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

unp system-default multicastmode {tandem | headend | hybrid}

Syntax Definitions

tandem	Specifies the tandem replication mode for services dynamically created for System Default profiles.
headend	Specifies the head-end replication mode for services dynamically created for System Default profiles.
hybrid	Specifies the hybrid replication mode for services dynamically created for System Default profiles.

Defaults

By default, System Default profile services are configured to use the head-end mode.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The multicast mode selection specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.
- The following multicast modes are supported for an SPB service:
 - Tandem:** In this mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.
 - Headend:** In this mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.
- The following multicast modes are supported for a VXLAN service:
 - Tandem:** In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
 - Headend:** In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.

- **Hybrid:** In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.
- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32.
- This command is not applicable for VPLS service.

Examples

```
-> unp system-default multicastmode tandem
-> unp system-default multicastmode headend
-> unp system-default multicastmode hybrid
```

Release History

Release 8.5R1; command was introduced.

Release 8.6R2; **hybrid** parameter added.

alaDaUNPServiceMulticastMode
```

unp system-default vlan-xlation

Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.

unp system-default vlan-translation {enable | disable}

Syntax Definitions

enable Enables egress translation of VLAN tags.
disable Disables egress translation of VLAN tags.

Defaults

By default, VLAN translation is enabled for System Default profile services.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The VLAN translation status specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.
- When VLAN translation is enabled for a service, the VLAN tags for outgoing frames on SAPs associated with that service are processed according to the local SAP configuration (the SAP on which the frames will egress) and not according to the configuration of the SAP on which the frames were received.
- When VLAN translation is disabled, frames simply egress without any modification of the VLAN tags. In other words, the frames are transparently bridged without tag modification.
- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-V72/Q32 and OmniSwitch 6900-V72/C32.
- A System Default profile for a dynamic VPLS service is supported only on the OmniSwitch 6860N.

Examples

```
-> unp system-default vlan-xlation disable
-> unp system-default vlan-xlation enable
```

Release History

Release 8.5R1; command was introduced.

unp system-default multicastgroup

Specifies a multicast group IP address to associate with dynamic VXLAN services that are created for System Default profiles.

unp system-default multicastgroup {*mc_group_address* | **default**}

Syntax Definitions

mc_group_address The multicast IP address of the group to which this service will join.
default Sets the multicast group IP address back to the default value (239.0.0.0).

Defaults

By default, a VXLAN service associated with a System Default profile will join the 239.0.0.0 multicast group.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	X72/Q32	Yes	No	No

Usage Guidelines

- The multicast group IP address specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.
- When a dynamic VXLAN service is created for a System Default profile, the specified multicast group IP address is used to build a VXLAN Service Distribution Point (SDP) tunnel for the VXLAN service traffic. VXLAN nodes that subscribe to the same multicast group will receive traffic through the associated SDP tunnel from all the other VXLAN nodes that belong to the same multicast group.

Examples

```
-> unp system-default multicastgroup 225.1.1.2
-> unp system-default multicastgroup 239.0.0.0
-> unp system-default multicastgroup default
```

Release History

Release 8.5R1; command was introduced.

```

unp system-default far-end-ip-list

Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles. The list contains IP addresses assigned to the Loopback0 interfaces of far-end VXLAN nodes. This allows multiple far-end nodes to be associated with the dynamic service created for the VXLAN Network ID (VNID) specified in a VXLAN System Default profile.

unp system-default far-end-ip-list *{ip_list_name | default}*

Syntax Definitions

ip_list_name

The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Point (VTEP) nodes. The valid range is 1–32 characters.

default

Sets the far-end list name to the default value (no list name is specified).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	No	No	X72/Q32	Yes	No	No

Usage Guidelines

- The far-end IP list name specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.
- When a dynamic VXLAN service is created for a System Default profile, the specified IP address list name is used to build VXLAN Service Distribution Point (SDP) tunnels between the VXLAN nodes. Traffic associated with the dynamic VXLAN service is encapsulated and sent through an SDP tunnel to the destined far-end node.

Examples

```
-> unp system-default far-end-ip-list vtep-list1
-> unp system-default far-end-ip-list default
```

Release History

Release 8.5R1; command was introduced.

Release 8.6R2; **default** parameter added.

show unp profile map	Displays the VLAN or service mapping configuration for the profile.

MIB Objects

alaDaUNPGlobalConfiguration
alaDaUNPServiceFarEndIpList

unp system-default vpls-signaling

Specifies the VPLS signaling type and the far-end IP list for the VPLS dynamic services that are created for System Default profiles. The signaling type can be configured to either LDP or BGP.

```
unp system-default vpls-signaling {ldp [far-end-ip-list ip_list_name] | [bgp ve-id num]}
```

Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP addresses for the far-end VPLS tunnel end point nodes when LDP is selected as signaling. The valid range is 1–32 characters.
<i>num</i>	The identifier to VPLS Edge (VE) device when BGP is selected as signaling.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	No	Yes	No	No	No	No	No

Usage Guidelines

- The far-end IP list name specified with this command is a global setting that is applied to all of the dynamic VPLS services that are created for System Default profiles.
- The far-end IP list contains IP addresses assigned to the Loopback0 interfaces of far-end VPLS nodes when LDP is selected as signaling type. This allows multiple far-end nodes to be associated with the dynamic service created for the VPLS service specified in a VPLS System Default profile.
- When a dynamic VPLS service is created for a System Default profile, the specified IP address list name is used to build VPLS Service Distribution Point (SDP) tunnels between the VPLS nodes. Traffic associated with the dynamic VPLS service is encapsulated and sent through an SDP tunnel to the destined far-end node.

Examples

```
-> unp system-default vpls-signaling bgp ve-id 10
-> unp system-default vpls-signaling ldp far-end-ip-list vpls-list1
```

Release History

Release 8.9R4; command introduced.

  alaDaUNPServiceVplsLdpFarEndIPList
  alaDaUNPServiceVplsBgpVeID
```

unp saa-profile

Configures a Service Assurance Agent (SAA) performance monitoring profile. This type of profile is assigned to UNP profiles to specify jitter and latency threshold values for SAA sessions that apply to the assigned UNP profile.

unp saa-profile *profile_name* [**jitter-threshold** *jitter_thresh*] [**latency-threshold** *latency_thresh*]

no unp saa-profile *profile_name*

Syntax Definitions

<i>profile_name</i>	The name to assign to the SAA profile.
<i>jitter_thresh</i>	The jitter threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.
<i>latency_thresh</i>	The latency threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.

Defaults

parameter	default
<i>jitter_thresh</i>	0 (disabled)
<i>latency_thresh</i>	0 (disabled)

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	Yes	No	No	Yes	No	Yes	Yes	No	No	No

Usage Guidelines

- Use the **no** form of this command to remove the SAA profile from the switch configuration.
- Although SAA profiles can be configured and assigned to a UNP through the CLI, these profiles are mainly used by the OmniVista network management application to trigger SAA sessions that monitor connections between virtual machines (VMs) in a data center network.
- Assigning SAA profiles is supported only with UNP profiles that are assigned to UNP bridge ports. UNP access ports do not support this functionality.

Examples

```
-> unp saa-profile unp_saa1 jitter-threshold 100 latency-threshold 500
-> unp saa-profile unp_saa2 jitter-threshold 150
-> unp saa-profile unp_saa3 latency-threshold 250
```

Release History

Release 7.3.2; command was introduced.

Related Commands

unp profile saa-profile	Assigns an SAA profile to the specified UNP profile.
show unp saa-profile	Displays the SAA profile configuration for the switch.
show unp profile	Displays the profile configuration for the switch.

MIB Objects

```
alaDaSaaProfileTable  
  alaDaSaaProfileName  
  alaDaSaaProfileLatencyThreshold  
  alaDaSaaProfileJitterThreshold
```

unp port-type

Configures UNP functionality for the specified port or link aggregate. This includes configuring the UNP port type (bridge or access). Traffic received on a UNP bridge port is classified using VLAN profiles and port attributes. Traffic received on a UNP access port is classified using service profiles and port attributes.

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id1*[-*agg_id2*]} port-type {access | bridge}

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id1*[-*agg_id2*]}

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1</i> [- <i>port</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id1</i> [- <i>agg_id2</i>]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
access	Configures the specified port or link aggregate as a service access port. This port type is used for classifying traffic into service-based profiles. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i>
bridge	Configures the specified port or link aggregate as a standard bridge port. This port type is used for classifying traffic into VLAN-based profiles.

Defaults

By default, UNP is disabled on all ports and link aggregates.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the UNP configuration from a port or link aggregate.
- Any configuration change to a UNP-enabled port will flush all MAC addresses learned on that port. This applies only to CLI commands used to configure UNP port parameters.
- Only one UNP port type is configurable for a specific port or link aggregate. To change the port type of an existing UNP port, remove the current UNP configuration first using the **no unp port** or **no unp linkagg** command then use the **unp port-type** command to set the new port type.
- There is no limit to the number of switch ports that can have UNP enabled.

- Enabling UNP is *not* supported on the following switch ports:
 - 802.1q-tagged ports.
 - MVRP ports.
 - Port Mirroring destination ports (MTP).
 - Port Mapping network ports.
 - STP and ERP ports.
 - Ports on which a static MAC address is configured.
 - Ports on which dynamic Source Learning is disabled.
 - VLAN Stacking (Ethernet Services NNI or UNI) ports.
 - Service Manager access and network ports.
 - Ethernet OAM ports.
- UNP and Learned Port Security (LPS) are supported on the same port with the following conditions:
 - LPS is not supported on link aggregates.
 - The LPS learning window is set globally but not on a per-port basis. So the window applies to all UNP ports.
 - When LPS is enabled or disabled on a UNP bridge port (LPS is not supported on UNP access ports), MAC addresses already learned on that port are flushed.
 - Configuring a static MAC address is not allowed on a UNP port unless LPS is also enabled on the same port.
 - When both LPS and UNP are enabled on the same port, UNP first authenticates and classifies any MAC addresses received, then LPS rules are applied. If a MAC address violates any of the LPS rules for the port, the address may get filtered or the port violated even if UNP initially determined the address was valid. In other words, LPS rules take precedence over UNP to determine if a MAC address is bridged or filtered on the port.
 - If UNP classifies a MAC address as learning but LPS learns the address as filtering, an untagged packet will show as filtering in the default VLAN for the port and a tagged packet MAC will show as filtering in the specific tagged VLAN.
 - When a MAC address is filtered by LPS, the **show unp user** command will display “LPS-Blocked” as the classification source for that MAC address.
- UNP ports support both tagged and untagged packets. If the VLAN ID of a tagged packet matches the VLAN associated with a UNP into which the packet was classified, the packet is learned as forwarding and a tagged VLAN-port association is created. However, if the VLAN ID tag does not match the VLAN ID associated with the profile, the packet is filtered.
- UNP bridge and access ports support single-tagged and double-tagged packets with the following conditions:
 - Double-tagged packets are treated the same as single-tagged packets in that UNP will only use the outer VLAN tag to determine how the packet is processed on the UNP bridge port.
 - UNP access ports use the inner VLAN tag of double-tagged packets received on the port to determine the service access port (SAP) to use or create for forwarding the traffic on the network backbone.

Examples

```
-> unp port 1/1/1 port-type access
-> unp port 1/1/1-3 port-type bridge
-> unp port 1/1/10 port-type access
-> no unp port 1/10
-> unp linkagg 5 port-type access
-> unp linkagg 8 port-type bridge
-> unp linkagg 2 port-type access
-> no unp linkagg 2
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp admin-state	Configures the administrative status of the UNP configuration for the specified port or link aggregate.
unp profile	Configures a UNP profile that is used to classify traffic received on UNP ports.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortType
```

unp l2-profile

Assigns an existing Layer 2 profile to the specified UNP access port. This profile determines how Layer 2 protocol frames received on the access port are processed.

unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} l2-profile l2profile_name

no unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} l2-profile

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The chassis number and the slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>l2profile_name</i>	The name of an existing Layer 2 profile.

Defaults

By default, the Layer 2 profile “unp-def-access-profile” is assigned when a port is configured as a UNP access port.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Layer 2 profile configuration from the UNP port.
- Specify only ports or link aggregates that are configured as UNP access ports. This command does not apply to UNP bridge ports.
- Specify a Layer 2 profile name that already exists in the switch configuration. Layer 2 profiles are created using the [service l2profile](#) command.

Examples

```
-> unp port 1/1/3 l2-profile sap_1_profile
-> unp linkagg 10 l2-profile sap_1_profile
-> unp port 1/1/3 l2-profile unp-def-access-profile
-> unp linkagg 10 l2-profile unp-def-access-profile
-> no unp port 1/1/3 l2-profile
-> no unp linkagg 10 l2-profile
```

Release History

Release 8.4.1; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
service l2profile	Configures a Layer 2 profile that is used to specify how to process Layer 2 control frames ingressing on the access port.
show service l2profile	Displays the Layer 2 profile configuration information for the bridge.
show unp port config	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable  
  alaDaUNPPortIfIndex  
  alaDaUNPPortL2Profile
```

unp redirect port-bounce

Enables or disables the port bounce action on the specified UNP bridge port or globally on all UNP bridge ports. When enabled, a port bounce is triggered upon receipt of a RADIUS Change of Authorization (COA) or a Disconnect request (DM) message from a redirection server to enforce a user role or terminate a user session.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} redirect port-bounce

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} redirect port-bounce

unp redirect port-bounce {enable | disable}

Syntax Definitions

<i>chassis/slot/port</i> [-port2]	The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [-agg_id2]	The link aggregate ID number for a specific UNP bridge link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
enable	Globally enables the port bounce function for all UNP bridge ports.
disable	Globally disables the port bounce function for all UNP bridge ports.

Defaults

By default, port bounce is disabled on all UNP bridge ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **port** or **linkagg** parameter to enable port bounce for a specific UNP bridge port or link aggregate. Use the **no** form of this command to disable port bounce for a specific UNP bridge port or link aggregate. Note that port bounce is not supported on UNP access ports.
- Use the **enable** or **disable** parameters to globally enable or disable the port bounce status for all UNP bridge ports or link aggregates on the entire switch.
- The port bounce action only applies to a MAC authenticated non-suppliant (non-802.1X device). If the device is a suppliant (802.1X device), then an EAP-Fail frame is sent instead. In both cases, re-authentication is triggered for both types of devices.

- The port-level setting of the port bounce action overrides the global setting for the switch. The following table indicates when a port is toggled based on the status of port bounce at the global and port level:

Global Port Bounce	Per-Port Bounce	Action
Enabled	Disabled	Port is not toggled
Enabled	Enabled	Port is toggled
Disabled	Enabled	Port is toggled
Disabled	Disabled	Port is not toggled

- This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

Examples

Port-level configuration example:

```
-> unp port 1/1/6 redirect port-bounce
-> no unp port 1/1/6 redirect port-bounce
```

Global configuration example:

```
-> unp redirect port-bounce enable
-> unp redirect port-bounce disable
```

Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **no** form of this command added for specific port or link aggregate configuration.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp redirect pause-timer	Configures the global pause timer value for the switch
unp redirect proxy-server-port	Configures the HTTP proxy port number to use for redirection.
unp redirect server	Configures an IP network address to allow HTTP traffic redirection.
unp redirect allowed-auth-server	Configures a list of additional IP addresses to which a host can access.
show unp port	Displays the UNP configuration for the port.
show unp global configuration	Displays the profile designated as the authentication server down UNP for the switch.

  alaDaUNPPortIfIndex
  alaDaUNPPortRedirectPortBounce
alaDaUNPGlobalConfiguration
  alaDaUNPRedirectPortBounce
```

unp 802.1x-authentication

Configures the status of 802.1X authentication for the specified UNP port. Enable this functionality to invoke 802.1X-based authentication for devices connected to the UNP port.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} **802.1x-authentication**

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} **802.1x-authentication**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

Defaults

By default, 802.1X authentication is enabled on UNP ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable 802.1X authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- An option exists to classify a device into an alternate UNP in the event successful 802.1X authentication does not return a UNP name. See the [unp 802.1x-authentication pass-alternate](#) command.
- If UNP MAC authentication, 802.1X authentication, and classification (see [unp classification](#) and [unp mac-authentication](#)) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured.
- Configuring an authentication server down UNP (see [unp auth-server-down](#)) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and

aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.

- If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
- If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- The authentication server down functionality is *not* supported on VXLAN access ports or aggregates.

Examples

```
-> unp port 1/1/5 802.1x-authentication
-> no unp port 1/1/5 802.1x-authentication

-> unp port 1/1/10-15 802.1x-authentication
-> no unp port 1/1/10-15 802.1x-authentication

-> unp linkagg 10 802.1x-authentication
-> no unp linkagg 20 802.1x-authentication

-> unp linkagg 10-50 802.1x-authentication
-> no unp linkagg 10-50 802.1x-authentication
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication pass-alternate	Assigns the device to another profile when successful 802.1X authentication does not return a UNP name.
unp mac-authentication	Configures the MAC authentication status for the UNP port.
unp classification	Configures the classification status for the UNP port.
unp auth-server-down	Configures an authentication server down UNP for the switch.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```

  alaDaUNPPortIfIndex
  alaDaUNPPort8021XAuthStatus
```

unp 802.1x-authentication pass-alternate

Configures the name of an existing UNP to use as an alternate profile. A device is assigned to the alternate profile when successful 802.1X authentication does not return the name of a profile.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication pass-alternate
profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id} 802.1X-authentication pass-alternate
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>profile_name</i>	The name of an existing VLAN, SPB, or VXLAN profile.

Defaults

By default, no alternate UNP is configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the alternate profile from the UNP port configuration.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- The profile name specified with this command must already exist in the switch configuration.

Examples

```
-> unp port 1/1/1 802.1x-authentication pass-alternate Finance
-> unp port 1/1/1-3 802.1x-authentication pass-alternate CustomerA
-> no unp port 1/1/1-3 802.1x-authentication pass-alternate

-> unp linkagg 5 802.1x-authentication pass-alternate AltUNP
-> unp linkagg 10-15 802.1x-authentication pass-alternate CustomerB
```

-> no linkagg 5 mac-authentication pass-alternate

Release History

Release 7.3.4; command was introduced.

Release 8.3.1; **vlan-profile**, **spb-profile**, and **vxlan-profile** parameters deprecated.

Related Commands

unp 802.1x-authentication tx-period

Configures the 802.1X authentication re-transmission time interval for the specified UNP port.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication tx-period seconds

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication tx-period

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>seconds</i>	The amount of time before an EAP Request Identity is retransmitted. The valid range is 1–60 seconds.

Defaults

By default, the retransmission period is set to 30 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the re-transmission time interval back to the default value of 30 seconds.
- The re-transmission time period only applies to UNP ports on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

Examples

```
-> unp port 1/1/5 802.1x-authentication tx-period 60
-> unp port 1/1/6-10 802.1x-authentication tx-period 20
-> no unp port 1/1/5 802.1x-authentication tx-period

-> unp linkagg 10 802.1x-authentication tx-period 60
-> unp linkagg 20-25 802.1x-authentication tx-period 20
-> no unp linkagg 10 802.1x-authentication tx-period
```

Release History

Release 7.3.4; command was introduced.

MIB Objects

alaDaUNPPortTable
alaDaUNPPort8021XTxPeriod

unp 802.1x-authentication supp-timeout

Configures the 802.1X authentication supplicant timeout for the specified UNP port. This value is the amount of time the switch will wait before timing out an 802.1X user that is attempting to authenticate.

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **802.1x-authentication supp-timeout** *seconds*

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **802.1x-authentication supp-timeout**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15)
<i>seconds</i>	The timeout value. The valid range is 1–120 seconds.

Defaults

By default, the supplicant timeout value is set to 30 seconds.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the supplicant timeout back to the default value of 30 seconds.
- Increase the supplicant timeout value if the authentication process requires additional steps by the user (for example, entering a challenge).
- The supplicant timeout is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

Examples

```
-> unp port 1/1/5 802.1x-authentication supp-timeout 10
-> unp port 1/1/10-15 802.1x-authentication supp-timeout 60
-> no unp port 1/1/5 802.1x-authentication supp-timeout
```

```
-> unp linkagg 10 802.1x-authentication supp-timeout 40
-> unp linkagg 2-5 802.1x-authentication supp-timeout 40
-> no unp linkagg 10 802.1x-authentication supp-timeout
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication	Configures the 802.1X authentication status for the UNP port.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPort8021XSuppTimeOut
```

unp 802.1x-authentication max-req

Configures the maximum number of times the switch will retransmit a request for authentication information (request identity, password, challenge) to an 802.1X user on the specified UNP port.

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **802.1x-authentication max-req** *max_req*

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **802.1x-authentication max-req**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>max_req</i>	The maximum number of times information requests are retransmitted. The valid range is 1–3.

Defaults

By default, the maximum number of requests is set to two.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the maximum number of times information requests are retransmitted back to the default value of two.
- The 802.1X requests are transmitted, up to the maximum number allowed, until the authentication session is shut down based on the supplicant timeout value configured for the 802.1X port.
- The maximum number of requests is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports within the range are skipped.

Examples

```
-> unp port 1/1/5 802.1x-authentication max-req 10
```

```
-> unp port 1/1/10-15 802.1x-authentication max-req 5
-> no unp port 1/1/5 802.1x-authentication max-req
-> unp linkagg 10 802.1x-authentication max-req 10
-> unp linkagg 2-5 802.1x-authentication max-req 5
-> no unp linkagg 10 802.1x-authentication max-req
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp 802.1x-authentication supp-timeout	Configures the number of seconds before the switch will time out an 802.1X user that is attempting to authenticate.
unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication	Configures the 802.1X authentication status for the UNP port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPort8021XMaxReq
```

unp 802.1x-authentication bypass-8021x

Configures whether the 802.1X authentication process is bypassed on the specified UNP port. When enabled, the 802.1X device authentication process is skipped; only MAC authentication or rule-based classification is applied to device traffic on the UNP port.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication bypass-8021x

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication bypass-8021x

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

Defaults

By default, 801.1X authentication bypass is disabled on the UNP port; 802.1X authentication is attempted first.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command is only allowed on UNP-enabled ports and link aggregates.
- Enabling 802.1X authentication bypass is not allowed on UNP ports that are configured with an 802.1X authentication failure policy.

Examples

```
-> unp port 1/1/5 802.1x-authentication bypass-8021x
-> no unp port 1/1/5 802.1x-authentication bypass-8021x
-> unp port 1/1/10-15 802.1x-authentication bypass-8021x
-> no unp port 1/1/10-15 802.1x-authentication bypass-8021x

-> unp linkagg 10 802.1x-authentication bypass-8021x
-> no unp linkagg 10 802.1x-authentication bypass-8021x
-> unp linkagg 2-5 802.1x-authentication bypass-8021x
-> no unp linkagg 2-5 802.1x-authentication bypass-8021x
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication	Configures the 802.1X authentication status for the UNP port.

MIB Objects

alaDaUNPPortTable
alaDaUNPPort8021XBypassStatus

unp 802.1x-authentication failure-policy

Configures whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails.

unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **802.1x-authentication failure-policy** {mac}

no unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **802.1x-authentication failure-policy**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
mac	Perform MAC authentication if 802.1X authentication fails.

Defaults

By default, device classification is performed after the initial 802.1X authentication process fails.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Configuring the 802.1X authentication failure policy is not allowed on UNP ports on which 802.1X authentication bypass is enabled.
- Device classification (the default) is performed based on the classification options configured for the UNP port.

Examples

```
-> unp port 1/1/5 802.1x-authentication failure-policy mac
-> no unp port 1/1/10-15 802.1x-authentication failure-policy

-> unp linkagg 10 802.1x-authentication failure-policy mac
-> no unp linkagg 2-5 802.1x-authentication failure-policy
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication	Configures the 802.1X authentication status for the UNP port.
unp 802.1x-authentication bypass-8021x	Configures the 802.1X bypass operation status for the UNP port.
show unp port	Displays the UNP configuration for the port.

MIB Objects

alaDaUNPPortTable
alaDaUNPPort8021XFailurePolicy

unp mac-authentication

Configures the status of MAC authentication for the specified UNP port. Enable this functionality to invoke MAC-based authentication for devices connected to the UNP port.

unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **mac-authentication**

no unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **mac-authentication**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

Defaults

By default, MAC authentication is enabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable MAC authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports (both bridge and access port types).
- MAC-based authentication is supported only through a RADIUS server.
- An option exists to classify a device into an alternate UNP in the event successful MAC authentication does not return a UNP name.
- If MAC authentication fails, any classification rules configured for the UNP port are applied.
- If UNP MAC authentication, 802.1X authentication, and classification (see [unp classification](#) and [unp 802.1x-authentication](#)) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured and/or trust VLAN tag is enabled for the port.
- Configuring an authentication server down UNP (see [unp auth-server-down](#)) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and

aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.

- If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
- If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- The authentication server down functionality is *not* supported on VXLAN access ports or aggregates.

Examples

```
-> unp port 2/1/1 mac-authentication
-> no unp port 2/1/1 mac-authentication
-> unp linkagg 2 mac-authentication
-> no unp linkagg 2 mac-authentication
```

Release History

Release 7.2.1; command was introduced.

Release 7.2.1.R02; **linkagg** parameter added.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp mac-authentication pass-alternate	Assigns the device to another VLAN-based or service-based UNP when successful MAC authentication does not return a UNP name.
unp classification	Configures the classification status for the UNP port.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortMacAuthFlag
```

unp mac-authentication pass-alternate

Configures the name of an existing VLAN-based or service-based UNP to use as an alternate profile. A device is assigned to the alternate profile when successful MAC authentication does not return a UNP name.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>profile_name</i>	The name of an existing VLAN, SPB, or VXLAN profile.

Defaults

By default, no alternate UNP is configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the alternate profile from the UNP port configuration.
- Service-based profiles classify traffic received on UNP access ports; VLAN-based profiles classify traffic received on UNP bridge ports. Make sure the specified port is of the correct type for the specified profile.
- The UNP name specified with this command must already exist in the switch configuration.

Examples

```
-> unp port 1/1/1 mac-authentication pass-alternate Finance
-> unp port 1/1/1-3 mac-authentication pass-alternate CustomerA
-> unp port 1/1/4-10 mac-authentication pass-alternate CustomerC
-> no unp port 1/1/1-3 mac-authentication pass-alternate
```

```
-> unp linkagg 5 mac-authentication pass-alternate AltUNP
-> unp linkagg 1-5 mac-authentication pass-alternate CustomerB
-> unp linkagg 10-12 mac-authentication pass-alternate CustomerD
-> no linkagg 5 mac-authentication pass-alternate
```

Release History

Release 7.2.1; command was introduced.

Release 7.2.1.R02; **linkagg** parameter added.

Release 7.3.1; **spb-profile** parameter added, **unp-name** parameter changed to **vlan-profile**.

Release 7.3.4; **vxlan-profile** parameter added.

Release 8.3.1; **vlan-profile**, **spb-profile**, and **vxlan-profile** parameters deprecated.

Related Commands

unp profile	Configures a UNP profile that is used to classify traffic received on UNP ports.
unp port-type	Configures UNP functionality on a port or link aggregate.
unp mac-authentication	Configures the MAC authentication status for the UNP port.
show unp port	Displays the UNP port parameter configuration.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortPassAltProfileName
```

unp mac-authentication allow-eap

Configures whether the switch attempts subsequent 802.1X authentication for a device connected to a UNP port on which 802.1X authentication bypass is enabled. When 802.1X bypass is enabled on the port, MAC authentication is performed first on any device connected to that port. This command specifies the conditions under which 802.1X authentication is performed or bypassed after the initial MAC authentication process.

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **mac-authentication allow-eap** {pass | fail | noauth}

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **mac-authentication allow-eap**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1</i> [- <i>port2</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
pass	Perform 802.1X (EAP frame) authentication if the device passes MAC authentication.
fail	Perform 802.1X (EAP frame) authentication if the device fails MAC authentication.
noauth	Perform 802.1X (EAP frame) authentication if MAC authentication is not configured on the UNP port.

Defaults

By default, the allow 802.1X authentication option is not set.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the allow 802.1X authentication option back to the default value of none (option is not set).
- The port specified with this command must also have 802.1X bypass enabled (see the [unp 802.1x-authentication bypass-8021x](#) command). If bypass is not enabled, the option configured with this command does not apply.

- This command is only allowed on UNP-enabled ports and link aggregates.

Examples

```
-> unp port 1/1/5 mac-authentication allow-eap pass
-> unp port 1/1/10-15 mac-authentication allow-eap fail
-> no unp port 1/1/5 mac-authentication allow-eap
-> unp linkagg 10 mac-authentication allow-eap noauth
-> unp linkagg 2-5 mac-authentication allow-eap none
-> no unp linkagg 10 mac-authentication allow-eap
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
unp 802.1x-authentication bypass-8021x	Configures the 802.1X bypass operation status for the UNP port.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortMacAllowEap
```

unp classification

Configures the classification status for the specified UNP port. When classification is enabled but authentication is disabled or fails, UNP classification rules (such as MAC address, MAC address range, IP network address, or VLAN tag) are applied to the traffic received on the UNP port.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} classification

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} classification

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

Defaults

By default, classification is enabled on the UNP port.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the classification status for a UNP port or link aggregate.
- This command is allowed only on UNP-enabled ports (both bridge and access ports).
- UNP classification rules are applied if authentication is disabled on the port, is enabled on the port but the RADIUS server is not configured, or the authentication method fails.
- If untagged device traffic does not match any of the classification rules, the device is assigned to the default UNP configured for the port.
- If tagged device traffic does not match any of the classification rules and the trust VLAN tag option (see [unp trust-tag](#)) is enabled for the port, the device is classified based on the VLAN tag of the traffic if a VLAN matching the tag exists in the switch configuration.
- If all of the UNP authentication methods *and* UNP classification are disabled for the UNP port, then all MAC addresses received on that port are blocked unless a default VLAN is specified and/or trust VLAN tag is enabled for the port.

- When classification is enabled for the port, UNP classification rules are applied in the following order of precedence:
 - MAC address + VLAN tag
 - MAC address
 - MAC address range + VLAN tag
 - MAC address range
 - IP address + VLAN tag
 - IP address
 - VLAN tag

Examples

```
-> unp port 1/1/1 classification
-> no unp port 1/1/1 classification
-> unp port 1/1/1-4 classification
ERROR: Port 1/1/3 is not a unp-port
-> unp linkagg 5 classification
-> no unp linkagg 5 classification
```

Release History

Release 7.2.1; command was introduced.
Release 7.2.1.R02; **linkagg** parameter added.

Related Commands

show unp classification	Displays the UNP classification rule configuration for the switch.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortClassificationFlag
```

unp trust-tag

Configures the option of whether or not to trust the VLAN ID of a tagged packet to determine how the packet is classified.

unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **trust-tag**

no {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **trust-tag**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

Defaults

By default, the trust VLAN tag option is disabled.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to disable the trust tag status for a UNP port or link aggregate.
- When this option is enabled, the device is classified into a VLAN or service access point (SAP) when one of the following conditions occur:
 - MAC or 802.1X authentication passes, but the RADIUS server returns a UNP that does not exist in the switch configuration.
 - MAC or 802.1X authentication passes, but the RADIUS server does not return a UNP and the alternate UNP option is disabled for the port.
 - Device traffic does not match any of the classification rules configured for the UNP port.
 - The UNP VLAN obtained from a matching classification rule does not exist in the switch configuration.
 - Auth-Server-Down UNP option is used, but the VLAN associated with that UNP does not exist in the switch configuration.
- When the trust tag option is triggered on a UNP bridge port and a VLAN exists in the switch configuration that matches the VLAN tag, a VLAN-port-association (VPA) is created between the UNP port and the matching VLAN even if the matching VLAN is *not* associated with a UNP.

- When the trust tag option is triggered on a UNP access port, the VLAN tag information is used to create a dynamic SAP (virtual port) to which the access port is associated.
- Enabling the trust VLAN ID tag option provides an implicit method of VLAN tag classification that will accept tagged traffic matching any of the existing UNPs without the need to create specific classification rules for those profiles.

Examples

```
-> unp port 1/1/1 trust-tag
-> unp port 1/1/1-4 trust-tag
-> no unp port 1/1/1 trust-tag
```

```
-> unp linkagg 5 trust-tag
-> unp linkagg 6-10 trust-tag
-> no unp linkagg 5 trust-tag
```

Release History

Release 7.2.1; command was introduced.

Related Commands

show unp port	Displays the UNP configuration for the port.
show unp user	Displays information about the devices learned on a UNP port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortTrustTagStatus
```

unp default-profile

Configures the name of an existing UNP classification profile to serve as the default UNP for the specified UNP port or link aggregate.

unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **default-profile** *profile_name*

no unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id*} **default-profile**

Syntax Definitions

<i>chassis</i>	The chassis identifier when running in virtual chassis mode.
<i>slot/port[-port2]</i>	The slot and port number (3/1) of a UNP-enabled port. Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>profile_name</i>	The name of an existing UNP classification profile.

Defaults

By default, there is no default profile configured for UNP ports or link aggregates.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove the default UNP from the port configuration.
- This command is allowed only on UNP-enabled ports.
- The UNP classification profile specified with this command must already exist in the switch configuration.
- The default UNP is used to classify devices on the port when one of the following conditions occur:
 - UNP authentication and classification are not enabled on the port.
 - MAC authentication fails.
 - Device traffic does not match any UNP classification rules.
 - The UNP trust VLAN tag option (see [unp trust-tag](#)) is enabled for the port, but the VLAN ID specified in the tag field of the device traffic does not exist in the switch configuration.
 - Untagged device traffic is not classified.

Examples

```
-> unp port 1/1/1 default-profile Sales
-> no unp port 1/1/1 default-profile
-> unp port 1/1/1-4 default-profile Sales
ERROR: Port 1/1/2 is not a unp port
ERROR: Port 1/1/3 is not a unp port
-> unp port 1/1/1 default-profile BAD-UNP
ERROR: UNP doesn't exist
-> no unp port 1/1/1-4 default-profile
-> unp linkagg 5 default-profile VM1-Server1
-> no unp linkagg 5 default-profile
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp profile	Configures a UNP profile that is used to classify traffic received on UNP ports.
unp port-type	Configures the status of UNP functionality on the port.
unp trust-tag	Configures whether or not a device is classified into an existing VLAN that matches the VLAN ID tag of the packets received from the device.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortDefaultProfileName
```

unp domain

Assigns a UNP port or link aggregate to a customer domain (UNP group).

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} domain *domain_id*

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} domain *domain_id*

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1</i> [- <i>port2</i>]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>domain_id</i>	The numerical domain ID to which the specified port or link aggregate is assigned.

Defaults

By default, all UNP ports are assigned to customer domain zero (0).

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- The domain ID specified with this command must already exist in the switch configuration.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain, only classification rules associated with the same customer domain ID are applied to that port.

Examples

```
-> unp port 1/1/1 domain 1
-> unp port 1/1/1-3 domain 2
-> no unp port 1/1/1 domain 1
-> unp linkagg 5 domain 5
-> unp linkagg 8-10 domain 6
-> no unp linkagg 5 domain 5
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp port-type	Configures the status of UNP for the specified port or link aggregate.
unp domain description	Creates a customer domain ID.
show unp domain	Displays the available customer domain IDs.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortDomainId
```

unp aaa-profile

Assigns the name of an existing authentication, authorization, and accounting (AAA) profile to the specified UNP port or link aggregate. This type of profile defines AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are applied to device traffic received on the UNP port to which the profile is assigned.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} aaa-profile profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} aaa-profile
```

Syntax Definitions

<i>chassis/slot/port1[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>profile_name</i>	The name of an existing AAA profile.

Defaults

By default, there is no AAA profile assigned to UNP ports or link aggregates. The global AAA configuration for the switch is applied.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove the AAA profile from the port configuration.
- The AAA profile specified with this command must already exist in the switch configuration.
- AAA profiles are configured using the **aaa profile** command. See the “AAA Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide* for more information.

Examples

```
-> unp port 1/1/5 aaa-profile A1
-> no unp port 1/1/5 aaa-profile

-> unp port 1/1/1-5 aaa-profile A2
-> no unp port 1/1/1-5 aaa-profile

-> unp linkagg 10 aaa-profile A3
```

```
-> no unp linkagg 10 aaa-profile
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp port-type	Configures UNP functionality for the specified port or link aggregate.
aaa profile	Configures an AAA configuration profile.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable  
  alaDaUNPPortIfIndex  
  alaDaUNPPortAaaProfile
```

unp port port-template

Assigns the name of an existing port template to the specified UNP port or link aggregate. A port template defines UNP port configuration options (such as the type of authentication, classification status, a default profile) that are applied to the UNP port to which the template is assigned.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} port-template template_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} port-template
```

Syntax Definitions

<i>chassis/slot/port1[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>template_name</i>	The name of an existing port template.

Defaults

By default, the “bridgeDefaultPortTemplate” port template is assigned to UNP bridge ports, and the “accessDefaultPortTemplate” port template is assigned to UNP access ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove the port template from the port configuration.
- When a custom template is removed from a UNP port, the port reverts back to using the default template to define UNP port parameter options.
- The port template specified with this command must already exist in the switch configuration.
- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.

Examples

```
-> unp port 1/1/5 port-template up1
-> unp port 1/1/1-5 port-template up2
-> no unp port 1/1/5 port-template
-> no unp port 1/1/1-5 port-template
```

```
-> unp linkagg 10 port-template up3
-> unp linkagg 10-50 port-template up4
-> no unp linkagg 10 port-template

Release History

Release 8.3.1; command was introduced.

Related Commands

unp port-type	Configures the UNP status and port type for the specified port or link aggregate.
unp port-template	Configures a port template.
show unp port config	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortPortTemplate
```

unp direction

Configures whether network access control is applied to both incoming and outgoing traffic or only applied to incoming traffic on the specified UNP bridge port or link aggregate.

unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **direction** {both | in}

no unp {port *chassis/slot/port1[-port2]* | linkagg *agg_id[-agg_id2]*} **direction**

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
both	Enables bidirectional network access control on the specified port or link aggregate.
in	Enables network access control for incoming traffic only on the specified port or link aggregate.

Defaults

By default, bidirectional network access control is enabled on the port.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the network access control direction to the default (**both**).
- When the port control direction is set to **both**, egress broadcast, unknown unicast, and multicast traffic is blocked on the UNP port.
- When the port control direction is set to **in**, egress broadcast, unknown unicast, and multicast traffic is allowed on the UNP port.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.

Examples

```
-> unp port 1/1/5 direction in
```

```
-> unp port 1/1/10-15 direction both
-> no unp port 1/1/10-15 direction
-> unp linkagg 10 direction in
-> unp linkagg 2-5 direction both
-> no unp linkagg 2-5 direction
```

Release History

Release 7.3.4; command was introduced.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.

show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortAdminControlledDirections
```

unp admin-state

Enables or disables the UNP configuration for a port or link aggregate.

```
unp {port {chassis/slot/port1[-port2] | linkagg agg_id1[-agg_id2]} admin-state {enable | disable}
```

Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id1[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
enable	Activates the UNP configuration for the UNP port or link aggregate. UNP functionality is applied to traffic received on the UNP port or link aggregate.
disable	Disables the UNP configuration for the UNP port or link aggregate. UNP functionality is not applied to traffic received on the UNP port or link aggregate.

Defaults

By default, UNP is administratively enabled at the time UNP functionality is configured for the port or link aggregate.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

When UNP functionality is disabled, the UNP configuration for the port or link aggregate is retained but is not applied to traffic received on the port or link aggregate.

Examples

```
-> unp port 1/1/1 admin-state disable
-> unp port 1/1/2-5 admin-state disable
-> unp port 1/1/1 admin-state enable
-> unp linkagg 5 admin-state disable
-> unp linkagg 8-10 admin-state disable
-> unp linkagg t admin-state enable
```

Release History

 alaDaUNPPortAdminState

unp dynamic-service

Configures whether the System Default service profile dynamically creates an SPB Service Access Point (SAP) or a VXLAN SAP based on the traffic received on the UNP access port.

```
unp {port [chassis_id/]slot/port1[-port2] | linkagg agg_id[-agg_id2]} dynamic-service {spb | vxlan | vpls | none}
```

Syntax Definitions

<i>chassis_id</i>	The chassis identifier when running in virtual chassis mode.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
spb	Dynamically creates an SPB SAP.
vxlan	Dynamically creates a VXLAN SAP (<i>supported only on OmniSwitch 6900-X72/Q32 and OmniSwitch 6900-V72/C32</i>).
vpls	Dynamically creates a VPLS SAP (<i>supported only on 6860N</i>).
none	No SPB, VXLAN, or VPLS SAP is dynamically created.

Defaults

SPB SAP is the default value.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- This command applies only to ports and link aggregates configured as UNP access ports; this command does not apply to UNP bridge ports.

- Traffic received on UNP access ports that is not assigned to a user-defined service profile is assigned to the System Default service profile. The System Default profile attributes used to dynamically create a SAP for such traffic are derived based on the setting for this UNP port parameter.
 - If the dynamic service port parameter is set to SPB, then a calculated SPB control BVLAN, a calculated default I-SID number, and an incremental reserved service ID number are used to dynamically create a SAP for SPB service traffic received on the UNP access port.
 - If the dynamic service port parameter is set to VXLAN, then a calculated VNI number, a default multicast group IP address, and an incremental reserved service ID number are used to dynamically create a SAP for VXLAN service traffic received on the UNP access port.
 - If the dynamic service port parameter is set to VPLS, then a calculated VPLS number with signaling type, and an incremental reserved service ID number are used to dynamically create a SAP for VPLS service traffic received on the UNP access port.

Examples

```
-> unp port 1/1/5 dynamic-service vxlan
-> unp port 1/1/10-15 dynamic-service spb
-> unp port 1/1/10-15 dynamic-service vpls
-> unp port 1/1/10-15 dynamic-service none
-> unp linkagg 10 dynamic-service vxlan
-> unp linkagg 2-5 dynamic-service spb
-> unp linkagg 2-5 dynamic-service vpls
-> unp linkagg 2-5 dynamic-service none
```

Release History

Release 8.9R4; VPLS support added.

Related Commands

unp port-type	Configures UNP functionality on a port or link aggregate.
show unp port	Displays the UNP configuration for the port.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortDynamicService
```

unp vlan

Configures an untagged or tagged VLAN-port association between the specified UNP bridge port and VLAN ID. This type of static VLAN assignment is particularly useful when connecting silent devices to UNP bridge ports.

unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **vlan** *vlan_id* [-*vlan_id2*] [**tagged**]

no unp {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*[-*agg_id2*]} **vlan** *vlan_id* [-*vlan_id2*]

Syntax Definitions

<i>chassis/slot/port</i> [- <i>port2</i>]	The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [- <i>agg_id2</i>]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>vlan_id</i> [- <i>vlan_id2</i>]	The VLAN ID to assign to the UNP port. Use a hyphen to specify a range of VLAN IDs.
tagged	Configures a tagged VLAN association for the UNP bridge port.

Defaults

By default, no VLAN associations are configured for UNP bridge ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a VLAN association from the UNP port configuration. The **tagged** keyword is not required to remove a tagged VLAN association.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.
- When the **tagged** parameter option is not specified, the VLAN-port association created is untagged.
- Configuring a UNP port or link aggregate with an untagged *and* tagged VLAN-port association is allowed as long as the untagged and tagged VLANs are different (for example, **unp port 1/4/45 vlan 100** and **unp port 1/4/45 vlan 200 tagged**).
- When this command is used to assign a VLAN to a UNP bridge port, the port goes into a forwarding state for egress traffic associated with the VLANs assigned to the port. This automatically occurs even

when there is no MAC address learned on the UNP port in the assigned VLANs and regardless of the direction value (in or both) set for the port.

Examples

```
-> unp port 1/1/5 vlan 500
-> unp port 1/1/5 vlan 600 tagged
-> unp port 1/1/10 vlan 100-105
-> unp port 1/1/10 vlan 200-205 tagged
-> no unp port 1/1/5 vlan 500
-> no unp port 1/1/5 vlan 600
-> no unp port 1/1/10 vlan 100-105
-> no unp port 1/1/10 vlan 200-205

-> unp linkagg 10 vlan 500
-> unp linkagg 10 vlan 600 tagged
-> unp linkagg 20 vlan 100-105
-> unp linkagg 20 vlan 200-205 tagged
-> no unp linkagg 10 vlan 500
-> no unp linkagg 10 vlan 600
-> no unp linkagg 20 vlan 100-105
-> no unp linkagg 20 vlan 200-205
```

Release History

Release 8.2.1; command was introduced.

Release 8.5R4; **tagged** parameter added.

Related Commands

Configures UNP functionality on a port or link aggregate.

[show unp port configured-vlans](#)

Displays the VLAN assignments configured for UNP bridge ports or link aggregates.

MIB Objects

```
alaDaUNPPortVlanTable
  alaDaUNPPortVlanVID
```

unp port profile

Configures a UNP service profile as a static profile for the specified UNP port. This type of profile assignment is particularly useful for silent devices that are connected to a UNP port; the profile SAP won't age out when the device goes idle.

unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} profile profile_name

no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} profile profile_name

Syntax Definitions

<i>chassis/slot/port</i> [-port2]	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [-agg_id2]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>profile_name</i>	The name of an SPB, VXLAN, L2 GRE, or VPLS service profile to statically assign to the specified UNP port.

Defaults

By default, no static profile is configured for UNP ports.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a static profile association from the UNP port configuration.
- When a MAC address is learned on a UNP port and classified into a service profile, a SAP is dynamically created based on the parameter values of the service profile. Once the MAC address associated with the dynamic SAP ages out, the SAP ages out as well. To accommodate silent devices, use this command to assign a service profile to the UNP port. This will dynamically create a persistent SAP that will not age out when the device MAC address ages out; the SAP continues to receive broadcast and multicast packets for the silent device.
- Make sure the specified UNP profile name already exists in the switch configuration and is mapped to an SPB, VXLAN, L2 GRE, VPLS or static service.
 - Profiles mapped to SPB, VXLAN, or static services are configured as static profiles on UNP access ports.
 - Profiles mapped to an L2 GRE service are configured as static profiles on UNP bridge or access ports.

- There can be up to eight SPB, VXLAN, or VPLS service profiles statically assigned to one UNP access port, but mixing service types on the same port is not supported. For example, configure only eight SPB service profiles or eight VXLAN service profiles, or eight VPLS service profiles.
- There can only be one L2 GRE service profile statically assigned to a UNP bridge or access port.

Examples

```
-> unp port 1/1/5 profile static-spb1
-> unp port 1/1/5 profile static-spb2
-> unp port 1/1/10 profile static-vxlan1
-> unp port 1/1/10 profile static-vxlan2
-> unp port 1/1/20 profile static-l2gre1
-> no unp port 1/1/20 profile static-l2gre1
-> unp port 1/1/10 profile static-vpls1
-> unp port 1/1/20 profile static-vpls2

-> unp linkagg 10 profile static-spb1
-> unp linkagg 20 profile static-vxlan1
-> unp linkagg 30 profile static-l2gre1
-> no unp linkagg 30 profile static-l2gre1
-> unp linkagg 20 profile static-vpls
```

Release History

Release 8.5R4; command was introduced.

Release 8.9R4; VPLS support added.

MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortProfile
```

unp port ap-mode

Configures the status of the Access Point (AP) mode for the specified UNP port or link aggregate.

unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} **ap-mode** [secure]

no unp {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} **ap-mode** {secure}

Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
secure	Set the secure ap-mode configuration on port enabled or disabled.

Defaults

By default, the AP mode status for the port or link aggregate is set to the global AP mode status when UNP is enabled on the port or link aggregate. For example, if the global status is disabled, the port-level status is initially disabled. Secure ap-mode is disabled by default.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- AP mode functionality is supported on UNP bridge ports and on UNP access ports. On bridge ports, the AP device and AP clients are learned into the VLAN domain; on access ports, the AP device and AP clients are learned into the Shortest Path Bridging (SPB) service domain.
- When the AP mode is enabled on the specified UNP bridge port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):
 - The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP bridge port.
 - The trust tag status for the UNP bridge port is operationally enabled.
 - The global status for dynamic VLAN configuration is operationally enabled for the switch.
- When the AP mode is enabled on a UNP access port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):

- The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP access port.
- The trust tag function is not used; AP clients are not learned into VLAN-based profiles. Instead, AP clients are learned into a UNP profile that is mapped to SPB service parameters. The SAP that is dynamically created based on the service parameters carries the AP client traffic.
- MAC or 802.1X authentication is bypassed for AP clients. However, the other Layer 2 UNP port options for learning and assigning an AP client to a profile are available, such as rule classification, a default SPB service profile, or a dynamic SPB System Default profile.
- Once the AP MAC address is detected and learned, a built-in LLDP UNP classification rule for access points classifies the AP device into one of the following built-in default profiles:
 - **defaultWLANProfile** for AP devices connected to UNP bridge ports. This profile is mapped to a VLAN into which the AP device is classified. A VLAN-port association (VPA) is established between the UNP bridge port and profile VLAN on which the AP MAC address is learned and forwarded.
 - **defaultWLANAccessProfile** for AP devices connected to UNP access ports. The profile is mapped to SPB service parameters. When the AP device is classified into this profile, an SPB Service Access Point (SAP) is dynamically created. A SAP-port association is established between the UNP access port and the SAP on which the AP MAC address is learned and forwarded.
- If the UNP AP mode is not enabled, the detection, learning, and management of connected OmniAccess Stellar AP devices may not occur as expected.
- AP mode functionality is not supported on Learned Port Security (LPS) ports.
- Use **secure** parameter to enable or disable the secure ap-mode.

Examples

```
-> unp port 1/1/6 ap-mode
-> unp linkagg 10 ap-mode
-> no unp port 1/1/6 ap-mode
-> no unp linkagg 10 ap-mode
-> unp port 1/1/1 ap-mode secure
-> no unp port 1/1/1 ap-mode secure
```

  alaDaUNPPortApMode
  alaDaUNPPortApModeSecurity
```

unp port-template

Configures a UNP port template that is used to apply a pre-defined port configuration to a UNP port or link aggregate. Using a port template to configure UNP functionality on a port or link aggregate avoids having to configure each parameter with a separate CLI command. Applying a template configures all port-based parameters with a single CLI command.

This section describes the base command (**unp port-template**) along with optional command keywords that are used to configure port parameter values that are applied when the template is assigned to a UNP port or link aggregate. Optional keywords are listed separately but can be entered in combination on the same command line. Use the **no** form for the keywords to change a specific parameter value for the template.

There are two default port templates: “bridgeDefaultPortTemplate” (applied to UNP bridge ports) and “accessDefaultPortTemplate” (applied to UNP access ports). These templates define a default set of port parameter values that are applied at the time a port or link aggregate is configured as a UNP bridge or access port. The default templates cannot be deleted, but the template parameter values are configurable through this command.

unp port-template {*template_name* | **bridgeDefaultPortTemplate** | **accessDefaultPortTemplate**}

no unp port-template *template_name* [**802.1x-authentication** | **802.1x authentication pass-alternate** | **mac-authentication** | **mac-authentication pass-alternate** | ...]

Syntax Definitions

<i>template_name</i>	The name to associate with the UNP port template.
bridgeDefaultPortTemplate	The name of the default port template applied to UNP bridge ports.
accessDefaultPortTemplate	The name of the default port template applied to UNP access ports. <i>This parameter is currently not supported on an OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i>

Defaults

The following table contains the default values for the system-defined port templates (“accessDefaultPortTemplate” and “bridgeDefaultPortTemplate”):

parameter	system-defined port template values
802.1x-authentication	enabled
802.1x-authentication pass-alternate <i>profile_name</i>	none
mac-authentication	enabled
mac-authentication pass-alternate <i>profile_name</i>	none
classification	enabled
trust-tag	disabled
default-profile <i>profile_name</i>	none
domain <i>domain_id</i>	0
aaa-profile <i>profile_name</i>	none
redirect port-bounce	disabled
direction {in both}	both
802.1x-authentication tx-period <i>seconds</i>	30
802.1x-authentication supp-timeout <i>seconds</i>	30
802.1x-authentication max-req <i>max_req</i>	2
802.1x-authentication bypass	disabled
802.1x-authentication failure-policy {mac}	default
mac-authentication allow-eap {pass fail noauth}	none
force-l3-learning [port-bounce]	disabled port bounce is enabled
admin state {enable disable}	enabled
dynamic-service {vxlan spb vpls}	none for UNP bridge port template SPB for UNP access port template
vlan <i>vlan_id</i> [- <i>vlan_id2</i>] [tagged]	none
l2-profile <i>l2profile_name</i>	unp-def-access-profile

parameter	system-defined port template values
ap-mode	enabled
ap-mode secure	disabled
profile <i>profile_name</i>	none

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a port template from the switch configuration.
- To change the value of a specific port template parameter, specify the parameter keyword with this command. For example, **no unp port-template port1 mac-authentication**, **unp port-template port1 domain 2**, or **unp port-template port1 default-profile defprofil**. The new parameter values are applied to all UNP ports to which the template is assigned.
- The **l2-profile** port template parameter is not supported on the OmniSwitch 9900.
- If the name of the template does not exist when this command is used to modify a port parameter, the switch will automatically create a new template using the name specified. For example, the **unp port-template port1 mac-authentication** command will create the “port1” template if it does not already exist in the switch configuration.
- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.
- For more information about specific port parameter values, refer to the following explicit UNP port configuration commands for each template parameter:

Port Template Parameter	Explicit Port Configuration Command
[802.1x-authentication]	unp 802.1x-authentication
[802.1x-authentication pass-alternate <i>profile_name</i>]	unp 802.1x-authentication pass-alternate
[mac-authentication]	unp mac-authentication
[mac-authentication pass-alternate <i>profile_name</i>]	unp mac-authentication pass-alternate
[classification]	unp classification
[default-profile <i>profile_name</i>]	unp default-profile
[domain <i>domain_id</i>]	unp domain
[aaa-profile <i>profile_name</i>]	unp aaa-profile

Port Template Parameter	Explicit Port Configuration Command
[redirect port-bounce]	unp redirect port-bounce
[direction {in both}]	unp direction
[802.1x-authentication tx-period <i>seconds</i>]	unp 802.1x-authentication tx-period
[802.1x-authentication supp-timeout <i>seconds</i>]	unp 802.1x-authentication supp-timeout
[802.1x-authentication max-req <i>max_req</i>]	unp 802.1x-authentication max-req
[802.1x-authentication bypass]	unp 802.1x-authentication bypass-8021x
[802.1x-authentication failure-policy {mac}]	unp 802.1x-authentication failure-policy
[mac-authentication allow-eap {pass fail noauth}]	unp mac-authentication allow-eap
[force-l3-learning [port-bounce]]	unp force-l3-learning
[trust-tag]	unp trust-tag
[admin-state {enable disable}]	unp admin-state
[dynamic-service {spb vxlan vpls}]	unp dynamic-service
[vlan <i>vlan_id</i> [- <i>vlan_id2</i>] [tagged]]	unp vlan
[l2-profile <i>l2profile_name</i>]	unp l2-profile
[ap-mode]	unp port ap-mode
[profile <i>profile_name</i>]	unp port profile

Examples

```

-> unp port-template port1
-> unp port-template port1 mac-authentication
-> unp port-template port1 mac-authentication pass-alternate unp1
-> unp port-template port1 classification
-> no unp port-template port1 mac-authentication
-> no unp port-template port1
-> unp port-template port2 802.1x-authentication
-> unp port-template port2 classification
-> unp port-template port2 domain 10
-> no unp port-template port2 classification
-> no unp port-template port2
-> unp port-template pt1 ap-mode secure
-> no unp port-template pt1 ap-mode secure

```

Release History

Release 8.3.1; command was introduced.
Release 8.3.1.R02; **force-l3-learning** parameter added.
Release 8.4.1; **l2-profile** parameter added.
Release 8.5R4; **profile** parameter added, **tagged** option added to **vlan** parameter.
Release 8.6R1; **ap-mode** parameter added.
Release 8.8R1; **secure** parameter added.
Release 8.9R4; **vpls** service support added.

Related Commands

unp port port-template	Assigns a port configuration template to a UNP port.
show unp port config	Displays the UNP configuration for the port, including the name of the port template associated with the port, if any.
show unp port-template	Displays the port template configuration.

unp network-group

Configures a network group name and its associated IPv4 addresses. The group is used to specify source or destination IP networks for UNP router domain authentication. Users attempting to access networks defined in this group are challenged for authentication.

unp network-group *net_group_name* *ip_address* [**mask** *net_mask*] [*ip_address2* [**mask** *net_mask2*]...]

no unp network-group *net_group_name* [*ip_address* [**mask** *net_mask*] [*ip_address2* [**mask** *net_mask2*]...]

Syntax Definitions

<i>net_group_name</i>	The name of the network group (up to 31 alphanumeric characters).
<i>ip_address</i>	An IPv4 address included in the network group.
<i>net_mask</i>	The mask for the IPv4 address. If no mask is entered, the IPv4 address is assumed to be a host address.
<i>ip_address2</i>	Optional. Another IPv4 address to be included in the network group. Multiple IPv4 addresses (up to a maximum of five) may be configured for a network group. Separate each address/mask combination with a space.
<i>net_mask2</i>	Optional mask for the IPv4 address. If no mask is entered, the natural mask for the address will be used.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a network group from the configuration or to remove an IP address from a network group.
- The network group defined with this command is used to configure a router authentication condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the group.
- Make sure that the IP networks/masks specified for a network group do not overlap.

Examples

```
-> unp network-group net-grp1 10.10.12.5 mask 255.255.0.0
```

```
-> unp network-group net-grp1 20.10.12.5 mask 255.255.0.0 10.50.3.1
-> unp network-group net-grp1 30.12.12.5
-> unp network-group net-grp1 10.10.12.5 mask 255.255.0.0 20.10.12.5 mask
255.255.0.0 10.50.3.1 30.12.12.5

-> no unp network-group net-grp1 10.10.12.5
-> no unp network group net-grp1
```

Release History

Release 8.5R4; command was introduced.

Related Commands

unp router-auth user-group	Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.
unp router-auth cp-profile	Configures a Captive Portal profile for router authentication.
unp router-auth user flush	Performs a MAC address flush of the specified router domain authentication users.
show unp network-group	Displays the UNP network group configuration.

MIB Objects

```
alaDaUNPNetworkGroupTable
  alaDaUNPNetworkGroupName
  alaDaUNPNetworkGroupIpAddrType
  alaDaUNPNetworkGroupIpAddr
  alaDaUNPNetworkGroupIpMask
```

unp router-auth user-group

Configures a user group as a condition for Layer 3 authentication. A user group specifies a destination network group and an optional source network group; traffic matching the networks in these groups is subject to router domain authentication.

```
unp router-auth user-group user_group_name {[src-network-group net_group] dst-network-group net_group_name}
```

```
no unp router-auth user-group user_group_name
```

Syntax Definitions

<i>user_group_name</i>	The name of the router authentication condition (up to 31 alphanumeric characters).
<i>net_group_name</i>	The name of an existing network group (configured through the unp network-group command).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove a router authentication user group from the switch configuration.
- Make sure the network group specified with this command exists in the switch configuration before attempting to configure the router authentication user group.
- To configure an optional source network group; specify the source network group name first then the destination network group name.
- When the first router authentication user group is configured, the router domain authentication feature is enabled for the switch.
- HTTP/HTTPS traffic that matches a user group condition is challenged with Captive Portal authentication; other IPv4 traffic that matches a user group condition is challenged with IP-based authentication.

- Configuring multiple router authentication user groups is allowed.
 - Any two user groups can share the same source network group as long as the destination network group for each user group is different and the IP addresses do not overlap.
 - Any two user groups can share the same destination network group as long as the source network group for each user group is different and the IP addresses do not overlap.

Examples

```
-> unp router-auth user-group ra-ugrp1 src-network-group net-grp1 dst-network-group
net-grp2
-> unp router-auth user-group ra-ugrp2 dst-network-group net-grp3

-> no unp router-auth user-group ra-ugrp1
-> no unp router-auth user-group ra-ugrp2

-> unp router-auth user-group ra-ugrp1 dst-network-group grp5
ERROR: Dst Network Group does not exist
-> unp router-auth user-group ra-ugrp2 src-network-group grp5 dst-network-group
net-grp2
ERROR: Src Network Group does not exist
```

Release History

Release 8.5R4; command was introduced.

Related Commands

unp network-group	Configures a network group name and its associated IPv4 addresses.
unp router-auth cp-profile	Configures a Captive Portal profile for router authentication.
unp router-auth user flush	Performs a MAC address flush of the specified router domain authentication users.
show unp router-auth user-group	Displays the router authentication user group configuration.

MIB Objects

```
alaDaUNPRouterAuthUserGroupTable
  alaDaUNPRouterAuthenticationName
  alaDaUNPRouterAuthenticationSrcGroup
  alaDaUNPRouterAuthenticationDestGroup
```

unp router-auth cp-profile

Specifies an existing Captive Portal (CP) profile to use for router authentication. This type of profile defines CP authentication parameter options that are applied to users that match router authentication user group conditions. If no CP profile is specified, then the global CP configuration is applied.

unp router-auth cp-profile *cp_profile_name*

no unp router-auth cp-profile *cp_profile_name*

Syntax Definitions

cp_profile_name The name of an existing CP profile (configured through the **captive-portal-profile** command).

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of the command to remove the CP profile assignment.
- Make sure the CP profile name specified with this command exists in the switch configuration.
- The following global and CP profile settings are applied for CP authentication:
 - The RADIUS server to use for authentication.
 - Session timeout value (determines aging of an accept/deny entry).
 - CP maximum retry attempts (number of login attempts the user is given before access is blocked).
 - Success redirect URL (the URL to display to the client after successful CP authentication)
- The following global and CP profile settings are applied for IP-based authentication:
 - The RADIUS server to use for authentication.
 - Session timeout value (determines aging of an accept/deny entry).
- If the RADIUS server returns a session timeout value that is set to zero and the trust RADIUS option is enabled, then the session timeout for CP and IP authenticated users is set to infinity (the user session does not time out). A zero session timeout value is supported only when it is returned by the RADIUS server; setting the value to zero through the CLI is not supported.

- The router domain authentication feature is not enabled for the switch until at least one router authentication user group is configured.
- CP authentication is applied to HTTP/HTTPS traffic that matches a router authentication user group condition.

Examples

```
-> unp router-auth cp-profile cp-1  
-> no unp router-auth cp-profile
```

Release History

Release 8.5R4; command was introduced.

Related Commands

unp network-group	Configures a network group name and its associated IPv4 addresses.
unp router-auth user-group	Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.
unp router-auth user flush	Performs a MAC address flush of the specified router domain authentication users.
show unp router-auth configuration	Displays the CP profile configuration that is used for router domain authentication.

MIB Objects

```
alaDaUNPRouterAuthenticationConfig  
alaDaUNPRouterAuthCpProfileName
```

unp router-auth user flush

Performs a MAC address flush of the specified router domain authentication users.

unp router-auth user flush {**user-group** *user_group_name* | **user-name** *cp_user_name* | [**ip-address** *ipv4_address* | **auth-type** {**cp** | **ip**} | **all**}

Syntax Definitions

<i>user_group_name</i>	The name of an existing router authentication user group.
<i>cp_user_name</i>	The Captive Portal (CP) user name.
<i>ipv4_address</i>	The IPv4 address associated with the router authentication user.
cp	Clears only the CP-authenticated users.
ip	Clears only the IP-authenticated users.
all	Clears all of the router authentication users.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **user-group** parameter to flush all users associated with the specified router authentication user group.
- Use the **user-name** parameter to flush the CP user name associated with the router authentication user.
- Use the **ip-address** parameter to flush the IPv4 address associated with the router authentication user.
- Use the **auth-type** parameter with the **cp** or **ip** options to flush router authentication users that were authenticated through Captive Portal or IP-based mechanisms.
- Use the **all** parameter to flush all router authentication users learned on the switch.

Examples

```
-> unp router-auth user flush all
-> unp router-auth user flush user-group ra-grp1
-> unp router-auth user flush user-name san
-> unp router-auth user flush ip-address 10.0.0.1
-> unp router-auth user flush auth-type cp
```

```
-> unp router-auth user flush auth-type ip
```

Release History

Release 8.5R4; command was introduced.

```

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

A UNP network group is used to configure a router authentication user group condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the network group.

Examples

```
-> show unp network-group
  Network Group Name      IP-Address/Mask
-----+-----
net-grp1                  10.0.0.1/255.255.0.0,
                           20.0.0.1/255.255.0.0,
                           30.0.0.1/255.0.0.0
net-grp2                  40.0.0.1/255.255.0.0
net-grp3                  10.0.0.1/255.255.0.0,
                           40.0.0.1/255.255.0.0
```

```
Total Network-Group Count: 3
```

output definitions

Network Group Name	The name of the UNP network group.
IP-Address/Mask	The IPv4 network addresses that are associated with the network group name.

Release History

Release 8.5R4; command was introduced.

Related Commands

unip network-group

Configures a network group name and its associated IPv4 addresses.

MIB Objects

```
alaDaUNPNetworkGroupTable  
  alaDaUNPNetworkGroupName  
  alaDaUNPNetworkGroupIpAddrType  
  alaDaUNPNetworkGroupIpAddr  
  alaDaUNPNetworkGroupIpMask
```

show unip router-auth user-group

Displays the router authentication user group configuration.

```
show unip router-auth user-group [user_group_name]
```

Syntax Definitions

user_group_name The name of an existing router authentication user group.

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

A router authentication user group specifies Layer 3 conditions for authentication; UNP network groups assigned to the router authentication user group contain IPv4 addresses. User traffic matching these networks are challenged with Captive Portal or IP-based authentication.

Examples

```
-> show unip router-auth user-group
User-Group Name                      Src-Network-Group                      Dst-Network-Group
-----+-----+-----
ra-ugrp1                              net-grp1                              net-grp2
ra-ugrp2                              net-grp3                              net-grp2
ra-ugrp3                              net-grp1                              net-grp3
ra-ugrp4                              net-grp2                              net-grp3
ra-ugrp5                                                                              net-grp4
```

```
-> show unip router-auth user-group UserGrp1
User-Group Name                      Src-Network-Group                      Dst-Network-Group
-----+-----+-----
ra-ugrp3                              net-grp1                              net-grp3
```

Rule Status = ACTIVE

output definitions

User-Group-Name The name of the router authentication user group.

output definitions

Src-Network-Group	The name of the UNP network group that is designated as a group of source IPv4 networks. Specifying a source network group is optional when configuring a user group condition.
Dst-Network-Group	The name of the UNP network group that is designated as a group of destination IPv4 networks.

Release History

Release 8.5R4; command was introduced.

Related Commands

unip router-auth user-group Configures a router authentication user group.

MIB Objects

```
alaDaUNPRouterAuthUserGroupTable
  alaDaUNPRouterAuthenticationName
  alaDaUNPRouterAuthenticationSrcGroup
  alaDaUNPRouterAuthenticationDestGroup
```

show unip router-auth configuration

Displays the Captive Portal (CP) profile configuration that is used for router domain authentication.

show unip router-auth configuration

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

If no CP profile is designated for this feature, then the global CP configuration is used.

Examples

```
-> show unip router-auth configuration
    CP-Profile Name      : cp-profl

    CP Params:
      Captive Portal AAA Profile Name      = al
      Captive Portal Success Redirect URL   = http://server-1.com/pass.html
      Captive Portal Retry Count           = 3
```

output definitions

CP-Profile Name	The name of the Captive Portal profile to use for router authentication. Configured through the captive-portal-profile command.
Captive Portal AAA Profile Name	The name of the AAA profile assigned to the CP profile. The AAA profile defines the session timeout value. Configured through the captive-portal-profile command.
Captive Portal Success Redirect URL	The URL to which a user is redirected after successful CP authentication. Configured through the captive-portal success-redirect-url command.
Captive Portal Retry Count	The number of login attempts a client is allowed. Configured through the captive-portal retry-count command.

Release History

Release 8.5R4; command was introduced.

Related Commands

unip router-auth cp-profile Specifies an existing CP profile to use for router authentication.

MIB Objects

```
alaDaUNPRouterAuthenticationConfig  
  alaDaUNPRouterAuthCpProfileName
```

show unip router-auth users

Displays information about users authenticating through the router authentication process.

show unip router-auth users [**user-name** *cp_user_name*] [**ip-address** *ipv4_address*] [**auth-type** {**cp** | **ip**}] [**auth-status** {**pass** | **fail**}]

Syntax Definitions

<i>cp_user_name</i>	The Captive Portal (CP) user name for the router authentication user.
<i>ipv4_address</i>	The IPv4 address of the router authentication user.
cp	Displays only Captive Portal authenticated users.
ip	Displays only IP authenticated users.
pass	Displays only users that have successfully authenticated.
fail	Displays only users that have failed authentication.

Defaults

By default, all router authenticated users are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results.
- The “Username” field displays either the user name that was entered to authenticate a user device through the Captive Portal process or the IP address of the user device if IP-authentication was used to authenticate the user.

Examples

```
-> show unip router-auth users
  UserName      Destination      User-Group  Intf-Name/  Auth Auth  LoginTime

output definitions

UserName	Displays either the IP address or Captive Portal user name for the learned user device.
Destination IP-Network	The destination IP network address for the user device.
User-Group	The name of the router authentication user group condition that matches the user device traffic.
Intf-Name/VLAN	The name of the IP interface and VLAN associated with the user device.
Auth Type	Indicates whether the user device attempted Captive Portal or IP-based authentication.
Auth Status	Indicates whether the user device passed or failed authentication.
LoginTime	The date and time the user logged into the network.

```
-> show unip router-auth users user-name Guest-user1
User-Name      : Guest-user1
IP-Address     : 20.0.0.5,
Destination IP-Network : 70.0.0.1,
Access Timestamp : 06/20/2018 06:43:47,
Interface-Name/Vlan : L3-auth1/20,
User-Group     : DST-GRP1,
Authentication-Type : CP,
Authentication-Status : Pass,
Session-Time Remaining(sec) : 1000 sec
```

```

-> show unip router-auth users user-name 40.1.1.20
User-Name           : 40.1.1.20
IP-Address          : 40.1.1.20,
  Destination IP-Network : 70.0.0.0,
  Access Timestamp      : 07/20/2018 10:10:05,
Interface-Name/Vlan : L3-auth3/40,
User-Group          : DST-GRP3,
Authentication-Type  : IP,
Authentication-Status : Fail,
Session-Time Remaining(sec) : 200 sec

```

output definitions

UserName	Displays either the IP address or Captive Portal user name for the learned user device.
IP-Address	The IP address of the user device.
Destination IP-Network	The destination IP network address for the user device.
Access Timestamp	The date and time the user device accessed the network.
Interface-Name/VLAN	The name of the IP interface and VLAN associated with the user device.
User-Group	The name of the router authentication user group condition that matches the user device traffic.
Authentication-Type	Indicates whether the user device attempted Captive Portal or IP-based authentication.
Authentication-Status	Indicates whether the user device passed or failed authentication.
Session-Time Remaining (sec)	The amount of time remaining for the users login session.

Release History

Release 8.5R4; command was introduced.

Related Commands

unip router-auth user flush Performs a MAC address flush of the specified router domain authentication users.

MIB Objects

N/A

unp classification port

Defines a Port classification rule for the specified UNP profile. If the UNP port or link aggregate on which the device traffic is received matches the port or link aggregate defined for the rule, the specified profile is applied to the device.

unp classification {port *chassis/slot/port1*[-*port2*] | linkagg [*agg_id*[-*agg_id2*]} [vlan-tag *vlan_id* | *outer_vlan_id*:*inner_vlan_id*] {profile1 *profile_name* [profile2 *profile_name*] [profile3 *profile_name*]}

no unp classification {port *chassis/slot/port1*[-*port2*] | linkagg *agg_id*} [profile1] [profile2] [profile3]

Syntax Definitions

<i>chassis/slot/port</i> [- <i>port2</i>]	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
[<i>agg_id</i> [- <i>agg_id2</i>]	The link aggregate ID for a specific UNP link aggregate. Use a hyphen to specify a range of IDs (5-10).
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id</i> : <i>inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Port rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- The Port rule configured for the specified profile is applied only to traffic learned on the specified UNP port or link aggregate.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

- When configuring a Port classification rule, specify an optional VLAN tag before specifying the UNP for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is applied only to tagged packets that are received on the specified UNP port *and* that contain the VLAN ID tag.
- Untagged packets are only classified using the specified UNP port; the VLAN ID tag is ignored if it is specified with this rule.
- A Port classification rule can be combined with a MAC address rule and IP address rule to configure a port-based binding rule.

Examples

```
-> unp classification port 1/1/5 vlan-tag 100 profile1 un1-vxlan profile2 un2-spb
-> unp classification port 1/1/10-15 profile1 un1-vlan profile2 un2-spb
-> no unp classification port 1/1/5 profile2
-> no unp classification port 1/1/5
```

```
-> unp classification linkagg 5 profile1 un1-vlan profile2 un2-vxlan profile3
unp3-spb
-> unp classification linkagg 6-10 vlan-tag 10:20 profile1 un1-vlan
-> no unp classification linkagg 5 profile3
-> no unp classification linkagg 5
```

Port + MAC address + IP address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 port 1/1/15 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 port 1/1/15
```

Port + MAC address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 port 1/1/5 profile1 Pr1
-> no unp classification mac-address 00:11:22:33:44:55 port 1/1/5
```

Port + IP address binding rule example:

```
-> unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10 profile1
Pr2
-> no unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10
```

Release History

Release 8.3.1; command was introduced.

Related Commands

```

unp classification domain

Defines a Domain ID classification rule for the specified UNP profile. If the port or link aggregate on which the device traffic is received belongs to a Domain ID that matches the Domain ID defined for the rule, the specified profile is applied to the device.

unp classification domain *domain_id* [**vlan-tag** *vlan_id* | *outer_vlan_id:inner_vlan_id*] {**profile1** *profile_name* [**profile2** *profile_name*] [**profile3** *profile_name*]}

no unp classification domain *domain_id* [**profile1**] [**profile2**] [**profile3**]

Syntax Definitions

<i>domain_id</i>	A domain ID number.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the domain ID rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a Port classification rule, specify and optional VLAN tag before specifying the UNP for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.

- Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
- When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets received on a UNP port associated with the Domain ID *and* tagged with the specified VLAN ID.
- Untagged packets are only classified using the specified domain ID; the VLAN ID tag is ignored if it is specified with this rule.
- A domain ID classification rule can be combined with a MAC address rule and an IP address rule to configure a domain-based binding rule.

Examples

```
-> unp classification domain 10 profile1 un1-vlan
-> unp classification domain 20 vlan-tag 100 profile1 un1-vxlan profile2 un2-spb
profile3 un3-vlan
-> no unp classification domain 20 profile3
-> no unp classification domain 20
```

Domain ID + MAC address + IP address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 domain 10 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 domain 10
```

Release History

```

unp classification mac-address

Defines a MAC address classification rule for the specified UNP. If the source MAC address of the device traffic matches the MAC address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-address mac_address [domain domain_id] [vlan-tag vlan_id |
outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification mac-address mac_address [profile1] [profile2] [profile3]
```

Syntax Definitions

<i>mac_address</i>	MAC address (e.g., 00:00:39:59:f1:0c).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the MAC address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- When configuring a MAC address classification rule, specify an optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.
- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source MAC address *and* the VLAN ID tag.
- Untagged packets are only classified using the specified MAC address; the VLAN ID tag is ignored if it is configured for this rule.

Examples

```
-> unp classification mac-address 00:11:22:33:44:55 profile1 CustA
-> unp classification mac-address 00:2a:95:00:00:01 vlan-tag 200 profile1 VNP1

```

unp classification mac-oui

Defines a MAC address Organizationally Unique Identifier (OUI) classification rule for the specified UNP profile. If the OUI of the source MAC address of the device traffic matches the OUI defined for the rule, the specified profile is applied to the device.

unp classification mac-oui *mac_oui* [**vlan-tag** *vlan_id* | *outer_vlan_id:inner_vlan_id*] {**profile1** *profile_name* [**profile2** *profile_name*] [**profile3** *profile_name*]}

no unp classification mac-oui *mac_oui* [**profile1**] [**profile2**] [**profile3**]

Syntax Definitions

<i>mac_oui</i>	The first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the MAC OUI rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a MAC address OUI classification rule, specify and optional VLAN tag before specifying the UNP for which the rule will classify traffic.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source MAC address OUI *and* the VLAN ID tag.
- Untagged packets are only classified using the specified MAC address OUI; the VLAN ID tag is ignored if it is specified with this rule.

Examples

```
-> unp classification mac-oui 00:11:22 profile1 unp1-vlan
-> unp classification mac-oui 00:11:33 vlan-tag 10 profile1 unp1-vlan profile2
unp2-spb profile3 unp3-vxlan
-> no classification mac-oui 00:11:33 profile3
-> no unp classification mac-oui 00:11:22
```

Release History

Release 8.3.1; command was introduced.

Related Commands

```

unp classification mac-range

Defines a MAC address range classification rule for the specified UNP. If the source MAC address of the device traffic matches any address within the range of MAC addresses, the specified UNP is applied to the device. An optional VLAN ID tag parameter is also available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-range low_mac_address high_mac_address [domain domain_id] [vlan-tag
vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3
profile_name]}
```

```
no unp classification mac-range low_mac_address high_mac_address [profile1] [profile2] [profile3]
```

Syntax Definitions

<i>low_mac_address</i>	MAC address that defines the low end of the range (e.g., 00:00:39:59:f1:00).
<i>high_mac_address</i>	MAC address that defines the high end of the range (e.g., 00:00:39:59:f1:90).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

```

unp classification ip-address

Defines an IP network address classification rule for the specified UNP. If the source IP address of the device traffic matches the IP address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source IP address.

```
unp classification ip-address ip_address mask subnet_mask [domain domain_id] [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification ip-address ip_address mask subnet_mask [profile1] [profile2] [profile3]
```

Syntax Definitions

<i>ip_address</i>	IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>subnet_mask</i>	An IP address mask to identify the IP subnet for the interface (supports class-less masking).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove an IP network address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.

- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring an IP network address classification rule, specify an optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.
- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source IP address *and* the VLAN ID tag.
- Untagged packets are only classified using the specified IP address; the VLAN ID tag is ignored if it is specified with this rule.

Examples

```
-> unp classification ip-address 10.1.1.1 mask 255.255.255.0 profile1 CustA
-> unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile1 vNP1 profile2
vNP2
-> unp classification ip-address 50.1.1.1 mask 255.255.255.0 vlan-tag 300 profile1
CustB
-> unp classification ip-address 60.1.1.1 mask 255.255.0.0 domain 2 profile1 unp2
profile2 unp3-spb
-> unp classification ip-address 70.1.1.1 mask 255.255.0.0 domain 1 vlan-tag 20:30
profile1 vNP3
-> no unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile2
-> no unp classification ip-address 10.1.1.1 mask 255.255.255.0
```

Release History

Release 8.3.1; command was introduced.

```

unp classification vlan-tag

Defines a VLAN tag classification rule for the specified UNP. If the VLAN ID tag of the device traffic matches the VLAN ID defined for the rule, the specified UNP is applied to the device.

unp classification vlan-tag {*vlan_id* | *outer_vlan_id:inner_vlan_id*} [**domain** *domain_id*] {**profile1** *profile_name* [**profile2** *profile_name*] [**profile3** *profile_name*]}

no unp classification vlan-tag *vlan_id* [**profile1**] [**profile2**] [**profile3**]

Syntax Definitions

<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>domain_id</i>	0

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a VLAN tag rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a VLAN tag classification rule, specify an optional customer domain ID before specifying the name of the UNP for which the rule will classify traffic.

- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- Untagged packets are not classified with this rule.

Examples

```
-> unp classification vlan-tag 400 profile1 CustA
-> unp classification vlan-tag 10:20 domain 3 profile1 unp1 profile2 spb1
-> no unp classification vlan-tag 10:20 profile1
-> no unp classification vlan-tag 400
```

Release History

Release 8.3.1; command was introduced.

Related Commands

  alaDaUNPCustDomainVlanTagRuleProfile3
```

unp classification lldp med-endpoint

Defines a Link Layer Discovery Protocol (LLDP) classification rule for the specified UNP profile. This rule is used specifically for IP phones and OmniAccess Stellar Access Point (AP) devices.

```
unp classification lldp med-endpoint {ip-phone | access-point} {profile1 profile_name [profile2
profile_name] [profile3 profile_name]}
```

```
no unp classification lldp med-endpoint {ip-phone | access-point} [profile1] [profile2] [profile3]
```

Syntax Definitions

ip-phone	When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
access-point	When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP profile.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- There is a built-in LLDP classification rule for access points that is assigned to built-in profiles named “defaultWLANProfile” and “defaultWLANAccessProfile”. This rule facilitates the automatic detection

and classification of OmniAccess Stellar APs that are connected to UNP bridge and access ports.

Consider the following regarding the built-in LLDP access point rule:

- The rule cannot be removed from the switch configuration. However, the profile designation for the rule can be changed.
 - The rule does not appear in the configuration snapshot for the switch unless the profile assignment for the rule was changed.
 - When Stellar APs are detected on a UNP bridge port, they are classified and assigned to the VLAN that is mapped to the built-in “defaultWLANProfile”. This VLAN is advertised to the AP device as the management VLAN for untagged AP traffic.
 - When Stellar APs are detected on a UNP access port, they are classified and assigned to the Shortest Path Bridging (SPB) service that is mapped to the built-in “defalutWLANAccessProfile”. This service is advertised to the AP device as the management service for untagged AP traffic.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
 - Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
 - Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

Examples

```
-> unp classification lldp med-endpoint ip-phone profile1 un1-vlan profile2 un2-  
vlan  
-> no unp classification lldp med-endpoint ip-phone profile2  
-> no unp classification lldp med-endpoint ip-phone  
  
-> unp classification lldp med-endpoint access-point profile1 defaultWLANProfile  
-> no unp classification lldp med-endpoint access-point  
ERROR: BUILT-IN Access-Point LLDP Rule cannot be deleted
```

Release History

Release 8.3.1; command was introduced.

Release 8.4.1.R02; **access-point** parameter added.

Related Commands

unp classification	Configures the classification status for the UNP port. Rules are not applied when classification is disabled for the port.
unp profile	Configures a UNP profile.
show unp classification	Displays the UNP classification rule configuration.

MIB Objects

```
alaDaUNPEndPoinRuleTable  
alaDaUNPEndPoinRuleId  
alaDaUNPEndPoinProfile1  
alaDaUNPEndPoinProfile2  
alaDaUNPEndPoinProfile3
```

unp classification authentication-type

Defines an Authentication Type classification rule for the specified UNP profile. If the type of authentication applied to the device traffic matches the authentication type defined for the rule, the specified profile is applied to the device.

```
unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [vlan-tag vlan_id |
outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [profile1] [profile2]
[profile3]
```

Syntax Definitions

none	No authentication was applied to the device.
mac	The device was successfully authenticated through MAC authentication.
802.1x	The device was successfully authenticated through 802.1X authentication.
fail	Optional parameter to specify failed MAC or 802.1X authentication.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

Defaults

By default, no classification rules are defined for a UNP profile.

parameter	default
<i>vlan_id</i>	none

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.
- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring this type of classification rule, specify an optional VLAN tag before specifying the UNP profile name for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
 - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
 - Profiles mapped to a service (SPB, VXLAN, L2 GRE, VPLS, or static) are only applied to matching traffic received on UNP access ports.
 - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified authentication type *and* the VLAN ID tag.
- Untagged packets are only classified using the specified authentication type; the VLAN ID tag is ignored if it is specified with this rule.

Examples

```
-> unp classification authentication-type 802.1X profile1 un1-vlan profile2 un2-
vlan profile3 un3-vlan
-> no unp classification authentication-type 802.1X profile2
-> no unp classification authentication-type 802.1X

-> unp classification authentication-type 802.1X fail profile1 un1-vlan profile2
unp2-vlan profile3 un3-vlan
-> no unp classification authentication-type 802.1X fail profile3
-> no unp classification authentication-type 802.1X fail

-> unp classification authentication-type MAC profile1 un1-vlan profile2 un2-vlan
profile3 un3-vlan
-> no unp classification authentication-type MAC profile2
-> no unp classification authentication-type MAC

-> unp classification authentication-type MAC fail profile1 un1-vlan profile2
unp2-vlan profile3 un3-vlan
-> no unp classification authentication-type MAC fail profile3
-> no unp classification authentication-type MAC fail

-> unp classification authentication-type MAC vlan-tag 10 profile1 un1-vlan
```

```
profile2 unp2-vlan profile3 unp3-vlan
-> no unp classification authentication-type MAC profile2
-> no unp classification authentication-type MAC
```

Release History

Release 8.3.1; command was introduced.

Related Commands

unp classification	Configures the classification status for the UNP port. Rules are not applied when classification is disabled for the port.
unp profile	Configures a UNP profile.
show unp classification	Displays the UNP classification rule configuration.

MIB Objects

```
alaDaUNPAuthRuleTable
  alaDaUNPAuthRuleType
  alaDaUNPAuthRuleVlanTag
  alaDaUNPAuthRuleProfile1
  alaDaUNPAuthRuleProfile2
  alaDaUNPAuthRuleProfile3
```

unp classification-rule

Configures an extended classification rule name and assigns a precedence value to the specified name. This type of rule defines a list of rule conditions, all of which a device must match to be classified into the UNP profile associated with the extended rule name.

```
unp classification-rule rule_name [precedence precedence_value] [profile1 profile_name [profile2 profile_name] [profile3 profile_name]]
```

```
no unp classification-rule rule_name [profile1] [profile2] [profile3]
```

Syntax Definitions

<i>rule_name</i>	The name to associate with the extended classification rule.
<i>precedence_value</i>	The precedence level to assign to the extended rule. The valid range is 1–255 (1 = lowest, 255 = highest). Precedence value 255 is reserved for Device Profiling classification rules.
<i>profile_name</i>	The name of an existing UNP profile to assign to the extended rule.

Defaults

parameter	default
<i>precedence_value</i>	1
<i>profile_name</i>	none

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the extended rule from the switch configuration or to remove a UNP profile name assigned to the rule.
- The precedence value specified with this command is used to determine precedence among extended classification rules.
- Extended rules take precedence over all other UNP classification rules (individual rules and binding rule combinations).
- Although some individual classification rules can be combined to form a binding rule, a binding rule is not assigned a rule name and does not have a configurable precedence value. In addition, extended classification rules offer more rule combinations than binding rules.

- The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (these rules cannot be removed):
 - devProfPrinter
 - devProfWindows
 - devProfIP-Phone
 - devProfWireless-Router
 - devProfSmartPhone/PDA/Tablets

Examples

```
-> unp classification-rule ext-r1
-> unp classification-rule ext-r1 profile1 UNP1 profile2 UNP2
-> unp classification-rule ext-r1 precedence 250

-> unp classification-rule ext-r2
-> unp classification-rule ext-r2 precedence 255
ERROR: Precedence 255 is reserved for Device Profiling
-> unp classification-rule ext-r2 precedence 254
-> unp classification-rule ext-r2 profile1 UNP3 profile2 UNP4 profile3 UNP5

-> no unp classification-rule ext-r1 profile1 UNP1
-> no unp classification-rule ext-r1

-> no unp classification-rule ext-r2 profile1 UNP4
-> no unp classification-rule ext-r2

-> no unp classification-rule devProfPrinter
ERROR: Device Profiling Rule cannot be modified
```

Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **edge-profile** parameter deprecated; **profile1**, **profile2**, and **profile3** parameters added.

Release 8.5R2; precedence value 255 reserved for Device Profiling extended classification rules.

```

unp classification-rule port

Defines a Port rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* {**port** *chassis/slot/port1*[-*port2*] | **linkagg** *agg_id*}

no unp classification-rule *rule_name* {**port** | **linkagg**}

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>chassis/slot/port1</i> [- <i>port2</i>]	The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i>	Link aggregate ID.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Port rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 port 1/1/10
-> no unp classification-rule ext-r1 port

-> unp classification-rule ext-r2 port 1/1/1-5
-> no unp classification-rule ext-r2 port

-> unp classification-rule ext-r3 linkagg 10
-> unp classification-rule ext-r3 linkagg
```

Release History

Release 8.1.1; command was introduced.

unp classification-rule domain

Defines a domain ID rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **domain** *domain_id*

no unp classification-rule *rule_name* **domain**

Syntax Definitions

rule_name The name of an extended classification rule to which the rule condition is assigned.

domain_id Domain ID number.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Domain ID rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 domain-id GRP1
-> no unp classification-rule ext-r1 domain-id
```

Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **group-id** parameter changed to **domain**.

unp classification-rule mac-address

Defines a MAC address, rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **mac-address** *mac_address*

no unp classification-rule *rule_name* **mac-address**

Syntax Definitions

rule_name The name of an extended classification rule to which the rule condition is assigned.

mac_address MAC address (e.g., 00:00:39:59:f1:0c).

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 mac-address 00:11:22:33:44:55
-> no unp classification-rule ext-r1 mac-address
```

Release History

Release 8.1.1; command was introduced.

Related Commands

- unp classification-rule** Configures an extended classification rule name and associated UNP profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleMacAddr
```

unp classification-rule mac-oui

Defines a MAC OUI rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **mac-oui** *mac_oui*

no unp classification-rule *rule_name* **mac-oui**

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>mac_address</i>	MAC address (e.g., 00:00:39:59:f1:0c).
<i>mac_oui</i>	The Organizationally Unique Identifier (OUI) of the MAC address. The OUI is the first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 mac-oui 00:11:22
-> no unp classification-rule ext-r1 mac-oui
```

Release History

Release 8.1.1; command was introduced.

Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.

  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleMacOuiAddr
```

unp classification-rule mac-range

Defines a MAC address range rule condition for the specified extended classification rule name.

```
unp classification-rule rule_name mac-range low_mac_address high_mac_address
```

```
no unp classification-rule rule_name mac-range
```

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>low_mac_address</i>	MAC address that defines the low end of the range (for example, 00:00:39:59:f1:00).
<i>high_mac_address</i>	MAC address that defines the high end of the range (for example, 00:00:39:59:f1:90).

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

```

unp classification-rule ip-address

Defines an IP network address rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **ip-address** *ip_address* **mask** *subnet_mask*

no unp classification-rule *rule_name* **ip-address**

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>ip_address</i>	IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>subnet_mask</i>	An IP address mask to identify the IP subnet for the interface (supports class-less masking).

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 ip-address 10.0.0.20 mask 255.0.0.0
-> no unp classification-rule ext-r1 ip-address
```

Release History

Release 8.1.1; command was introduced.

Related Commands

  alaDaUNPClassifRuleIpMaskType  
  alaDaUNPClassifRuleIpMask
```

unp classification-rule vlan-tag

Defines a VLAN tag rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **vlan-tag** [*vlan_id* | *outer_vlan_id:inner_vlan_id*]

no unp classification-rule **vlan-tag**

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets. Specify a value of zero to classify untagged traffic.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

Examples

```
-> unp classification-rule ext-r1 vlan-tag 200
-> unp classification-rule ext-r2 vlan-tag 10:20
-> unp classification-rule ext-r3 vlan-tag 0
-> no unp classification-rule ext-r1 vlan-tag
```

Release History

Release 8.2.1; command was introduced.

Related Commands

MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleVlanTag
```

unp classification-rule lldp med-endpoint

Defines an LLDP rule condition for the specified extended classification rule name. This rule condition is specifically to detect IP phone TLVs or OmniAccess Stellar Access Point (AP) TLVs.

unp classification-rule *rule_name* lldp med-endpoint {ip-phone | access-point}

no unp classification-rule *rule_name* lldp med-endpoint ip-phone

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the port condition is assigned.
ip-phone	When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
access-point	When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- When using the **access-point** option to define this rule condition, make sure “defaultWLANProfile” is assigned as the profile for the specified extended classification rule name.

Examples

```
-> unp classification-rule ext-r1 lldp med-endpoint ip-phone
-> no unp classification-rule ext-r1 lldp med-endpoint ip-phone

-> unp classification-rule AP profile1 defaultWLANProfile
-> unp classification-rule AP lldp med-endpoint access-point
-> no unp classification-rule AP lldp med-endpoint access-point
```

Release History

Release 8.1.1; command was introduced.

Release 8.4.1.R02; **access-point** parameter added.

Related Commands

MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleEndPoin
```

unp classification-rule authentication-type

Defines an authentication type rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **authentication-type** {**none** | **mac** [**fail**] | **802.1x** [**fail**]}

no unp classification-rule *rule_name* **authentication-type**

Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the port condition is assigned.
none	No authentication was applied to the device.
mac	The device was successfully authenticated through MAC authentication.
802.1x	The device was successfully authenticated through 802.1X authentication.
fail	Optional parameter to specify failed MAC or 802.1X authentication.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.
- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.

Examples

```
-> unp classification-rule ext-r1 authentication-type 8021x
-> unp classification-rule ext-r1 authentication-type 8021X fail
```

```
-> unp classification-rule ext-r1 authentication-type mac
-> unp classification-rule ext-r1 authentication-type mac fail
-> no unp classification-rule ext-r1 authentication-type
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp classification-rule	Configures an extended classification rule name and associated profile.
show unp classification-rule	Displays the UNP extended classification rule configuration.

MIB Objects

```
alaDaUNPClassifRuleTable
  alaDaUNPClassifRuleName
  alaDaUNPClassifRuleAuthType
```

unp classification-rule device-type

Defines a Device Profiling rule condition for the specified extended classification rule name.

unp classification-rule *rule_name* **device-type** *device_name*

no unp classification-rule *rule_name* **device-type**

Syntax Definitions

rule_name The name of an extended classification rule to which the rule condition is assigned.

device_name The name of a device type to which the condition is assigned.

Defaults

By default, no conditions are defined when an extended classification rule is created.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (the device type for these rules cannot be removed):
 - devProfPrinter
 - devProfWindows
 - devProfIP-Phone
 - devProfWireless-Router
 - devProfSmartPhone/PDA/Tablets

Examples

```
-> unp classification-rule ext-r1 device-type Printer
```

```
-> no unp classification-rule ext-r1 device-type
```

```
-> no unp classification-rule devProfPrinter device-type
```

ERROR: Device-type cannot be modified on built-in rules

Release History

Release 8.5R2; command was introduced.

Related Commands

unp classification-rule	Configures an extended classification rule name and associated profile.
show unp classification-rule	Displays the UNP extended classification rule configuration.

MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleDeviceType
```

unp user-role

Configures a user-defined role name and assigns a precedence value to the specified name. This type of role is used to define a list of conditions and a QoS policy list name. If the current context of a device matches all of the role conditions, then the policy list is applied to that device.

unp user-role *role_name* [**precedence** *precedence_value*]

no unp user-role *role_name*

Syntax Definitions

role_name The name to associate with the user-defined role.

precedence_value The precedence level to assign to the user-defined role. The valid range is 1–255 (1 = lowest, 255 = highest).

Defaults

parameter	default
<i>precedence_value</i>	1

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the user-defined role from the switch configuration.
- The precedence value specified with this command is used to determine precedence among other user-defined roles.
- Every time the user context changes for a device, all the user-defined roles are checked to see if there is a role that matches the current user context.
- Only one user-defined role per user is allowed because only one QoS policy list per user is allowed.

Examples

```
-> unp user-role role1
-> unp user-role role2 precedence 255
-> no unp user-role role2
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp user-role policy-list	Assigns a QoS policy list to a user-defined role.
unp user-role profile	Configures a UNP profile condition for a user-defined role name.
unp user-role authentication-type	Defines an authentication type condition for a user-defined role name.
unp user-role cp-status-post-login	Configures the Captive Portal post login status as a condition for a user-defined role.
show unp user-role	Displays the user-defined role configuration for the switch.

MIB Objects

```
alaDaUNPUserRoleTable  
  alaDaUNPUserRoleName  
  alaDaUNPUserRolePrecedenceNum
```

unp user-role policy-list

Assigns a QoS policy list to the specified user-defined role name. When the context of a user device matches all the user-defined role conditions, the policy list associated with the role is applied to the device.

unp user-role *role_name* **policy-list** *list_name*

no unp user-role *role_name* **policy-list**

Syntax Definitions

role_name The name of a user-defined role to which the QoS policy list is assigned.
list_name The name of an existing QoS policy list.

Defaults

By default, no QoS policy list is assigned to a user-defined role.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove a QoS policy list from the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the QoS policy list with that name.
- The QoS policy list name specified with this command must already exist in the switch configuration.

Examples

```
-> unp user-role role1 policy-list role1-list
-> unp user-role role2 policy-list role2-list
-> no unp user-role role2 policy-list
```

Release History

Release 8.1.1; command was introduced.

Related Commands

policy list	Configures a QoS policy list.
show unp user-role	Displays the user-defined role configuration for the switch.

MIB Objects

```
alaDaUNPUserRoleTable  
alaDaUNPUserRoleName  
alaDaUNPUserRolePolicyList
```

unp user-role profile

Defines a UNP profile condition for the specified user-defined role name.

```
unp user-role role_name {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp user-role role_name [profile1] [profile2] [profile3]
```

Syntax Definitions

role_name The name of a user-defined role.
profile_name The name of an existing UNP profile.

Defaults

By default, the profile condition is not configured for a user-defined role.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the profile name as a condition for the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.
- The profile name specified with this command must already exist in the switch configuration.

Examples

```
-> unp user-role role1 profile1 unp1
-> unp user-role role2 profile1 unp1 profile2 unp2
-> unp user-role role3 profile1 unp1 profile2 unp2 profile3 unp3
-> no unp user-role role1 profile1
-> no unp user-role role2 profile1 profile2
-> no unp user-role role3 profile3
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp user-role

Configures the name and precedence for a user-defined role.

unp user-role policy-list

Assigns a QoS policy list to a user-defined role.

show unp user-role

Displays the user-defined role configuration for the switch.

MIB Objects

```
alaDaUNPUserRoleTable  
  alaDaUNPUserRoleName  
  alaDaUNPUserRoleProfile1  
  alaDaUNPUserRoleProfile2  
  alaDaUNPUserRoleProfile3
```

unp user-role authentication-type

Defines an authentication type condition for the specified user-defined role name.

```
unp user-role role_name authentication-type {none | mac [fail] | 802.1x [fail]}
```

```
no unp user-role role_name authentication-type
```

Syntax Definitions

<i>role_name</i>	The name of a user-defined role.
none	No authentication was applied to the device.
mac	The device was successfully authenticated through MAC authentication.
802.1x	The device was successfully authenticated through 802.1X authentication.
fail	Optional parameter to specify failed MAC or 802.1X authentication.

Defaults

By default, the authentication type condition is not configured for a user-defined role.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the authentication type as a condition for the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.
- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.

Examples

```
-> unp user-role role1 authentication-type 8021x
-> unp user-role role1 authentication-type 8021X fail
```

```
-> unp user-role role1 authentication-type mac
-> unp user-role role1 authentication-type mac fail
-> no unp user-role role1 authentication-type
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp user-role	Configures the name and precedence for a user-defined role.

MIB Objects

```
alaDaUNPUserRoleTable
  alaDaUNPUserRoleName
  alaDaUNPUserRoleAuthType
```

unp user-role cp-status-post-login

Configures the Captive Portal (CP) post login status as a condition for the specified user-defined role name.

unp user-role *role_name* **cp-status-post-login**

no unp user-role *role_name* **cp-status-post-login**

Syntax Definitions

role_name The name of an existing user-defined role.

Defaults

By default, the CP post login status condition is not configured for a user-defined role.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the CP post login status as a condition for the specified user-defined role.
- When this condition is active for a user-defined role, the switch will check to see if a device is in a CP post login state before applying the QoS policy list associated with the user-defined role.

Examples

```
-> unp user-role role1 cp-status-post-login
-> no unp user-role role1 cp-status-post-login
```

Release History

Release 8.1.1; command was introduced.

Related Commands

unp user-role

Configures the name and precedence for a user-defined role.

unp user-role policy-list

Assigns a QoS policy list to a user-defined role.

show unp user-role

Displays the user-defined role configuration for the switch.

MIB Objects

alaDaUNPUserRoleTable

alaDaUNPUserRoleName

alaDaUNPUserRolePostLoginStatus

unp restricted-role policy-list

Assigns an explicit QoS policy list to an implicit restricted role. When the switch assigns a user device to one of the restricted role states (unauthorized, Quarantine Manager, or Captive Portal pre-login), the explicit QoS policy list is applied instead of the built-in policy list associated with the restricted role.

unp restricted-role {**unauthorized** | **qmr** | **cp-prelogin**} **policy-list** *list_name*

no unp restricted-role {**unauthorized** | **qmr** | **cp-prelogin**} **policy-list**

Syntax Definitions

<i>list_name</i>	The name of an existing QoS policy list.
unauthorized	Applies the explicit policy list to unauthorized devices.
qmr	Applies the explicit policy list to quarantined devices. <i>Not supported on the OmniSwitch 6360.</i>
cp-prelogin	Applies the explicit policy list to devices in a Captive Portal pre-login state.

Defaults

By default, the built-in policy list associated with the restricted role state.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the explicit QoS policy list assignment.
- An explicit QoS policy list overrides the built-in policy list associated with the restricted role state.
- When the explicit policy list assignment is removed, the switch reverts back to using the built-in policy list associated with the restricted role state.

Examples

```
-> unp restricted-role unauthorized policy-list unauth1
-> unp restricted-role qmr policy-list quarantined1
-> unp restricted-role cp-prelogin policy-list cplogin1
-> no unp restricted-role unauthorized
-> no unp restricted-role qmr
-> no unp restricted-role cp-prelogin
```

Release History

Release 8.1.1; command was introduced.

Related Commands

Displays the UNP restricted role policy list configuration.

MIB Objects

alaDaUNPRstrctedRoleTable

alaDaUNPRstrctedRoleType

alaDaUNPRstrctedRolePolicyList

captive-portal mode

Configures the Captive Portal mode of operation.

captive-portal mode {**internal** | **internal dhcp** [**ip-lease-time** *seconds*] [**ip-renew-time** *seconds*] [**ip-rebinding-time** *seconds*] | **external**}

no captive-portal mode internal

Syntax Definitions

internal	Internal Captive Portal (Web server is on the switch. A VLAN change requires a port bounce).
internal dhcp	Internal DHCP Captive Portal (Web server is on the switch. IP address from Captive Portal subnet is leased to the client; VLAN change does not require a port bounce).
ip-lease-time <i>seconds</i>	The amount of time an IP address is leased to a client. The valid range is 20–120 seconds.
ip-renew-time <i>seconds</i>	The amount of time until a client with a leased IP address attempts to renew the leased IP address.
ip-rebinding-time <i>seconds</i>	The amount of time until a client attempts to obtain a new leased IP address (occurs when renew attempts fail).
external	Not supported; an external Captive Portal operation is provided through the OmniSwitch Bring Your Own Device (BYOD) solution.

Defaults

By default, the mode is set to internal Captive Portal. When the internal DHCP Captive Portal mode is selected without specifying any optional parameter values, the following default values are set:

parameter	default
ip-lease-time	30 seconds
ip-renew-time	15 seconds
ip-rebinding-time	26 seconds

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to revert the Captive Portal mode back to the default internal mode (no internal DHCP functionality).
- Only the internal and internal DHCP Captive Portal modes (Web server on the switch) are configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.
- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. The Captive Portal mode determines how a device in the pre-login state obtains an IP address, the necessary DNS information, and whether a port bounce is required after a VLAN change.
 - If the internal Captive Portal mode (the default) is active, the device can directly contact a DHCP server to get an IP address and DNS information. A port bounce action is required if the initial VLAN assignment for the device is changed.
 - If the internal DHCP Captive Portal mode is active, the switch provides basic DHCP functionality to assign the device an IP address with a short-term lease from the Captive Portal subnet (10.123.0.0) and provide the necessary DNS information. A port bounce action is not required if the initial VLAN assignment for the device is changed.
- Consider the following when changing the internal DHCP parameter values:
 - The **ip-renew-time** is 50% of the **ip-lease-time**.
 - The **ip-rebinding-time** is 87.5% of the **ip-lease-time**.
 - When only the **ip-lease-time** is changed, the **ip-renew-time** and **ip-rebinding-time** are automatically recalculated based on the noted percentages.
 - Make sure the **ip-renew-time** specified is less than the **ip-rebinding-time**.
 - Make sure the **ip-rebinding-time** specified falls between the **ip-renew-time** and **ip-lease-time**.

Examples

```
-> captive-portal mode internal-dhcp
-> captive-portal mode internal-dhcp ip-lease-time 120
-> captive-portal mode internal
-> no captive-portal mode internal
```

Release History

Release 8.5R4; command was introduced.

```

captive-portal name

Configures an IP address or Fully Qualified Domain Name (FQDN) as a redirect URL to use for Captive Portal.

captive-portal name *{ip_address | domain_name}*

no captive-portal name

Syntax Definitions

<i>ip_address</i>	The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.
<i>domain_name</i>	An FQDN (up to 32 characters) to which HTTP traffic is redirected.

Defaults

By default, the Captive Portal redirect name is set to “captive-portal.com”.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to revert the URL name back to the default “captive-portal.com”.
- Use this command to change the Captive Portal redirect URL name to match the common name (cn) used by the public certificate on the switch. Matching these two names prevents a certificate warning message caused when these names do not match.

Note. Do not preface the redirect URL domain name with **https://**; the switch automatically adds **https://** to the beginning of the domain name.

- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.
- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login Web pages to the user device.
- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.

Examples

```
-> captive-portal name cert-name  
-> captive-portal name "20.2.2.1"  
-> no captive-portal name
```

Release History

Release 8.1.1; command was introduced.

Related Commands

captive-portal ip-address	Configures the internal Captive Portal IP address for the switch.
show captive-portal configuration	Displays the global Captive Portal configuration for the switch.

MIB Objects

```
alaDaCPortalGlobalConfig  
  alaDaCPortalRedirectUrlName
```

captive-portal ip-address

Configures the internal Captive Portal IP address for the switch.

captive-portal ip-address *ip_address*

Syntax Definitions

ip_address IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).

Defaults

By default, the internal Captive Portal IP address is set to 10.123.0.1.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- If the default 10.123.0.0 subnet is already in use, then use this command to change the Captive Portal IP address to another 10.x.0.0 subnet (only the second octet of the Captive Portal IP address can be changed).
- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login role. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.
- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect URL name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login web pages to the user device.
- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.

Examples

```
-> captive-portal ip-address 10.255.0.20
```

Release History

Release 8.1.1; command was introduced.

Related Commands

  alaDaCPortalIpAddress
```

captive-portal success-redirect-url

Configures the URL of a specific site to which a user is redirected after a successful Captive Portal authentication.

captive-portal success-redirect-url *redirect_url*

no captive-portal success-redirect-url

Syntax Definitions

redirect_url The redirect URL (up to 63 characters).

Defaults

By default, no success redirect URL is configured.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

Use the **no** form of this command to remove the success redirect URL from the Captive Portal global configuration.

Examples

```
-> captive-portal success-redirect-url http://server-1.com/pass.html
-> no captive-portal success-redirect-url
```

Release History

Release 8.1.1; command was introduced.

Related Commands

```

captive-portal proxy-server-port

Configures the proxy server port to use for Captive Portal.

captive-portal proxy-server-port *proxy_port*

no captive-portal proxy-server-port

Syntax Definitions

proxy_port The HTTP proxy port number. The valid range is 1024–49151.

Defaults

By default, the proxy server port number is set to 8080.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to set the proxy port number back to the default (8080).
- This command overwrites the existing proxy port number for the switch.
- The proxy port number only requires changing if the proxy port used is not 80 or 8080.

Examples

```
-> captive-portal proxy-server-port 1200
-> no captive-portal proxy-server-port
```

Release History

Release 8.1.1; command was introduced.

captive-portal retry-count

Configures the number of times a device can try to login before Captive Portal determines that authentication for that device has failed.

captive-portal retry-count *retries*

Syntax Definitions

retries The number of login attempts allowed. The valid range is 1–99.

Defaults

By default, the retry count is set to 3.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

No access page is sent to devices that exceed the number of login retries allowed.

Examples

```
-> captive-portal retry-count 5
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show captive-portal configuration](#) Displays the global Captive Portal configuration for the switch.

MIB Objects

```
alaDaCPortalGlobalConfig
  alaDaCPortalRetryCnt
```

captive-portal authentication-pass

Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process. Each policy can specify a QoS policy list and UNP profile name to assign to the authenticated devices.

```
captive-portal authentication-pass {policy-list list_name | profile profile_name | profile-change {enable | disable}}
```

```
no captive-portal authentication-pass {policy-list | profile}
```

Syntax Definitions

<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
enable	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
disable	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

Defaults

By default, no policy list name or UNP profile name is specified for the global Captive Portal configuration.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal authentication pass policy from the global Captive Portal configuration.
- When the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal users is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is applied to the authenticated users.
- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.
- If the new UNP profile assigned also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.

- When the **profile-change** parameter is disabled, the QoS policy list name returned from the RADIUS server or the list name specified with this command is applied instead.
- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
 - The policy list name returned from the RADIUS server.
 - The policy list name specified with this command for the global Captive Portal configuration.
 - The policy list name associated with the UNP profile returned from the RADIUS server.
 - The policy list name associated with the UNP profile specified with this command for the global Captive Portal configuration.
- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

Examples

```
-> captive-portal authentication-pass policy-list list1
-> captive-portal authentication-pass profile unpl-vlan profile-change enable
-> captive-portal authentication-pass profile-change disable
-> no captive-portal authentication-pass policy-list
-> no captive-portal authentication-pass profile
```

Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

Related Commands

[captive-portal authentication-pass domain](#) Configures a domain specific authentication pass policy to determine the QoS policy list or UNP profile name to apply to authenticated devices. This type of policy overrides the global Captive Portal configuration.

[show captive-portal configuration](#) Displays the global Captive Portal configuration for the switch.

MIB Objects

```
alaDaCPortalGlobalConfig
  alaDaCPortalPolicyListName
  alaDaCPortalUNPProfile
  alaDaCPortalUNPProfileChange
```

captive-portal authentication-pass domain

Configures a domain specific authentication pass policy. This type of policy is applied to all devices within the specified domain that were successfully authenticated through the Captive Portal process.

captive-portal authentication-pass realm {prefix | suffix} domain *domain_name* {policy-list *list_name* | profile *profile_name* | profile-change {enable | disable}}

no captive-portal authentication-pass [realm {prefix | suffix} domain *domain_name*]

Syntax Definitions

prefix	Specifies a prefix domain name (for example, <i>domain_name</i> /user).
suffix	Specifies a suffix domain name (for example, user@ <i>domain_name</i>).
<i>domain_name</i>	The domain name for the user device.
<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
enable	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
disable	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

Defaults

By default, no domain specific authentication pass policy is configured for the Captive Portal process.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the domain specific authentication pass policy from the Captive Portal configuration.
- Use the **realm prefix domain** or **realm suffix domain** parameter to apply the authentication policy list or UNP profile based on the domain name of the Captive Portal authenticated user device.
- If the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal user is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is then applied to the authenticated users.
- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is

completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.

- If the new profile assigned to the user also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.
- If the **profile-change** parameter is disabled, then the QoS policy list name returned from the RADIUS server or the list name specified through the global (non-domain specific) Captive Portal configuration is applied.
- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
 - The policy list name returned from the RADIUS server.
 - The policy list name specified with this command or through the global Captive Portal configuration.
 - The policy list name associated with the UNP profile returned from the RADIUS server.
 - The policy list name associated with the UNP profile specified with this command or through the global Captive Portal configuration.
- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

Examples

```
-> captive-portal authentication-pass realm prefix domain asia-pacific policy-list
list2
-> captive-portal authentication-pass realm suffix domain north-america profile
unp2 profile-change enable
-> no captive-portal authentication-pass realm suffix domain north-america
```

Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

Related Commands

captive-portal authentication-pass Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process.

show captive-portal configuration Displays the global Captive Portal configuration for the switch.

  alaDaCPortalAuthUNPProfile
```

alaDaCPortalAuthUNProfileChange

captive-portal-profile

Configures a Captive Portal profile that is assigned to a UNP profile. This type of profile defines Captive Portal configuration options that are applied to devices classified into the assigned UNP profile. This command page describes the base command (**captive-portal-profile** *profile_name*) along with the other command keywords that are used to configure profile attributes.

```
captive-portal-profile profile_name
  [aaa-profile aaa_profile_name]
  [success-redirect-url redirect_url]
  [retry-count retries]
  [authentication-pass [realm {prefix | suffix} domain domain_name] {policy-list list_name | profile
profile_name | profile-change {enable | disable}}
```

```
no captive-portal-profile profile_name
```

Syntax Definitions

<i>profile_name</i>	The name to assign to the Captive Portal profile (up to 32 characters).
<i>aaa_profile_name</i>	The name of an authentication, authorization, and accounting (AAA) profile to associate with the Captive Portal profile.
<i>redirect_url</i>	A URL (up to 63 characters) to which user devices are redirected after successful Captive Portal authentication.
<i>retries</i>	The number of login attempts allowed. The range is 1–99.
realm prefix	Specifies a prefix domain name (for example, <i>domain_name</i> /user).
realm suffix	Specifies a suffix domain name (for example, user@ <i>domain_name</i>).
<i>domain_name</i>	The domain name for the user device.
<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
enable	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
disable	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

Defaults

parameter	default
<i>aaa_profile_name</i>	none
<i>redirect_url</i>	none
<i>retries</i>	3
realm prefix suffix	none
<i>domain_name</i>	none
<i>list_name</i>	none
<i>profile_name</i>	none
enable disable	disabled

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal profile from the switch configuration.
- Creating a Captive Portal profile name with the base command (**captive-portal-profile** *profile_name*) is not required to configure a profile attribute value. If the profile name does not exist, the switch will automatically create the name specified when the attribute is configured. For example, the **unp captive-portal-profile cp-profl retry-count 5** command will create the “cp-profl” profile if it does not already exist in the switch configuration.
- When a Captive Portal profile is applied to a UNP profile, the parameter values defined in the profile override the global Captive Portal parameter values configured for the switch.
- A Captive Portal profile is applied only when Captive Portal authentication is enabled for the UNP profile. If there is no Captive Portal profile associated with a UNP profile, then the global Captive Portal configuration is applied.
- Assigning an AAA profile to a Captive Portal profile defines specific AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are used for Captive Portal authentication. If there is no AAA profile assigned, then the global AAA configuration is used.
- AAA profiles are configured using the **aaa profile** command. See the “AAA Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide* for more information.

Examples

```

-> captive-portal-profile cp-p1
-> captive-portal-profile cp-p1 aaa-profile aaa_p1
-> captive-portal-profile cp-p1 authentication-pass realm prefix domain asia-
pacific policy-list list1
-> no captive-portal-profile cp-p1 aaa-profile aaa_p1
-> no captive-portal-profile cp-p1

-> captive-portal-profile cp-p2 retry-count 5
-> captive-portal-profile cp-p2 authentication-pass profile ep-1
-> captive-portal-profile cp-p2 authentication-pass profile-change enable
-> captive-portal-profile cp-p2 success-redirect-url http://server-1.com/pass.html
-> captive-portal-profile cp-p2 authentication-pass profile-change disable
-> no captive-portal-profile cp-p2 authentication-pass profile
-> no captive-portal-profile cp-p2

```

Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

captive-portal customization

Enables or disables the use of custom Web pages for Captive Portal authentication. When customization is enabled, Captive Portal presents Web pages stored in the “/flash/switch/captive_portal/custom_files/” directory on the switch. When customization is disabled, Captive Portal presents Web pages stored in the “/flash/switch/captive_portal/release_files/” directory on the switch.

captive-portal customization {enable | disable}

Syntax Definitions

enable Displays custom web pages for Captive Portal authentication.

disable Displays default web pages for Captive Portal authentication.

Defaults

By default, the web pages provided on the switch are displayed.

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- To create custom Web pages, create a folder in the same path as the “release_files” folder and name the new folder “custom_files” (for example “/flash/switch/captive_portal/custom_files/”). Next, copy the “assets” and “templates” folders found under “/flash/switch/captive_portal/release_files/” to the “custom_files” folder. Modify the contents in the copied folders to create custom Web pages.
- The “release_files” folder is overwritten each time the switch reboots, so **DO NOT** modify the files in this folder for custom use.
- The folders "assets" and "templates" under the /flash/switch/captive_portal/custom_files/ directory are used to create and display Web pages to Captive Portal users when the switch reboots or at runtime when Captive Portal customization is enabled for the switch, if the “custom_files” folder exists.
- Anything in the custom "assets" folder is statically served by the internal Web server on the switch whenever they are requested. These pages are typically .css files, javascript files, or the acceptable use policy and are linked to files in the custom "templates" folder.
- The custom "templates" folder contains the Web pages that are dynamically served to users depending on the Captive Portal state of each user. The file names in this folder must not be changed. The login form field names and form action in these pages must not be changed. The variables in these pages, as denoted by "<?=\${(name)?>", are substituted in place by the internal Web server.

Examples

```
-> captive-portal customization enable  
-> captive-portal customization disable
```

Release History

Release 8.1.1; command was introduced.

Related Commands

[show captive-portal configuration](#)

Displays the global Captive Portal configuration for the switch.

MIB Objects

show captive-portal configuration

Syntax Definitions

N/A

Defaults

N/A

Platforms Supported

This command is supported on the following OmniSwitch platforms:

6360	6465	6560	6570M	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6/ X48C4E/V48C8/ C32E/T24C2/ X24C2	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Usage Guidelines

- Currently only the internal Captive Portal mode (Web server on the switch) is configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.
- The parameter values configured and applied through a Captive Portal profile override any values set through the global Captive Portal configuration. A Captive Portal profile is associated with a UNP profile and is applied to devices classified into that profile.

Examples

```
-> show captive-portal configuration
Captive Portal Global Configuration:
```

```
Captive Portal Mode                = Internal
DHCP Parameters:
  DHCP Lease Time                   = 30
  DHCP Renew Time                   = 15
  DHCP Rebinding Time               = 26
Captive Portal IP address           = 10.123.0.1
Captive Portal Redirect String      = captive-portal.com
Captive Portal Success Redirect URL =
Captive Portal Proxy Server Port    = 8080
Captive Portal Retry Count          = 3
Captive Portal Global Auth Policy List=
Captive Portal Page Customization  = Disable
Captive Portal Profile Name         =
```

```

Captive Portal Profile Change          = Disable
Domain Specific Policy Lists:
      Domain      | Realm | Policy List | Profile Name | Profile
                  |       |            |             | Change
-----|-----|-----|-----|-----
na01              | Suffix | qos-bw1    | unp1-vlan   | Enable
na02              | Prefix | qos-bw2    | unp2-vlan   | Enable

```

output definitions

Captive Portal Mode	The Captive Portal mode of operation. Only the internal and internal DHCP modes (Web server on the OmniSwitch) are supported at this time. Configured through the captive-portal mode command.
DHCP Parameters:	A list of DHCP parameter values that are applied when the internal DHCP mode is active. These fields display “N/A” when the internal DHCP mode is not active. Configured through the captive-portal mode command.
DHCP Lease Time	The amount of time an IP address is leased to a DHCP client.
DHCP Renew Time	The amount of time, in seconds, until an attempt is made to renew the leased IP address (50% of the DHCP Lease Time).
DHCP Rebinding Time	The amount of time until an attempt is made to obtain a new IP leased address (87.5% of the DHCP Lease Time).
Captive Portal IP address	The internal Captive Portal IP address for the switch. Configured through the captive-portal ip-address command.
Captive Portal Redirect String	The name of the redirect URL that is used for accessing a public certificate. Configured through the captive-portal name command.
Captive Portal Success Redirect URL	The URL of a specific site to which a user is redirected after a successful Captive Portal authentication. Configured through the captive-portal success-redirect-url command.
Captive Portal Proxy Server Port	The proxy server port to use for Captive Portal. Configured through the captive-portal proxy-server-port command.
Captive Portal Retry Count	The number of times a device can try to login before Captive Portal determines that authentication for that device has failed. Configured through the captive-portal retry-count command.
Captive Portal Global Auth Policy List	The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication. Configured through the captive-portal authentication-pass command.
Captive Portal Page Customization	Whether or not (Enable or Disable) customized Captive Portal pages are presented to the user.
Captive Portal Profile Name	The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled. Configured through the captive-portal authentication-pass command.
Captive Portal Profile Change	The status of profile change (Enable or Disable). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option. Configured through the captive-portal authentication-pass command.

output definitions

Domain Specific Policy Lists:	A list of Captive Portal domain specific policies. The policy list is applied when the domain for a Captive Portal authenticated device matches the domain criteria associated with the list. Domain specific policies take precedence over the global Captive Portal settings.
Domain	The domain name associated with a domain specific policy. Configured through the captive-portal authentication-pass domain command.
Realm	The realm of the domain name (prefix or suffix) associated with a domain specific policy. The realm identifies the domain name as a prefix (<i>domain-name/user</i>) or as a suffix (<i>user@domain-name</i>). Configured through the captive-portal authentication-pass domain command.
Policy List	The name of the QoS policy list that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the list name. Configured through the captive-portal authentication-pass domain command.
Profile Name	The name of the UNP profile that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the profile name. Configured through the captive-portal authentication-pass domain command.
Profile Change	The status of profile change (Enable or Disable) for the associated domain name. When enabled, the initial profile assigned to the Captive Portal device is changed to the profile specified through the profile change option associated with the domain name. Configured through the captive-portal authentication-pass domain command.

|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Captive Portal Mode</b>                    | The Captive Portal mode of operation. Only internal mode (Web server on the OmniSwitch) is supported at this time.                                                                                                                                                              |
| <b>Captive Portal AAA Profile Name</b>        | The name of an authentication, authorization, and accounting (AAA) profile associated with the Captive Portal profile.                                                                                                                                                          |
| <b>Captive Portal Success Redirect URL</b>    | The URL of a specific site to which a user is redirected after a successful Captive Portal authentication.                                                                                                                                                                      |
| <b>Captive Portal Retry Count</b>             | The number of times a device can try to login before Captive Portal determines that authentication for that device has failed.                                                                                                                                                  |
| <b>Captive Portal Global Auth Policy List</b> | The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication.                                                                                                              |
| <b>Captive Portal Profile Name</b>            | The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled.                                                                  |
| <b>Captive Portal Profile Change</b>          | The status of profile change ( <b>Enable</b> or <b>Disable</b> ). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option.                                                   |
| <b>Domain Specific Policy Lists:</b>          | A list of Captive Portal domain specific policies. The policy list is applied when the domain for a Captive Portal authenticated device matches the domain criteria associated with the list. Domain specific policies take precedence over the global Captive Portal settings. |
| <b>Domain</b>                                 | The domain name associated with a domain specific policy.                                                                                                                                                                                                                       |
| <b>Realm</b>                                  | The realm of the domain name ( <b>prefix</b> or <b>suffix</b> ) associated with a domain specific policy. The realm identifies the domain name as a prefix ( <i>domain-name/user</i> ) or as a suffix ( <i>user@domain-name</i> ).                                              |
| <b>Policy List</b>                            | The name of the QoS policy list that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the list name.                                                                                                        |
| <b>Profile Name</b>                           | The name of the UNP profile that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the profile name.                                                                                                         |
| <b>Profile Change</b>                         | The status of profile change ( <b>Enable</b> or <b>Disable</b> ) for the associated domain name. When enabled, the initial profile assigned to the Captive Portal device is changed to the profile specified through the profile change option associated with the domain name. |

## Release History

Release 8.1.1; command was introduced.

## Related Commands

 alaDaCPortalProfUNPProfile
 alaDaCPortalProfUNPProfileChange
```

---

## qmr quarantine path

Specifies the URL for a remediation server. This information is used by the Quarantine Manager and Remediation (QMR) application. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

**qmr quarantine path** *url*

**no qmr quarantine path**

---

### Syntax Definitions

*url* The URL for the QMR remediation server.

### Defaults

By default, no URL is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **no** form of the command to remove the remediation server URL from the configuration.
- Make sure to add the corresponding IP address for the remediation server to the QMR list of exception subnets, configured through the **qmr quarantine allowed-name** command.
- Configuring the URL *and* adding the server IP address to the allowed list is required to redirect quarantined MAC addresses to the remediation server.
- Redirecting quarantined users learned on UNP access ports for remediation is not supported; users learned on UNP bridge ports can be redirected for remediation.
- QMR is supported only if the user or device is using TLS version 1.2 or above.

### Examples

```
-> qos quarantine path www.remediate.com
-> no quarantine path
```

### Release History

| <b>show quarantine mac group</b>        | Displays the contents of the QoS quarantined MAC address group.                                                     |

## MIB Objects

alaDaQMRGlobalConfig  
alaDaQMRPath

---

## qmr quarantine page

Configures the QMR application to send a “Quarantined” page to a client if a remediation server is not configured. This page is used to notify the client that QMR has quarantined the client.

**qmr qos quarantine page {enable | disable}**

---

### Syntax Definitions

**enable** Enables the sending of a “Quarantined” page to the client.  
**disable** Disables the sending of a “Quarantined” page to the client.

### Defaults

By default, no “Quarantined” page is sent to the client.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

A “Quarantined” page is only sent if a remediation server path was not configured for QMR. Note that even if the remediation server is not active, QMR will not send the page as long as there is a value set for the remediation server path.

### Examples

```
-> qmr quarantine page enable
-> qmr quarantine page disable
```

### Release History

Release 8.1.1; command was introduced.

| <b>qmr quarantine allowed-name</b>      | Configures a list of IP addresses to which a restricted quarantined user can access.              |
| <b>qmr quarantine custom-proxy-port</b> | Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device. |
| <b>qos quarantine mac-group</b>         | Configures the name of the Quarantine MAC address group.                                          |
| <b>show qmr</b>                         | Displays the Access Guardian QMR configuration.                                                   |
| <b>show quarantine mac group</b>        | Displays the contents of the QoS quarantined MAC address group.                                   |

## MIB Objects

alaDaQMRGlobalConfig  
alaDaQMRPage

---

## qmr quarantine allowed-name

Configures a list of IP addresses that a restricted quarantined user is allowed to access.

**qmr quarantine allowed-name** *name* **ip-address** *ip\_address* [**ip-mask** *ip\_mask*]

**no qmr quarantine allowed-name** *name*

---

### Syntax Definitions

|                   |                                                                                                    |
|-------------------|----------------------------------------------------------------------------------------------------|
| <i>name</i>       | Specify a name to assign to the allowed IP network address.                                        |
| <i>ip_address</i> | An IPv4 network address (for example, 10.0.0.0, 171.15.0.0, or 196.190.254.0).                     |
| <i>ip_mask</i>    | A valid IP address mask for the allowed IP network address (for example, 255.0.0.0 or 255.255.0.0) |

### Defaults

By default, no IP addresses are configured as QMR allowed addresses.

| parameter      | default          |
|----------------|------------------|
| <i>ip_mask</i> | IP address class |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **no** form of this command to remove an IP address from the allowed list.
- A maximum of two allowed IP addresses is supported.
- Make sure the IP address of the QMR remediation server is configured as an allowed IP address. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

### Examples

```
-> qmr quarantine allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no qmr quarantine allowed-name server2
```

## Release History

Release 8.1.1; command was introduced.

## qmr quarantine custom-proxy-port

Configures the HTTP proxy port number used in the Web browser configuration of a host device. Quarantine Manager uses this information when trapping HTTP packets from a quarantined device and redirecting traffic from the device for remediation.

**qmr quarantine custom-proxy-port** *proxy\_port*

**no qmr quarantine custom-proxy-port**

---

### Syntax Definitions

*proxy\_port* The HTTP proxy port number. The valid range is 1025–65535.

### Defaults

By default, the redirect proxy port number is set to 8080.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

| No   | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use the **no** form of this command to set the proxy port number back to 8080 (the default).

### Examples

```
-> qmr quarantined custom-proxy-port 8887
-> no qmr quarantined custom-proxy-port
```

### Release History

Release 8.1.1; command was introduced.

### Usage Guidelines

QMR is an OmniSwitch application that interacts with the OmniVista Quarantine Manager (OVQM) application to restrict the network access of quarantined clients and provide a remediation path for such clients to regain their network access. This command displays the OmniSwitch QMR configuration.

### Examples

-> show qmr

```

Quarantine Mac Group Name : Quarantine,
Allowed IP Subnets : IT-HD 135.254.1.10 /255.255.255.248,
 oss-lan 10.1.1.0 /255.255.255.0,
 rem-ser 135.254.200.0 /255.255.255.0,
Custom Proxy port : 8888,
Quarantine Path : www.remediation-server.alu.com,
Quarantine Page : enabled,

```

### Usage Guidelines

The QoS MAC address group contains the MAC addresses of clients that the OmniVista Quarantine Manager (OVQM) application has quarantined. This command displays the quarantined MAC addresses that belong to this group.

### Examples

```
-> show quarantine mac group
Group Name : Quarantine,
Number of MACs quarantined : 6,
00:00:00:11:11:1b,
00:00:00:11:11:1a,
00:00:00:11:11:19,
00:00:00:11:11:18,
00:00:00:11:11:17,
00:00:00:11:11:16,
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[qos quarantine mac-group](#) Configures the name of the QoS Quarantine MAC address group.

### MIB Objects

N/A

---

## zeroconf mdns admin-state

Enables or disables the Multicast DNS (mDNS) relay on the switch.

`zeroconf mdns admin-state {enable | disable}`

---

### Syntax Definitions

**enable** Enables the mDNS relay on the switch.  
**disable** Disables the mDNS relay on the switch.

### Defaults

The mDNS relay feature is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Apple devices use mDNS (multicast DNS) as the underlying protocol for Bonjour exchanges.
- When mDNS relay is disabled on the switch, mDNS packets are handled in the same manner as conventional packets.

### Example

```
-> zeroconf mdns admin-state enable
-> zeroconf mdns admin-state disable
```

### Release History

Release 8.4.1 R02; command introduced.

**Related Commands**

**zeroconf ssdp admin-state** Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch.

**show zeroconf** Displays the zero configuration for the switch.

**MIB Objects**

alaZeroConfMdnsAdminStatus

---

## zeroconf sstp admin-state

Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch. SSDP relay enables the OmniSwitch to allow non-Apple devices to discover services with minimal configuration by the administrator.

**zeroconf sstp admin-state {enable | disable}**

---

### Syntax Definitions

**enable**                      Enables the SSDP relay on the switch.  
**disable**                      Disables the SSDP relay on the switch.

### Defaults

The SSDP relay feature is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The Digital Living Network Alliance (DLNA) uses Universal Plug and Play (UPnP) for media management, discovery, and control. DLNA/UPnP uses SSDP to discover services, similar to how Bonjour uses mDNS for the same. All the SSDP packets coming in on an OmniSwitch are intercepted and tunneled through the GRE tunnel to the WLAN controller (acting as a gateway).
- When SSDP relay is disabled on the switch, SSDP packets are handled in the same manner as conventional packets.

### Example

```
-> zeroconf sstp admin-state enable
-> zeroconf sstp admin-state disable
```

### Release History

Release 8.4.1 R02; command introduced.

**Related Commands**

- zeroconf mdns admin-state** Enables or disables the Multicast DNS (mDNS) relay on the switch.
- show zeroconf** Displays the zero configuration for the switch.

**MIB Objects**

alaZeroConfSstpAdminStatus

---

## zeroconf mode

Configures the mode of the SSDP or MDNS packet processing.

**zeroconf mode [tunnel [type standard] | gateway | responder]**

---

### Syntax Definitions

|                             |                                                                                                                                                                           |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>tunnel</b>               | This is Aruba mode. The packets are sent to the responder through the configured GRE tunnel with protocol value of 0x0. The tunnel mode is configured on the edge switch. |
| <b>tunnel type standard</b> | The packets are sent to the responder through the configured GRE tunnel with protocol value of 0x6558.                                                                    |
| <b>gateway</b>              | The received packets are forwarded to all the VLANs in the gateway VLAN list. The gateway mode is configured on the gateway switch.                                       |
| <b>responder</b>            | This is responder mode. The responder mode is configured on the core switch. Responder mode is not supported on an OmniSwitch 6360 or OmniSwitch 9900.                    |

### Defaults

The tunnel mode (Aruba mode) is enabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- In tunnel mode (both Aruba and Standard), the responder IP address must be configured to tunnel the mDNS or SSDP packets. The operational status will be DOWN until the responder IP address is configured.
- In tunnel mode (both Aruba and Standard) or responder mode, the mDNS and SSDP packets are processed only when the Loopback0 IP address is configured, which is considered as the source IP address for the tunneled packets. Use the **ip interface** command to configure the interface address.
- In responder mode, the tunnel for each edge switch must be configured manually.
- In responder mode if there are no service rules configured, the responder switch will learn all the services but will not process any query received from the mDNS or SSDP client.
- The switch can operate in only one mode at a time.

## Example

```
-> zeroconf mode gateway
-> zeroconf mode tunnel
-> zeroconf mode responder
```

## Release History

Release 8.4.1 R02; command introduced.

| <a href="#">zeroconf access-vlan-list</a>  | Adds or deletes a VLAN from the access VLAN list.                                     |
| <a href="#">show zeroconf</a>              | Displays the zero configuration for the switch.                                       |

## MIB Objects

```
alaZeroConfMode
 alaZeroConfTunnelMode
```

---

## zeroconf responder-ip

Configures the IP address of the tunnel endpoint (zero configuration responder) on the edge switch.

**zeroconf responder-ip** *ip\_address*

**no zeroconf responder-ip** *ip\_address*

---

### Syntax Definitions

*ip\_address*                      The IPv4 address of the zero configuration responder.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Only IPv4 address can be configured as a responder IP address.
- In gateway mode, the responder IP address must not be configured.
- In tunnel mode, the responder IP address must be configured to tunnel the mDNS or SSDP packets. The operational status will be DOWN until the responder IP address is configured.
- To remove the responder IP address configuration, use the **no** form of the command.

### Example

```
-> zeroconf responder-ip 10.0.0.1
-> no zeroconf responder-ip 10.0.0.1
```

### Release History

Release 8.4.1 R02; command introduced.

### Syntax Definitions

|                    |                                                                                                                                                                         |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>policy_name</i> | The name of the zero configuration server policy. The policy name can be maximum 31 characters in length.                                                               |
| <b>unp-name</b>    | The name of a user-defined UNP role to map to the server policy. Multiple roles can be mapped to a server policy. The role name can be maximum 32 characters in length. |
| <b>vlan</b>        | The VLAN ID to be mapped with the server policy. Multiple VLAN IDs can be mapped to a server policy.                                                                    |
| <b>location</b>    | The location name to be mapped with the server policy. Multiple locations can be mapped to a server policy. The location name can be maximum 63 characters in length.   |
| <b>username</b>    | The user name to be mapped with the server policy. Multiple user names can be mapped to a server policy. The user name can be maximum 63 characters in length.          |
| <b>mac-address</b> | The MAC address to be mapped with the server policy. Multiple MAC address can be mapped to a server policy. Maximum size of MAC address allowed is six bytes.           |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The configured server policy is not applied unless it is mapped to a service rule.
- A maximum of 16 roles, 16 locations, 16 VLANs, 16 username, and 16 MAC address can be configured for a server policy.
- The server policy can be modified even when it is mapped to a service rule.

- The server policy cannot be deleted if it is being used by a service rule.
- The server policy attribute can be deleted even when it is mapped to a service rule unless any one of the policy attributes remains configured for that policy.
- To remove the server policy, use the **no** form of the command. To remove specific attribute associated to the policy mention the attribute along with the **no** command.

### Example

```
-> zeroconf server-policy SP1 role employee
-> zeroconf server-policy SP1 vlan 10 20 30
-> zeroconf server-policy SP1 location meetingroom1 meetingroom2
-> zeroconf server-policy SP1 username user1 user2
-> zeroconf server-policy SP1 mac-address e8:e7:32:9a:53:3 e8:e7:32:9a:53:3
-> no zeroconf server-policy SP1
-> no zeroconf server-policy SP1 role employee
-> no zeroconf server-policy SP1 vlan 10 20
-> no zeroconf server-policy SP1 location meetingroom1
-> no zeroconf server-policy SP1 username user2
-> no zeroconf server-policy SP1 mac-address e8:e7:32:9a:53:3
```

### Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **username** and **mac-address** parameters included.

Release 8.7.R2; **role** parameter name changed to **unp-name**; *policy\_name*, **username**, and **location** maximum numbers updated.

### Usage Guidelines

- The configured client policy is not applied unless it is mapped to a service rule.
- A maximum of 64 service rules can be configured.
- A maximum of 16 roles, 16 locations, 16 VLANs, 16 username, and 16 MAC address can be configured for a client policy.

- The client policy can be modified even when it is mapped to a service rule.
- The client policy cannot be deleted if it is being used by a service rule.
- The client policy attribute can be deleted even when it is mapped to a service rule unless any one of the policy attributes remains configured for that policy.
- To remove the client policy, use the **no** form of the command. To remove specific attribute associated to the policy mention the attribute along with the **no** command.

## Example

```
-> zeroconf client-policy SP1 role employee
-> zeroconf client-policy SP1 vlan 10 20 30
-> zeroconf client-policy SP1 location meetingroom1 meetingroom2
-> zeroconf client-policy SP1 username username1 username2
-> zeroconf client-policy SP1 mac-address e8:e7:32:9a:53:3 e8:e7:32:9a:53:3
-> no zeroconf client-policy SP1
-> no zeroconf client-policy SP1 role employee
-> no zeroconf client-policy SP1 vlan 10 20
-> no zeroconf client-policy SP1 location meetingroom1
-> no zeroconf client-policy SP1 username user2
-> no zeroconf client-policy SP1 mac-address e8:e7:32:9a:53:3
```

## Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **username** and **mac-address** parameters included.

Release 8.7R2; **role** parameter name changed to **unp-name**; *policy\_name*, **username**, and **location** maximum numbers updated.

### Syntax Definitions

|                           |                                                                                                                               |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <i>rule_name</i>          | The name of the service rule. The rule name can be maximum 31 characters in length.                                           |
| <i>server_policy_name</i> | Name of the server policy to be mapped with service rule. A server policy cannot be mapped to multiple service rules.         |
| <i>client_policy_name</i> | The name of the client policy to be mapped with the service rule. A client policy cannot be mapped to multiple service rules. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- There must be one-to-one mapping between the server and client policy.
- The responder will respond to a service query only when the server and client policy is matched.
- A service rule with an existing server and client policy mapping cannot be linked to a new server and client policy without deleting the existing mapping.
- A maximum of 64 service rule configuration is supported on a responder.
- To remove a service rule, use the **no** form of the command.

### Example

```
-> zeroconf service-rule SR1 server-policy SP1 client-policy CP1
-> no zeroconf service-rule SR1
```

## Release History

Release 8.4.1 R02; command introduced.

Release 8.7R2; *rule\_name* maximum number changed.

|-----------------------------------------|---------------------------------------------------------------------------------|
| <b>zeroconf mode</b>                    | Configures the mode of the SSDP or mDNS packet processing.                      |
| <b>zeroconf server-policy</b>           | Configures the server policy.                                                   |
| <b>zeroconf client-policy</b>           | Configures the client policy.                                                   |
| <b>zeroconf service-rule service-id</b> | Configures selective services for a service rule to be shared with the clients. |
| <b>show zeroconf</b>                    | Displays the zero configuration for the switch.                                 |
| <b>show zeroconf service rules</b>      | Displays the information of the service rules configured on the responder.      |

## MIB Objects

```
alaZeroConfServiceRuleTable
 alaZeroConfServiceRuleEntry
 alaZeroConfServiceRuleName
 alaZeroConfServiceRuleServerPolicyName
 alaZeroConfServiceRuleClientPolicyName
```

---

## zeroconf service-rule service-id

Configures selective services for a service rule.

```
zeroconf service-rule rule_name [mdns-service-id | ssdp-service-id] service_id1.....[service_idn]
```

```
no zeroconf service-rule rule_name [mdns-service-id | ssdp-service-id] service_id1.....[service_idn]
```

---

### Syntax Definitions

|                        |                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------|
| <i>rule_name</i>       | The name of the service rule.                                                                              |
| <b>mdns-service-id</b> | Configures the mDNS service ID list to be mapped with the service rule.                                    |
| <b>ssdp-service-id</b> | Configures the SSDP service ID list to be mapped with the service rule.                                    |
| <i>service_id</i>      | The service ID to be mapped with the service rule. Multiple service IDs can be mapped with a service rule. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- A service ID can be part of multiple service rule or multiple service IDs can be mapped to a service rule.
- A service ID can be mapped or removed form a service rule without deleting the service rule.
- The responder will respond to a service query only when the server and client policy is matched.
- A maximum of 64 service IDs can be configured for a service rule.
- To remove a service ID, use the **no** form of the command.

### Example

```
-> zeroconf service-rule SR1 mdns-service-id _scanner._tcp.local _ipp._tcp.local
-> zeroconf service-rule SR2 ssdp-service-id urn:schemas-upnp-
org:device:MediaServer:1 upnp:rootdevice
-> no zeroconf service-rule SR1 mdns-service-id _scanner._tcp.local
-> no zeroconf service-rule SR2 ssdp-service-id upnp:rootdevice
```

## Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **ssdp-service-id** parameter added.

## Related Commands

```

---

## zeroconf service-list

Configures a list of known services for mDNS or SSDP service query.

**zeroconf** [**mdns service-list** | **ssdp service-list**] *service\_id1...service\_idn*

**no zeroconf** [**mdns service-list** | **ssdp service-list**] *service\_id1...service\_idn*

---

### Syntax Definitions

|                          |                                                                                                                                                                      |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>mdns service-list</b> | Configures the list of mDNS services for the service query.                                                                                                          |
| <b>ssdp service-list</b> | Configure the list of SSDP services for the service query.                                                                                                           |
| <i>service_id</i>        | The service ID to be included in the service list. A maximum of 64 service IDs can be configured in the list. The service ID can be maximum 63 characters in length. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The services in the list are queried for re-learning by the responder, in an event of reload or takeover on the responder.
- A maximum of 64 service IDs can be configured in a service list.
- To remove a service ID from the service list, use the **no** form of the command.

### Example

```
-> zeroconf mdns service-list _scanner._tcp.local _ipp._tcp.local
-> zeroconf ssdp service-list urn:schemas-upnp-org:device:MediaServer:1
upnp:rootdevice
-> no zeroconf mdns service-list _scanner._tcp.local
-> no zeroconf ssdp service-list upnp:rootdevice
```

### Release History

Release 8.4.1 R02; command introduced.  
 Release 8.4.1 R03; **ssdp service-list** parameter added.  
 Release 8.7R2; *service\_id* maximum number changed.

## Related Commands

- zeroconf service-id query-request**      Queries a specific service.
- show zeroconf services-cache**      Displays the list of services assigned along with the service information.
- show zeroconf**      Displays the zero configuration for the switch.

## MIB Objects

```
alaZeroConfMdnsServiceTable
 alaZeroConfMdnsServiceEntry
 alaZeroConfSsdpServiceEntry
```

---

## zeroconf service-id query-request

Queries a specific service. If the responder does not learn a service, that specific service can be queried for re-learning by the responder.

**zeroconf {mdns | ssdp} service-id *service-id* query-request**

---

### Syntax Definitions

|                   |                                                                                                     |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>mdns</b>       | Sends mDNS query for the service ID to all the configured tunnels to re-learn the service instance. |
| <b>ssdp</b>       | Sends SSDP query for the service ID to all the configured tunnels to re-learn the service instance. |
| <i>service_id</i> | The service ID to be queried for learning by the responder.                                         |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use this command to manually query for a specific service.

### Example

```
-> zeroconf mdns service-id _scanner._tcp.local query-request
-> zeroconf ssdp service-id upnp:rootdevice
```

### Release History

Release 8.4.1 R02; command introduced.  
Release 8.4.1 R03; **ssdp** parameter added.

### Related Commands

|                               |                                                            |
|-------------------------------|------------------------------------------------------------|
| <a href="#">zeroconf mode</a> | Configures the mode of the SSDP or mDNS packet processing. |
| <a href="#">show zeroconf</a> | Displays the zero configuration for the switch.            |

## **MIB Objects**

alaZeroConfMdnsServiceTriggerQuery  
alaZeroConfSsdpServiceTriggerQuery

---

## zeroconf edge-ip-list

Configures the list of tunnel edge endpoint IP addresses. The edge-ip-list must be configured for the responder.

**zeroconf edge-ip-list** *ip\_address1...ip\_addressn*

**no zeroconf edge-ip-list** *ip\_address1...ip\_addressn*

---

### Syntax Definitions

*ip\_address*                    The tunnel edge endpoint IP address, which is the Loopback0 IP address of the edge switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The configured tunnel edge endpoint IP address in the list must be reachable. If the IP addresses are not reachable then the operational status of the mDNS will be down.
- To remove a tunnel edge endpoint IP address from the list, use the **no** form of the command.

### Example

```
-> zeroconf edge-ip-list 10.1.1.1 10.2.2.2 10.3.3.3
-> no zeroconf edge-ip-list 10.1.1.1
```

### Release History

Release 8.4.1 R02; command introduced.

| <a href="#">show zeroconf edge-details</a> | Displays the IP address and reachability status of the tunnel endpoints configured on the responder. |
| <a href="#">show zeroconf</a>              | Displays the zero configuration for the switch.                                                      |

**MIB Objects**

```
alaZeroConfEdgeIpTable
 alaZeroConfEdgeIpEntry
```

---

## zeroconf edge-ip-list mode

Configures the edge IP mode as manual or auto.

**zeroconf edge-ip-list mode [manual | auto]**

---

### Syntax Definitions

**manual** In this mode, the admin has to configure the edge IPs manually.  
**auto** In this mode, edge IPs are automatically learned by the responder.

### Defaults

By default, the mode is manual.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- By default, the mode is manual.
- In manual mode, the admin has to configure the edge IPs manually.

### Example

```
-> zeroconf edge-ip-list mode manual
-> zeroconf edge-ip-list mode auto
```

### Release History

Release 8.7 R1; command introduced.

## Related Commands

[zeroconf mode](#)

Configures the mode of the SSDP or mDNS packet processing.

[show zeroconf edge-details](#)

Displays the IP address and reachability status of the tunnel endpoints configured on the responder.

[show zeroconf](#)

Displays the zero configuration for the switch.

## MIB Objects

alaZeroConfEdgeIpTable  
alaZeroConfEdgeIPMode

---

## zeroconf refresh-database

Refreshes the database (mDNS or SSDP records) with latest server policies, client policies, server rules, learned service instances, and service cache entry.

**zeroconf {mdns | ssdp} refresh-database**

---

### Syntax Definitions

**mdns** Refreshes the mDNS database. The files “mdns\_srvr\_plcy”, “mdns\_srvr\_plcy\_inst”, “mdns\_clnt\_plcy” and “mdns\_srvc\_rule” are updated.

**ssdp** Refreshes the SSDP database. The files “ssdp\_srvr\_plcy”, “ssdp\_srvr\_plcy\_inst”, “ssdp\_clnt\_plcy” and “ssdp\_srvc\_rule” are updated.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use this command to update the latest server policies, server policy name along with learned service instance, client policies and server rules configuration.
- After refreshing the database, use the [show zeroconf services-cache](#) and [show zeroconf server policy-instances](#) commands to display the latest cache and service instances information.

### Example

```
-> zeroconf mdns refresh-database
-> zeroconf ssdp refresh-database
```

### Release History

Release 8.4.1 R02; command introduced.  
Release 8.4.1 R03; **ssdp** parameter included.

## Related Commands

- show zeroconf services-cache** Displays the list of services learned by mDNS or SSDP stack.
- show zeroconf server policy-instances** Displays the mDNS or SSDP service instance learned on the responder for each server policy.

### Usage Guidelines

N/A

### Example

```
-> show zeroconf
zero-conf mode : responder,
MDNS admin status : enabled,
SSDP admin status : disabled
MDNS operational status : up,
SSDP operational status : down,
Tunnel Source IP : 172.16.1.1
```

```
-> show zeroconf
zero-conf mode : gateway,
MDNS admin status : disabled,
SSDP admin status : disabled
MDNS operational status : down,
SSDP operational status : down,
Gateway vlans list : 1, 2, 3
```

```
-> show zeroconf
zero-conf mode : tunnel,
zero-conf tunnel type : standard,
MDNS admin status : disabled,
SSDP admin status : disabled
MDNS operational status : down,
SSDP operational status : down,
```

```

Responder IP : -
Tunnel source IP : -
Access vlans list : 4, 5, 6
-> show zeroconf
zero-conf mode : tunnel,
zero-conf tunnel type : aruba,
MDNS admin status : disabled,
SSDP admin status : disabled
MDNS operational status : down,
SSDP operational status : down,
Responder IP : -
Tunnel source IP : -

```

### Usage Guidelines

N/A

### Example

```
-> show zeroconf service rules
```

```
Service rules:
```

```

Rule name : SR1
Client Policy : CP1
Server Policy : SP1
Attached mdns services : _ipp._tcp.local
Attached sdp services : upnp:rootdevice

```

```

Rule name : SR2
Client Policy : CP2
Server Policy : SP2
Attached mdns services : _ipp._tcp.local
Attached sdp services : upnp:rootdevice

```

```

Rule name : SR3
Client Policy : CP3
Server Policy : SP3
Attached mdns services : _ipp._tcp.local
Attached sdp services : upnp:rootdevice
 upnp:rootdevice

```

### Usage Guidelines

N/A

### Example

```
-> show zeroconf mdns server policy-instances
```

```
MDNS server policy instances:
```

```

Policy name : SP1
Attached service instance : -

Policy name : SP2
Attached service instance : PRINTER_EDGE4
 PRINTER_EDGE3

Policy name : SP3
Attached service instance : -

Policy name : SP4
Attached service instance : PRINTER_EDGE4

```

```
-> show zeroconf sstp server policy-instances
```

```
SSDP server policy instances :
```

```

Policy name : SP1
Attached service instance:

Policy name : SP3

```

```
Attached service instance: uuid:88618bb0-6790-4cb0-9166-
e1d15af5a87c::upnp:rootdevice
Policy name : SP4
Attached service instance: uuid:88618bb0-6790-4cb0-9166-
e1d15af5a87c::upnp:rootdevice
```

## show unip profile

Displays the UNP profile configuration for the switch.

**show unip profile** [*profile\_name*]

---

### Syntax Definitions

*profile\_name*                      The name of the UNP to display.

### Defaults

By default, the configuration for all profiles is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Enter a UNP profile name with this command to display information for a specific profile.
- Use the **show unip profile map** command to display the VLAN or service type (SPB, VXLAN, VPLS or static) that is mapped to the UNP profile.
- If Device Profiling is enabled for the switch, the following UNP profiles are automatically created on the switch and will be included in the display:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> show unip profile
Profile Name: unip2-spb
 Qos Policy = qrules1,
 Location Policy = -,
 Period Policy = -,
 CP Profile = -,
 CP State = Dis,
 Authen Flag = Dis,
 Mobile Tag = Dis,
 SAA Profile = -,
```

```
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Ena
```

Profile Name: unpl-vlan

```
Qos Policy = -,
Location Policy = loclist1,
Period Policy = timelist1,
CP Profile = guest-profile,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
```

Profile Name: defaultWLANProfile

```
Qos Policy = -,
Location Policy = -,
Period Policy = -,
CP Profile = -,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
```

Total Profile Count: 3

-> show unip profile unpl-vlan

```
Profile Name: unpl-vlan
Qos Policy = -,
Location Policy = loclist1,
Period Policy = timelist1,
CP Profile = guest-profile,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
Kerberos Auth = Dis
```

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Profile Name</b>    | The name of the UNP profile. Configured through the <b>unip profile</b> command.                                                                                                                                                                                                                                                                                                                                            |
| <b>QoS Policy</b>      | The name of the QoS policy list associated with the profile. Configured through the <b>unip profile qos-policy-list</b> command.                                                                                                                                                                                                                                                                                            |
| <b>Location Policy</b> | The name of the location policy assigned to the UNP profile. Configured through the <b>unip profile location-policy</b> command.                                                                                                                                                                                                                                                                                            |
| <b>Period Policy</b>   | The name of the period policy assigned to the UNP profile. Configured through the <b>unip profile period-policy</b> command.                                                                                                                                                                                                                                                                                                |
| <b>CP Profile</b>      | The name of the Captive Portal (CP) profile assigned to the UNP profile. A CP profile defines a CP configuration that is applied to devices when CP authentication is enabled for the UNP profile. Configured through the <b>unip profile captive-portal-profile</b> command.                                                                                                                                               |
| <b>CP State</b>        | The CP authentication status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether CP authentication is triggered for devices classified into the profile. Configured through the <b>unip profile captive-portal-authentication</b> command.                                                                                                                                                                  |
| <b>Authen Flag</b>     | The authentication flag status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether only authenticated devices are allowed into the profile. Configured through the <b>unip profile authentication-flag</b> command.                                                                                                                                                                                         |
| <b>Mobile Tag</b>      | The mobile tag status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. When enabled, the first user that is learned on a UNP port and is classified into a UNP profile will cause the UNP port to be added as a tagged member of the VLAN associated with the profile. If the profile is mapped to a service, a tagged virtual port association is created. Configured through the <b>unip profile mobile-tag</b> command. |
| <b>SAA Profile</b>     | The name of a Service Assurance Agent (SAA) profile that is associated with the UNP profile. Configured through the <b>unip profile saa-profile</b> command.                                                                                                                                                                                                                                                                |
| <b>Ingress BW</b>      | The maximum ingress bandwidth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-ingress-bandwidth</b> command.                                                                                                                                                                                                                                                   |
| <b>Egress BW</b>       | The maximum egress bandwidth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-egress-bandwidth</b> command.                                                                                                                                                                                                                                                     |
| <b>Ingress Depth</b>   | The maximum ingress depth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-ingress-depth</b> command.                                                                                                                                                                                                                                                           |
| <b>Egress Depth</b>    | The maximum egress depth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-egress-depth</b> command.                                                                                                                                                                                                                                                             |
| <b>Inact Interval</b>  | The amount of time, in seconds, that a device can remain inactive after the MAC address for the device has aged out. When the timer reaches this value, inactive devices are automatically logged out of the network. Configured through the <b>unip profile inactivity-interval</b> command.                                                                                                                               |

|                      |                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Mac-Mobility</b>  | The status of MAC address mobility ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. MAC mobility functionality applies only to profiles that are mapped to SPB services and is <i>not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M</i> . Configured through the <b>unip profile mac-mobility</b> command. |
| <b>Kerberos Auth</b> | The status of Kerberos snooping ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether Kerberos snooping authentication is triggered for devices classified into the profile. Configured through the <b>unip profile kerberos-authentication</b> command.                                                                               |

---

**Release History**

Release 8.3.1; command was introduced.

Release 8.4.1.R02; the built-in “defaultWLANProfile” included in the display.

Release 8.4.1.R03; “Redirect State” field deprecated.

Release 8.5R2; default UNP profiles for Device Profiling included in the display.

Release 8.6R1; “Mac-Mobility” field added.

Release 8.6R2; “Kerberos Auth” field added.

## show unprofile map

Displays the VLAN, service, or L2 GRE tunnel mapping configuration assigned to a UNP profile.

```
show unprofile map [profile_name] map {vlan | service-type {spb | vxlan | static | l2gre | vpls}}
```

---

### Syntax Definitions

|                     |                                                                                                                                                                               |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>profile_name</i> | The name of the UNP to display.                                                                                                                                               |
| <b>vlan</b>         | Displays the VLAN mapping configuration for a UNP profile.                                                                                                                    |
| <b>spb</b>          | Displays the Shortest Path Bridging (SPB) service mapping configuration for a UNP profile.                                                                                    |
| <b>vxlan</b>        | Displays the Virtual eXtensible Local Area Network (VXLAN) service mapping configuration for a UNP profile.                                                                   |
| <b>static</b>       | Displays the existing SPB or VXLAN, or VPLS service IDs that are statically assigned to a UNP profile. This type of mapping is used to map the profile to a known service ID. |
| <b>l2gre</b>        | Displays the L2 GRE tunnel mapping configuration for a UNP profile.                                                                                                           |
| <b>vpls</b>         | Displays the Virtual Private LAN Service (VPLS) service mapping configuration for a UNP profile.                                                                              |

### Defaults

By default, the VLAN, service, or L2 GRE tunnel mapping configuration for all profiles is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Enter a UNP profile name with this command to display the mapping information for a specific profile.
- Only one VLAN or service is mapped to a profile at any given time.

## Examples

```
-> show unprofile map vlan
```

```
Profile Name Vlan-Id
-----+-----
unp1-vlan 300
unp2-vlan 301
unp3-vlan 500
unp4-vlan 501
```

```
Total Profile Vlan-Map Count: 4
```

```
-> show unprofile unp2-vlan map vlan
```

```
Profile Name Vlan-Id
-----+-----
unp2-vlan 301
```

### output definitions

### output definitions

|                      |                                                                                                                                                             |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Profile Name</b>  | The name of the UNP profile that is mapped to the SPB service.                                                                                              |
| <b>Isid</b>          | The SPB service instance identifier (I-SID) that will be used to dynamically create the SPB service access point (SAP) for the profile.                     |
| <b>Tag Value</b>     | The VLAN ID tags of the traffic that the dynamically created SPB SAP will carry for the profile.                                                            |
| <b>BVlan</b>         | The SPB BVLAN ID that will be associated with the I-SID for the dynamically created SPB SAP.                                                                |
| <b>Vlan Xlation</b>  | The status of egress VLAN translation ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created SPB SAP.                                                     |
| <b>Mcast Mode</b>    | The multicast mode ( <b>Headend</b> or <b>Tandem</b> ) for the dynamically created SPB SAP.                                                                 |
| <b>Igmp Snoop</b>    | The status of IGMP snooping for the dynamically created SPB SAP.                                                                                            |
| <b>Igmp Profile</b>  | The name of the optional IPMS profile that is applied to the IGMP snooping instance for the dynamically created SPB SAP                                     |
| <b>Mld Snoop</b>     | The status of MLD snooping for the dynamically created SPB SAP.                                                                                             |
| <b>Mld Profile</b>   | The name of the optional MLD profile that is applied to the IGMP snooping instance for the dynamically created SPB SAP                                      |
| <b>Remove IngTag</b> | Whether the customer VLAN tag is removed before the packet is encapsulated for the dynamically created SPB SAP ( <b>Ena</b> , <b>Dis</b> , <b>e-tree</b> ). |

```
-> show unip profile map service-type vxlan
```

| Profile Name | Tag Vnid | Value | Far-End-List | Vlan Xlation | Mcast Mode | Mcast Group | Mac Orchest | Remove IngTag |

|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Profile Name</b>  | The name of the UNP profile that is mapped to the VXLAN service.                                                                                                                                                                                                                                                                                                                                      |
| <b>Vnid</b>          | The VXLAN network identifier for the VXLAN segment that will be used to dynamically create the VXLAN service access point (SAP) for the profile.                                                                                                                                                                                                                                                      |
| <b>Tag Value</b>     | The VLAN ID tags of the traffic that the dynamically created VXLAN SAP will carry for the profile.                                                                                                                                                                                                                                                                                                    |
| <b>Far-End-List</b>  | The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEPs). The VTEPs are used to create Service Distribution Points (SDPs) for the dynamically created VXLAN SAP.                                                                                                                                                                                           |
| <b>Vlan Xlation</b>  | The status of egress VLAN translation ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created VXLAN SAP.                                                                                                                                                                                                                                                                                             |
| <b>Mcast Mode</b>    | The multicast mode ( <b>Headend</b> , <b>Tandem</b> , or <b>Hybrid</b> ) for the dynamically created VXLAN SAP.                                                                                                                                                                                                                                                                                       |
| <b>Mcast Group</b>   | The multicast group IP address that the dynamically created VXLAN SAP will use to forward traffic to participating VTEPs.                                                                                                                                                                                                                                                                             |
| <b>Mac Orchest</b>   | The status of Mac Orchestration ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created VXLAN SAP. This parameter is automatically configured through OmniSwitch integration with Open vSwitch Database (OVSD) protocols. See the "Web Services, CLI Scripting, OpenFlow, and AOS Micro Services (AMS)" chapter in the <i>OmniSwitch AOS Release 8 Switch Management Guide</i> for more information. |
| <b>Remove IngTag</b> | Whether the customer VLAN tag is removed before the packet is encapsulated for the dynamically created VXLAN SAP ( <b>Ena</b> or <b>Dis</b> ).                                                                                                                                                                                                                                                        |

|                         |                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Profile Name</b>     | The name of the UNP profile that is mapped to the L2 GRE tunnel.                                                                                                                                         |
| <b>Vplsid</b>           | The VPLS identifier for the VPLS segment that will be used to dynamically create the VPLS service access point (SAP) for the profile.                                                                    |
| <b>Tag Value</b>        | The VLAN ID tags of the traffic that the dynamically created VPLS SAP will carry for the profile.                                                                                                        |
| <b>Far-End-List</b>     | The name of the list that contains the IP addresses for the far-end VPLS Tunnel End Points. These end points are used to create Service Distribution Points (SDPs) for the dynamically created VPLS SAP. |
| <b>VE-ID/Far-End-IP</b> | The Loopback0 IP interface address for the far-end tunnel aggregation switch when LDP is selected as signaling.<br>The identifier to VPLS Edge (VE) device when BGP is selected as signaling.            |
| <b>Signaling</b>        | The signaling type: BGP or LDP.                                                                                                                                                                          |

---

## Release History

Release 8.3.1; command was introduced.

Release 8.4.1.R02; **l2gre** parameter added.

Release 8.6R1; IGMP and MLD snooping related fields added to SPB service-mapped profile display; “Port-Isolation” and “Vlan Xlation” fields added to L2 GRE service-mapped profile display.

Release 8.7R1; “Mac Orchest” field added to VXLAN service-mapped profile display.

Release 8.7R2; “Remove IngTag” field added to the service-mapped profile display for SPB, VXLAN, and L2 GRE.

Release 8.9R3; e-tree added to SPB service type display.

Release 8.9R4; **vpls** parameter added.

## Related Commands

## show unip vxlan far-end-ip-list

Displays the contents of an IP address list. Each address represents a VXLAN Tunnel End Point (VTEP). A far-end IP list is associated with a VXLAN service to identify all the VTEPs that will participate in that service.

```
show unip vxlan far-end-ip-list [ip_list_name]
```

---

### Syntax Definitions

*ip\_list\_name*                      The name of a list that contains the IP addresses for the far-end VTEPs.

### Defaults

By default, the contents of all the VXLAN far-end IP address lists is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |         |                 |                                                               |      |
|------|------|------|-------|------|-------|------|---------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900    | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | X72/Q32 | Yes             | No                                                            | No   |

### Usage Guidelines

Enter a list name with this command to display information for a specific list.

### Examples

```
-> show unip vxlan far-end-ip-list
Far-End-IP-List Name: toDataCenter1, IP-Count: 3,
 IP-Addresses:
 101.1.1.1
 102.1.1.1
 103.1.1.1
Far-End-IP-List Name: toDataCenter2, IP-Count: 3,
 IP-Addresses:
 201.1.1.1
 202.1.1.1
 203.1.1.1

-> show unip vxlan far-end-ip-list toDataCenter2
Far-End-IP-List Name: toDataCenter2, IP-Count: 3,
 IP-Addresses:
 201.1.1.1
 202.1.1.1
 203.1.1.1
```

## show unp l2gre far-end-ip-list

Displays the contents of an IP address list that contains the IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch.

```
show unp l2gre far-end-ip-list [ip_list_name]
```

---

### Syntax Definitions

*ip\_list\_name*                      The name of a list that contains the IP address for the far-end tunnel aggregation switch.

### Defaults

By default, the contents of all the far-end IP address lists is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

---

## show unp saa-profile

Displays the Service Assurance Agent (SAA) performance monitoring profile configuration for the switch. SAA profiles are assigned to UNP VLAN profiles to specify jitter and latency threshold values for SAA sessions that apply to the assigned UNP VLAN profile.

**show unp saa-profile** [*profile\_name*]

---

### Syntax Definitions

*profile\_name*                      The name of an existing SAA profile to display.

### Defaults

By default, all SAA profiles are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | Yes  | No   | No    | Yes  | No    | Yes  | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Enter an SAA profile name with this command to display information for a specific profile.
- This command does not provide the UNP assignment for each SAA profile. Use the [show unp profile](#) command to display the assignment information.

### Examples

```
-> show unp saa-profile

## show unip global configuration

Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

**show unip global configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- UNP global parameter settings determine specific actions related to the following:
  - Dynamically creating VLANs and/or profiles.
  - Whether or not devices attempting to authenticate are assigned to a temporary profile if the authentication server is unreachable.
  - Interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.
- A hyphen, “-”, indicates that a value has not been configured for the global UNP parameter.

### Examples

```
-> show unip global configuration
Dynamic Vlan Configuration = Disabled,
Dynamic Profile Configuration = Disabled,
Auth Server Down Profile1 = -,
Auth Server Down Profile2 = -,
Auth Server Down Profile3 = -,
Auth Server Down Voice Profile1 = ALE_phones,
Auth Server Down Voice Profile2 = IP_Phones,
Auth Server Down Voice Profile3 = -,
Auth Server Down Port Bounce = Disabled
Auth Server Down Timeout = 60,
Redirect Port Bounce = Enabled,
Redirect Pause Timer = -
Redirect http proxy-port = 8080
Redirect Server FQDN = cppm.abc.com
```

```

Redirect Server IP = 10.135.20.50
Allowed IP = -
Force L3-Learning = Disabled
Force L3-Learning Port Bounce = Enabled
802.1x Pass Through Mode = Disabled
AP Mode = Enabled
Secure AP Mode = Disabled
System-default service-mod = 512
System-default service-base = 10000000
System-default Multicast-Mode = Headend
System-default Vlan-Xlation = Enabled
System-default vpls-signaling = BGP,
System-default bgp Edge ID = 0
System-default Multicast-Group = 239.0.0.0
System-default far-end-ip-list = -,
System-default Vpls far-end-ip-list = -,
IPv6 Drop Packets = Disabled,
Delayed Learning Interval = 0,
Global Mac-Mobility = Disabled,
802.1x EAP Version = v3
Multiple Untag SAP = Enabled

```

|----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Dynamic Vlan Configuration</b>                                                                                          | The status ( <b>Enabled</b> or <b>Disabled</b> ) of dynamic VLAN configuration. Configured through the <b>unip dynamic-vlan-configuration</b> command.                                                                                                      |
| <b>Dynamic Profile Configuration</b>                                                                                       | The status ( <b>Enabled</b> or <b>Disabled</b> ) of dynamic profile configuration. Configured through the <b>unip dynamic-profile-configuration</b> command.                                                                                                |
| <b>Auth Server Down Profile1</b><br><b>Auth Server Down Profile2</b><br><b>Auth Server Down Profile3</b>                   | The name of a UNP that a device is assigned to in the event the RADIUS server is unreachable. Up to three different profile names are configurable as authentication server down UNP profiles. Configured through the <b>unip auth-server-down</b> command. |
| <b>Auth Server Down Voice Profile1</b><br><b>Auth Server Down Voice Profile2</b><br><b>Auth Server Down Voice Profile3</b> | The name of voice profile to which the device is assigned when the authentication server is unreachable. Configured through the <b>unip auth-server-down</b> command.                                                                                       |
| <b>Auth Server Down Port Bounce</b>                                                                                        | The status ( <b>Enabled</b> or <b>Disabled</b> ) of the port-bounce feature for the authentication server down users globally on all the UNP ports. Configured through the <b>unip auth-server-down port-bounce</b> command.                                |
| <b>Auth Server Down Timeout</b>                                                                                            | The amount of time, in seconds, that devices remain assigned to the authentication server down UNP. Configured through the <b>unip auth-server-down-timeout</b> command.                                                                                    |
| <b>Redirect Port Bounce</b>                                                                                                | The status ( <b>Enabled</b> or <b>Disabled</b> ) of the port bounce operation for non-suppliant devices. Configured through the <b>unip redirect port-bounce</b> command.                                                                                   |
| <b>Redirect Pause Timer</b>                                                                                                | The amount of time, in seconds, the switch pauses to clear all device authentication states and trigger re-authentication. Configured through the <b>unip redirect pause-timer</b> command.                                                                 |
| <b>Redirect http proxy-port</b>                                                                                            | The HTTP proxy port number to use for redirection to a server. Configured through the <b>unip redirect proxy-server-port</b> command.                                                                                                                       |

*output definitions*

|                                       |                                                                                                                                                                                                                                        |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Redirect Server FQDN</b>           | The Fully Qualified Domain Name of a redirection server. Configured through the <b>unip redirect server</b> command. This field is blank if an IP address was configured for the redirect server.                                      |
| <b>Redirect Server IP</b>             | The IP network address of a redirection server. Configured through the <b>unip redirect server</b> command. If an FQDN was configured for the redirect server, then the resolved IP address for that domain will appear in this field. |
| <b>Allowed IP</b>                     | A list of IP addresses to which a host can access additional servers. Configured through the <b>unip redirect allowed-auth-server</b> command.                                                                                         |
| <b>Force L3-Learning</b>              | The status ( <b>Enabled</b> or <b>Disabled</b> ) of UNP Layer 3 learning. Configured through the <b>unip force-l3-learning</b> command.                                                                                                |
| <b>Force L3-Learning Port Bounce</b>  | The status ( <b>Enabled</b> or <b>Disabled</b> ) of the port bounce action, which is associated with the Layer 3 learning function. Configured through the <b>unip force-l3-learning</b> command.                                      |
| <b>802.1x Pass Through Mode</b>       | Whether a supplicant device is authenticated locally ( <b>Enabled</b> ) or passed through to another switch for authentication ( <b>Disabled</b> ). Configured through the <b>unip 802.1x-pass-through</b> command.                    |
| <b>AP Mode</b>                        | The status ( <b>Enabled</b> or <b>Disabled</b> ) of the Access Point (AP) mode. This mode is enabled to support the detection of connected OmniAccess Stellar AP devices. Configured through the <b>unip ap-mode</b> command.          |
| <b>System-default service-mod</b>     | The modulo number that is used to dynamically calculate an SPB I-SID value or a VXLAN VNID, or a VPLS ID value for a System Default profile. Configured through the <b>unip system-default service-mod</b> command.                    |
| <b>System-default service-base</b>    | The base service number that is used to dynamically calculate an SPB I-SID value or a VXLAN VNID, or a VPLS ID value for a System Default profile. Configured through the <b>unip system-default service-base</b> command.             |
| <b>System-default Multicast-Mode</b>  | The multicast replication mode ( <b>Headend</b> or <b>Tandem</b> ) for dynamic services that are created for System Default profiles. Configured through the <b>unip system-default multicastmode</b> command.                         |
| <b>System-default Vlan-Xlation</b>    | The status ( <b>Enabled</b> or <b>Disabled</b> ) of VLAN translation for dynamic services that are created for System Default profiles. Configured through the <b>unip system-default vlan-xlation</b> command.                        |
| <b>System-default vpls-signaling</b>  | The signaling type (LDP or BGP) configured for the System Default profiles. Configured through the <b>unip system-default vpls-signaling</b> command.                                                                                  |
| <b>System-default bgp Edge ID</b>     | The identifier to VPLS Edge (VE) device when BGP is selected as signaling. Configured through the <b>unip system-default vpls-signaling</b> command.                                                                                   |
| <b>System-default Multicast-Group</b> | The multicast group IP address for dynamic VXLAN services that are created for System Default profiles. Configured through the <b>unip system-default multicastgroup</b> command.                                                      |

---

|                                            |                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>System-default far-end-ip-list</b>      | The name of a far-end IP list associated with dynamic VXLAN services that are created for System Default profiles.. Configured through the <b>unip system-default far-end-ip-list</b> command.                                                                                                                                                                                    |
| <b>System-default Vpls far-end-ip-list</b> | The name of a far-end IP list associated with dynamic VPLS services that are created for System Default profiles.. Configured through the <b>unip vpls far-end-ip-list</b> command.                                                                                                                                                                                               |
| <b>IPv6 Drop Packets</b>                   | The status ( <b>Enabled</b> or <b>Disabled</b> ) of IPv6 packet drop on UNP ports. Configured through the <b>unip ipv6-drop</b> command.                                                                                                                                                                                                                                          |
| <b>Delayed Learning Interval</b>           | The amount of time, in seconds, that UNP will wait before starting to learn packets received on UNP ports. Configured through the <b>unip delay-learning</b> command.                                                                                                                                                                                                             |
| <b>Global Mac-Mobility</b>                 | The status ( <b>Enabled</b> or <b>Disabled</b> ) of MAC address mobility. The global status specifies the default status that is applied to new UNP profiles that are mapped to SPB service parameters. MAC mobility functionality is <i>not supported on the OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M</i> . Configured through the <b>unip mac-mobility</b> command. |
| <b>802.1x EAP Version</b>                  | EAPOL version ( <b>V1</b> or <b>V3</b> ) configured for 802.1x authentication. Configured through the <b>unip 802.1x eapol-version</b> command.                                                                                                                                                                                                                                   |
| <b>Multiple Untag SAP</b>                  | Indicates whether multiple untagged user association for UNP dynamic SAP with different services is enabled or disabled.                                                                                                                                                                                                                                                          |

---

**Release History**

Release 7.2.1; command was introduced.

Release 7.2.1.R02; “Dynamic Profile Configuration” and “MC Conf Status” fields added.

Release 7.3.4; “VXLAN” fields added; “MC Conf Status” fields deprecated.

Release 8.3.1; “Auth Server Down UNP” field replaced with “Auth Server Down UNP Profile1”, “Auth Server Down UNP Profile2”, and “Auth Server Down UNP Profile3” fields; “Force L3-Learning” field added.

Release 8.3.1.R02; “Force L3-Learning Port Bounce” field added.

Release 8.4.1.R02; “802.1x Pass Through Mode” and “AP Mode fields added”.

Release 8.5R1; “Redirect Server FQDN” and all of the “System-default” fields added.

Release 8.5R2; “IPv6 Drop Packets”, “Delayed Learning Interval”, “Auth Server Down Voice Profile”, and “Auth Server Down Port Bounce” fields added.

Release 8.6R1; “Global Mac-Mobility” field added.

Release 8.7R1; “802.1x EAP Version” field added.

Release 8.9R1; “Multiple Untag SAP” field added.

Releaes 8.9R4; “System-default vpls-signaling”, “System-default bgp Edge ID”, and “System-default Vpls far-end-ip-list” fields added.

## show unip domain

Displays the UNP domain configuration for the switch.

**show unip domain**

---

### Syntax Definitions

N/A

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific domain, classification rules associated with the same domain ID are applied only to UNP ports associated with that same domain ID.

### Examples

```
-> show unip domain
```

```
Domain Description
-----+-----
0 Default-Domain
1 UNP Domain 1
2 UNP Domain 2
```

### Release History

Release 8.3.1; command was introduced.

## show unp classification

Displays the UNP classification rule configuration for the switch.

**show unp classification** *rule\_type*

---

### Syntax Definitions

*rule\_type* The rule type to display (refer to the table in the “Usage Guidelines” section of this command page for a list of rule type parameters).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Specifying one of the following classification rule type parameters is required with this command:

| Standard Rule Parameters                                                                                                                                                                                                 | Binding Rule Parameters                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| mac-rule<br>mac-domain-rule<br>mac-oui-rule<br>mac-range-rule<br>mac-range-domain-rule<br>ip-rule<br>ip-domain-rule<br>vlan-tag-rule<br>vlan-domain-rule<br>port-rule<br>domain<br>authentication-type-rule<br>lldp-rule | mac-port-rule<br>mac-ip-port-rule<br>mac-ip-domain-rule<br>ip-port-rule |

- Standard classification rule parameters are combined at the time a rule is created to define a binding classification rule. The parameter combinations provided with this command reflect the allowed binding rule parameter combinations.
- An extended classification rule defines a list of rules and allows more combinations of standard rules than the binding rule configuration (see the **show unp classification-rule** command).

**Examples**

```
-> show unp classification mac-rule
```

| MAC Address       | VLAN Tag | Profile1 Name | Profile2 Name | Profile3 Name |
|-------------------|----------|---------------|---------------|---------------|
| 00:2a:da:11:22:01 | -        | unp1-vlan     | unp2-vxlan    | unp3-vlan     |
| 00:0f:b5:46:d7:56 | 20       | unp4-spb      | -             | -             |
| 00:2a:95:57:e1:67 | -        | unp2-vxlan    | -             | -             |

```
Total Mac Rule Count: 3
```

```
-> show unp classification mac-range-rule
```

|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Domain</b>                                     | The customer domain ID assigned to the classification rule for the specified profiles. The rule is applied to traffic received on UNP ports that are assigned to the same domain ID. This rule is also supported in combination with each of the other classification rules. Configured through the <b>unnp domain</b> command or as a parameter with the other classification rule commands.                                                                                                                                                                                                                      |
| <b>MAC Address</b>                                | The MAC address value to match for this profile rule. Configured through the <b>unnp classification mac-address</b> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Low MAC Address</b><br><b>High MAC Address</b> | The lowest and highest MAC address values used to specify a range of addresses to match for this rule. Configured through the <b>unnp classification mac-range</b> command.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>IP Address</b><br><b>IP Mask</b>               | The IP network address and mask values to match for this rule. Configured through the <b>unnp classification ip-address</b> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Profile1, Profile2, Profile3</b>               | The name of the UNP profile to which the rule is applied. Configured through the <b>unnp profile</b> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>VLAN Tag</b>                                   | The VLAN ID value to match for this profile rule. <ul style="list-style-type: none"> <li>• If one VLAN ID is displayed, the rule will match single-tagged packets or the outer VLAN tag of double-tagged packets.</li> <li>• If two VLAN IDs are displayed, the rule will match double-tagged packets (for example, 10:20 will match outer VLAN tag 10 <i>and</i> inner VLAN tag 20).</li> </ul> This rule is also supported in combination with each of the other classification rules. Configured through the <b>unnp classification vlan-tag</b> or as a parameter with the other classification rule commands. |
| <b>MED Endpoint</b>                               | The LLDP Media Endpoint Device to match for this profile rule ( <b>IP-Phone</b> or <b>Access-Point</b> ). Configured through the <b>unnp classification lldp med-endpoint</b> command.                                                                                                                                                                                                                                                                                                                                                                                                                             |

## show unp classification-rule

Displays the UNP extended classification rule configuration for the switch. An extended classification rule defines a list of rule conditions, all of which a device must match to be classified into the UNP profile associated with the extended rule name. A name and precedence value is also assigned to the list of rule conditions.

```
show unp classification-rule [rule-name]
```

---

### Syntax Definitions

*rule\_name*                                      The name of an existing extended classification rule.

### Defaults

By default, the configuration for all extended rules is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Enter the name of an extended classification rule to display information for a specific rule.
- An extended classification rule defines a list of rules and allows more combinations of standard rules than a binding rule configuration.
- An extended classification rule is associated with a UNP profile and applied to traffic learned on UNP ports.
- If Device Profiling is enabled for the switch, the following “built-in” extended classification rules are also displayed:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> show unp classification-rule
```

```
Rule Name: "ext_rule1"
Precedence = 10,
```

```
Profile1 = unp1-vlan,
 Conditions:
 Domain = 2,
 Mac-OUI = 00:22:11,
 VLAN Tag = 100

Rule Name: "ext_rule2"
Precedence = 1,
Profile1 = unp1-vlan,
Profile2 = unp2-vxlan,
Profile3 = unp3-vlan,
 Conditions:
 Domain = 20,
 Mac-Address = 00:2a:94:11:22:01,
 Port = 1/1/11 ,
 LLDP MED Endpoint = IP-Phone,
 Authentication-Type = None,

Rule Name: "devProfPrinter"
Precedence = 255,
Profile1 = devProfPrinter,
 Conditions:
 Device-Type = Printer,

Rule Name: "devProfWindows"
Precedence = 255,
Profile1 = devProfWindows,
 Conditions:
 Device-Type = Windows,

Rule Name: "devProfIP-Phone"
Precedence = 255,
Profile1 = devProfIP-Phone,
 Conditions:
 Device-Type = IP-Phone,

Rule Name: "devProfWireless-Router"
Precedence = 255,
Profile1 = devProfWireless-Router,
 Conditions:
 Device-Type = Wireless-Router,

Rule Name: "devProfSmartPhone/PDA/Tablets"
Precedence = 255,
Profile1 = devProfSmartPhone/PDA/Tablets,
 Conditions:
 Device-Type = SmartPhone/PDA/Tablets,

Total Extended Classification Rule Count: 7

-> show unp classification-rule ext_rule2
Rule Name: "ext_rule2"
Precedence = 1,
Profile1 = unp1-vlan,
Profile2 = unp2-vxlan,
Profile3 = unp3-vlan,
 Conditions:
 Domain = 1,
 Mac-Address = 00:2a:94:11:22:01,
```

```

 Port = 1/1/11 ,
 LLDP MED Endpoint = IP-Phone,
 Authentication-Type = None,
-> show unp classification-rule devProfPrinter

```

```

Rule Name: "devProfPrinter"
 Precedence = 255,
 Profile1 = devProfPrinter,
 Conditions:
 Device-Type = Printer,

```

## Release History

Release 8.1.1; command was introduced.

Release 8.2.1; “VLAN Tag” field added.

Release 8.3.1; “Edge-Profile” field replaced with “Profile1”, “Profile2”, and “Profile3” fields.

Release 8.5R2; support added for displaying Device Profile extended classification rules.

## show unp user-role

Displays the user-defined role configuration for the switch.

```
show unp user-role [role_name]
```

---

### Syntax Definitions

*role\_name*                                      The name of an existing user-defined role.

### Defaults

By default, all user-defined role are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |

### Usage Guidelines

Enter a user-defined role name with this command to display information for a specific role.

### Examples

```
-> show unp user-role
```

```
Role Name: url
Qos Policy List : qlist1
Priority : 1
Conditions:
 Profile1 : unp1-vlan
 Profile2 : unp2-spb
 Profile3 : -
Authentication-Type : Mac
CP Status : Enabled
```

```
Role Name: ur2
Qos Policy List : qlist-allow
Priority : 1
Conditions:
 Profile1 : -
 Profile2 : -
 Profile3 : -
Authentication-Type : 802.1x Fail
CP Status : Disabled
```

```
Total User Role Derivation Rule Count: 2
```

```
-> show unnp user-role ur2
```

| Role Name | QoS Policy List Name | Priority |
|-----------|----------------------|----------|
| ur2       | qlist-allow          | 1        |

### output definitions

|                                     |                                                                                                                                                                                                                                                                   |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Role Name</b>                    | The name of the user-defined role. Configured through the <b>unnp user-role</b> command.                                                                                                                                                                          |
| <b>Qos Policy List</b>              | The name of the QoS policy list associated with the role name. The specified list defines the user role for the device. Configured through the <b>unnp user-role policy-list</b> command.                                                                         |
| <b>Priority</b>                     | The role precedence, which assigns a priority value to the user-defined role. This value determines which role to apply if a device matches the conditions of more than one user-defined role. Configured through the <b>unnp user-role</b> command.              |
| <b>Profile1, Profile2, Profile3</b> | The name of a UNP profile. The user-defined role is only applied to devices classified into the specified profile name. Configured through the <b>unnp user-role profile</b> command.                                                                             |
| <b>Authentication-Type</b>          | The type of authentication applied to a device ( <b>none</b> , <b>mac</b> , or <b>802.1x</b> ). The user-defined role is only applied to devices authenticated with the specified type. Configured through the <b>unnp user-role authentication-type</b> command. |
| <b>CP Status</b>                    | The Captive Portal post login status. If enabled, the role is only applied to devices in this state. Configured through the <b>unnp user-role cp-status-post-login</b> command.                                                                                   |

### Release History

Release 8.1.1; command was introduced.

Release 8.3.1; “Edge-Profile” field replaced with “Profile1”, “Profile2”, and “Profile3” fields.

### Related Commands

 alaDaUNPUserRolePostLoginStatus
```

## show unpr restricted-role

Displays the names of the explicit QoS policy lists assigned to the built-in restricted role states (Captive Portal pre-login, Unauthorized, and QMR) used by the switch.

**show unpr restricted-role**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

An explicit QoS policy list overrides the built-in policy list associated with the restricted role state. When the explicit policy list assignment is removed, the switch reverts back to using the built-in policy list associated with the restricted role state.

### Examples

```
-> show unpr restricted-role
Role name Qos Policy List Name
-----+-----
UNAUTHORIZED qlist-bad
QMR qlist-qmr
CP PRE-LOGIN qlist-cp
```

Total Restricted Role Count: 3

#### *output definitions*

---

|                        |                                                                           |
|------------------------|---------------------------------------------------------------------------|
| <b>Role Name</b>       | The restricted role name.                                                 |
| <b>Qos Policy List</b> | The name of the QoS policy list associated with the restricted role name. |

---

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unpr restricted-role policy-list** Configures a user-defined role.
- show unpr user** Displays information about devices learned on UNP ports.

## MIB Objects

```
alaDaUNPRstrctedRoleTable
 alaDaUNPRstrctedRoleType
 alaDaUNPRstrctedRolePolicyList
```

---

## show unp port

Displays the UNP configuration for the port. Includes only ports and link aggregates on which UNP is enabled.

```
show unp {port [chassis/slot/port1[-port2]] | linkagg [agg_id[-agg_id2]]} [type {bridge | access}]
```

---

### Syntax Definitions

|                          |                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                           |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). |
| <i>agg_id[-agg_id2]</i>  | Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15). |
| <b>bridge</b>            | Displays only UNP bridge ports.                                                   |
| <b>access</b>            | Displays only UNP access ports.                                                   |

### Defaults

By default, configuration information for all UNP ports or link aggregates is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Enter a port or link aggregate ID number to display information specific to the port or link aggregate.
- Specify a UNP port type (**bridge** or **access**) to display information only for that type of UNP port.

### Examples

```
-> show unp port
```

```
Port Port Type 802.1x Mac Class. Default 802.1x MAC Trust-Tag
 Domain Auth Auth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----

|                        |                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port/LagID</b>      | The port or link aggregate on which UNP is enabled. Configured through the <b>unip port-type</b> command.                                                                                                                     |
| <b>Port Domain</b>     | The customer domain ID assigned to the UNP port. Traffic received on the port is classified with UNP profile rules that are assigned to the same domain ID. Configured through the <b>unip domain</b> command.                |
| <b>Type</b>            | The type of UNP port ( <b>Bridge</b> or <b>Access</b> ). UNP bridge ports classify traffic into VLAN profiles; UNP access ports classify traffic into service profiles. Configured through the <b>unip port-type</b> command. |
| <b>802.1x Auth</b>     | The status of 802.1X authentication ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip 802.1x-authentication</b> command.                                               |
| <b>Mac Auth</b>        | The status of MAC authentication ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip mac-authentication</b> command.                                                     |
| <b>Class.</b>          | The status of classification ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip classification</b> command.                                                             |
| <b>Default</b>         | The name of the default UNP assigned to the port or link aggregate. Configured through the <b>unip default-profile</b> command.                                                                                               |
| <b>802.1X Pass-Alt</b> | The name of the 802.1X authentication pass alternate UNP assigned to the port or link aggregate. Configured through the <b>unip 802.1x-authentication pass-alternate</b> command.                                             |
| <b>MAC Pass-Alt</b>    | The name of the MAC authentication pass alternate UNP assigned to the port or link aggregate. Configured through the <b>unip mac-authentication pass-alternate</b> command.                                                   |
| <b>Trust-Tag</b>       | The status of the trust VLAN tag option for the UNP port or link aggregate. Configured through the <b>unip trust-tag</b> command.                                                                                             |

### Release History

Release 8.3.1; command was introduced.

## show unnp port config

Displays detailed configuration information for UNP ports and link aggregates.

**show unnp {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]]} config**

---

### Syntax Definitions

|                                    |                                                                                    |
|------------------------------------|------------------------------------------------------------------------------------|
| <i>chassis</i>                     | The chassis identifier.                                                            |
| <i>slot/port</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).  |
| <i>agg_id</i> [- <i>agg_id2</i> ]  | Link aggregate ID. Use a hyphen to specify a range of link aggregates IDs (10-15). |

### Defaults

By default, configuration information for all ports or link aggregates is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use the **port** or **linkagg** parameter to display information for a specific port or link aggregate ID.

### Examples

```
-> show unnp port 1/1/10 config
Port 1/1/10
 Port-Type = BRIDGE,
 Redirect Port Bounce = Disabled,
 802.1x authentication = Enabled,
 802.1x Pass Alternate Profile = -,
 802.1x Bypass = Disabled,
 802.1x failure-policy = default,
 Mac-auth allow-eap = -,
 Mac authentication = Enabled,
 Mac Pass Alternate Profile = -,
 Classification = Enabled,
 Trust-tag = Enabled,
 Default Profile = -,
 Port Domain Num = 0,
 AAA Profile = -,
 Port Template = bridgeDefaultPortTemplate,
 Port Control Direction = Both,
```

```

Egress Flooding = Not Allowed,
Admin State = Enabled,
Dynamic Service = -,
PVLAN Port Type = -,
Force L3-Learning = Disabled,
Force L3-Learning Port Bounce = Enabled,
AP Mode = Enabled,
802.1x Parameters:
 Tx-Period = 30,
 Supp-Timeout = 30,
 Max-req = 2
L2 Profile = -,

-> show unsp port 1/1/12 config
Port 1/1/12
Port-Type = Access,
Redirect Port Bounce = Disabled,
802.1x authentication = Enabled,
802.1x Pass Alternate Profile = -,
802.1x Bypass = Disabled,
802.1x failure-policy = default,
Mac-auth allow-eap = -,
Mac authentication = Enabled,
Mac Pass Alternate Profile = -,
Classification = Enabled,
Trust-tag = Disabled,
Default Profile = -,
Port Domain Num = 0,
AAA Profile = -,
Port Template = accessDefaultPortTemplate,
Admin State = Enabled,
Dynamic Service = vpls,
PVLAN Port Type = -,
Force L3-Learning = Disabled,
Force L3-Learning Port Bounce = Enabled,
AP Mode = Enabled,
Secure AP Mode = Disabled,
Switch Supp Mode = Disabled,
802.1x Parameters:
 Tx-Period = 30,
 Supp-Timeout = 30,
 Max-req = 2

L2 Profile = "unp-def-access-profile"

-> show unsp linkagg 12 config
Linkagg ID 0/12
Port-Type = Bridge,
Redirect Port Bounce = Disabled,
802.1x authentication = Enabled,
802.1x Pass Alternate Profile = -,
802.1x Bypass = Disabled,
802.1x failure-policy = default,
Mac-auth allow-eap = -,
Mac authentication = Enabled,
Mac Pass Alternate Profile = -,
Classification = Enabled,
Trust-tag = Enabled,
Default Profile = -,

```

```

Port Domain Num = 0,
AAA Profile = -,
Port Template = bridgeDefaultPortTemplate,
Port Control Direction = Both,
Egress Flooding = Not Allowed,
Admin State = Enabled,
Dynamic Service = -,
Force L3-Learning = Disabled,
Force L3-Learning Port Bounce = Enabled,
AP Mode = Enabled,
802.1x Parameters:
 Tx-Period = 30,
 Supp-Timeout = 30,
 Max-reqmeout = 2
L2 Profile = -,

```

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port or Linkagg ID</b>            | The port or link aggregate on which UNP is enabled. Configured through the <b>unnp port-type</b> command. A “0” indicates the port is a link aggregate (for example, 0/12 is link aggregate ID 12).                                                                                                                                                                                                                                                                                                                    |
| <b>Port Type</b>                     | The type of UNP port ( <b>Bridge</b> or <b>Access</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Redirect Port Bounce</b>          | The status of the port bounce operation ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp redirect port-bounce</b> command. This field applies only to UNP bridge ports and link aggregates.                                                                                                                                                                                                                                                                    |
| <b>802.1x Authentication</b>         | The 802.1X authentication status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp 802.1x-authentication</b> command.                                                                                                                                                                                                                                                                                                                                           |
| <b>802.1x Pass Alternate Profile</b> | The name of the 802.1X authentication pass alternate profile assigned to the port or link aggregate. Configured through the <b>unnp 802.1x-authentication pass-alternate</b> command                                                                                                                                                                                                                                                                                                                                   |
| <b>802.1x Bypass</b>                 | The status of 802.1X bypass ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>802.1x failure-policy</b>         | Whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails ( <b>default</b> = no MAC authentication or <b>mac-authentication</b> ).                                                                                                                                                                                                                                                                                                                  |
| <b>Mac-auth allow-eap</b>            | Indicates the conditions under which 802.1X authentication is performed or bypassed based on the initial MAC authentication process ( <b>pass</b> = MAC authentication passes, <b>fail</b> = if MAC authentication fails, <b>noauth</b> = no MAC authentication, or <b>none</b> = do not attempt 802.1X authentication). This parameter option only applies to a UNP port or link aggregate on which 802.1X authentication bypass is enabled. Configured through the <b>unnp mac-authentication allow-eap</b> command. |
| <b>Mac Authentication</b>            | The MAC authentication status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp mac-authentication</b> command.                                                                                                                                                                                                                                                                                                                                                 |
| <b>Mac Pass Alternate Profile</b>    | The name of the MAC authentication pass alternate profile assigned to the port or link aggregate. Configured through the <b>unnp mac-authentication pass-alternate</b> command.                                                                                                                                                                                                                                                                                                                                        |
| <b>Classification</b>                | The classification status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp classification</b> command.                                                                                                                                                                                                                                                                                                                                                         |

|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Trust-Tag</b>                     | The status of the trust VLAN tag option for the UNP port or link aggregate. Configured through the <b>unnp trust-tag</b> command.                                                                                                                                                                                                                                                     |
| <b>Default Profile</b>               | The name of the default UNP profile assigned to the UNP port or link aggregate. Configured through the <b>unnp default-profile</b> command.                                                                                                                                                                                                                                           |
| <b>Port Domain Name</b>              | The domain ID number assigned to the UNP port or link aggregate. Configured through the <b>unnp domain</b> command.                                                                                                                                                                                                                                                                   |
| <b>AAA Profile</b>                   | The name of an AAA profile assigned to the UNP port or link aggregate. Configured through the <b>unnp aaa-profile</b> command.                                                                                                                                                                                                                                                        |
| <b>Port Template</b>                 | The name of a port template assigned to the UNP port or link aggregate. A port template defines and saves UNP port configuration options (such as the type of authentication, classification status, a default profile). Configured through the <b>unnp port port-template</b> command.                                                                                               |
| <b>Port Control Direction</b>        | Whether 802.1X access control is applied to ingress and egress traffic ( <b>both</b> ) or just ingress traffic ( <b>in</b> ). Configured through the <b>unnp direction</b> command. This field applies only to UNP bridge ports and link aggregates.                                                                                                                                  |
| <b>Egress Flooding</b>               | Indicates whether egress broadcast, unknown unicast, and multicast traffic is blocked ( <b>Not Allowed</b> ) or unblocked ( <b>Allowed</b> ) on the UNP port. The value displayed in this field is based on the port control direction setting for the port ( <b>both</b> = Not Allowed; <b>in</b> = Allowed). This field is displayed only for UNP bridge ports and link aggregates. |
| <b>Admin State</b>                   | The administrative status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp admin-state</b> command.                                                                                                                                                                                                                           |
| <b>Dynamic Service</b>               | The type of dynamic service ( <b>VXLAN, SPB, or VPLS</b> ) to generate on the UNP port or link aggregate. Configured through the <b>unnp dynamic-service</b> command. This field applies only to UNP access ports and link aggregates.                                                                                                                                                |
| <b>PVLAN Port Type</b>               | The Private VLAN (PVLAN) port type for the UNP port or link aggregate ( <b>promiscuous, isl, community, or isolated</b> ). This field is displayed only for UNP access ports, not link aggregates.                                                                                                                                                                                    |
| <b>Force L3-Learning</b>             | The status of Layer 3 learning ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp force-l3-learning</b> command.                                                                                                                                                                                                                |
| <b>Force L3-Learning Port Bounce</b> | The status of the port bounce action, which is an optional parameter associated with the Layer 3 learning function. Configured through the <b>unnp force-l3-learning</b> command.                                                                                                                                                                                                     |
| <b>AP Mode</b>                       | The Access Point mode status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp port ap-mode</b> command.                                                                                                                                                                                                                       |
| <b>802.1x Tx-Period</b>              | The amount of time, in seconds, before an EAP Request Identity is retransmitted. Configured through the <b>unnp 802.1x-authentication tx-period</b> command.                                                                                                                                                                                                                          |
| <b>802.1x Supp-Timeout</b>           | The amount of time, in seconds, the switch waits before timing out an 802.1X user (supplicant) that is attempting to authenticate. Configured through the <b>unnp 802.1x-authentication supp-timeout</b> command.                                                                                                                                                                     |

|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>802.1x Max-Req</b> | The maximum number of times the switch will retransmit a request for authentication information. Configured through the <b>unnp 802.1x-authentication max-req</b> command.                                |
| <b>L2 Profile</b>     | The name of a Layer 2 profile that is assigned to the UNP port or link aggregate. Configured through the <b>unnp l2-profile</b> command. This field applies only to UNP access ports and link aggregates. |

---

**Release History**

Release 8.3.1; command was introduced.

Release 8.3.1.R02; “Force L3-Learning” and “Force L3-Learning Port Bounce” fields added.

Release 8.4.1; “L2 Profile” field added.

Release 8.6R1; “AP Mode” field added.

Release 8.9R4; “VPLS” support added.

## show unp port bandwidth

Displays the bandwidth parameter values applied to a UNP port or link aggregate. These values are optionally assigned through the UNP profile to which a UNP port is associated.

```
show unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} bandwidth
```

---

### Syntax Definitions

|                                   |                                                                                                                        |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <i>chassis/slot/port</i> [-port2] | The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8). |
| <i>agg_id</i> [-agg_id2]          | Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15).                                      |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific port or link aggregate ID.
- Bandwidth parameter values are not applied to UNP link aggregates that are assigned to the profile. As a result, this command will always show the bandwidth parameter values as not set for link aggregates.
- The optional bandwidth parameter values are applied when a UNP port is classified into a UNP profile. The profile name is obtained through local classification or returned from the RADIUS server.
- The source from which the bandwidth parameter values was last updated is also included in the display information. The source updates are based on the following conditions:
  - The UNP profile applies the bandwidth values at the time the UNP port is classified into the profile. This overrides any existing QoS bandwidth policies configured on the physical port.
  - QoS bandwidth policies defined in a QoS policy list associated with the profile are applied after the port is classified into the profile. This overrides the profile bandwidth values initially applied.
  - User-configured QoS bandwidth policies are applied after the port is classified into the profile.

## Examples

The following example shows the default display of UNP rate limit parameters when no users are learned on the UNP port:

```
-> show unip port 1/1/11 bandwidth
Port Port Type Max Ingress Ingress BW Ingr BW Max Egress Egress BW Egress BW Max Ingress Max Egress
 Domain Bandwidth Source profile Bandwidth Source profile Depth Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0 Bridge 0 - 0 - 0 0
```

The following example shows the UNP rate limit parameters that are applied when user devices are assigned to a UNP profile that specifies bandwidth parameter values:

```
-> show unip port 1/1/11 bandwidth
Port Port Type Max Ingress Ingress BW Ingr BW Max Egress Egress BW Egress BW Max Ingress Max Egress
 Domain Bandwidth Source profile Bandwidth Source profile Depth Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0 Bridge 50.0M UNP Ingress50 30.0M UNP Egress30 0 0
```

The following example shows the rate limit parameter values that are applied when QoS policies override the bandwidth parameter values that were applied through UNP profile settings:

```
-> qos port 1/1/11 maximum ingress-bandwidth 60M maximum egress-bandwidth 60M

-> show unip port 1/1/11 bandwidth
Port Port Type Max Ingress Ingress BW Ingr BW Max Egress Egress BW Egress BW Max Ingress Max Egress
 Domain Bandwidth Source profile Bandwidth Source profile Depth Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0 Bridge 60.0M QoS - 60.0M QoS - 0 0
```

|                              |                                                                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>                  | The port or link aggregate on which UNP is enabled. A “0” indicates the port is a link aggregate (for example, 0/11 is link aggregate ID 11). Configured through the <b>unip port-type</b> command.       |
| <b>Port Domain</b>           | The domain ID assigned to the UNP port or link aggregate. Configured through the <b>unip domain</b> command.                                                                                              |
| <b>Type</b>                  | The type of UNP port ( <b>Bridge</b> or <b>Access</b> ). Configured through the <b>unip port-type</b> command.                                                                                            |
| <b>Max Ingress Bandwidth</b> | The maximum ingress bandwidth value applied to the UNP port. Configured through the <b>unip profile maximum-ingress-bandwidth</b> command.                                                                |
| <b>Ingress BW Source</b>     | The source from which the maximum ingress bandwidth value was updated on the port ( <b>UNP</b> or <b>QoS</b> ).                                                                                           |
| <b>Ingr BW Profile</b>       | The name of the UNP profile responsible for setting the maximum ingress bandwidth value on the UNP port. This field is only applicable when UNP classification applies the bandwidth setting on the port. |
| <b>Max Egress Bandwidth</b>  | The maximum egress bandwidth value applied to the UNP port. Configured through the <b>unip profile maximum-egress-bandwidth</b> command.                                                                  |
| <b>Egress BW Source</b>      | The source from which the maximum egress bandwidth value was updated on the port ( <b>UNP</b> or <b>QoS</b> ).                                                                                            |
| <b>Egress BW Profile</b>     | The name of the UNP profile responsible for setting the maximum egress bandwidth value on the UNP port. This field is only applicable when UNP classification applies the bandwidth setting on the port.  |

## show unip port 802.1x statistics

Displays 802.1X statistics for a UNP port or link aggregate on which 802.1X authentication is enabled.

**show unip {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x statistics**

---

### Syntax Definitions

|                          |                                                                                    |
|--------------------------|------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                            |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).  |
| <i>agg_id[-agg_id2]</i>  | Link aggregate ID. Use a hyphen to specify a range of link aggregates IDs (10-15). |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use the **port** or **linkagg** parameter to display information for a specific UNP port or link aggregate ID.

### Examples

```
-> show unip port 1/1/13 802.1x statistics
Port 1/1
 Mac-address=00:00:00:00:00:01,
 Vlan=0,
 Rx EAP Frames=0,
 Tx EAP Frames=0,
 Rx EAP Logoff Frames=0,
 Tx EAP Request Frames=0,
 Tx EAP Request ID Frames=0,
 Rx EAP Response Frames=0,
 Rx EAP Response ID Frames=0,
 Rx EAP Start Frames=0,
 Rx Invalid EAP Frames=0,
 Rx Length Error EAP Frames=0,
 Last EAP Frame Version=0,
 Last EAP Frame Version=0,
 Last EAP Source=00:00:00:00:00:00
```

```
-> show unip linkagg 20 802.1x statistics
Linkagg ID 0/10
 Mac-address=00:00:00:00:00:01,
 Vlan=0,
 Rx EAP Frames=0,
 Tx EAP Frames=0,
 Rx EAP Logoff Frames=0,
 Tx EAP Request Frames=0,
 Tx EAP Request ID Frames=0,
 Rx EAP Response Frames=0,
 Rx EAP Response ID Frames=0,
 Rx EAP Start Frames=0,
 Rx Invalid EAP Frames=0,
 Rx Length Error EAP Frames=0,
 Last EAP Frame Version=0,
 Last EAP Frame Version=0,
 Last EAP Source=00:00:00:00:00:00
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

[show unip port](#)

Displays the UNP port configuration for the switch.

[show unip user](#)

Displays information about the devices learned on a UNP port.

## MIB Objects

N/A

---

## show unip port configured-vlans

Displays the VLANs assigned to UNP bridge ports or link aggregates.

**show unip {port [chassis/slot/port1[-port2]] | linkagg [agg\_id[-agg\_id2]]} configured-vlans**

### Syntax Definitions

*chassis/slot/port[-port2]*

The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id[-agg\_id2]*

Link aggregate ID for a specific UNP bridge link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific UNP bridge port or link aggregate ID.
- If the **port** or **linkagg** parameter is used without specifying an individual port, a range of ports, or link aggregate ID, then the configured VLAN information for all UNP ports and link aggregates is displayed.
- The “Type” field indicates if the VLAN assignment is untagged (unpUntag) or tagged (unpQtag).

### Examples

```
-> show unip port configured-vlans
```

```
Port Vlan Type
-----+-----+-----
1/0/10 500 unpUntag
1/0/10 501 unpUntag
1/1/10 600 unpQtag
1/1/11 601 unpUntag
1/1/11 602 unpQtag
1/1/11 603 unpQtag
```

```
-> show unip port 1/1/11 configured-vlans
```

```
Port Vlan Type
-----+-----+-----
1/1/11 601 unpUntag
```

```
1/1/11 602 unipQtag
1/1/11 603 unipQtag
-> show unip linkagg configured-vlans
LagId Vlan Type
-----+-----+-----
0/10 500 unipUntag
0/10 501 unipQtag
0/100 100 unipQtag
0/100 101 unipUntag
0/101 200 unipQtag
0/101 201 unipQtag

-> show unip linkagg 100 configured-vlans
LagId Vlan Type
-----+-----+-----
0/100 100 unipQtag
0/100 101 unipUntag
```

## Release History

Release 8.2.1; command was introduced.

Release 8.5R4; "Type" field added.

## Related Commands

[unip vlan](#)

Configures VLAN assignments for UNP bridge ports.

Displays the UNP port and link aggregate configuration for the switch.

## MIB Objects

```
alaDaUNPPortVlanTable
 alaDaUNPPortVlanVID
```

---

## show unnp port profile

Displays the UNP service profiles that are statically assigned to UNP ports or link aggregates.

**show unnp {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]} profile**

---

### Syntax Definitions

*chassis/slot/port*[-*port2*]      The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id*[-*agg\_id2*]              Link aggregate ID for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific UNP port or link aggregate ID.
- If the **port** or **linkagg** parameter is used without specifying an individual port, a range of ports, or link aggregate ID, then the static profile information for all UNP ports and link aggregates is displayed.

### Examples

```
-> show unnp port profile
Port Profile
-----+-----
1/1/5 static-spb1
1/1/5 static-spb2
1/1/10 static-vxlan1
1/1/10 static-vxlan2
1/1/20 static-l2gre
1/1/21 static-vpls

-> show unnp port 1/1/5 profile
Port Profile
-----+-----
1/1/5 static-spb1
1/1/5 static-spb2
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

alaDaUNPPortProfile

---

## show unip port-template

Displays the port template configuration for the switch.

**show unip port-template** [*template\_name*] [**config** | **configured-vlans** | **profile**]

---

### Syntax Definitions

|                         |                                                                                                                  |
|-------------------------|------------------------------------------------------------------------------------------------------------------|
| <b>template_name</b>    | The name of the UNP port template to display.                                                                    |
| <b>config</b>           | Displays additional details about the parameter configuration for the template.                                  |
| <b>configured-vlans</b> | Displays the VLAN IDs that the specified template assigns to a UNP port.                                         |
| <b>profile</b>          | Displays the names of UNP service profiles that the specified template assigns as static profiles to a UNP port. |

### Defaults

By default, displays a summary of the configuration information for all port templates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Enter a template name with this command to display information for a specific port template.
- Use the **config** option with this command to display the full configuration for each template.
- Use the **configured-vlans** option with this command to display the VLAN IDs that a port template will statically assign to a UNP bridge port when the template is applied on the port. Configuring a static VLAN-port association (VPA) applies only to UNP bridge ports.
- Use the **profile** option with this command to display the names of UNP service profiles that a port template will assign as a static profile to a UNP port when the template is applied on the port.

### Examples

```
-> show unip port-template
```

| Template Name             | 802.1x   | Pass-Alt | Profile | Mac-Auth | Mac-Auth | Pass-Alt | Profile | Redirect | Port-Bounce | Class.   | Trust-Tag |

|                                        |                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port Template</b>                   | The name of the port template. By default, the “accessDefaultPortTemplate” is assigned to UNP access ports and the “bridgeDefaultPortTemplate” is assigned to UNP bridge ports.                                                                                                                                                                                                   |
| <b>802.1x Authentication</b>           | The 802.1X authentication status ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                           |
| <b>802.1x Pass Alternate Profile</b>   | The name of an alternate profile for devices that pass 802.1X authentication.                                                                                                                                                                                                                                                                                                     |
| <b>Mac Authentication</b>              | The MAC authentication status ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                              |
| <b>Mac-Auth Pass Alternate Profile</b> | The name of an alternate profile for devices that pass MAC authentication.                                                                                                                                                                                                                                                                                                        |
| <b>Classification</b>                  | The classification status ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                                  |
| <b>Trust-Tag</b>                       | The trust VLAN ID tag status ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                               |
| <b>Default Profile</b>                 | The name of a default profile for devices that are not classified by any other classification methods.                                                                                                                                                                                                                                                                            |
| <b>Port Domain Num</b>                 | The domain ID number assignment for the UNP port.                                                                                                                                                                                                                                                                                                                                 |
| <b>Redirect Port Bounce</b>            | The status of port bounce ( <b>Enabled</b> or <b>Disabled</b> ) for BYOD registration and authorization. This parameter is only configurable on UNP bridge ports.                                                                                                                                                                                                                 |
| <b>AAA Profile</b>                     | The name of an AAA profile to apply to the port.                                                                                                                                                                                                                                                                                                                                  |
| <b>Port Control Direction</b>          | Whether 802.1X access control is applied to ingress and egress traffic ( <b>both</b> ) or just ingress traffic ( <b>in</b> ). This parameter is only configurable on UNP bridge ports.                                                                                                                                                                                            |
| <b>802.1x Tx-Period</b>                | The amount of time, in seconds, before an EAP Request Identity is retransmitted.                                                                                                                                                                                                                                                                                                  |
| <b>802.1x Supp-Timeout</b>             | The amount of time, in seconds, the switch will wait before timing out an 802.1X user that is attempting to authenticate.                                                                                                                                                                                                                                                         |
| <b>802.1x Max-Req</b>                  | The maximum number of times the switch will retransmit a request for authentication information.                                                                                                                                                                                                                                                                                  |
| <b>802.1x Bypass</b>                   | The status of 802.1X bypass ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                                |
| <b>802.1x failure-policy</b>           | Whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails ( <b>default</b> = no MAC authentication is attempted or <b>mac-authentication</b> ).                                                                                                                                                                |
| <b>Mac-auth allow-eap</b>              | The conditions under which 802.1X authentication is performed or bypassed based on the initial MAC authentication process ( <b>pass</b> = if MAC authentication passes, <b>fail</b> = if MAC authentication fails, or <b>noauth</b> = if MAC authentication is not configured). This parameter option only applies to UNP ports on which 802.1X authentication bypass is enabled. |
| <b>Force L3-Learning</b>               | The status of Layer 3 learning ( <b>Enabled</b> or <b>Disabled</b> ).                                                                                                                                                                                                                                                                                                             |

|                                      |                                                                                                                                                             |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Force L3-Learning Port Bounce</b> | The status of the port bounce action, which is an optional parameter associated with the Layer 3 learning function.                                         |
| <b>Admin State</b>                   | The administrative status of the UNP port configuration ( <b>Enabled</b> or <b>Disabled</b> ).                                                              |
| <b>Dynamic Service</b>               | Whether the UNP port generates dynamic SPB, VXLAN, or VPLS services. This parameter is only configurable on UNP access ports.                               |
| <b>L2 Profile</b>                    | The name of a Layer 2 service profile to apply to a UNP access port. This parameter is not configurable when the template is assigned to a UNP bridge port. |
| <b>AP Mode</b>                       | The status of Access Point (AP) mode functionality ( <b>Enabled</b> or <b>Disabled</b> ). This parameter is only configurable on UNP bridge ports.          |

|                      |                                                                                                                       |
|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Template Name</b> | The name of a UNP port template.                                                                                      |
| <b>Profile</b>       | The name of UNP service profiles that are statically assigned to a UNP port when the template is applied to the port. |

---

**Release History**

Release 8.3.1; command was introduced.

Release 8.3.1.R02; “Force L3-Learning” and “Force L3-Learning Port Bounce” fields added.

Release 8.4.1; “L2 Profile” field added.

Release 8.5R4; **profile** parameter added, “Type” field added to configured VLANs display.

Release 8.6R1; “AP Mode” field added.

## show unp user

Displays information about the MAC addresses learned on a UNP port or link aggregate.

```
show unp user [port chassis/slot/port[-port2]] | [linkagg agg_id[-agg_id2]] [sap-id sap_id] [service-id
service_id] [profile profile_name] [authentication-type {none | mac | 802.1x}] [mac-address
mac_address] [count]
```

---

### Syntax Definitions

|                          |                                                                                                                                                                            |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                    |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). This parameter displays all UNP users learned on the specified port number.              |
| <i>agg_id[-agg_id2]</i>  | Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15). This parameter displays all UNP users learned on the specified link aggregate ID. |
| <i>sap_id</i>            | A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID.                                                               |
| <i>service_id</i>        | A service ID number. This parameter displays all UNP users associated with the specified service ID.                                                                       |
| <i>profile_name</i>      | The name of an existing UNP profile. This parameter displays all UNP users associated with the specified profile name.                                                     |
| <b>none</b>              | Displays all UNP users that did not undergo the authentication process.                                                                                                    |
| <b>mac</b>               | Displays all UNP users that were authenticated through the MAC authentication process.                                                                                     |
| <b>802.1x</b>            | Displays all UNP users that were authenticated through the 802.1X authentication process.                                                                                  |
| <i>mac_address</i>       | A source MAC address. This parameter displays the UNP user device with the specified source MAC address.                                                                   |
| <b>count</b>             | Displays the number of UNP users learned on the switch.                                                                                                                    |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results. In addition, some parameters can be combined to further narrow the display results. For example:
  - Combine the **port** or **linkagg** parameter with the **profile** parameter option to display users learned on the port or link aggregate that are classified into the specified profile.
  - Combine the **port** or **linkagg** parameter with the **authentication-type** parameter option to display users on the port or link aggregate that were authenticated with the specified authentication type.
- The “Username” field displays the user name that was entered to authenticate an 802.1X user device or the user name that was entered to successfully authenticate a user device through the Captive Portal process. However, if a user device first undergoes 802.1X authentication and then undergoes successful Captive Portal authentication, the user name entered during the Captive Portal process is displayed in this field.
- IPv6 is supported only for users learned into a VLAN or service which has an IP interface configured.
- On a UNP Bridge port with ap-mode enabled, for clients connected to the AP the Profile will not be displayed as the client is learned using the trust-tag method.

## Examples

```
-> show unip user count
Total users: 6
```

```
-> show unip user
 User
Port Username Mac address IP(V4/V6) Vlan Profile Type Status
-----+-----+-----+-----+-----+-----+-----+-----
1/1/1 00:00:00:00:00:01 00:00:00:00:00:01 2100::3 unp-1 Access Active
1/1/2 00:00:00:00:00:02 00:00:00:00:00:02 2100::4 11 unp-2 Bridge Active
1/1/3 guest_user 00:00:00:00:00:04 2100::6 unp-guest Access Active
1/1/7 00:00:00:00:00:07 00:00:00:00:00:07 2100::7 11 unp-emp Bridge Active
1/0/1 Employee-001 00:00:00:00:00:03 2100::8 12 unp-emp Bridge Active
1/0/2 00:00:00:00:00:14 00:00:00:00:00:14 2100::9 20 unp-7 Bridge Active
```

```
Total users : 6
```

### output definitions

|                        |                                                                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>            | The port or link aggregate on which the MAC address was learned. A “0” indicates the UNP port is a link aggregate (e.g., 0/10 refers to link aggregate ID 10).     |
| <b>Username</b>        | Displays either a source MAC address or a Captive Portal user name for the learned user device.                                                                    |
| <b>MAC address</b>     | The MAC address of the user device. This field and the <b>Username</b> field may contain the same MAC address, depending on how the user device was authenticated. |
| <b>User IP (V4/V6)</b> | The IP network address of the user device (IPv4 or IPv6).                                                                                                          |
| <b>Vlan</b>            | The UNP VLAN ID to which the user device was assigned. This only applies for users authenticated into VLAN profiles.                                               |
| <b>Profile</b>         | The name of the UNP profile to which the user device was assigned.                                                                                                 |

**output definitions**

|               |                                                                                                                                                                                                                                                                |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Type</b>   | The type of UNP port on which the device was learned ( <b>Bridge</b> or <b>Access</b> ).                                                                                                                                                                       |
| <b>Status</b> | The status of the device: <ul style="list-style-type: none"> <li>• <b>In progress</b>—device learning is in progress.</li> <li>• <b>Active</b>—device is learned in forwarding state.</li> <li>• <b>Block</b>—device is learned in filtering state.</li> </ul> |

### Syntax Definitions

|                                    |                                                                                                              |
|------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>                     | The chassis identifier.                                                                                      |
| <i>slot/port</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                            |
| <i>agg_id</i> [- <i>agg_id2</i> ]  | Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15).                            |
| <i>sap_id</i>                      | A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID. |
| <i>service_id</i>                  | A service ID number. This parameter displays all UNP users associated with the specified service ID.         |
| <i>profile_name</i>                | The name of an existing UNP profile.                                                                         |
| <b>none</b>                        | Displays users that did not undergo the authentication process.                                              |
| <b>mac</b>                         | Displays users that were authenticated through MAC authentication.                                           |
| <b>802.1x</b>                      | Displays users that were authenticated through 802.1X authentication.                                        |
| <i>mac_address</i>                 | The user device MAC address.                                                                                 |

### Usage Guidelines

Use the optional parameters provided with this command to filter the output display results. In addition, some parameters can be combined to further narrow the display results. For example:

- Combine the **port** or **linkagg** parameter with the **profile** parameter option to display users learned on the port or link aggregate that are classified into the specified profile.

- Combine the **port** or **linkagg** parameter with the **authentication-type** parameter option to display users on the port or link aggregate that were authenticated with the specified authentication type.

## Examples

```
-> show unip user status port 1/1/1
 Profile Profile Authentication Role Role
Port Mac address Name Source Type Status Name Source CP Redirect Restricted

1/1/2 00:00:00:00:00:15 Prf2 Alt MAC Passed emp2 Profile Y - -
```

Total users : 1

### output definitions

|                              |                                                                                                                                                                |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>                  | The port or link aggregate on which the MAC address was learned. A “0” indicates the UNP port is a link aggregate (e.g., 0/10 refers to link aggregate ID 10). |
| <b>MAC address</b>           | The MAC address of the user device.                                                                                                                            |
| <b>Profile Name</b>          | The name of the UNP to which the user device was assigned.                                                                                                     |
| <b>Profile Source</b>        | The source of the profile assignment (e.g., Radius, Alt).                                                                                                      |
| <b>Authentication Type</b>   | The type of authentication applied to the user ( <b>none</b> , <b>mac</b> , or <b>802.1X</b> ).                                                                |
| <b>Authentication Status</b> | The authentication status for the device.                                                                                                                      |
| <b>Role Name</b>             | The name of the user role applied to the user device.                                                                                                          |
| <b>Role Source</b>           | The source of the user role applied to the user device.                                                                                                        |
| <b>CP</b>                    | Indicates if the device was authenticated through Captive Portal.                                                                                              |
| <b>Redirect</b>              | The redirection status.                                                                                                                                        |
| <b>Restricted Access</b>     | Whether or not access is restricted for the user.                                                                                                              |

## Release History

Release 8.1.1; command was introduced.

## MIB Objects

N/A

---

## show unip user details

Displays additional details about the MAC addresses learned on a UNP port or link aggregate.

```
show unip user details [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]] [sap-id sap_id]
[service-id service_id] [profile profile_name] [authentication-type {none | mac | 802.1x}] [mac-address
mac_address]
```

### Syntax Definitions

|                          |                                                                                                                                                                            |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                    |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). This parameter displays all UNP users learned on the specified port number.              |
| <i>agg_id[-agg_id2]</i>  | Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15). This parameter displays all UNP users learned on the specified link aggregate ID. |
| <i>sap_id</i>            | A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID.                                                               |
| <i>service_id</i>        | A service ID number. This parameter displays all UNP users associated with the specified service ID.                                                                       |
| <i>profile_name</i>      | The name of an existing UNP profile. This parameter displays all UNP users associated with the specified profile name.                                                     |
| <b>none</b>              | Displays all UNP users that did not undergo the authentication process.                                                                                                    |
| <b>mac</b>               | Displays all UNP users that were authenticated through the MAC authentication process.                                                                                     |
| <b>802.1x</b>            | Displays all UNP users that were authenticated through the 802.1X authentication process.                                                                                  |
| <i>mac_address</i>       | A source MAC address. This parameter displays the UNP user device with the specified source MAC address.                                                                   |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results. In addition, some parameters can be combined to further narrow the display results. For example:
  - Combine the **port** or **linkagg** parameter with the **profile** parameter option to display users learned on the port or link aggregate that are classified into the specified profile.
  - Combine the **port** or **linkagg** parameter with the **authentication-type** parameter option to display users on the port or link aggregate that were authenticated with the specified authentication type.
- The “User Name” field displays the user name that was entered to authenticate an 802.1X user device or the user name that was entered to successfully authenticate a user device through the Captive Portal process. However, if a user device first undergoes 802.1X authentication and then undergoes successful Captive Portal authentication, the user name entered during the Captive Portal process is displayed in this field.

|                                      |                                                                                                                               |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>                          | The UNP port or link aggregate on which the device was learned.                                                               |
| <b>Mac-address</b>                   | The MAC address of the device.                                                                                                |
| <b>SAP</b>                           | The port or link aggregate and encapsulation value for an SPB, VXLAN Service Access Point (SAP), or VPLS SAP.                 |
| <b>Service ID</b>                    | The SPB, VXLAN, or VPLS service ID number.                                                                                    |
| <b>VNID</b>                          | The VXLAN Network Identifier. This value is associated with a VXLAN service ID.                                               |
| <b>VPNID</b>                         | The L2 GRE tunnel VPN ID.                                                                                                     |
| <b>ISID</b>                          | The SPB service instance identifier. This value is associated with an SPB service ID.                                         |
| <b>VPLSID</b>                        | The VPLS Network Identifier. This value is associated with a VPLS service ID.                                                 |
| <b>Access Timestamp</b>              | The date and time the device was learned.                                                                                     |
| <b>User Name</b>                     | The MAC address of the user.                                                                                                  |
| <b>IP-Address (IPv4/IPv6)</b>        | The IP network address of the device, IPv4 or IPv6.                                                                           |
| <b>Vlan</b>                          | The VLAN ID number for the VLAN in which the device was learned.                                                              |
| <b>Authentication Type</b>           | The type of authentication used ( <b>Mac-Authentication</b> or <b>802.1x-Authentication</b> ).                                |
| <b>Authentication Status</b>         | The status of the authentication process ( <b>blank “-”</b> , <b>Authenticated</b> , <b>Failed</b> , or <b>In Progress</b> ). |
| <b>Authentication Failure Reason</b> | The reason authentication failed.                                                                                             |
| <b>Authentication Retry Count</b>    | The number of times authentication has been attempted.                                                                        |
| <b>Authentication Server IP Used</b> | The IP address of the authentication server.                                                                                  |
| <b>Authentication Server Used</b>    | The name of the authentication server used.                                                                                   |
| <b>Server Reply-Message</b>          | Reply message from the authentication server.                                                                                 |
| <b>Profile</b>                       | The name of the UNP profile to which the user was assigned.                                                                   |
| <b>Profile Source</b>                | The source of the profile (returned from the server or assigned through the UNP process on the switch).                       |
| <b>Profile From Auth Server</b>      | The name of the UNP profile returned from the authentication server.                                                          |
| <b>Classification profile rule</b>   | The rule that resulted in the device classification into the UNP profile.                                                     |
| <b>QMR Status</b>                    | The Quarantine Manager Remediation status for the device.                                                                     |

## show unip policy validity-period

Displays the UNP period policy configuration for the switch. This type of policy is assigned to a UNP profile and applied to devices classified into the profile.

**show unip policy validity-period** [*policy\_name*]

---

### Syntax Definitions

*policy\_name*                      The name of an existing UNP period policy.

### Defaults

By default, all UNP period policies are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Enter a UNP period policy name to display information about a specific policy.

### Examples

```
-> show unip policy validity-period
Policy Days Months Hours Interval TZ Active
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
tp1 SMTWTFS JFMAMJJASOND 08:00 - 17:00 - - - - NO
tp2 ----- - - - 01/01/13 00:00 - 01/02/13 00:00 CST NO
```

Total Period Policy Count: 2

```
-> show unip policy validity-period tp1
Policy Days Months Hours Interval TZ Active
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
tp1 SMTWTFS JFMAMJJASOND 08:00 - 17:00 - - - - NO
```

### Release History

Release 8.1.1; command introduced.

## show unip policy validity-location

Displays the UNP location policy configuration for the switch. This type of policy is assigned to a UNP profile and applied to devices classified into the profile.

**show unip policy validity-location** [*policy\_name*]

---

### Syntax Definitions

*policy\_name*                      The name of an existing UNP location policy.

### Defaults

By default, all UNP location policies are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

### Usage Guidelines

Enter a location policy name to display information about a specific policy.

### Examples

```
-> show unip policy validity location
Policy: 11
 Port = 1/1/1
 Domain ID = 256,
 System Name = shasta
 System Location = Bangalore
```

```
Total Location Policy Count: 1
```

### Release History

Release 8.1.1; command introduced.  
Release 8.9R3; **Domain ID** output filed added.

## Related Commands

---

## device-profile admin-state

Enables or disables the Device Profiling configuration on the switch.

**device-profile admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables Device Profiling configuration on the switch.

**disable** Disables Device Profiling configuration on the switch.

### Defaults

By default Device Profiling configuration is disabled globally on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

When Device Profiling is globally enabled for the switch, Device Profiling functionality is automatically enabled on all ports and link aggregates.

### Example

```
-> device-profile admin-state enable
-> device-profile admin-state disable
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

[device-profile port linkagg](#) Enables or disables the Device Profiling on the ports or linkagg interface.

[show device-profile config](#) Displays the global configuration of the Device Profile.

### MIB Objects

---

## device-profile port linkagg

Enables or disables the Device Profiling on the ports or linkagg interface.

**device-profile** [**port** *chassis*/]*slot/port1*[-*port2*] | **linkagg** *agg\_id1*[-*agg\_id2*] **admin-state** {**enable** | **disable**}

---

### Syntax Definitions

|                                     |                                                                                                    |
|-------------------------------------|----------------------------------------------------------------------------------------------------|
| <i>chassis</i>                      | The chassis identifier.                                                                            |
| <i>slot/port1</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                  |
| <i>agg_id1</i> [- <i>agg_id2</i> ]  | The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10). |
| <b>enable</b>                       | Enables the Device Profiling on the specified port or linkagg.                                     |
| <b>disable</b>                      | Disables the Device Profiling on the specified port or linkagg.                                    |

### Defaults

By default Device Profiling is enabled on all ports or linkagg when the Device Profiling feature is enabled globally on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use this command to disable Device Profiling on specific ports or linkagg when the Device Profiling is globally enabled on the switch.
- Device Profiling configuration is not allowed on VFL or HiGig ports.

### Example

```
-> device-profile linkagg 1 admin-state enable
-> device-profile port 2/1/2-5 admin-state enable
-> device-profile port 1/1/2 admin-state enable
-> device-profile port 1/1/2 admin-state disable
-> device-profile linkagg 1-5 admin-state disable
```

### Release History

Release 8.5R2; command was introduced.

## Related Commands

[show device-profile config](#)

Displays the global configuration of the Device Profile.

[show device-profile catalog](#)

Displays the details of known and unknown devices identified in the network.

## MIB Objects

---

## device-profile device-type

Adds or removes a new device type and category in the Device Profile.

```
device-profile device-type type_name device-name device_name from {mac-address mac_address |
dhcp-option-55 dhcp_option}
```

```
no device-profile device-type type_name
```

---

### Syntax Definitions

|                    |                                                                                                           |
|--------------------|-----------------------------------------------------------------------------------------------------------|
| <i>type_name</i>   | The type of the device. The device type name can be of maximum size 32 alphanumeric characters.           |
| <i>device_name</i> | The name of the device type. The device name can be of maximum size 32 alphanumeric characters.           |
| <i>mac_address</i> | The MAC address of the device. The device with that MAC address must be in the unknown cataloged devices. |
| <i>dhcp_option</i> | The DHCP option 55 codes of the device.                                                                   |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The unknown cataloged devices can be identified or moved to trusted identity in the Device Profile using this command.
- While specifying the MAC address of the device for identity, the device must first be present in the unknown cataloged devices. Otherwise, the MAC address will not be recognized.
- Custom signatures can be created using the DHCP option 55.
- The new signatures created will not be persistent unless it is saved. Use the [device-profile update-signature](#) CLI command to update the flash or signature database.
- Use the **no** form of the command to remove the device and its category from the trusted device list.

## Example

```
-> device-profile device-type Printer-Fax device-name Kyocera-Printer mac-address
00:aa:bb:12:43:55
-> device-profile device-type IP-Camera device-name netgear dhcp-option-55
1,3,6,15,119,252
-> no device-profile device-type Printer-Fax
```

## Release History

Release 8.5R2; command was introduced.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use this command to update the signature file in the system. Currently, only DHCP option 55 based signature is updated.
- The command also updates the custom signature into the flash.

### Example

```
-> device-profile update-signature from /flash/dhcp_option55_list.txt
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

- [show device-profile catalog](#)      Displays the details of known and unknown devices identified in the network.
- [show device-profile signatures](#)    Displays the device types in the local database and indicates the signatures which are not saved to the flash.
- [show device-profile signatures from](#)    Displays the contents of the signature file.

## **MIB Objects**

alaDpGlobalConfig  
  alaDpUpdateSignatureFileName

---

## device-profile auto-unp-assignment

Configures the status of automatic assignment to a UNP profile when the device gets identified and categorized into existing device types.

**device-profile auto-unp-assignment**

**no device-profile auto-unp-assignment**

---

### Syntax Definitions

N/A

### Defaults

By default, automatic assignment to a UNP profile is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- If the device profile is from a different VLAN, then it must be port bounced using the **unp redirect port-bounce** command to toggle.
- Use the **no** form of the command to disable the auto assignment of the UNP profile.
- When Device Profiling is globally enabled for the switch, the following UNP profiles and extended classification rules are automatically created on the switch:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets
- Automatically created UNP profiles are not mapped to a VLAN; manually configuring the VLAN assignment for the profile is still required.
- UNP profiles automatically created for the device types still require mapping the profiles to a VLAN.

### Example

```
-> device-profile auto-unp-assignment
-> no device profile auto-unp-assignment
```

## Release History

Release 8.5R2; command was introduced.

alaDpUpdateSignatureFileName

---

## show device-profile signatures

Displays the device types in the local database and indicates the signatures which are not saved to the flash.

**show device-profile signatures**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Displays all the device types in the local database (/flash file).
- An asterisk (\*) next to the device type indicates that the device signature is not saved to the flash.

### Examples

```
-> show device-profile signatures
```

```
Device Type Device Name DHCP Option 55
-----+-----+-----

## show unp redirect allowed-auth-server

Displays the details (FQDN, server IPv4 address, FQDN resolved time and programmed IP) of the allowed-auth-servers configured for BYOD web-redirection.

**show unp redirect allowed-auth-server** *name*

---

### Syntax Definitions

*name* When the server name is specified, it displays the details only for the specified server.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | No    | Yes  | No   | No              | No                                                            | No   |

### Usage Guidelines

N/A

### Examples

```
-> show unp redirect allowed-auth-server
Allowed-auth-Server Polling-Interval = 30 min .
```

```
Allowed-auth-Server: WS1
FQDN = www.byodredsvr.com,
Server IPv4 Address = -,
FQDN Resolved Time = 22:01:23
Programmed IP(s) = 10.135.66.7
 135.76.8.9
```

```
Allowed-auth-Server: WS2
FQDN = www.byodredsvr1.com,
Server IPv4 Address = -,
FQDN Resolved Time = 22:00:21
Programmed IP(s) = 10.135.99.23
```

```
Allowed-auth-Server: WS3
FQDN = -,
Server IPv4 Address = 10.45.67.9,
FQDN Resolved Time = -,
Programmed IP(s) = 10.45.67.9
```

```
Total Allowed-auth-Server Count: 3
```

```
-> show unp redirect allowed-auth-server WS1
Allowed Server: WS1
FQDN = www.byodredsvr.com,
Server IPv4 Address = -,
FQDN Resolved Time = 22:01:23
Programmed IP(s) = 10.135.66.7
 135.76.8.9
```

### *output definitions*

# 43 Application Monitoring and Enforcement Commands

Application usage patterns in the enterprise network is changing with the increase in use of the social networking, browser based file sharing, and peer to peer applications. The use of these applications result in the new traffic patterns in the network that are not straightforward to distinguish. There is also an increase in consumerization of IT with multiplication of thin clients, HTTP based, and virtual desktop clients.

OmniSwitch Application Monitoring and Enforcement (AppMon) feature addresses the key challenges of real time classification of flows at application level by providing differential QoS treatment in the form of higher priority marking and security policies at application level. AppMon feature improves the quality of user experience through application aware network optimization and control.

---

**Note.**

- AppMon is supported on a virtual chassis of OmniSwitch 6860 and OmniSwitch 6860E platforms where at least one OmniSwitch 6860E is mandatory for the feature to work.

- AppMon is supported on a virtual chassis of OmniSwitch 6860N.

---

MIB information for the AppMon commands is as follows:

*Filename:* ALCATEL-IND1-APP-MON-MIB.mib  
*Module:* alaAppMonMIB

A summary of the available commands is listed here:

---

**app-mon admin-state**  
**app-mon port admin-state**  
**app-mon auto-group create**  
**app-mon app-group**  
**app-mon app-list**  
**app-mon apply**  
**app-mon l3-mode**  
**app-mon l4-mode**  
**app-mon l4port-exclude**  
**app-mon flow-table flush**  
**app-mon flow-table enforcement stats**  
**app-mon aging enforcement**  
**app-mon logging-threshold**  
**app-mon flow-sync enforcement interval**  
**app-mon force-flow-sync**  
**app-mon separate-config-file**  
**app-mon data**  
**app-mon enforcement-mode**  
**show app-mon config**  
**show app-mon port**  
**show app-mon app-pool**  
**show app-mon app-list**  
**show app-mon app-group**  
**show app-mon app-record**  
**show app-mon ipv4-flow-table**  
**show app-mon ipv6-flow-table**  
**show app-mon l4port-exclude**  
**show app-mon stats**  
**show app-mon aging enforcement**  
**show app-mon vc-topology**  
**clear app-mon app-list**

---

## app-mon admin-state

Enable or disable the Application Monitoring and Enforcement (AppMon) feature.

**app-mon admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables AppMon support on the switch.  
**disable** Disables AppMon support on the switch.

### Defaults

By default, AppMon is disabled on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- AppMon cannot be enabled globally when,
  - all the mirroring sessions are used by port mirroring or monitoring features.
  - mirroring session is used by policy manager.
  - This is applicable for OmniSwitch 6860 only.
- On OmniSwitch 6860, when AppMon is enabled globally, it reserves a mirroring session in the system.
- If AppMon functionality is enabled at a port level, disabling AppMon globally overrides the functionality of all AppMon ports; however, configuration on the ports remain the same.
- AppMon is supported on a virtual chassis of OmniSwitch 6860 and OmniSwitch 6860E platforms where at least one OmniSwitch 6860E is mandatory for the feature to work.
- AppMon is supported on a virtual chassis of OmniSwitch 6860N.

### Examples

```
-> app-mon admin-state enable
-> app-mon admin-state disable
```

### Release History

Release 8.2.1; command introduced.

**Related Commands**

- app-mon port admin-state** Enable or disable AppMon on one or more switch ports.  
**show app-mon config** Displays global AppMon configuration.

**MIB Objects**

alaAppMonAdminStatus

---

## app-mon port admin-state

Enable or disable AppMon Monitoring and Enforcement on one or more switch ports.

**app-mon {port chassis/slot/port[-port2] | slot chassis/slot [-slot]} admin-state {enable | disable}**

---

### Syntax Definitions

|                                  |                                                                                                                        |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <i>chassis/slot/port[-port2]</i> | The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8). |
| <i>chassis/slot</i>              | The chassis ID and slot number (3/1) for a specific slot.                                                              |
| <b>enable</b>                    | Enables AppMon on the port.                                                                                            |
| <b>disable</b>                   | Disables AppMon on the port.                                                                                           |

### Defaults

By default, AppMon is disabled on all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- It is mandatory to enable AppMon globally for the port level AppMon to function.
- When slot option is used, then AppMon configuration is applied on all the physical ports of that particular slot.
- AppMon configuration is not allowed on Virtual Fabric Link, ERP, or VLAN stacking ports.
- On OmniSwitch 6860, AppMon cannot be configured on a port that is part of a link aggregate or a port mirroring port. On OmniSwitch 6860N, AppMon can be configured on a port that is part of a link aggregate.
- On OmniSwitch 6860, AppMon must not be configured on user ports and uplink ports at the same time. On OmniSwitch 6860N, it is mandatory to enable AppMon on user ports and uplink ports.
- On OmniSwitch 6860N, AppMon must be enabled on both ports involving bi-direction flow traffic.

### Examples

```
-> app-mon slot 1/1 admin-state enable
-> app-mon port 1/1/2-5 admin-state enable
-> app-mon slot 1/1 admin-state disable
```

## Release History

Release 8.2.1; command introduced.

Release 8.7R1; AppMon support on SPB/UNP access ports added.

Release 8.8R1; AppMon support on SPB/UNP access ports added on OmniSwitch 6860N.

## Related Commands

[app-mon admin-state](#)

Enable or disable the Application Monitoring feature.

[show app-mon port](#)

Displays AppMon status per physical port or per slot for the switch.

## MIB Objects

alaAppMonPortConfigTable

  alaAppMonPortConfigSlotPortIndex

  alaAppMonPortConfigPortStatus

---

## app-mon auto-group create

Creates application groups automatically on the switch. The application groups are automatically created based on the 'category' field of each application present in the application pool.

**app-mon auto-group create**

---

### Syntax Definitions

### Usage Guidelines

- Modifications are allowed in auto application groups with addition or deletion of applications using the **app-mon app-group** command.
- Enter **app-mon apply** and **write memory** to save the auto group configuration or modification on the switch.
- The **show app-mon app-pool** command displays the application categories in the signature file. The application group names are derived from the category name.

### Examples

```
-> app-mon auto-group create
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

### **app-mon apply**

Updates the set of application signatures configured for application monitoring.

### **show app-mon app-group**

Displays the details of all the applications in an application group.

### **show app-mon app-pool**

Displays all the applications that are part of an application pool.

## MIB Objects

alaAppMonAutoGroupCreation

---

## app-mon app-group

Creates an application group. Applications can be added or removed from the application group.

**app-mon app-group** *app\_group\_name* {**add** | **remove**} {**app-name** *app\_name* | **from** *app\_name* **to** *app\_name*}

**no app-mon app-group** *app\_group\_name*

---

### Syntax Definitions

|                             |                                                                                                                                        |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <i>app_group_name</i>       | Name of the application group. The group name can be a maximum of 32 alphanumeric characters.                                          |
| <i>app_name</i>             | The name of the application to be added to the application group. The application name can be a maximum of 32 alphanumeric characters. |
| <b>from</b> <i>app_name</i> | The first application name when adding a range of applications to an application group.                                                |
| <b>to</b> <i>app_name</i>   | The last application name when adding a range of applications to an application group.                                                 |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove an application group.
- This command can be used to add or delete applications for the auto application groups as well.
- One application can belong to more than one application group.
- Only those applications that are part of an application pool are allowed to be added to an application group.
- To add a range of applications or multiple applications to an application group, use the **from** and **to** options. Range is expanded based on the list of applications in the app-pool list (application pool). Use the **show app-mon app-pool** command to view the application names.
- If an application is removed from an application group which has only one application, then the complete application group is removed.

- If any application is added to a user group (group name same name as category name), and signature toolkit update operation or 'app-mon auto-group create' is done, then added group is not deleted. Only update happens.
- If an application group contains a single application and the group is part of an application list, then this single application cannot be removed from the application group.
- An application group cannot be deleted when it is part of an application list.
- When the last application from the application group is removed, the application group is automatically deleted.
- The list of applications (added or deleted) to an application group is displayed in **show configuration snapshot** command after **app-mon apply** command is entered. A list of applications (added or deleted) are displayed with the **show app-mon app-group** command even without using the **app-mon apply** command.

## Examples

```
-> app-mon app-group apg2 add app-name whatsapp
-> app-mon app-group apg2 remove app-name whatsapp
-> no app-mon app-group apg2
```

To add a range of applications or multiple applications to an application group, use the **show app-mon app-pool** command to view the application names. For example:

```
-> show app-mon app-pool
```

Legend: Application-name: \*= Not present in recently updated kit,

| AppId | Application-name | Revision | Category          |
|-------|------------------|----------|-------------------|
| 968   | amazon           | 1.0.0    | Web               |
| 244   | facebook         | 1.0.0    | Web               |
| 182   | sip              | 1.0.0    | Audio/Video       |
| 183   | skype            | 1.1.0    | Instant Messaging |
| 211   | tftp             | 1.0.0    | File Server       |
| 503   | twitter          | 1.0.0    | Web               |
| 597   | viber            | 1.0.0    | Audio/Video       |
| 890   | webex            | 1.0.0    | Audio/Video       |
| 1093  | whatsapp         | 1.0.0    | Instant Messaging |
| 240   | youtube          | 1.0.0    | Web               |

```
Number of Applications: 10
```

Select any two applications for the range option using the **app-mon app-group** command.

```
-> app-mon app-group apg1 add from sip to viber
```

This command adds the applications from sip to viber to the application group (sip, skype, tftp, twitter, and viber).

If an application is removed from an application group which has only one application, then the complete application group is removed. For example:

```
-> show app-mon app-group group1
```

| AppGrp-Id | App-group | App-name          |
|-----------|-----------|-------------------|
| 1093      | whatsapp  | Instant Messaging |

Now, remove the application name 'whatsapp' from the application group. The complete application group gets removed as shown below.

## app-mon app-list

Add or remove applications or application groups to an application list for enforcement or monitoring.

```
app-mon app-list {enforcement | monitor} {add | remove} {app-name app_name | app-group
app_group_name}
```

---

### Syntax Definitions

|                       |                                                                                                                                                                         |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>add</b>            | Adds the specified application or application group to an application list.                                                                                             |
| <b>remove</b>         | Removes the specified application or application group from an application list.                                                                                        |
| <i>app_name</i>       | Name of the application to be added to the application list. This adds the specified application to the application list.                                               |
| <i>app_group_name</i> | Name of the application group to be added to the application list. This enables the addition of multiple applications in the application group to the application list. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- The application group can be user created or generated automatically (see [app-mon app-group](#) and [app-mon auto-group create](#) command).
- Separate application list is maintained for enforcement and monitoring.
- The **show configuration snapshot** command displays the applications added or removed from the application list only after the **app-mon apply** command is used. The **app-mon apply** command saves the list of applications added or removed to the application list. The saved list of applications are displayed with the **show app-mon app-list active** command.
- QoS policy rules can be configured for a given application as well as an application group where the same application also exists. QoS matches policies based on the application-name or application-group name configured in an application list. For more information on configuring enforcement for QoS policy rules, see the “**QoS Policy Commands**” chapter.

## Examples

```
-> app-mon app-list enforcement add app-name whatsapp
-> app-mon app-list enforcement add app-group apg1
-> app-mon app-list monitor add app-group apg2
-> app-mon app-list enforcement remove app-name whatsapp
```

## Release History

Release 8.2.1; command introduced.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

The following operations are performed with the **app-mon apply** command:

- Saves the current application-list, application-group, and auto-groups to flash when 'write memory' command is used.
- The application list is checked for any application configured more than once in an application list (individually or as a part of application group).
  - The **app-mon apply** command will not be successful until the conflict is resolved.
  - The **show app-mon app-list** command with the **monitor conflict** or the **enforcement conflict** parameter displays the available conflicts in an application list.
  - The duplicate application names must be removed for a successful **app-mon apply** operation.
- QoS is applied to the flows learned for the activated applications based on the configured QoS policies for Enforcement application list.

### Examples

```
-> app-mon apply
```

### Release History

Release 8.2.1; command introduced.

### Syntax Definitions

|                               |                                                                                      |
|-------------------------------|--------------------------------------------------------------------------------------|
| <b>range-id</b> <i>number</i> | The range ID number. The valid range is 1–8.                                         |
| <b>tcp-service-port</b>       | Specifies TCP service ports.                                                         |
| <b>udp-port</b>               | Specifies UDP ports.                                                                 |
| <b>start</b> <i>number</i>    | The first port associated with the range ID number. The valid port range is 1–65535. |
| <b>end</b> <i>number</i>      | The last port associated with the range ID number. The valid port range is 1–65535.  |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove an L4 exclude range ID from the switch configuration.
- For the **udp-port** option, the AppMon operation is not performed on the flows with a source or destination port that is in the excluded port range.
- For the **tcp-service-port** option, the AppMon operation is not performed on the flows with a destination TCP port of TCP-SYN packet or a source TCP port of TCP-SYN-ACK packet that is in the excluded port range.
- This configuration applies to both enforcement and monitor features.

### Examples

```
-> app-mon l4port-exclude range-id 5 tcp-service-port start 20 end 30
-> app-mon l4port-exclude range-id 6 udp-port start 90 end 100
-> no app-mon l4port-exclude range-id 6
```

## Release History

Release 8.2.1; command introduced.

## Related Commands

**show app-mon l4port-exclude** Displays the port range excluded from AppMon operation.

## MIB Objects

```

---

## app-mon flow-table flush

Clears all the learned flow-table entries for both IPv4 and IPv6 flow tables.

**app-mon flow-table {enforcement | monitor} flush**

---

### Syntax Definitions

**enforcement** Flushes all the learned flow-table entries from the enforcement application.

**monitor** Flushes all the learned flow-table entries from the monitor application.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- When the **enforcement** option is used, all the active flows information are cleared; no QoS treatment is provided (if configured). The data (active, gross counters, statistics, and flow information) in the following commands are cleared: **show app-mon app-list enforcement active**, **show app-mon app-list enforcement active stats**, **show app-mon ipv4-flow-table enforcement**, **show app-mon ipv6-flow-table enforcement**, **show app-mon stats**.
- When the **monitor** option is used, all the learned flows information will be cleared. The data (gross counters and flow information) in the following commands are cleared: **show app-mon app-list monitor active**, **show app-mon ipv4-flow-table monitor**, **show app-mon ipv6-flow-table monitor**.
- When this command is used, application-record information is not cleared.

### Examples

```
-> app-mon flow-table enforcement flush
-> app-mon flow-table monitor flush
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

- show app-mon config** Displays global AppMon configuration.
- show app-mon app-list** Displays a list of applications and application groups added to an application list. 'stats' option in this command displays active or gross packets/byte counters on per application basis.
- show app-mon ipv4-flow-table** Displays the flow table for IPv4 flows entries for enforcement and monitor flows.
- show app-mon ipv6-flow-table** Displays the flow table for IPv6 flows entries for enforcement and monitor flows.

## MIB Objects

alaAppMonFlowTableFlush

---

## app-mon flow-table enforcement stats

Enable or disable flow table statistics update for enforcement applications.

**app-mon flow-table enforcement stats admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enable flow-table statistics update.  
**disable** Disable flow-table statistics update.

### Defaults

By default, statistics admin status is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- This command is applicable only for enforcement applications.
- The statistics collection capability is shared with Service Manager, which means that either the Service Manager feature or AppMon can use this capability at any given time. Hence, disabling the counter usage in Service Manager using the **service stats disable** command is required to view the flow table statistics update for enforcement applications. For more information about this command, see the “Service Manager Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide*.
- When update statistics is enabled, the updated statistics is displayed in the **show app-mon ipv4-flow-table enforcement verbose**, **show app-mon ipv6-flow-table enforcement verbose**, and **show app-mon app-list enforcement active stats** commands. Statistics are refreshed every 160 seconds from data path, and based on the flow sync interval between the data path and the control path.

### Examples

```
-> app-mon flow-table enforcement stats admin-state enable
-> app-mon flow-table enforcement stats admin-state disable
```

### Release History

Release 8.2.1; command introduced.

**Related Commands**

**MIB Objects**

alaAppMonEnforcementFlowTableStatsAdminStatus

---

## app-mon aging enforcement

Configures aging time for dynamically learned TCP/UDP flows for each application for Enforcement applications.

**app-mon aging enforcement app-name *app\_name* [tcp | udp] interval {120m | 60m | 30m | 10m | 5m | 3m | default}**

---

### Syntax Definitions

|                 |                                                                                                                |
|-----------------|----------------------------------------------------------------------------------------------------------------|
| <i>app_name</i> | Name of the application to configure its aging interval. The application must be part of the application pool. |
| <b>interval</b> | The aging time interval for dynamically learned flows in the flow table, in minutes.                           |
| <b>default</b>  | Configures the default aging interval.                                                                         |

### Defaults

By default, aging interval is set per application and TCP or UDP flow type basis.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- User can set separate TCP or UDP flows aging interval for an given application.
- When TCP option is used to configure aging interval for an application, TCP flows generated by a given application age out with configured value.
- When UDP option is used to configure aging interval for an application, UDP flows generated by a given application age out with configured value.
- Flow aging is supported for the applications that are part of the enforcement application list. Flows related with enforcement application list are made active for QoS treatment as well statistics collection.
- Flow aging is not supported for applications that are part of Monitor application list. Monitor flow tables log these flows when they are detected until logging threshold is reached.

### Examples

```
-> app-mon aging enforcement app-name sip tcp interval 60m
-> app-mon aging enforcement app-name tftp udp interval 120m
```

## Release History

Release 8.2.1; command introduced.

## Related Commands

---

## app-mon logging-threshold

Configures the threshold for the number of matched flows for enforcement and monitor applications.

**app-mon logging-threshold** {enforcement | monitor} num-of-flows {number | default}

---

### Syntax Definitions

**number** Threshold value for the number of matched flows. The valid range is 1000–60000.

**default** Sets the threshold back to the default value of 20K.

### Defaults

By default, 20000 flows are logged.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- When the logging threshold value is set to '0', flows are not logged to the log file.
- When used with enforcement option, it configures the threshold for the number of matched flows to be saved on to the log file for enforcement applications.
- When used with monitor option, it configures the threshold for the number of matched flows to be displayed in the monitor flow table commands.

### Examples

```
-> app-mon logging-threshold monitor num-of-flows 10000
-> app-mon logging-threshold monitor num-of-flows default
-> app-mon logging-threshold enforcement num-of-flows 10000
```

### Release History

Release 8.2.1; command introduced.

---

## app-mon flow-sync enforcement interval

Configures the interval at which the enforcement flows information is refreshed.

**app-mon flow-sync enforcement interval** {*number* | **default**}

---

### Syntax Definitions

*number* Flow sync interval at which the enforcement flows information is refreshed. The valid range is 10–3600 seconds. The interval can be configured only for the enforcement feature.

**default** Configures the default flow-sync interval.

### Defaults

Default flow-sync interval is 60 seconds for enforcement.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

---

## app-mon force-flow-sync

Synchronizes flows learned in the data path.

`app-mon force-flow-sync {enforcement | monitor}`

---

### Syntax Definitions

|                    |                                                                                            |
|--------------------|--------------------------------------------------------------------------------------------|
| <b>enforcement</b> | Synchronizes flows learned in the data path for the enforcement feature from the hardware. |
| <b>monitor</b>     | Synchronizes flows learned in the data path for the monitor feature from the hardware.     |

### Defaults

By default, flow synchronization occurs every 5 minutes for monitor flows and 60 seconds for enforcement flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

Use this command to force a flow synchronization with the control path database in real time.

### Examples

```
-> app-mon force-flow-sync enforcement
-> app-mon force-flow-sync monitor
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

## app-mon separate-config-file

Reduces the per-application level AppMon configuration display in the **show configuration snapshot** output as well as in “vcboot.cfg”.

**app-mon separate-config-file**

**no app-mon separate-config-file**

---

### Syntax Definitions

N/A

### Defaults

By default, the separate configuration file option is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- When this command is used, per-application level AppMon configuration is moved to a separate file called “appmon\_vcboot.cfg” from “vcboot.cfg” on **write memory**.
- Use the **no** form of this command to disable the separate configuration file feature.

### Examples

```
-> app-mon separate-config-file
-> no app-mon separate-config-file
```

### Release History

Release 8.7R1; command introduced.

### Related Commands

---

## app-mon data

Provides an option to extract pre-defined attributes of a given application for debugging and monitoring purposes. Use this command to view the interface information for an application attribute flow.

**app-mon data** *app\_name* [**filter** *filter\_header* | **no-page**]

---

### Syntax Definitions

|                      |                                                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------------------------------|
| <i>app_name</i>      | Name of the application from which to extract pre-defined attributes.                                           |
| <i>filter_header</i> | Filter the data attributes based on various fields like time, interface, source MAC, destination MAC and so on. |
| <b>no-page</b>       | Filter with this option to display all the records.                                                             |

### Default

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- This is a meta CLI, and does not have corresponding SNMP MIB object.
- This command does not allow any configuration; can be used to view the attribute records for a specific application. Currently, this command can be used only for **IEC104** application.
- The data attributes can be filtered based on various fields like time, interface, source MAC, destination MAC and so on. Filter with 'no-page' option to display all the records.

### Examples

```
-> app-mon data
Please wait...
Usage: app-mon data <app-name> [filter <"string">] [no-page]
app-name: display attribute records of an application name
filter: to display attribute records based on given column name (s)
no-page: display all the attribute records
Filter Usage: app-mon data <app-name> filter "ColumnNmae1=value1, ColumnN-
mae2=value2 ..." [no-page]
Header:
Time | Interface | SrcMac | SrcIp | SrcPort | DesMac | DesIp | DesPort | CauseTx |

## MIB Objects

N/A

---

## app-mon enforcement-mode

Enables the enforcement for either IPv4 or IPv4-IPv6 flows.

**app-mon enforcement-mode [ipv4 | ipv4-ipv6]**

---

### Syntax Definitions

**ipv4** Applies enforcement to IPv4 flows.  
**ipv4-ipv6** Applies enforcement to IPv4-IPv6 flows.

### Default

By default, enforcement mode is set to IPv4-IPv6.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6465 | 6560 | 6860 | 6570M | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6 | 9900 |
|------|------|------|-------|-------|------|------|-----------------|---------------------|------|
| No   | No   | No   | No    | Yes   | No   | No   | No              | No                  | No   |

### Usage Guidelines

- Enforcement mode can be changed only when AppMon is in disabled state.
- Enforcement mode does not apply to monitoring app-list.
- Enforcement mode is specific to enforcement app-list only. However, this configuration does not impact the flow matching or tracking of IPv4 and IPv6 flows for applications that are part of enforcement app-lists; it only affects the subsequent QoS enforcement for flows.
- If mode is IPv4, QoS enforcement is not supported for the IPv6 flows; however, flow matching and tracking will be supported for IPv6 flows.
- If mode is IPv4-IPv6, flow matching, tracking, and QoS enforcement are supported for both IPv4 and IPv6 flows.
- This configuration is to enable user to increase the number of flows supported for QoS enforcement. User can increase number of flows supported for QoS enforcement by configuring IPv4 mode. However, it will not support QoS enforcement for IPv6 flows.

### Examples

```
-> app-mon enforcement-mode ipv4
-> app-mon enforcement-mode ipv4-ipv6
```

### Release History

Release 8.7R2; command introduced.

## Related Commands

**show app-mon config** Displays global AppMon configuration.

## MIB Objects

## show app-mon config

Displays global AppMon configuration.

**show app-mon config [app-snapshot]**

---

### Syntax Definitions

**app-snapshot** Displays per-application level AppMon configuration.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                         |                                                                          |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|-------------------------|--------------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900<br/>V72/C32</b> | <b>6900<br/>X48C6/T48C6/<br/>X48C4E/V48C8/<br/>C32E/T24C2/<br/>X24C2</b> | <b>9900</b> |
| No          | No          | No          | No           | Yes         | Yes          | No          | No          | No                      | No                                                                       | No          |

### Usage Guidelines

- The operational state is enabled if there is at least one OmniSwitch 6860E chassis in the virtual chassis (VC). If there is no OmniSwitch 6860E in the VC, the operational-state is disabled.
- Use **app-snapshot** option to view the AppMon configuration at an application level.

### Examples

```
-> show app-mon config
Admin State : Enable,
Operational State : Enable,
Separate Config File Status : Yes,
L3-IPv4 : Enable,
L3-IPv6 : Enable,
Enforcement Flow-Table Stats : Enable,
Enforcement Flow-Sync Interval : 60 seconds,
Monitor Logging Threshold : 7000,
Enforcement Logging Threshold : 7000,
App-Pool Applications : 2849,
Monitor Applied Applications : 2849,
Enforcement Applied Applications : 2849,
Upgraded Signature File Type : Production,
AOS Compatible Signature Kit Version : 1,
Signature Kit version : 3.7.6
```

```
-> show app-mon config app-snapshot
! APP-MONITORING:
app-mon app-group "Web" add app-name "01net"
```

```

app-mon app-group "Web" add app-name "0zz0"
app-mon app-group "Web" add app-name "104com"
...

app-mon app-list monitor add app-group "Web"p
app-mon app-list enforcement add app-group "Web"
...

.-> show app-mon config
Admin State : Enable,
Operational State : Enable,
Separate Config File Status : Yes,
Enforcement Mode : IPV4-IPV6,
Enforcement Flow-Sync Interval : 60 seconds,
Monitor Logging Threshold : 7000,
Enforcement Logging Threshold : 7000,
App-Pool Applications : 2849,
Monitor Applied Applications : 2849,
Enforcement Applied Applications : 2849,
Upgraded Signature File Type : Production,
AOS Compatible Signature Kit Version : 1,
Signature Kit version : 3.7.6

```

alaAppMonAutoGroupCreation
```

---

## show app-mon port

Displays AppMon status per physical port or per slot for the switch.

**show app-mon** [**port** *chassis/slot/port* | **slot** *chassis/slot*]

---

### Syntax Definitions

*chassis/slot/port*[-*port2*]      The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).

*chassis/slot*                      The chassis ID and slot number (3/1) for a specific slot.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

## show app-mon app-list

Displays a list of applications and application groups added to an application list.

**show app-mon app-list {monitor | enforcement} [active [stats]] [conflict]**

---

### Syntax Definitions

|                       |                                                                                                                                              |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>monitor</b>        | Displays information for applications added for monitoring.                                                                                  |
| <b>enforcement</b>    | Displays information for applications added for enforcement.                                                                                 |
| <b>active [stats]</b> | Displays the list of activated applications in an application list. Use the <b>stats</b> option together with the <b>enforcement</b> option. |
| <b>conflict</b>       | Displays the list of applications that are present more than once in an application list.                                                    |

### Defaults

By default, all applications and application groups that belong to an application list are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- Use the **conflict** option to identify applications that are present more than once in an application list. This needs to be checked and resolved for **app-mon apply** to be successful.
- The **active** option displays active and gross number of flows detected on per application basis.
- For monitor feature, **active** option displays only the gross counters.
- The **stats** option is used only for the **enforcement** option. This displays active or gross packets/byte counters per application basis.

**Examples**

```
-> show app-mon app-list monitor
```

| App-Id/<br>AppGrp-Id | Application-List<br>Member Name | Application-List<br>Member Type |
|----------------------|---------------------------------|---------------------------------|
| 244                  | facebook                        | APP                             |
| 182                  | sip                             | APP-GRP                         |

**output definitions**

|                                     |                                                                                                                     |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>App-Id/AppGrp-Id</b>             | Identity of the application or application group.                                                                   |
| <b>Application-List Member Name</b> | Name of the application group or application.                                                                       |

## show app-mon app-group

Displays the details of all the applications in an application group.

**show app-mon app-group** [*group-name* *group\_name*]

---

### Syntax Definitions

*group\_name*                      The name of an application group. This is a case sensitive string.

### Defaults

By default, information is displayed for all application groups.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                         |                                                                          |             |

### Usage Guidelines

- This command displays both user created and automatically created application groups and the applications added to the respective group.
- Application names which are added to group and not yet activated are also displayed.
- This also display the auto application groups.

### Examples

```
-> show app-mon app-group
```

Legend: Application-name: \*= Not present in recently updated kit,

```

## show app-mon app-record

Displays current-hour application-record information as well the historic application-records on the hourly or 24-hours basis for monitored applications.

**show app-mon app-record [hourly | twenty-four-hours | current-hour] [verbose]**

---

### Syntax Definitions

|                          |                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>hourly</b>            | Displays flows detected for an applications in an hour. An Hour is defined with fixed boundary (for example, 1:30 p.m to 2:30 p.m).                                                                                                                                                                                                                                                  |
| <b>twenty-four-hours</b> | Displays aggregate of available 'hourly' records for each application, flows detected in last 24-hours since last hour boundary. 'current-hour' data will not be part of this. This information is updated every one hour when 'hourly' record is updated.                                                                                                                           |
| <b>current-hour</b>      | Displays new flow detected for an application in the current hour which is not part of 'hourly' historic data. When current-hour reaches an hour boundary, this data is moved to 'hourly' records. For example, if current time is 2.40 p.m, then information between 2.30 p.m to 2.40 p.m is displayed. On 3.30 p.m, current-hour information is moved to the latest hourly record. |
| <b>verbose</b>           | Select this option to view detail information for each option. Detail information include minimum, maximum and average flows detected for each application.                                                                                                                                                                                                                          |

### Defaults

| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- The **verbose** option displays additional information about the flow start time, statistics counters, associated application group, policy rule, and so on. This option is supported only for enforcement feature.
- On OmniSwitch 6860N, flows will take ten minutes to age out when the flow is idle.

### Examples

## show app-mon ipv6-flow-table

Displays the flow table for IPv6 flows entries for enforcement and monitor flows.

```
show app-mon ipv6-flow-table {monitor | enforcement [verbose]} [{src-ipv6 | dest-ipv6} ip_address]
[app-name app_name | app-group grp_name]
```

---

### Syntax Definitions

|                                    |                                                                    |
|------------------------------------|--------------------------------------------------------------------|
| <b>verbose</b>                     | Displays detailed information of the flows.                        |
| <b>src-ipv6</b> <i>ip_address</i>  | Filter flow table based on the specified source IPv6 address.      |
| <b>dest-ipv6</b> <i>ip_address</i> | Filter flow table based on the specified destination IPv6 address. |
| <i>app_name</i>                    | Filter flow table based on application name.                       |
| <i>grp_name</i>                    | Filter flow table based on application group.                      |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | Yes  | Yes   | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

- The **verbose** option displays additional information about the flow start time, statistics counters, associated application group, policy rule, and so on. This option is supported only for enforcement feature.
- On OmniSwitch 6860N, flows will take ten minutes to age out when the flow is idle.

### Examples

```
-> show app-mon ipv6-flow-table monitor

## show app-mon l4port-exclude

Displays the port range excluded from AppMon operation.

**show app-mon l4port-exclude range-id** [*number*]

---

### Syntax Definitions

*number* A range ID number. The valid range is 1–8.

### Defaults

By default, information is displayed for all range ID numbers.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

Enter a range ID number with this command to display information for a specific range.

### Examples

```
-> show app-mon l4port-exclude range-id
Range-Id Start-port End-port Port-type
-----+-----+-----+-----
1 100 200 UDP-Port
2 20 25 TCP-Service-Port
```

```
-> show app-mon l4port-exclude range-id 1
Range-Id Start-port End-port Port-type
-----+-----+-----+-----
1 100 200 UDP-Port
```

### output definitions

---

|                   |                                                      |
|-------------------|------------------------------------------------------|
| <b>Range-Id</b>   | The service port range ID.                           |
| <b>Start-port</b> | The start port associated with the range ID.         |
| <b>End-port</b>   | The end port associated with the range ID.           |
| <b>Port-type</b>  | Indicates the port type ( <b>TCP</b> or <b>UDP</b> ) |

---

## Release History

Release 8.2.1; command introduced.

## Related Commands

## show app-mon aging enforcement

Displays the aging interval for each application for enforcement feature.

**show app-mon aging enforcement** [**app-name** *app\_name*]

---

### Syntax Definitions

*app\_name*                                      The name of the application. This is a case sensitive string.

### Defaults

By default, the aging time for all applications is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

N/A

### Examples

```

## show app-mon vc-topology

Displays the AppMon virtual chassis topology.

**show app-mon vc-topology**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | Yes  | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

Displays the topology of the available OmniSwitch 6860 and OmniSwitch 6860E chassis. This also displays the connectivity between the chassis for flow classification.

### Examples

```
-> show app-mon vc-topology
```

```
Chassis/ Node Designated
Slot Type Chassis/Slot
-----+-----+-----
1/1 OS6860 2/1
2/1 OS6860E 2/1
3/1 OS6860E 3/1
```

# 44 Application Fingerprinting Commands

The OmniSwitch Application Fingerprinting feature attempts to detect and identify remote applications by scanning IP packets and comparing them to pre-defined bit patterns (application signatures). Once an application is identified, Application Fingerprinting collects and stores information about the application flow in a database on the local switch. Additional configurable options for this feature include the ability to apply QoS policy list rules to the identified flow and generating SNMP traps when a signature match occurs.

Using this implementation of Application Fingerprinting, an administrator can obtain more detailed information about protocols running on a specific device or make sure that certain QoS actions are automatically applied wherever an application might be running.

MIB information for the Application Fingerprinting commands is as follows:

*Filename:* ALCATEL-IND1-APP-FINGERPRINT-MIB.mib  
*Module:* alcatelIND1AppFPMIB

A summary of the available commands is listed here:

---

**app-fingerprint admin-state**  
**app-fingerprint port**  
**app-fingerprint signature-file**  
**app-fingerprint reload-signature-file**  
**app-fingerprint trap**  
**show app-fingerprint configuration**  
**show app-fingerprint port**  
**show app-fingerprint app-name**  
**show app-fingerprint app-group**  
**show app-fingerprint database**  
**show app-fingerprint statistics**

---

## app-fingerprint admin-state

Enables or disables the Application Fingerprinting process on all Application Fingerprinting ports.

**app-fingerprint admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables Application Fingerprinting.  
**disable** Disables Application Fingerprinting.

### Defaults

By default, Application Fingerprinting is enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- When Application Fingerprinting is enabled for the switch, traffic flows on Application Fingerprinting ports are sampled and compared to REGEX application signatures defined in the “app-regex.txt” file located in the **/flash/app-signature** directory on the local switch. This is done to identify the presence of remote applications on a flow-by-flow basis.
- Disabling the administrative status of the Application Fingerprinting feature does not remove the Application Fingerprinting configuration from the switch.

### Examples

```
-> app-fingerprint admin-state disable
-> app-fingerprint admin-state enable
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

[show app-fingerprint configuration](#) Displays the Application Fingerprinting configuration for the switch.

### MIB Objects

alaAppFPGlobalMIBConfigObjects

alaAppFPGlobalAdminState

---

## app-fingerprint port

Configures a port or link aggregate as an Application Fingerprinting interface. Once the interface is configured and Application Fingerprinting is enabled for the switch, IP packets received on the interface are sampled to determine if they match pre-defined patterns in application signature files that reside on the local switch. When a match occurs, the flow is monitored and/or subject to QoS policy rules.

```
app-fingerprint {port chassis/slot/port[-port] | linkagg agg_id[-agg_id2]} {monitor-app-group
group_name | policy-list-name policy_list | unp-profile}
```

```
no app-fingerprint {port chassis/slot/port[-port] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

|                                   |                                                                                     |
|-----------------------------------|-------------------------------------------------------------------------------------|
| <i>chassis</i>                    | The chassis identifier.                                                             |
| <i>slot/port</i> [- <i>port</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports.           |
| <i>agg_id</i> [- <i>agg_id2</i> ] | The link aggregate ID number. Use a hyphen to specify a range of ID numbers (5-10). |
| <i>group_name</i>                 | The name of an existing signature application group.                                |
| <i>policy_list</i>                | The name of an existing QoS policy list.                                            |
| <b>unp-profile</b>                | Apply QoS policy list from UNP to which matching traffic is classified.             |

### Defaults

By default, Application Fingerprinting is disabled on all switch ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to disable the Application Fingerprinting service on the specified port or link aggregate.
- Use the **monitor-app-group** parameter to specify a group (profile) that represents a set of application signature files. All of the signature files in the group are checked against the IP packets received on the port. When a packet match is detected, the flow is identified and monitored. No other action is taken.
- Use the **policy-list-name** parameter to associate a QoS policy list with the Application Fingerprinting port. When a packet match is detected, the policy rules in the specified policy list are applied to the matching traffic flow.

- Use the **unp-profile** parameter to specify that if traffic received on an Application Fingerprinting interface is classified into a Universal Network Profile (UNP), then the QoS policy list rules associated with that profile are applied to the traffic.
- The QoS policy list specified with the **policy-list-name** parameter or assigned to a UNP for Application Fingerprinting traffic, must contain policy rules with the **appfp-group** condition.
- The QoS policy list specified with the **policy-list-name** parameter must be configured as an **appfp** list. However, the UNP policy list must be configured as a UNP list.
- Application Fingerprinting uses the sFlow mechanism to sample packets. Do not run Application Fingerprinting and other sFlow services on the same port or link aggregate.

## Examples

```
-> app-fingerprint port 1/2/1-5 monitor-app-group my-p2p
-> app-fingerprint linkagg 10 policy-list-name list1
-> app-fingerprint port 1/1/11 unp
-> no app-fingerprint port 1/2/1-5
-> no app-fingerprint linkagg 10
```

## Release History

Release 7.3.2; command was introduced.

## Related Commands

---

## app-fingerprint reload-signature-file

Reloads the contents of the active application signature file into the switch memory. Use this command after making any changes to the current signature file.

**app-fingerprint reload-signature-file**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- This command reloads the application signature file that was previously applied to the switch. This may be the default “app-regex.txt” file or another signature file that was applied through the **app-fingerprint signature-file** command.
- A switch reboot is *not* required after the signature file is reloaded.

### Examples

```
-> app-fingerprint reload-signature-file
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

[app-fingerprint signature-file](#) Specifies a different signature file to use for Application Fingerprinting.

### MIB Objects

```

---

## app-fingerprint trap

Enables or disables trap generation for the Application Fingerprinting feature.

`app-fingerprint trap {enable | disable}`

---

### Syntax Definitions

**enable** Enables Application Fingerprinting traps.  
**disable** Disables Application Fingerprinting traps.

### Defaults

By default, traps are disabled for this feature.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

A trap is generated when a traffic flow matches an application signature.

### Examples

```
-> app-fingerprint trap enable
-> app-fingerprint trap disable
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.

### Examples

```
-> show app-fingerprint port
Legend: * = Port or App-Group is invalid
```

```

 Port Operation Mode App-group/Policy-list
-----+-----+-----
1/2/1 Monitoring Testing13
1/2/1 QoS list1
1/2/1 QoS list2

```

```
-> show app-fingerprint linkagg
Legend: * = Port or App-Group is invalid
```

```

 Port Operation Mode App-group/Policy-list
-----+-----+-----
1/0/100 Monitoring Testing16
1/0/100 QoS list3
1/0/100 QoS list4

```

## show app-fingerprint app-name

Displays the REGEX application signature configuration for the switch. When the switch samples Application Fingerprinting ports, the traffic flow patterns on these ports are compared against the REGEX signatures specified in the “app-regex.txt” file. When a match occurs, the traffic flow is classified and monitored. In addition, QoS policies can be applied to these flows based on a specific match to an application signature group.

```
show app-fingerprint app-name [app_name]
```

---

### Syntax Definitions

*app\_name*                                 The name of an existing application signature.

### Defaults

By default, all application signatures are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                         |                                                                          |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|-------------------------|--------------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900<br/>V72/C32</b> | <b>6900<br/>X48C6/T48C6/<br/>X48C4E/V48C8/<br/>C32E/T24C2/<br/>X24C2</b> | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                      | No                                                                       | No          |

### Usage Guidelines

- Application signatures are defined in the “app-regex.txt” file that resides in the **/flash/app-signature** directory on the switch. A default version of this file is available, but the file is user-configurable and new files can also be created.
- Application signatures can also be combined into an application group. This type of group is then assigned to one or more Application Fingerprinting ports. All the application signatures that are members of the assigned group are then applied to traffic flows on that same port.
- Use the *app\_name* parameter to display information for a specific application signature.

### Examples

```
-> show app-fingerprint app-name
App Name: ciscovpn
 Description: VPN client software to a Cisco VPN server
 REGEX Signature: \x01\xf4\x01\xf4

App Name: citrix
 Description: Citrix ICA - proprietary remote desktop application
 REGEX Signature: \x32\x26\x85\x92\x58

App Name: dhcp
 Description: Dynamic Host Configuration Protocol
```

```

REGEX Signature: [\x01\x02][\x01-]\x06.*c\x82sc
-> show app-fingerprint app-name citrix

App Name: citrix
Description: Citrix ICA - proprietary remote desktop application
REGEX Signature: \x32\x26\x85\x92\x58

```

### *output definitions*

## show app-fingerprint app-group

Displays the Application Fingerprinting application group configuration for the switch. An application group contains a user-configured list of REGEX application signatures that are represented by the group name. The group name is then assigned to Application Fingerprinting ports or link aggregates.

**show app-fingerprint app-group** [*group\_name*]

---

### Syntax Definitions

*group\_name*                      The name of an existing application group.

### Defaults

By default, all application groups are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Application groups are defined in the “app-regex.txt” file that is located in the **/flash/app-signature** directory on the switch. A default version of this file is available, but the file is user-configurable and new files can also be created.
- Use the *group\_name* parameter to display information for a specific application group.

### Examples

```
-> show app-fingerprint app-group
```

```
App Group: chatting
App names: jabber
```

```
App Group: mail
App names: smtp
```

```
App Group: network
App names: bgp dhcp rtsp smb
```

```
App Group: p2p
App names: hotline
```

```
App Group: remote_access
App names: ciscovpn citrix rdp ssh vnc
```

```
App Group: voip
 App names: h323 sip
-> show app-fingerprint app-group network
```

```
App Group: network
 App names: bgp dhcp rtsp smb
```

### *output definitions*

## show app-fingerprint database

Displays Application Fingerprinting database entries. When a match occurs between an IP traffic flow and a REGEX application signature, a multi-tuple classifier and the name of the matching application group and signature are stored in a local switch database to identify and track the application associated with the flow.

**show app-fingerprint database** [*port chassis/slot/port* | *linkagg agg\_id*] [*detail*]

---

### Syntax Definitions

|                  |                                                                    |
|------------------|--------------------------------------------------------------------|
| <i>chassis</i>   | The chassis identifier.                                            |
| <i>slot/port</i> | The slot and the port number (3/1).                                |
| <i>agg_id</i>    | The link aggregate ID number.                                      |
| <i>detail</i>    | Displays additional information about the classified traffic flow. |

### Defaults

By default, all application flow database entries are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- The following multi-tuple classifier is used to identify an application traffic flow:
  - Ingress Port
  - Dest MAC
  - Src MAC
  - VLAN
  - Dest IP
  - Src IP
  - Dest Port
  - Src Port
- Each database entry is subject to a 15 minute aging period. If the database fills up, older entries are aged out before the 15 minute limit (fast aging). However, fast aging is not applied to database entries associated with QoS. In this case, the QoS is removed after the regular 15 minute aging time period expires.

- When a database entry is removed due to regular aging or fast aging conditions, any corresponding QoS is also removed for that flow.

## Examples

```
-> show app-fingerprint database
```

| Port  | App-Group/Name | SRC MAC           | VLAN | SRC IP/Port |
|-------|----------------|-------------------|------|-------------|
| 0/1/2 | P2P/aim        | 00:00:22:33:44:55 | 20   | 2.3.4.4/200 |
| 0/1/2 | P2P/ares       | 00:00:22:33:44:55 | 20   | 2.3.4.4/200 |
| 0/1/2 | Mail/smtp      | 00:00:22:33:44:55 | 20   | 2.3.4.4/100 |

### output definitions

|                       |                                                                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>           | The slot/port or link aggregate ID of the AFP interface on which the flow was classified. A “0” slot number indicates a link aggregate. |
| <b>App-Group/Name</b> | The name of the application group and signature that matched the flow.                                                                  |
| <b>SRC MAC</b>        | The source MAC address of the flow.                                                                                                     |
| <b>VLAN</b>           | The VLAN on which the flow is learned and forwarded.                                                                                    |
| <b>SRC IP/Port</b>    | The source IP network address and port.                                                                                                 |

```
-> show app-fingerprint database detail

| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- Statistics displayed with this command include total number of packets matched, the number of unmatched packets, and the packets matched for each application signature.

### Examples

```
-> show app-fingerprint statistics
 Port Group/App name Last 1 hour Last 1 day
-----+-----+-----+-----
1/2/1 Testing2/App_4 19976 19976
1/2/1 Testing2/App_5 20000 20000
1/2/1 Testing2/App_6 20000 20000
2/3/23 Testing1/App_1 19975 19975
2/3/23 Testing1/App_2 20000 20000
2/3/23 Testing1/App_3 20000 20000
```

### Release History

Release 7.3.2; command introduced.

## Related Commands

**show app-fingerprint port**      Displays the Application Fingerprinting interface configuration.

# 45 FIP Snooping Commands

The OmniSwitch implementation of Fibre Channel over Ethernet (FCoE) Initiation Protocol (FIP) snooping supports the FCoE technology used to tunnel Fibre Channel (FC) frames within Ethernet MAC frames. When the FCoE and FIP snooping functionality is enabled, the OmniSwitch serves as an FCoE transit switch. In this role, the OmniSwitch implementation of Data Center Bridging (DCB) is also used to provide the lossless Ethernet network required to support FCoE.

This implementation of FIP snooping ensures the security of the FCoE network and maintains a virtual point-to-point network connection between FCoE Nodes (ENodes) and FCoE Forwarder (FCF) devices. In addition, FIP snooping is also required to support OmniSwitch FCoE/FC gateway functionality that allows the switch to provide FCoE forwarding services between an FCoE network and a native FC storage area network (SAN).

- An OmniSwitch FCoE transit switch is placed between ENodes (servers or other bridges) and an FCF or an OmniSwitch FCoE/FC gateway to extend the reach of the FCoE network without extending the physical FC connections.
- An OmniSwitch FCoE/FC gateway runs FIP snooping on the 10G Ethernet FCoE ports that connect to an FCoE network. On the same switch, FC ports connect to native FC switches or nodes. Traffic is transmitted between the FCoE network and the FC SAN through the gateway switch.

This chapter provides information about configuring FCoE and FIP global and port parameters through the Command Line Interface (CLI). See [Chapter 46, “FCoE/FC Gateway Commands,”](#) for more information about configuring OmniSwitch FCoE/FC gateway functionality.

MIB information for the FCoE and FIP snooping commands is as follows:

*Filename:* ALCATEL-IND1-FIPS-MIB.mib  
*Module:* alcatelIND1FipsMIB

The FCoE and FIP Snooping commands are listed here:

|                               |                                                                                                                                                                                                                                                                                                                                                |

## fcoe fip-snooping

Enables or disables Fibre Channel Initiation Protocol (FIP) snooping on the switch. FIP Snooping is enabled to allow the OmniSwitch to serve as an FCoE transit switch.

**fcoe fip-snooping admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables FIP Snooping.  
**disable** Disables FIP Snooping.

### Defaults

| parameter        | default |
|------------------|---------|
| enable   disable | disable |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

When FIP Snooping is enabled, traffic with an Ethertype of FCoE is dropped on all switch VLANs and ports that are not configured as FCoE VLANs and ports.

### Examples

```
-> fcoe fip-snooping admin-state enable
-> fcoe fip-snooping admin-state disable
```

### Release History

Release 7.3.2; command was introduced.

**Related Commands****show fcoe**

Displays the FCoE and FIP snooping status and configuration for the switch.

**MIB Objects**

alaFipsConfigFIPAdmin

---

## fcoe address-mode

Configures the FCoE addressing mode. This mode determines whether a server-provided MAC address (SPMA) or a fabric-provided MAC address (FPMA) is assigned to virtual FCoE entities.

**fcoe address-mode {spma | fpma}**

---

### Syntax Definitions

**spma** Selects the SPMA address mode.  
**fpma** Selects the FPMA address mode.

### Defaults

| parameter   | default |
|-------------|---------|
| spma   fpma | FPMA    |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- The FCoE Node (ENode) and the FCoE Forwarder (FCF) must use the same addressing mode to establish virtual links between the ENode and FCF. Configure the global OmniSwitch addressing mode to match the mode used by the ENode and FCF.
- When the FPMA mode is active, a MAC address is assigned by an FCF to a single ENode MAC. This MAC address is not assigned to any other ENode MAC in the same VLAN.
- When the SPMA mode is active, MAC addresses are assigned by the ENode server.
- To change the addressing mode selection, disable FIP Snooping for the switch then make the change and enable FIP Snooping again.

### Examples

```
-> fcoe address-mode spma
-> fcoe address-mode fpma
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

**fcoe fip-snooping**

Enables or disables FIP Snooping on the switch

**show fcoe**

Displays the FCoE and FIP snooping status and configuration for the switch.

## MIB Objects

alaFipsConfig

  alaFipsConfigAddressMode

---

## fcoe priority

Configures up to two global priority values that are designated as lossless for FCoE traffic.

**fcoe priority** {*priority*} [*priority*]

---

### Syntax Definitions

*priority* A priority value between 0–7.

### Defaults

| parameter       | default |
|-----------------|---------|
| <i>priority</i> | 3       |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- This command overwrites the existing FCoE priority values used by the switch.
- If two priority values are configured but there is a need to change only one of the values, both priority values must be specified with this command. For example, if the current priority is set to 2 and 5, to change priority 2 to 3, specify both 3 and 5 as the priority values.
- Specify a priority value of 3 to set the priority back to the default value.
- The FCoE priority values are used when FCoE priority protection is enabled for the switch.
- In addition to enabling priority protection, a lossless DCB FCoE profile with the same FCoE priority values must be assigned to the FCoE interfaces.

### Examples

```
-> fcoe priority 2 5
-> fcoe priority 3 5
-> fcoe priority 3
```

### Release History

Release 7.3.2; command was introduced.

 alaFipsConfigPriorityOne
 alaFipsConfigPriorityTwo
```

---

## fcoe priority-protection

Enables or disables priority protection.

**fcoe priority-protection {enable | disable}**

---

### Syntax Definitions

**enable** Enables priority protection for the switch.  
**disable** Disables priority protection for the switch.

### Defaults

By default, priority protection is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- When priority protection is enabled, only FCoE and FIP traffic that matches the FCoE lossless priority values is allowed. All other traffic is either marked or dropped, based on the priority protection action configured for the switch.
- This command applies only to the priority value that is specified using the **fcoe priority** command.
- The FCoE priority value is advertised to FCoE-enabled hosts using the Data Center Bridging Exchange (DCBx) protocol.

### Examples

```
-> fcoe priority-protection enable
-> fcoe priority-protection disable
```

### Release History

Release 7.3.2; command was introduced.

|----------------------------------------|---------------------------------------------------------------------------------------------------|
| <b>fcoe priority</b>                   | Configures the lossless priority values for the switch.                                           |
| <b>fcoe priority-protection action</b> | Determines whether non-FCoE and non-FIP traffic is dropped or marked with a lower priority value. |
| <b>fcoe fip-snooping</b>               | Enables or disables FIP Snooping on the switch                                                    |
| <b>show fcoe</b>                       | Displays the FCoE and FIP snooping status and configuration for the switch.                       |

## MIB Objects

```
alaFipsConfig
 alaFipsConfigPrioProtection
```

---

## fcoe priority-protection action

Specifies whether non-FCoE and non-FIP traffic is dropped or marked with a lower priority value. This action is only valid when FCoE priority protection is enabled for the switch.

**fcoe priority-protection action** {**drop** | **remark** *priority*}

---

### Syntax Definitions

**drop** All non-FCoE and non-FIP traffic is dropped.

*priority* Specifies the priority value to use for remarking non-FCoE and non-FIP traffic.

### Defaults

By default, non-FCoE and non-FIP traffic is dropped when priority protection is enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- When priority protection is enabled, only FCoE traffic that matches the protected priority values is allowed in the priority queues. All other traffic is either re-marked or dropped, based on the priority protection action configured for the switch.
- If the re-mark action is configured, traffic is marked with the specified priority value and forwarded on the switch.

### Examples

```
-> fcoe priority-protection action drop
-> fcoe priority-protection action remark 0
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

---

## fcoe house-keeping-time-period

Configures the amount of time the FCoE switch waits to receive keep alive messages from the ENode and FCF for a given FCoE session. When this time expires and no keep alive messages were received for any entity of the session, the session information is removed.

**fcoe house-keeping-time-period** *seconds*

---

### Syntax Definitions

*seconds*                                      The keep alive wait time, in seconds.

### Defaults

By default, the housekeeping timer is set to 300 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

To disable the housekeeping timer, set the timer value to “0”

### Examples

```
-> fcoe house-keeping-time-period 120
-> fcoe house-keeping-time-period 0
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**show fcoe**                                      Displays the FCoE and FIP snooping status and configuration for the switch.

### MIB Objects

```
alaFipsConfig
 alaFipsConfigHouseKeepingTimePeriod
```

---

## fcoe vlan

Configures an FCoE VLAN. This type of VLAN is used to deploy the OmniSwitch implementation of FIP snooping.

**fcoe vlan** *vlan\_id* [**admin-state** {**enable** | **disable**}] [**name** *description*]

**no fcoe vlan** *vlan\_id*

---

### Syntax Definitions

|                    |                                                                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>vlan_id</i>     | A numeric value that uniquely identifies an individual FCoE VLAN. The valid ID range is 2–4094.                                                                        |
| <b>enable</b>      | Enables the FCoE VLAN administrative status.                                                                                                                           |
| <b>disable</b>     | Disables the FCoE VLAN administrative status.                                                                                                                          |
| <i>description</i> | An alphanumeric string. Optional name description for the VLAN ID. Enclose the description in double quotes if it contains more than one word with a space in between. |

### Defaults

| parameter                      | default        |
|--------------------------------|----------------|
| <b>enable</b>   <b>disable</b> | <b>enable</b>  |
| <i>description</i>             | <b>VLAN ID</b> |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove a FCoE VLAN from the switch configuration. All VLAN ports are detached before the VLAN is removed.
- Specify a VLAN ID that does not exist in the switch configuration, or the ID of a dynamically created MVRP VLAN.
- Only 802.1q-tagged FCoE ports and link aggregates can be members of FCoE VLANs.
- Configuring a FCoE VLAN as a default VLAN for a port or link aggregate is not allowed. All port associations are created by tagging FCoE ports with the FCoE VLAN ID.
- Configuring default VLAN 1 as an FCoE VLAN is not allowed.

- The following features are not supported on FCoE VLANs:
  - IGMP Snooping
  - IP interface
  - HA VLANs
  - SVLAN and CVLAN
  - Shortest Path Bridging (SPB)
  - UDP Relay, DHCP Snooping
  - Universal Network Profile (UNP)
- An OmniSwitch FCoE transit switch operates between an FCoE Node (ENode) and a FCoE Forwarder (FCF). Manual configuration of the FCoE VLAN is required along the transit switch path. However, the ENode and FCF may invoke FIP VLAN discovery to discover the FCoE VLANs within the transit path. If not, manual configuration of the FCoE VLANs may also be required on the appropriate ENodes and FCFs.

## Examples

```
-> fcoe vlan 100
-> no fcoe vlan 100
-> fcoe vlan 100 admin-state enable name fcoe-vlan1
-> fcoe vlan 100 admin-state enable
```

## Release History

Release 7.3.2; command introduced.

 alaFipsVlanRowStatus
```

---

## fcoe fcf mac

Configures a static Fibre Channel Forwarder (FCF) MAC address for the specified FCoE VLAN. Virtual Fibre Channel (FC) links that traverse the lossless Ethernet network send FCoE frames to and from the FCF MAC address.

**fcoe fcf mac** *mac\_address* **vlan** *vlan\_id*

**no fcoe fcf mac** *mac\_address* **vlan** *vlan\_id*

---

### Syntax Definitions

*mac\_address* Enter the FCF MAC Address (for example, 00:00:39:59:f1:0c).

*vlan\_id* An existing FCoE VLAN ID. The valid ID range is 2–4094.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove the FCF MAC address from the specified FCoE VLAN.
- The FCoE VLAN ID must already exist in the switch configuration.

### Examples

```
-> fcoe fcf mac 30:10:94:01:00:00 vlan 100
-> no fcoe fcf 30:10:94:01:00:00
```

### Release History

Release 7.3.2; command introduced.

## Related Commands

**fcoe vlan**

Configures an FCoE VLAN for the switch.

**fcoe fip-snooping**

Enables or disables FIP Snooping on the switch

**show vlan**

Displays the VLAN configuration for the switch.

## MIB Objects

alaFipsVlanTable

    alaFipsVlanId

    alaFipsVlanFCMap

---

## fcoe fc-map

Configures a static Fibre Channel Mapped Address Prefix (FC-MAP) for the specified FCoE VLAN. The FC-MAP is a 24-bit value used by the Fibre Channel Forwarder (FCF) to identify an individual fabric.

**fcoe fc-map** *prefix* **vlan** *vlan\_id*

**no fcoe fc-map** *prefix* **vlan** *vlan\_id*

---

### Syntax Definitions

*prefix* Enter the FC-MAP prefix value. The valid range is 0EFC00–0EFCFF.  
*vlan\_id* An existing FCoE VLAN ID. The valid ID range is 2–4094.

### Defaults

By default, the FC-MAP is set to 0E:FC:00.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- On an OmniSwitch 6900, use the **no** form of this command to set the FC-MAP back to the default value (0E:FC:00) for the specified FCoE VLAN.
- The FCoE VLAN ID must already exist in the switch configuration.
- The configured FC-MAP value assigned to an FCoE VLAN must match the FC-MAP value used by the FCF device. FCF advertisement packets that contain a different FC-MAP are not processed by the switch.
- When the FCoE address mode is set to Fabric-Provided MAC Address (FPMA), the FCF uses the FC-MAP value (upper 24 bits) combined with an FCID value (lower 24 bits) to generate a unique MAC address to identify an ENode VN\_Port for FCoE transactions.

### Examples

```
-> fcoe fc-map 0E:FC:04 vlan 30
-> no fcoe fc-map 0E:FC:04 vlan 30
```

### Release History

Release 7.3.2; command introduced.

## fcoe discovery-advertisement

Configures FIP discovery advertisement message parameters for the specified FCoE VLAN. These parameter values are advertised in both unicast and multicast advertisements.

**fcoe discovery-advertisement** *vlan* *vlan\_id*[-*vlan\_id2*] [**a-bit** {**enable** | **disable**}] [**fka-adv-period** *adv\_seconds*] [**priority** *priority*] [**uds-retries** *retries*]

---

### Syntax Definitions

|                                     |                                                                                                                                                                                                 |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>vlan_id</i> [- <i>vlan_id2</i> ] | An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25).                                                                                                             |
| <b>enable</b>                       | Enables the available-for-login bit (A-bit) in the discovery advertisement message to indicate that the switch can accept fabric logins from ENodes.                                            |
| <b>disable</b>                      | Disables the A-bit in the discovery advertisement message to indicate that the switch cannot accept fabric logins from ENodes.                                                                  |
| <i>adv_seconds</i>                  | The discovery advertisement transmission interval and the number of FIP ENode keep alive packets expected. The valid range is 1–90 seconds.                                                     |
| <i>priority</i>                     | The priority value assigned to the switch, indicated in the priority descriptor of the discovery advertisement message. The valid range is 0–255 (0 = highest priority, 255 = lowest priority). |
| <i>retries</i>                      | The number of times a unicast discovery solicitation is transmitted after a port on which an FCF MAC was learned goes down. The valid range is 0–10.                                            |

### Defaults

| parameter                                   | default       |
|---------------------------------------------|---------------|
| <b>a-bit</b> <i>enable</i>   <i>disable</i> | <b>enable</b> |
| <b>fka-adv-period</b> <i>adv_seconds</i>    | <b>8</b>      |
| <b>priority</b> <i>priority</i>             | <b>128</b>    |
| <b>uds-retries</b> <i>retries</i>           | <b>0</b>      |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

## Usage Guidelines

- When the A-bit parameter is disabled, the switch will not process any new logins for the FCoE VLAN. However, there is no impact on existing VN\_Port sessions, which are allowed to continue.
- Transmitting unicast discovery solicitations helps to find out if the same FCF is reachable on some other port of the same FCoE VLAN.

## Examples

```
-> fcoe discovery-advertisement vlan 100 priority 10
-> fcoe discovery-advertisement uds-retries 3
-> no fcoe discovery-advertisement vlan 100
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

```

---

## fcoe role

Configures the specified port or link aggregate as an FCoE interface and defines the role of the interface in the FCoE network.

**fcoe** {port *chassis/slot/port*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} **role** {edge | enode-only | fcf-only | mixed | trusted | ve}

**no fcoe** {port *chassis/slot/port*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

|                                    |                                                                                                                                                                                                                           |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>                     | The chassis identifier when running in virtual chassis mode.                                                                                                                                                              |
| <i>slot/port</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). FCoE is only supported on 10G or faster ports.                                                                                          |
| <i>agg_id</i> [- <i>agg_id2</i> ]  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                                                                                                                             |
| <b>edge</b>                        | Port connects directly to an ENode for transmission of FCoE and FIP frames from the ENode to the FCF.                                                                                                                     |
| <b>enode-only</b>                  | Link between FCoE switches that carries traffic from ENode to FCF.                                                                                                                                                        |
| <b>fcf-only</b>                    | Link between FCoE switches that carries traffic from FCF to ENode.                                                                                                                                                        |
| <b>mixed</b>                       | Link between FCoE switches that carries traffic in both directions (from FCF to ENode or from ENode to FCF).                                                                                                              |
| <b>trusted</b>                     | Trust the FCoE Edge port; traffic on this port is not filtered by FIP ACLs. This port role type is typically assigned to the switch FCoE port that connects to an Ethernet port on the FCF.                               |
| <b>ve</b>                          | Configures port as a virtual expansion port (VE_Port) that is associated with an E2E-tunnel session. A VE_Port emulates an E_Port in an FCoE network, providing connectivity between FC switches. VE_Ports discover FCFs. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

## Usage Guidelines

- Use the **no** form of this command to revert the FCoE port back to a regular switch port. Before doing so, however, delete any associations the port may have with an FCoE VLAN.
- To change the role of an FCoE port, first remove the FCoE configuration from the port, then configure FCoE and the new role again for that same port.
- FCoE is only supported on 10G or faster ports that are associated with an FCoE lossless DCB profile. In addition, DCBX must be enabled on the port with both PFC and ETS in an active state (either forced or negotiated via DCBX). The DCB configuration is done separately using QoS port and profile commands.
- The maximum frame size for an FCoE port must be at least 2500 bytes to accommodate FCoE encapsulated frames, which are larger than the standard Ethernet frame size. In addition, make sure the FCoE port frame size is configured the same end-to-end.
- When configuring a link aggregate as an FCoE port, make sure the link aggregate ID number already exists in the switch configuration. Ports already configured as FCoE ports cannot be added to a link aggregate.
- FCoE ports must be manually assigned to a default VLAN and then tagged with the FCoE VLAN that will carry the FCoE and FIP frames on that port.
- The following features are not supported on FCoE ports:
  - Learned Port Security (LPS)
  - Port Mirroring and Remote Port Mirroring
  - Shortest Path Bridging (SPB)
- Enabling FCoE on a Universal Network Profile (UNP) port is only supported to allow UNP dynamic assignment of a default VLAN for an FCoE port. Manual tagging of the FCoE UNP port with FCoE VLAN IDs is still required.
- FCoE VLANs may be dynamically learned through the transmission of MVRP join PDU, but any port associations with that VLAN must be manually configured.
- Assigning FCoE interfaces to different FCoE VLANs provides a method for configuring multiple FC fabrics through the same FCoE switch.

## Examples

```
-> fcoe port 1/1/1 role edge
-> fcoe port 2/1/1 role fcf-only
-> no fcoe port 2/1/1
```

## Release History

Release 7.3.2; command introduced.

## Related Commands

|                                   |                                                                                                                                                                                                                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FIP Snooping</b>               | The administrative status of FIP snooping for the switch ( <b>Enable</b> or <b>Disable</b> ). Configured through the <b>fcoe fip-snooping</b> command.                                                                                                                                       |
| <b>Address-mode</b>               | Indicates whether a server-provided MAC address ( <b>SPMA</b> ) or a fabric-provided MAC address ( <b>FPMA</b> ) is assigned to virtual FCoE entities. Configured through the <b>fcoe address-mode</b> command.                                                                              |
| <b>Priority 1</b>                 | One of two global lossless priority values for FCoE traffic. Configured through <b>fcoe priority</b> command.                                                                                                                                                                                |
| <b>Priority 2</b>                 | Two of two global lossless priority values for FCoE traffic. Configured through <b>fcoe priority</b> command.                                                                                                                                                                                |
| <b>Priority Protection</b>        | The status of priority protection for the switch ( <b>Enable</b> or <b>Disable</b> ). Configured through the <b>fcoe priority-protection</b> command.                                                                                                                                        |
| <b>Priority Protection Action</b> | The action applied to traffic that does not match the FCoE/FIP Ethertype and configured FCoE priority value ( <b>Drop</b> or <b>Remark</b> ). Configured through the <b>fcoe priority-protection action</b> command.                                                                         |
| <b>Re-mark Priority</b>           | The priority value to use for marking traffic that does not match the FCoE/FIP Ethertype and configured FCoE priority value. This value is only applied when the priority protection action is set to <b>Remark</b> . Configured through the <b>fcoe priority-protection action</b> command. |
| <b>Total Filtering Resources</b>  | The number of ACL entries available for filtering of FCoE traffic.                                                                                                                                                                                                                           |
| <b>Used Filtering Resources</b>   | The number of ACL entries currently in use for filtering FCoE traffic.                                                                                                                                                                                                                       |
| <b>Trap threshold (%)</b>         | The percentage of filtering resources used for FIP. When this percentage is reached, a trap is sent indicating the available and maximum percentage of filtering resources. Configured through the <b>fcoe filtering-resource trap-threshold</b> command.                                    |
| <b>House Keeping Time Period</b>  | The amount of time the FCoE switch will wait to receive keep alive messages from the ENode and FCF. When this amount of time expires, information for the specific FCoE session is removed. Configured through the <b>fcoe house-keeping-time-period</b> command                             |

---

| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

This command also shows the FCoE role assigned to the interface.

### Examples

```
-> show fcoe ports
 Ports FCoE Role Status
-----+-----+-----
 1/3/1 Edge Port DISABLE
 1/4/1 Edge Port DISABLE
 1/5/1 Edge Port DISABLE
 1/6/1 Edge Port DISABLE
 0/12/1 Mixed Port ENABLED
 1/19/1 FCF Port DISABLE
 0/40/1 Mixed Port DISABLE
```

#### output definitions

### Syntax Definitions

|                   |                                                                                                                                                       |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>fips</b>       | Displays FIP snooping sessions on FCoE ports.                                                                                                         |
| <b>npiv-proxy</b> | Displays N_Port proxy (NPIV) sessions between ENode and FC switch.                                                                                    |
| <b>r-npiv</b>     | Displays F_Port proxy (R- NPIV) sessions between the HBA and the gateway switch.                                                                      |
| <i>chassis</i>    | The chassis identifier.                                                                                                                               |
| <i>slot/port</i>  | The slot and port number (3/1).                                                                                                                       |
| <i>vlan_id</i>    | An existing FCoE VLAN ID. The valid ID range is 2–4094.                                                                                               |
| <i>agg_id</i>     | The link aggregate ID number.                                                                                                                         |
| <i>tunnel_id</i>  | Displays E2E tunnel sessions between two E_Ports on different FC switches. Optionally enter a tunnel ID to display information for a specific tunnel. |

### Defaults

By default, all FCoE sessions are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display sessions for a specific FCoE port or link aggregate ID.
- Use the **vlan** parameter to display the sessions for a specific FCoE VLAN ID.
- The output displays for this command include FIP snooping, N\_Port proxy (NPIV), F\_Port proxy (reverse-NPIV), and E2E tunnel sessions. However, the N\_Port proxy, F\_Port proxy, and E2E tunnel sessions are only displayed on an OmniSwitch 6900 that is configured as an FCoE/FC gateway (see [Chapter 46, “FCoE/FC Gateway Commands”](#) for more information).

**Examples**

```
-> show fcoe sessions
```

```
Total FIP Snooping Sessions: 2
```

| PORT  | ENODE MAC         | VN_PORT MAC       | FCF MAC           | VLAN | STATUS  |

|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>VLAN</b>         | The FCoE VLAN used for this session. Configured through the <b>fcoe vlan</b> command.                                                                                                                                                        |
| <b>STATUS</b>       | The operational status of this session.                                                                                                                                                                                                      |
| <b>IN-PORT</b>      | The FCoE port or link aggregate ID for an N_Port proxy (NPIV) or F_Port proxy (R-NPIV) session. Configured through the <b>fcoe role</b> command.                                                                                             |
| <b>OUT-PORT</b>     | The FC port for an N_Port proxy (NPIV) or F_Port proxy (R-NPIV) session. Configured through the <b>fibre-channel port mode</b> command.                                                                                                      |
| <b>VSAN</b>         | The VSAN ID mapped to the FCoE VLAN ID for an F_Port proxy (R-NPIV) session. Configured through the <b>fibre-channel vsan</b> command.                                                                                                       |
| <b>FCID</b>         | The FC port ID (also referred to as N_Port ID) received after successful login for an F_Port proxy (R-NPIV) session.                                                                                                                         |
| <b>TUNNEL-ID</b>    | The E2E tunnel ID associated with the session. Configured through the <b>fcoe e-tunnel</b> command.                                                                                                                                          |
| <b>PORT1, PORT2</b> | The FCoE port (in VE_Port role) and/or FC port (in TE_Port mode) for this session. The FCoE port rule is configured through the <b>fcoe role</b> command. The FC port mode is configured through the <b>fibre-channel port mode</b> command. |
| <b>PAIR MODE</b>    | The type of E2E tunnel ( <b>TE to VE</b> or <b>TE to TE</b> ).                                                                                                                                                                               |

## show fcoe enode

Displays FCoE Node (ENode) information for FIP Snooping sessions associated with the switch.

**show fcoe enode** [*mac\_address*]

---

### Syntax Definitions

*mac\_address* Enter an ENode MAC Address (for example, 00:00:39:59:f1:0c).

### Defaults

By default, information is displayed for all ENodes associated with the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |

### Usage Guidelines

Specify an ENode MAC address to display more detailed information about a specific ENode.

### Examples

```
-> show fcoe enode
Port Enode MAC VLAN Sessions
-----+-----+-----+-----
1/1/1 00:10:00:00:00:02 100 2
2/1/1 00:00:a0:bb:00:01 200 1
```

```
-> show fcoe enode 00:10:00:00:00:02
Enode MAC: 00:10:00:00:00:02 Port : 1/1/1
```

```

## show fcoe fcf

Displays FCoE Forwarder (FCF) information for FIP Snooping sessions associated with the switch.

**show fcoe fcf** [*mac\_address*]

---

### Syntax Definitions

*mac\_address* Enter an FCF Address (for example, 00:00:39:59:f1:0c).

### Defaults

By default, information is displayed for all FCFs associated with the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |

|                |                                              |
|----------------|----------------------------------------------|
| <b>FCF-MAC</b> | The MAC address of the FCoE Forwarder (FCF). |
| <b>VLAN</b>    | The FCoE VLAN ID.                            |

*output definitions*

---

|                    |                                                                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Config</b>      | Whether the FCF MAC address was user-configured or learned through the FIP Snooping session for the given FCoE VLAN.                                                   |
| <b>Sessions</b>    | The number of sessions associated with the FCF MAC for the given FCoE VLAN.                                                                                            |
| <b>A-bit</b>       | Whether or not the available-for-login bit is set for this FCF.                                                                                                        |
| <b>MaxFrmVer</b>   | Whether or not the maximum frame size was verified for this FCF.                                                                                                       |
| <b>VN-Port-MAC</b> | The MAC address of the virtual node port (VN_Port) for this session. This address is comprised of the FCID that the FCF assigned to the port combined with the FC-MAP. |

---

**Release History**

Release 7.3.2; command introduced.

Release 7.3.3; **A-bit** and **MaxFrmVer** fields added.

## show fcoe fc-map

Displays the Fibre Channel Mapped Address Prefix (FC-MAP) for each FCoE VLAN.

**show fcoe fc-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

When the FCoE address mode is set to Fabric-Provided MAC Address (FPMA), the FC-MAP value is the required upper 24 bits of a MAC address that is assigned to a Virtual N\_Port (VN\_Port).

### Examples

```
-> show fcoe fc-map
 VLAN FC-MAP
-----+-----
 10 0E:FC:00
 100 0E:FC:22
 200 0E:FC:23
 300 0E:FC:23
```

### Release History

Release 7.3.2; command introduced.

**Related Commands****fcoe vlan**

Configures an FCoE VLAN for the switch.

**fcoe fc-map**

Configures the FC-MAP for and FCoE VLAN.

## show fcoe discovery-advertisement

Displays the FIP discovery advertisement message parameter values for the specified FCoE VLAN.

**show fcoe discovery-advertisement [vlan *vlan\_id*[-*vlan\_id2*]]**

---

### Syntax Definitions

*vlan\_id*[-*vlan\_id2*] An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25).

### Defaults

By default, the discovery advertisement parameters are displayed for all FCoE VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

Use the *vlan\_id*[-*vlan\_id2*] parameter to display information for a specific FCoE VLAN or for a range of FCoE VLANs.

### Examples

```
-> show fcoe discovery-advertisement
VLAN A-Bit FKA Pd Priority UDS-Retries
-----+-----+-----+-----+-----
46 ENABLE 8 128 3
56 ENABLE 8 128 3
76 ENABLE 8 128 3
3000 ENABLE 8 128 3
4000 ENABLE 8 128 3
```

```
-> show fcoe discovery-advertisement vlan 3000
VLAN A-Bit FKA Period Priority UDS-Retries
-----+-----+-----+-----+-----
3000 ENABLE 8 128 3
```

### output definitions

---

|              |                                                                                                                                           |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>VLAN</b>  | The FCoE VLAN ID. Configured through the <b>fcoe vlan</b> command.                                                                        |
| <b>A-Bit</b> | The status of the available-for-login bit (Enabled or Disabled). When enabled, indicates the switch can accept fabric logins from ENodes. |

*output definitions (continued)*

---

|                    |                                                                                                                             |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>FKA-PD</b>      | The discovery advertisement transmission interval, in seconds.                                                              |
| <b>Priority</b>    | The priority value assigned to the switch (0 = highest priority, 255 = lowest priority).                                    |
| <b>UDS-Retries</b> | The number of times a unicast discovery solicitation is transmitted after a port on which an FCF MAC was learned goes down. |

## show fcoe statistics

Displays both ENode and FCF generated statistics for FCoE interfaces or specific VLANs.

```
show fcoe statistics [enode | fcf] {interface | vlan [vlan_id[vlan_id2] | port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

|                           |                                                                                     |
|---------------------------|-------------------------------------------------------------------------------------|
| <b>enode</b>              | Display statistics only for ENode traffic.                                          |
| <b>fcf</b>                | Display statistics only for FCF traffic.                                            |
| <b>interface</b>          | Display statistics for all FCoE interfaces (ports and link aggregates).             |
| <i>vlan_id[-vlan_id2]</i> | An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25). |
| <i>chassis</i>            | The chassis identifier.                                                             |
| <i>slot/port[-port2]</i>  | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).   |
| <i>agg_id[-agg_id2]</i>   | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).       |

### Defaults

By default, FCF and ENode statistics are displayed for all FCoE interfaces and VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.
- The output displays for this command include FIP snooping, N\_Port proxy (NPIV), and F\_Port proxy (reverse-NPIV) statistics. However, the N\_Port proxy and F\_Port proxy statistics are only displayed on an OmniSwitch 6900 that is configured as an FCoE/FC gateway (see [Chapter 46, “FCoE/FC Gateway Commands”](#) for more information).

|                  |                                                                                                                                    |
|------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>      | The slot/port or link aggregate ID of the FCoE interface. A “0” slot number indicates that the FCoE interface is a link aggregate. |
| <b>Sess</b>      | The number of FIP Snooping sessions.                                                                                               |
| <b>MDS</b>       | The number of Multicast Discovery Solicitation packets.                                                                            |
| <b>UDS</b>       | The number of Unicast Discovery Solicitation packets.                                                                              |
| <b>FLOGI</b>     | The number of Fabric Login packets.                                                                                                |
| <b>FDISC</b>     | The number of Fabric Discovery packets.                                                                                            |
| <b>LOGO</b>      | The number of Fabric Logout packets.                                                                                               |
| <b>E KA</b>      | The number of ENode keep-alive packets.                                                                                            |
| <b>VN KA</b>     | The number of VN_Port keep-alive packets                                                                                           |
| <b>VLAN</b>      | The FCoE VLAN ID.                                                                                                                  |
| <b>MDA</b>       | The number of Multicast Discovery Advertisement packets.                                                                           |
| <b>UDA</b>       | The number of Unicast Discovery Advertisement packets.                                                                             |
| <b>FLOGI_ACC</b> | The number of Fabric Login Accept packets.                                                                                         |
| <b>FLOGI_RJT</b> | The number of Fabric Login Reject packets.                                                                                         |
| <b>FDISC_ACC</b> | The number of Fabric Discovery Accept packets.                                                                                     |
| <b>FDISC_RJT</b> | The number of Fabric Discover Reject packets.                                                                                      |
| <b>LOGO_ACC</b>  | The number of Fabric Logout Accept packets.                                                                                        |
| <b>LOGO_RJT</b>  | The number of Fabric Logout Reject packets.                                                                                        |
| <b>CVL</b>       | The number of Clear Virtual Link packets.                                                                                          |

---

**Release History**

Release 7.3.2; command introduced.

Release 7.3.3; N\_Port proxy and F\_Port proxy statistics displayed only on an OmniSwitch 6900.

**Related Commands**

[clear fcoe statistics](#) Clears ENode and FCF statistics.

**MIB Objects**

```
alaFipsIntfEnodeStatsTable
alaFipsIntfFcfStatsTable
alaFipsVlanEnodeStatsTable
alaFipsVlanFcfStatsTable
```

---

## clear fcoe statistics

Clears ENode and FCF generated statistics on FCoE interfaces or specific VLANs.

```
clear fcoe statistics [enode | fcf] [interface | vlan [vlan_id{vlan_id2}] | port chassis/slot/port{-port2} | linkagg agg_id{-agg_id2}]
```

---

### Syntax Definitions

|                                    |                                                                                                                |
|------------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>enode</b>                       | Clears statistics only for ENode traffic.                                                                      |
| <b>fcf</b>                         | Clears statistics only for FCF traffic.                                                                        |
| <b>interface</b>                   | Clears statistics on all FCoE interfaces (ports and link aggregates).                                          |
| <i>vlan_id</i> { <i>vlan_id2</i> } | An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150). |
| <i>chassis</i>                     | The chassis identifier.                                                                                        |
| <i>slot/port</i> {- <i>port2</i> } | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                              |
| <i>agg_id</i> {- <i>agg_id2</i> }  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                  |

### Defaults

By default, statistics are cleared for all FCoE interfaces and VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **port** or **linkagg** parameters to clear the statistics for a specific FCoE port or link aggregate ID.
- Use the **vlan** parameter to clear the statistics for a specific FCoE VLAN ID.

### Examples

```
->clear fcoe statistics

->clear fcoe statistics interface

->clear fcoe statistics vlan
->clear fcoe statistics vlan 2
->clear fcoe statistics vlan 2-3

->clear fcoe statistics port 1/2/1
```

```
->clear fcoe statistics port 1/1/2-3
->clear fcoe statistics port 1/1/2
->clear fcoe statistics port 1/1/2-3
->clear fcoe statistics linkagg 2
->clear fcoe statistics linkagg 2-6
->clear fcoe statistics enode interface

->clear fcoe statistics enode vlan
->clear fcoe statistics enode vlan 2
->clear fcoe statistics enode vlan 2-3

->clear fcoe statistics enode port 1/2/1
->clear fcoe statistics enode port 1/2/1-3
->clear fcoe statistics enode port 1/1/2
->clear fcoe statistics enode port 1/1/2-3

->clear fcoe statistics enode linkagg 2
->clear fcoe statistics enode linkagg 2-6

->clear fcoe statistics fcf interface
->clear fcoe statistics fcf vlan
->clear fcoe statistics fcf vlan 2
->clear fcoe statistics fcf vlan 2-3

->clear fcoe statistics fcf port 1/2/1
->clear fcoe statistics fcf port 1/2/1-3
->clear fcoe statistics fcf port 1/1/2
->clear fcoe statistics fcf port 1/1/2-3

->clear fcoe statistics fcf linkagg 2
->clear fcoe statistics fcf linkagg 2-6
```

## Release History

Release 7.3.2; command introduced.

## Related Commands

### [show fcoe statistics](#)

Displays ENode and FCF statistics for FCoE interfaces and VLANs.

# 46 FCoE/FC Gateway Commands

The OmniSwitch implementation of FCoE/FC gateway functionality allows the switch to transparently connect FCoE and FC nodes with an FC SAN across an FCoE (lossless Ethernet) network. To provide this type of connectivity, an OmniSwitch FCoE/FC gateway supports the following three modes of operation that are used to converge FC over Ethernet and FC-to-FC over Ethernet:

- **N\_Port Proxy mode**—allows ENodes in an FCoE network and FC switches in an FC SAN to communicate with each other. To an ENode the OmniSwitch gateway emulates an FCoE forwarder; to an FC switch the OmniSwitch gateway emulates an N\_Port ID Virtualization (NPIV) host.
- **F\_Port Proxy mode**—allows FC nodes to connect with FC switches and FCFs across an FCoE network. The OmniSwitch gateway forwards login requests from an FC node (N\_Port on a server or storage with an HBA) across Ethernet via an FCoE VLAN to an NPIV node or FCF. This mode is sometimes referred to as reverse-NPIV proxy (R-NPIV).
- **E\_Port Proxy mode**—allows FC switches to set up inter-switch link trunking between FC fabrics over an FCoE network. The OmniSwitch gateway provides an E\_Port to E\_Port (E2E) tunneling function that emulates a point-to-point FC link between E\_Ports on native FC switches.

The OmniSwitch FCoE/FC gateway sits at the entry point of an FC fabric, which is required to handle the login process for ENodes and FC nodes accessing the fabric through the gateway switch.

OmniSwitch FCoE/FC gateway operations are not automatically activated for the switch; there is no single command to enable or disable gateway functionality. Instead, the configuration of the following software components enables one or more of the supported gateway operations:

- **FIP snooping**—FCoE/FC gateway functionality requires an active FIP snooping configuration. FIP Snooping ensures the security of an FCoE network.
- **Virtual Storage Area Network (VSAN)**—an FC port is assigned to a VSAN to create an NP\_Port or F\_Port connection to an FC switch or node in that VSAN. Not required for E2E Tunnel configuration.
- **VSAN-to-FCoE VLAN mapping**—identifies the FCoE/FC gateway fabric for the ENode or FC node login process via the FCoE VLAN. Not required for E\_Port proxy (E2E Tunnel) configuration.
- **FC port mode**—the operational mode of the FC port determines the type of gateway functionality provided on that port. There are three modes supported: N\_Port proxy, F\_Port proxy, and E\_Port proxy.
- **FCoE port role**—an FCoE port serves as an E2E tunnel endpoint in an FCoE network only when the port is configured as a virtual E\_Port (VE\_Port). The role of other FCoE ports is configured based on the FIP snooping configuration for the gateway switch.

This chapter and the [Chapter 45, “FIP Snooping Commands,”](#) describe the command line interface (CLI) commands used to configure these components.

MIB information for the FCoE/FC gateway commands is as follows:

*Filename:* ALCATEL-IND1-FIPS-MIB.mib  
*Module:* alcatelIND1FipsMIB

The acronyms used in this chapter are defined here:

|                |                                     |
|----------------|-------------------------------------|
| <b>CNA</b>     | Converged Network Adapter           |
| <b>CVL</b>     | Clear Virtual Link                  |
| <b>E2E</b>     | E_Port-to-E_Port Tunnel             |
| <b>ELP</b>     | Exchange Link Parameters            |
| <b>ENode</b>   | FCoE Node                           |
| <b>E_Port</b>  | Expansion Port                      |
| <b>F_Port</b>  | Fabric Port                         |
| <b>FC</b>      | Fibre Channel                       |
| <b>FCF</b>     | FCoE Forwarder                      |
| <b>FDISC</b>   | Fabric Discovery                    |
| <b>FCID</b>    | Fabric Port ID (same as N_Port ID). |
| <b>FCoE</b>    | Fibre Channel over Ethernet         |
| <b>FIP</b>     | FCoE Initialization Protocol        |
| <b>FLOGI</b>   | Fabric Login                        |
| <b>FLOGO</b>   | Fabric Logout                       |
| <b>HBA</b>     | Host Bus Adapter                    |
| <b>ISL</b>     | Inter-switch Link                   |
| <b>NPIV</b>    | N_Port ID Virtualization            |
| <b>N_Port</b>  | Node Port                           |
| <b>NP_Port</b> | Proxy Node Port                     |
| <b>TE_Port</b> | Tunnel Expansion Port               |
| <b>VE_Port</b> | Virtual E_Port                      |
| <b>VF_Port</b> | Virtual F_Port                      |
| <b>VN_Port</b> | Virtual N_Port                      |
| <b>VSAN</b>    | Virtual Storage Area Network        |
| <b>WWNN</b>    | World Wide Node Name                |
| <b>WWPN</b>    | World Wide Port Name                |

The FCoE/FC gateway commands are listed here:

---

## fibre-channel vsan

Configures an OmniSwitch VSAN with the specified VSAN ID and an optional description. This type of VSAN is used to segment OmniSwitch Fibre Channel ports into a virtual FCoE/FC gateway fabric.

**Note.** The VSAN created with this command only applies to the local switch configuration. There is no correlation between an OmniSwitch VSAN and a VSAN created within a native FC SAN.

**fibre-channel vsan** {*vsan\_id*[-*vsan\_id2*]} [**admin-state** {**enable** | **disable**}] [**name** *description*]

**no fibre-channel vsan** {*vsan\_id*[-*vsan\_id2*]}

### Syntax Definitions

|                                     |                                                                                                                                                       |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>vsan_id</i> [- <i>vsan_id2</i> ] | A numeric value that will uniquely identify the VSAN. Use a hyphen to specify a range of VSAN IDs (for example, 100-105). The valid range is 2–4094). |
| <b>enable</b>                       | Enable the VSAN administrative status.                                                                                                                |
| <b>disable</b>                      | Disable the VSAN administrative status.                                                                                                               |
| <i>description</i>                  | An alphanumeric string. Optional name description for the VSAN ID.                                                                                    |

### Defaults

By default, VSAN 1 is created on the switch and all unassigned FC ports are assigned to VSAN 1.

| parameter                      | default        |
|--------------------------------|----------------|
| <b>enable   disable</b>        | <b>enable</b>  |
| <b>name</b> <i>description</i> | <b>VSAN ID</b> |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to delete a VSAN from the configuration.
- When a VSAN is administratively disabled, all sessions established over that VSAN are cleared and the switch stops sending periodic FIP multicast discovery advertisement messages for the corresponding FCoE VLAN.
- The description can be any alphanumeric string. Enclose the description in double quotes if it contains more than one word with space in between.

- Only FC switch ports can be assigned to a VSAN.
- Assigning multiple FC ports to the same VSAN is allowed, but an FC port can only belong to one VSAN.
- Configuring N\_Port and F\_Port proxy functionality requires mapping a VSAN to an FCoE VLAN. Note that only one VSAN is mapped to one FCoE VLAN (one-to-one) at any given time. This mapping defines a single traffic path through the gateway switch.
- If an FCoE VLAN is not mapped to a VSAN, then the FCoE VLAN participates only in the FIP snooping process.

## Examples

```
-> fibre-channel vsan 200 name "Fabric A"
-> fibre-channel vsan 100-105 admin-state disable
-> no fibre-channel vsan 200
```

## Release History

Release 7.3.3; command introduced.

## fibre-channel port mode

Configures the port type and operational mode for an eligible FC port. The port type is only set to Fibre Channel and the specified operational mode determines the type of gateway functionality provided on that port. There are three modes supported: N\_Port proxy, F\_Port proxy, and E\_Port proxy.

**fibre-channel port** *chassis/slot/port[-port2]* **mode** {np | f | te} [**bb-sc-n** *buffer\_num*]

**no fibre-channel port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

|                          |                                                                                                                                                                                                                                                                                                                               |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                                                                                                                                                                       |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). Only ports on an OmniSwitch 6900 OS-XNI-U12E module with an SFP-FC-SR transceiver are eligible for this command.                                                                                                                            |
| <b>np</b>                | Activates N_Port proxy functionality on the port. In this mode the port serves as a proxy node port (NP_Port) that aggregates N_Port transactions between FCoE devices and FC switches.                                                                                                                                       |
| <b>f</b>                 | Activates F_Port proxy functionality on the port. In this mode the port operates as a fabric port (F_Port), which connects to an N_Port in a point-to-point link between FC devices.                                                                                                                                          |
| <b>te</b>                | Activates E_Port functionality on the port. In this mode, the port operates as a tunnel expansion port (TE_Port) that connects to an E_Port on an FC switch. TE_Ports allow E_Ports to connect across an FCoE network as part of an inter-switch link (ISL) tunnel that is used to expand the native FC fabric over Ethernet. |
| <i>buffer_num</i>        | The buffer-to-buffer state change (BB_SC) number. FC ports exchange BB_SC primitives after 2^BB_SC_N frames. These primitives are used to recalculate buffer credits as part of a buffer-to-buffer flow control function between FC switch connections. The valid range is 0–15.                                              |

### Defaults

By default, no operational mode is configured for the FC ports and the port type is set to Ethernet.

| parameter                        | default  |
|----------------------------------|----------|
| <b>bb-sc-n</b> <i>buffer_num</i> | <b>0</b> |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

## Usage Guidelines

- Use the **no** form of this command to remove the operational mode configuration from the FC port. The port type reverts back to Ethernet.
- To change the FC mode for the port, use the **no** form of this command to remove the current mode configuration then configure the FC mode again for the same port.
- Changing the **bb-sc-n** parameter value can be changed at any time (removing the FC mode configuration is not required to change this parameter value).
- Make sure the **bb-sc-n** parameter value is the same on both ends of the connection between the OmniSwitch FCoE/FC gateway and an FC switch. If the value is different on each end of the connection then the greater value is used. However, if this value is set to zero for one of the ports on the connection, then the buffer-to-buffer state change function is disabled.
- FC ports do not participate in Ethernet features, such as a link aggregates, a virtual fabric links (VFLs) in virtual chassis (VC) configurations, standard VLANs, or FCoE VLANs.
- To ensure end-to-end lossless connectivity through the gateway switch, assign a PAUSE-enabled DCB profile to each FC port. For more information, see Chapter 5, “Configuring an FCoE Gateway”, in the *OmniSwitch AOS Release 8 Data Center Switching Guide*.

## Examples

```
-> fibre-channel port 1/2/1 mode np
-> fibre-channel port 1/2/3 mode f
-> fibre-channel port 1/2/5 mode te
-> no fibre-channel port 1/2/5
```

To change the FC port mode:

```
-> no fibre-channel port 1/2/1
-> fibre-channel port 1/2/1 f
```

To change the **bb-sc-n** parameter value:

```
-> fibre-channel port 1/2/1 bb-sc-n 3
```

## Release History

Release 7.3.3; command introduced.

## fibre-channel vsan members

Configures the VSAN assignment for the specified FC port.

**fibre-channel vsan** *vsan\_id* **members port** *chassis/slot/port[-port2]*

**no fibre-channel vsan** *vsan\_id* **members port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

|                          |                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------|
| <i>vsan_id</i>           | An existing VSAN ID number.                                                       |
| <i>chassis</i>           | The chassis identifier.                                                           |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). |

### Defaults

By default, all FC ports are assigned to VSAN 1.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove the association between the specified FC port and VSAN.
- When an NP\_Port is removed from a VSAN, a FIP CVL is generated for all the VN\_Ports that are logged in through that NP\_Port and an FC LOGO is sent on the FC port. An FC LOGO is also sent for any R-NPIV sessions that exist when the CVL is generated.
- When an F\_Port (used for R-NPIV) is removed from a VSAN, then FC LOGO is sent to the host and also to the FCF.
- When an FC port is moved from VSAN 1 to another VSAN, traffic loss will occur for all existing sessions. Moving FC ports between other VSANs (for example, between VSAN 2 and 3) is not allowed.
- Multiple FC ports can belong to the same VSAN, but an FC port can belong to only one VSAN. In other words, it is not possible to tag FC ports with multiple VSANs.

- When a VSAN is mapped to an FCoE VLAN and an active FC port is assigned to that VSAN, the FC mode configured for that port determines the FCoE/FC gateway functionality provided. For example, if the FC port mode is set to operate as:
  - an NP\_Port, then NPIV proxy functionality is automatically enabled.
  - an F\_Port, then the R-NPIV functionality is automatically enabled.
  - a TE\_Port and an FCoE port is set to operate as a virtual E\_Port (VE\_Port), then E2E tunneling functionality is automatically enabled.
- When more than one NP\_Port is associated with the same VSAN, the OmniSwitch will load balance ENode FLOGI requests across the NP\_Ports for that VSAN. By default, the NP\_Port with the lowest number of logins provided is selected. If all the NP\_Ports have the same number of logins provided, then the switch will select a port using a round robin algorithm.

## Examples

```
-> fibre-channel vsan 10 members port 1/2/1
-> fibre-channel vsan 10 members port 1/2/1-3
-> no fibre-channel vsan 10 members port 1/2/1-3
```

## Release History

Release 7.3.3; command introduced.

## fcoe vsan-map

Maps an FC VSAN to an FCoE VLAN. This mapping is required to activate the processing of specific FCoE ENode traffic traveling to and from the designated virtual FC fabric through the FCoE/FC gateway OmniSwitch.

```
fcoe vsan-map vsan vsan_id vlan vlan_id
```

```
no fcoe vsan-map vsan vsan_id vlan vlan_id
```

---

### Syntax Definitions

*vsan\_id* An existing VSAN ID number.  
*vlan\_id* An existing FCoE VLAN ID number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove the VSAN-to-FCoE VLAN mapping.
- When a mapping is removed, all sessions associated with the FCoE VLAN are cleared.
- Only one VSAN is mapped to one FCoE VLAN.
- The FCoE/FC gateway does not participate in FCoE discovery mechanisms for FCoE VLANs not mapped to a VSAN.
- If an FCoE VLAN is not mapped to a VSAN, then only FIP snooping functionality is applied to that VLAN.

### Examples

```
-> fcoe vsan-map vsan 10 vlan 100
-> no fcoe vsan-map vsan 10 vlan 100
```

### Release History

Release 7.3.3; command introduced.

## fibre-channel npiv-proxy load-balance

Configures the dynamic load balancing method that is applied to ENode FLOGI requests when more than one FC port is associated with the same VSAN. Load balancing is not applied to FDISC requests.

**fibre-channel npiv-proxy load-balance static {default | dynamic-reorder | enode-based}**

---

### Syntax Definitions

|                        |                                                                       |
|------------------------|-----------------------------------------------------------------------|
| <b>default</b>         | Selects the default load balancing method.                            |
| <b>dynamic-reorder</b> | Ensures that all sessions are load balanced evenly at any given time. |
| <b>enode-based</b>     | Selects the FC for the new session based on the ENode MAC address.    |

### Defaults

By default, the FC port with the lowest number of logins provided is selected for new FLOGI requests. If all the ports have the same number of logins provided, then the switch will select a port using a round robin algorithm.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- The load balancing method is globally applied to the switch, and only one method is applied at a time.
- Using the dynamic reorder load balancing method may trigger the tearing down of some sessions, so that upon re-login the ENode FLOGI is processed on a different NP\_Port in the same VSAN. For example, when a new FC NP\_Port is added to the VSAN, some of the sessions are torn down and logged in again on the newly added port to distribute sessions across all ports in the VSAN.
- When the ENode-based load balancing method is used, each NP\_Port in the VSAN will send a multicast discovery advertisement to all ENodes in the mapped FCoE VLAN. The FCF MAC address in the discovery advertisement is the MAC address of the FC port. The ENode then decides which FCF (NP\_Port) to use for the login.
- The default and ENode-based load balancing methods do not disturb existing sessions.
- The load balancing method is *not* applied to statically mapped FCoE and FC ports.

### Examples

```
-> fibre-channel npiv-proxy load-balance dynamic-reorder
-> fibre-channel npiv-proxy load-balance enode-based
-> fibre-channel npiv-proxy load-balance default
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

- fibre-channel npiv-proxy load-balance static** Configures a static mapping between an FCoE port and an FC NP\_Port. Load balancing does not apply to statically mapped ports.
- show fibre-channel** Displays the global load balancing method applied to NP\_Ports.

## MIB Objects

alaFcInfo  
  alaFcConfigNpivLoadBalance

---

## fibre-channel npiv-proxy load-balance static

Configures a static port association between an FCoE port and an FC NP\_Port to ensure that FC sessions on the specified FCoE port are mapped to the specified NP\_Port.

**fibre-channel npiv-proxy load-balance static** {port *chassis/slot/port* | linkagg *agg\_id*} **fc-port** *chassis/slot/port*

**no fibre-channel npiv-proxy load-balance static** {port *chassis/slot/port* | linkagg *agg\_id*} **fc-port** *chassis/slot/port*

---

### Syntax Definitions

|                                 |                                                 |
|---------------------------------|-------------------------------------------------|
| <i>chassis</i>                  | The chassis identifier.                         |
| <b>port</b> <i>slot/port</i>    | The slot and port number (3/1) of an FCoE port. |
| <i>agg_id</i>                   | The link aggregate ID number.                   |
| <b>fc-port</b> <i>slot/port</i> | The slot and port number (3/1) of an FC port.   |

### Defaults

By default, there are no static FCoE-to-FC port associations. The dynamic load balancing method is applied to the FC NP\_ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove the static association between the FCoE port and the FC port. When this association is removed, the dynamic load balancing method is applied.
- Use caution when configuring static FCoE-to-FC port assignments. Static assignments exempt both the FCoE port and the FC NP\_Port from dynamic load balancing of sessions when multiple FC ports belong to the same VSAN.

### Examples

```
-> fibre-channel npiv-proxy load-balance static port 1/1/1 fc-port 1/2/1
-> no fibre-channel npiv-proxy load-balance static port 1/1/1 fc-port 1/2/1

-> fibre-channel npiv-proxy load-balance static linkagg 10 fc-port 1/2/1
-> no fibre-channel npiv-proxy load-balance static linkagg 10 fc-port 1/2/1
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

**show fibre-channel npiv-proxy load-balance** Displays the static FCoE port/FC NP\_Port mapping and FC port session counts.

 alaFcNpivStaticLoadBalanceFibreIfIndex
```

---

## fcoe e-tunnel

Configures an E2E tunnel identifier and associates the identifier with tunnel endpoints and an FCoE VLAN. An E2E tunnel allows FC switches to set up ISLs between fabrics over an FCoE network.

```
fcoe e-tunnel tunnel_id {fc-port1 chassis/slot/port} {fc-port2 chassis/slot/port | vlan vlan_id}
```

```
no fcoe e-tunnel tunnel_id
```

---

### Syntax Definitions

|                  |                                                                |
|------------------|----------------------------------------------------------------|
| <i>tunnel_id</i> | A unique ID number to assign to this tunnel session.           |
| <i>chassis</i>   | The chassis identifier.                                        |
| <i>slot/port</i> | The slot and port number (3/1) of an FC tunnel edge (TE) port. |
| <i>vlan_id</i>   | An existing FCoE VLAN ID number.                               |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove the tunnel configuration.
- An OmniSwitch FC port is configured as a tunnel E\_Port (TE\_Port) and connects to an E\_Port on an FC switch. TE\_Ports can carry traffic from multiple VSANs. This command is used to associate the TE port with an FCoE VLAN or with another TE port on the same switch.
- An OmniSwitch FCoE port is configured as a virtual expansion port (VE\_Port) on the FCoE network side. The VE port is associated with an FCoE VLAN by tagging the VE port with the FCoE VLAN ID.
- This command does not establish a connection. Once the required tunnel components are configured, successful exchange of exchange link parameters (ELP) between a TE\_Port and a VE\_Port or between two TE\_Ports will establish the tunnel session.
- To create a tunnel connection between two FC switches across the FCoE network requires the following steps:
  - Configure the FCoE port that will connect to the FCoE network as a virtual expansion port

- (VE\_Port).
- Tag the VE\_Port to the FCoE VLAN that will carry traffic through the tunnel.
  - Configure the FC port that will connect to an E\_Port on an FC as a TE\_Port.
  - Use this command (**fcoe e-tunnel**) with the **fc-port1** and **vlan** parameters to associate the TE\_Port with the FCoE VLAN to which the VE\_Port is tagged.
- To create a tunnel between two FC TE\_Ports on the same switch or in a virtual chassis configuration, use the **fc-port1** and **fc-port2** parameters to specify the slot and port number of the two TE ports.

## Examples

```
-> fcoe e-tunnel 1 fc-port1 1/2/1 fc-port2 1/2/2
-> fcoe e-tunnel 10 fc-port1 1/2/3 vlan 200
-> fcoe e-tunnel 11 fc-port1 1/2/4 vlan 200
-> no fcoe e-tunnel 10
```

## show fibre-channel vsan

Displays the VSAN configuration for the switch.

**show fibre-channel vsan** [*vsan\_id*]-*vsan\_id2*]

---

### Syntax Definitions

*vsan\_id*[-*vsan\_id2*]                      An existing VSAN ID. Use a hyphen to specify a range of VSAN IDs (10-25).

### Defaults

By default, a list of all VSANs is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

Specify a VSAN ID with this command to display information about a specific VSAN.

### Examples

```
-> show fibre-channel vsan
```

```
vsan oper admin name
-----+-----+-----+-----
 1 Ena Dis test1
 1000 Dis Dis test2
 2000 Ena Dis test3
```

```
-> show fibre-channel vsan 101
```

```
vsan oper admin name
-----+-----+-----+-----
 1000 Dis Dis test2
```

### output definitions

---

## show fibre-channel vsan members

Displays the VSAN port assignments.

```
show fibre-channel vsan [vsan_id [-vsan_id2]] members [port chassis/slot/port[-port2]]
```

---

### Syntax Definitions

*vsan\_id*[-*vsan\_id2*] An existing VSAN ID number. Use a hyphen to specify a range of VSAN IDs (10-25).

*chassis* The chassis identifier.

*slot/port*[-*port2*] The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

### Defaults

By default, all VSAN port assignments are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- If the *vsan\_id* is specified without a *slot/port*, then all port assignments for that VSAN are displayed.
- If both the *vsan\_id* and *slot/port* are specified, then information only for that VSAN and slot/port is displayed.
- Only OmniSwitch FC ports can be assigned to a VSAN.

### Examples

```
-> show fibre-channel vsan members
vsan port status
-----+-----
 1 2/2/1 Enabled
 1003 2/2/12 Enabled
 1005 3/2/5 Disbled

-> show fibre-channel vsan 1003 members
 port status
-----+-----
 2/2/12 Enabled

-> show fibre-channel vsan 1005 members port 3/2/5
vsan : 1005,
port : 3/2/5,
status : disabled
```

## show fibre-channel port

Displays the FC port configuration for the switch.

**show fibre-channel port [info]**

---

### Syntax Definitions

**info** Displays session details for each FC port.

### Defaults

By default, the parameters for each FC port are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

- When the **info** parameter is used with this command, the **fcid** field shows an FC port ID for NP\_Ports. For all other port modes, this field is blank. Only NP\_Ports perform fabric login (FLOGI) and obtain a port ID from an FC switch.
- If an FC port is configured to operate in the fabric or tunnel E\_Port mode, there is no fabric login process performed. Ports running in these modes will come up immediately.
- FLOGI is triggered only after an NP\_Port is assigned to a VSAN.

### Examples

```
-> show fibre-channel port
```

Legend: NP=Proxy N\_Port, F=Fabric Port connected to N\_port, TE=Tunnel E-Port

```
ports oper-status mode BB-SC-N service class
-----+-----+-----+-----+-----+
 2/1 Up NP 3 3
 2/2 Up F 0 3
 2/3 Up TE 3 3/F
 2/4 Down NP 0 3
```

## show fcoe vsan-map

Displays the VSAN-to-FCoE VLAN mapping configuration.

**show fcoe vsan-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

Mapping a VSAN to an FCoE VLAN is required to activate the processing of specific ENode traffic traveling to and from the designated virtual FC fabric through the NPIV OmniSwitch.

### Examples

```
-> show fcoe vsan-map
vsan vlan
-----+-----
 10 10
 2000 2000
 3000 3000
```

#### *output definitions*

Displays the sessions established on the OmniSwitch FC ports.

**show fibre-channel sessions** [*vsan vsan\_id* | *e-tunnel tunnel\_id*] [*port chassis/slot/port*] [*summary*]

---

### Syntax Definitions

|                  |                                       |
|------------------|---------------------------------------|
| <i>vsan_id</i>   | An existing VSAN ID number.           |
| <i>tunnel_id</i> | An existing E-Tunnel (E2E Tunnel) ID. |
| <i>chassis</i>   | The chassis identifier.               |
| <i>slot/port</i> | The slot and port number (3/1).       |

### Defaults

By default, all FC sessions are displayed for all FC ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

The **port** parameter can be combined with the **vsan** or **e-tunnel** parameters to display sessions for a specific FC port within a VSAN or E2E tunnel.

### Examples

```
-> show fibre-channel sessions summary
Total FIBRE-CHANNEL Sessions : 7
Total NPIV Sessions : 4
Total R-NPIV Sessions : 1
Total E-TUNNEL Sessions : 2
```

```
-> show fibre-channel sessions
Total FIBRE-CHANNEL Sessions : 4
Total NPIV Sessions : 2
Total R-NPIV Sessions : 1
Total E-TUNNEL Sessions : 1
```

Displays global Fibre Channel parameter values.

**show fibre-channel**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

This command currently displays the following:

- The load-balancing method that is applied to FLOGI requests when there is more than one NPIV proxy port assigned to the same VSAN. This mode does not apply to FC ports configured to operate in the F\_Port proxy mode (R-NPIV) or as E2E tunnel ports.
- The World Wide Node Name (WWNN) for the switch. The WWNN is comprised of “10:00” combined with the next available increment of the switch based MAC address.

### Examples

```
-> show fibre-channel
Fibre Channel Global Configurations :

NPIV Proxy Global Load Balance Method : Default
Local WWNN : 10:00:00:E0:B1:E7:09:A4
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**fibre-channel npiv-proxy load-balance** Configures the load balancing method applied to multiple FC ports that belong to the same VSAN.

## show fibre-channel statistics

Displays FC port statistics.

**show fibre-channel statistics** [**npiv** | **r-npiv**] [**vsan** *vsan\_id*[*vsan\_id2*] [**port** *chassis/slot/port*[-*port2*] [**e-tunnel** **port** *chassis/slot/port*[-*port2*]]

---

### Syntax Definitions

|                                      |                                                                                                                           |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>npiv</b>                          | Displays statistics for N_Port proxy sessions.                                                                            |
| <b>r-npiv</b>                        | Displays statistics for F_Port proxy sessions.                                                                            |
| <b>e-tunnel</b> [ <i>tunnel_id</i> ] | Displays E2E tunnel (E_Port proxy) statistics. Optionally enter a tunnel ID to display information for a specific tunnel. |
| <i>vsan_id</i> [ <i>vsan_id2</i> ]   | An existing VSAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VSAN IDs (100-150).                 |
| <i>chassis</i>                       | The chassis identifier.                                                                                                   |
| <i>slot/port</i> [- <i>port2</i> ]   | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                         |

### Defaults

By default, all statistics are displayed

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vsan** parameter to display statistics for a specific VSAN ID. The **vsan** parameter is not used with the **e-tunnel** parameter, because tunnel ports are not associated with a VSAN.
- Use the **port** parameter to display statistics for a specific FC port.

## show fcoe statistics npiv-proxy

Displays ENode fabric login or ENode discovery statistics for FCoE interfaces or specific VLANs.

```
show fcoe statistics npiv-proxy {enode-login | enode-discovery} {interface | vlan [vlan_id[vlan_id2] |
port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

|                          |                                                                                                                |
|--------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>enode-login</b>       | Displays ENode login statistics.                                                                               |
| <b>enode-discovery</b>   | Displays ENode discovery statistics.                                                                           |
| <b>interface</b>         | Display statistics for all FCoE interfaces (ports and link aggregates).                                        |
| <i>vlan_id[vlan_id2]</i> | An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150). |
| <i>chassis</i>           | The chassis identifier.                                                                                        |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                              |
| <i>agg_id[-agg_id2]</i>  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                  |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

### Examples

```
->show fcoe statistics npiv-proxy enode-discovery interface
Packets Received:
 Port Vlan Req MDS UDS
-----+-----+-----+-----
 1/1/1 1 1 0
 1/1/22 1 1 0
```

Packets Sent:

| Port   | Vlan | Res | MDA | UDA |

## show fcoe statistics r-npiv

Displays FCF discovery fabric login or ENode discovery statistics for FCoE interfaces or specific VLANs.

```
show fcoe statistics r-npiv {node-login | fcf-discovery} {interface | vlan [vlan_id[vlan_id2] | port
chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

|                          |                                                                                                                |
|--------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>node-login</b>        | Displays FC node login statistics.                                                                             |
| <b>fcf-discovery</b>     | Displays FCF discovery statistics.                                                                             |
| <b>interface</b>         | Display statistics for all FCoE interfaces (ports and link aggregates).                                        |
| <i>vlan_id[vlan_id2]</i> | An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150). |
| <i>chassis</i>           | The chassis identifier.                                                                                        |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                              |
| <i>agg_id[-agg_id2]</i>  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                  |

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

### Examples

```
-> show fcoe statistics e-tunnel

## show fibre-channel npiv-proxy load-balance

Displays the NPIV proxy load balancing static mapping and session count.

**show fibre-channel npiv-proxy load balance {static | session-count}**

---

### Syntax Definitions

**static** Displays the static FCoE port/FC NP\_Port mapping.  
**session-count** Displays the number of sessions on each FC port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- This command displays information only for FC ports operating in the NP\_Port mode.
- Use the **static** parameter to display only the static mapping of FCoE ports to FC NP\_Ports.
- When the **sessions-count** parameter is used, the “FC Port” field includes all NP\_Ports.

### Examples

```
-> show fibre-channel npiv-proxy load-balance static
```

```
FCoE Port FC port
-----+-----
 1/1/1 1/2/1
 1/1/2 1/2/1
```

```
-> show fibre-channel npiv-proxy load-balance sessions-count
```

```
FC Port session_count
-----+-----
 1/2/1 2
 1/2/2 0
```

1/2/3

## clear fibre-channel statistics

Clears FC port statistics.

**clear fibre-channel statistics** [**npiv** | **r-npiv**] [**port chassis/slot/port[-port2]**] [**e-tunnel port chassis/slot/port[-port2]**]

---

### Syntax Definitions

|                                      |                                                                                                                         |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>npiv</b>                          | Clears statistics for N_Port proxy sessions.                                                                            |
| <b>r-npiv</b>                        | Clears statistics for F_Port proxy sessions.                                                                            |
| <b>e-tunnel</b> [ <i>tunnel_id</i> ] | Clears E2E tunnel (E_Port proxy) statistics. Optionally enter a tunnel ID to display information for a specific tunnel. |
| <i>vsan_id</i> [ <i>vsan_id2</i> ]   | An existing VSAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VSAN IDs (100-150).               |
| <i>chassis</i>                       | The chassis identifier.                                                                                                 |
| <i>slot/port</i> [- <i>port2</i> ]   | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                       |

### Defaults

By default, all statistics are cleared.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **vsan** parameter to clear statistics for a specific VSAN ID. The **vsan** parameter is not used with the **e-tunnel** parameter, because tunnel ports are not associated with a VSAN.
- Use the **port** parameter to clear statistics for a specific FC port.

### Examples

```
-> clear fibre-channel statistics
-> clear fibre-channel statistics port 2/2/5
-> clear fibre-channel statistics npiv
-> clear fibre-channel statistics r-npiv
-> clear fibre-channel statistics e-tunnel
-> clear fibre-channel statistics npiv port 2/2/1
-> clear fibre-channel statistics r-npiv port 2/2/3
-> clear fibre-channel statistics e-tunnel port 2/2/4
```

## Release History

## clear fibre-channel sessions

Clears the specified sessions on all FC ports.

`clear fibre-channel sessions {npiv-proxy | r-proxy | e-tunnel | all}`

---

### Syntax Definitions

|                   |                                                                 |
|-------------------|-----------------------------------------------------------------|
| <b>npiv-proxy</b> | Clears NP_Port proxy sessions.                                  |
| <b>r-proxy</b>    | Clears reverse NP_Port proxy sessions.                          |
| <b>e-tunnel</b>   | Clears E-Tunnel (E2E Tunnel) sessions.                          |
| <b>all</b>        | Clears all NP_Port proxy, reverse proxy, and E-Tunnel sessions. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Only the sessions associated with the specified parameter are cleared. For example, if the **npiv-proxy** parameter is used, only NPIV proxy sessions are cleared. All other session types remain active.
- When sessions are cleared on FC ports, the corresponding sessions on the FCoE ports are also cleared.

### Examples

```
-> clear fibre-channel sessions npiv-proxy
-> clear fibre-channel sessions r-npiv
-> clear fibre-channel sessions e-tunnel
-> clear fibre-channel sessions all
```

### Release History

Release 7.3.3; command introduced.

Clears E\_Port proxy (E2E tunnel) statistics.

```
clear fcoe statistics e-tunnel [ve | te] {tunnel_id[-tunnel_id]}
```

---

### Syntax Definitions

|                                        |                                                                                          |
|----------------------------------------|------------------------------------------------------------------------------------------|
| <b>ve</b>                              | Clears VE_Port statistics.                                                               |
| <b>te</b>                              | Clears TE_Port statistics.                                                               |
| <i>tunnel_id</i> [- <i>tunnel_id</i> ] | The ID of an existing E2E tunnel. Use a hyphen to specify a range of tunnel IDs (10-15). |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **ve** parameter to clear only VE\_Port statistics for the specified tunnel ID.
- Use the **te** parameter to clear only TE\_Port statistics for the specified tunnel ID.

### Examples

```
-> clear fcoe statistics e-tunnel 1
-> clear fcoe statistics e-tunnel ve 2
-> clear fcoe statistics e-tunnel te 2
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

```

---

## clear fcoe sessions

Clears the specified sessions on all FCoE ports.

**clear fcoe sessions [fips | npiv-proxy | r-proxy | e-tunnel | all]**

---

### Syntax Definitions

|                   |                                                                       |
|-------------------|-----------------------------------------------------------------------|
| <b>fips</b>       | Clears FIP snooping sessions.                                         |
| <b>npiv-proxy</b> | Clears NP_Port proxy sessions.                                        |
| <b>r-proxy</b>    | Clears reverse NP_Port proxy sessions.                                |
| <b>e-tunnel</b>   | Clears E-Tunnel (E2E Tunnel) sessions.                                |
| <b>all</b>        | Clears all FCoE, NP_Port proxy, reverse proxy, and E-Tunnel sessions. |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                         |                                                                          |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|-------------------------|--------------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900<br/>V72/C32</b> | <b>6900<br/>X48C6/T48C6/<br/>X48C4E/V48C8/<br/>C32E/T24C2/<br/>X24C2</b> | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                      | No                                                                       | No          |

### Usage Guidelines

- When FIP snooping sessions are cleared, a clear virtual link (CVL) request is sent for all logged ENodes.
- When R-NPIV sessions are cleared, FIP FLOGO is sent to the FCF and FC FLOGO is sent to the HBA for each R-NPIV session created.
- Once sessions are cleared, NP\_Ports will trigger a fabric login to the connected fabric.

### Examples

```
-> clear fcoe sessions fips
-> clear fcoe sessions npiv-proxy
-> clear fcoe sessions r-npiv
-> clear fcoe sessions e-tunnel
-> clear fcoe sessions all
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

### [show fcoe sessions](#)

# 47 VXLAN Snooping Commands

The OmniSwitch Virtual eXtensible LAN (VXLAN) Snooping feature attempts to detect and identify VXLAN traffic by sampling packets to determine if they are VXLAN encapsulated packets. Once this type of traffic is identified, VXLAN Snooping collects and stores information about the flow in a database on the local switch. Additional configurable options for this feature include the ability to apply QoS policy list rules to the identified flow and SNMP trap generation.

A VXLAN segment is a Layer 2 overlay network through which devices can communicate. Traffic from such devices is encapsulated into VXLAN frames and then tunneled through the VXLAN segment. Using this implementation of VXLAN Snooping, an administrator can obtain more detailed information about the traffic flow through the overlay network.

---

**Note.** Throughout this chapter, the terms “VXLAN Snooping” and “VM Snooping” are interchangeable.

---

MIB information for the VXLAN Snooping commands is as follows:

*Filename:* ALCATEL-IND1-VM-SNOOPING-MIB.mib  
*Module:* alaVMSnoopingMIB

A summary of the available commands is listed here:

---

**vm-snooping admin-state**  
**vm-snooping policy-mode**  
**vm-snooping trap**  
**vm-snooping filtering-resource trap threshold**  
**vm-snooping sampling-rate**  
**vm-snooping aging-timer**  
**vm-snooping vxlan udp-port**  
**vm-snooping static-policy rule**  
**vm-snooping logging-threshold**  
**vm-snooping port**  
**show vm-snooping config**  
**show vm-snooping port**  
**show vm-snooping database**  
**show vm-snooping virtual-machines**  
**show vm-snooping filtering-resource**  
**show vm-snooping statistics**  
**show vm-snooping static-policy**  
**clear vm-snooping database**  
**clear vm-snooping statistics**

---

## vm-snooping admin-state

Configures the global status of the VXLAN Snooping process for the switch.

**vm-snooping admin-state** {enable | disable}

---

### Syntax Definitions

**enable** Enables VXLAN Snooping for the switch.  
**disable** Disables VXLAN Snooping for the switch.

### Defaults

By default, VXLAN Snooping is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Enable VXLAN Snooping first before attempting any other VXLAN Snooping command. When enabled, the switch allocates resources for this feature. When disabled, switch resources are released for other purposes.
- This command enables or disables this feature on all VXLAN Snooping ports.

### Examples

```
-> vm-snooping admin-state enable
-> vm-snooping admin-state disable
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

**show vm-snooping config** Displays the VXLAN Snooping configuration for the switch.

### MIB Objects

```
alaVMSnoopingConfig
alaVMSnoopingAdminStatus
```

---

## vm-snooping policy-mode

Configures the allocation of hardware resources for VXLAN Snooping. Use this command to change the policy lookup mode to basic or advanced and specify the number of policies reserved for VXLAN Snooping. In addition, an optional inner header parameter is available to specify if the header of the inner Ethernet frame is tagged or untagged.

```
vm-snooping policy-mode {basic | advance} [policy-resource {extended | default}] [inner-header {tagged | untagged | default}]
```

---

### Syntax Definitions

|                                 |                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>basic</b>                    | Reserves resources for VNI, VXLAN UDP port, inner source MAC address, and inner IPv4 source address policy conditions.                                                                                                                                                                                                                                |
| <b>advance</b>                  | For IPv4 packets, reserves resources for VNI, VXLAN UDP port, inner source MAC address, inner IPv4 source address, IP protocol, and Layer 4 source and destination port policy conditions.<br><br>For IPv6 packets, reserves resources for VNI, VXLAN UDP port, inner source IPv6 address, Layer 4 source and destination port for policy conditions. |
| <b>policy-resource extended</b> | Doubles the amount of resources for VXLAN Snooping policies.                                                                                                                                                                                                                                                                                          |
| <b>policy-resource default</b>  | Reserves the minimum amount of resources for VXLAN Snooping policies.                                                                                                                                                                                                                                                                                 |
| <b>inner-header tagged</b>      | The header of the inner frame is tagged.                                                                                                                                                                                                                                                                                                              |
| <b>inner-header untagged</b>    | The header of the inner frame is untagged.                                                                                                                                                                                                                                                                                                            |
| <b>inner-header default</b>     | The header of the inner frame is either tagged or untagged (basic mode) or just tagged (advance mode).                                                                                                                                                                                                                                                |

### Defaults

| parameter            | default |
|----------------------|---------|
| [basic   advance]    | basic   |
| [extended   default] | default |

By default, the inner header option is set to the following values based on the current policy lookup mode:

- Basic mode—untagged and tagged header for the inner frame.
- Advanced mode—tagged header for the inner frame.

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

## Usage Guidelines

- To change the policy mode, globally disable VXLAN Snooping then make the changes and enable VXLAN Snooping again to apply the changes to the switch. This command is also allowed when the VXLAN Snooping feature is globally disabled.
- When the VXLAN Snooping policy mode is changed, all database and QoS entries are flushed.
- When the VXLAN policy mode is set to **basic**, any QoS policy rules with advanced mode policy conditions will not work. When the mode is set to **advance**, QoS policy rules with basic *and* advance policy conditions will work.
- When configuring the **inner-header** parameter for **basic** mode, specifying only tagged or only untagged may increase the number of policies allowed. In other words, specifying both tagged and untagged (the default) may reduce the number of policies allowed.
- When configuring the **inner-header** parameter for **advance** mode, specifying both tagged and untagged is not allowed. In this case, the **default** option sets the parameter to tagged.
- Other applications, such as QoS user policies, VLAN Stacking, Application Fingerprinting, DHCP Snooping, Open Flow, IP multicast, and FIP Snooping also use up system resources. Depending on which application comes first, other applications may not be able to get the required hardware resources.
- If the resources are increased by two times (**policy-resource extended**), then none of the above-mentioned applications can work simultaneously.
- Only one set of hardware resources are reserved for the VXLAN Snooping application when VXLAN Snooping is globally enabled.

## Examples

```
-> vm-snooping admin-state disable
-> vm-snooping policy-mode basic policy-resource extended inner-header tagged
-> vm-snooping admin-state enable

-> vm-snooping admin-state disable
-> vm-snooping policy-mode advance policy-resource extended inner-header untagged
-> vm-snooping admin-state enable

-> vm-snooping admin-state disable
-> vm-snooping policy-mode basic inner-header default
-> vm-snooping policy-mode advance inner-header default
-> vm-snooping admin-state enable
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

**show vm-snooping config**      Displays the VXLAN Snooping configuration for the switch.

## MIB Objects

```
alaVMSnoopingConfig
 alaVMSnoopingPolicyMode
 alaVMSnoopingPolicyResource
 alaVMSnoopingVMTrafficTagged
```

---

## vm-snooping trap

Enables or disables trap generation for the VXLAN Snooping feature.

```
vm-snooping trap {enable | disable}
```

---

### Syntax Definitions

**enable** Enables VXLAN Snooping trap generation.

**disable** Disables VXLAN Snooping trap generation.

### Defaults

By default, trap generation for this feature is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

A trap is generated when one of the following occurs:

- A new VXLAN database entry is learned or ages out.
- The usage of system resources allocated for VXLAN Snooping exceeds a configurable threshold value.

### Examples

```
-> vm-snooping trap enable
-> vm-snooping trap disable
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

**vm-snooping filtering-resource trap threshold** Configures the threshold value at which point the switch generates a trap to indicate that VXLAN Snooping has utilized the specified level of system resources.

**show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

## MIB Objects

---

## vm-snooping filtering-resource trap threshold

Configures the threshold value at which point the switch generates a trap to indicate that VXLAN Snooping has utilized the specified level of system resources.

**vm-snooping filtering-resource trap threshold** *{percentage | default}*

---

### Syntax Definitions

*percentage* The percentage of system resources used by VXLAN Snooping.  
**default** Sets the trap threshold value back to 80 percent (the default).

### Defaults

By default, the filtering resource threshold is set to 80 percent.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

A trap is generated when the system resources used by VXLAN Snooping reach the specified threshold value.

### Examples

```
-> vm-snooping filtering-resource trap threshold 50
-> vm-snooping filtering-resource trap threshold default
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

- show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.
- show vm-snooping filtering-resource** Displays the system resources used by VXLAN Snooping on a per-port basis.

---

## vm-snooping sampling-rate

Configures the packets-per-second (pps) sampling rate for the VXLAN Snooping feature.

**vm-snooping sampling-rate** *pps*

---

### Syntax Definitions

*pps* The number of packets-per-second to sample on all VXLAN Snooping ports. The valid range is 1–1000.

### Defaults

By default, the sampling rate is set to 1000 pps.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

The sampling rate value specified with this command is applied to every VXLAN Snooping port on the switch.

### Examples

```
-> vm-snooping sampling-rate 500
-> vm-snooping sampling-rate 1000
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

**show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

### MIB Objects

```
alaVMSnoopingConfig
alaVMSnoopingSamplingRate
```

---

## vm-snooping aging-timer

Configures the aging time value for VXLAN packet flows learned in the VXLAN Snooping database on the local switch.

**vm-snooping aging-timer** *seconds*

---

### Syntax Definitions

*seconds* The number of seconds to wait before aging out a learned VM. The valid range is 60–86400 seconds.

### Defaults

By default, the aging timer is set to 300 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Set this timer to zero to prevent the learned VMs from aging out.
- Note that an inactive VXLAN packet flow (no packets received for the flow) can take up to twice as long as the aging time value specified to be removed from the VXLAN Snooping database. For example, if an aging time of 300 seconds is specified, the database entry for the flow ages out any time between 300 and 600 seconds of inactivity.

### Examples

```
-> vm-snooping aging-timer 100
-> vm-snooping aging-timer 300
-> vm-snooping aging-timer 0
```

### Release History

Release 7.3.4; command was introduced.

alaVMSnoopingAgingTimer

---

## vm-snooping vxlan udp-port

Configures additional UDP destination port numbers to look for when the switch inspects packets received on VXLAN Snooping ports. This value is used to identify encapsulated VXLAN packets.

```
vm-snooping vxlan udp-port {udp_port_num[-udp_port_num2]}
```

```
no vm-snooping vxlan udp-port {udp_port_num[-udp_port_num2]}
```

---

### Syntax Definitions

*udp\_port\_num[-udp\_port\_num2]* The UDP destination port number. Use a hyphen to specify a range of port numbers. Do not specify a range that configures more than seven UDP ports.

### Defaults

By default, the well-known UDP port number 4789 is used.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove a UDP destination port number. Note that the default UDP port number of 4789 is not configurable, so it can not be removed with this command. Only port numbers that were added through this command can be removed.
- Avoid using the well-known UDP ports that are already reserved by IANA for other applications.
- Including the default UDP port number (4789), up to eight UDP ports are allowed. However, configuring multiple UDP ports may slow down the VXLAN Snooping process.
- Changing the UDP port number on the fly might stop the VXLAN traffic until the VXLAN Tunnel End Points (VTEPs) in the network are configured with the same destination UDP port.

### Examples

```
-> vm-snooping vxlan udp-port 8472
-> no vm-snooping vxlan udp-port 8472
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

### `show vm-snooping config`

Displays the destination UDP port value that is used to identify VXLAN traffic.

```
alaVMSnoopingUDPPortTable
 alaVMSnoopingUDPPortIndex
 alaVMSnoopingUDPRowStatus
```

---

## vm-snooping static-policy rule

Configures a static QoS policy rule. When configured, QoS resources are automatically allocated for the specified rule even if there is no VXLAN packet flow that matches the rule conditions.

**vm-snooping static-policy rule** *rule\_name* [**list** *list\_name*]

**no vm-snooping static-policy rule** *rule\_name* [**list** *list\_name*]

---

### Syntax Definitions

*rule\_name* The name of the policy rule (alphanumeric string up to 32 characters).

*list\_name* The name of the policy list (alphanumeric string up to 32 characters).

### Defaults

| parameter        | default   |
|------------------|-----------|
| <i>list_name</i> | “Default” |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to remove a static VXLAN Snooping policy rule. If the rule is associated with a user-configured policy list (not the default list), then the list name must be specified as well to remove the static policy rule. If the rule is associated with the default list, then specifying a list name is not required to remove the static policy rule.
- The default policy list available in every switch has no name and is not configurable. All QoS policy rules are assigned to the default list unless the **no default-list** option of the **policy rule** command is used at the time the rule is created.

### Examples

```
-> vm-snooping static-policy rule r1
-> vm-snooping static-policy rule r2 list l2
-> no vm-snooping static-policy rule r1
-> no vm-snooping static-policy rule r2 list l2
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

**show vm-snooping static-policy** Displays the static policy configuration.

## MIB Objects

```
alaVMSnoopingStaticPolicyTable
 alaVMSnoopingStaticPolicyRuleName
 alaVMSnoopingStaticPolicyListName
 alaVMSnoopingStaticPolicyRowStatus
```

---

## vm-snooping logging-threshold

Configures the threshold value that determines how many entries for VXLAN packet flows and statistics are logged into a .csv file on the local switch.

**vm-snooping logging-threshold number-of-flows** *{flow\_num | default}*

---

### Syntax Definitions

*flow\_num* The number of VXLAN packet flows to log. The range is 1000–6000.

**default** Sets the logging threshold value back to 5000 (the default).

### Defaults

By default, the logging threshold value is set to 5000 packet flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Set the logging threshold value to zero to turn off the logging function.
- When the logging function is on, setting the VXLAN Snooping aging timer to 300 seconds is recommended. If the aging timer is set to zero, no logging occurs regardless of this threshold setting.
- The packet flows and hardware statistics are logged to the **vm\_snoop\_db\_flow\_rec.csv** file and the **vm\_snoop\_hw\_stats\_rec.csv** file in the **/flash/switch/bridge/vm\_snoop/** directory on the local switch to maintain a packet flow history.
- When the number of records logged to the .csv files exceeds the logging threshold value, the corresponding files are renamed to **/flash/switch/bridge/vm\_snoop/vm\_snoop\_db\_flow\_old\_rec.csv** and to **/flash/switch/bridge/vm\_snoop/vm\_snoop\_hw\_stats\_old\_rec.csv**.
- These files are accessed and used by Alcatel-Lucent Enterprise network management tools to provide management and visibility of the overlay network traffic.

### Examples

```
-> vm-snooping logging-threshold number-of-flows 1000
-> vm-snooping logging-threshold number-of-flows 0
-> vm-snooping logging-threshold number-of-flows default
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

**show vm-snooping config**      Displays the VXLAN Snooping status and configuration for the switch.

## MIB Objects

alaVMSnoopingConfig  
  alaVMSnoopingLoggingThresholdFlows

---

## vm-snooping port

Configures a switch port or link aggregate as a VXLAN Snooping interface. Once the interface is configured and enabled and VXLAN Snooping is enabled for the switch, IP packets received on the interface are sampled to determine if they contain the designated UDP destination port.

```
vm-snooping {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]} [admin-state {enable | disable}]
```

```
no vm-snooping {port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

|                                    |                                                                                     |
|------------------------------------|-------------------------------------------------------------------------------------|
| <i>chassis</i>                     | The chassis identifier.                                                             |
| <i>slot/port</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).   |
| <i>agg_id</i> [- <i>agg_id2</i> ]  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).       |
| <b>enable</b>                      | Enables the VXLAN Snooping administrative status on the port or link aggregate ID.  |
| <b>disable</b>                     | Disables the VXLAN Snooping administrative status on the port or link aggregate ID. |

### Defaults

By default, VXLAN Snooping is disabled on all switch ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **no** form of this command to revert the VXLAN Snooping interface back to a regular switch port or link aggregate. This will clear the VXLAN Snooping configuration from the interface.
- Disabling the administrative status of a VXLAN Snooping interface does not remove the VXLAN Snooping configuration from the interface.
- Make sure the VXLAN Snooping feature is globally enabled for the switch to ensure that VXLAN Snooping ports will process VXLAN packets.
- VXLAN Snooping uses the sFlow mechanism to sample packets.

## Examples

```
-> vm-snooping port 1/1/1
-> vm-snooping port 1/1/5-10
-> no vm-snooping port 1/1/1
-> no vm-snooping port 1/1/5-10
-> vm-snooping port 1/1/1 admin-state enable
-> vm-snooping port 1/1/5-10 admin-state enable
-> vm-snooping port 1/1/1 admin-state disable
-> vm-snooping port 1/1/5-10 admin-state disable

-> vm-snooping linkagg 1
-> vm-snooping linkagg 5-10
-> no vm-snooping linkagg 1
-> no vm-snooping linkagg 5-10
-> vm-snooping linkagg 1 admin-state enable
-> vm-snooping linkagg 5-10 admin-state enable
-> vm-snooping linkagg 1 admin-state disable
-> vm-snooping linkagg 5-10 admin-state disable
```

## Release History

|                              |                                                                                                                                                                               |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Trap-Threshold</b>        | The percentage of switch resources used that will trigger the switch to generate a trap. Configured through the <b>vm-snooping filtering-resource trap threshold</b> command. |
| <b>Policy-Mode</b>           | The policy mode setting that designates switch resources for VXLAN Snooping. Configured through the <b>vm-snooping policy-mode</b> command.                                   |
| <b>Policy Resource</b>       | Indicates the number of VXLAN Snooping policies allowed ( <b>Default</b> or <b>Extended</b> ). Configured through the <b>vm-snooping policy-mode</b> command.                 |
| <b>VM Inner Header</b>       | Whether to check tagged and/or untagged VM traffic. Configured through the <b>vm-snooping policy-mode</b> command.                                                            |
| <b>Aging-Timer</b>           | The number of seconds before a learned VM is aged out. Configured through the <b>vm-snooping aging-timer</b> command.                                                         |
| <b>UDP-Port(s)</b>           | The UDP port numbers to snoop for VXLAN packets. Configured through the <b>vm-snooping vxlan udp-port</b> command.                                                            |
| <b>Sampling-Rate</b>         | The number of packets-per-second (pps) to sample. Configured through the <b>vm-snooping sampling-rate</b> command.                                                            |
| <b>Logging-Threshold</b>     | The number of VXLAN packet flow entries and statistics logged to a .csv file on the local switch.                                                                             |
| <b>Qos Allocation Status</b> | The status of QoS resource allocation ( <b>Success</b> , <b>InProgress</b> , or <b>Failed</b> ). This field is blank when VXLAN Snooping is disabled.                         |

---

## show vm-snooping port

Displays the VXLAN Snooping port configuration for the switch.

**show vm-snooping port**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- The display output also indicates whether or not the VXLAN Snooping port is a virtual machine network profile (vNP) port.

### Examples

```
-> show vm-snooping port
Port VM-Snooping vNP
-----+-----+-----
1/2/1 Enable Yes
1/2/2 Enable No
1/2/2 Enable Yes
1/2/2 Enable Yes
0/12 Disable No
```

## show vm-snooping database

Displays VXLAN Snooping database entries. When a VXLAN packet is detected and the packet contains the designated UDP destination port, VXLAN Snooping creates an entry in the local switch database to identify and track the VXLAN packet flow.

**show vm-snooping database** [**vxlan udp-port** *udp\_port\_num* | **vtep-ip** *ip\_address* | **vni** *vxlan\_id* | **vm-src-mac** *mac\_address* | **vm-ip** *ip\_address*] [**detail**] [**port** *chassis/slot/port[-port2]*] | **linkagg** *agg\_id[-agg\_id2]*] [**detail**]

### Syntax Definitions

|                                  |                                                                                                                 |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <i>udp_port_num</i>              | The UDP destination port number used to identify VXLAN traffic.                                                 |
| <b>vtep-ip</b> <i>ip_address</i> | The IP address of the VXLAN Tunnel End Point (VTEP). This is the Loopback0 interface address on the OmniSwitch. |
| <i>vxlan_id</i>                  | The VXLAN Network Identifier (VNI) for the VXLAN segment on which the VM was learned.                           |
| <i>mac_address</i>               | The source MAC address of a VM.                                                                                 |
| <b>vm-ip</b> <i>ip_address</i>   | The source IP address of a VM.                                                                                  |
| <b>detail</b>                    | Displays additional information about the classified traffic flow.                                              |
| <i>chassis</i>                   | The chassis identifier.                                                                                         |
| <i>slot/port[-port2]</i>         | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                               |
| <i>agg_id[-agg_id2]</i>          | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                   |

### Defaults

By default, all database entries are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- Each database entry is subject to a VXLAN Snooping aging period. If the database fills up, older entries are aged out before the limit (fast aging).
- When a database entry is removed due to regular aging or fast aging conditions, any corresponding QoS is also removed for that flow.

## Examples

```
-> show vm-snooping database
Total number of VM Flows: 15
```

| Port  | VXLAN<br>PORT | VNI  | VM<br>SRC MAC     | VM<br>VLAN | VM<br>SRC IP  |

## clear vm-snooping database

Clears the local database entries for each virtual machine (VM) flow.

```
clear vm-snooping database [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]]
```

---

### Syntax Definitions

|                          |                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                           |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). |
| <i>agg_id[-agg_id2]</i>  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).     |

### Defaults

By default, all database entries are cleared for all VXLAN Snooping ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

Use the **port** and **linkagg** parameters to clear database entries for a specific port or link aggregate.

### Examples

```
-> clear vm-snooping database
-> clear vm-snooping database port 3/1/1
-> clear vm-snooping database linkagg 10
```

### Release History

Release 7.3.4; command introduced.

```

---

## show vm-snooping virtual-machines

Displays the port, source MAC address, and VLAN associated with Virtual Machines (VMs) discovered through the VXLAN Snooping process.

**show vm-snooping virtual-machines**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|             |             |             |              |             |              |             |             |                        |                                                                      |             |
|-------------|-------------|-------------|--------------|-------------|--------------|-------------|-------------|------------------------|----------------------------------------------------------------------|-------------|
| <b>6360</b> | <b>6465</b> | <b>6560</b> | <b>6570M</b> | <b>6860</b> | <b>6860N</b> | <b>6865</b> | <b>6900</b> | <b>6900</b><br>V72/C32 | <b>6900</b><br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | <b>9900</b> |
| No          | No          | No          | No           | No          | No           | No          | Yes         | No                     | No                                                                   | No          |

### Usage Guidelines

The output display of this command shows the port, source MAC address, and VLAN associated with each VM learned through the VXLAN Snooping process.

### Examples

```
-> show vm-snooping virtual-machines
Port SRC MAC VLAN
-----+-----+-----+
1/1/2 00:00:00:88:00:01 -
1/1/2 00:00:00:88:00:02 -
1/1/2 00:00:00:88:00:03 -
1/1/2 00:00:00:88:00:04 -
1/1/2 00:00:00:88:00:05 -
```

#### *output definitions*

```

---

## show vm-snooping filtering-resource

Displays the amount of switch resources available for and used by QoS policies that contain VXLAN conditions.

**show vm-snooping filtering-resource**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- VXLAN Snooping uses the amount of resources used to calculate the percentage of switch resources used and then determine if that percentage exceeds the value set for the filtering trap threshold. An SNMP trap is generated when the percentage used meets or exceeds the trap threshold value.
- The output display of this command shows the percentage of switch resources used by VXLAN policies on a per-slot basis.

### Examples

```
-> show vm-snooping filtering-resource
Total Filtering Resources :256,
Chassis/Slot Filtering Resources Used
-----+-----
 1/SLOT-1 0
 2/SLOT-1 0
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

- vm-snooping filtering-resource trap threshold** Configures the trap threshold value for system resources used by VXLAN Snooping.
- show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

## show vm-snooping statistics

Displays statistics for each VXLAN packet flow on a VXLAN Snooping port or link aggregate.

**show vm-snooping statistics** [**hardware** | **sampling**] [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]]

---

### Syntax Definitions

|                                    |                                                                                                                   |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>hardware</b>                    | Displays the VXLAN policy rule and list and the number of packets and bytes on which the policy rule was applied. |
| <b>sampling</b>                    | Displays the number of VXLAN packets that were sampled for a specific flow.                                       |
| <i>chassis</i>                     | The chassis identifier.                                                                                           |
| <i>slot/port</i> [- <i>port2</i> ] | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                 |
| <i>agg_id</i> [- <i>agg_id2</i> ]  | The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).                                     |

### Defaults

By default, statistics are displayed for all VXLAN Snooping ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.

### Examples

```
-> show vm-snooping statistics
```

```
Total number of Hardware Statistics: 0
```

```
Policy Rule Policy List Number of pkts Number of Bytes
-----+-----+-----+-----+
Total number of Sampling Statistics: 1
```

```
Port VXLAN VXLAN VM VM Pkts
UDP PORT VNI SRC MAC SRC IP
-----+-----+-----+-----+-----+
2/1/2 4789 43 00:00:00:88:00:01 88.0.0.1 15
```

```
-> show vm-snooping statistics sampling
Total number of Sampling Statistics: 1
```

| Port  | VXLAN<br>UDP PORT | VXLAN<br>VNI | VM<br>SRC MAC     | VM<br>SRC IP | Pkts |
|-------|-------------------|--------------|-------------------|--------------|------|
| 1/1/2 | 4789              | 43           | 00:00:00:99:00:01 | 99.0.0.1     | 10   |

```
-> show vm-snooping statistics hardware
Total number of Hardware Statistics: 1
```

| Policy Rule | Policy List | Number of pkts | Number of Bytes |
|-------------|-------------|----------------|-----------------|
| r1          | Default     | 497            | 45724           |

## Release History

Release 7.3.4; command introduced.

## Related Commands

[clear vm-snooping statistics](#) Clears VXLAN Snooping statistics.

```

## show vm-snooping static-policy

Displays the static QoS policy rule configuration for VXLAN Snooping.

**show vm-snooping static-policy**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| No   | No   | No   | No    | No   | No    | No   | Yes  | No              | No                                                            | No   |

### Usage Guidelines

- When a static policy rule is configured for VXLAN Snooping, QoS resources are automatically allocated for the specified rule even if there is no VXLAN packet flow that matches the rule conditions.
- If the static policy rule was created with a user-configured policy list (not the default list), then the list name appears in the “Policy List” field. However, if the static policy rule was created without specifying a policy list name, then the “Default” list name appears in the “Policy List” field.

### Examples

```
-> show vm-snooping static-policy
Total number of Static-Policy: 5
```

```
Policy Rule Policy List
-----+-----
r0 Default
r1 Default
r2 L1
r2 l3
r2 Default
```

# 48 Port Mapping Commands

Port Mapping is a security feature that controls communication between peer users. Each session comprises of a session ID and a set of user ports and/or a set of network ports. The user ports within a session cannot communicate with each other and can only communicate through network ports. In a port mapping session with user port set A and network port set B, ports in set A can communicate with ports in set B only. If set B is empty, the ports in set A can communicate with the rest of the ports in the system.

A port mapping session can be configured in a unidirectional or bidirectional mode. In the unidirectional mode, the network ports can communicate with each other within the same session. In the bidirectional mode, the network ports cannot communicate with each other. Network ports of a unidirectional port mapping session can be shared with other unidirectional sessions, but cannot be shared with any session that is configured in bidirectional mode. Network ports of different sessions can communicate with each other.

MIB information for the Port Mapping commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MAPPING.mib  
*Module:* alcatelIND1PortMappingMIB

A summary of the available commands is listed here:

---

**port-mapping user-port network-port**  
**port-mapping** (configures port mapping status and direction)  
**port-mapping unidirectional bidirectional**  
**port-mapping unknown-unicast-flooding**  
**port-mapping dynamic-proxy-arp**  
**show port-mapping status**  
**show port-mapping**  
**show ip dynamic-proxy-arp**

---

## port-mapping user-port network-port

Creates a port mapping session with the user ports, network ports, or both user ports and network ports. Use the **no** form of the command to delete ports or a link aggregate group from a session.

**port-mapping** *session\_id* [**user-port** {*slot chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]  
[**network-port** {*slot chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]

**no port-mapping** *session\_id* [**user-port** {*slot chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]  
[**network-port** {*slot chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]

---

### Syntax Definitions

|                          |                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------|
| <i>session_id</i>        | The port mapping session ID.                                                                                  |
| <b>user-port</b>         | Specifies a user port of the mapping session.                                                                 |
| <b>network-port</b>      | Specifies a network port of the mapping session.                                                              |
| <i>chassis</i>           | The chassis identifier.                                                                                       |
| <i>slot</i>              | The slot number to be assigned to the mapping session.                                                        |
| <i>slot/port[-port2]</i> | The slot and port number to assign to the mapping session. Use a hyphen to specify a range of ports (1/5-10). |
| <i>agg_id</i>            | The link aggregate ID number to assign to the mapping session.                                                |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

- User ports that are part of one session cannot communicate with each other. The user ports can communicate only through network ports of the session to the other elements of the system.
- User ports can be part of only one port mapping session.
- An aggregable port of a link aggregation group cannot be a mapped port and a mapped port cannot be an aggregable port of a link aggregation group.
- A mirrored port cannot be a mapped port and a mapped port cannot be a mirrored port.

## Examples

```
-> port-mapping 3 user-port 1/2/3 network-port 1/6/4
-> port-mapping 4 user-port 1/2/5-8
-> port-mapping 5 user-port 1/2/3 network-port slot 3
-> no port-mapping 5 user-port 1/2/3
-> no port-mapping 6 network-port linkagg 7
```

## Release History

Release 7.1.1; command introduced.

 pmapPortType
```

---

## port-mapping

Enables, disables, or deletes a port mapping session.

**port-mapping** *session\_id* {enable | disable}

**no port-mapping** *session\_id*

---

### Syntax Definitions

|                   |                                  |
|-------------------|----------------------------------|
| <i>session_id</i> | The port mapping session ID.     |
| <b>enable</b>     | Enables a port mapping session.  |
| <b>disable</b>    | Disables a port mapping session. |

### Defaults

| parameter        | default |
|------------------|---------|
| enable   disable | disable |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

To be enabled, a session should have a minimum of two ports.

### Examples

```
-> port-mapping 3 enable
-> port-mapping 4 disable
-> no port-mapping 5
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

|--------------------------------------------------|----------------------------------------------------------------------------------------|
| <b>port-mapping user-port network-port</b>       | Creates a port mapping session with or without the user ports, network ports, or both. |
| <b>port-mapping unidirectional bidirectional</b> | Configures the direction of a port mapping session.                                    |
| <b>show port-mapping status</b>                  | Displays the status of one or more port mapping sessions.                              |
| <b>show port-mapping</b>                         | Displays the configuration of one or more port mapping sessions.                       |

## MIB Objects

```
PortMappingSessionTable
 pmapSessionNumber
 pmapSessionStatus
```

---

## port-mapping unidirectional bidirectional

Configures the direction of a port mapping session.

**port-mapping** *session\_id* [**unidirectional** | **bidirectional**]

---

### Syntax Definitions

|                       |                                        |
|-----------------------|----------------------------------------|
| <i>session_id</i>     | The port mapping session ID.           |
| <b>unidirectional</b> | Specifies unidirectional port mapping. |
| <b>bidirectional</b>  | Specifies bidirectional port mapping.  |

### Defaults

| parameter                                    | default              |
|----------------------------------------------|----------------------|
| <b>enable</b>   <b>disable</b>               | <b>enable</b>        |
| <b>unidirectional</b>   <b>bidirectional</b> | <b>bidirectional</b> |

### Platform Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

- In the bidirectional mode, the network ports of a session cannot communicate with each other. Also, the network ports of that session cannot be a part of a network port set of another session.
- In the unidirectional mode, the network ports of a session can communicate with each other. Also, the network ports of that session can be part of a network port set of another session that is in the unidirectional mode.
- To change the directional mode of an active session with network ports, delete the network ports of the session, change the direction, and recreate the network ports.

### Examples

```
-> port-mapping 5 enable unidirectional
-> port-mapping 5 disable unidirectional
-> port-mapping 6 enable bidirectional
-> port-mapping 5 disable bidirectional
```

## Release History

Release 7.1.1; command introduced.

PortMappingSessionTable

  PmapSessionNumber

  PmapSessionDirection

---

## port-mapping unknown-unicast-flooding

Enables or disables flooding of unicast traffic from all the switch ports to the user ports related to a particular session.

**port-mapping *session\_id* unknown-unicast-flooding {enable | disable}**

---

### Syntax Definitions

|                   |                                                                                                             |
|-------------------|-------------------------------------------------------------------------------------------------------------|
| <i>session_id</i> | The port mapping session ID.                                                                                |
| <b>enable</b>     | Enables the flooding of unknown unicast traffic from all ports to the user ports for a particular session.  |
| <b>disable</b>    | Disables the flooding of unknown unicast traffic from all ports to the user ports for a particular session. |

### Defaults

| parameter        | default |
|------------------|---------|
| enable   disable | enable  |

### Platform Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

- Configuring unknown unicast flooding creates a new port mapping session if there is no existing session.
- When a link aggregate is configured as a user port, the unknown unicast flooding configuration is applied to all the member ports of the aggregate.

### Examples

```
-> port-mapping 1 unknown-unicast-flooding enable
-> port-mapping 2 unknown-unicast-flooding disable
```

### Release History

Release 7.1.1; command introduced.

| <b>show port-mapping status</b>            | Displays the status of one or more port mapping sessions.                             |

## MIB Objects

portMappingSessionTable  
pmapSessionUnknownUnicastFloodStatus

---

## port-mapping dynamic-proxy-arp

Enables or disables the dynamic proxy ARP functionality for the port mapping session.

```
port-mapping session_id dynamic-proxy-arp {enable | disable}
```

---

### Syntax Definitions

|                   |                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------|
| <i>session_id</i> | The port mapping session for which the dynamic proxy ARP status is enabled or disabled. |
| <b>enable</b>     | Enables the dynamic proxy ARP status.                                                   |
| <b>disable</b>    | Disables the dynamic proxy ARP status.                                                  |

### Defaults

| parameter        | default |
|------------------|---------|
| enable   disable | disable |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | No   | No    | Yes  | No    | Yes  | No   | No              | No                                                            | No   |

### Usage Guidelines

- Clients must be connected to the user-ports and the head end routers connected to the network-ports of the port mapping session for dynamic proxy ARP to function properly.
- DHCP snooping must be enabled for dynamic proxy ARP to function.
- Using dynamic proxy ARP in conjunction with DHCP snooping allows for the configuration of the MAC Forced Forwarding feature.
- When dynamic proxy ARP is enabled, port-group allocation will be triggered. The TCAM manager will respond as success if the port-group allocation is a success. If QoS is already using the port-groups, the TCAM manager will respond with a failure and an error is displayed.
- Dynamic proxy ARP can be enabled on only two port-groups. If QoS is already using the port-groups, an error message is displayed.

### Examples

```
-> port-mapping 1 dynamic-proxy-arp enable
-> port-mapping 1 dynamic-proxy-arp disable
```

## Release History

Release 8.6R1; command was introduced.

| <a href="#">show ip dynamic-proxy-arp</a>           | Displays the ARPs learned through dynamic proxy.                                      |

## MIB Objects

portMappingSessionTable  
pmapSessionDynProxyARP

---

## show port-mapping status

Displays the status of one or more port mapping sessions.

**show port-mapping** [*session\_id*] **status**

---

### Syntax definitions

*session\_id*                      The port mapping session ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

If you do not specify the port mapping session ID, then the status of all the port mapping sessions are displayed.

### Examples

```
-> show port-mapping status
```

| SessionID | Direction | Status  | Unknown Unicast | DPA Status |
|-----------|-----------|---------|-----------------|------------|
| 1         | bi        | disable | flood           | enable     |
| 1         | bi        | enable  | drop            | disable    |
| 2         | bi        | disable | flood           | disable    |

### output definitions

|                        |                                                                                                                                                                |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SessionID</b>       | Displays the port mapping session ID.                                                                                                                          |
| <b>Direction</b>       | Displays the direction of a port mapping session.                                                                                                              |
| <b>Status</b>          | Displays status of a port mapping session.                                                                                                                     |
| <b>Unknown Unicast</b> | Whether unknown unicast traffic is dropped or flooded from all the switch ports to the user ports related to the port mapping session                          |
| <b>DPA Status</b>      | Displays the status of Dynamic Proxy ARP for the port mapping session. <i>This functionality is supported only on the OmniSwitch 6465 and OmniSwitch 6865.</i> |

---

## Release History

Release 7.1.1; command introduced.

Release 8.6R1; “DPA Status” field added.

## Related Commands

[port-mapping user-port  
network-port](#)

Creates a port mapping session with or without the user ports, network ports, or both.

[port-mapping](#)

Enables, disables, or deletes a port mapping session.

## MIB Objects

PmapSessionDirection

pmapSessionStatus

pmapSessionUnknownUnicastFloodStatus

pmapSessionDynProxyARP

---

## show port-mapping

Displays the configuration of one or more port mapping sessions.

```
show port-mapping [session_id]
```

---

### Syntax Definitions

*session\_id* The port mapping session ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

If you do not specify the port mapping session ID, then the user port and network port information are displayed for all the port mapping sessions active on the switch.

### Examples

```
-> show port-mapping 3
```

```
SessionID USR-PORT NETWORK-PORT
-----+-----+-----
 1 1/2 1/3
 1 1/6
 1 1/7
```

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | No   | No    | Yes  | No    | Yes  | No   | No              | No                                                            | No   |

### Usage Guidelines

- This command shows the information related to the router IP.
- To view the output, dynamic proxy must be enabled on the port mapping session, DHCP snooping must be enabled on the VLAN.

### Examples

```
-> show ip dynamic-proxy-arp
```

```

Router IP Addr Hardware Addr Vlan Interface
-----+-----+-----+-----
10.20.35.3 e9:ca:ab:e3:23:4c 500 1/1/23

```

# 49 Learned Port Security Commands

Learned Port Security (LPS) provides a mechanism for controlling network device communication on one or more switch ports. Configurable LPS parameters allow the user to restrict source learning on a port to:

- A maximum number of learned source MAC addresses.
- A specific amount of time in which source MAC addresses are learned.
- An individual learned source MAC address.
- A range of learned source MAC addresses.

This chapter includes descriptions of the CLI commands used to define LPS parameters and display information about the current LPS configuration.

MIB information for Learned Port Security commands is as follows:

*Filename:* ALCATEL-IND1-LPS-MIB.mib  
*Module:* alcatelIND1LearnedPortSecurityMIB

A summary of the available commands is listed here:

---

**port-security**  
**port-security learning-window**  
**port-security convert-to-static**  
**port-security mac**  
**port-security maximum**  
**port-security port max-filtering**  
**port-security mac-range**  
**port-security port violation**  
**port-security learn-trap-threshold**  
**port-security port pkt-relay**  
**port-security pkt-relay protocol**  
**port-security pkt-relay protocol udp**  
**show port-security pkt-relay filter**  
**show port-security**  
**show port-security mac-range**  
**show port-security brief**  
**show port-security learning-window**

---

## port-security

Enables or disables Learned Port Security (LPS) on the switch port(s) or SAP. When LPS is enabled, only devices that have a source MAC address that complies with LPS restrictions are learned on the port(s).

```
port-security {port chassis/slot/port[-port2] | chassis} | {sap {port | linkagg} sap_id} [admin-state {enable | disable | locked}]
```

```
no port-security {port chassis/slot/port[-port2] | sap {port | linkagg} sap_id}
```

---

### Syntax Definitions

|                          |                                                                                                                                                                                                                  |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                                                          |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                                                                |
| <b>chassis</b>           | Specifies all LPS ports.                                                                                                                                                                                         |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i>                                         |
| <b>enable</b>            | Administratively enables LPS on the specified port(s).                                                                                                                                                           |
| <b>disable</b>           | Administratively disables LPS on the specified port(s). All bridged and filtered MAC addresses are cleared, but the static MAC address and LPS configuration for the port is retained. Learning is unrestricted. |
| <b>locked</b>            | Administratively disables all learning on the port. Existing MAC addresses are retained but no additional learning of addresses, except for static MAC addresses, is allowed.                                    |

### Defaults

By default, LPS functionality is disabled on all ports.

The following default value applies if the **admin-state** parameter is *not* specified with this command:

| parameter          | default       |
|--------------------|---------------|
| <b>admin-state</b> | <b>enable</b> |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900 V72/C32 | 6900 X48C6/T48C6/X48C4E/V48C8/C32E/T24C2/X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|--------------|------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes          | Yes                                            | Yes  |

## Usage Guidelines

- Use the **no** form of this command to remove the LPS configuration from the specified port *and* clear all MAC addresses learned on the port. Note that the **chassis** parameter is not supported when using the **no** form of this command.
- The **admin-state disable** option disables LPS on the port but does not clear the LPS configuration.
- Use the **chassis** parameter to administratively disable or enable all active LPS ports with one command. This option does not apply to ports on which LPS was not previously enabled.
- LPS is supported on Ethernet fixed, 802.1Q-tagged ports, and access ports.
- LPS is not supported on link aggregates, 802.1Q tagged (trunked) link aggregates, or link aggregate member ports.
- Note that when LPS is enabled on an active port, all MAC addresses previously learned on that port are cleared from the source learning MAC address table.
- LPS is also supported on ports that have Universal Network Profile (UNP) functionality enabled, with the following conditions:
  - When LPS is enabled or disabled on a UNP bridge port (LPS is not supported on UNP access ports), MAC addresses already learned on that port are flushed.
  - UNP authentication and classification is applied first, then LPS rules.
  - If UNP classifies a MAC address as forwarding but LPS learns the address as filtering, an untagged packet will show as filtering in the default VLAN for the port and a tagged packet MAC will show as filtering in the specific tagged VLAN.
  - When a MAC address is filtered by LPS, the **show unp user status** command will display “LPS-B” as the profile classification source for that MAC address.
- LPS allows for the configuration of the following source MAC address learning restrictions:
  - A source learning time limit window to specify the length of time learning is allowed on a port.
  - A maximum number of bridged and filtered MAC addresses allowed on a specific port
  - A list of MAC addresses (individual or range of addresses) allowed on a port.
  - How a port handles traffic that is unauthorized.
- Multi-untag SAP feature is not supported on an untagged LPS UNP port.

## Examples

```
-> port-security port 1/4/8 admin-state enable
-> port-security port 1/2/1-10 admin-state enable
-> port-security chassis admin-state disable
-> no port-security port 1/1/1-12
-> port-security sap port 2/1/10:10
-> port-security sap port 2/1/10:10.20
-> port-security sap linkagg 10:10
-> port-security sap linkagg 10:20
-> no port-security sap port 2/1/10:10
-> no port-security sap linkagg 10:20
```

## Release History

Release 7.1.1; command introduced.

Release 8.8R1; **sap** parameter added.

## Related Commands

|                                      |                                                                                                               |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>port-security mac-range</b>       | Configures a list of authorized MAC addresses by defining a range of addresses allowed on the port.           |
| <b>port-security maximum</b>         | Specifies the maximum number of source MAC addresses that an LPS port(s) is allowed to learn.                 |
| <b>port-security learning-window</b> | Configures the amount of time, in minutes, to allow source learning on all LPS ports.                         |
| <b>port-security port violation</b>  | Selects the method for handling traffic that does not comply with LPS restrictions for the specified port(s). |

## MIB Objects

```
learnedPortSecurityTable
 lpsAdminStatus
learnedPortSecuritySAPTable
 lpsSAPAdminStatus
```

---

## port-security learning-window

Configures the amount of time, in minutes, to allow source learning on all LPS ports. This LPS parameter applies to the entire switch, so when the time limit expires, source learning of *new* MAC addresses is stopped on all LPS ports. Only authorized MAC addresses are allowed to be associated on LPS ports after this timer expires. This command also enables or disables the conversion of dynamic MAC addresses to static MAC addresses on LPS ports.

**port-security learning-window** *minutes* [**convert-to-static** {**enable** | **disable**}] [**no-aging** {**enable** | **disable**}] [**mac-move** {**enable** | **disable**}] [**learn-as-static** {**enable** | **disable**}] [**boot-up** {**enable** | **disable**}]

**no port-security learning-window**

---

### Syntax Definitions

|                                  |                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>minutes</i>                   | The number of minutes during which LPS allows source learning across all LPS ports. This amount of time defines the LPS learning window. The valid range is 0–2880. When this value is set to zero, the learning window time is set to infinity (no source learning time restriction on LPS ports).                                                                                        |
| <b>convert-to-static enable</b>  | Enables the <b>convert-to-static</b> option for the learning window. Dynamically learned bridged (not filtered) MAC addresses are automatically converted to static addresses when the learning window closes. This option is automatically disabled when the LPS learning window is set to infinity (zero).                                                                               |
| <b>convert-to-static disable</b> | Disables the <b>convert-to-static</b> option for the learning window. Dynamically learned bridged MAC addresses are not converted to static addresses and will start to age out when the learning window closes.                                                                                                                                                                           |
| <b>no-aging enable</b>           | Enables the <b>no-aging</b> option for the learning window. Dynamically learned bridged MAC addresses are learned as <i>pseudo-static</i> MACs, which do not age out but are not saved in the switch configuration. MAC movement is not allowed for pseudo-static MAC addresses unless the <b>mac-move</b> option is also enabled.                                                         |
| <b>no-aging disable</b>          | Disables the <b>no-aging</b> option for the learning window. MAC addresses are learned as dynamic addresses that will age out.                                                                                                                                                                                                                                                             |
| <b>mac-move enable</b>           | Enables the <b>mac-move</b> option. Allows a pseudo-static MAC address to move to a different port in the same VLAN without getting dropped. The <b>mac-move</b> option is used with the <b>no-aging</b> option to allow MAC movement for pseudo-static MAC addresses.                                                                                                                     |
| <b>mac-move disable</b>          | Disables the <b>mac-move</b> option. If the <b>no-aging</b> option is enabled, MAC movement for pseudo-static MAC addresses is not allowed. Frames from a duplicate pseudo-static MAC address are dropped.                                                                                                                                                                                 |
| <b>learn-as-static enable</b>    | Enables the <b>learn-as-static</b> option for the learning window. Dynamically learned bridged MAC addresses are converted to permanent static MAC addresses during the learning window time (even if the <b>convert-to-static</b> option is disabled). MAC movement is allowed for the permanent static MAC addresses. This option and the <b>no-aging</b> option are mutually exclusive. |

|                                |                                                                                                                                                                                                    |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>learn-as-static disable</b> | Disables the <b>learn-as-static</b> option for the learning window. Dynamically learned bridged MAC addresses are not converted to permanent static MAC addresses during the learning window time. |
| <b>boot-up enable</b>          | Enables the automatic start of the LPS learning window timer when the switch restarts.                                                                                                             |
| <b>boot-up disable</b>         | Disables the automatic start of the LPS learning window timer when the switch restarts.                                                                                                            |

## Defaults

By default, the LPS source learning time limit is not set for the switch; the learning window defaults to infinity (source learning is not limited to a specific time frame).

| parameter                | default        |
|--------------------------|----------------|
| <b>convert-to-static</b> | <b>disable</b> |
| <b>no-aging</b>          | <b>disable</b> |
| <b>mac-move</b>          | <b>disable</b> |
| <b>learn-as-static</b>   | <b>disable</b> |
| <b>boot-up</b>           | <b>enable</b>  |

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Use the **no** form of this command to clear the learning window time (no learning window time limit is applied to the port).
- The LPS source learning time window is started and/or reset each time the **port-security learning-window** command is issued or when the **port-security learning-window boot-up** option is enabled and the switch restarts.
- Setting the LPS learning window time to 0 (zero) configures an infinite source learning time period for all LPS ports. The learning of MAC addresses on LPS ports never times out.
- When the LPS learning window time is set to zero, all options except the **convert-to-static** option are still valid. For example, the **no-aging** option setting still applies.
- After the LPS learning window time expires, MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of bridged MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

- Enabling the **no-aging** option triggers the following LPS learning window behavior:
  - All new bridged MAC addresses are learned as pseudo-static MAC addresses during the learning window time period. Pseudo-static addresses do not age out but are not saved to the switch configuration.
  - MAC movement is not allowed for pseudo-static MAC addresses unless the **mac-move** option is also enabled. The **mac-move** status (enabled or disabled) applies only to the **no-aging** option.
  - Enabling the **mac-move** option is not allowed unless the **no-aging** option is also enabled. When the **mac-move** option is enabled, disabling the **no-aging** option is *not* allowed.
  - When the learning window starts, any MAC addresses that were learned prior to the learning window time period are retained as dynamic addresses; they are not converted to pseudo-static MAC addresses.
- The **learn-as-static** and **no-aging** options are mutually exclusive; if both are enabled, then the **learn-as-static** option takes precedence.
- If the **convert-to-static** option is enabled, then all dynamic bridged and pseudo-static MAC addresses are converted to static MAC addresses when the learning window closes. Static MAC addresses do not age out and are saved to the switch configuration.

---

**Note.** When UNP is enabled on any one LPS port, the **convert-to-static**, **no-aging**, and **boot-up** parameter options are not supported on *all* LPS-enabled ports. This is because the learning window configuration is global and applies to all LPS ports.

---

## Examples

```
-> port-security learning-window 25
-> port-security learning-window 2 convert-to-static enable
-> port-security learning-window 60 no-aging enable mac-move enable
-> port-security learning-window 0 learn-as-static enable
-> port-security learning-window 500 boot-up disable
-> port-security learning-window 2 convert-to-static enable no-aging enable
-> port-security learning-window 2 no-aging enable convert-to-static enable boot-up
enable learn-as-static enable mac-move enable
-> no port-security learning-window
```

## Release History

Release 7.1.1; command introduced.

Release 7.2.1.R02; **no-aging** and **boot-up** parameters added.

Release 8.2.1; **learn-as-static** and **mac-move** parameters added.

### Syntax Definitions

|                          |                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                  |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                        |
| <b>chassis</b>           | Specifies all the LPS ports on the chassis.                                                                                                                              |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i> |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Converting dynamic MAC addresses to static MAC addresses is not supported on Universal Network Profile (UNP) ports.
- You can stop the aging out of dynamic MAC addresses on the LPS port(s) by converting them to static MAC addresses.
- The number of converted static MAC addresses cannot exceed the maximum number of MAC addresses allowed on the port(s).

---

**Note.** The **port-security convert-to-static** command is not supported on UNP ports.

---

### Examples

```
-> port-security port 1/4/8 convert-to-static
-> port-security chassis convert-to-static
-> port-security sap port 2/1/10:10 convert-to-static
```

## Release History

Release 7.2.1.R02; command was introduced.

Release 8.8R1; **sap** parameter added.

## Related Commands

### Usage Guidelines

- Use the **no** form of this command to remove a specific static MAC address or all of the static MAC addresses configured on the specified LPS port. Note that even when all statically configured MAC addresses are removed, LPS remains active on the port.
- A VLAN-port association (VPS) must exist between the specified VLAN and the LPS port. If no VLAN ID is specified with this command, the default VLAN for the LPS port is used.
- The following conditions will display an error or warning message:
  - A VLAN ID is specified that is not associated with the LPS port:
  - An attempt is made to configure a MAC address more than once on the same LPS port with the

- same VLAN association.
- A duplicate MAC address is configured on different LPS ports.
- Configuring a multicast MAC address, an all zero MAC address, or a broadcast MAC address is not allowed with this command.
- Use this command instead of the **mac-learning static mac-address** command to create a static MAC address on an LPS port.

## Examples

```
-> port-security port 1/1/20 mac 00:20:95:00:fa:5c
-> port-security port 1/1/1-15 mac 00:da:95:00:00:10

| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                        |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i> |
| <i>number</i>            | The number of source MAC addresses that are allowed on this port. The valid range is 1–1000.                                                                             |

### Defaults

By default, the number of MAC addresses allowed is set to 1.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Any additional source MAC addresses received that exceed the maximum number of bridged addresses allowed are filtered on the port, regardless of the LPS learning window time limit. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.
- Note that source learning of configured authorized MAC addresses is still allowed after the LPS time limit has expired; however, all learning is stopped if the number of MAC addresses learned meets or exceeds the maximum number of addresses allowed, even if the LPS time limit has not expired.

### Examples

```
-> port-security port 1/2/14 maximum 25
-> port-security port 1/4/10-15 maximum 100
-> port-security sap port 2/1/10:10.20 maximum 50
-> port-security sap linkagg 10:10 maximum 500
```

## port-security learn-trap-threshold

Configures the number of bridged MAC addresses to learn before sending a SNMP trap.

**port-security** {port *chassis/slot/port[-port2]* | sap {port | linkagg} *sap\_id*} **learn-trap-threshold** *number*

---

### Syntax Definitions

|                          |                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                  |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                        |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i> |
| <i>number</i>            | The number of bridged MAC addresses to learn before sending a trap. The valid range is 0–1000.                                                                           |

### Defaults

By default, the number of bridged MAC addresses to learn before sending a trap is set to the same value as the maximum number of bridged MAC addresses allowed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- When the number of bridged MAC addresses learned on the port matches the specified threshold amount, a trap is sent for every bridged MAC address learned thereafter.
- Sending a trap when this threshold is reached provides notification of newly learned bridged MAC addresses. Trap contents includes identifying information about the MAC, such as the address itself, the corresponding IP address, switch identification, and the slot and port number on which the MAC was learned.
- If this threshold value is set to zero, a trap is sent for every MAC address learned on the LPS port.

### Examples

```
-> port-security port 1/1/10 learn-trap-threshold 6
-> port-security port 1/1/10-13 learn-trap-threshold 18
-> port-security sap port 2/1/10:10 learn-trap-threshold 1
```

## Release History

### Syntax Definitions

|                          |                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                  |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                        |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i> |
| <i>number</i>            | The maximum number of filtered MAC addresses that are allowed on this port. The valid range is 0–100.                                                                    |

### Defaults

By default, the maximum number of MAC addresses that can be filtered on an LPS port is 5.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- When the number of filtered MAC addresses learned on the port reaches the maximum, the violation mode (restrict, discard, or shutdown) configured for the port is applied.
- Any additional source MAC addresses received that exceed the maximum number of bridged addresses allowed are filtered on the port, regardless of the LPS learning window time limit. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.
- Even after the LPS learning window time expires, MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

### Examples

```
-> port-security port 1/1/10 max-filtering 6
-> port-security port 1/1/10-13 max-filtering 18
```

```
-> port-security sap port 2/1/10:10 max-filtering 100
-> port-security sap port 2/1/10:10.20 max-filtering 50
-> port-security sap linkagg 10:10 max-filtering 25
-> port-security sap linkagg 10:20 max-filtering 5
```

## port-security mac-range

Configures a list of authorized MAC addresses by defining a range of addresses allowed on the port. This command also enables LPS on the specified port, if LPS is not already active on the port.

**port-security** {**port** *chassis/slot/port[-port2]* | **sap** {**port** | **linkagg**} *sap\_id*} **mac-range** [**low** *mac\_address* | **high** *mac\_address*]

**no port-security** {**port** *chassis/slot/port[-port2]* | **sap** {**port** | **linkagg**} *sap\_id*} **mac-range** [**low** *mac\_address*]

---

### Syntax Definitions

|                                  |                                                                                                                                                                                                     |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis/slot/port[-port2]</i> | The chassis, slot and port number (1/1/1). Use a hyphen to specify a range of ports (1/1/1-8). On the OmniSwitch 6900 only, configuring multiple MAC address ranges for the same port is supported. |
| <i>sap_id</i>                    | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i>                            |
| <b>low</b> <i>mac_address</i>    | MAC address that defines the low end of a range of MACs (for example, 00:20:95:00:10:2A).                                                                                                           |
| <b>high</b> <i>mac_address</i>   | MAC address that defines the high end of a range of MACs (for example, 00:20:95:00:10:2F).                                                                                                          |

### Defaults

| parameter                      | default           |
|--------------------------------|-------------------|
| <b>high</b> <i>mac_address</i> | ff:ff:ff:ff:ff:ff |
| <b>low</b> <i>mac_address</i>  | 00:00:00:00:00:00 |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- By default, each LPS port is set to a range of 00:00:00:00:00:00–ff:ff:ff:ff:ff:ff, which includes all MAC addresses.
- Source MAC addresses received on an LPS port that fall within the authorized range are allowed on the port. An additional entry is made in the LPS table for each of these learned addresses.

- Any additional source MAC addresses received that do not match the configured authorized addresses are not allowed (filtered) on the port, regardless of the LPS learning window time limit or the maximum number of bridged addresses allowed. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.
- Configuring more than one MAC address range per port is supported. When attempting to configure multiple MAC address ranges on the same port, consider the following:
  - A maximum of eight multiple MAC address ranges can be configured per port.
  - On a newly configured LPS port, the first user configured MAC range would overwrite the default MAC range.
  - A MAC range cannot overlap with another MAC range configured for the port.
  - Modifying a MAC range is allowed only if the lower MAC address is not changed and the defined new range does not overlap with the existing range. To modify the lower MAC address, the existing range must be deleted before adding the new range.
    - When modifying a MAC range, the new range must match or accommodate any existing static MACs on the port, else an error will be thrown indicating some static MACs exist on the port that fall outside the new/resultant MAC range being configured. (Note: It is required to flush such static MACs on the port, if user needs to configure the new MAC range, which was not accommodating the static MACs).
    - When the MAC range size is increased, all the dynamic filtering MACs on the port would be flushed.
    - When the MAC range size is reduced, any existing dynamic forwarding MACs learned on the port would be flushed if they fall outside any MAC ranges configured on the port at that point of time.
    - All the dynamic filtering MACs learned on the port would be flushed.
- Use the **no** form of this command to delete the configured MAC range.
- The default MAC range is automatically applied when all the configured MAC ranges for the port are deleted.
- The default MAC range on the port cannot be deleted.

## Examples

```
-> port-security port 1/5/11-15 mac-range low 00:da:95:00:00:10 high
00:da:95:00:00:1f
-> port-security port 1/1/5 mac-range low 00:01:01:22:22:56 high 00:01:01:22:22:67
-> port-security port 1/1/5 mac-range low 00:01:01:22:22:33:56 high 00:01:01:22:22:33:67
-> port-security port 1/1/5 mac-range low 00:01:01:22:22:44:56 high 00:01:01:22:22:44:67
-> port-security port 1/1/5 mac-range low 00:01:22:22:11:56 high 00:01:22:22:11:67
-> port-security port 1/1/5 mac-range low 00:01:22:22:22:56 high 00:01:22:22:22:67
-> port-security port 1/1/5 mac-range low 00:01:22:22:33:56 high 00:01:22:22:33:67
-> port-security port 1/1/5 mac-range low 00:01:22:22:44:56 high 00:01:22:22:44:67
-> port-security port 1/1/5 mac-range low 00:01:22:22:55:56 high 00:01:22:22:55:67
-> no port-security port 1/1/5 mac-range low 00:01:01:22:33:56
```

## Release History

Release 7.1.1; command introduced.

Release 8.5R3; ability to configure multiple MAC ranges per port added.

Release 8.8R1; **sap** parameter added.

## port-security port violation

Selects the method for handling traffic that does not comply with LPS restrictions for the specified port(s).

```
port-security {port chassis/slot/port[-port2] | sap {port | linkagg} sap_id} violation {shutdown |
restrict | discard} | violation recovery-time {default | seconds} | violation recovery-maximum {infinite
| default | max_attempts}
```

---

### Syntax Definitions

|                          |                                                                                                                                                                              |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                      |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                            |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.</i>     |
| <b>shutdown</b>          | The port is administratively disabled when the port receives unauthorized traffic. No further traffic is allowed on the port.                                                |
| <b>restrict</b>          | Filters (blocks) unauthorized traffic but allows traffic that complies with LPS restrictions to forward on the port. The port remains administratively enabled.              |
| <b>discard</b>           | Disables learning on the port when unauthorized traffic is received or the configured maximum number of MAC addresses is reached. The port remains administratively enabled. |
| <b>default</b>           | Sets the SAP <b>recovery-time</b> or <b>recovery-maximum</b> values to their default setting.                                                                                |
| <i>seconds</i>           | The number of seconds after which the SAP is reactivated. The valid range is 30-600 seconds.                                                                                 |
| <b>infinite</b>          | Sets the recovery attempts to infinite for a SAP.                                                                                                                            |
| <i>max_attempts</i>      | The maximum number of recovery attempts. Valid range is 0-50.                                                                                                                |
| <b>clear</b>             | Clears the violation on a SAP.                                                                                                                                               |

### Defaults

By default, the security violation mode is set to **restrict** when LPS is enabled on the port.

| parameter           | default         |
|---------------------|-----------------|
| <b>violation</b>    | <b>restrict</b> |
| <i>seconds</i>      | 300 seconds     |
| <i>max_attempts</i> | 10              |

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- When a traffic violation occurs on an LPS port, a notice is sent to the switch log.
- If the violation mode is set to **restrict**, unauthorized source MAC addresses are not learned in the LPS table, but they are recorded in the source learning MAC address table with a filtered operational status. This allows the user to view MAC addresses attempting unauthorized access to the LPS port.
- Only violation mode **restrict** is supported on a SAP.

## Examples

```
-> port-security port 1/2/14 violation restrict
-> port-security port 1/4/10-15 violation shutdown
-> port-security port 1/1/37 violation discard
-> port-security sap port 2/1/10:10 violation recovery-maximum 4
-> port-security sap port 2/1/10:10.20 violation recovery-time 60
-> port-security sap linkagg 10:10 violation restrict
-> port-security sap linkagg 10:20 violation clear
```

## Release History

Release 7.1.1; command introduced.  
 Release 7.2.1.R02; **discard** parameter added.  
 Release 8.8R1; **sap** parameter added.

## port-security port pkt-relay

Enables packet relay feature on a single or range of LPS ports.

**port-security** {port *chassis/slot/port[-port2]*} **pkt-relay**

**no port-security** {port *chassis/slot/port[-port2]*} **pkt-relay**

---

### Syntax Definitions

*chassis* The chassis identifier.

*slot/port[-port2]* The slot and port number. Use a hyphen to specify a range of ports.

### Defaults

By default, the packet relay is disabled on LPS port.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- When packet relay is enabled on a non LPS port, the LPS is automatically enabled on that port.
- Packet relay feature is not supported on UNP ports.
- Use the **no** form of the command to disable packet relay on the port.

### Examples

```
-> port-security port 3/2/1 pkt-relay
-> port-security port 3/2/1-4 pkt-relay
-> no port-security port 3/2/1-4 pkt-relay
```

### Release History

Release 8.8R2; command introduced.

## Related Commands

**port-security pkt-relay protocol**

Configures the protocol filter criteria for packet relay feature.

**show port-security pkt-relay filter**

Displays Learned Port Security (LPS) configuration and table entries.

## MIB Objects

lpsPacketRelay

---

## port-security pkt-relay protocol

Configures the protocol filter criteria for packet relay feature.

```
port-security pkt-relay protocol {udp} {icmp} {igmp}
```

---

### Syntax Definitions

|             |                                                                                |
|-------------|--------------------------------------------------------------------------------|
| <b>udp</b>  | The packets with UDP protocol are considered for retransmission to the queue.  |
| <b>icmp</b> | The packets with ICMP protocol are considered for retransmission to the queue. |
| <b>igmp</b> | The packets with IGMP protocol are considered for retransmission to the queue. |

### Defaults

By default, no protocol is enabled as filter for packet relay.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- When the protocol filter is configured, it is applied on all the ports on which packet relay is enabled.
- More than one protocol can be configured for protocol filter.

### Examples

```
-> port-security pkt-relay protocol udp
-> port-security pkt-relay protocol icmp igmp
```

### Release History

Release 8.8R2; command introduced.

## Related Commands

Configures the UDP source and destination ports as the criteria for packet relay.

```
port-security pkt-relay protocol udp [src-port port1[-port2]] [dst-port port1[-port2]]
```

---

### Syntax Definitions

|                 |                                                                                |
|-----------------|--------------------------------------------------------------------------------|
| <b>src-port</b> | Specify the UDP source port for packet relay.                                  |
| <b>dst-port</b> | Specify the UDP destination port for packet relay.                             |
| <i>port1</i>    | Specify the port number which will be matched for retransmission to the queue. |
| <i>port2</i>    | Specify the port range for sequential port.                                    |

### Defaults

By default, no UDP source and destination ports are configured for packet relay.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use this command to specify a particular or range of UDP source and destination port for packet relay.
- UDP protocol filter must be configured before configuring specific UDP source and destination ports. Use the [port-security pkt-relay protocol CLI](#).

### Examples

```
-> port-security pkt-relay protocol udp src-port 2
-> port-security pkt-relay protocol udp src-port 2-6
-> port-security pkt-relay protocol udp dst-port 4
-> port-security pkt-relay protocol udp dst-port 4-6
```

### Release History

Release 8.8R2; command introduced.

### Syntax Definitions

|                          |                                                                                                                                                                                                  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>chassis</i>           | The chassis identifier.                                                                                                                                                                          |
| <i>slot/port[-port2]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).                                                                                                                |
| <i>slot</i>              | Enter the slot number for a module to specify that the command should include all ports on that module (for example, 6 specifies all ports on the module found in slot 6 of the switch chassis). |
| <i>sap_id</i>            | The SAP ID number identifying the service instance. <i>This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 and OmniSwitch 6570M.</i>                        |

### Defaults

By default, all ports with an LPS configuration are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Displays ports that have an LPS configuration, even if LPS is disabled on the port.
- Use the **port** parameter with this command to display the LPS configuration for a specific port or a range of ports.
- Use the **slot** parameter with this command to display the LPS configuration for all the ports on a specific slot.
- MAC addresses learned on the LPS enabled port that are within the specified MAC address range appear as a separate entries in the LPS table as dynamic MAC type addresses.
- The MAC Type field is blank if an authorized MAC address range is configured for the LPS port.

### Examples

```
-> show port-security port 1/1/20
```

Legend: Mac Address: \* = address not valid,

Mac Address: & = duplicate static address,

Port: 1/1/20

```

Admin-State : ENABLED,
Operation Mode : ENABLED,
Max MAC bridged : 3,
Trap Threshold : 1,
Violation : RESTRICT
Max MAC filtered : 5,
Violating MAC : NULL
Pkt-Relay : ENABLED

```

| MAC               | VLAN | MAC TYPE      | OPERATION |
|-------------------|------|---------------|-----------|
| 00:11:22:22:22:21 | 1    | STATIC        | bridging  |
| 00:11:22:22:22:22 | 1    | STATIC        | bridging  |
| 00:11:22:22:22:23 | 1    | PSEUDO-STATIC | bridging  |

### output definitions

|                         |                                                                                                                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Port</b>             | The module slot number and the physical port number on that module.                                                                                                                                                                                                                                        |
| <b>Admin-State</b>      | The LPS administrative state for the port ( <b>Enabled</b> , <b>Disabled</b> , or <b>Locked</b> ). Configured through the <b>port-security</b> command.                                                                                                                                                    |
| <b>Operation Mode</b>   | The LPS operational mode for the port ( <b>Enabled</b> , <b>Disabled</b> , <b>Restricted</b> , <b>Shutdown</b> , <b>Discard</b> , <b>Locked</b> , or <b>Filtered-only</b> ).                                                                                                                               |
| <b>Max MAC bridged</b>  | The maximum number of bridged MAC addresses that are allowed on this port. Configured through the <b>port-security maximum</b> command.                                                                                                                                                                    |
| <b>Trap Threshold</b>   | The number of bridged MACs to learn before sending a trap. After this number is reached, a trap is sent out for every MAC learned thereafter. If <b>disabled</b> is displayed in this field, the trap threshold is not in force. Configured through the <b>port-security learn-trap-threshold</b> command. |
| <b>Violation</b>        | The security violation mode for the port ( <b>restrict</b> , <b>shutdown</b> , or <b>discard</b> ). Configured through the <b>port-security port violation</b> command.                                                                                                                                    |
| <b>Max MAC filtered</b> | The maximum number of filtered MAC addresses that the LPS port can learn. Configured through the <b>port-security port max-filtering</b> command.                                                                                                                                                          |
| <b>Violating MAC</b>    | The MAC Address that caused the violation on this port.                                                                                                                                                                                                                                                    |
| <b>Pkt-Relay</b>        | Displays the packet relay configuration status on the port.                                                                                                                                                                                                                                                |
| <b>MAC</b>              | The MAC address learned dynamically or configured statically on the LPS port. Static MAC addresses configured through the <b>port-security mac</b> command.                                                                                                                                                |
| <b>VLAN</b>             | The VLAN to which the LPS port belongs.                                                                                                                                                                                                                                                                    |
| <b>MAC TYPE</b>         | Indicates if the MAC address was dynamically learned or statically configured as an authorized MAC address for the port.                                                                                                                                                                                   |
| <b>OPERATION</b>        | The operational status of the MAC address ( <b>bridging</b> or <b>filtering</b> ).                                                                                                                                                                                                                         |

## Release History

Release 7.1.1; command introduced.

Release 7.2.1.R02: **Admin-State** and **Violating MAC** fields added.

Release 8.4.1; **MAC Address: \*** = **address not valid** and **MAC Address: &** = **duplicate static address** legend added.

Release 8.8R1; **sap** parameter added.

Release 8.8R2; **Pkt-Relay** field added.

## Related Commands

[show port-security learning-window](#)

Displays the amount of time during which source learning can occur on all LPS ports.

[port-security port pkt-relay](#)

Enables packet relay feature on a single or range of LPS ports.

## show port-security mac-range

Displays the MAC range configured on the Learned Port Security (LPS) ports.

```
show port-security [port chassis/slot/port[-port2] | sap {port | linkagg} sap_id] mac-range
```

---

### Syntax Definitions

*chassis/slot/port[-port2]* The chassis, slot and port number (1/1/1). Use a hyphen to specify a range of ports (1/1/1-8).

*sap\_id* The SAP ID number identifying the service instance. *This parameter is not supported on the OmniSwitch 6360, OmniSwitch 6465, OmniSwitch 6560 or OmniSwitch 6570M.*

### Defaults

By default, all the LPS ports configured with MAC range are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Specify the chassis, slot, and port to view the MAC range configured for the specific port.

### Examples

```
-> show port-security port 1/1/4 mac-range
```

```
Port: 1/1/4:
```

```
 Low MAC Range High MAC Range
-----+-----
00:00:00:00:00:00 00:00:00:00:00:10
00:00:00:44:00:01 00:00:00:66:ff:ff
```

```
-> show port-security mac-range
```

```
Port: 1/1/2:
```

```
 Low MAC Range High MAC Range
-----+-----
00:00:00:00:00:01 00:00:00:00:00:20
00:00:00:00:55:01 00:00:00:00:55:ff
00:00:00:66:00:01 00:00:00:99:ff:ff
```

```
Port: 1/1/4:
```

```
 Low MAC Range High MAC Range
-----+-----
00:00:00:00:00:00 00:00:00:00:00:10
00:00:00:44:00:01 00:00:00:66:ff:ff
```

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The LPS port parameter values are displayed even if the LPS is disabled on the port.
- The operation mode displayed for the LPS port is based on a combination of the existing administrative status and the operational status of the port, the result of which is one of the following values:
  - Enabled
  - Restricted (only when the administrative status is enabled)
  - Shutdown (only when the administrative status is enabled)
  - Discard (only when the administrative status is enabled)
  - Disabled
  - Locked
  - Filtered\_only

### Examples

```
-> show port-security brief
Slot/ Max Max Nb Macs Nb Macs Nb Macs Nb Macs
Port Operation Mode Bridge Filter Dyn Br Dyn Fltr Static Br Static Fltr
-----+-----+-----+-----+-----+-----+-----+-----
1/1 ENABLED 5 100 5 10 0 0
1/2 ENABLED 5 100 0 10 5 0
1/3 RESTRICTED 5 100 5 100 0 0
1/4 SHUTDOWN 5 100 - - - 0
1/5 DISABLED 5 100 - - - 0
1/6 LOCKED 5 100 - - 3 0
```

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- The source learning time limit is a switch-wide parameter that applies to all ports that have LPS enabled.
- If the learning window time is not set, then no source learning time limit is applied to LPS ports.
- Even after the LPS learning window time expires, dynamic MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of bridged MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

### Examples

```
-> show port-security learning-window
Learning-Window = 2 min,
Convert-to-static = DISABLE,
No Aging = DISABLE,
Boot Up = ENABLE,
Remaining Learning Window = 120 sec
Learn As Static = ENABLE,
Mac Move = DISABLE,
```

|                                  |                                                                                                                                                                                                                                                               |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Learning-Window</b>           | The configured amount of time during which the LPS port can learn new MAC addresses. This value of this field is set to <b>INFINITY</b> when the learning time window is set to zero (no source learning time restriction on LPS ports).                      |
| <b>Convert-to-static</b>         | Indicates whether or not dynamic bridged or pseudo-static MACs are converted to static MACs ( <b>ENABLED</b> or <b>DISABLED</b> ). This option is always disabled when the LPS learning window is set to infinity (zero).                                     |
| <b>No Aging</b>                  | Indicates whether or not bridged MAC addresses are learned as pseudo-static MAC addresses, which do not age out during the LPS learning window time period ( <b>DISABLED</b> or <b>ENABLED</b> ).                                                             |
| <b>Boot Up</b>                   | Indicates whether or not the LPS learning window automatically starts when the switch boots up ( <b>enabled</b> or <b>disabled</b> ).                                                                                                                         |
| <b>Learn As Static</b>           | Indicates whether or not dynamic MAC addresses are automatically learned as static MAC addresses during the LPS learning window time period. The <b>Learn As Static</b> and <b>No Aging</b> learning window options are mutually exclusive.                   |
| <b>Mac Move</b>                  | Indicates whether or not pseudo-static MAC addresses are allowed to move to a different port in the same VLAN during the LPS learning window time period. The <b>Mac Move</b> learning window option applies only when the <b>No Aging</b> option is enabled. |
| <b>Remaining Learning Window</b> | The remaining amount of time during which the LPS port can learn MAC addresses. If the learning time window is set to <b>INFINITY</b> (zero), this field does not display in the show command output.                                                         |

---

**Release History**

Release 7.1.1; command introduced.

Release 7.2.1.R02; **LPS Shutdown Config** field changed to **Learning-Window**, **No Aging** and **Boot Up** fields added.

Release 8.2.1; **Learn As Static** and **Mac Move** fields added.

# 50 Port Mirroring and Monitoring Commands

The Port Mirroring and Port Monitoring features are primarily used as diagnostic tools.

The Port Mirroring feature allows you to have all the inbound and outbound traffic of an Ethernet port sent to another port on the switch. When you enable port mirroring, the active, or “mirrored,” port transmits and receives network traffic normally and the “mirroring” port receives a copy of all transmit and receive traffic to the active port. You can connect an RMON probe or network analysis device to the mirroring port to see an exact duplication of traffic on the mirrored port without disrupting network traffic to and from the mirrored port.

The Port Monitoring feature allows you to capture and examine the data traffic to and from a monitored Ethernet port.

MIB information for the Port Mirroring commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MIRRORING-MONITORING-MIB.mib  
*Module:* alcatelIND1PortMirrorMonitoringMIB

The following table summarizes the available commands:

|                                 |                                                                                                                                                  |

## port-mirroring source destination

Defines the port to mirror and the port that is to receive data from the mirrored port. Also, enables or disables remote port mirroring.

**port-mirroring** *port\_mirror\_sessionid* **source** {**port** *chassis/slot/port[-port2]*} **destination** {**port** *chassis/slot/port[-port2]* | **linkagg** *linkagg[-linkagg2]*} [**rpmir-vlan** *vlan\_id*] [**bidirectional** |**inport** |**outport**] [**loopback**] [**unblocked-vlan** *vlan\_id*] [**tag-remove**] [**enable** | **disable**]

**port-mirroring** *port\_mirror\_sessionid* **no source** {**port** *chassis/slot/port[-port2]*} [*chassis/slot/port[-port2]*...]

**port-mirroring** *port\_mirror\_sessionid* **no destination** {**port** *chassis/slot/port[-port2]*} [*chassis/slot/port[-port2]*...] | **linkagg** *linkagg[-linkagg2]* [*linkagg[-linkagg2]*...]

---

### Syntax Definitions

|                                      |                                                                                                                                                                                             |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>port_mirror_sessionid</i>         | Mirroring session identifier.                                                                                                                                                               |
| <b>source</b>                        | Specifies source port, or range of ports desired to be mirrored.                                                                                                                            |
| <b>destination</b>                   | Specifies the destination port or linkagg that receives all the mirrored packets.                                                                                                           |
| <i>chassis</i>                       | The chassis identifier.                                                                                                                                                                     |
| <i>slot/port[-port2]</i>             | The slot and port number. Use a hyphen to specify a range of ports.                                                                                                                         |
| <i>linkagg[-linkagg2]</i>            | The destination link aggregate. Use a hyphen to specify a range.<br><i>This parameter is not supported on OS6360, OS6465, and OS6570M.</i>                                                  |
| <b>rpmir-vlan</b> <i>vlan_id</i>     | Specifies a reserved VLAN to carry the mirroring traffic. Use this parameter to configure remote port mirroring. See “Usage Guidelines - Remote Port Mirroring” below for more information. |
| <b>bidirectional</b>                 | Specifies bidirectional port mirroring.                                                                                                                                                     |
| <b>inport</b>                        | Specifies incoming unidirectional port mirroring.                                                                                                                                           |
| <b>outport</b>                       | Specifies outgoing unidirectional port mirroring.                                                                                                                                           |
| <b>loopback</b>                      | Enables or disables loopback mechanism on the destination port for the session.                                                                                                             |
| <b>unblocked-vlan</b> <i>vlan_id</i> | Specifies the VLAN that is to be protected from Spanning Tree changes when port mirroring is active. Ports in this VLAN remain unblocked.                                                   |
| <b>tag-remove</b>                    | Removes the VLAN tag on mirrored traffic that egresses out of the destination mirroring ports.<br><i>This parameter is supported only on the OmniSwitch 9900.</i>                           |
| <b>enable</b>                        | Enables port mirroring status.                                                                                                                                                              |
| <b>disable</b>                       | Disables port mirroring status.                                                                                                                                                             |

## Defaults

| parameter                               | default              |
|-----------------------------------------|----------------------|
| <b>bidirectional   inport   outport</b> | <b>bidirectional</b> |
| <b>enable   disable</b>                 | <b>disable</b>       |

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Port mirroring cannot be configured on an AppMon enabled port.
- You can configure a port mirroring and a port monitoring session on the same network interface module.
- A mirroring port can not be assigned to a tagged VLAN port.
- When a port is configured as a mirroring port, it does not belong to any VLAN. Inbound traffic to the mirroring port is dropped since it does not belong to any VLAN.
- To mirror traffic from SAP port to destination port, explicitly create a VLAN same as the SAP VLAN.
- Spanning tree is disabled by default on a mirroring port.
- Port mirroring is not supported on logical link aggregate ports. However, it is supported on individual ports that are members of a link aggregate.
- Port mirroring destination port can be a link aggregate. This functionality is not supported on OmniSwitch 6360, OmniSwitch 6465, and OmniSwitch 6570M.
- Use the **port mirroring source destination** command to define the mirrored port and enable port mirroring status. Use the **port mirroring** command to enable the port mirroring session.
- Specify the *vlan\_id* number of the mirroring port that is to remain **unblocked** when the command is executed. The **unblocked** VLAN becomes the default VLAN for the mirroring port. This VLAN handles the inbound traffic for the mirroring port. Spanning Tree remains disabled on the unblocked VLAN.
- A maximum of 128 source mirroring ports can be configured. In case of mirroring to LACP Link Aggregate, only the first 8 aggregable ports will be used for mirroring.
- Unblocked VLAN and RPMIR configuration cannot co-exist in the same port mirroring session.
- A port/link aggregate which is to be configured as a mirroring destination should have no prior configuration on it, for example, a MVRP enabled port/link aggregate cannot be configured as a mirroring destination. The only exception to this rule is that a port can be a untagged or a tagged member of a standard VLAN.

- Any protocol/feature configurations on existing mirroring destinations would fail. All such configuration attempts would result in an error. The only exception to this is that if a mirroring destination is part of a mirroring session which has remote port mirroring VLAN configured (RPMIR VLAN) then such a destination can be made a tagged and/or untagged member of standard VLAN(s).
- The same destination port can be used in different port mirroring sessions and the maximum port-mirroring sessions is 4 on OmniSwitch 6860, OmniSwitch 6860N, OmniSwitch 6865, and OmniSwitch 6900.
- Supports single destination mirroring port per session and seven port mirroring sessions in a system on OmniSwitch 6465, OmniSwitch 6560 and OmniSwitch 6570M platforms.
- Supports multiple destination mirroring port and link aggregates per session and seven port mirroring sessions, and 128 destination mirroring ports or link aggregates in a system. This functionality is supported on OmniSwitch 9900.
- Supports policy based multiple destination mirroring on a single port mirroring session. This functionality is supported on OmniSwitch 9900.
  - To enable this functionality, configure port mirroring session with destination port and then apply policy based configuration on the port mirroring session.
  - Use the QoS mirror session attribute to support policy based multiple destination mirroring. QoS mirroring session attribute can be specified as a part of policy action in the **policy action** command. Mirroring can be done on the ingress packets only. Only one session ID is supported for policy based mirroring, thus all the policies must specify the same session ID. For more information on policy based mirroring, see [Chapter 37, “QoS Policy Commands.”](#)
- Use the **tag remove** option to remove the VLAN tag on mirrored traffic that egresses out of destination mirroring ports. For double tagged mirrored packet, this option removes the outer VLAN tag.
- RPMIR and **tag remove** configuration is mutually exclusive and hence cannot co-exist in the same port mirroring session.

### Usage Guidelines - Remote Port Mirroring

- Use the **rpmir-vlan** parameter and VLAN ID with this command to configure remote port mirroring and to assign the VLAN ID for remote port mirroring.
  - Remote port mirroring over a link aggregate is not supported on the OmniSwitch 6360, OmniSwitch 6465, and OmniSwitch 6570M.
  - Remote port mirroring in loopback mode is supported on OS6465, OS6860, OS6860N, and OS6865.
- The VLAN ID assigned for remote port mirroring cannot be assigned to a general port mirroring port.
- There must not be any physical loop present in the remote port mirroring VLAN.
- Source learning must be disabled or overridden on the ports belonging to the remote port mirroring VLAN on intermediate and destination switches.
- The QoS redirect feature can be used to override source learning.
- The **mac-learning** command can also be used to disable learning on the RPMIR VLAN ID.
- VLAN 1 cannot be configured as the RPMIR VLAN.
- When mirroring configuration is removed from a mirroring destination, the port/link aggregate is made an untagged member of VLAN 1. The only exception to this is when the destination in a mirroring session with RPMIR configuration.

- When RPMIR-loopback session is enabled, source learning on the loopback port is disabled.
- When RPMIR-loopback session is enabled, STP for the configured RPMIR-VLAN alone is disabled.
- To revert the RPMIR session from loopback to default the entire session must be removed and configured again.

## Examples

```
-> port-mirroring 6 source port 1/2/2 destination port 1/1/3
-> port-mirroring 6 destination port 1/1/3 rpmir-vlan 7
-> port-mirroring 6 no source port 1/2/2

-> port-mirroring 7 source port 1/2/3 destination linkagg 3 unblocked-vlan 750
-> port-mirroring 7 source port 1/2/3 output

-> port-mirroring 7 source port 1/2/3 destination linkagg 3 tag-remove

-> port-mirroring 9 source port 1/1/23 destination port 1/1/24
-> port-mirroring 9 disable

-> port mirroring 1 source port 1/1/1 destination port 1/1/3 bidirectional rpmir-
vlan 100 loopback enable
-> port mirroring 1 source port 1/1/1 destination port 1/1/3 bidirectional rpmir-
vlan 100 loopback disable
```

## Release History

Release 7.1.1; command introduced.

Release 8.4.1.R03; Mirroring to a link aggregate supported on OmniSwitch 6900 and OmniSwitch 6860.

Release 8.6.R1; **tag-remove** keyword added, policy based multiple destination mirroring supported on OmniSwitch 9900.

Release 8.7 R2; **loopback** keyword added.

```

## port-mirroring

Enables, disables, or deletes a port mirroring session.

**port-mirroring** *port\_mirror\_sessionid* {**enable** | **disable**}

**no port-mirroring** *port\_mirror\_sessionid*

---

### Syntax Definitions

*port\_mirror\_sessionid*                      Mirroring session identifier.

**enable**                                              Enables port mirroring.

**disable**                                             Disables port mirroring.

### Defaults

| parameter                      | default        |
|--------------------------------|----------------|
| <b>enable</b>   <b>disable</b> | <b>disable</b> |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **no** form of this command to delete a port mirroring session.
- Use the [port-mirroring source destination](#) command to specify the mirrored ports and destination port. before using this command to enable or disable port mirroring activity for the particular port mirroring session.

### Examples

```
-> port-mirroring 6 enable
-> port-mirroring 6 disable
-> no port-mirroring 6
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

## port-mirroring traffic-priority

This command enables to set the priority for mirroring traffic.

**port-mirroring traffic-priority {normal | high}**

---

### Syntax Definitions

**normal** Sets the priority for mirroring traffic to normal.  
**high** Sets the priority for mirroring traffic to high.

### Defaults

| parameter     | default |
|---------------|---------|
| normal   high | normal  |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | No   | No    | No   | No    | No   | No   | No              | No                                                            | No   |

### Usage Guidelines

When the traffic priority is set to high, ingress and egress mirroring receive strict priority over other clients (regular received, not mirrored, traffic, and so on).

### Examples

```
-> port-mirroring traffic-priority normal
-> port-mirroring traffic-priority high
```

### Release History

Release 8.7R3; command introduced.

### Related Commands

**show port-mirroring status** Displays the status of mirrored ports. This value may be enabled or disabled.

### MIB Objects

mirrorTrafficPriority

---

## port-monitoring source

Configures a port monitoring session.

**port-monitoring** *port\_monitor\_sessionid* **source port** *chassis/slot/port[-port2]* [**file** *filename* [**size** *filesize*] | **no file** | **overwrite** {**on** | **off**}] [**inport** | **outport** | **bidirectional**] [**timeout** *seconds*] [**enable** | **disable**] [**capture-type** {**full** | **brief**}]

**port-monitoring** *port\_monitor\_sessionid* **no source port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

|                               |                                                                                                                                                                        |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>port_monitor_sessionid</i> | Monitoring session identifier.                                                                                                                                         |
| <i>chassis</i>                | The chassis identifier.                                                                                                                                                |
| <i>slot/port[-port2]</i>      | The slot and port number. Use a hyphen to specify a range of ports.                                                                                                    |
| <i>filename</i>               | Specifies a file name and pathname for capturing information related to the monitoring session (for example, <b>/flash/port2.enc</b> ).                                |
| <i>filesize</i>               | Specifies the size of the file in 64K byte increments. For example, a value of 3 would specify a size of (3 x 64K) bytes.                                              |
| <b>no file</b>                | <i>This option is not supported at this time.</i>                                                                                                                      |
| <b>on</b>                     | Specifies that capturing of data packets into the port monitoring file continues and old information is overwritten if the total data exceeds the specified file size. |
| <b>off</b>                    | Specifies that capturing of data packets into the port monitoring file is stopped when the maximum file size is reached.                                               |
| <b>inport</b>                 | Specifies incoming unidirectional port monitoring.                                                                                                                     |
| <b>outport</b>                | Specifies outgoing unidirectional port monitoring.                                                                                                                     |
| <i>seconds</i>                | Specifies the number of seconds after which the session is disabled.                                                                                                   |
| <b>enable</b>                 | Enables the port monitoring status.                                                                                                                                    |
| <b>disable</b>                | Disables the port monitoring status.                                                                                                                                   |
| <b>full</b>                   | Captures port monitoring information in detail.                                                                                                                        |
| <b>brief</b>                  | Captures only the concise port monitoring data transmitted.                                                                                                            |

### Defaults

| parameter                                             | default              |
|-------------------------------------------------------|----------------------|
| <i>filesize</i>                                       | 1                    |
| <b>on</b>   <b>off</b>                                | <b>on</b>            |
| <b>bidirectional</b>   <b>inport</b>   <b>outport</b> | <b>bidirectional</b> |
| <i>seconds</i>                                        | 0                    |
| <b>enable</b>   <b>disable</b>                        | <b>disable</b>       |
| <b>capture-type</b>                                   | <b>brief</b>         |

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Port monitoring cannot be configured on an AppMon enabled port.
- If the **ip interface** 'no forward' parameter is configured in conjunction with port-monitoring on a port which is being used for switch IP connectivity, IP connectivity may be lost. Either port-monitoring or 'no forward' must be disabled to allow IP connectivity.
- You can configure a port mirroring and a port monitoring session on the same NI.
- If the port monitoring capture-type is set to **brief**, the first 64 bytes of the traffic is captured. If the port-monitoring capture-type is set to **full**, the entire packet is captured.
- By default, a file called **pmonitor.enc** is created in the **/flash** directory when you configure and enable a port monitoring session. Use the **file** option to create a user-specified file.
- The **/flash** directory is the default and the only directory used to capture the port monitoring files.
- The format of the file created is compliant with the ENC file format (Network General Sniffer Network Analyzer Format).
- By default, the recent frames overwrite the older frames in a port monitoring file if the total data exceeds the specified file size. Use the **overwrite off** option to prevent this from occurring.

## Examples

```
-> port-monitoring 6 source port 1/2/3
-> port-monitoring 6 source port 1/2/3 file /flash/user_port size 2 enable
-> port-monitoring 6 source port 1/2/3 file /flash/user_port capture-type full
-> port-monitoring 10 source port 1/4/22-30
-> port-monitoring 10 no source port 1/4/30
```

## Release History

Release 7.1.1; command introduced.

## port-monitoring

Disables, pauses, resume, or deletes an existing port monitoring session.

**port-monitoring** *port\_monitor\_sessionid* {**disable** | **pause** | **resume**}

**no port-monitoring** *port\_monitor\_sessionid*

---

### Syntax Definitions

|                               |                                       |
|-------------------------------|---------------------------------------|
| <i>port_monitor_sessionid</i> | Monitoring session identifier.        |
| <b>disable</b>                | Disables the port monitoring session. |
| <b>pause</b>                  | Pauses the port monitoring session.   |
| <b>resumes</b>                | Resumes the port monitoring session.  |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use the **no** form of this command to delete a port monitoring session.

### Examples

```
-> port-monitoring 6 pause
-> port-monitoring 6 disable
-> port-monitoring 6 resume
-> no port-monitoring 6
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

- [port-monitoring](#) Configures a port monitoring session.
- [show port-monitoring status](#) Displays the port monitoring status.

## MIB Objects

```
monitorTable

## show port-mirroring status

Displays the status of mirrored ports.

**show port-mirroring status** [*port\_mirror\_sessionid*]

---

### Syntax Definitions

*port\_mirror\_sessionid*                      Mirroring session identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

If a port mirroring session identifier is not specified with this command, then all port mirroring sessions are displayed.

### Examples

```
-> show port-mirroring status
Session Mirror Mirror Unblocked RPMIR Config Oper
 Destination Direction Vlan Vlan Mode Status Status
-----+-----+-----+-----+-----+-----+-----+-----+
 1. 1/1/11 bidirectional NONE 100 loopback Enable on

```

---

## show port-monitoring file

Displays port monitoring data.

**show port-monitoring file** *port\_monitor\_sessionid*

---

### Syntax Definitions

*port\_monitor\_sessionid*            Monitoring session identifier.

### Defaults

A single line from the captured packet is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Only a single line from the captured packet is displayed, even though the full packet is captured. To view the entire packet, download the file and view it using compatible network analyzer tool.

### Examples

```
-> show port-monitoring file 1
```

| Destination       | Source            | Type | Data                          |
|-------------------|-------------------|------|-------------------------------|

# 51 sFlow Commands

sFlow is a network monitoring technology that gives visibility in to the activity of the network, by providing network usage information. It provides the data required to effectively control and manage the network usage. sFlow is a sampling technology that meets the requirements for a network traffic monitoring solution.

sFlow provides a network-wide view of usage and active routes. It is used for measuring network traffic, collecting, storing, and analyzing the traffic data. As it is scalable, that doesn't add significant network load. sFlow is an industry standard with many vendors delivering products with this support. Some of the applications of the sFlow data include:

- Detecting, diagnosing, and fixing network problems
- Real-time congestion management
- Detecting unauthorized network activity
- Usage accounting and billing
- Understanding application mix
- Route profiling and peer optimization
- Capacity planning

sFlow is a sampling technology embedded within switches/routers. It provides the ability to monitor the traffic flows. It requires an sFlow agent software process running as part of the switch software and a sFlow collector which receives and analyses the monitored data. The sFlow collector makes use of SNMP to communicate with an sFlow agent in order to configure sFlow monitoring on the device (switch).

An sFlow agent running on the switch/router combines interface counters and traffic flow (packet) samples, preferably, on all the interfaces into sFlow datagrams that are sent across the network to an sFlow collector.

Packet sampling on the switch/router is typically performed by the switching/routing ASICs, providing wire-speed performance. In this case, an sFlow agent does very little processing, by packaging data into sFlow datagrams that are immediately sent on network. This minimizes the memory and CPU utilization by the sFlow agent.

MIB information for the sFlow commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MIRRORING-MONITORING-MIB.mib  
*Module:* alcatelIND1PortMirrorMonitoringMIB

*Filename:* SFLOW-MIB.MIB.mib  
*Module:* sFlow

A summary of the available commands is listed here:

---

**sflow agent**  
**sflow receiver**  
**sflow sampler**  
**sflow poller**  
**show sflow agent**  
**show sflow receiver**  
**show sflow sampler**  
**show sflow poller**

---

## Related Commands

**show sflow agent**                      Displays the agent table.

## MIB Objects

```
mirmonSFlowObjects
 alasFlowAgentConfigType
 alasFlowAgentAddressType
 alasFlowAgentAddress
```

---

## sflow receiver

Sets the destination hosts where the sFlow datagrams are sent out. If there are multiple destinations, then each destination has an instance of the receiver. All these receivers are attached to the sFlow manager instance and to an associated sampler/poller.

```
vrf {name} sflow receiver receiver_index {name string | timeout {seconds | forever} | address
{ip_address | ipv6_address | domain_name} | udp-port port | packet-size size version num | release}
```

---

### Syntax Definitions

|                                 |                                                                                                        |
|---------------------------------|--------------------------------------------------------------------------------------------------------|
| <i>name</i>                     | The name of the VRF to be configured for the sflow receiver.                                           |
| <i>receiver_index</i>           | The receiver index number.                                                                             |
| <i>string</i>                   | The name.                                                                                              |
| <i>seconds</i>   <b>forever</b> | Specifies the timeout value.                                                                           |
| <i>ip_address</i>               | Specifies the 32-bit IPv4 address.                                                                     |
| <i>ipv6_address</i>             | Specifies the 128-bit IPv6 address.                                                                    |
| <i>domain_name</i>              | Specifies a Fully Qualified Domain Name (FQDN). The domain name can be up to 255 characters in length. |
| <i>port</i>                     | Specifies the UDP (destination) port.                                                                  |
| <i>size</i>                     | Specifies the maximum number of data bytes (size) that can be sent.                                    |
| <i>num</i>                      | Specifies the version number.                                                                          |

### Defaults

| parameter          | default       |
|--------------------|---------------|
| <i>string</i>      | empty         |
| <i>seconds</i>     | 0             |
| <i>ip_address</i>  | 0.0.0.0(ipv4) |
| <i>port</i>        | 6343          |
| <i>size</i>        | 1400          |
| <i>version num</i> | 5             |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

## Usage Guidelines

- Use the **release** parameter at the end of the command to delete a receiver.
- Use the *domain\_name* option to specify an FQDN instead of an IPv4 or IPv6 address. The switch will then resolve the domain name to an IP address. Make sure the specified domain name maps to a valid and reachable address. If the address is not valid or cannot be reached, then flow and counter samples may not be sent out of the sFlow agent as expected.
- After the IPv4 or IPv6 address for the specified domain name is determined, a refresh is triggered every 30 seconds. If the mapping of the domain name to an IP address changes before the next refresh, both flow and counter samples are not sent to the new address until the next refresh occurs.
- If the VRF is not configured then the default VRF is applied.

## Examples

```
-> sflow receiver 1 name Golden Rcvr1 address 198.206.181.3
-> vrf ipvxlan sflow receiver 1 name Golden Rcvr1 address 198.206.181.3
-> sflow receiver 1 name Golden Rcvr1 address upam.omnivista.com
-> sflow receiver 1 release
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; *domain\_name* parameter option added.

Release 8.9R1; **vrf** parameter introduced.

## Related Commands

**show sflow receiver**                      Displays the receiver table.

## MIB Objects

```
sFlowRcvrTable
 sFlowRcvrIndex
 sFlowRcvrOwner
 sFlowRcvrTimeout
 sFlowRcvrMaximumDatagramSize
 sFlowRcvrAddressType
 sFlowRcvrAddress
 sFlowRcvrPort
 sFlowRcvrDatagramVersion
```

---

## sflow sampler

Gets the hardware sampled from Q-dispatcher and fills up the sampler part of the UDP datagram.

```
vrf {name} sflow sampler num port chassis/slot/port[-port] {receiver receiver_index | rate value |
sample-hdr-size size}
```

```
no sflow sampler num port [chassis_id/slot/port[-port]]
```

---

### Syntax Definitions

|                         |                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------|
| <i>name</i>             | The name of the VRF to be configured for the sflow sampler.                            |
| <i>num</i>              | Specifies the instance ID.                                                             |
| <i>chassis</i>          | The chassis identifier.                                                                |
| <i>slot/port[-port]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-5).      |
| <i>receiver_index</i>   | Specifies the receiver index.                                                          |
| <i>value</i>            | Specifies the rate value for packet sampling.                                          |
| <i>size</i>             | Specifies the maximum number of bytes (size) that can be copied from a sampled packet. |

### Defaults

| parameter             | default |
|-----------------------|---------|
| <i>receiver_index</i> | 0       |
| <i>value</i>          | 0       |
| <i>size</i>           | 128     |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- Use the **no** form of this command to delete a sampler.
- A sampling rate of 1 counts all packets. A sampling rate of 0 disables sampling.
- If the VRF is not configured then the default VRF is applied.

## Examples

```
-> sflow sampler 1 port 1/2/1 receiver 1 rate 5 sample-hdr-size 64
-> vrf ipvlan sflow sampler 1 port 1/2/1 receiver 1 rate 5 sample-hdr-size 64
-> no sflow sampler 1 port 1/2/1-5
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.9R1; **vrf** parameter introduced.

## Related Commands

**show sflow sampler**                      Displays the sampler table.

## MIB Objects

```
sFlowFsTable
 sFlowFsDataSource
 sFlowFsInstance
 sFlowFsReceiver
 sFlowFsPacketSamplingRate
 sFlowFsMaximumHeaderSize
```

---

## sflow poller

Gets counter samples from ethernet driver and fills up the counter part of the UDP datagram.

```
vrf {name} sflow poller num port chassis/slot/port[-port] {receiver receiver_index | interval value}
```

```
no sflow poller num port [chassis_id/slot/port[-port]]
```

---

### Syntax Definitions

|                         |                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------|
| <i>name</i>             | The name of the VRF to be configured for the sflow poller.                           |
| <i>num</i>              | Specifies the instance ID.                                                           |
| <i>chassis</i>          | The chassis identifier.                                                              |
| <i>slot/port[-port]</i> | The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-5).    |
| <i>receiver_index</i>   | Specifies the receiver index.                                                        |
| <i>value</i>            | Specifies the maximum number of seconds between successive samples (interval value). |

### Defaults

| parameter             | default |
|-----------------------|---------|
| <i>receiver_index</i> | 0       |
| <i>value</i>          | 0       |

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

Use the **no** form of this command to delete a poller.

### Examples

```
-> sflow poller 1 port 1/1/1 receiver 2 interval 20
-> vrf vxlan sflow poller 1 port 1/1/1 receiver 2 interval 20
-> sflow poller 1 port 1/2/6-10 receiver 1 interval 30
-> no sflow poller 1 port 1/2/6-10
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.9R1; **vrf** parameter introduced.

## Related Commands

**show sflow poller**                      Displays the poller table.

## MIB Objects

```
sFlowCpTable
 sFlowCpDataSource
 sFlowCpInstance
 sFlowCpReceiver
 sFlowCpInterval
```

---

## show sflow agent

Displays the sFlow agent table.

**show sflow agent**

---

| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | Yes  |

### Usage Guidelines

- It is necessary to execute the **ip interface** command to make a loopback0 IP address as the fixed primary address of the switch to avoid interface changes, which might need the collector software to be restarted for it to communicate using the new agent IP address. Normally, the primary IP address could change depending on the IP interface going up/down. Therefore, the sFlow agent always needs to send a fixed IP address in the datagram.
- The loopback address should be an IP interface configured on the switch.

### Examples

```
-> ip interface loopback0 address 198.206.181.100
-> show sflow agent
Agent Version = 1.3; Alcatel; 6.1.1
Agent IP = 127.0.0.1
```

|                      |                                                                                                                         |
|----------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Agent Version</b> | Identifies the version which includes the MIB version, organization name, and the specific software build of the agent. |
| <b>Agent address</b> | IP address associated with the agent. Configured through the <b>sflow agent</b> command.                                |

|                     |                                                                                                                                                                                                                                                                            |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>         | Name of the entry to claim.                                                                                                                                                                                                                                                |
| <b>Address</b>      | IP address of the sFlow collector. If a receiver address was configured as a domain name, then both the domain name and IP address for that domain are displayed. If the domain name did not translate to a valid IP address, a hyphen is displayed instead of an address. |
| <b>UDP Port</b>     | Destination port for sFlow datagrams.                                                                                                                                                                                                                                      |
| <b>Timeout</b>      | Time remaining before the sampler is released and stops sampling.                                                                                                                                                                                                          |
| <b>Packet size</b>  | Maximum number of data bytes that can be sent in a single sample datagram.                                                                                                                                                                                                 |
| <b>Datagram ver</b> | Version of sFlow datagrams that should be sent.                                                                                                                                                                                                                            |

# 52 RMON Commands

Remote Network Monitoring (RMON) probes can be used to monitor, manage, and compile statistical data about network traffic from designated active ports in a LAN segment without negatively impacting network performance. This feature supports basic RMON 4 group implementation compliant with RFC 2819 (Remote Network Monitoring Management Information Base), but does not support RMON 10 group or RMON 2. This chapter includes descriptions of RMON commands used to enable or disable individual (or a group of a certain flavor type) RMON probes, show a list of (or individual) RMON probes and show a list of (or individual) RMON logged events.

MIB information for the RMON commands is as follows:

*Filename:* RMON-MIB.mib  
*Module:* rmonMibModule

The following table summarizes the available commands:

---

**rmon probes**  
**show rmon probes**  
**show rmon events**

---

## rmon probes

This command enables or disables types of RMON probes.

```
rmon probes {stats | history | alarm} [entry_number] {enable | disable}
```

---

### Syntax Definitions

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <b>stats</b>        | Ethernet Statistics Table probe entries.                    |
| <b>history</b>      | History Control Table probe entries.                        |
| <b>alarm</b>        | Alarm Table probe entries.                                  |
| <i>entry_number</i> | The entry number in the list of probes ( <i>optional</i> ). |
| <b>enable</b>       | Enables the RMON probe.                                     |
| <b>disable</b>      | Disables the RMON probe.                                    |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

- Network activity on subnetworks attached to the RMON probe can be monitored by NMS applications.
- RMON will not monitor activities on the CMM onboard Ethernet Management port.

### Examples

```
-> rmon probes stats 4012 enable
-> rmon probes history 10240 disable
-> rmon probes alarm 11235 enable
-> rmon probes stats enable
-> rmon probes history disable
-> rmon probes alarm enable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

**show rmon probes** [**stats** | **history** | **alarm**] [*entry\_number*]

---

### Syntax Definitions

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <b>stats</b>        | Ethernet Statistics Table probe entries.                    |
| <b>history</b>      | History Control Table probe entries.                        |
| <b>alarm</b>        | Alarm Table probe entries.                                  |
| <i>entry_number</i> | The entry number in the list of probes ( <i>optional</i> ). |

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
|------|------|------|-------|------|-------|------|------|-----------------|---------------------------------------------------------------|------|
| 6360 | 6465 | 6560 | 6570M | 6860 | 6860N | 6865 | 6900 | 6900<br>V72/C32 | 6900<br>X48C6/T48C6/<br>X48C4E/V48C8/<br>C32E/T24C2/<br>X24C2 | 9900 |
| Yes  | Yes  | Yes  | Yes   | Yes  | Yes   | Yes  | Yes  | Yes             | Yes                                                           | No   |

### Usage Guidelines

- To display a list of current probes, omit the *entry-number* from the command line.
- To display statistics for a particular probe, include the probe's *entry\_number* in the command line.
- The **show rmon probes** command displays the following information: Entry number, Slot/Port, Flavor (whether the probe type is Ethernet, History or Alarm), Status (Active or Inactive), Duration (time since the last change in status, in hours/minutes) and System Resources (the amount of memory allocated to this probe).
- The **show rmon probes entry-number** command displays the following information: Probe's Owner (probe type and location), Slot/Port, Entry number, Flavor (whether the probe type is Ethernet, History or Alarm), Status (Active or Inactive), Time since the last change in status (hours/minutes), and System Resources (the amount of memory allocated to this probe). Displayed statistics may vary, depending on whether the probe type is Ethernet, History or Alarm.

### Examples

```
-> show rmon probes stats
 Chassis/
Entry Slot/Port Flavor Status Duration System Resources
-----+-----+-----+-----+-----+-----
 1026 1/1/26 Ethernet Active 71:49:41 301 bytes
```

```

1025 1/1/25 Ethernet Active 71:49:20 301 bytes
1001 1/1/1 Ethernet Active 71:48:05 300 bytes

```

-> show rmon probes history

| Entry | Chassis/<br>Slot/Port | Flavor  | Status | Duration | System Resources |
|-------|-----------------------|---------|--------|----------|------------------|
| 1     | 1/1/26                | History | Active | 71:50:08 | 5471 bytes       |
| 2     | 1/1/25                | History | Active | 71:49:47 | 5471 bytes       |
| 3     | 1/1/1                 | History | Active | 71:48:32 | 5470 bytes       |
| 4     | 1/1/22                | History | Active | 71:48:30 | 5471 bytes       |
| 5     | 1/1/23                | History | Active | 71:48:30 | 5471 bytes       |

-> show rmon probes alarm

| Entry | Slot/Port | Flavor | Status | Duration | System Resources |
|-------|-----------|--------|--------|----------|------------------|
| 11235 | 1/4/8     | Alarm  | Active | 00:07:00 | 835 bytes        |

-> show rmon probes 4005

Probe's Owner: Switch Auto Probe on Chassis 1, Slot 4, Port 5, ifindex 4005

```

Entry 4005
 Flavor = Ethernet, Status = Active,
 Time = 48 hrs 54 mins,
 System Resources (bytes) = 301

```

-> show rmon probes history 30562

Probe's Owner: Switch Auto Probe on Chassis 8, Slot 1, Port 29

```

History Control Buckets Requested = 50,
History Control Buckets Granted = 50,
History Control Interval = 30 seconds,
History Sample Index = 287
Entry 9
 Flavor = History, Status = Active,
 Time = 71 hrs 48 mins,
 System Resources (bytes) = 5471

```

-> show rmon probes alarm 11235

Probe's Owner:

```

Alarm Rising Threshold = 5
Alarm Falling Threshold = 0
Alarm Rising Event Index = 26020
Alarm Falling Event Index = 0
Alarm Interval = 10 seconds
Alarm Sample Type = delta value
Alarm Startup Alarm = rising alarm
Alarm Variable = 1.3.6.1.2.1.16.1.1.1.5.4008
Entry 11235
 Flavor = Alarm, Status = Active
 Time = 48 hrs 48 mins,
 System Resources (bytes) = 1677

```

|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Probe's Owner</b>    | Description and interface (location) of the probe.                                                                                                       |
| <b>Slot/Port</b>        | The Slot/Port number (interface) that this probe is monitoring.                                                                                          |
| <b>Entry</b>            | The Entry number in the list of probes.                                                                                                                  |
| <b>Flavor</b>           | Whether the probe type is Ethernet, History, or Alarm.                                                                                                   |
| <b>Status</b>           | The status of the probe— <b>Creating</b> (the probe is under creation), <b>Active</b> (the probe is Active), or <b>Inactive</b> (the probe is inactive). |
| <b>Duration</b>         | Elapsed time (hours/minutes/seconds) since the last change in status.                                                                                    |
| <b>System Resources</b> | Amount of memory that has been allocated to this probe.                                                                                                  |

## show rmon events

Displays RMON events (actions that take place based on alarm conditions detected by the RMON probe).

**show rmon events** [*entry\_number*]

---

### Syntax Definitions

*entry\_number*                      The entry number in the list of probes (*optional*).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

|      |      |      |       |      |       |      |      |                 |                                                               |      |
