<b>willing no</b>	Stops the PFC from negotiating with the network.

### Defaults

parameter	default
<b>pfc config-tlv</b>	enable
<b>pfc defense</b>	enable
<b>pfc willing</b>	yes

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the option **pfc config-tlv** to enable or disable the transmission of PFC configuration TLVs. To use this option, DCBX must be enabled on the port.
- Use the option **ets willing** to allow the PFC to negotiate with the network.

### Examples

```
-> qos qsi port 1/1-10 dcb dcbx pfc config-tlv disable
-> qos qsi port 1/11 dcb dcbx pfc defense disable
-> qos qsi linkagg 5 dcb dcbx pfc willing no
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

<code>show qos qsi dcbx pfc</code>	Displays the configured ports in the system and the related DCBX PFC information.
<code>show qos pfc-lossless-usage</code>	Displays the usage of the PFC lossless traffic class on the switch.
<code>show qos qsi dcb pfc stats</code>	Displays the traffic statistics per port and per traffic class.

## show qos qsp dcb

Displays the configured DCB profiles and the traffic classes associated with the DCB profile.

**show qos qsp dcb** [*dcp\_id* | *dcp\_name*] [**tc** *tc\_num*]

---

### Syntax Definitions

<i>dcp_id</i>	DCB profile ID. DCB profile ID 11–128 refers to the custom profiles. DCB profile ID 1–0 refers to the predefined profiles.
<i>dcp_name</i>	DCB profile name.
<i>tc_num</i>	The traffic class associated to the DCB profile. The valid range is 0–7.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- This command displays the details of the configured DCB profile.
- Use the **tc** option to display the traffic classes associated to the DCB profile.

### Examples

```
-> show qos qsp dcb
```

Legends: Prio TC Map:

Represents the priority to traffic class mapping;  
begins with priority 0 on the left and displays the  
traffic class it belongs to.

#	Name	Priority TC Map	PFC Cap	ETS Max TC	Template-DCP #	Name	802.3x Pause-Ready
1	dcp-1	00001122	8	8	1	dcp-1	No
2	dcp-2	00112233	8	8	2	dcp-2	No
3	dcp-3	00112234	8	8	3	dcp-3	No
4	dcp-4	10223345	8	8	4	dcp-4	No
5	dcp-5	10234456	8	8	5	dcp-5	No
6	dcp-6	10234567	8	8	6	dcp-6	No
7	dcp-7	01234567	8	8	7	dcp-7	No
8	dcp-8	01234567	8	8	8	dcp-8	No
9	dcp-9	10234567	8	8	9	dcp-9	No

```

10 dcp-10      10234567 8 8 10 dcp-10      No
20 dcp-20      10234567 8 8 10 dcp-10      No

```

**output definitions**

---

<b>#</b>	Indicates a DCB profile entry.
<b>Name</b>	Name of the DCB profile.
<b>Priority TC Map</b>	Indicates the priority of the traffic class.
<b>PFC Cap</b>	Indicates the number of traffic classes on the local device that have simultaneously PFC enabled.
<b>ETS Max TC</b>	Indicates the number of traffic classes supported.
<b>Template-DCP #</b>	Identifies the template DCB profile.
<b>Template-DCP Name</b>	Name of the template DCB profile.
<b>802.3x Pause-Ready</b>	Indicates if pause-ready is enabled for the profile.

---

```
-> show qos qsp dcp tc
```

Legends: Linkdelay shown in KB.

**output definitions**

---

<b>#</b>	Indicates a DCB profile entry.
<b>Name</b>	Name of DCB profile.
<b>TC</b>	Indicates the traffic class.
<b>Priorities</b>	Indicates the priorities assigned to the traffic class.
<b>ETS Min BW</b>	Indicates the minimum bandwidth assigned to the traffic class.
<b>ETS Max BW</b>	Indicates the maximum bandwidth assigned to the traffic class.
<b>ETS Sched</b>	Indicates the traffic class scheduler assigned to the traffic class.
<b>ETS Reco BW</b>	Indicates the recommended minimum bandwidth assigned to the traffic class.
<b>ETS Reco Sched</b>	Indicates the recommended traffic class scheduler assigned to the traffic class.
<b>PFC Mode</b>	Indicates if PFC traffic flow is enabled on the traffic class.
<b>PFC LinkDelay</b>	Indicates the delay in the PFC link.

## show qos qsi dcb dcbx

Displays the DCBX port configuration and status.

**show qos qsi** [*port chassis/slot/port*[-*port2*] | *linkagg agg\_id*[-*agg\_id2*]] **dcb dcbx** [*status*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id</i> [- <i>agg_id2</i> ]	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
<b>status</b>	Displays the DCBX operational status for the port.

### Defaults

By default, the DCBX configuration is displayed for all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** *slot/port* or **linkagg** *agg\_id*, parameters to display information for a specific port or link aggregate.
- Use the **status** option to display the status information of the DCBX related to the port.

### Examples

```
-> show qos qsi port 1/1-5 dcb dcbx
```

Port	DCP Name	DCBX Ver	DCBX Admin	Stats Admin	PFC Defense	ETS				
						PFC TLV	PFC Will	Reco TLV	ETS Will	
1/1	8 dcp-8	AUTO	Ena	Dis	Ena	Ena	Yes	Ena	Ena	Yes
1/2	8 dcp-8	AUTO	Ena	Dis	Ena	Ena	Yes	Ena	Ena	Yes
1/3	8 dcp-8	AUTO	Ena	Dis	Ena	Ena	Yes	Ena	Ena	Yes
1/4	8 dcp-8	AUTO	Ena	Dis	Ena	Ena	Yes	Ena	Ena	Yes
1/5	8 dcp-8	AUTO	Ena	Dis	Ena	Ena	Yes	Ena	Ena	Yes

### output definitions

---

<b>Port</b>	The DCB slot and port number or link aggregate ID.
<b>DCP Name</b>	The DCB profile ID assigned to the port.
<b>Name</b>	The name of the DCB profile assigned to the port.

*output definitions (continued)*

---

<b>DCBX Ver</b>	The version of DCBX running on the port ( <b>CEE</b> , <b>IEEE</b> , or <b>AUTO</b> ).
<b>DCBX Admin</b>	Indicates the administrative status of DCBX on the port.
<b>Stats Admin</b>	Indicates if statistics collection is enabled or disabled on the port.
<b>PFC Defense</b>	Indicates the status of PFC defense ( <b>Ena</b> or <b>Dis</b> ). Applies when PFC negotiation fails. If enabled then PFC becomes disabled but traffic still flows. If disabled then the PFC local configuration remains on the port.
<b>PFC TLV</b>	Indicates whether the IEEE 802.1 organizationally defined PFC TLV transmission is allowed on a given LLDP transmission capable port.
<b>PFC Will</b>	Indicates whether or not the port is willing to accept the PFC configuration from a remote peer.
<b>Cfg TLV</b>	Indicates whether or not ETS configuration TLV transmission is allowed on a port.
<b>Reco TLV</b>	Indicates whether or not ETS configuration TLV transmission is allowed on a port.
<b>ETS Will</b>	Indicates whether or not the port is willing to accept the recommended ETS configuration from a remote peer.

---

```
-> show qos qsi port 1/1-5 dcb dcbx status

```

*output definitions*

---

<b>Port</b>	The DCB slot and port number or link aggregate ID.
<b>DCBX Oper</b>	Indicates the operational status of DCBX on the port.
<b>Local Oper Changed</b>	Identifies if the local configuration is different from the configuration imported from the DCB profile applied to the port.
<b>Error</b>	Indicates if there is an error condition.
<b>Local Oper Ver</b>	The version of DCBX running on the local port ( <b>CEE</b> , <b>IEEE</b> , or <b>AUTO</b> ).
<b>Remote Oper Ver</b>	The version of DCBX running on the remote port ( <b>CEE</b> , <b>IEEE</b> , or <b>AUTO</b> ).
<b>Action</b>	Indicates the action taken as a result of the status.

## show qos qsi dcb ets

Displays the configured ports in the system and the related DCBX ETS and ETS traffic class information.

**show qos qsi** {port *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]} **dcb ets** [**tc** [*tc\_num*]]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id</i> [- <i>agg_id2</i> ]	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).
<i>tc_num</i>	Enter the traffic class for which the information needs to be displayed. The valid range is 0–7.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the *tc\_num* option to display the DCBX ETS information for a specific traffic class.

### Examples

```
-> show qos qsi port 1/1 dcb ets
```

## show qos qsi dcbx pfc

Displays the configured ports in the system and the related DCBX PFC information.

**show qos qsi {port chassis/slot/port[-port2] | linkagg agg\_id[-agg\_id2]} dcb pfc**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	A link aggregate ID. Use a hyphen to specify a range of IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

If there is no PFC TLV received from the remote end, then the remote information will be blank.

### Examples

```
-> show qos qsi port 4/1-2 dcb pfc
```

Legends: \* indicates port oper status is different than the configured status

Port	Priorities	Loc-Adm				Loc-Oper				Rem-Oper			
		MBC	Will	Cap	Cap	Priorities	MBC	Will	Cap	Priorities	MBC	Will	Cap
4/1*	0467	No	Yes	3	01	No	No	3	01	Yes	No	3	
4/2*	23	No	No	3	-	No	No	3	-	Yes	No	3	

### output definitions

---

<b>Port</b>	Configured DCB ports.
<b>Loc-Adm Priorities</b>	Indicates the priority for which PFC is enabled or disabled.
<b>Loc-Adm MBC</b>	Indicates if the local system is capable of bypassing MACsec processing when MACsec is disabled.
<b>Loc-Adm Will</b>	Indicates if the local system is willing to accept the PFC configuration of the remote system.

*output definitions (continued)*

---

<b>Loc-Adm Cap</b>	Indicates the number of traffic classes on the local device that have simultaneously PFC enabled.
<b>Loc-Oper Priorities</b>	Indicates if PFC is enabled on the corresponding priority.
<b>Loc-Oper MBC</b>	Indicates if the local system is capable of bypassing MACsec processing when MACsec is disabled.
<b>Loc-Oper Will</b>	Indicates if the local system is willing to accept the PFC configuration of the remote system.
<b>Loc-Oper Cap</b>	Indicates the number of traffic classes on the local device that have simultaneously PFC enabled.
<b>Rem-Oper Priorities</b>	Indicates if PFC is enabled on the corresponding priority on the remote system.
<b>Rem-Oper MBC</b>	Indicates if the remote system is capable of bypassing MACsec processing when MACsec is disabled.
<b>Rem-Oper Will</b>	Indicates if the remote system is willing to accept the PFC configuration of the local system.
<b>Rem-Oper Cap</b>	Indicates the number of traffic classes on the remote device that have simultaneously PFC enabled.

## show qos pfc-lossless-usage

Displays the usage of the PFC lossless traffic class on the switch.

**show qos pfc-lossless-usage**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

This command displays the PFC lossless traffic class usage on the switch.

### Examples

```
-> show qos pfc-lossless-usage
Lossless Priorities in use      : 55,
Lossless Priorities reserved   : 60,
Lossless Priorities available  : 73
```

#### *output definitions*

---

<b>Lossless Priorities in use</b>	Indicates the number of PFC lossless priorities in use in the system.
<b>Lossless Priorities reserved</b>	Indicates the number of PFC lossless priorities in reserve in the system.
<b>Lossless Priorities available</b>	Indicates the number of priorities available to be configured as PFC lossless.

---

---

## show qos qsi dcb pfc stats

Displays the Priority Flow Control (PFC) statistics for the specified DCB port.

**show qos qsi [port chassis/slot/port[-port2] dcb pfc stats**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Statistics are displayed on a per-traffic class (TC) basis.

### Examples

```
-> show qos qsi port 1/11 dcb pfc stats
```

Legends: displays packet count

Port	Q	PFC		PFC RX (ind)
		TC	TX (req)	
1/11	0	0	0	0
1/11	1	0	0	0
1/11	2	0	0	0
1/11	3	0	0	0
1/11	4	1	0	0
1/11	5	1	0	0
1/11	6	2	0	0
1/11	7	2	0	0

### output definitions

---

<b>Port</b>	The DCB port number.
<b>Q</b>	The 802.1p priority number (0–7). This number is mapped to a traffic class (TC) based on the DCB profile assigned to the port.
<b>TC</b>	Indicates the traffic class to which the priority belongs.

*output definitions (continued)*

---

<b>Priority</b>	Indicates the priority of the DCB port.
<b>PFC TX (req)</b>	Total count of PFC packets transmitted.
<b>PFC RX (ind)</b>	Total count of PFC packets received.

---

**Release History**

Release 7.3.1; command was introduced.

**Related Commands**

<a href="#">qos qsi dcb dcbx pfc</a>	Enables or disables config-tlv, defense mode, and willing for PFC on a per port basis.
<a href="#">clear qos qsi dcb pfc stats</a>	Clears the port statistics.

**MIB Objects**

```

  alaDcbxPIPrioPFCPacketsTransmitted  
  alaDcbxPIPrioPFCPacketsReceived
```

---

## clear qos qsi dcb pfc stats

Clears the DCB PFC queue statistics.

**clear qos qsi {port chassis/slot/port[-port2]} dcb pfc stats**

---

### Syntax Definitions

*chassis* The chassis identifier.

*slot/port[-port2]* The slot and port number (1/5). Use a hyphen to specify a range of ports (1/5-10).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the *slot/port* parameter to clear queue statistics associated with specific ports.

### Examples

```
-> clear qos qsi port 2/1 dcb pfc stats
```

### Release History

Release 7.3.1; command was introduced.

### Related Commands

[show qos qsi stats](#) Displays the queue statistics for DCB and NDCB ports.

### MIB Objects

# 36 QoS Policy Commands

This chapter describes the CLI commands used for policy management in the switch. The Quality of Service (QoS) software in the switch uses policy rules for classifying incoming flows and deciding how to treat outgoing flows. A policy rule is made up of a policy condition and a policy action. Policy rules may be created on the switch through CLI or SNMP commands, or they may be created through the PolicyView GUI application on an attached LDAP server.

---

**Note.** Rules created through PolicyView cannot be modified through the CLI; however, you can create policies in the CLI that take precedence over policies created through PolicyView.

---

Refer to [Chapter 35, “QoS Commands,”](#) for information about commands used to configure QoS software.

MIB information for the QoS policy commands is as follows:

*Filename:* ALCATEL-IND1-QOS-MIB.mib  
*Module* alaQoS MIB

---

**Important Note.** Some of the commands listed here are not currently supported on one or more platforms. See command descriptions in this chapter and check release notes for information about commands that are not supported.

---

The QoS Policy commands are listed here:

---

<b>Policy commands</b>	<a href="#">policy rule</a> <a href="#">iec message-type priority</a> <a href="#">policy list</a> <a href="#">policy list rules</a> <a href="#">policy condition</a> <a href="#">policy action</a> <a href="#">show policy action</a> <a href="#">show policy condition</a> <a href="#">show active policy rule</a> <a href="#">show policy rule</a> <a href="#">show policy validity period</a> <a href="#">show active policy list</a> <a href="#">show policy list</a> <a href="#">show policy ipv4-summary</a> <a href="#">show policy ipv6-summary</a>

## policy rule

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

**policy rule** *rule\_name* [**enable** | **disable**] [**precedence** *precedence*] [**condition** *condition*] [**action** *action*] [**validity-period** *name*] [**save**] [**log** [**log-interval** *seconds*]] [**count** {**packets** | **bytes**}] [**trap**] [**default-list**]

**policy rule** *rule\_name* **no** {**validity-period** | **save** | **log** | **trap** | **default-list**}

**no policy rule** *rule\_name*

---

### Syntax Definitions

<i>rule_name</i>	The name of the policy rule, any alphanumeric string.
<b>enable</b>	Enables the policy rule.
<b>disable</b>	Disables the policy rule.
<i>precedence</i>	The precedence value in the range 0–65535. This value determines the order in which rules are searched for a matching condition. A higher number indicates higher precedence. Typically the range 30000–65535 is reserved for PolicyView.
<i>condition</i>	The condition name that is associated with this rule. Conditions are configured through the <b>policy condition</b> command.
<i>action</i>	The name of the action that is associated with this rule. Actions are configured through the <b>policy action</b> command.
<i>name</i>	The name of a user-defined validity period that is associated with this rule. Validity periods are configured through the <b>policy validity period</b> command.
<b>save</b>	Marks the policy rule so that it may be captured as part of the switch configuration.
<b>log</b>	Configures the switch to log messages about specific flows coming into the switch that match this policy rule. <i>This parameter is not supported on the OmniSwitch 6465 or OmniSwitch 6560.</i>
<i>seconds</i>	Configures how often to look for packets that match this policy rule when rule logging is applied (in the range from 0–3600 seconds). A value of 0 specifies to log as often as possible.
<b>packets</b>	Counts the number of packets that match the rule.
<b>bytes</b>	Counts the number of bytes that match the rule.
<b>trap</b>	Enables or disables traps for the rule.
<b>default-list</b>	Adds the rule to the QoS default policy list.

## Defaults

parameter	default
<b>enable   disable</b>	enable
<i>precedence</i>	0
<b>log</b>	no
<i>seconds</i>	60
<b>packets   bytes</b>	packets
<b>trap</b>	enable
<b>default-list</b>	adds rule to the default list

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Any rule configured through this command is not active on the switch until the **qos apply** command is issued.
- A policy rule configured through the PolicyView application may not be edited in the CLI. You may, however, create a rule using the CLI with a higher precedence that will override a rule created through PolicyView.
- Use the **no** form of the command to remove the rule from the configuration or to remove parameters from a particular rule. The change will not take effect, however, until the **qos apply** command is issued.
- Only one validity period is associated with a policy rule. Each time this command is entered with a validity period name specified, the existing period name is overwritten with the new one.
- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.
- The **save** option marks the policy rule so that the rule will be captured in an ASCII text file (using the **configuration snapshot** command), saved to the working directory after the **write memory** command or **copy running-config working** command is entered, or saved after a reboot. Rules are saved by default. If **no save** is entered for the rule, the policy rule will not be written to the configuration. The **save** option should be disabled only if you want to use a policy rule temporarily.
- The **default-list** option adds the rule to the default policy list. Rules are added to this list by default when the rule is created. A rule can belong to multiple policy lists. As a result, the rule remains a member of the default list even when it is subsequently assigned to additional lists.

- If the rule is going to belong to a QoS policy list for a Universal Network Profile (UNP), use the **no default-list** option when creating the rule. Doing so will give the rule precedence over default list rules when the policy list is applied to UNP device traffic.
- Note that each time a rule is assigned to a policy list, an instance of that rule is created and each instance is allocated system resources. Use the **no default-list** option with this command to exclude the rule from the default policy list.
- If the **configuration snapshot** command is entered after the **policy rule** command is configured, the resulting ASCII file will include the following additional syntax for the **policy rule** command:

**from {cli | ldap | blt}**

This syntax indicates how the rule was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in rule, this setting is not configurable.

- The **log** option is useful for determining the source of attacks on the switch firewall.
- If traps are enabled for the rule, a trap is only sent when a port disable action or UserPort shutdown operation is triggered.

## Examples

```
-> policy rule rule2 condition c2 action a2
-> policy rule rule3 condition c3 action a3 no default-list
-> policy rule rule2 precedence 65535
-> policy rule rule2 validity-period vp01
-> policy rule rule2 no precedence
-> policy rule rule2 no validity-period
-> policy rule rule3 no default-list
-> no policy rule rule2
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">iec message-type priority</a>	Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.

## iec message-type priority

Configures IEC 61850 message priority.

**iec message-type** *message* **priority** *string*

---

### Syntax Definitions

<i>message</i>	The message type for which rule is to be configured. The format of the message is one of the supported IEC 61850 message types - goose, gse, sv, ptp, sntp, mms, all.
<b>priority</b> <i>string</i>	Sets the priority level. The string must be “high”, “medium”, “low” or “default”. High is mapped to QoS priority queue 7, medium is mapped to QoS priority queue 4, low is mapped to QoS priority queue 1. The “default” option can be used to restore to the default priority level.

### Defaults

By default, the priority for all the supported IEC 61850 message type is set to default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- This command runs a python script that programs the QOS rules for traffic prioritization.
- The message type can be one of the supported types - goose, gse, sv, ptp, sntp, mms, all.
- The “all” option for the message type can be used to set the priority for all message type at once.
- A message type can be configured with only one priority.
- The priority value can be “high”, “medium”, “low” or “default”.
- Use the “default” option to restore to the default priority as shown in the table:

Message Type	Default Priority
GOOSE	High
GSE	Medium
SV	High
MMS	Low
SNTP	Medium
PTP	Medium

- Condition, action, and rule names are predefined. The following reserved names must not be used for user policy configuration:

Function	Message Type	Condition	Action	Rule
1A. Trip	GOOSE	iec_goose_c	iec_goose_a	iec_goose_r
1B. Other	GSE	iec_gse_c	iec_gse_a	iec_gse_r
Raw Data	SV	iec_sv_c	iec_sv_a	iec_sv_r
Time Sync	PTP	iec_ptp_c	iec_ptp_a	iec_ptp_r
Time Sync	SNTP	iec_sntp_c	iec_sntp_a	iec_sntp_r
File Transfer	MMS	iec_mms_c	iec_mms_a	iec_mms_r

- Use the [iec message-type flush](#) CLI command to remove the prioritization for message type.

## Examples

```
-> iec message-type goose priority high
-> iec message-type gse priority low
-> iec message-type mms priority medium
-> iec message-type all priority high
```

## Release History

Release 8.7 R1; command was introduced.

## Related Commands

[iec message-type flush](#)

Removes the rule applied for the IEC 61850 message priority.

[iec show](#)

Displays the priority configured for the IEC 61850 message types.

## MIB Objects

N/A

## iec message-type flush

Removes the rule applied for the IEC 61850 message priority.

**iec message-type *message* flush**

---

### Syntax Definitions

*message*

The message type for which rule must be flushed. The format of the message is one of the supported IEC 61850 message types - goose, gse, sv, ptp, sntp, mms, all.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- This command runs a python script that programs the QOS rules for traffic prioritization.
- The message type can be one of the supported types - goose, gse, sv, ptp, sntp, mms, all.
- The “all” option flushes the priority rule for all the message type at once.

### Examples

```
-> iec message-type goose flush
-> iec message-type gse flush
-> iec message-type mms flush
-> iec message-type all flush
```

### Release History

Release 8.7 R1; command was introduced.

### Related Commands

[iec message-type priority](#)

Configures IEC 61850 message priority.

[iec show](#)

Displays the priority configured for the IEC 61850 message types.

### MIB Objects

N/A

---

## iec show

Displays the priority configured for the IEC 61850 message types.

**iec show**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- Use the command to view the priority configured for the IEC 61850 message types.
- The output displays only the configured message types.

### Examples

```
-> iec show
Message Type      Priority
-----+-----
goose             high
sntp              low
```

### Release History

Release 8.7 R1; command was introduced.

### Related Commands

[iec message-type priority](#) Configures IEC 61850 message priority.

### MIB Objects

N/A

---

## policy validity-period

Configures a validity period that specifies the days and times in which a policy rule is in effect.

**policy validity-period** *name* [**days** *days*] [**months** *months*] [**hours** *hh:mm to hh:mm*] [**interval** *mm:dd:yy hh:mm to mm:dd:yy hh:mm*]

**policy validity-period** *name* **no** {**hours** / **interval**}

**no policy validity-period** *name*

---

### Syntax Definitions

<i>name</i>	The name of the validity period (up to 31 alphanumeric characters).
<i>days</i>	The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., <b>monday</b> , <b>tuesday</b> , <b>wednesday</b> , etc.).
<i>months</i>	The month(s) in which the validity period is active. Enter the actual month (e.g., <b>january</b> , <b>february</b> , <b>march</b> , etc.).
<i>hh:mm</i>	The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).
<i>mm:dd:yy hh:mm</i>	An interval of time during which a rule is in effect. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).

### Defaults

By default, no validity period is in effect for a policy rule.

parameter	default
<i>days</i>	no restriction
<i>months</i>	no restriction
<i>hh:mm</i>	no specific time
<i>mm:dd:yyyy hh:mm</i>	no interval

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a validity period from the configuration, or to remove parameters from a particular validity period. Note that at least one parameter must be associated with a validity period.

- Any combination of days, months, hours, and interval parameters is allowed. The validity period is only in effect when all specified parameters are true.
- Use the **policy rule** command to associate a validity period with a rule.
- Software and hardware resources are allocated for rules associated with a validity period even if the validity period is not active. Pre-allocating the resources makes sure the rule can be enforced when the validity period becomes active.
- If the **configuration snapshot** command is entered after the **policy validity-period** command is configured, the resulting ASCII file will include the following additional syntax for the **policy validity-period** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

```
-> policy validity-period vp01 days tuesday thursday months january february
-> policy validity-period vp01 hours 13:00 to 19:00
-> policy validity-period vp02 interval 01/01/05 12:01 to 02/01/05 11:59
-> policy validity-period vp01 no days thursday
-> no policy-validity period vp02
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">policy rule</a>	Configures a policy rule on the switch and optionally associates that rule with a validity period.

---

## policy list

Configures a QoS policy list. There are four types of lists available: a Universal Network Profile (UNP) policy list, an egress policy list, an Application Fingerprinting policy list, and a default policy list.

**policy list** *list\_name* **type** {**unp** | **egress** | **appfp** | **empacl**} [**enable** | **disable**]

**no policy list** *list\_name*

---

### Syntax Definitions

<i>list_name</i>	The name to assign to the policy list. Note that the list name is case sensitive.
<b>unp</b>	Applies the list of policy rules to traffic classified into the User Network Profile to which the list is assigned
<b>egress</b>	Applies the list of policy rules to traffic egressing on switch ports. <i>This parameter is not supported on the OmniSwitch 6465, OmniSwitch 6560, and OmniSwitch 9900.</i>
<b>appfp</b>	Applies the list of policy rules to an Application Fingerprinting interface. <i>This parameter is supported only on the OmniSwitch 6900.</i>
<b>empacl</b>	<i>This parameter is not supported.</i>
<b>enable</b>	Enables the policy list.
<b>disable</b>	Disables the policy list.

### Defaults

A default policy list is available when the switch boots up; all policy rules belong to this list unless otherwise specified (see the [policy list rules](#) and [policy rule](#) commands for more information).

parameter	default
<b>enable</b>   <b>disable</b>	<b>enable</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a policy list from the configuration.
- Once a policy list is created, use the [policy list rules](#) command to add rules to the list.
- Any policy list configured through this command is not active on the switch until the **qos apply** command is issued.

- If the **configuration snapshot** command is entered after the **policy list** command is configured, the resulting ASCII file will include the following additional syntax for the **policy list** command:

**from {cli | ldap | blt}**

This syntax indicates how the list was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

```
-> policy list unpl type unp
-> policy list unpl disable
-> policy list unpl enable
-> no policy list unpl
```

## Release History

Release 7.2.1; command was introduced.

Release 8.4.1; **egress** parameter added.

## Related Commands

<a href="#">policy list rules</a>	Assigns QoS policy rules to a QoS policy list.
<a href="#">policy rule</a>	Configures a policy rule on the switch and optionally associates that rule with a validity period.
<a href="#">show policy rule</a>	Displays information for policy rules configured on the switch.
<a href="#">show active policy list</a>	Displays only those policy lists that are currently being enforced on the switch.
<a href="#">show policy list</a>	Displays information for policy lists configured on the switch.

  alaQoSAppliedRuleGroupsName
  alaQoSAppliedRuleGroupsSource
  alaQoSAppliedGroupsType
  alaQoSAppliedGroupsEnabled
  alaQoSAppliedRuleGroupsStatus
```

## policy list rules

Assigns existing QoS policy rules to the specified QoS policy list.

**policy list** *list\_name* **rules** *rule\_name* [*rule\_name2*...]

**policy list** *list\_name* **no rules** *rule\_name* [*rule\_name2*...]

---

### Syntax Definitions

<i>list_name</i>	The name of an existing QoS policy list. Note that the list name is case sensitive.
<i>rule_name</i>	The name of an existing QoS policy rule to include in the policy list.
<i>rule_name2</i>	Optional. The name of another QoS policy rule to include in the policy list. Separate each rule name specified with a space.

### Defaults

A default policy list is available when the switch boots up. This list has no name and is not configurable. All QoS policy rules are assigned to the default list unless the **no default-list** option of the **policy rule** command is used.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a policy rule from an existing list.
- The QoS policy list and rule names specified with this command must already exist in the switch configuration.
- A rule may belong to a Universal Network Profile (UNP) list, the default list, and an egress policy list at the same time. By default, a rule is assigned to a default policy list when the rule is created. If the rule is subsequently assigned to another policy list, it still remains associated with the default list.
- If a rule is a member of multiple policy lists but one or more of these lists are disabled, the rule is still active in those lists that are enabled.
- If the QoS status of a policy rule is disabled, then the rule is disabled for all lists even if a list to which the policy rule belongs is enabled.
- If a policy rule is going to be assigned to a UNP policy list, make sure the rule was created using the **no default-list** option of the **policy rule** command. This will ensure that the rule will take precedence over other default list rules when the UNP policy list is applied to device traffic.
- A QoS policy list that is assigned to an Application Fingerprinting interface must contain policy rules with the **appfp-group** condition.

- Only those rules that are assigned to an egress policy list are applied to egress traffic. When configuring egress policy lists, consider the following:
  - Egress policy lists are *not* supported on the OmniSwitch 6465, OmniSwitch 6560, and OmniSwitch 9900.
  - Only one egress policy list per switch is supported, to which IPv4 and IPv6 rules can be added.
  - Applying egress policy lists to SPB or VXLAN SAP ports is not supported.
  - Only the following policy conditions and actions are supported when creating rules for an egress policy list:

policy conditions	policy actions
Destination port	Disposition (drop/accept)
Destination VLAN	
Source IPv4 address	
Source IPv6 address	
IPv6 (qualifier for traffic types)	

- Using policy lists that contain rules with a source port condition are not supported when applied to 10G ports on an OmniSwitch 6560.
- On the OmniSwitch 6465, policy rules containing the following conditions are not supported in a UNP policy list:
  - Source port group
  - Source IPv6 address
  - IPv6 flow label
- On the OmniSwitch 6560 and OmniSwitch 9900, only policy rules with the following conditions can be assigned to a UNP policy list:
  - Destination MAC
  - EtherType
  - Source VLAN
  - SIP
  - DIP / DIPv6
  - Layer 4 Protocol
  - Layer 4 source port
  - Layer 4 destination port
  - Source port
- Any policy list configured through this command is not active on the switch until the **qos apply** command is issued.

## Examples

```
-> policy list unpl rules r1 r2 r3
-> policy list unpl no rules r2
```

## Release History

Release 7.2.1; command was introduced.

## policy network group

Configures a network group name and its associated IP addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the network group.

**policy network group** *net\_group ip\_address [mask net\_mask] [ip\_address2 [mask net\_mask2]...]*

**no policy network group** *net\_group*

**policy network group** *net\_group no ip\_address [mask netmask] [ip\_address2 [mask net\_mask2]...]*

---

### Syntax Definitions

<i>net_group</i>	The name of the network group (up to 31 alphanumeric characters).
<i>ip_address</i>	An IPv4 or IPv6 address included in the network group.
<i>net_mask</i>	The mask for the IPv4 or IPv6 address. If no mask is entered, the address is assumed to be a host address.
<i>ip_address2</i>	Optional. Another IPv4 or IPv6 address to be included in the network group. Multiple IP addresses may be configured for a network group. Separate each address/mask combination with a space.
<i>net_mask2</i>	Optional mask for the IPv4 or IPv6 address. If no mask is entered, the natural mask for the address will be used.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure a group of IP addresses to which you want to apply QoS rules. Rather than create a condition for each IP address, group the addresses together. Use the **policy condition** command to associate a condition with the network group.
- Use the **no** form of the command to remove a network group from the configuration, or to remove an IP address from a network group.

- If the **configuration snapshot** command is entered after the **policy network group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy network group** command:

**from {cli | ldap | blt}**

This syntax indicates how the network group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in network group, this setting is not configurable.

## Examples

```
-> policy network group webgroup1 10.10.12.5 10.50.3.1
-> policy network group webgroup1 no 10.10.12.5
-> no policy network group webgroup1

-> policy network group webgroup2 2001:db8:4132:86::19a 2002:c633:6489::35
-> policy network group webgroup2 no 2002:c633:6489::35
-> no policy network group webgroup2
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">policy condition</a>	Configures a policy condition. A network group may be configured as part of a policy condition.

## policy service group

Configures a service group and its associated services. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the service group.

**policy service group** *service\_group service\_name1 [service\_name2...]*

**no policy service group** *service\_group*

**policy service group** *service\_group no service\_name1 [service\_name2...]*

---

### Syntax Definitions

*service\_group*

The name of the service group (up to 31 alphanumeric characters).

*service\_name1*

The service name is configured through the **policy service** command and includes information about protocol, source port, and destination port.

*service\_name2...*

Optional. Additional service names may be configured for a service group. Separate each service name with a space.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure a group of services to which you want to apply QoS rules. Rather than create a condition for each service, group services together. Use the **policy condition** command to associate a condition with the service group.
- Use the **no** form of the command to remove a service group from the configuration, or to remove a service from a service group.
- To drop packets destined to specific TCP and UDP ports, create port services for the traffic that you want dropped and add these services to a service group. Then create a condition for this service group and a source port group, which can then be used in a deny rule. Refer to the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about ACL security enhancements.

- If the **configuration snapshot** command is entered after the **policy service group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service group** command:

**from {cli | ldap | blt}**

This syntax indicates how the service group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in service group, this setting is not configurable.

## Examples

```
-> policy service group servgroup2 telnet ftp
-> policy service group servgroup2 no telnet
-> no policy service group servgroup2
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

## policy mac group

Configures a MAC group and its associated MAC addresses. The group may be used as part of a policy condition. The action associated with any policy using the condition will be applied to all members of the MAC group.

**policy mac group** *mac\_group mac\_address [mask mac\_mask] [mac\_address2 [mask mac\_mask2]...]*

**no policy mac group** *mac\_group*

**policy mac group** *mac\_group no mac\_address [mask mac\_mask] [mac\_address2 [mask mac\_mask2]...]*

---

### Syntax Definitions

<i>mac_group</i>	The name of the MAC group (up to 31 alphanumeric characters).
<i>mac_address</i>	The MAC address associated with the group (for example, 00:20:da:05:f6:23).
<i>mac_mask</i>	The mask of the MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.
<i>mac_address2</i>	Optional. Additional MAC addresses may be configured for a MAC group. Separate each address with a space.
<i>mac_mask2</i>	The mask of an additional MAC address, used to identify which bytes in the MAC address are significant when comparing the MAC address in the received frame with the MAC address in the policy condition. If no mask is specified, the switch automatically uses ff:ff:ff:ff:ff:ff.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure a group of source or destination MAC addresses to which you want to apply QoS rules. Rather than create a condition for each MAC address, group MAC addresses together. Use the **policy condition** command to associate a condition with the MAC group.
- Use the **no** form of the command to remove a MAC group from the configuration, or to remove a MAC address from a MAC group.
- The MAC group name “alaPhones” is a reserved group name used to identify the MAC addresses of IP phones. See the [qos phones](#) command for more information.

- If the **configuration snapshot** command is entered after the **policy map group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy map group** command:

**from {cli | ldap | blt}**

This syntax indicates how the map group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

```
-> policy mac group mac_group1 00:20:da:05:f6:23 00:20:da:05:f6:24
-> no policy mac group mac_group1
```

## Release History

Release 7.1.1; command was introduced.

```

---

## policy port group

Configures a port group and its associated slot and port numbers. A port group may be attached to a policy condition. The action associated with that policy will be applied to all members of the port group.

**policy port group** *group\_name* {*chassis//slot/port[-port2]* | *agg\_id[-agg\_id2]*} [*chassis//slot/port[-port2]* / *agg\_id[-agg\_id2]*]

**no policy port group** *group\_name*

**policy port group** *group\_name* **no** {*chassis//slot/port[-port2]* | *agg\_id[-agg\_id2]*} [*chassis//slot/port[-port2]* / *agg\_id[-agg\_id2]*]

---

### Syntax Definitions

<i>group_name</i>	The name of the port group (up to 31 alphanumeric characters).
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port (or port range) to be included in the group. At least one slot/port combination must be specified. Additional combinations may be included in the group; each combination should be separated by a space.
<i>agg_id[-agg_id2]</i>	A link aggregate ID to be included in the group. Use a hyphen to specify a range of IDs (10-15). Additional combinations may be included in the group; each combination should be separated by a space. <i>This parameter is not supported on the OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 9900.</i>

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure a group of ports or link aggregates to which you want to apply QoS rules. Rather than create a condition for each port, group ports together. Use the **policy condition** command to associate a condition with the port group.
- Configuring ports and link aggregates in the same port group is allowed.
- Adding link aggregate member ports to a QoS port group is not recommended; doing so may cause undesired results when the port group is used in a QoS policy, particularly if only a subset of member ports is added to the port group.

- Use the **no** form of the command to remove a port group from the configuration, or to remove a slot/port from a port group.
- If a range of ports is specified using the syntax *chassis/slot/port-port2* (that is, 1/2/1-8), a single port within that range cannot be removed on its own. The entire range must be deleted as it was entered.
- If a range of link aggregates is specified using the syntax *agg\_id[-agg\_id2]* (that is, 10-15), a single aggregate within that range cannot be removed on its own. The entire range must be deleted as it was entered.
- When a port group is used as part of a policy rule and a policy action specifies a maximum bandwidth, each interface in the port group will be allowed the maximum bandwidth.
- To prevent IP source address spoofing, add ports to the port group called **UserPorts**. This port group does not need to be used in a condition or rule to be effected on flows and applies to both bridged and routed traffic. Ports added to the UserPorts group will block spoofed traffic while still allowing normal traffic on the port. Refer to the *OmniSwitch AOS Release 8 Network Configuration Guide* for more information about ACL security enhancements.
- Adding ports to the **UserPorts** group is not supported on the OmniSwitch 6465, OmniSwitch 6560, or OmniSwitch 9900.
- Use the **qos user-port** command to configure the option to filter or administratively disable a port when a specific type of traffic (Spoof, RIP, BPDU, OSPF, and/or BGP) is received on a port that is a member of the pre-defined UserPorts group.
- If the **configuration snapshot** command is entered after the **policy port group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy port group** command:

**from {cli | ldap | blt}**

This syntax indicates how the port group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

```
-> policy port group port_group4 3/1/1-2 4/3/1 5/4/1
-> policy port group port_group4 no 3/1/1-2
-> policy port group UserPorts 4/1/1-8 5/1/1-8
```

## Release History

Release 7.1.1; command was introduced.

Release 8.3.1; *agg\_id* parameter added.

## Related Commands

  alaQoSAppliedPortGroupSlot
  alaQoSAppliedPortGroupPort
  alaQoSAppliedPortGroupPortEnd
```

---

## policy map group

Configures a map group and its associated mappings for 802.1p, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values. A map group may be referenced in a policy action with the **map** keyword.

**policy map group** *map\_group* {*value1:value2...*}

**no policy map group** *map\_group*

**policy map group no** {*value1:value2...*}

---

### Syntax Definitions

<i>map_group</i>	The name of the map group (up to 31 alphanumeric characters).
<i>value1</i>	The 802.1p, ToS, or DSCP value to be mapped to another value. May be a value or a range of values (for example, <b>1-2</b> ).
<i>value2...</i>	The 802.1p, ToS, or DSCP value to be used in place of <i>value1</i> . Additional mapping pairs may be included.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a mapping pair or to remove the map group entirely.
- The map group may contain more than one mapping pair.
- If the **configuration snapshot** command is entered after the **policy map group** command is configured, the resulting ASCII file will include the following additional syntax for the **policy map group** command:

**from** {**cli** | **ldap** | **blt**}

This syntax indicates how the map group was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

### Examples

```
-> policy map group tosGroup 1-4:3 5-6:5 7:6
-> policy map group tosGroup no 7:6
-> no policy map group tosGroup
```

## Release History

Release 7.1.1; command was introduced.

```

---

## policy service

Configures a service that may be used as part of a policy service group or included as part of a policy condition. A service is a source and/or destination TCP or UDP port or port range.

This overview section describes the base command. *At least one option must be configured with the base command.* Some options may be used in combination; some options are shortcuts for keyword combinations (see the Usage Guidelines). Options are described as separate commands. See the command descriptions and usage guidelines for valid combinations.

Use the **no** form for keywords to remove a parameter from a service.

```
policy service service_name
  [protocol protocol]
  [source ip-port port[-port]]
  [destination ip-port port[-port]]
  [source tcp-port port[-port]]
  [destination tcp-port port[-port]]
  [source udp-port port[-port]]
  [destination udp-port port[-port]]
```

```
no policy service service_name
```

---

### Syntax Definitions

<i>service_name</i>	The name of the service (up to 31 alphanumeric characters).
<i>protocol</i>	The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported. This value must be specified for <b>source ip-port</b> or <b>destination ip-port</b> ; it cannot be specified for <b>source tcp-port</b> , <b>destination tcp-port</b> , <b>source udp-port</b> , or <b>destination udp-port</b> .
<i>port</i>	The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. Specify a range of ports using a hyphen (for example, <b>22-23</b> ).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.

- The command options offer alternate ways of configuring TCP or UDP ports for a service. Note that port types (TCP or UDP) cannot be mixed in the same service. The following table shows how the keywords are used:

To configure:	Use keywords:	Notes
TCP or UDP ports for a service	<b>protocol</b> <b>source ip-port</b> <b>destination ip-port</b>	<i>The protocol must be specified with at least one source or destination port.</i>
TCP ports for a service	<b>source tcp-port</b> <b>destination tcp-port</b>	<i>Keywords may be used in combination.</i>
UDP ports for a service	<b>source udp-port</b> <b>destination udp-port</b>	<i>Keywords may be used in combination.</i>

- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

The following two commands show two different ways of configuring the same service:

```
-> policy service telnet2 protocol 6 destination ip-port 23
-> policy service telnet3 destination tcp-port 23
```

## Release History

Release 7.1.1; command was introduced.

---

## policy service protocol

Configures a service with a protocol and IP port or port range that may be used as part of a policy service group or included as part of a policy condition.

**policy service** *service\_name* **protocol** *protocol* {[**source ip-port** *port[-port]*] [**destination ip-port** *port[-port]*]}

**no policy service** *service\_name*

**policy service** *service\_name* **no** {**source ip-port** | **destination ip-port**}

---

### Syntax Definitions

<i>service_name</i>	The name of the service (up to 31 alphanumeric characters).
<i>protocol</i>	The protocol associated with the service. The range of values is 0–255. Currently a value of 6 (for TCP) or 17 (for UDP) is supported.
<i>port</i>	The well-known port number (or port range) for the desired service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, <b>22-23</b> ).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a service from the configuration or to remove parameters from a particular service. (A protocol value cannot be removed from a service.)
- Shortcut commands for the **policy service protocol** command include the following: **policy service source tcp-port**, **policy service destination tcp-port**, **policy service source udp-port**, and **policy service destination udp-port**.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from** {**cli** | **ldap** | **blt**}

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

## Examples

```
-> policy service telnet2 protocol 6 destination ip-port 23 source ip-port 22  
-> policy service telnet2 no source ip-port
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

```

---

## policy service source tcp-port

Configures a service with a source TCP port or port range that may be used as part of a policy service group or included as part of a policy condition.

**policy service** *service\_name* **source tcp-port** *port[-port]*

**no policy service** *service\_name*

**policy service** *service\_name* **no source tcp-port**

---

### Syntax Definitions

*service\_name*

The name of the service (up to 31 alphanumeric characters).

*port*

The well-known port number (or port range) for the desired TCP service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, **22-23**).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- Ports associated with a particular service must all be of the same type. (The **destination tcp-port** keyword may be used with this command; other keywords for the command are not allowed.)
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

### Examples

```
-> policy service serv_5 source tcp-port 21-22
-> policy service serv_5 no source tcp-port
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

  alaQoSAppliedSourceTcpPortEnd
```

---

## policy service destination tcp-port

Configures a service with a destination TCP port or port range that may be used as part of a policy service group or included as part of a policy condition.

**policy service** *service\_name* **destination tcp-port** *port[-port]*

**no policy service** *service\_name*

**policy service** *service\_name* **no destination tcp-port**

---

### Syntax Definitions

*service\_name*

The name of the service (up to 31 alphanumeric characters).

*port*

The well-known port number (or port range) for the desired TCP service. For example, the port number for Telnet is 23. A port range should be separated by a hyphen (for example, **22-23**).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a service from the configuration, or to remove parameters from a particular service.
- This command is a shortcut for the **policy service protocol** command.
- A policy service may be grouped in a policy group using the **policy service group** command. A policy condition may then be associated with the service group.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

### Examples

```
-> policy service service4 destination tcp-port 23
-> policy service service4 no destination tcp-port
```

## Release History

  alaQoSAppliedServiceName
  alaQoSAppliedServiceSource
  alaQoSAppliedServiceDestinationTcpPort
  alaQoSAppliedServiceDestinationTcpPortEnd
```

---

## policy service source udp-port

Configures a service with a source UDP port or port range that may be used as part of a policy service group or included as part of a policy condition.

**policy service** *service\_name* **source udp-port** *port*[-*port*]

**no policy service** *service\_name*

**policy service** *service\_name* **no source udp-port**

---

### Syntax Definitions

*service\_name*

The name of the service (up to 31 alphanumeric characters).

*port*

The well-known port number (or port range) for the desired UDP service. Specify a port range with a hyphen (for example, **22-23**).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service. Note that at least one parameter must be associated with a service.
- Ports associated with a particular service must all be of the same type. (The **destination tcp-port** keyword may be used with this command; other keywords for the command are not allowed.)
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

### Examples

```
-> policy service serv_a source udp-port 1000
-> no policy service serv_a source udp-port
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

  alaQoSAppliedSourceUdpPortEnd
```

---

## policy service destination udp-port

Configures a service with a destination UDP port or port range that may be used as part of a policy service group or included as part of a policy condition.

**policy service** *service\_name* **destination udp-port** *port[-port]*

**no policy service** *service\_name*

**policy service** *service\_name* **no destination udp-port**

---

### Syntax Definitions

*service\_name*

The name of the service (up to 31 alphanumeric characters).

*port*

The well-known port number (or port range) for the desired UDP service. For example, a port number for NETBIOS is 137. A port range should be separated by a hyphen (for example, **137-138**).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is a shortcut for the **policy service protocol** command.
- A policy service may be grouped in a policy group using the **policy service group** command. A policy condition may then be associated with the service group.
- Use the **no** form of the command to remove a service from the configuration, or to remove parameters from a particular service.
- If the **configuration snapshot** command is entered after the **policy service** command is configured, the resulting ASCII file will include the following additional syntax for the **policy service** command:

**from {cli | ldap | blt}**

This syntax indicates how the service was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in object, this setting is not configurable.

### Examples

```
-> policy service service4 destination udp-port 137
-> policy service service4 no destination udp-port
```

## Release History

```

---

## policy condition

Creates a QoS policy condition. The condition determines what parameters the switch uses to classify incoming flows. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove a parameter from the condition.

Some condition parameters may not be supported depending on the platform you are using. Also some condition parameters may not be supported with some action parameters. See the condition/action tables in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

**policy condition** *condition\_name*

```
[source ip ip_address [mask netmask]]
[source ipv6 {any | ipv6_address [mask netmask]}]
[destination ip ip_address [mask netmask]]
[destination ipv6 {any | ipv6_address [mask netmask]}]
[multicast ip ip_address [mask netmask]]
[source network group network_group]
[destination network group network_group]
[multicast network group multicast_group]
[source ip-port port[-port]]
[destination ip-port port[-port]]
[source tcp-port port[-port]]
[destination tcp-port port[-port]]
[source udp-port port[-port]]
[destination udp-port port[-port]]
[ethertype etype]
[established]
[tcpflags {any | all} flag [mask flag]]
[service service]
[service group service_group]
[icmptype type]
[icmpcode code]
[ip-rotocol protocol]
[ipv6]
[flow-label flow_label_value]
[tos tos_value tos_mask]
[dscp {dscp_value[-value] [dscp_mask]}]
[source mac mac_address [mask mac_mask]]
[destination mac mac_address [mask mac_mask]]
[source mac group group_name]
[destination mac group mac_group]
[source vlan vlan_id]
[destination vlan vlan_id]
[802.1p 802.1p_value]
[source port chassis/slot/port[-port2]]
```

```

[source port group group_name]
[destination port chassis/slot/port[-port2]]
[destination port group group_name]
[vrf {vrf_name | default}]
[fragments]
[appfp-group group_name]

no policy condition condition_name

```

---

## Syntax Definitions

*condition\_name* The name of the condition. Any alphanumeric string.

## Defaults

N/A

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- A policy condition and a policy action are combined to make a policy rule. See the [policy rule](#) command.
- Use the [qos apply](#) command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.
- Use the **no** form of the command to remove a condition from a policy rule.
- At least one parameter must be associated with a condition.
- If the **configuration snapshot** command is entered after the **policy condition** command is configured, the resulting ASCII file will include the following additional syntax for the **policy condition** command:

```
from {cli | ldap | blt}
```

This syntax indicates how the condition was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in condition, this option is not configurable.

## Examples

```
-> policy condition cond4 source port 3/1/1
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Configures a policy action.
<a href="#">policy rule</a>	Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).
<a href="#">show policy condition</a>	Shows information about policy conditions configured on the switch.

## MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionSource
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSource
```

---

## policy condition source ip

Configures a source IP address for a policy condition.

**policy condition** *condition\_name* **source ip** {**any** | *ip\_address* [**mask** *netmask*]}

**policy condition** *condition\_name* **no source ip**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<b>any</b>	Any source IPv4 address.
<i>ip_address</i>	The source IP address of the Layer 3 flow.
<i>netmask</i>	The mask for the source IP address.

### Defaults

parameter	default
<i>netmask</i>	IP address class

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A source IP address and a source IP network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a source IP address from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond3 source ip 173.201.18.3
-> policy condition cond4 source ip any
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about a particular policy condition configured on the switch.

## MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionSourceIpAddr
  alaQoSConditionSourceIpMask
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceIpAddr
  alaQoSAppliedConditionSourceIpMask
```

---

## policy condition source ipv6

Configures a source IPv6 address for a policy condition.

**policy condition** *condition\_name* **source ipv6** {**any** | *ipv6\_address* [**mask** *netmask*]}

**policy condition** *condition\_name* **no source ipv6**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<b>any</b>	Any source IPv6 address.
<i>ipv6_address</i>	A specific source IPv6 address.
<i>netmask</i>	The mask for the source IPv6 address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- If a mask is not specified, the IPv6 address is assumed to be a host address.
- On the OmniSwitch 6560 and OmniSwitch 9900, a source IPv6 address policy condition is supported only for *egress* IPv6 ACLs.

### Examples

```
-> policy condition cond3 source ipv6 ::1234:531F:BCD2:F34A
-> policy condition cond4 source ipv6 any
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about a particular policy condition configured on the switch.

  alaQoSAppliedConditionSourceIpMask
```

---

## policy condition destination ip

Configures a destination IP address for a policy condition.

**policy condition** *condition\_name* **destination ip** *ip\_address* [**mask** *netmask*]

**policy condition** *condition\_name* **no destination ip**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>ip_address</i>	The source IP address of the Layer 3 flow.
<i>netmask</i>	The mask for the source IP address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A destination IP address and a destination IP network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a destination IP address from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond4 destination ip 208.192.21.0 mask 255.255.255.0
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

**policy condition**

Creates a policy condition.

**qos apply**

Applies configured QoS and policy settings to the current configuration.

**show policy condition**

Shows information about a particular policy condition configured on the switch.

## MIB Objects

alaQoSConditionTable

  alaQoSConditionName

  alaQoSConditionDestinationIpAddr

  alaQoSConditionDestinationIpMask

alaQoSAppliedConditionTable

  alaQoSAppliedConditionName

  alaQoSAppliedConditionDestinationIpAddr

  alaQoSAppliedConditionDestinationIpMask

---

## policy condition destination ipv6

Configures a destination IPv6 address for a policy condition.

**policy condition** *condition\_name* **destination ipv6** {**any** | *ipv6\_address* [**mask netmask**]}

**policy condition** *condition\_name* **no destination ipv6**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<b>any</b>	Any destination IPv6 address.
<i>ipv6_address</i>	A specific destination IPv6 address.
<i>netmask</i>	The mask for the destination IPv6 address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a destination IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- If a mask is not specified, the IPv6 address is assumed to be a host address.
- On the OmniSwitch 6560 and OmniSwitch 9900, a destination IPv6 address policy condition is supported only for *ingress* IPv6 ACLs.

### Examples

```
-> policy condition cond3 destination ipv6 ::1234:531f:bcd2:f34a
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about a particular policy condition configured on the switch.

  alaQoSAppliedConditionDestinationIpv6AddrStatus
  alaQoSAppliedConditionDestinationIpMask
```

---

## policy condition multicast ip

Configures a multicast IP address for a policy condition.

**policy condition** *condition\_name* **multicast ip** *ip\_address* [**mask** *netmask*]

**policy condition** *condition\_name* **no multicast ip**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>ip_address</i>	The multicast IP address.
<i>netmask</i>	Optional. The mask for the multicast IP address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If a mask is not specified, the IP address is assumed to be a host address.
- A multicast IP address and a multicast network group cannot be specified in the same condition.
- Use the **no** form of the command to remove a multicast IP address from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond4 multicast ip 224.1.1.1
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[policy condition](#)

Creates a policy condition.

[qos apply](#)

Applies configured QoS and policy settings to the current configuration.

## MIB Objects

alaQoSConditionTable

- alaQoSConditionName
- alaQoSMulticastIpAddr
- alaQoSMulticastIpMask

alaQoSAppliedConditionTable

- alaQoSAppliedConditionName
- alaQoSAppliedMulticastIpAddr
- alaQoSAppliedMulticastIpMask

---

## policy condition source network group

Associates a source network group with a policy condition.

**policy condition** *condition\_name* **source network group** *network\_group*

**policy condition** *condition\_name* **no source network group**

---

### Syntax Definitions

*condition\_name*

The name of the condition.

*network\_group*

The name of the source network group. Network groups are configured through the [policy network group](#) command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source network group from a condition; however, at least one classification parameter must be associated with a condition.
- A source IP address and a source IP network group cannot be specified in the same condition.
- On the OmniSwitch 6560 and OmniSwitch 9900, a source network group policy condition with an IPv6 address (includes user-configured and the built-in “Switch6” group) is supported only for *egress* IPv6 ACLs,

### Examples

```
-> policy condition cond5 source network group webgroup1
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

## policy condition destination network group

Associates a destination network group with a policy condition.

**policy condition** *condition\_name* **destination network group** *network\_group*

**policy condition** *condition\_name* **no destination network group**

---

### Syntax Definitions

*condition\_name*

The name of the condition.

*network\_group*

The name of the destination network group. Network groups are configured through the [policy network group](#) command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination network group from a condition; however, at least one classification parameter must be associated with a condition.
- A destination IP address and a destination IP network group cannot be specified in the same condition.
- On the OmniSwitch 6560 and OmniSwitch 9900, a destination network group policy condition with an IPv6 address is supported only for *ingress* IPv6 ACLs,

### Examples

```
-> policy condition cond6 destination network group webgroup1
```

### Release History

Release 7.1.1; command was introduced.

## policy condition multicast network group

Associates a multicast group with a policy condition.

**policy condition** *condition\_name* **multicast network group** *multicast\_group*

**policy condition** *condition\_name* **no multicast network group**

---

### Syntax Definitions

*condition\_name*

The name of the condition.

*multicast\_group*

The multicast group name. Multicast groups are configured through the **policy network group** command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a multicast group from a condition; however, at least one classification parameter must be associated with a condition.
- A multicast address and a multicast network group cannot be specified in the same condition.

### Examples

```
-> policy condition cond3 multicast group video2
```

### Release History

Release 7.1.1; command was introduced.

## policy condition source ip-port

Configures a source IP port number for a policy condition.

**policy condition** *condition\_name* **source ip-port** *port*[-*port*]

**policy condition** *condition\_name* **no source ip-port**

---

### Syntax Definitions

*condition\_name*

The name of the condition.

*port*

The TCP or UDP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source IP port from a condition; however, at least one classification parameter must be associated with a condition.
- The protocol (TCP or UDP) must be specified in the condition, either on the same command line or in a previous command. Use the **ip-protocol** keyword. See the [policy condition ip-protocol](#) command.
- The same condition cannot specify a source IP port with a source TCP port, source UDP port, service, or service group.

### Examples

```
-> policy condition cond1 ip-protocol 6 source ip-port 137
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.

  alaQoSConditionName
  alaQoSConditionSourceIpPort
  alaQoSConditionSourceIpPortEnd
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceIpPort
  alaQoSAppliedConditionSourceIpPortEnd
```

---

## policy condition destination ip-port

Configures a destination IP port number for a policy condition.

**policy condition** *condition\_name* **destination ip-port** *port*[-*port*]

**policy condition** *condition\_name* **no destination ip-port**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>port</i>	The TCP or UDP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination IP port from a condition; however, at least one classification parameter must be associated with a condition.
- The protocol (TCP or UDP) must be specified in the same condition, either on the same command line or in a previous command. Use the **ip-protocol** keyword. See the [policy condition ip-protocol](#) command.
- The same condition cannot specify a destination IP port with a service or service group.

### Examples

```
-> policy condition cond2 ip-protocol 6 destination ip-port 137-138
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition ip-protocol</a>	Configures an IP protocol for a policy condition.

  alaQoSAppliedConditionName
  alaQoSAppliedConditionDestinationIpPort
  alaQoSAppliedConditionDestinationIpPortEnd
```

---

## policy condition source tcp-port

Configures a source TCP port number for a policy condition.

**policy condition** *condition\_name* **source tcp-port** *port[-port]*

**policy condition** *condition\_name* **no source tcp-port**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>port</i>	The TCP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source TCP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition source ip-port** command, which requires that the protocol also be specified. Rather than specifying **source ip-port** and **ip-protocol**, use **source tcp-port**.
- The same condition cannot specify a source TCP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

### Examples

```
-> policy condition cond3 source tcp-port 137
-> policy condition cond4 ipv6 source tcp-port 21
-> policy condition cond3 no source tcp-port
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition destination tcp-port

Configures a destination TCP port number for a policy condition.

**policy condition** *condition\_name* **destination tcp-port** *port*[-*port*]

**policy condition** *condition\_name* **no destination tcp-port**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*port* The TCP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination TCP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition destination ip-port** command, which requires that the protocol also be specified. Rather than specifying **destination ip-port** and **ip-protocol**, use **destination tcp-port**.
- The same condition cannot specify a destination TCP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

### Examples

```
-> policy condition cond4 destination tcp-port 137-138
-> policy condition cond5 ipv6 destination tcp-port 140
-> policy condition cond4 no destination tcp-port
```

### Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedConditionDestinationTcpPortEnd
```

---

## policy condition source udp-port

Configures a source UDP port number for a policy condition.

**policy condition** *condition\_name* **source udp-port** *port*[-*port*]

**policy condition** *condition\_name* **no source udp-port**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>port</i>	The UDP port number of the source address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source UDP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition source ip-port** command, which requires that the protocol also be specified. Rather than specifying **source ip-port** and **ip-protocol**, use **source udp-port**.
- The same condition cannot specify a source UDP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

### Examples

```
-> policy condition cond5 source udp-port 1200-1400
-> policy condition cond6 ipv6 source udp-port 1000
-> policy condition cond5 no source udp-port
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition destination udp-port

Configures a destination UDP port number for a policy condition.

**policy condition** *condition\_name* **destination udp-port** *port[-port]*

**policy condition** *condition\_name* **no destination udp-port**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<i>port</i>	The UDP port number (or port range) of the destination address of the Layer 3 flow, in the range from 0–65535. A range of ports (separated by a hyphen) may be specified instead of a single port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination UDP port from a condition; however, at least one classification parameter must be associated with a condition.
- This command is a shortcut for the **policy condition destination ip-port** command, which requires that the protocol also be specified. Rather than specifying **destination ip-port** and **ip-protocol**, use **destination udp-port**.
- The same condition cannot specify a destination UDP port with a service or service group.
- IP port protocol types cannot be mixed in the same condition; ports must be either TCP or UDP.
- Use this condition in combination with the IPv6 condition (**policy condition ipv6**) to configure IPv6 policies for Layer 4 information, services, and service groups.

### Examples

```
-> policy condition cond4 destination udp-port 137-138
-> policy condition cond5 ipv6 destination udp-port 140
-> policy condition cond4 no destination udp-port
```

### Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedConditionDestinationTcpPortEnd
```

---

## policy condition ethertype

Configures an ethertype value to use for traffic classification.

**policy condition** *condition\_name* **ethertype** *etype*

**policy condition** *condition\_name* **no ethertype**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*etype* The ethertype value, in the range 1536–65535 or 0x600–0xffff hex.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove an ethertype value from a condition; however, at least one classification parameter must be associated with a condition.
- Enter a numeric or equivalent hex value for the *etype*.
- On the OmniSwitch 6465, an ethertype value is not supported in policy conditions for IPv6 packets.

### Examples

```
-> policy condition cond12 ethertype 8137
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about policy conditions configured on the switch.

## MIB Objects

```
alaQoSConditionTable
  alaQoSConditionName
  alaQoSConditionEthertype
  alaQoSConditionEthertypeStatus
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedConditionEthertype
  alaQoSAppliedConditionEthertypeStatus
```

---

## policy condition established

Configures an established TCP connection as a policy condition. A connection is considered established if the **ack** or **rst** flags in the TCP header of the packet are set.

**policy condition** *condition\_name* **established**

**policy condition** *condition\_name* **no established**

---

### Syntax Definitions

*condition\_name*                      The name of the condition.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove **established** from a condition; however, at least one classification parameter must be associated with a condition.
- When an initial TCP connection packet is received only the **syn** flag is set. As a result, TCP packets are only examined if they are not the starting packet.
- Typically this condition is used in combination with **source ip**, **destination ip**, **source port**, **destination port**, **source tcp-port**, or **destination tcp-port** conditions.
- Note that even though **established** can be used with most action parameters, it is mainly intended for ACL use.

### Examples

```
-> policy condition cond2 source ip 192.168.5.10 established
-> policy condition cond3 destination ip 10.255.11.40
```

### Release History

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about policy conditions configured on the switch.

**MIB Objects**

```
alaQoSConditionTable  
  alaQoSConditionTcpEstablished  
alaQoSAppliedConditionTable  
  alaQoSAppliedConditionTcpEstablished
```

---

## policy condition tcpflags

Configures a specific TCP flag value or combination of flag values as a policy condition.

```
policy condition condition_name tcpflags [any | all] {f | s | r | p | a | u | e | w} mask {f | s | r | p | a | u | e | w}
```

```
policy condition condition_name no tcpflags
```

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition.
<b>any</b>	Match on any of the specified TCP flags.
<b>all</b>	Match all specified TCP flags.
<b>f   s   r   p   a   u   e   w</b>	TCP flag value to match ( <b>f</b> =fin, <b>s</b> =syn, <b>r</b> =rst, <b>p</b> =psh, <b>a</b> =ack, <b>u</b> =urg, <b>e</b> =ecn, and <b>w</b> =cwr). <i>The e and w flags are currently not supported.</i>

### Defaults

parameter	default
any   all	all

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove **tcpflags** from a condition; however, at least one classification parameter must be associated with a condition.
- Use the **any** option to indicate that a match on any one of the specified TCP flags qualifies as a match for the condition. Use the **all** option to indicate that a match on all specified TCP flags is required to qualify as a match for the condition.
- Enter one or more TCP flags after the **any** or **all** keyword to indicate that the value of the flag bit must be set to one to qualify as a match.
- Enter one or more TCP flags after the **mask** keyword to indicate which TCP flags to match.
- If a TCP flag is specified as part of the **mask** but does not have a corresponding match value specified with the **any** or **all** options, then zero is assumed as the match value. For example, **tcpflags all f s mask f s a** looks for the following bit values to determine a match: **f**=1, **s**=1, **a**=0.
- Typically this condition is used in combination with **source ip**, **destination ip**, **source port**, **destination port**, **source tcp-port**, or **destination tcp-port** conditions.

- Note that even though **tcpflags** can be used with most action parameters, it is mainly intended for ACL use.
- Use **tcpflags** in combination with the IPv6 condition to configure an IPv6 TCP flag policy (for example, **policy condition ipv6 tcpflags**). *Note that IPv6 TCP flag conditions are not supported on the OmniSwitch 6560.*

## Examples

```
-> policy condition tcp-flag tcpflags all f s mask f s a
-> policy condition tcp-flag-ar tcpflags any a r mask a r
-> policy condition tcp-flag-f destination network group Allowed_Resources source
tcp-port 1982 tcpflags any f mask f ipv6
```

## Release History

Release 7.1.1; command was introduced.

```

---

## policy condition service

Configures a service for a policy condition.

**policy condition** *condition\_name* **service** *service\_name*

**policy condition** *condition\_name* **no service**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*service\_name* The service name, configured through the **policy service** command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a service group from a condition; however, at least one classification parameter must be associated with a condition.
- A policy condition that specifies a service cannot also specify a service group, IP protocol, source IP port, or destination IP port.

### Examples

```
-> policy condition cond12 service serv2
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [policy service](#)

Configures a service that may be used as part of a policy service group.

### [qos apply](#)

Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

### [show policy service](#)

Displays information about all particular policy services or a particular policy service configured on the switch.

## MIB Objects

    alaQoSAppliedConditionService

---

## policy condition service group

Associates a policy service group with a policy condition.

**policy condition** *condition\_name* **service group** *service\_group*

**policy condition** *condition\_name* **no service group**

---

### Syntax Definitions

*condition\_name*

The name of the condition.

*service\_group*

The service group name. Service groups are configured through the [policy service group](#) command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a service group from a condition; however, at least one classification parameter must be associated with a condition.
- A policy condition that specifies a service group cannot also specify a service, IP protocol, source IP port, or destination IP port.

### Examples

```
-> policy condition cond12 service group servgroup2
```

### Release History

Release 7.1.1; command was introduced.

---

## policy condition icmptype

Configures an ICMP type value to use for traffic classification.

**policy condition** *condition\_name* **icmptype** *type*

**policy condition** *condition\_name* **no icmptype**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*type* The ICMP type value, in the range 0–255.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove an ICMP type value from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond12 icmptype 100
```

### Release History

Release 7.1.1; command was introduced.

---

## policy condition icmpcode

Configures an ICMP code value to use for traffic classification.

**policy condition** *condition\_name* **icmpcode** *code*

**policy condition** *condition\_name* **no icmpcode**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*code* The ICMP code value, in the range 0–255.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove an ICMP code value from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond12 icmpcode 150
```

### Release History

Release 7.1.1; command was introduced.

---

## policy condition ip-protocol

Configures an IP protocol for a policy condition.

**policy condition** *condition\_name* **ip-protocol** *protocol*

**policy condition** *condition\_name* **no ip-protocol**

---

### Syntax Definitions

*condition\_name* The name of the condition.

*protocol* The protocol associated with the flow. The range is 0–255.

### Defaults

parameter	default
<i>protocol</i>	6

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a protocol from a condition; however, at least one classification parameter must be associated with a condition.
- If a source or destination port is specified (through the **policy condition source ip-port** or **policy condition destination ip-port** commands), the protocol must be specified.
- The same condition cannot specify an IP protocol with a service or service group.

### Examples

```
-> policy condition cond4 ip-protocol 6
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

- policy condition source ip-port** Configures a source IP port number for a policy condition.
- policy condition destination ip-port** Configures a destination IP port number for a policy condition.
- qos apply** Applies configured global QoS and policy settings to the current configuration (changes will be active and stored in flash).

```

---

## policy condition ipv6

Configures a policy condition to classify IPv6 traffic.

**policy condition** *condition\_name* **ipv6**

**policy condition** *condition\_name* **no ipv6**

---

### Syntax Definitions

*condition\_name*                      The name of the condition.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove IPv6 traffic as a condition; however, at least one classification parameter must be associated with a condition.
- When the **ipv6** keyword is used in a condition, a policy that uses the condition is considered an IPv6 policy. IPv6 policies are effected only on IPv6 traffic. All other IP policies are considered IPv4 policies and are effected only on IPv4 traffic.
- IPv6 Layer 4 policies are supported and are configured using the **ipv6** keyword in a condition that specifies Layer 4 information, services, or service groups. Note that IPv6 Layer 4 policies only work with packets that contain a single header.
- The **icmptype** and **icmpcode** keywords in an IPv6 policy imply the ICMPv6 protocol, not the ICMPv4 protocol.

### Examples

```
-> policy condition cond4 ipv6
-> policy condition cond5 ipv6 tos 7
-> policy condition cond6 ipv6 source port 1/1/1
-> policy condition cond7 ipv6 source tcp-port 21
-> policy condition cond8 ipv6 source tcp-port 0-1024
-> policy condition cond6 no ipv6
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

## policy condition flow-label

Configures an IPv6 flow label value as a policy condition. This value is compared to the flow label value in the IPv6 header.

**policy condition** *condition\_name* **flow-label** *flow\_label\_value*

**policy condition** *condition\_name* **no flow-label**

---

### Syntax Definitions

*condition\_name*                      The name of the condition.  
*flow\_label\_value*                    The flow-label value (0–1048575).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove the flow label value as a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond4 flow-label 1500
-> policy condition cond4 no flow-label
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

---

## policy condition tos

Configures the precedence bits in the Type of Service (ToS) byte value for a policy condition.

**policy condition** *condition\_name* **tos** *tos\_value* [**mask** *tos\_mask*]

**policy condition** *condition\_name* **no tos**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>tos_value</i>	The Type of Service bits value included in the IP header. The three most significant bits of the byte determine the precedence (i.e, priority) of the frame (0 is the lowest, 7 is the highest).
<i>tos_mask</i>	The mask for the ToS bits, in the range 0–7.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a ToS value from a condition; however, at least one classification parameter must be associated with a condition.
- If a ToS value is specified, a DSCP value may not be specified.

### Examples

```
-> policy condition cond2 tos 7
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[policy condition](#)

Creates a policy condition.

[qos apply](#)

Applies configured QoS and policy settings to the current configuration.

    alaQoSConditionName

    alaQoSConditionTos

alaQoSAppliedConditionTable

    alaQoSAppliedConditionName

    alaQoSAppliedConditionTos

---

## policy condition dscp

Configures the Differentiated Services Code Point (DSCP) for a policy condition. The DSCP value defines the six most significant bits of the DS byte in the IP header.

**policy condition** *condition\_name* **dscp** {*dscp\_value*[-*value*]} [**mask** *dscp\_mask*]

**policy condition** *condition\_name* **no dscp**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>dscp_value</i> [- <i>value</i> ]	The DiffServ Code Point value, in the range 0–63. Use a hyphen to specify a range of DSCP values for the condition (for example, 10-20).
<i>dscp_mask</i>	The mask for the DiffServ Code Point, in the range 0–63. <i>Specifying a DSCP mask for a policy condition is not supported on an OmniSwitch 6465.</i>

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a DSCP value from a condition; however, at least one classification parameter must be associated with a condition.
- If a DSCP value is specified, a ToS value may not be specified.
- When a DSCP policy condition is configured on one of these switches, QoS automatically calculates the appropriate mask value.

### Examples

```
-> policy condition cond4 dscp 10
-> policy condition cond5 dscp 20-30
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

## policy condition source mac

Configures a source MAC address for a policy condition.

**policy condition** *condition\_name* **source mac** *mac\_address* [**mask** *mac\_mask*]

**policy condition** *condition\_name* **no source mac**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>mac_address</i>	The source MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23)
<i>mac_mask</i>	Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- A source MAC address and a source MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a source MAC address is not supported in policy conditions for IPv6 packets.

### Examples

```
-> policy condition cond2 source mac 00:20:da:05:f6:23
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition destination mac

Configures a destination MAC address for a policy condition.

**Note.** Specifying a destination MAC address and mask of all zeros (00:00:00:00:00:00) as a policy condition can result in the switch dropping all traffic. Only use this type of condition in combination with other policies that will allow desired traffic and/or if a source or destination slot/port is also part of the destination MAC condition.

**policy condition** *condition\_name* **destination mac** *mac\_address* [**mask** *mac\_mask*]

**policy condition** *condition\_name* **no destination mac**

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>mac_address</i>	The destination MAC address in the Layer 2 header of the frame (for example, 00:20:da:05:f6:23).
<i>mac_mask</i>	Optional. The mask for the destination MAC address (for example, ff:ff:ff:ff:ff:ff).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- A destination MAC address and a destination MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a destination MAC address is not supported in policy conditions for IPv6 packets.

### Examples

```
-> policy condition cond3 destination mac 00:20:da:05:f6:23
```

### Release History

Release 7.1.1; command was introduced.

---

## policy condition source mac group

Associates a source MAC group with a policy condition.

**policy condition** *condition\_name* **source mac group** *group\_name*

**policy condition** *condition\_name* **no source mac group**

---

### Syntax Definitions

*condition\_name* The name of the condition. May be an existing condition name or a new condition.

*group\_name* The name of the source MAC group, configured through the **policy mac group** command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a source MAC group from a condition; however, at least one classification parameter must be associated with a condition.
- A source MAC address and a source MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a source MAC group is not supported in policy conditions for IPv6 packets.

### Examples

```
-> policy condition cond4 source mac group mac_group1
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition destination mac group

Associates a destination MAC group with a policy condition.

**policy condition** *condition\_name* **destination mac group** *mac\_group*

**policy condition** *condition\_name* **no destination**

---

### Syntax Definitions

*condition\_name* The name of the condition. May be an existing condition name or a new condition.

*mac\_group* The name of the destination MAC group, configured through the **policy mac group** command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination MAC group from a policy condition; however, at least one classification parameter must be associated with a condition.
- A destination MAC address and a destination MAC group cannot be specified in the same condition.
- On the OmniSwitch 6465, a source MAC group is not supported in policy conditions for IPv6 packets.

### Examples

```
-> policy condition cond5 destination mac group mac_group1
```

### Release History

Release 7.1.1; command was introduced.

## policy condition source vlan

Configures a source VLAN for a policy condition.

**policy condition** *condition\_name* **source vlan** *vlan\_id*

**policy condition** *condition\_name* **no source vlan**

---

### Syntax Definitions

*condition\_name* The name of the condition. May be an existing condition name or a new condition.

*vlan\_id* The source VLAN ID for the flow.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove a source VLAN from a policy condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond5 source vlan 3
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition</a>	Creates a policy condition.
<a href="#">show policy condition</a>	Shows information about policy conditions configured on the switch.

## MIB Objects

  alaQoSAppliedConditionName
  alaQoSAppliedConditionSourceVlan
```

---

## policy condition inner source-vlan

Configures an inner source VLAN ID as a policy condition. This condition applies to double-tagged VLAN Stacking traffic and is used to classify such traffic based on the inner VLAN ID tag, also known as the customer VLAN ID.

**policy condition** *condition\_name* **inner source-vlan** *vlan\_id*

**policy condition** *condition\_name* **no inner source-vlan**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>vlan_id</i>	The inner source VLAN ID (customer VLAN ID) to match on double-tagged packets.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove an inner source VLAN from a policy condition; however, at least one classification parameter must be associated with a condition.
- Policies that use the inner source VLAN condition are referred to as QoS VLAN Stacking policies. These are separate policies from those configured through the VLAN Stacking Service application.

### Examples

```
-> policy condition cond5 inner source-vlan 3
-> policy condition cond5 no inner source-vlan
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition destination vlan

Configures a destination VLAN (multicast only) for a policy condition. Use the **no** form of the command to remove a destination VLAN from a condition.

**policy condition** *condition\_name* **destination vlan** *vlan\_id*

**policy condition** *condition\_name* **no destination vlan**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>vlan_id</i>	The destination VLAN ID for the flow.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a destination VLAN from a condition; however, at least one classification parameter must be associated with a condition.
- Note that this condition is supported for multicast only policies.

### Examples

```
-> policy condition cond4 destination vlan 3 multicast ip any
```

### Release History

Release 7.1.1; command was introduced.

  alaQoSAppliedConditionDestinationVlan
```

---

## policy condition 802.1p

Configures the 802.1p value for a policy condition.

**policy condition** *condition\_name* **802.1p** *802.1p\_value*

**policy condition** *condition\_name* **no 802.1p**

---

### Syntax Definitions

*condition\_name* The name of the condition. May be an existing condition name or a new condition.

*802.1p\_value* The 802.1p value in the 802.1Q VLAN tag for the flow. Values range from 0 (lowest priority) to 7 (highest priority).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove an 802.1p value for a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond3 802.1p 7
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.

  alaQoSConditionName
  alaQoSCondition8021p
alaQoSAppliedConditionTable
  alaQoSAppliedConditionName
  alaQoSAppliedCondition8021p
```

---

## policy condition inner 802.1p

Configures an inner (customer) source 802.1p value for a policy condition. This condition applies to double-tagged VLAN Stacking traffic and is used to classify such traffic based on the inner 802.1p bit value.

**policy condition** *condition\_name* **inner 802.1p** *802.1p\_value*

**policy condition** *condition\_name* **no inner 802.1p**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>802.1p_value</i>	The inner 802.1p value of the inner 802.1Q VLAN tag (customer VLAN) to match on double-tagged packets. Values range from 0 (lowest priority) to 7 (highest priority).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove an 802.1p value for a condition; however, at least one classification parameter must be associated with a condition.
- Policies that use the inner 802.1p condition are referred to as QoS VLAN Stacking policies. These are separate policies from those configured through the VLAN Stacking Service application.

### Examples

```
-> policy condition cond3 inner 802.1p 7
-> policy condition cond3 no inner 802.1p
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition source port

Configures a source port number for a policy condition. Use the **no** form of the command to remove a source port number from a condition.

**policy condition** *condition\_name* **source** {**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]}

**policy condition** *condition\_name* **no source** {**port** | **linkagg**}

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number on which the frame is received. Use a hyphen to specify a range of ports (1/5-10). <i>Specifying a range of ports for a policy condition is not supported on an OmniSwitch 6465.</i>
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID on which the frame is received. Use a hyphen to specify a range of IDs (10-15). <i>A link aggregate policy condition is not supported on the OmniSwitch 6560, OmniSwitch 6900-V72/C32, and OmniSwitch 9900.</i>

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove a source port from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond2 source port 3/1/1
-> policy condition cond3 source port 3/2/1-4
-> policy condition cond3 no source port
-> policy condition cond3 source linkagg 10
-> policy condition cond3 source linkagg 15-20
-> policy condition cond3 no source linkagg
```

## Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **linkagg** parameter added.

## Related Commands

## policy condition destination port

Configures a destination port number for a policy condition.

**policy condition** *condition\_name* **destination** {**port** *chassis/slot/port[-port2]* | **linkagg** *agg\_id[-agg\_id2]*}

**policy condition** *condition\_name* **no destination** {**port** | **linkagg**}

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number for which the frame is destined. Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id[-agg_id2]</i>	The link aggregate ID for which the frame is destined. Use a hyphen to specify a range of IDs (10-15). <i>A link aggregate policy condition is not supported on the OmniSwitch 6560, OmniSwitch 6900-V72/C32, and OmniSwitch 9900.</i>

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a destination port from a condition; however, at least one classification parameter must be associated with a condition.
- The destination port condition does not apply to routed traffic. Only bridged unicast traffic is supported (bridged multicast and broadcast traffic is not supported).

### Examples

```
-> policy condition cond3 destination port 4/2/1
-> policy condition cond4 destination port 4/3/1-4
-> policy condition cond4 no destination port
-> policy condition cond4 destination linkagg 10
-> policy condition cond4 destination linkagg 15-20
-> policy condition cond4 no destination linkagg
```

## Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **linkagg** parameter added.

## policy condition source port group

Associates a source port group with a policy condition. Use the **no** form of the command to remove a source port group from a condition.

**policy condition** *condition\_name* **source port group** *group\_name*

**policy condition** *condition\_name* **no source port group**

---

### Syntax Definitions

*condition\_name*

The name of the condition. May be an existing condition name or a new condition.

*group\_name*

The name of the source port group. Port groups are configured through the [policy port group](#) command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove a source port group from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond6 source port group portgr4
```

### Release History

Release 7.1.1; command was introduced.

---

## policy condition vrf

Associates a Virtual Routing and Forwarding (VRF) instance with a policy condition.

**policy condition** *condition\_name* **vrf** {*vrf\_name* / **default**}

**policy condition** *condition\_name* **no vrf**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>vrf_name</i>	The name of the VRF instance to which the QoS policy condition applies.
<b>default</b>	Specifies the default VRF instance.

### Defaults

By default, QoS policy conditions are not associated with any VRF instance. The policy applies across all instances.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a VRF instance from a condition; however, at least one classification parameter must be associated with a condition.
- VRF policies are configured in the default VRF, similar to how all other QoS policies are configured. If the VRF name specified does not exist, the policy is not allocated any system resources.
- Policies that do not specify a VRF name are considered global policies and are applied across all VRF instances and VLANs.
- Policies that specify the default VRF apply only to traffic in the default VRF instance.
- Policies that specify a VRF name apply only to traffic in the VRF instance associated with that name.
- The **switch** network group is supported only in VRF policies that specify the default VRF instance. If this group is specified in a global policy (no VRF specified) then the policy is applied across all VRF instances.

### Examples

```
-> policy condition cond6 vrf engr-vrf
-> policy condition cond7 vrf default
-> policy condition cond6 no vrf
```

## Release History

Release 7.1.1; command was introduced.

```

---

## policy condition fragments

Associates TCP packet fragments with a policy condition.

**policy condition** *condition\_name* **fragments**

**policy condition** *condition\_name* **no fragments**

---

### Syntax Definitions

*condition\_name*                      The name of the condition. May be an existing condition name or a new condition.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of the command to remove TCP packet fragments from a condition; however, at least one classification parameter must be associated with a condition.

### Examples

```
-> policy condition cond6 fragments
-> policy condition cond7 no fragments
```

### Release History

Release 7.1.1; command was introduced.

```

---

## policy condition appfp-group

Associates an Application Fingerprinting (AFP) application signature group with a policy condition.

**policy condition** *condition\_name* **appfp-group** *group\_name*

**policy condition** *condition\_name* **no appfp-group**

---

### Syntax Definitions

<i>condition_name</i>	The name of the condition. May be an existing condition name or a new condition.
<i>group_name</i>	The name of the AFP application group to which the QoS policy condition applies.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove an AFP group name from a condition; however, at least one classification parameter must be associated with a condition.
- The **appfp-group** policy condition is used in rules associated with QoS policy lists that are applied to AFP ports running in either the QoS or UNP mode.

### Examples

```
-> policy condition cond6 appfp-group my-p2p
-> policy condition cond6 no appfp-group
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.

<a href="#">show policy condition</a>	Shows information about policy conditions configured on the switch.

## MIB Objects

```
alaQoSConditionTable  
  alaQoSConditionAppFpGroup  
  alaQoSConditionAppFpGroupStatus
```

---

## policy condition vxlan

Creates a VXLAN Snooping policy condition to determine the parameters the switch uses to classify incoming encapsulated Virtual eXtensible Local Area Network (VXLAN) packets. Condition parameters may be configured when the condition is created; or parameters may be configured for an existing condition. At least one parameter must be configured for a condition.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove a parameter from the condition.

```
policy condition condition_name vxlan vni vxlan_id
  [inner source mac mac_address [mask mac_mask]]
  [inner source mac-group mac_group]
  [inner source ip ip_address [mask netmask]]
  [inner source ipv6 ip6_address [mask netmask]]
  [inner ip-protocol protocol]
  [inner l4-port {src src_port / dest dest_port}]
  [vxlan-port udp_port]
```

```
no policy condition condition_name
```

---

### Syntax Definitions

<i>condition_name</i>	The name of the VXLAN condition. Any alphanumeric string.
<i>vxlan_id</i>	A 24-bit numerical value that identifies traffic for a VXLAN segment. The valid range is 1– 2147483647.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- A policy condition and a policy action are combined to make a policy rule. See the [policy rule](#) command.
- Use the [qos apply](#) command to activate configuration changes.
- If multiple keywords are defined for a single condition, the traffic flow must match all of the parameters in the condition before the rule is enforced.
- Use the **no** form of the command to remove a condition from the switch configuration.

- The **vni** (VXLAN Network Identifier) parameter is required to configure a VM Snooping policy condition. The VXLAN header contains the VNI that is associated with the source MAC address of the Ethernet frame that is encapsulated in a VXLAN packet. The VNI represents the VXLAN segment ID to which the packet belongs.
- The **vxlan-port** condition parameter applies only to the outer header of an encapsulated VXLAN packet. All other **inner** condition parameters apply only to the inner header of the Ethernet frame that was encapsulated in a VXLAN packet.
- When a VXLAN Snooping policy condition is used in a policy rule, the rule is then applied only to traffic on ports that have the VM Snooping feature enabled.
- All existing policy actions are supported in combination with VXLAN Snooping policy conditions; there are no specific policy actions required for policy rules containing VXLAN Snooping policy conditions. Policy actions are applied to the outer header of an encapsulated VXLAN packet.
- See the “Configuring VXLAN Snooping” chapter in the *OmniSwitch AOS Release 8 Data Center Switching Guide* for more information about using VXLAN Snooping policy rules.

## Examples

```
-> policy condition cond4 vxlan vni 23000
```

The following is an example of using VM Snooping policy conditions in a policy rule that is added to a UNP policy list:

```
-> policy condition c1 vxlan vni 1234 udp-port 4789
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c1 vxlan inner source ip 10.10.10.10
-> policy action a1 disposition dscp 45
-> policy rule r1 condition c1 action a1 no default-list
-> policy list list1 type UNP
-> policy list list1 rule r1
-> qos apply
```

## Release History

Release 7.3.4; command was introduced.

## policy condition vxlan inner source mac

Configures a source MAC address as a policy condition for a VM Snooping policy rule. This type of condition applies to the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition** *condition\_name* **vxlan inner source mac** *mac\_address* [**mask** *mac\_mask*]

**policy condition** *condition\_name* **vxlan no source mac**

---

### Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>mac_address</i>	The source MAC address of a VM (inner MAC address of an encapsulated VXLAN frame).
<i>mac_mask</i>	Optional. The mask for the source MAC address (for example, ff:ff:ff:ff:ff:ff).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the VM source MAC address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VM Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner source mac 00:11:22:33:44:00
-> policy condition c2 vxlan inner source mac 00:20:da:05:f6:23 mask
ff:ff:ff:ff:ff:ff
-> policy condition c2 vxlan no source mac
```

---

## policy condition vxlan inner source mac-group

Configures a source MAC address group as a policy condition for a VXLAN Snooping policy rule. This type of condition checks to see if the source MAC address of the inner Ethernet frame of an encapsulated VXLAN packet matches any of the MAC addresses specified in the MAC address group.

**policy condition** *condition\_name* **vxlan inner source mac-group** *group\_name*

**policy condition** *condition\_name* **vxlan no source mac-group**

---

### Syntax Definitions

*condition\_name* The name of an existing policy condition.

*group\_name* The name of the source MAC group, configured through the **policy mac group** command.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the source MAC address group name from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner source mac-group vm-macs
```

```
-> policy condition c1 vxlan no source mac-group
```

### Release History

Release 7.3.4; command was introduced.

---

## policy condition vxlan inner source ip

Configures a source IPv4 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition** *condition\_name* **vxlan inner source ip** *ip\_address* [**mask** *netmask*]

**policy condition** *condition\_name* **vxlan no source ip**

---

### Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>ip_address</i>	A specific source IP address.
<i>netmask</i>	The network mask for the source IP address (for example, 255.0.0.0, 255.255.0.0).

### Defaults

parameter	default
<i>netmask</i>	IP address class

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the source IP address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner source ip 10.1.1.2
-> policy condition c2 vxlan inner source ip 10.1.1.3 mask 255.0.0.0
-> policy condition c1 vxlan no source ip
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

  alaQoSConditionVmSourceIpMask
```

---

## policy condition vxlan inner source ipv6

Configures a source IPv6 address as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the source IP address of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition** *condition\_name* **vxlan inner source ipv6** *ipv6\_address* [**mask** *netmask*]

**policy condition** *condition\_name* **vxlan no source ipv6**

---

### Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>ipv6_address</i>	A specific source IPv6 address.
<i>netmask</i>	The network mask for the source IPv6 address.

### Defaults

parameter	default
<i>netmask</i>	IPv6 address class

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the source IPv6 address from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner source ipv6 ::1234:531F:BCD2:F34A
-> policy condition c1 vxlan no source ipv6
```

### Release History

Release 7.3.4; command was introduced.

```

---

## policy condition vxlan inner ip-protocol

Configures a an IP protocol number as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the IP protocol of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition** *condition\_name* **vxlan inner ip-protocol** *protocol*

**policy condition** *condition\_name* **vxlan no ip-protocol**

---

### Syntax Definitions

*condition\_name*                      The name of an existing policy condition.  
*protocol*                                The IP protocol number. The range is 0–255.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the IP protocol number from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter VXLAN packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner ip-protocol 6
-> policy condition c1 vxlan no ip-protocol
```

### Release History

Release 7.3.4; command was introduced.

  alaQoSConditionVmIpProtocol  
  alaQoSConditionVmIpProtocolStatus
```

---

## policy condition vxlan inner l4-port

Configures a Layer 4 (UDP or TCP) source port and/or destination port as a policy condition for a VXLAN Snooping policy rule. This type of condition applies to the Layer 4 port of the inner Ethernet frame of an encapsulated VXLAN packet.

**policy condition** *condition\_name* **vxlan inner l4-port** {**src** *src\_port* | **dest** *dest\_port*}

**policy condition** *condition\_name* **vxlan no l4-port**

---

### Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>src_port</i>	The source port number. The valid range is 0–65535
<i>dest_port</i>	The destination port number. The valid range is 0–65535

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the Layer 4 port number from a condition; however, at least one classification parameter must be associated with a condition.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan inner l4-port dest 9445
-> policy condition c1 vxlan inner l4-port src 4000
-> policy condition c2 vxlan inner l4-port dest 8100 inner l4-port src 3000
-> policy condition c1 vxlan no l4-port
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy condition vxlan</a>	Creates a VXLAN Snooping policy condition.

  alaQoSConditionVmL4DestPort  
  alaQoSConditionVmL4DestPortStatus
```

---

## policy condition vxlan vxlan-port

Configures a UDP destination port number as a policy condition for a VXLAN Snooping policy rule. This number is found in the outer IP header of an encapsulated VXLAN packet.

**policy condition** *condition\_name* vxlan vxlan-port *udp\_port*

**policy condition** *condition\_name* vxlan no vxlan-port

---

### Syntax Definitions

<i>condition_name</i>	The name of an existing policy condition.
<i>udp_port</i>	The UDP destination port number of the VXLAN packet. The valid range is 0–65535

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the VXLAN port number from a condition; however, at least one classification parameter must be associated with a condition.
- VXLAN packets use the well-known UDP destination port 4789 by default.
- The **vxlan** policy conditions are used to filter packets received on VXLAN Snooping ports.

### Examples

```
-> policy condition c1 vxlan vxlan-port 6000
-> policy condition c1 vxlan 7000
-> policy condition c1 vxlan no vxlan-port
```

### Release History

Release 7.3.4; command was introduced.

```

---

## policy action

Configures or deletes a QoS action. A QoS action describes how traffic that matches a particular QoS condition should be treated. It may specify a particular set of bandwidth and queue parameters, or it may simply specify whether the flow is allowed or denied on the switch.

This section describes the base command. Optional keywords are listed below and described as separate commands later in this chapter. (Options may be used in combination but are described separately for ease in explanation.) Use the **no** form for keywords to remove the parameter from the action.

Note that some action parameters may not be supported depending on the platform you are using. Also some action parameters may not be supported with some conditions. See the condition in the *OmniSwitch AOS Release 8 Network Configuration Guide*.

**policy action** *action\_name*

**[disposition {accept | drop | deny}]**  
**[shared]**  
**[priority** *priority\_value***]**  
**[maximum bandwidth** *bps***]**  
**[maximum depth** *bytes***]**  
**[cir** *bps* **[cbs** *bytes***] [pir** *bps***] [pbs** *bytes***] [color-only]**  
**[cpu priority** *priority***]**  
**[tos** *tos\_value***]**  
**[802.1p** *802.1p\_value***]**  
**[dscp** *dscp\_value***]**  
**[map {802.1p | tos | dscp} to {802.1p | tos| dscp} using** *map\_group***]**  
**[permanent gateway ip** *ip\_address***]**  
**[permanent gateway ipv6** *ipv6\_address***]**  
**[port-disable]**  
**[redirect port** *chassis/slot/port***]**  
**[redirect linkagg** *link\_agg***]**  
**[no-cache]**  
**[{ingress | egress | ingress egress | no} mirror {chassis/slot/port | session** *session\_id***]**

**policy no action** *action\_name*

---

## Syntax Definitions

*action\_name* A name for the action, any alphanumeric string.

## Defaults

By default, no drop algorithm is configured for the action, and any queues created by the action are not shared.

parameter	default
<b>accept   drop   deny</b>	accept

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Any condition parameters that the hardware supports will be used to classify the traffic; any condition parameters that are not supported by the hardware will not be used to classify traffic, and the event will be logged in the QoS log.
- Bandwidth parameters may be specified when the action is created or may be specified as separate commands.
- Use the **qos apply** command to activate configuration changes.
- Use the **no** form of the command to remove a QoS action from the configuration.
- If the **configuration snapshot** command is entered after the **policy action** command is configured, the resulting ASCII file will include the following additional syntax for the **policy action** command:

**from {cli | ldap | blt}**

This syntax indicates how the action was created. The **cli** and **ldap** options may be changed by a user modifying the ASCII file; however, changing this setting is not recommended. The **blt** option indicates a built-in action, this setting is not configurable.

## Examples

```
-> policy action action1 accept
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.6R1; **session** keyword added.

## Related Commands

<b>policy condition</b>	Configures a condition associated with the action.
<b>qos apply</b>	Applies configured QoS and policy settings to the current configuration.
<b>show policy action</b>	Displays information about policy actions.

## MIB Objects

```

  alaQoSActionName
  alaQoSActionSource
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionSource
```

## policy action disposition

Configures a disposition for a policy action.

**policy action** *action\_name* **disposition** {**accept** | **drop** | **deny**}

**policy action** *action\_name* **no disposition**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<b>accept</b>	Specifies that the switch should accept the flow.
<b>drop</b>	Specifies that the switch should silently drop the flow.
<b>deny</b>	Specifies that the switch should drop the flow and issue an ICMP message indicating the flow was dropped for administrative reasons. Currently this option will provide the same result as <b>drop</b> ; that is, the flow is silently dropped.

### Defaults

parameter	default
<b>accept</b>   <b>drop</b>   <b>deny</b>	accept

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of this command to remove a disposition from an action.

### Examples

```
-> policy action a3 disposition deny
-> policy action a3 no disposition
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

## MIB Objects

```

  alaQoSActionName
alaQoSActionDispositionalalaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionDisposition
```

---

## policy action shared

Enables bandwidth sharing among multiple QoS rules that use the same maximum bandwidth action.

**policy action** *action\_name* **shared**

**policy action** *action\_name* **no shared**

---

### Syntax Definitions

*action\_name*                      The name of the action.

### Defaults

By default, queues created by an action are *not* shared.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the **shared** policy action is not specified, then each bandwidth rule will implement a separate instance of the specified bandwidth allocation.
- Use the **no** form of the command to disable sharing.

### Example

```
-> policy action action5 maximum bandwidth 10m shared
-> policy action action6 maximum bandwidth 10m shared
-> policy action action5 no shared
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### **qos apply**

Applies configured QoS and policy settings to the current configuration.

### **policy action maximum bandwidth**

Creates a maximum bandwidth policy action.

### **show policy action**

Displays information about policy actions.

## MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionShared
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionShared
```

---

## policy action priority

Configures the priority for queuing a flow to which the QoS action applies.

**policy action** *action\_name* **priority** *priority\_value*

**policy action** *action\_name* **no priority**

---

### Syntax Definitions

*action\_name*

The name of the action.

*priority\_value*

The priority given to scheduling traffic on the output port. Values range from 0 (lowest) to 7 (highest).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a priority value from an action.
- This priority value is independent of 802.1Q, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values.

### Examples

```
-> policy action action1 priority 1
-> policy action action1 no priority
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

## MIB Objects

  alaQoSActionName
  alaQoSActionPriority
  alaQoSActionPriorityStatus
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionPriority
  alaQoSAppliedActionPriorityStatus
```

---

## policy action maximum bandwidth

Configures a maximum bandwidth value for a policy action.

**policy action** *action\_name* **maximum bandwidth** *bps[k | m | g | t]*

**policy action** *action\_name* **no maximum bandwidth**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bps[k   m   g   t]</i>	The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, <b>10</b> ) or with abbreviated units (for example, <b>10k</b> , <b>5m</b> , <b>1g</b> , <b>1t</b> ).

### Defaults

parameter	default
<i>k   m   g   t</i>	<b>k</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a maximum bandwidth value from an action.
- If the maximum bandwidth value is specified as an integer, without an abbreviated unit designation, the value is applied in kbps by default. For example, if the number **10** is specified, **10K** is the maximum bandwidth value used. However, if **10G** is specified, the maximum bandwidth value applied is **10** gbps.
- Use the **shared** policy action to enabling sharing of bandwidth across policy rules that specify the same maximum bandwidth action.

### Examples

```
-> policy action action3 maximum bandwidth 10000
-> policy action action4 maximum bandwidth 10k shared
-> policy action action5 maximum bandwidth 10k shared
-> policy action action4 no maximum bandwidth
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

## MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionMaximumBandwidth
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionMaximumBandwidth
```

---

## policy action maximum depth

Configures the maximum queue depth or bucket size assigned to this action, in bytes. The queue depth or bucket size determines the amount of buffer allocated to each queue. When the queue depth or bucket size is reached, the switch starts dropping packets.

**policy action** *action\_name* **maximum depth** *bytes* [**K** (kilo)| **M** (mega) | **G** (giga) | **T** (tera)]

**policy action** *action\_name* **no maximum depth**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bytes</i> [ <b>K</b>   <b>M</b>   <b>G</b>   <b>T</b> ]	The maximum queue depth in bytes. The value may be entered as an integer (for example, <b>10</b> ) or with abbreviated units (for example, <b>10k</b> , <b>5m</b> , <b>1g</b> ). If the value is entered as an integer, the switch uses the default unit of <b>K(kilo)</b> .

### Defaults

parameter	default
<b>K</b>   <b>M</b>   <b>G</b>   <b>T</b>	<b>K</b>
<i>bytes</i>	<b>0</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a maximum depth value from a policy action.
- If the maximum depth value is specified as an integer, without an abbreviated unit designation, the value is applied in Kbytes by default. For example, if the number **10** is specified, **10K** bytes is the maximum depth value used. However, if **10G** is specified, the maximum depth value applied is **10G** bytes.
- A maximum depth action is used in combination with a maximum bandwidth action.

### Examples

```
-> policy action action2 maximum depth 100
-> policy action action2 no maximum depth
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

  alaQoSActionName
  alaQoSActionMaximumDepth
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionMaximumDepth
```

---

## policy action cir

Configures a Tri-Color Marking (TCM) policy action. This type of action includes parameters for Committed Information Rate (CIR), Committed Burst Size (CBS), Peak Information Rate (PIR), and Peak Burst Size (PBS). The TCM policier meters and marks packets red, green, or yellow based on the parameter values of this policy action.

**policy action** *action\_name* **cir** *bps* [**cbs** *bytes*] [**pir** *bps*] [**pbs** *bytes*] [**color-only**]

**policy action** *action\_name* **no cir**

**policy action** *action\_name* **no pir**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<i>bps</i> [ <b>k</b>   <b>m</b>   <b>g</b>   <b>t</b> ]	The maximum amount of bandwidth, in bits-per-second, for all traffic that ingresses on the port. The value may be entered as an integer (for example, <b>10</b> ) or with abbreviated units (for example, <b>10k</b> , <b>5m</b> , <b>1g</b> , <b>1t</b> ).
<i>bytes</i>	The desired value for maximum bucket size, in bytes.
<b>color-only</b>	Disables TCM rate limiting based on the metering results. Packets are only marked the specific color that applies to the level of packet conformance.

### Defaults

parameter	default
<b>cir pir</b> <i>bps</i>	0
<b>cbs pbs</b> <i>bytes</i>	10K
<b>k</b>   <b>m</b>   <b>g</b>   <b>t</b>	<b>k</b>

By default, this action enables rate limiting based on TCM marking and metering.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the TCM parameter values.
- If the **color-only** parameter is specified with this command, the TCM action will only mark packet color; packets are not rate limited based on the metering results. In this case, packets are then subject to any rate limiting specifications as defined in the queue management configuration for the switch.

- This implementation of TCM supports two rate limiting modes: Single-Rate (srTCM) and Two-Rate (trTCM). The srTCM mode marks packets based only on the CIR and the two burst sizes: CBS and PBS. The trTCM mode marks packets based on both the CIR and PIR and their associated CBS and PBS values.
- There is no explicit CLI command to configure the mode (srTCM or trTCM) in which the TCM meter operates. Instead, the mode is determined by the CIR and PIR values configured for the policy action. If the PIR value is greater than the CIR value, trTCM is used. If the PIR value is less than the CIR value, srTCM is used.
- Configuring CIR and CBS is similar to configuring a maximum bandwidth. Configuring CIR and PIR is similar to configuring maximum depth.
- The number of packets counted as a result of the counter color mode setting is displayed using the **show active policy rule** command. These statistics are only shown for those rules that are configured with a TCM policy action.

## Examples

The following command examples configure srTCM (the default):

```
-> policy action A3 cir 10M
-> policy action A4 cir 10M cbs 4k
-> policy action A5 cir 10M cbs 4k pir 10M
-> policy action A6 cir 10M cbs 4k pir 10M pbs 4k
-> policy action a7 cir 5M cbs 2k color-only
-> policy action A3 no cir
-> policy action A5 no pir
```

The following command examples configure trTCM (note that PIR is greater than CIR):

```
-> policy action A7 cir 10M cbs 4k pir 20M
-> policy action A8 cir 10M cbs 4k pir 20M pbs 40M
-> policy action a9 cir 5M cbs 1M pbs 10M pbs 2M color-only
-> policy action A7 no cir
```

---

## policy action cpu priority

Configures a CPU priority policy action.

**policy action** *action\_name* **cpu priority** *priority*

**policy action** *action\_name* **no cpu priority**

---

### Syntax Definitions

*action\_name*

The name of the action.

*priority*

The CPU queue on which packets destined for the CPU are received.  
The valid range is 0–31.

### Defaults

By default, the CPU priority is set to zero.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Use the **no** form of this command to remove the CPU priority parameter value.

### Examples

```
-> policy action A7 cpu priority 15
-> policy action A8 cpu priority 31
-> policy action A7 no cpu priority
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

  alaQoSAppliedActionCPUPriorityStatus
```

---

## policy action tos

Configures a Type of Service (ToS) bits value to be applied to packets in outgoing flows to which the specified policy applies.

**policy action** *action\_name* **tos** *tos\_value*

**policy action** *action\_name* **no tos**

---

### Syntax Definitions

*action\_name*

The name of the action.

*tos\_value*

The three-bit priority value in the IP header that should be set on outgoing frames in flows that match the specified policy. Values range from 0 (lowest priority) to 7 (highest priority).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a ToS value from a policy action.
- Note that specifying both ToS and DSCP in the same action is *not* allowed.

### Examples

```
-> policy action action3 tos 4
-> policy action action3 no tos
```

### Release History

Release 7.1.1; command was introduced.

---

## policy action 802.1p

Configures a value to be set in the 802.1p bits of the 802.1Q byte of an outgoing frame for traffic that matches a policy with this action.

**policy action** *action\_name* **802.1p** *802.1p\_value*

**policy action** *action\_name* **no 802.1p**

---

### Syntax Definitions

*action\_name*

The name of the action.

*802.1p\_value*

The priority value to be set in 802.1Q frames. Values range from 0 (lowest priority) to 7 (highest priority).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove an 802.1p value from a policy action.
- Note that specifying both ToS and DSCP in the same action is not allowed.

### Examples

```
-> policy action action4 802.1p 7
-> policy action action4 no 802.1p
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedAction8021p
```

---

## policy action dscp

Configures a Differentiated Services Code Point (DSCP) value to be set in an outgoing flow for traffic that matches rules with this action.

**policy action** *action\_name* **dscp** *dscp\_value*

**policy action** *action\_name* **no dscp**

---

### Syntax Definitions

*action\_name* The name of the action.

*dscp\_value* The DSCP value to be set, in the range 0–63.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a DSCP value from a policy action.
- Note that specifying both ToS and DSCP in the same action is *not* allowed.

### Examples

```
-> policy action action2 dscp 61
-> policy action action2 no dscp
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

    alaQoSActionDscp

alaQoSAppliedActionTable

    alaQoSAppliedActionName

    alaQoSAppliedActionDscp

---

## policy action map

Configures a mapping group for a policy action.

**policy action map** {802.1p | tos | dscp} to {802.1p | tos | dscp} using *map\_group*

**policy action no map**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<b>802.1p</b>	Indicates that an 802.1p value should be mapped.
<b>tos</b>	Indicates that a ToS value should be mapped.
<b>dscp</b>	Indicates that a DSCP value should be mapped.
<i>map_group</i>	The name of the map group, configured through the <a href="#">policy map group</a> command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When remapping is configured with this command and a flow matches a policy with this remapping action, and the 802.1p, ToS, or DSCP setting in the incoming flow is specified by the map group, the value will be remapped in the outgoing flow according to the map group.
- If the 802.1p, ToS, or DSCP setting in the incoming flow is not a value specified in the map group, the switch will do one of two things:

If the *remap from* and *remap to* types are the same (802.1p to 802.1p, ToS to ToS, or DSCP to DSCP), the values in the outgoing flow will be unchanged. If the *remap from* and *remap to* types are not the same (for example: 802.1p to ToS), the switch will determine the outgoing 802.1p and ToS based on whether or not the port is trusted or untrusted).

- Use the **no** form of the command to delete the map group from the configuration.

### Examples

```
-> policy action a1 map 802.1p to 802.1p using mapGroup2
-> policy action a2 map 802.1p to tos using mapGroup3
```

## Release History

Release 7.1.1; command was introduced.

---

## policy action permanent gateway-ip

Used for Policy Based Routing (PBR). Routed flows to which this action is applied will be directed to the IP address specified in the action regardless of whether or not a route already exists in the switch routing table.

**policy action** *action\_name* **permanent gateway-ip** *ip\_address*

**policy action** *action\_name* **no permanent gateway-ip**

---

### Syntax Definitions

*action\_name* The name of the action.

*ip\_address* The destination IP address to which packets will be routed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of the command to remove a gateway IP address from a policy action.
- If the gateway goes down, the traffic to be routed over the gateway will be dropped.

### Examples

```
-> policy action pbr2 permanent gateway-ip 10.10.2.1
-> policy action pbr2 no permanent gateway-ip
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.

```

---

## policy action permanent gateway-ipv6

Used for Policy Based Routing (PBR). Routed flows to which this action is applied will be directed to the IPv6 address specified in the action regardless of whether or not a route already exists in the switch routing table.

**policy action** *action\_name* **permanent gateway-ipv6** *ipv6\_address*

**policy action** *action\_name* **no permanent gateway-ipv6**

---

### Syntax Definitions

*action\_name*                      The name of the action.  
*ipv6\_address*                      The destination IPv6 address to which packets will be routed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of the command to remove a gateway IPv6 address from a policy action.
- If the gateway goes down, the traffic to be routed over the gateway will be dropped.

### Examples

```
-> policy action pbr2 permanent gateway-ipv6 2607:f0d0:2001:000a:0000:0000:0010
-> policy action pbr2 no permanent gateway-ipv6
```

### Release History

Release 7.1.1; command was introduced.

---

## policy action port-disable

Administratively disables the source port of the traffic to which this action is applied.

**policy action** *action\_name* **port-disable**

**policy action** *action\_name* **no port-disable**

---

### Syntax Definitions

*action\_name*                      The name of the action.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove **port-disable** from the policy action.
- An SNMP trap is sent when a port is administratively disabled through a port disable action or a UserPorts shutdown function.
- To enable a port disabled by this action, use the **interfaces** or **interfaces fec** command to administratively enable the port, or physically disconnect and reconnect the port cable.

### Examples

```
-> policy action pd01 port-disable
-> policy action pb02 no port-disable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.

  alaQoSAppliedActionName
  alaQoSAppliedActionPortdisable
```

---

## policy action redirect port

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified port instead of the port to which the traffic was destined.

**policy action** *action\_name* **redirect port** *chassis/slot/port*

**policy action** *action\_name* **no redirect port**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number that will receive the redirected traffic.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove **redirect port** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect port must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect port is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified port or link aggregate and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will *not* trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port must belong to VLAN A (tagged or default VLAN).

## Examples

```
-> policy action rp01 redirect port 1/12/1
-> policy action rp01 no redirect port
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

## MIB Objects

```
alaQoSActionTable
  alaQoSActionName
  alaQoSActionRedirectSlot
  alaQoSActionRedirectPort
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionRedirectSlot
  alaQoSAppliedActionRedirectPort
```

---

## policy action redirect linkagg

Redirects all traffic (flooded, bridged, routed, and multicast) matching a redirect policy to the specified link aggregate ID instead of the link aggregate to which the traffic was destined.

**policy action** *action\_name* **redirect linkagg** *agg\_id*

**policy action** *action\_name* **no redirect linkagg**

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<i>agg_id</i>	The link aggregate ID number (0–32) to assign to the specified VLAN. See the “Link Aggregation Commands” chapter in this guide.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove **redirect linkagg** from the policy action.
- When redirecting routed traffic from VLAN A to VLAN B, the redirect link aggregate ID must belong to VLAN B (tagged or default VLAN).
- Routed packets (from VLAN A to VLAN B) are not modified after they are redirected; the source and MAC address remain the same. In addition, if the redirect link aggregate ID is tagged, the redirected packets will have a tag from the ingress VLAN A.
- If a route exists for the redirected flow, then redirected packets are the final post-routing packets.
- If a route does not exist for the redirected flow, the flow is not redirected to the specified link aggregate ID and is “blackholed”. As soon as a route is available, the flow is then redirected as specified in the policy.
- In most cases, a redirected flow will *not* trigger an update to the routing and ARP tables. If necessary, create a static route for the flow or assign the redirect port or link aggregate ID to the ingress VLAN (VLAN A) to send packets to the redirect port until a route is available.
- When redirecting bridged traffic on VLAN A, the redirect port or link aggregate ID must belong to VLAN A (tagged or default VLAN).

## Examples

```
-> policy action rp01 redirect linkagg 2
-> policy action rp01 no redirect linkagg 2
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

  alaQoSAppliedActionName
  alaQoSAppliedActionRedirectAgg
```

---

## policy action no-cache

Disables logging of rule entries to the hardware cache.

**policy action** *action\_name* **no-cache**

**policy action** *action\_name* **no no-cache**

---

### Syntax Definitions

*action\_name*                      The name of the action.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove **no-cache** from the policy action.
- Recommended for use when applied to traffic going to the switch.

### Examples

```
-> policy action nc01 no-cache
-> policy action nc01 no no-cache
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">qos apply</a>	Applies configured QoS and policy settings to the current configuration.
<a href="#">policy action</a>	Creates a policy action.
<a href="#">show policy action</a>	Displays information about policy actions.

## MIB Objects

  alaQoSActionName
  alaQoSActionNocache
alaQoSAppliedActionTable
  alaQoSAppliedActionName
  alaQoSAppliedActionNocache
```

---

## policy action mirror

Mirrors ingress, egress, or both ingress and egress packets that match a mirroring policy to the specified port.

**policy action** *action\_name* [**ingress** | **egress** | **ingress egress**] **mirror** {*chassis/slot/port* | **session** *session\_id*}

**policy action** *action\_name* **no mirror** {*chassis/slot/port* | **session** *session\_id*}

---

### Syntax Definitions

<i>action_name</i>	The name of the action.
<b>ingress</b>	Mirrors ingress packets.
<b>egress</b>	Mirrors egress packets.
<b>ingress egress</b>	Mirrors ingress and egress packets.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number that will receive the mirrored traffic.
<i>session_id</i>	Mirroring session identifier. <i>This parameter is supported only on the OmniSwitch 9900.</i>

### Defaults

parameter	default
<b>ingress   egress   ingress egress</b>	<b>ingress</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove **mirror** from the policy action.
- Use this command to configure a mirror-to-port (MTP) and mirror-to-session action used for policy based mirroring.
- Only one policy-based MTP session is supported at any given time either port-based policy mirroring or session-based policy mirroring. As a result, all mirroring policies must specify the same destination port or same port mirroring session ID.
- Policy based mirroring and the port based mirroring feature can run simultaneously on the same switch.

## Examples

```
-> policy action a1 mirror 1/7/1 (default ingress)
-> policy action a1 ingress mirror 1/7/1
-> policy action a1 egress mirror 1/7/1
-> policy action a1 ingress egress mirror 1/7/1
-> policy action a1 no mirror
-> policy action a1 mirror session 1
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.6R1; **session** keyword introduced.

## Related Commands

  alaQoSActionMirrorMode
  alaQoSActionMirrorModeStatus
```

---

## show policy network group

Displays information about pending and applied policy network groups.

**show [applied] policy network group** [*network\_group*]

---

### Syntax Definitions

**applied** Displays only network groups that have been applied.

*network\_group* The name of the policy network group for which you want to display information; or a wildcard sequence of characters for displaying information about network groups with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information for all policy network groups displays unless *network\_group* is specified.

### Examples

```
-> show policy network group
Group Name           : netg1
State                = new,
Entries              = 198.206.10.1
```

```
-> show policy network group
Group Name           : group1
Entries              = 203.185.129.0 mask 255.255.255.0,
                    203.185.131.192 mask 255.255.255.192,
                    203.185.132.0 mask 255.255.252.0,
                    204.226.0.0 mask 255.255.0.0
```

### output definitions

---

<b>Group Name</b>	The name of the port group, configured through the <b>policy network group</b> command.
<b>State</b>	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Entries</b>	The IP addresses associated with the network group.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

[policy network group](#) Configures policy network groups.

## MIB Objects

```
alaQoSNetworkGroupsTable
  alaNetworkGroupsName

```

---

## show policy service

Displays information about pending and applied policy services.

**show [applied] policy service** [*service\_name*]

---

### Syntax Definitions

**applied** Displays only policy services that have been applied.

*service\_name* The name of the service for which you want to display information; or a wildcard sequence of characters for displaying information about services with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information about all policy services is displayed unless *service\_name* is specified.

### Examples

```
-> show policy service
Service name           : s1
State                  = new,
Destination UDP port   = 1001-2004
```

### output definitions

---

<b>Service Name</b>	The name of the port group, configured through the <b>policy service</b> command.
<b>State</b>	This field appears if the service was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>IPProto</b>	The IP protocol associated with the service.
<b>SrcPort</b>	A source port associated with the service.
<b>DstPort</b>	A destination port associated with the service.

---

## Release History

Release 7.1.1; command was introduced.

## show policy service group

Displays information about pending and applied policy service groups.

**show** [**applied**] **policy service group** [*service\_group*]

---

### Syntax Definitions

**applied** Displays only policy service groups that have been applied.

*service\_group* The name of the service group for which you want to display information; or a wildcard sequence of characters for displaying information about service groups with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information for all policy service groups displays unless *service\_group* is specified.

### Examples

```
-> show policy service group
Group Name      : mgmt
State           = new,
Entries        = ftp,
                http,
                https,
                snmp,
                ssh,
                telnet
```

#### *output definitions*

---

<b>Group Name</b>	The name of the port group, configured through the <b>policy service group</b> command.
<b>State</b>	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Entries</b>	The services associated with the group. Services are configured through the <b>policy service</b> command.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

### [policy service group](#)

Configures a service group and its associated services. A service group may be attached to a policy condition.

  alaQoSServiceGroupServiceName
alaQoSAppliedServiceGroupTable
  alaQoSAppliedServiceGroupServiceName
```

---

## show policy mac group

Displays information about pending and applied MAC groups.

**show** [**applied**] **policy mac group** [*mac\_group*]

---

### Syntax Definitions

**applied** Displays only MAC groups that have been applied.

*mac\_group* The name of the MAC group for which you want to display information; or a wildcard sequence of characters for displaying information about MAC groups with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information for all policy MAC groups displays unless *mac\_group* is specified.

### Examples

```
-> show policy mac group
Group Name           : mgl
State                = new,
Entries              = 00:02:9A:44:5E:10 mask 00:00:00:FF:FF:FF,
                    00:11:01:00:00:01 mask 00:00:00:FF:FF:FF
                    00:02:9A:44:5E:20
```

#### *output definitions*

---

<b>Group Name</b>	The name of the port group, configured through the <b>policy mac group</b> command.
<b>State</b>	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Entries</b>	The MAC addresses associated with the group.

## show policy port group

Displays information about pending and applied policy port groups.

**show** [**applied**] **policy port group** [*group\_name*]

---

### Syntax Definitions

**applied** Displays only policy port groups that have been applied.

*group\_name* The name of the policy port group for which you want to display information; or a wildcard sequence of characters for displaying information about port groups with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information for all policy port groups displays unless *group\_name* is specified.

### Examples

```
-> show policy port group
Group Name      : pgl
State          = new,
Entries        = 1/2/1,
                1/3/1,
                1/4/1,
                3/1/11
```

#### *output definitions*

---

<b>Group Name</b>	The name of the port group, configured through the <b>policy port group</b> command or built-in port groups automatically set up by the switch ( <b>Slot01</b> , <b>Slot02</b> , <b>Slot03</b> , etc.).
<b>State</b>	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Entries</b>	The slot/port combinations associated with the port group.

## show policy map group

Displays information about pending and applied policy map groups.

**show** [**applied**] **policy map group** [*group\_name*]

---

### Syntax Definitions

**applied** Displays only policy map groups that have been applied.

*group\_name* The name of the policy map group for which you want to display information; or a wildcard sequence of characters for displaying information about map groups with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Information for all policy map groups displays unless *group\_name* is specified.

### Examples

```
-> show policy map group
Group Name           : m1
State                = new,
Entries              = 0:0,
                    1:9,
                    2:18,
                    3:27,
                    4:36,
                    5:45,
                    6:54,
                    7:63
```

#### *output definitions*

---

<b>Group Name</b>	The name of the map group, configured through the <b>policy map group</b> command.
<b>State</b>	This field appears if the group was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Entries</b>	The slot/port combinations associated with the port group.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

### [policy map group](#)

Configures a map group and its associated mappings for 802.1p, Type of Service (ToS), or Differentiated Services Code Point (DSCP) values.

## MIB Objects

```
alaQoSMapGroupsTable
  alaQoSMapGroupsName
  alaQoSMapGroupsSource

  alaQoSAppliedMapGroupKey
  alaQoSAppliedMapGroupKeyEnd
  alaQoSAppliedMapGroupValue
```

---

## show policy action

Displays information about pending and applied policy actions configured on the switch.

**show [applied] policy action** [*action\_name*]

---

### Syntax Definitions

<b>applied</b>	Displays only actions that have been applied to the QoS configuration for the switch.
<i>action_name</i>	The name of the action for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Information for all policy actions displays unless *action\_name* is specified.
- When the optional **applied** parameter is used, pending QoS actions are not displayed.

### Examples

```
-> show policy action
Action name           : a1
  Committed Information Rate   = 10.0M,
  Committed Burst size        = 5.00M,
  Peak Information Rate        = 20.0M,
  Peak Burst size             = 5.00M

Action name           : a2
  State                   = new,
  Disposition             = deny

Action name           : a3
  State                   = new,
  Priority                 = 7,
```

```

-> show applied policy action
Action name                : a1
  Committed Information Rate = 10.0M,
  Committed Burst size     = 5.00M,
  Peak Information Rate    = 20.0M,
  Peak Burst size         = 5.00M

```

### *output definitions*

---

<b>Action Name</b>	The name of the action, configured through the <b>policy action</b> command.
<b>State</b>	This field appears if the action was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Policy Action Parameters</b>	Displays the configured policy action parameters.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

**policy action** Creates a policy action. A QoS action is a particular set of bandwidth and queue parameters that may be applied to a flow matching particular QoS conditions.

## MIB Objects

```

alaQoSActionTable
  alaQoSActionName
  alaQoSActionSource
  alaQoSActionDisposition
  alaQoSActionShared
  alaQoSActionMinimumBandwidth
  alaQoSActionMaximumBandwidth
  alaQoSActionMaximumDepth

  alaQoSAppliedActionDisposition
  alaQoSAppliedActionShared
  alaQoSAppliedActionMinimumBandwidth
  alaQoSAppliedActionMaximumBandwidth
  alaQoSAppliedActionMaximumDepth

```

---

## show policy condition

Displays information about pending and applied policy conditions.

**show [applied] policy condition** [*condition\_name*]

---

### Syntax Definitions

#### **applied**

Displays only conditions that have been applied to the QoS configuration for the switch.

#### *condition\_name*

The name of the condition for which you want to display information; or a wildcard sequence of characters for displaying information about actions with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Information for all policy conditions displays unless *condition\_name* is specified.
- When the optional **applied** parameter is used, pending QoS conditions are not displayed.

### Examples

```
-> show policy condition
Condition name           : c1
Source VLAN             = 1001

Condition name           : c2
State                   = new,
Source IP                = 10.2.2.1,
Destination UDP port    = 17

-> show applied policy condition
Condition name           : c1
Source VLAN             = 1001
```

#### *output definitions*

---

#### **Condition Name**

The name of the condition, configured through the **policy condition** command.

*output definitions (continued)*

---

<b>State</b>	This field appears if the condition was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Policy Condition Parameters</b>	Displays the configured policy condition parameters.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

**policy condition** Creates a policy condition. The condition determines what parameters the switch uses to classify incoming flows.

**MIB Objects**

---

## show active policy rule

Displays information about pending and applied policy rules that are active (enabled) on the switch.

**show active policy rule** [*rule\_name*]

---

### Syntax Definitions

*rule\_name*                      The name of the rule for which you want to display information; or a wildcard sequence of characters for displaying information about rules with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **show policy rule** command to display inactive as well as active policy rules.
- Information for all rules is displayed unless *rule\_name* is specified.
- Applied rules may or may not be active on the switch. Applied rules are inactive if they have been administratively disabled with the **disable** option in the **policy rule** command.

### Examples

```
-> show active policy rule
Rule name           : r1
Condition name      = c1,
Action name         = a1,
Packets             = 4166772,
Bytes               = 266665728
```

### *output definitions*

---

<b>Rule name</b>	The name of the policy rule, configured through the <b>policy rule</b> command.
<b>Condition name</b>	The name of the condition configured for this rule.
<b>Action name</b>	The name of the action configured for this rule.
<b>Packets</b>	The number of packets that match this rule.
<b>Bytes</b>	The number of bytes that match this rule.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

### [policy rule](#)

Configures a policy rule on the switch. A rule is made up of a condition (for classifying incoming traffic) and an action (to be applied to outgoing traffic).

## MIB Objects

```
alaQoSRuleTable
  alaQoSRuleName
  alaQoSRuleEnabled
  alaQoSRuleSource
  alaQoSRulePrecedence
  alaQoSRuleActive
  alaQoSRuleReflexive

  alaQoSRuleTrapEvents
  alaQoSRuleSave
  alaQoSRuleCondition
  alaQoSRuleAction
```

---

## show policy rule

Displays information about pending and applied policy rules.

**show [applied] policy rule** [*rule\_name*]

---

### Syntax Definitions

**applied** Displays only policy rules that have been applied.

*rule\_name* The name of the rule for which you want to display information; or a wildcard sequence of characters for displaying information about rules with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Information for all rules is displayed unless *rule\_name* is specified.
- Use the [show active policy rule](#) command to display only active rules that are currently being enforced on the switch.

### Examples

```
-> show policy rule
Rule name           : r1
Condition name      = c1,
Action name         = a1

Rule name           : r2
State               = new,
Condition name      = c2,
Action name         = a1

Rule name           : r3
State               = new,
Condition name      = c2,
Action name         = a2

-> show applied policy rule
Rule name           : r1
Condition name      = c1,
Action name         = a1
```

*output definitions*

---

<b>Rule name</b>	The name of the policy rule, configured through the <b>policy rule</b> command.
<b>State</b>	This field appears if the rule was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Condition name</b>	The name of the condition configured for this rule.
<b>Action name</b>	The name of the action configured for this rule.

---

**Release History**

Release 7.1.1; command was introduced.

  alaQoSRuleTrapEvents
  alaQoSRuleSave
  alaQoSRuleCondition
  alaQoSRuleAction

```

---

## show policy validity period

Displays information about policy validity periods.

show policy validity period [*name*]

---

### Syntax Definitions

*name* The name of the validity period.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Information for all validity periods is displayed unless *name* is specified.
- Use the [show policy rule](#) command to display the validity period that is associated with a policy rule.

### Examples

```
-> show policy validity-period
Validity period name      = tuesday
    State                 = new,
    Days                  = tuesday

Validity period name      = february
    Months                = february

-> show applied policy validity-period
Validity period name      = february
    Months                = february
```

### output definitions

---

<b>Validity period name</b>	The name of the policy validity period, configured through the <a href="#">iec message-type priority</a> command.
<b>State</b>	This field appears if the validity period was created or modified but not yet applied to the QoS configuration. When the <b>qos apply</b> command is issued, this field no longer displays.
<b>Days</b>	The days of the week the validity period is active, configured through the <a href="#">iec message-type priority</a> command. If this field does not appear, then the validity period is not restricted to specific days.

*output definitions*

---

<b>Months</b>	The months during which the validity period is active, configured through the <b>iec message-type priority</b> command. If this field does not appear, then the validity period is not restricted to specific months.
<b>Hours</b>	The time of day the validity period begins and ends, configured through the <b>iec message-type priority</b> command. If this field does not appear, then the validity period is not restricted to a specific time.
<b>Interval</b>	The date and time a validity period interval begins and ends, configured through the <b>iec message-type priority</b> command. If this field does not appear, then the validity period is not restricted to a specific date and time interval.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

**iec message-type priority** Configures a validity period that specifies days, times, and/or months during which an associated policy rule is in effect.

**MIB Objects**

```

alaQoSValidityPeriodTable
  alaQoSValidityPeriodName
  alaQoSValidityPeriodSource
  alaQoSValidityPeriodDays

  alaQoSAppliedValidityPeriodEndInterval

```

---

## show active policy list

Displays information about applied policy lists that are active (enabled) on the switch.

**show active policy list** [*list\_name*]

---

### Syntax Definitions

*list\_name*

The name of the list for which you want to display information; or a wildcard sequence of characters for displaying information about lists with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Information for all active rules is displayed unless a *list\_name* is specified.
- Use the [show policy list](#) command to display inactive as well as active policy lists.
- Applied lists may or may not be active on the switch. Applied lists are inactive if they have been administratively disabled with the **disable** option in the **policy list** command.
- The display may include any of the following characters:

---

character	definition
+	Indicates that the policy list has been modified or has been created since the last <b>qos apply</b> .
-	Indicates the policy list is pending deletion.
#	Indicates that the policy list differs between the pending/applied lists.

---

## Examples

```
-> show active policy list
```

Group Name	From	Type	Enabled	Entries
list1	cli	unp	Yes	r1 r2
+list2	cli	unp	Yes	r3
egress_list1	cli	egress	Yes	r1 r2 r3

### output definitions

<b>Group Name</b>	The name of the policy list. Configured through the <a href="#">policy list</a> command. A plus sign (+) preceding a policy list name indicates that the list was modified or created since the last <b>qos apply</b> .
<b>From</b>	Where the list originated.
<b>Type</b>	The type of rule ( <b>unp</b> , <b>egress</b> , <b>appfp</b> ). Configured through the <a href="#">policy list</a> command. Note that the default policy list is not shown. Use the <a href="#">show policy rule</a> command to display rules that are members of the default policy list.
<b>Enabled</b>	Whether or not the rule is enabled. Configured through the <a href="#">policy list</a> command.
<b>Entries</b>	The QoS policy rules that are grouped together in this policy list. Configured through the <a href="#">policy list</a> command.

## Release History

Release 7.2.1; command was introduced.

## Related Commands

[show policy list](#)

Displays information about pending and applied policy lists.

## show policy list

Displays information about pending and applied policy lists.

**show [applied] policy list** [*list\_name*]

---

### Syntax Definitions

**applied** Displays only those policy lists that have been applied to the switch configuration.

*list\_name* The name of the list to display information; or a wildcard sequence of characters for displaying information about lists with similar names. Use an asterisk (\*) to indicate a wildcard character.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	Yes

### Usage Guidelines

- Information for all rules is displayed unless a *list\_name* is specified.
- Use the [show active policy list](#) command to display only active policy lists that are currently enforced on the switch.
- The display may include any of the following characters:

character	definition
+	Indicates that the policy list has been modified or has been created since the last <b>qos apply</b> .
-	Indicates the policy list is pending deletion.
#	Indicates that the policy list differs between the pending/applied lists.

### Examples

```
-> show policy list
Group Name                               From  Type   Enabled  Entries
-----+-----+-----+-----+-----
list1                                     cli   unp    Yes      r1
                                           r2
+list2                                     cli   unp    Yes      r3
```

```
-> show applied policy list
```

Group Name	From	Type	Enabled	Entries
list1	cli	unp	Yes	r1 r2

### output definitions

<b>Group Name</b>	The name of the policy list. Configured through the <a href="#">policy list</a> command. A plus sign (+) preceding a policy list name indicates that the list was modified or created since the last <b>qos apply</b> .
<b>From</b>	Where the list originated.
<b>Type</b>	The type of rule ( <b>unp</b> , <b>egress</b> , <b>appfp</b> ). Configured through the <a href="#">policy list</a> command. Note that the default policy list is not shown. Use the <a href="#">show policy rule</a> command to display rules that are members of the default policy list.
<b>Enabled</b>	Whether or not the rule is enabled. Configured through the <a href="#">policy list</a> command.
<b>Entries</b>	The QoS policy rules that are grouped together in this policy list. Configured through the <a href="#">policy list</a> command.

### Release History

Release 7.2.1; command was introduced.

### Related Commands

<a href="#">show active policy list</a>	Displays only those policy lists that are currently being enforced on the switch.
<a href="#">show policy rule</a>	Displays information about pending and applied policy rules

### MIB Objects

```

  alaQoSRuleDefaultList
  alaQoSRuleGroupsName
  alaQoSRuleGroupsSource
  alaQoSRuleGroupsType
  alaQoSRuleGroupsEnabled
  alaQoSRuleGroupsStatus
alaQoSAppliedRuleGroupsTable
  alaQoSAppliedRuleGroupsName
  alaQoSAppliedRuleGroupsSource
  alaQoSAppliedGroupsType
  alaQoSAppliedGroupsEnabled
  alaQoSAppliedRuleGroupsStatus
```

## show policy ipv4-summary

Displays all the IPv4 networks that are currently matched by ACLs on the system.

**show policy ipv4-summary** [*rule rule\_name*]

---

### Syntax Definitions

*rule\_name*                                 The name of the policy rule.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specifying the rule name displays the detailed summary for the corresponding rule. If no rule name is specified, then the summary for each rule is displayed in a tabular form.
- If there is an explicit default rule that is set to deny, the same is displayed in the output.

### Examples

```
-> show policy ipv4-summary
```

Legends:

P= Protocol

Act= Action (d = deny, a = accept)

Rule	P	Source IP/ Source Group	Destination IP/ Destination Group	VRF Name	Act	Hit Count
rle-rule3	IP	224.0.0.0/4	224.0.0.0/4	default	a	30129
rle-rule4	UDP	0.0.0.0/0	0.0.0.0/0	default	d	10202020
rle-rule1	IP	192.168.10.0/*	192.168.20.0/24	guest	a	458723011
rle-rule2	IP	192.168.30.0/24	192.168.10.0/24	enterpr*	a	458723011

```
-> show policy ipv4-summary rule rle-rule2
```

```
Rule name      : rle-rule2,
Protocol       : IP,
Source IP      : 192.168.30.0/24,
Destination IP : 192.168.10.0/24,
VRF Name       : enterprise,
Action         : Accept,
Hit Count      : 458723011
```

*output definitions*

---

<b>Rule</b>	Name of the rule.
<b>P</b>	The associated IP protocol.
<b>Source IP/ Source Group</b>	The IPv4 address of the source or source group.
<b>Destination IP/Destination Group</b>	The IPv4 address of the destination or destination group.
<b>VRF Name</b>	The name of the VRF.
<b>Act</b>	The name of the action.
<b>Hit Count</b>	The sum of packet counts from all NIs matching the corresponding rule.

## show policy ipv6-summary

Displays all the IPv6 networks that are currently matched by ACLs on the system.

```
show policy ipv6-summary [rule rule_name]
```

---

### Syntax Definitions

*rule\_name* The name of the policy rule.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specifying the rule name displays the detailed summary for the corresponding rule. If no rule name is specified, then the summary for each rule is displayed in a tabular form.
- If there is an explicit default rule that is set to deny, the same is displayed in the output.

### Examples

```
-> show policy ipv6-summary
Legends:
P= Protocol
Act= Action (d = deny, a = accept)
```

Rule	P	Source IP/ Source Group	VRF Name	Act	Hit Count	Destination IP/ Destination Group
rle-Rule1	IP	2001:abcd:1100:200::/64	default	a	02020	2020:acdc:1010:100::/64
rle-Rule2	IP	2010:3456:8080:4323:6789::/32	default	d	10101010	2005:dead::/16

```
-> show policy ip6-summary rule rle-Rule2
Rule name          : rle-Rule2,
Protocol           : IP,
Source IP          : 2001:abcd:1100:200::/64,
Destination IP     : 2020:acdc:1010:100::/64,
VRF Name           : default,
Hit Count          : 458723011
```

### output definitions

---

**Rule** Name of the rule.

**P** The associated IP protocol.

*output definitions*

---

<b>Source IP/ Source Group</b>	The IPv6 address of the source or source group.
<b>Destination IP/Destination Group</b>	The IPv6 address of the destination or destination group.
<b>VRF Name</b>	The name of the VRF.
<b>Act</b>	The name of the action.
<b>Hit Count</b>	The sum of packet counts from all NIs matching the corresponding rule.

# 37 Policy Server Commands

This chapter describes CLI commands used for managing policies downloaded to the switch from an attached LDAP server. Policy rules can be created on an attached server through the PolicyView GUI application. Policy rules can also be created on the switch directly through CLI or SNMP commands. This chapter describes commands related to managing LDAP policies only. See [Chapter 35, “QoS Commands,”](#) for information about commands for creating and managing policies directly on the switch.

The policy commands are based on RFC 2251 and RFC 3060.

MIB information for policy server commands is as follows:

*Filename:* ALCATEL-IND1-POLICY-MIB.mib  
*Module:* alcatelIND1PolicyMIB

The policy server commands are summarized here:

---

**policy server load**  
**policy server flush**  
**policy server**  
**show policy server**  
**show policy server long**  
**show policy server statistics**  
**show policy server rules**  
**show policy server events**

---

## policy server load

Downloads policies from an LDAP server. These policies are created through the PolicyView management application.

### policy server load

---

#### Syntax Definitions

N/A

#### Defaults

N/A

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

#### Usage Guidelines

Policies are downloaded to the switch from the directory server with the highest preference setting; this server must be enabled and operational (able to bind).

#### Examples

```
-> policy server load
```

#### Release History

Release 7.1.1; command introduced.

#### Related Commands

[policy server flush](#) Removes all cached LDAP policy data from the switch.

#### MIB Objects

```
serverPolicyDecision
```

---

## policy server flush

Removes all cached LDAP policy data from the switch.

**policy server flush**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Use this command to remove LDAP policies. Policies configured through the CLI or SNMP are not removed.

### Examples

```
-> policy server flush
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

#### [policy server load](#)

Downloads policies from a LDAP server. These policies are created through the PolicyView management application.

### MIB Objects

```
serverPolicyDecision
```

---

## policy server

Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

**policy server** *ip\_address* [**port** *port\_number*] [**admin-state** {**enable** | **disable**}] [**preference** *preference*] [**user** *user\_name* **password** *password*] [**searchbase** *search\_string*] [**ssl** | **no ssl**]

**no policy server** *ip\_address* [**port** *port\_number*]

---

### Syntax Definitions

<i>ip_address</i>	The IP address of the LDAP-enabled directory server.
<i>port_number</i>	The TCP/IP port number used by the switch to connect to the directory server.
<b>enable</b>	Enables the specified policy server to download rules to the switch. The policy servers are <b>up</b> by default.
<b>disable</b>	Prevents the specified policy server from downloading rules to the switch.
<i>preference</i>	Determines which directory server is used for policy downloads when multiple servers are configured. The range is 0–255. The server with the highest value is used as the policy server. If that server becomes unavailable, the server with the next highest preference value is used for policy downloads.
<i>user_name</i>	The user name for accessing the database entries on the directory server. When spaces are used in the user name, quotation marks must be included: (e.g. “Directory Manager”).
<i>password</i>	The password associated with the user name. The password must match the password defined on the directory server.
<i>search_string</i>	The root of the directory required for searching the policy information. Typically, the <i>search_string</i> includes <b>o=organization</b> and <b>c=country</b> . For example, <b>o=company</b> and <b>c=country</b> .
<b>ssl</b>	Enables a Secure Socket Layer between the switch and the policy server.
<b>no ssl</b>	Disables a Secure Socket Layer between the switch and the policy server.

### Defaults

parameter	default
<b>admin</b>	<b>up</b>
<i>port_number</i>	389 (SSL disabled) 636 (SSL enabled)
<i>preference</i>	0
<b>ssl</b>   <b>no ssl</b>	<b>no ssl</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

## Usage Guidelines

If you change the port number, another entry is added to the policy server table; the existing port number is not changed. To remove a port number, use the **no** form of this command with the relevant policy server IP address and the port number you want to remove.

## Examples

```
-> policy server 222.22.22.2 port 345 user dirmgr password secret88 searchbase
ou=qos,o=company,c=country
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

[show policy server](#) Displays information about policies downloaded from an LDAP server.

## MIB Objects

```
DIRECTORYSERVERTABLE
  directoryServerAddress
  directoryServerPort
  directoryServerAdminStatus
  directoryServerPreference
  directoryServerUserId
  directoryServerAuthenticationType
  directoryServerPassword
  directoryServerSearchbase
  directoryServerEnableSSL
```

---

## show policy server

Displays information about servers from which policies can be downloaded to the switch.

**show policy server**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command displays basic information about policy servers. Use the **show policy server long** command to display more details about the servers.

### Examples

```
-> show policy server
```

```
Server  IP Address  port  enabled  status  primary
-----+-----+-----+-----+-----+-----
   1    208.19.33.112  389    Yes     Up      X
   2    208.19.33.66   400    No      Down    -
```

### output definitions

---

<b>Server</b>	The index number corresponding to the LDAP server.
<b>IP Address</b>	The IP address of the LDAP server.
<b>port</b>	The TCP/IP port number used by the switch to connect to the policy server.
<b>enabled</b>	Whether or not the policy server is enabled.
<b>status</b>	The state of the policy server, <b>Unkn</b> , <b>Up</b> or <b>Down</b> .
<b>primary</b>	Indicates whether the server is the primary server; this server can be used for the next download of policies; only one server is a primary server.

---

## Release History

Release 7.1.1; command introduced.

## Related Commands

### [policy server](#)

Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

## MIB Objects

```
directoryServerTable
  directoryServerAddress
  directoryServerPort
  directoryServerAdminState
```

---

## show policy server long

Displays more detailed information about an LDAP policy server.

**show policy server long**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command displays detailed information about policy servers. Use the **show policy server** command to display basic information about policy servers.

### Examples

```
-> show policy server long
LDAP server 0
  IP address           : 155.132.44.98,
  TCP port             : 16652,
  Enabled              : Yes,
  Operational status   : Unkn,
  Preference           : 99,
  Authentication       : password,
  SSL                  : Disabled,
  login DN             : cn=Directory Manager,
  searchbase           : ou:4.1, cn=policyRoot, o=company.fr
  Last load time       : 09/13/01 16:38:18
LDAP server 1
  IP address           : 155.132.48.27,,
  TCP port             : 21890,
  Enabled              : Yes,
  Operational status   : Unkn,
  Preference           : 50,
  Authentication       : password,
  SSL                  : Disabled,
  login DN             : cn=Directory Manager,
  searchbase           : o=company.fr
  Last load time       : 00/00/00 00:00:00
```

*output definitions*

---

<b>IP address</b>	The IP address of the policy server.
<b>TCP port</b>	The TCP/IP port number used by the switch to connect to the policy server.
<b>Enabled</b>	Displays whether the policy server is enabled through the PolicyView application.
<b>Operational status</b>	The state of the policy server, <b>Up</b> or <b>Down</b> .
<b>Preference</b>	Determines which directory server is used for policy downloads when multiple servers are configured. The range is 0–255. The server with the highest value is used as the policy server. If that server becomes unavailable, the server with the next highest preference value is used for policy downloads.
<b>Authentication</b>	Displays <b>password</b> if a user name and password was specified for the server through the <b>policy server</b> command. Displays <b>anonymous</b> if a user name and password are not configured.
<b>login DN</b>	The directory user name.
<b>searchbase</b>	The searchbase name, which is the root of the directory that can be searched for policy download information.
<b>Last load time</b>	The date and time that policies were last downloaded. Values of zero indicate that no policies have been downloaded.

---

**Release History**

Release 7.1.1; command introduced.

**MIB Objects**

```
directoryServerTable
  directoryServerAddress
  directoryServerPort
  directoryServerPreference
  directoryServerAuthenticationType
  directoryServerSearchbase
  directoryServerUserId
  directoryServerPassword
  directoryServerCacheChange
  directoryServerLastChange
  directoryServerAdminStatus
  directoryServerOperStatus
```

---

## show policy server statistics

Displays statistics about policy directory servers.

**show policy server statistics**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command displays statistics about server downloads. For information about server parameters, use the **show policy server** command.

### Examples

```
-> show policy server statistics
Server  IP Address      port  accesses  delta  successes  delta  errors  delta
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
   1    155.132.44.98 16652      793     793      295     295       0       0
   2    155.132.48.27 21890       0       0       0       0       0       0
```

### output definitions

---

<b>Server</b>	The index number corresponding to the server.
<b>IP Address</b>	The IP address of the LDAP server.
<b>port</b>	The TCP/IP port number used by the switch to connect to the policy server.
<b>accesses</b>	The number of times the server was polled by the switch to download policies.
<b>delta</b>	The change in the number of accesses since the last time the policy server was accessed.
<b>successes</b>	The number of times the server was polled by the switch to download policies and the policies were successfully downloaded.
<b>delta</b>	The change in the number of successful policy downloads since the last time the policy server was accessed.

***output definitions***

---

<b>errors</b>	The number of errors returned by the server.
<b>delta</b>	The change in the number of errors returned by the server since the last time the policy server was accessed.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

[policy server](#) Configures operational parameters for an LDAP-enabled directory server on which policies are stored.

**MIB Objects**

```
policyStatsTable
  policyStatsAddress
  policyStatsServerPort
  policyStatsAccessCount
  policyStatsSuccessAccessCount
  policyStatsNotFoundCount
```

---

## show policy server rules

Displays the names of policies originating from a directory server, that have been downloaded to the switch.

**show policy server rules**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command displays information about policies created on directory servers only. [Chapter 35, “QoS Commands,”](#) for information about configuring and displaying policies directly on the switch.

### Examples

```
-> show policy server rules
Num      name          prio      scope      status
-----+-----+-----+-----+-----
1         QoSRule1      0         Provisioned Active
2         QoSrule2     0         Provisioned Active
```

#### *output definitions*

---

<b>Num</b>	An index number corresponding to the policy rule.
<b>name</b>	The name of the policy rule; only rules configured through PolicyView are displayed in this table.
<b>prio</b>	The priority or preference of the rule. Indicates the order in which rules can be checked to match to the incoming traffic. If two or more rules apply to the traffic, the rule with the highest preference is applied. Preference is determined when the rule is created.
<b>scope</b>	The type of rule. <b>Provisioned</b> is the only type valid for the current release.

*output definitions (continued)*

---

<b>status</b>	The status of the rule: <b>Active</b> indicates that the rule is available in the QoS software on the switch and is available to be applied to the traffic; <b>notInService</b> means the rule can be pushed to the QoS software in the future but is not available yet (typically because of a variable validity period); <b>notReady</b> indicates that the rule can never be pushed to the QoS software because its validity period has expired or because it has been disabled through SNMP.

**Related Commands**[policy server load](#)

Downloads policies from a LDAP server. These policies are created through the PolicyView management application.

**MIB Objects**

```
policyRuleNamesTable
  policyRuleNamesIndex
  policyRuleNamesName
  policyRuleOperStatus
```

---

## show policy server events

Displays any events related to a directory server on which policies are stored.

**show policy server events**

---

### Syntax Definitions

N/A

### Defaults

The display is limited to 50 events.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The Policy Manager initialization event is always the first event logged.

### Examples

```
-> show policy server events
Event Time                event description
-----+-----
09/13/01 16:38:15 Policy manager log init
09/13/01 16:38:17 LDAP server 155.132.44.98/16652 defined
09/13/01 16:38:17 LDAP server 155.132.44.98/21890 defined
09/13/01 16:38:18 PDP optimization: PVP day-of-week all 1
09/13/01 16:38:18 PDP optimization: PVP Month all 1
09/13/01 16:38:18 PDP optimization: PVP Month all 1
09/13/01 16:38:18 PDP optimization: PVP Month all 1
09/13/01 16:38:18 PDP optimization: PVP Month all 1
09/13/01 16:38:18 IP address and mask make bad address change on desination IP
address 155.132.44.98:155.132.44.101
```

#### *output definitions*

---

<b>Event Time</b>	The date and time the policy event occurred.
<b>event description</b>	A description of the event.

---

### Release History

Release 7.1.1; command introduced.

## Related Commands

---

# 38 AAA Commands

This chapter includes descriptions for authentication, authorization, and accounting (AAA) commands. The commands are used for configuring the type of authentication as well as the AAA servers and the local user database on the switch.

- **Authenticated Switch Access.** Authenticates users into the switch to manage the switch. User information is stored on a RADIUS, TACACS+, LDAP or information may be stored locally in the switch user database.
- **Local user database.** User information may be configured for Authenticated Switch Access. For functional management access, users may be allowed to access specific command families or domains.

MIB information for the AAA commands is as follows:

*Filename:* ALCATEL-IND1-AAA-MIB.mib  
*Module:* alcatelIND1AAAMIB

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

A summary of the available commands is listed here:

---

<b>Authentication servers</b>	<b>aaa radius-server</b> <b>aaa radius-server health-check</b> <b>aaa radius unprofile-precedence</b> <b>aaa test-radius-server</b> <b>aaa tacacs+-server</b> <b>aaa tacacs command-authorization</b> <b>aaa ldap-server</b> <b>show aaa server</b> <b>show aaa server statistics</b> <b>aaa radius-server clear-statistics</b>

---

## aaa radius-server

Configures a RADIUS server for Authenticated Switch Access and device authentication.

```
aaa radius-server server_name host {hostname | ip_address / ipv6_address} [hostname2 | ip_address2 / ipv6_address2] {key secret | hash-key hash_secret | prompt-key}[salt salt | hash-salt hash_salt]  
[retransmit retries] [timeout seconds] [auth-port auth_port] [acct-port acct_port] [vrf-name name] [ssl  
| no ssl]
```

```
no aaa radius-server server_name
```

---

### Syntax Definitions

<i>server_name</i>	The name of the RADIUS server.
<i>hostname</i>	The host name (DNS name) of the primary RADIUS server. The host name or IP address is required when creating a server.
<i>ip_address</i> / <i>ipv6_address</i>	The IPv4 or IPv6 address of the primary RADIUS server. An IP address or host name is required when creating a server.
<i>hostname2</i>	The host name (DNS name) of an optional backup RADIUS server.
<i>ip_address2</i> / <i>ipv6_address2</i>	The IPv4 or IPv6 address of an optional backup RADIUS server.
<i>secret</i>	The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but <b>MUST</b> match the secret configured on the server. The secret is case-sensitive. Required when creating a server.
<i>hash_secret</i>	A shared secret that the switch saves with a hashing algorithm.
<b>prompt-key</b>	This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both entries match, the command is accepted. The key provided in this mode is not displayed on the CLI as text.
<i>salt</i>	The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, system time will be taken as default salt value.
<i>hash-salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
<i>retries</i>	The number of retries the switch makes to authenticate a user before trying the backup server ( <i>hostname2</i> or <i>ip_address2</i> ).
<i>seconds</i>	The timeout for server replies to authentication requests.
<i>auth_port</i>	The UDP destination port for authentication requests.
<i>acct_port</i>	The UDP destination port for accounting requests.
<i>name</i>	The name of the VRF to be used to access the server.
<b>ssl</b>	Enables Transport Layer Security (TLS) between the switch and the RADIUS server.
<b>no ssl</b>	Disables Transport Layer Security (TLS) between the switch and the RADIUS server.

## Defaults

parameter	default
<i>retries</i>	3
<i>seconds</i>	2
<i>auth_port</i>	1812
<i>acct_port</i>	1813
<b>ssl   no ssl</b>	<b>no ssl</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- A host name (or IP address) and a secret are required when configuring a server.
- The server and the backup server must both be RADIUS servers.
- Use the **no** form of the command to remove a RADIUS server from the configuration. Only one server can be deleted at a time.
- A host name (or IP address) and a secret key are required when configuring a server.
- If **key** and **hash-key** parameters are both configured, the **hash-key** value is given priority over **key**.
- The user configured or default salt along with the server name will be combined with 'key' and encrypted as a whole, the output of which will be displayed under 'hash-key'.
- If **salt** and **hash-salt** parameters are both configured, the **hash-salt** value is given priority over **salt**.
- The special character '!' and pure integers will not be accepted as a valid input for both **salt** and **hashsalt**.
- If you want to provide special characters in salt value, give it in between "" double quotes.
- The input given through **salt** and **hash-salt** is encrypted and will be displayed as "hash-salt" in **show configuration snapshot** command.
- Backward compatibility for **salt** and **hash-salt** is not supported. In case of an accidental downgrade, a boot.cfg error is generated for that particular configuration, and re-configuration is required.
- RADIUS server can be configured on any VRF instance or the default VRF instance. However, all the RADIUS servers must reside on the same VRF instance.
- Enabling the RADIUS server health check feature is recommended for each RADIUS server to help improve the user authentication time. Use the **aaa radius-server health-check** command to enable this feature and the **show aaa server** command to determine the reachability status of each RADIUS server on which health check is enabled.

## Examples

```
-> aaa radius-server pubs2 host 10.10.2.1 key wwwtoe timeout 5
-> no aaa radius-server pubs2

-> aaa radius-server radsrv1 host rad1_ipaddr key rad1_secret vrf-name rad_vrf
-> aaa radius-server "Rad1" host 10.10.10.2 key myorg salt mysalt
-> aaa radius-server "Rad1" host 10.10.2.1 key myorg hash-salt
c7f5eee2c0f9b33e72e3482673fb6059

-> aaa radius-server rad1 prompt-key host 10.10.2.1
Enter Key: *****
Confirm Key: *****
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.3.1; **prompt-key** parameter added.  
Release 8.4.1; **IPv6** and **SSL support** for radius server added.  
Release 8.6R1; **salt** and **hash-salt** parameters added.

## Related Commands

  aaasRadSalt
  aaasRadSaltHash
```

---

## aaa radius-server health-check

Enables or disables the RADIUS server health check configuration for the specified RADIUS server. When this feature is enabled, individual RADIUS servers are polled at the specified time interval to determine whether the server is up or down.

**aaa radius-server** *server\_name* **health-check** [**poling-interval** *seconds* | **username** *user\_name* | **password** *password* | **hash-key** *hash\_secret* | **failover**]

**no aaa radius-server** *server\_name* **health-check** [**failover**]

---

### Syntax Definitions

<i>server_name</i>	The name of the RADIUS server for which a health check session is configured.
<i>seconds</i>	The number of seconds after which a health check request is sent to the specified RADIUS server. The valid range is 60–600 seconds.
<i>user_name</i>	The user name (up to 32 characters) to use in polling requests to the server.
<i>password</i>	The password (up to 64 characters) to use in polling requests to the server.
<i>hash_secret</i>	A shared secret that the switch saves with a hashing algorithm.
<b>failover</b>	Triggers an attempt to re-authenticate users assigned to the authentication server down profile when the RADIUS server comes back up before the authentication server down timeout expires.

### Defaults

By default, RADIUS server health check is disabled. When health check is enabled without specifying any of the optional parameters, the following default health check parameter values are set for the specified RADIUS server:

parameter	default
<i>seconds</i>	60
<i>user_name</i>	alcatel
<i>password</i>	alcatel
<b>failover</b>	disabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Make sure the specified RADIUS server is defined on the switch before attempting to enable a health check session for that server. See the [aaa radius-server](#) command for more information on RADIUS server configuration.
- Each RADIUS server with health check enabled is polled at regular intervals (instead of checked sequentially) to determine if the server is up or down. Notification of the server status is then provided to help expedite the authentication process.
- User devices are typically assigned to a UNP authentication server down profile when the authentication server is down (unreachable).
  - If the **failover** option is disabled (the default) for the health check session, re-authentication is not attempted for the profile devices until the authentication server down timeout value expires.
  - If the **failover** option is enabled for the health check session, there is no waiting for the authentication server down timeout value to expire. When the health check session receives notification that a server has transitioned from down to up, a re-authentication attempt is immediately triggered for the profile devices.
- Use the **no** form of this command to disable health check.
- Use the **no** form of this command with the **failover** parameter to disable the failover operation.

## Examples

```
-> aaa radius-server rad1 health-check
-> aaa radius-server rad1 health-check polling-interval 300
-> aaa radius-server rad1 health-check username admin password switch failover
-> no aaa radius-server rad1 health-check failover
-> no aaa radius-server rad1 health-check
```

## Release History

Release 8.5R4; command introduced.

## Related Commands

## MIB Objects

```
aaaServerTable
  aaasHostName
  aaasRadHealthCheck
  aaasRadPollingInterval
  aaasRadFailover
  aaasRadUsername
  aaasRadPassword
```

---

## aaa radius unprofile-precedence

This command can be used to set the precedence to filter ID or tunnel private group ID attributes for selection of UNP profile in the event of both these attributes being returned from the RADIUS server.

**aaa radius unprofile-precedence { tunnel-private-group-id | filter-id }**

---

### Syntax Definitions

**tunnel-private-group-id**      The tunnel private group ID attribute.  
**filter-id**                      The filter ID RADIUS attribute.

### Defaults

By default, filter ID will be given precedence over the tunnel private group ID.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> aaa radius unprofile-precedence tunnel-private-group-id
-> aaa radius unprofile-precedence filter-id
```

### Release History

Release 8.5R4; command introduced.

### Related Commands

[aaa radius-server](#)              Configures or modifies a RADIUS server for Authenticated Switch Access and device authentication.  
[show aaa radius config](#)        Displays the global AAA attribute values and MAC address format.

### MIB Objects

alaAaaRadUnpProfilePrecedence

---

## aaa test-radius-server

RADIUS test tool allows the user to test the RADIUS server reachability from the OmniSwitch. Use this command to start the authentication or accounting test for the specified user name and password.

```
aaa test-radius-server server_name type {authentication user user_name password password [method {md5 | pap}] | accounting user user_name}
```

---

### Syntax Definitions

<i>server_name</i>	RADIUS server name for which test has been configured.
<b>authentication</b>   <b>accounting</b>	Type of test to run.
<i>user_name</i>	User name configured on the server.
<i>password</i>	Password for the given user name.
<b>md5</b>   <b>pap</b>	Authentication method for the test.

### Defaults

By default, MD5 is used as the authentication method.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	Yes

### Usage Guidelines

- RADIUS server must be configured on the switch to test the tool.
- The switch must have the following RADIUS server configuration before starting the test tool: RADIUS server name, acct-port, auth-port, secret key, retransmit count, and timeout. See the [aaa radius-server](#) command for more information on RADIUS server configuration.
- Supports multiple sessions (console, telnet, SSH) to test multiple RADIUS servers.
- The CLI of the user session (console, telnet, SSH) goes in the blocking state when the test is started. In the blocking state, no other command (CLI) is accepted. The blocking state of the CLI prompt of the switch can be terminated by pressing any key.
- Two IP addresses are configurable for a RADIUS server. When the test starts, the requests are sent to the first address. When all the requests to the first address time out, then the requests are sent to the second address.

## Examples

```
-> aaa test-radius-server rad1 type authentication user admin password switch
method MD5
-> aaa test-radius-server rad2 type authentication user admin password switch
method pap
-> aaa test-radius-server rad1 type accounting user admin
```

## Release History

Release 8.1.1; command introduced.

## Related Commands

<a href="#">aaa authentication</a>	Servers for authenticated switch access.
<a href="#">show aaa server</a>	Displays information about AAA servers configured for the switch.

## MIB Objects

N/A

---

## aaa tacacs+-server

Configures or modifies a TACACS+ server for Authenticated Switch Access.

```
aaa tacacs+-server server_name host {hostname | ip_address} [hostname2 | ip_address2] {key secret | prompt-key}[salt salt | hash-salt hash_salt] [timeout seconds] [port port] [vrf-name name]
```

```
no aaa tacacs+-server server
```

---

### Syntax Definitions

<i>server_name</i>	The name of the TACACS+ server.
<i>hostname</i>	The host name (DNS name) of the primary TACACS+ server. The host name or IP address is required when creating a server.
<i>ip_address</i>	The IP address of the primary TACACS+ server. An IP address or host name is required when creating a server.
<i>hostname2</i>	The host name (DNS name) of an optional backup TACACS+ server.
<i>ip_address2</i>	The IP address of an optional backup TACACS+ server.
<i>secret</i>	The shared secret known to the switch and the server, but which is not sent over the network. Can be any text or hexadecimal string but <b>MUST</b> match the secret configured on the server. The secret is case-sensitive. Required when creating a server.
<i>salt</i>	The input given through ‘salt’ will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters, and must be in clear text format. By default, the system time will be taken as default salt value.
<i>hash-salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
<b>prompt-key</b>	This option enters the secret key in a obscured format rather than as clear text. When this option is selected, press the Enter key. A prompt appears asking for the secret key. Re-enter the key and only if both the entries match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.
<i>seconds</i>	The timeout for server replies to authentication requests.
<i>port</i>	The port number for the primary TACACS+ server.
<i>name</i>	The name of the VRF to be used to access the server.

### Defaults

parameter	default
<i>seconds</i>	2
<i>port</i>	49

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of the command to remove a TACACS+ server from the configuration. Only one server may be deleted at a time.
- A host name (or IP address) and a secret are required when configuring a server.
- If 'key' and 'hash-key' parameters are configured at a time, hash-key value is given priority over key.
- The user configured or default salt along with the server name will be combined with 'key' and encrypted as a whole, the output of which will be displayed under 'hash-key'.
- If 'salt' and 'hash-salt' parameters are configured at a time, hash-salt value is given priority over salt.
- The special character '!' and pure intergers will not be accepted as a valid input for both salt and hashsalt.
- If you want to provide special characters in salt value, give it in between "" double quotes.
- The input given through 'salt' and 'hash-salt' is encrypted and will be displayed as 'hash-salt' in 'show configuration snapshot' command.
- Backward compatibility for 'salt' and 'hash-salt' is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- The server and the backup server must both be TACACS+ servers.
- TACACS+ server can be configured on any VRF instance or the default VRF instance. However, all the TACACS+ servers must reside on the same VRF instance.

## Examples

```
-> aaa tacacs+-server tpub host 10.10.2.2 key otna timeout 10
-> no aaa tacacs+-server tpub
-> aaa tacacs+-server T1 host 10.10.10.3 key myorg salt salt@123
-> aaa tacacs+-server tacsv1 host tacl_ipaddr key tacl_secret vrf-name tac_vrf

-> aaa tacacs+-server tacl prompt-key host 10.10.2.2
Enter Key:  *****
Confirm Key:  *****
```

## Release History

Release 7.1.1; command was introduced.  
 Release 7.3.1; **vrf-name** parameter added.  
 Release 8.3.1; **prompt-key** parameter added.  
 Release 8.6R1; **salt** and **hash-salt** parameters added.

## Related Commands

[show aaa server](#)

Displays information about AAA servers.

[aaa authentication](#)

Specifies the AAA servers to be used for Authenticated Switch Access.

[aaa accounting session](#)

Specifies the accounting servers to be used for Authenticated Switch Access.

## MIB Objects

aaaServerTable

aaasName

aaasProtocol

aaasRadSaltHash

---

## aaa tacacs command-authorization

Configures a command based authorization in TACACS+ server for authenticated switch.

**aaa tacacs command-authorization {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enable command based authorization in TACACS+ server.
<b>disable</b>	Disable command based authorization. This enables partition-management family based authorization in TACACS+ server.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- This command is applicable only for CLI commands.
- If this command is enabled, then in the TACACS+ server the authorization of every command executed on the switch is command based. CLI commands executed on the switch are sent for authorization to the TACACS+ server along with mode of operation (read or read-write). After authorization, the server will send the response message to the TACACS+ client.
- If the command is disabled, then in the TACACS+ server the authorization is partition-management family based.
- Use **show configuration snapshot aaa** command to view the configuration details of this command.

### Examples

```
-> aaa tacacs command-authorization enable
-> aaa tacacs command-authorization disable
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

[show aaa server](#)

Displays information about AAA servers.

alaAaaTacacsServerCmdAuthorization

---

## aaa ldap-server

Configures or modifies an LDAP server for Authenticated Switch Access.

```
aaa ldap-server server_name host {hostname | ip_address | ipv6_address} [hostname2 | ip_address2 | ipv6_address2] dn dn_name {password super_password | prompt-password}[salt salt | hash-salt hash_salt] [base search_base] [retransmit retries] [timeout seconds] [ssl | no ssl] [port port] [vrf-name name]
```

```
no aaa ldap-server server-name
```

---

### Syntax Definitions

<i>server_name</i>	The name of the LDAP server.
<i>hostname</i>	The host name (DNS name) of the primary LDAP server. The host name or IP address is required when creating a server.
<i>ip_address</i> / <i>ipv6_address</i>	The IPv4 or IPv6 address of the primary LDAP server.
<i>hostname2</i>	The host name (DNS name) of the backup LDAP server.
<i>ip_address2</i> / <i>ipv6_address2</i>	The IPv4 or IPv6 address of a backup host for the LDAP server.
<i>dn_name</i>	The super-user or administrative distinguished name in the format recognized by the LDAP-enabled directory servers. For example: <b>cn=manager</b> . Must be different from the <i>search-base</i> name and must be in a format supported by the server. Required when creating a new server.
<i>super_password</i>	The super-user password recognized by the LDAP-enabled directory servers. The password may be clear text or hexadecimal format. Required when creating a new server.
<b>prompt-password</b>	This option enters the super-user password in a obscured format rather than as clear text. When this option is selected, press the Enter key. A password prompt appears asking for the super-user password. Re-enter the password and only if both the passwords match, the command is accepted. Password provided in this mode is not displayed on the CLI as text.
<i>salt</i>	The input given through 'salt' will be used to add randomness to the encryption of the key. The maximum length of the salt is 15 characters and must be in clear text format. By default, the system time will be taken as default salt value.
<i>hash-salt</i>	The salt value for which the input must be in an encrypted format. The maximum length of the hash-salt should not exceed 64 characters.
<i>search_base</i>	The search base recognized by the LDAP-enabled directory servers. For example, <b>o=company</b> or <b>c=country</b> . Must be different from the <i>dn_name</i> . Required when creating a new server.
<i>retries</i>	The number of retries the switch makes to the LDAP server to authenticate a user before trying the backup server.
<i>seconds</i>	The timeout in seconds for server replies to authentication requests from the switch.

<b>ssl</b>	Enables Transport Layer Security (TLS) between the switch and the LDAP server.
<b>no ssl</b>	Disables Transport Layer Security (TLS) between the switch and the LDAP server.
<i>port</i>	The port number for the primary LDAP server and any backup server. Must match the port number configured on the server.
<i>name</i>	The name of the VRF to be used to access the server.

## Defaults

parameter	default
<i>port</i>	389 (SSL disabled) 636 (SSL enabled)
<i>retries</i>	3
<i>seconds</i>	2
<b>ssl   no ssl</b>	<b>no ssl</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- The *dn\_name* must be different from the *search\_base* name.
- Use the **no** form of the command to remove an LDAP server from the configuration. Only one server may be removed at a time.
- The port number configured on the switch must match the port number configured for the server.
- If 'salt' and 'hash-salt' parameters are configured at a time, hash-salt value is given priority over salt.
- The special character '!' and pure intergers will not be accepted as a valid input for both salt and hashsalt.
- If you want to provide special characters in salt value, give it in between "" double quotes.
- The input given through 'salt' and 'hash-salt' is encrypted and will be displayed as 'hash-salt' in 'show configuration snapshot' command.
- Backward compatibility for 'salt' and 'hash-salt' is not supported. In case of an accidental downgrade, boot.cfg error is generated for that particular configuration, and re-configuration is required.
- LDAP server can be configured on any VRF instance or the default VRF instance. However, all the LDAP servers must reside on the same VRF instance.
- For IPV6 address, IPV6 LDAP host and interface must be configured in the switch.

## Examples

```
-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager password tpub base c=us
retransmit 4
-> aaa ldap-server omnivista host 1.2.3.4 dn "cn=DirMgr, o=alcatel.com" password
somepass base "ou=People, o=alcatel.com" vrf-name ldap_vrf
-> no aaa ldap-server topanga5

-> aaa ldap-server topanga5 host 10.10.3.4 dn cn=manager prompt-password base c=us
retransmit 4
Enter Password: ******
Confirm Password: ******

-> aaa ldap-server L1 host 10.10.10.5 dn cn=manager password tpub base c=us salt
mysalt
```

## Release History

Release 7.1.1; command was introduced.  
 Release 7.3.1; **vrf-name** parameter added.  
 Release 8.3.1; **prompt-password** parameter added.  
 Release 8.6R1; **salt** and **hash-salt** parameters added.  
 Release 8.7 R1; **IPv6** support added.

```

## system fips admin-state

Enable or disable the Federal Information Processing Standards (FIPS) mode on the switch.

```
system fips admin-state {enable | disable}
```

---

### Syntax Definitions

**enable | disable** Enables or disables the FIPS mode.

### Defaults

By default, the FIPS mode is disabled on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enabling or disabling FIPS mode takes effect only after a switch reboot. The FIPS mode configuration is persistent across reboots.
- When FIPS mode is disabled, all other existing cryptographic algorithms will be supported.
- A FIPS supported client is required to access the switch in FIPS enabled mode. For example, Absolute Telnet.
- Other unsecured management interfaces, such as Telnet or FTP, have to be manually disabled after FIPS mode is enabled to achieve a completely secure device.

### Examples

```
-> system fips admin-state enable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

```
-> system fips admin-state disable
WARNING: FIPS Admin State only becomes Operational after write memory and reload
```

### Release History

Release 8.1.1; command introduced.

**Related Commands****show system fips**

---

## aaa authentication

Configures the interface for Authenticated Switch Access and specifies the server(s) to be used. This type of authentication gives users access to manage the switch.

**aaa authentication** {console | telnet | ftp | http | snmp | ssh | default} *server1* [*server2...*] [local]

**no aaa authentication** [console | telnet | ftp | http | snmp | ssh | default]

---

### Syntax Definitions

<b>console</b>	Configures Authenticated Switch Access through the console port.
<b>telnet</b>	Configures Authenticated Switch Access for any port used for Telnet.
<b>ftp</b>	Configures Authenticated Switch Access for any port used for FTP.
<b>http</b>	Configures Authenticated Switch Access for any port used for Web-based management.
<b>snmp</b>	Configures Authenticated Switch Access for any port used for SNMP.
<b>ssh</b>	Configures Authenticated Switch Access for any port used for Secure Shell.
<b>default</b>	Configures Authenticated Switch Access for any port using any service ( <b>telnet</b> , <b>ftp</b> , etc.). Note that SNMP access is enabled only if an LDAP or local server is specified with the command.
<i>server1</i>	The name of the authentication server used for Authenticated Switch Access. At least one server is required. The server may be a RADIUS, TACACS+, LDAP, or the local user database. RADIUS, TACACS+, and LDAP server names are set up through the <b>aaa radius-server</b> , <b>aaa tacacs+-server</b> , and <b>aaa ldap-server</b> commands.
<i>server2...</i>	The names of backup servers for Authenticated Switch Access. Up to 3 backups may be specified (including <b>local</b> ). These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the authentication server.
<b>local</b>	Specifies that the local user database will be a backup for the authentication servers. If you want to use the local user database as the only authentication server, specify <b>local</b> for <i>server1</i> .

### Defaults

- At switch startup, Authenticated Switch Access is available through console port via the local database. Authentication for other management interfaces (Telnet, FTP, etc.) is disabled.
- The default user on the switch is **admin**, and **switch** is the password.
- Remote authentication is not supported on secondary CMMs or Slave chassis. Use local authentication on secondary CMMs and Slave chassis.

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- The server type may be RADIUS, TACACS+, LDAP, or the local user database. Up to 4 servers may be configured for an interface type; at least one is required. Each server name should be separated by a space.
- The switch uses *only the first available server* in the list to check for user information. For example, if *server1* is not available, the switch will poll *server2*. If user information is not found on the first available server, the authentication request will fail.
- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the [aaa radius-server](#), [aaa tacacs+-server](#), and [aaa ldap-server](#) commands.
- If the local switch database will be used as the only authentication server, specify **local** for *server1*. If **local** is specified as a backup server, it should be entered last in the list of servers. The local user database is always available if the switch is up.
- Only LDAP or the local database may be used for authenticated SNMP management.
- If Secure Shell (**ssh**) is enabled, Telnet and FTP should be disabled.

## Examples

```
-> aaa authentication telnet pubs1
-> no aaa authentication telnet
-> aaa authentication default pubs2 pubs3
```

---

## aaa console admin-only

Enables or disables the user restriction for all users except the user “admin” from accessing the switch through the secure console session.

**aaa console admin-only {enable | disable}**

---

### Syntax Definitions

**enable** Restricts all users from accessing the switch through the secure console session except the user “admin”. Only user “admin” can access the switch through the secure console session.

**disable** Disables the user restrictions.

### Defaults

By default, console admin-only is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enable this feature to restrict all users except user “admin” from accessing the switch through the secure console session.

### Examples

```
-> aaa console admin-only enable
-> aaa console admin-only disable
```

### Release History

Release 8.3.1 R02; command was introduced.

### Related Commands

---

## aaa authentication default

Sets the authenticated switch access type to the default server setting.

**aaa authentication {console | telnet | ftp | http | snmp | ssh} default**

---

### Syntax Definitions

<b>console</b>	Configures the default Authenticated Switch Access server setting for the console port.
<b>telnet</b>	Configures the default Authenticated Switch Access server setting for Telnet.
<b>ftp</b>	Configures the default Authenticated Switch Access server setting for FTP.
<b>http</b>	Configures the default Authenticated Switch Access server setting for Web-based management.
<b>snmp</b>	Configures the default Authenticated Switch Access server setting for any port used for SNMP.
<b>ssh</b>	Configures the default Authenticated Switch Access server setting for any port used for Secure Shell.

### Defaults

By default, the default Authenticated Switch Access server setting does not include any servers.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **aaa authentication** command to set the default servers.

### Examples

```
-> aaa authentication telnet default
-> aaa authentication default default
```

### Release History

Release 7.1.1; command was introduced.

## aaa accounting session

Configures an accounting server or servers for authenticated switch sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

**aaa accounting session** *server1* [*server2...*] [**local**]

**no accounting session**

---

### Syntax Definitions

<i>server1</i>	The name of the RADIUS, TACACS+, or LDAP server used for accounting of authenticated switch sessions. At least one server is required. RADIUS, TACACS+, and LDAP server names are set up through the <b>aaa radius-server</b> , <b>aaa tacacs+-server</b> , and <b>aaa ldap-server</b> commands.
<i>server2...</i>	The names of backup servers. Up to 3 backups may be specified (including <b>local</b> ); each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
<b>local</b>	Local accounting is done through the Switching Logging feature on the switch.

### Defaults

Accounting is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to disable accounting for Authenticated Switch Access.
- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The servers may be RADIUS, TACACS+, LDAP servers, and/or the local Switch Logging facility.
- If **local** is specified as *server1*, the switch will **only** use the local Switching Logging facility for accounting.
- If **local** is specified as a backup, it should be entered last in the list of servers. The Switch Logging facility is always available if the switch is up.
- The switch uses **only the first available server** in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.

- RADIUS, TACACS+, and LDAP servers may each have an additional backup specified through the [aaa radius-server](#), [aaa tacacs+-server](#), and [aaa ldap-server](#) commands.

### Examples

```
-> aaa accounting session ldap1 radius2 local
-> no aaa accounting session
```

## aaa accounting command

Enables or disables the server for command accounting. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

**aaa accounting command** *server1* [*server2...*] [**local**]

**no accounting command**

---

### Syntax Definitions

<i>server1</i>	The name of the TACACS+ server used for command accounting. At least one server is required. TACACS+ server names are set up through the <a href="#">aaa tacacs+-server</a> commands.
<i>server2...</i>	The names of TACACS+ backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
<b>local</b>	Local accounting is done through the Switching Logging feature on the switch.

### Defaults

Accounting is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to disable command accounting.
- Up to 4 accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The servers can be only TACACS+ servers.
- The switch uses *only the first available server* in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.
- TACACS+ server may each have an additional backup specified through the [aaa tacacs+-server](#) command.

### Examples

```
-> aaa accounting command tacacs1 tacacs2 tacacs3
-> no aaa accounting command
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

## aaa device-authentication

Configures the switch to use RADIUS servers for 802.1X, MAC, and Captive Portal device authentication.

**aaa device-authentication** {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]

**no device-authentication** {802.1x | mac | captive-portal}

---

### Syntax Definitions

<b>802.1x</b>	Use the specified RADIUS server to authenticate 802.1X users.
<b>mac</b>	Use the specified RADIUS server for MAC authentication.
<b>captive-portal</b>	Use the specified RADIUS server for Captive Portal authentication.
<i>server1</i>	The name of the RADIUS authentication server to use for the specified type of authentication. ( <i>Note that only RADIUS servers are supported for these types of authentication.</i> ) At least one server is required. RADIUS server names are configured through the <a href="#">aaa radius-server</a> command.
<i>server2...server4</i>	The names of backup servers used for authentication. Up to 3 backups may be specified; include a space between each server name. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the authentication server.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a RADIUS server assignment for a specific authentication type.
- Up to 4 RADIUS servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The switch uses *only the first available server* in the list to check for user information. For example, if *server1* is not available, the switch will poll *server2*. If user information is not found on the first available server, the authentication request will fail.
- RADIUS servers may each have an additional backup specified through the **aaa radius-server** command.

- Configuring the RADIUS servers to use for 802.1X, MAC, and Captive Portal authentication is required to support authentication and classification of devices connected to Universal Network Profile (UNP) ports.

## Examples

```
-> aaa device-authentication 802.1x rad1
-> aaa device-authentication 802.1x rad1 rad2
-> no aaa device-authentication 802.1x

-> aaa device-authentication mac rad1
-> aaa device-authentication mac rad1 rad2
-> no aaa device authentication mac

-> aaa device-authentication captive-portal rad1
-> aaa device-authentication captive-portal rad1 rad2
-> no aaa device-authentication captive-portal
```

## Release History

Release 7.2.1; command was introduced.  
Release 7.3.4; **802.1x** parameter added.  
Release 8.1.1; **captive-portal** parameter added.

## Related Commands

## MIB Objects

```
AaaAuthDATable
  aaaDaName1
  aaaDaName2
  aaaDaName3
  aaaDaName4
```

---

## aaa accounting

Configures RADIUS server accounting or local Switch Logging (syslog) accounting for 802.1X, MAC, and Captive Portal authenticated device sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

**aaa accounting** {802.1x | mac | captive-portal} {server1 [server2...]} | **syslog** ip\_address [port udp\_port]}

**no accounting** {802.1x | mac | captive-portal}

---

### Syntax Definitions

<b>802.1x</b>	Enables the specified RADIUS or syslog server to log accounting of 802.1X authenticated sessions.
<b>mac</b>	Enables the specified RADIUS or syslog server to log accounting for MAC authenticated sessions.
<b>captive-portal</b>	Enables the specified RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.
<i>server1</i>	The name of the RADIUS server used for accounting of authenticated switch sessions. At least one server is required. RADIUS server names are configured through the <a href="#">aaa radius-server</a> command.
<i>server2...</i>	The names of backup servers. Up to 3 backups may be specified; each server name should be separated by a space. These backups are only used if <i>server1</i> becomes unavailable. They are polled in the order they are listed in this command. The first available server becomes the accounting server.
<i>ip_address</i>	The IP network address for syslog accounting.
<i>udp_port</i>	The UDP port number for syslog accounting.

### Defaults

By default, no RADIUS server or syslog accounting is configured for the switch.

parameter	default
<i>udp_port</i>	514

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of the command to disable accounting for device authentication sessions.
- Up to 4 RADIUS accounting servers (total) may be specified. At least one server is required. Each server name should be separated by a space.
- The switch uses *only the first available server* in the list for accounting. For example, if *server1* is not available, the switch will use *server2*.
- Accounting with the local syslog facility is not allowed if RADIUS accounting is already configured. In other words, configure either RADIUS *or* syslog accounting.
- RADIUS servers may each have an additional backup specified through the [aaa radius-server](#) command.

## Examples

```
-> aaa accounting 802.1x rad1
-> aaa accounting 802.1x rad1 rad2 rad3 rad4
-> aaa accounting 802.1x syslog 10.135.67.99 port 8000
-> no aaa accounting 802.1x

-> aaa accounting mac rad1
-> aaa accounting mac rad1 rad2
-> aaa accounting mac syslog 10.135.67.99 port 8000
-> no aaa accounting mac

-> aaa accounting captive-portal rad1
-> aaa accounting captive-portal rad1 rad2 rad3
-> aaa accounting captive-portal syslog 10.135.67.99 port 8000
-> no aaa accounting captive-portal
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[show aaa accounting](#) Displays the accounting server configuration for the switch.

```

---

## aaa accounting radius calling-station-id

Configures the RADIUS Calling-Station-Id attribute for the specified accounting session type.

```
aaa accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}
```

---

### Syntax Definitions

<b>802.1x</b>	Configures the attribute for 802.1X accounting sessions.
<b>mac</b>	Configures the attribute for MAC accounting sessions.
<b>captive-portal</b>	Configures the attribute for Captive Portal accounting sessions.
<b>mac-address</b>	Sets the Calling Station ID to the MAC address of the user.
<b>ip-address</b>	Sets the Calling Station ID to the IP address of the user.

### Defaults

By default, the RADIUS Calling -Station-Id attribute value is set to the MAC address of the user.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Configuring the Calling-Station-Id attribute is not allowed if the accounting server configuration is set to use local Switch Logging (syslog) for the specified accounting session type (802.1x, MAC, or Captive Portal).
- The Calling Station ID attribute is defined in a RADIUS Accounting-Request message that is sent to the RADIUS accounting server.

### Examples

```
-> aaa accounting 802.1x radius calling-station-id ip-address
-> no aaa accounting 802.1x radius calling-station-id ip-address
-> aaa accounting 802.1x radius calling-station-id mac-address

-> aaa accounting mac radius calling-station-id ip-address
-> no aaa accounting mac radius calling-station-id ip-address
-> aaa accounting mac radius calling-station-id mac-address

-> aaa accounting captive-portal radius calling-station-id ip-address
-> no aaa accounting onex radius calling-station-id ip-address
-> aaa accounting captive-portal radius calling-station-id mac-address
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[show aaa accounting](#) Displays the AAA accounting configuration.

## MIB Objects

```
aaaAcctDTable
  aaacdInterface
  aaacdCallingStationId
```

---

## aaa 802.1x re-authentication

Configures the automatic re-authentication of authenticated 802.1X users.

```
aaa 802.1x re-authentication {enable | disable | interval seconds | trust-radius {enable | disable}}
```

---

### Syntax Definitions

<b>enable</b>	Enables re-authentication of 802.1X users.
<b>disable</b>	Disables re-authentication of 802.1X users.
<i>seconds</i>	The amount of time the switch waits before triggering re-authentication of 802.1X users. The valid range is 600–7200 seconds.
<b>trust-radius enable</b>	Directs the switch to use the Session-Timeout attribute value for the re-authentication time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.
<b>trust-radius disable</b>	Directs the switch to use the locally configured re-authentication time interval value.

### Defaults

By default, 802.1X re-authentication is disabled for the switch. When re-authentication is enabled, the following default values apply:

parameter	default
<i>seconds</i>	3600
<b>trust-radius enable   disable</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The re-authentication time interval is triggered when 802.1X re-authentication is enabled.
- When the re-authentication time interval is changed, the new value does not apply to existing authenticated 802.1X users until the user is flushed out or when the user is authenticated again. Any new 802.1X users are re-authenticated based on the current time interval setting.
- When the trust RADIUS option is enabled, the Session-Timeout attribute value received from the RADIUS server overrides the locally configured value for the switch.
- AAA profile settings for 802.1x re-authentication take precedence over global 802.1x re-authentication settings configured with this command. For example, if the global trust RADIUS option is enabled and the AAA profile trust RADIUS option is disabled (the default), the trust RADIUS status is disabled on the UNP port when the AAA profile is assigned to that port.

## Examples

```
-> aaa 802.1x re-authentication enable
-> aaa 802.1x re-authentication enable interval 7200
-> aaa 802.1x re-authentication enable trust-radius enable
-> aaa 802.1x re-authentication enable interval 7200 trust-radius enable
-> aaa 802.1x re-authentication interval 7200 trust-radius disable
-> aaa 802.1x re-authentication disable
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[show aaa config](#) Displays the global AAA parameter configuration for 802.1X sessions.

## MIB Objects

```

  alaAaaOnexReAuthTrustRadStatus
```

---

## aaa interim-interval

Configures the amount of time between each interim accounting update for any given session.

**aaa {802.1x | mac | captive-portal} interim-interval *seconds* [trust-radius {enable | disable}]**

---

### Syntax Definitions

<b>802.1x</b>	Configures the interim interval value for 802.1X accounting sessions.
<b>mac</b>	Configures the interim interval value for MAC accounting sessions.
<b>captive-portal</b>	Configures the interim interval value for Captive Portal accounting sessions.
<i>seconds</i>	The amount of time between each interim accounting update. The valid range is 60–1200 seconds.
<b>trust-radius enable</b>	Directs the switch to use the Acct-Interim-Interval attribute value for the interim time interval. This attribute is returned from the RADIUS server in an Accept-Accept message.
<b>trust-radius disable</b>	Directs the switch to use the locally configured interim time interval value.

### Defaults

By default, the accounting interim interval value is set to 600 seconds.

parameter	default
<b>trust-radius enable   disable</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the trust RADIUS option is enabled, the accounting interim interval value received from the RADIUS server overrides the locally configured value for the switch.
- When the accounting interim interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.

### Examples

```
-> aaa 802.1x interim-interval 1200
-> aaa 802.1x interim-interval 1200 trust-radius enable
-> aaa 802.1x interim-interval 1200 trust-radius disable
```

```
-> aaa mac interim-interval 1200
-> aaa mac interim-interval 1200 trust-radius enable
-> aaa mac interim-interval 1200 trust-radius disable

-> aaa captive-portal interim-interval 1200
-> aaa captive-portal interim-interval 1200 trust-radius enable
-> aaa captive-portal interim-interval 1200 trust-radius disable
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

### [show aaa config](#)

Displays the global AAA parameter configuration for device authentication and accounting sessions.

```

---

## aaa session-timeout

Configures whether or not an authenticated user is automatically logged out of the network based on a session timeout value.

**aaa {mac | captive-portal} session-timeout {enable | disable} [interval *seconds*] [trust-radius {enable | disable}]**

---

### Syntax Definitions

<b>mac</b>	Configures the session timeout parameter for authenticated MAC users.
<b>captive-portal</b>	Configures the session timeout parameter for authenticated Captive Portal users.
<b>session-timeout enable</b>	Enables the session timeout timer for authenticated user sessions.
<b>session-timeout disable</b>	Disables the session timeout timer for authenticated user sessions.
<i>seconds</i>	The session timeout value. The valid range is 300–172800 seconds.
<b>trust-radius enable</b>	Directs the switch to use the Session-Timeout attribute returned from the RADIUS server in an Accept-Accept message.
<b>trust-radius disable</b>	Directs the switch to use the locally configured timeout interval value.

### Defaults

By default, the session timer is disabled for the switch.

parameter	default
<i>seconds</i>	43200 seconds (12 hours)
<b>trust-radius enable   disable</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The session timeout parameter is configurable only for MAC and Captive Portal authentication sessions. When 802.1x re-authentication is enabled, the session timeout is set to 43200 seconds by default.
- The timeout interval is triggered when the session timeout parameter is enabled for the switch.
- When the trust RADIUS option is enabled, the timeout interval value received from the RADIUS server overrides the locally configured value for the switch.

- When the session timeout interval is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- When the session timeout value is reached, the authenticated users are logged out and the MAC address for each logged out user device is flushed.

## Examples

```
-> aaa mac session-timeout enable interval 13000
-> aaa mac session-timeout enable interval 14000 trust-radius enable
-> aaa mac session-timeout disable

-> aaa captive-portal session-timeout enable interval 13000
-> aaa captive-portal session-timeout enable interval 14000 trust-radius enable
-> aaa captive-portal session-timeout disable
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

  alaAaaCpSessTimeoutIntrvl
  alaAaaCpSsTmotTrstRadStatus
```

---

## aaa session console

Enables or disables switch access through the console port of the switch.

**aaa session console {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables the switch access through the console port through the CLI shell.
<b>disable</b>	Disables the switch access through the console port through the CLI shell.

### Defaults

parameter	default
enable / disable	enable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- It is recommended to create a back-up of the configuration file before using this command. Contact customer support to recover the switch.
- Before disabling the CLI console shell, configuration for telnet or SSH access with proper user privilege must be made.
- When the CLI console shell is disabled, the switch log output to the console is also disabled.
- When the CLI console shell is disabled, the switch can be accessed through SSH or telnet or WebView session.
- The command can be stored to the configuration file using **write memory**.
- If the console access is disabled through configuration (on both working and certified directory) and the telnet/SSH/WebView session is also not available to the switch, contact customer support to recover the switch.

---

**Note.** Deleting the configuration file will also delete the other configurations. Hence, it is recommended to create a back-up of the configuration file before deleting the configuration file.

---

- In a virtual chassis, the command must be used only on the master chassis; the console on master and all slaves will be disabled/enabled accordingly.

## Examples

```
-> session console disable  
-> session console enable
```

## Release History

Release 8.6R2; command introduced.

## Related Commands

[show aaa session console config](#) Displays Session Manager information, such as banner file name, session timeout value, and default prompt value.

## MIB Objects

```
alaAaaConsoleAccessConfig  
alaAaaConsoleAccessAdminState
```

---

## aaa inactivity-logout

Configures whether or not an authenticated user is automatically logged out of the network after a specific period of inactivity.

**aaa {mac | captive-portal} inactivity-logout {enable | disable} [interval *seconds*]**

---

### Syntax Definitions

<b>mac</b>	Configures the inactivity logout timer for authenticated MAC users.
<b>captive-portal</b>	Configures the inactivity logout timer for authenticated Captive Portal users.
<b>enable</b>	Enables the inactivity logout timer for the specified authentication type.
<b>disable</b>	Disables the inactivity logout timer for the specified authentication type.
<i>seconds</i>	The inactivity logout time. The valid range is 60–1200 seconds, or enter 0 to indicate that an authenticated user should never be logged out.

### Defaults

By default, the inactivity logout timer is disabled for the switch.

parameter	default
seconds	600 seconds

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The inactivity logout timer is configurable only for MAC and Captive Portal authentication sessions.
- The timer is triggered when the inactivity logout parameter is enabled for the switch.
- Make sure the configured inactivity logout time is set to a value greater than the MAC address aging time for the switch.
- If a specific time is configured for the inactivity logout timer, the user is *not* logged out of the network even if the MAC address for the user device ages out before the inactivity logout timer value expires.
- Setting the inactivity logout time to zero helps prevent silent devices from getting automatically logged out; the silent device will always remain logged in.
- When the inactivity logout time is changed, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values is applied to the device.

## Examples

```
-> aaa mac inactivity-logout enable
-> aaa mac inactivity-logout enable interval 600
-> aaa mac inactivity-logout enable interval 0
-> aaa mac inactivity-logout disable

-> aaa captive-portal inactivity-logout enable
-> aaa captive-portal inactivity-logout enable interval 600
-> aaa captive-portal inactivity-logout enable interval 0
-> aaa captive-portal inactivity-logout disable
```

## Release History

Release 8.1.1; command was introduced.

Release 8.4.1.R02; setting the inactivity logout time to zero is supported (user is never logged out).

## Related Commands

```

---

## aaa radius nas-port-id

Configures the RADIUS client NAS-Port attribute for authentication and accounting sessions.

**aaa radius nas-port-id** {*user-string* *string* | **default**}

---

### Syntax Definitions

*string* A text string (up to 31 characters) used to define a NAS-Port identifier for the NAS-Port attribute.

**default** Sets the NAS-Port attribute value to the chassis/slot/port of the user.

### Defaults

By default, the NAS-Port attribute is set to the user port (chassis/slot/port).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The NAS-Port attribute value specified with this command is used in Account-Request messages and in Accounting-Request messages.

### Examples

```
-> aaa radius nas-port-id default
-> aaa radius nas-port-id user-string nasport
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[show aaa radius config](#) Displays the global RADIUS client attribute configuration.

### MIB Objects

```
alaAaaClientAttrGroup
  alaAaaRadNasPortId
```

---

## aaa radius nas-identifier

Configures the RADIUS client NAS-Identifier attribute for authentication and accounting sessions.

**aaa radius nas-identifier** {**user-string** *string* | **default**}

---

### Syntax Definitions

<i>string</i>	A text string (up to 31 characters) used to identify the switch (RADIUS client) in the NAS-Identifier attribute.
<b>default</b>	Sets the NAS-Identifier attribute to the system name of the switch.

### Defaults

By default, the NAS-Identifier attribute is set to the system name of the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The NAS-Identifier attribute value specified with this command is used in both Account-Request and Accounting-Request messages.

### Examples

```
-> aaa radius nas-identifier default
-> aaa radius nas-identifier user-string os6860
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[show aaa radius config](#) Displays the global RADIUS client attribute configuration.

### MIB Objects

```
alaAaaClientAttrGroup
  alaAaaRadNasIdentifier
```

---

## aaa radius nas-ip-address

Configure the RADIUS client NAS IP address attribute for the outgoing RADIUS packets.

```
aaa radius nas-ip-address {default | local-ip [ip_address]}
```

---

### Syntax Definitions

<b>default</b>	Sets the NAS IP address attribute value to the source IP address of the interface used to send the RADIUS packet. In OmniVista Cirrus it will be the VPN IP address.
<b>local-ip</b>	Sets the NAS IP address attribute value with the DHCP-Client interface IP address as the device identifier.
<i>ip_address</i>	The IPv4 address for NAS IP address attribute in RADIUS packets.

### Defaults

By default, the value of NAS IP address is default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The NAS IP address attribute value configured will be used in all Authentication-Request messages and in Accounting-Request messages.
- If the Local IP is configured without the optional IP address, then the NAS IP address attribute value will be the DHCP-Client interface IP address.
- If there is no DHCP IP address configured on the switch, then NAS IP address attribute will contain the IP address as per the default behavior.
- If Local IP option is configured with an IP address, then this configured IP address value will be used in the NAS IP address attribute.

### Examples

```
-> aaa radius nas-ip-address default
-> aaa radius nas-ip-address local-ip
-> aaa radius nas-ip-address local-ip 12.12.12.12
```

### Release History

Release 8.5R4; command was introduced.

## Related Commands

[show aaa radius config](#) Displays the global AAA attribute values.

## MIB Objects

```
alaAaaClientAttrGroup
  alaAaaRadNasIpAddressMode
  alaAaaRadNasIpAddressType
  alaAaaRadNasIpAddress
```

---

## aaa radius mac-format

Configures the MAC address format to use in the specified RADIUS client attributes.

```
aaa radius mac-format {username | password | calling-station-id | called-station-id} delimiter {char | none} case {uppercase | lowercase}
```

---

### Syntax Definitions

<b>username</b>	Configures the MAC address format for the User-Name attribute.
<b>password</b>	Configures the MAC address format for the User-Password attribute.
<b>calling-station-id</b>	Configures the MAC address format for the Calling-Station-Id attribute.
<b>called-station-id</b>	Configures the MAC address format for the Called-Station-Id attribute.
<i>char</i>	The delimiter character to use to separate the octets within a MAC address. The valid characters are a space (“ ”), a hyphen (“-”), or a colon (“:”). For example, “e8 e7 32 a4 63 23”, “e8-e7-32-a4-63-23”, or “e8:e7:32:a4:63:23”.
<b>none</b>	No delimiter is used in the MAC address format.
<b>uppercase</b>	Uses uppercase characters in the MAC address format.
<b>lowercase</b>	Uses lowercase characters in the MAC address format.

### Defaults

By default, no delimiter is used and the MAC address characters are in uppercase.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The MAC address format configured for the User-Name and User-Password attributes is only applied for MAC authentication and accounting, where these attributes are set to the MAC address of the user. The configured format is not applied for 802.1X or Captive Portal authentication and accounting.
- The MAC address format configured for the Called-Station-Id and Calling-Station-Id attributes is applied for MAC, 802.1X, and Captive Portal authentication and accounting sessions when these attributes are set to a MAC address value.
- The Called-Station-Id attribute is set to the base MAC address of the switch.
- The Calling-Station-ID attribute is configurable and can be set to the MAC address or IP address of the user.

## Examples

```
-> aaa radius mac-format username delimiter none case lowercase
-> aaa radius mac-format username delimiter ":" case lowercase

-> aaa radius mac-format password delimiter none case lowercase
-> aaa radius mac-format password delimiter ":" case lowercase
-> aaa radius mac-format calling-station-id delimiter none case lowercase
-> aaa radius mac-format calling-station-id delimiter ":" case lowercase

-> aaa radius mac-format called-station-id delimiter none case lowercase
-> aaa radius mac-format called-station-id delimiter ":" case lowercase
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

**aaa accounting radius calling-station-id** Sets the Calling-Station-Id attribute to the MAC address or IP address of the user for accounting sessions.

**show aaa radius config** Displays the global RADIUS client attribute configuration.

## MIB Objects

```

  alaAaaRadiusUserNameDelimiter
  alaAaaRadiusUserNameCase
  alaAaaRadiusPasswordDelimiter
  alaAaaRadiusPasswordCase
  alaAaaRadCallnStnIdDelim
  alaAaaRadiusCallingStationIdCase
  alaAaaRadCalldStnIdDelim
  alaAaaRadiusCalledStationIdCase
```

---

## aaa profile

Configures an AAA profile that is used to define and apply specific AAA parameter values to Universal Network Profile (UNP) Edge ports, link aggregates, or an Access Guardian Captive Portal profile. This section describes the base command (**aaa profile profile\_name**) along with the other command keywords that are used to configure AAA parameter values that are applied when the profile is assigned to a UNP port or link aggregate.

**aaa profile** *profile\_name*

```
[device-authentication {802.1x | mac | captive-portal} server1 [server2] [server3] [server4]]
[accounting {802.1x | mac | captive-portal} {server1 [server2...]} | syslog ip_address
[port udp_port]]]
[accounting {802.1x | mac | captive-portal} radius calling-station-id {mac-address | ip-address}]
[802.1x re-authentication {enable | disable} [interval seconds] [trust-radius {enable | disable}]]
[{802.1x | mac | captive-portal} interim-interval seconds [trust-radius {enable | disable}]]
[{mac | captive-portal} session-timeout {enable | disable} [interval seconds] [trust-radius
{enable | disable}]]
[{mac | captive-portal} inactivity-logout {enable | disable} [interval seconds]]
[radius nas-port-id {user-string string | default}]
[radius nas-identifier {user-string string | default}]
[radius nas-ip-address {default | local-ip [ip_address]}]
[radius mac-format {username | password | calling-station-id | called-station-id} delimiter
{char | none} case {uppercase | lowercase}]
```

**no aaa profile** *profile\_name*

---

### Syntax Definitions

*profile\_name* The name to associate with the AAA configuration profile.

### Defaults

The AAA profile parameters are set to the same default values that are set when the explicit AAA command is used to configure the parameter value. See the **show aaa profile** command output example in the “Examples” section of this command page to determine default values for AAA profile parameters.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the AAA profile from the switch configuration.
- Creating the template name with the base command (**aaa profile profile\_name**) is required before attempting to configure profile parameter values.

- When an AAA profile is assigned to a UNP port, the parameter values defined in the profile will override any existing global AAA configuration for users authenticating on that port.
- When an AAA profile is assigned to a Captive Portal profile, the parameters values defined in the AAA profile will override any existing global AAA configuration for users authenticated through the Captive Portal profile configuration.
- For more information about specific AAA parameter values, refer to the following explicit AAA configuration commands for each profile parameter option:

AAA Profile Parameter	Explicit Port Configuration Command
[device-authentication {802.1x   mac   captive-portal} server1 [server2] [server3] [server4]]	<b>aaa device-authentication</b>
[accounting {802.1x   mac   captive-portal} {server1 [server2...]}   syslog ip_address [port udp_port]]	<b>aaa accounting</b>
[accounting {802.1x   mac   captive-portal} radius calling-station-id {mac-address   ip-address}]	<b>aaa accounting radius calling-station-id</b>
[802.1x re-authentication {enable   disable} [interval seconds] [trust-radius {enable   disable}]]	<b>aaa 802.1x re-authentication</b>
[{802.1x   mac   captive-portal} interim-interval seconds [trust-radius {enable   disable}]]	<b>aaa interim-interval</b>
[{mac   captive-portal} session-timeout {enable   disable} [interval seconds] [trust-radius {enable   disable}]]	<b>aaa session-timeout</b>
[{mac   captive-portal} inactivity-logout {enable   disable} [interval seconds]]	<b>aaa inactivity-logout</b>
[radius nas-port-id {user-string string   default}]	<b>aaa radius nas-port-id</b>
[radius nas-identifier {user-string string   default}]	<b>aaa radius nas-identifier</b>
[radius nas-ip-address {default   local-ip ip_address}]	<b>aaa radius nas-ip-address</b>
[radius mac-format {username   password   calling-station-id   called-station-id} delimiter {char   none} case {uppercase   lowercase}]	<b>aaa radius mac-format</b>

## Examples

```

-> aaa profile prof1
-> no aaa profile prof1

-> aaa profile ap-1 device-authentication mac rad1 rad2
-> aaa profile ap-1 device-authentication 802.1x serv1 serv2 serv3 serv4
-> aaa profile ap-2 device-authentication captive-portal rad3 rad4
-> no aaa profile ap-2 device-authentication captive-portal

-> aaa profile ap-1 accounting 802.1x rad1 rad2 rad3
-> aaa profile ap-1 accounting mac rad1 rad2
-> aaa profile ap-1 accounting captive-portal syslog 10.135.67.99 port 8000
-> no aaa profile ap-1 accounting captive-portal

```

```
-> aaa profile ap-1 802.1x re-authentication enable trust-radius enable
-> aaa profile ap-1 802.1x re-authentication enable interval 700
-> aaa profile ap-1 802.1x re-authentication interval 700 trust-radius disable
-> aaa profile ap-1 802.1x re-authentication disable
-> aaa profile ap-1 mac inactivity-logout enable
-> aaa profile ap-1 mac inactivity-logout enable interval 600
-> aaa profile ap-1 mac inactivity-logout disable

-> aaa profile ap-1 captive-portal inactivity-logout enable
-> aaa profile ap-1 captive-portal inactivity-logout enable interval 600
-> aaa profile ap-1 captive-portal inactivity-logout disable

-> aaa profile abc radius nas-ip-address default
-> aaa profile abc radius nas-ip-address local-ip
-> aaa profile abc radius nas-ip-address local-ip 192.168.1.1
```

The following **show aaa profile** command output example shows the default values applied when the AAA profile is created:

```
-> show aaa profile ap-2

AAA profile name = ap-2
Authentication type = mac
  Session Timeout:
    Status           = disable,
    Interval (sec)   = 43200,
    Trust Radius     = disable

  Inactivity Timeout:
    Status           = disable,
    Interval (sec)   = 600

  Accounting Interim:
    Interval (sec)   = 600,
    Trust Radius     = disable

Authentication type = 802.1x
  Re-Authentication Timeout:
    Status           = disable,
    Interval (sec)   = 3600,
    Trust Radius     = disable

  Accounting Interim:
    Interval (sec)   = 600,
    Trust Radius     = disable

Authentication type = captive-portal
  Session Timeout:
    Status           = disable,
    Interval (sec)   = 43200,
    Trust Radius     = disable

  Inactivity Timeout:
    Status           = disable,
    Interval (sec)   = 600

  Accounting Interim:
    Interval (sec)   = 600,
    Trust Radius     = disable
```

```

RADIUS client attributes:
  NAS port id      = default,
  NAS identifier   = default,
  NAS IP address   = default,
  MAC format delimiter:
    Username       = none, UserNameCase = uppercase,

[**console-only** {**enable** | **disable**}]

[**priv-password** *password* | **prompt-priv-password**]

**no user** *username*

---

### Syntax Definitions

<i>username</i>	The name of the user. Used for logging into the switch. Required to create a new user entry or for modifying a user. Maximum 63 characters.
<i>password</i>	The user's password in clear text or hexadecimal (corresponding to encrypted form). Required to create a new user entry. Maximum 30 characters.
<b>password-prompt</b>	This option allows to enter the password in a obscured format rather than as clear text. Select this option with the 'user' command to configure the password for the user. When this option is selected, a password prompt appears and the password can be provided. Password needs to be re-entered, and only if both the passwords match, command is accepted. The password provided in this mode is not displayed on the CLI as text.
<i>day</i>	The number of days before this user's current password expires. The range is 1 to 150 days.
<i>date</i>	The date (in the format <i>mm/dd/yyyy hh:mm</i> ) that the user's current password will expire.
<b>read-only</b>	Specifies that the user will have read-only access to the switch.
<b>read-write</b>	Specifies that the user will have read-write access to the switch.
<i>families</i>	Determines the command families available to the user on the switch. Each command family should be separated by a space. Command families are subsets of domains.
<i>domains</i>	Determines the command domains available to the user on the switch. Each domain should be separated by a space.
<b>all</b>	Specifies that all command families and domains are available to the user.
<b>none</b>	Specifies that no command families or domains are available to the user.
<b>all-except</b>	Specifies that functional privileges for families or domains followed by 'all-except' are disabled to the user.
<b>no snmp</b>	Denies the specified user SNMP access to the switch.

<b>no auth</b>	Specifies that the user has SNMP access without any required SNMP authentication and encryption protocol.
<b>sha</b>	Specifies that the SHA authentication algorithm should be used for authenticating SNMP PDU for the user.
<b>md5</b>	Specifies that the MD5 authentication algorithm should be used for authenticating SNMP PDU for the user.
<b>sha+des</b>	Specifies that the SHA authentication algorithm and DES encryption standard should be used for authenticating and encrypting SNMP PDU for the user.
<b>md5+des</b>	Specifies that the MD5 authentication algorithm and the DES encryption standard should be used for authenticating and encrypting SNMP PDU for the user.
<b>sha+aes</b>	Specifies that the SHA authentication algorithm and AES encryption standard is used for authenticating and encrypting SNMP PDU for the user.
<b>sha224</b>	Specifies that the SHA224 authentication algorithm used for storing the user passwords.
<b>sha256</b>	Specifies that the SHA256 authentication algorithm used for storing the user passwords.
<b>sha384</b>	Specifies SHA384 authentication and no privacy must be used for authenticating the SNMP PDU for the user.
<b>sha224+aes</b>	Specifies SHA224 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
<b>sha256+aes</b>	Specifies SHA256 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
<b>sha384+aes</b>	Specifies SHA384 authentication and AES encryption must be used for authenticating the SNMP PDU for the user.
<b>console-only enable</b>	Enables console only access for the user <i>admin</i> .
<b>console-only disable</b>	Disables console only access for the user <i>admin</i> .
<b>priv-password</b>	Separate password that is used for SNMPv3 encryption. (8-30 characters)
<b>prompt-priv-password</b>	This option allows to enter the privacy password in a obscured format rather than as clear text. When this option is selected, press the Enter key. Select this option with the 'user' command to configure the privacy password for the user. When this option is selected, a password prompt appears and the privacy password can be provided. Password needs to be re-entered, and only if both the passwords match, command is accepted. The password provided in this mode is not displayed on the CLI as text.

## Defaults

- By default, if a user is created without indicating the read and write privileges and SNMP access, the user will be given privileges based on the *default user account*. The *default* user account may be modified.
- By default, the password will be encrypted using SHA for all non SNMP users.

- For SNMP users without authentication, password will be encrypted with SHA.
- For SNMP users with authentication, it will be encrypted with the authentication method set for the user. If user is created with MD5, then it will be still encrypted with MD5.
- Users created with SHA2 authentication algorithm cannot be used for SNMP authentication.

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- At least one user with SHA/MD5 authentication and/or DES encryption must be configured on the switch for SNMPv3 communication with OmniVista.
- Note that the exclamation point ‘!’ is not a valid password character. In addition, specifying an asterisk (\*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, **password \*\*123456\*\*** is allowed; **password \*\*\*\*\*** is not allowed.
- Some special characters are interpreted as a Linux shell variable by the switch when being used in a password. They can still be used in a password but they must be escaped (‘\’). For example, to use the ‘\$’ as part of a password the following should be entered:

```
-> user test password test\$1234
```

this password will be interpreted as *test\$1234*.

- An alternative method is to use the **password-prompt** parameter when using special characters in a password. The **password-prompt** parameter exits the Linux shell and special characters are no longer interpreted as shell variables. The following characters are the majority of characters considered special characters by the switch [ " " (white space), \$, "", \#, [], >, <, |, ;, { }, (), ~, ` ].
- A password expiration for the user’s current password may be configured with the **expiration** option. However, if the password is changed, or the global password expiration setting is configured with the **user password-expiration** command, the user’s password expiration will be configured with the global expiration setting.
- When modifying a user’s SNMP access, the user password must be re-entered (or a new one configured). This is required because the hash algorithm used to save the password in the switch depends on the SNMP authentication level.
- At initial startup, the default user on the switch is **admin** with a password of **switch**. The switch will not recreate this user at any successive startup as long as there exists at least one user defined with write access to all commands. (Note that if password expiration is configured for the **admin** user, or configured globally through the **user password-expiration** command, when the **admin** user’s password expires, the **admin** user will have access only through the console port.)
- New users or updated user settings are saved *automatically*.
- The **priv-password** token is accepted only when SNMP level with encryption is configured for the user. If SNMP level with encryption is not selected and **priv-password** is configured, then CLI command is rejected with error.

- If `priv-password` is not configured for the user with encryption SNMP level, then the user password parameter is used for `priv-password` (both for authentication/encryption).
- Password policy is not applicable for the new optional parameter **`priv-password`**.
- For authenticating switch access through other access types such as telnet, FTP, SSH the existing user password will be used irrespective of whether **`priv-password`** is configured or not.
- When the SNMP level for an existing user with `priv-password` configured is changed from one encryption level to another encryption level, then the previously configured `priv-password` will not be used with the new SNMP level. `Priv-password` needs to be configured again when SNMP level is changed for an existing user.

## Examples

```
-> user techpubs password writer_pass read-only config
-> user techpubs password-prompt
Enter Password: *****
Confirm Password: *****

-> user techpubs password writer_pass read-write all sha256
```

The following example creates a user with read-write privileges for all families except aaa.

```
-> user techpubs password writer_pass read-write all-except aaa
-> no user techpubs

-> user snmpv3user password passlpassl priv-password privlprivl read-write all
sha+aes

-> user snmpv3user password passlpassl prompt-priv-password
Enter Priv-Password: *****
Confirm Priv-Password: *****
```

## Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **`password-prompt`**, **`all-except`**, **`priv-password`**, **`prompt-priv-password`** parameter added, **`sha224`** and **`sha256`** algorithm support added.

Release 8.7 R01; Support for **`sha384`**, **`sha224+aes`**, **`sha256+aes`**, and **`sha384+aes`** added.

## Related Commands

<a href="#">password</a>	Configures the current user's password.
<a href="#">show user</a>	Displays information about users configured in the local database.

## MIB Objects

```
aaaUserTable
  aaauPassword
  aaauReadRight
  aaauWriteRight
  aaauSnmpLevel
  aaauSnmpAuthKey
  aaauPasswordExpirationDate
```

## password

Configures the current user's password.

**password**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the **snapshot** command is used to capture the switch configuration, the text of the password is not displayed in the file. Instead an authentication key is included in the file.
- A new password cannot be identical to the current password; it cannot be identical to any of the three passwords that preceded the current password.
- Note that the exclamation point (!) is not a valid password character. In addition, specifying an asterisk (\*) as one or more characters in a password is allowed as long as every character is not an asterisk. For example, **password \*\*123456\*\*** is allowed; **password \*\*\*\*\*** is not allowed.
- Password settings are saved *automatically*.

### Examples

```
-> password
enter old password: *****
enter new password: *****
reenter new password: *****
->
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### **user**

Configures entries in the local user database. May be used by a system administrator to change any user's password in addition to configuring user privileges.

## MIB Objects

aaaUserTable

    aaauPassword

    aaauOldPassword

---

## user password-size min

Configures the minimum number of characters required when configuring a user password.

**user password-size min** *size*

---

### Syntax Definitions

*size* The number of characters required when configuring a user password through the **password** command or when setting up a user password through the **user** command. The range is 1 to 14 characters.

### Defaults

parameter	default
<i>size</i>	6

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> user password-size min 9
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**user** Configures entries in the local user database. May be used by a system administrator to change any user's password in addition to configuring user privileges.

**show user password-policy** Displays the global password policy configuration for the switch.

### MIB Objects

```
aaaAsaConfig
  aaaAsaPasswordSizeMin
```

---

## user password-expiration

Configures an expiration date for all user passwords stored locally on the switch or disables password expiration.

**user password-expiration** {*day* / **disable**}

---

### Syntax Definitions

**day** The number of days before locally configured user passwords will expire. The range is 1 to 150 days.

**disable** Disables password expiration for users configured locally on the switch.

### Defaults

parameter	default
<i>day</i> / <b>disable</b>	<b>disable</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The **user password-expiration** command sets a default password expiration for users configured locally on the switch.
- Password expiration may be configured on a per-user basis through the **user** command; the user setting overrides the **user password-expiration** setting until the user password is changed or the **user password-expiration** command is entered again.

### Examples

```
-> user password-expiration 2
-> user password-expiration disable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [user](#)

Configures entries in the local user database. May be used by a system administrator to change any user's password in addition to configuring user privileges.

### [show user password-policy](#)

Displays the global password policy configuration for the switch.

## MIB Objects

aaaAsaConfig

aaaAsaDefaultPasswordExpirationInDays

---

## user password-policy cannot-contain-username

Specifies whether or not a user can configure a password that contains the username for the account.

**user password-policy cannot-contain-username {enable | disable}**

---

### Syntax Definitions

**enable** Does not allow the password to contain the username.  
**disable** Allows the password to contain the username.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The status of this function is specified as part of a global password policy that is applied to all passwords when they are created or modified.
- When this function is enabled, a check is done at the time the password is created or modified to ensure that the username is not specified as part of the password text.

### Examples

```
-> user password-policy cannot-contain-username enable
-> user password-policy cannot-contain-username disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show user password-policy](#) Displays the global password policy configuration for the switch.

### MIB Objects

```

  aaaAsaPasswordContainUserName
```

---

## user password-policy min-upper-case

Configures the minimum number of uppercase English characters required for a valid password.

**user password-policy min-upper-case** *number*

---

### Syntax Definitions

*number* The minimum number of uppercase characters. The valid range is 0–7.

### Defaults

parameter	default
<i>number</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the minimum uppercase character requirement.
- The minimum number of uppercase characters is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-policy min-upper-case 2
-> user password-policy min-upper-case 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show user password-policy](#) Displays the global password policy configuration for the switch.

### MIB Objects

```

---

## user password-policy min-lowercase

Configures the minimum number of lowercase English characters required for a valid password.

**user password-policy min-upper** *number*

---

### Syntax Definitions

*number* The minimum number of uppercase characters. The valid range is 0–7.

### Defaults

parameter	default
<i>number</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the minimum lowercase character requirement.
- The minimum number of lowercase characters is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-policy min-lowercase 2  
-> user password-policy min-lowercase 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show user password-policy](#) Displays the global password policy configuration for the switch.

### MIB Objects

```
aaaAsaConfig  
  aaaAsaPasswordMinLowerCase
```

## user password-policy min-digit

Configures the minimum number of base-10 digits required for a valid password.

**user password-policy min-digit** *number*

---

### Syntax Definitions

*number* The minimum number of uppercase characters. The valid range is 0–7.

### Defaults

parameter	default
<i>number</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the minimum number of digits requirement.
- The minimum number of digits requirement is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-policy min-digit 2
-> user password-policy min-digit 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show user password-policy](#) Displays the global password policy configuration for the switch.

### MIB Objects

```

  aaaAsaPasswordMinDigit
```

---

## user password-policy min-nonalpha

Configures the minimum number of non-alphanumeric characters (symbols) required for a valid password.

**user password-policy min-nonalpha** *number*

---

### Syntax Definitions

*number* The minimum number of non-alphanumeric characters. The valid range is 0–7.

### Defaults

parameter	default
<i>number</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the minimum non-alphanumeric character requirement.
- The minimum number of non-alphanumeric characters is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-policy min-nonalpha 2
-> user password-policy min-nonalpha 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show user password-policy](#) Displays the global password policy configuration for the switch.

### MIB Objects

```
aaaAsaConfig
  aaaAsaPasswordMinNonAlpha
```

---

## user password-history

Configures the maximum number of old passwords to retain in the password history.

**user password-history** *number*

---

### Syntax Definitions

*number* The maximum number of old passwords to retain. The range is 0–24.

### Defaults

parameter	default
<i>number</i>	4

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the password history function.
- The user is prevented from specifying any passwords that are recorded in the password history and fall within the range configured through this command.
- The password history value is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-history 2
-> user password-history 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**show user password-policy** Displays the global password policy configuration for the switch.

### MIB Objects

```
aaaAsaConfig
  aaaAsaPasswordHistory
```

---

## user password-min-age

Configures the minimum number of days during which a user is prevented from changing a password.

**user password-min-age** *days*

---

### Syntax Definitions

*days* The number of days to use as the minimum age of the password. The range is 0–150.

### Defaults

parameter	default
<i>days</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specify **0** with this command to disable the minimum number of days requirement.
- Configure the minimum age of a password with a value that is less than the value configured for the password expiration.
- The password minimum age value is specified as part of a global password policy that is applied to all passwords when they are created or modified.

### Examples

```
-> user password-min-age 7
-> user password-min-age 0
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**show user password-policy** Displays the global password policy configuration for the switch.

### MIB Objects

```
aaaAsaConfig
  aaaAsaPasswordMinAge
```

---

## user lockout-window

Configures a moving period of time (observation window) during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts. The number of failed login attempts is decremented by the number of failed attempts that age beyond the observation window time period.

**user lockout-window** *minutes*

---

### Syntax Definitions

*minutes* The number of minutes the observation window remains active. The range is 0–99999.

### Defaults

parameter	default
<i>minutes</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- Specify **0** with this command to disable the observation window function. This means that failed login attempts will never age out; the number of failed attempts is never decremented.
- Do not configure an observation window time period that is greater than the lockout duration time period.
- If the number of failed login attempts exceeds the number of failed attempts allowed before the observation window time expires, then the user account is locked out of the switch.
- The observation window time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*.

### Examples

```
-> user lockout-window 500
-> user lockout-window 0
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">user lockout-duration</a>	Configures the amount of time a user account remains locked out of the switch.
<a href="#">user lockout-threshold</a>	Configures the number of failed password attempts allowed before the user account is locked out of the switch.
<a href="#">user lockout unlock</a>	Manually locks or unlocks a user account on the switch.
<a href="#">show user lockout-setting</a>	Displays the global user lockout settings for the switch.

## MIB Objects

```
aaaAsaConfig  
  aaaAsaLockoutWindow
```

---

## user lockout-threshold

Configures the number of failed password login attempts allowed during a certain period of time (observation window). If the number of failed attempts exceeds the lockout threshold number before the observation window period expires, the user account is locked out.

**user lockout-threshold** *number*

---

### Syntax Definitions

*number*                                      The number of failed login attempts allowed. The range is 0–999.

### Defaults

parameter	default
<i>number</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- If the lockout threshold is set to zero (the default), there is no limit to the number of failed login attempts allowed.
- A user account remains locked out for the length of the lockout duration time period; at the end of this time, the account is automatically unlocked.
- If the lockout duration time period is set to zero, only the **admin** user or a user with read/write AAA privileges can unlock a locked user account. An account is unlocked by changing the user account password or with the **user lockout unlock** command.
- The lockout threshold time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*; that is, these settings do not require the **write memory**, **reload slot**, or **configuration snapshot** command to save user settings over a reboot.

### Examples

```
-> user lockout-threshold 3
-> user lockout-threshold 0
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">user lockout-window</a>	Configures a window of time during which failed login attempts are counted to determine if the number of failed attempts has exceeded the number of allowed attempts.

<a href="#">user lockout unlock</a>	Manually locks or unlocks a user account on the switch.
<a href="#">show user lockout-setting</a>	Displays the global user lockout settings for the switch.

## MIB Objects

```
aaaAsaConfig  
  aaaAsaLockoutThreshold
```

---

## user lockout-duration

Configures the length of time a user account remains locked out of the switch. At the end of this time period, the user account is automatically unlocked.

**user lockout-duration** *minutes*

---

### Syntax Definitions

*minutes* The number of minutes the user account remains locked out. The range is 0–99999.

### Defaults

parameter	default
<i>minutes</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is only available to the **admin** user because the **admin** user account is the only account protected from any type of lockout attempt.
- Note that if the lockout duration time period is set to zero (the default), then locked user accounts are never automatically unlocked.
- Only the **admin** user or a user with read/write AAA privileges can unlock a locked user account when the lockout duration time is set to zero. An account is unlocked by changing the user password or with the **user lockout unlock** command.
- Do not configure a lockout duration time period that is less than the amount of time configured for the observation window.
- The lockout duration time period is a global lockout setting that is applied to all passwords configured on the switch.
- Lockout settings are saved *automatically*; that is, these settings do not require the **write memory**, **reload slot**, or **configuration snapshot** command to save user settings over a reboot.

### Examples

```
-> user lockout-duration 60
-> user lockout-duration 0
```

## Release History

Release 7.1.1; command was introduced.

## MIB Objects

```
aaaAsaConfig  
  aaaAsaLockoutDuration
```

---

## user lockout unlock

Manually locks or unlocks a user account on the switch.

```
user username {lockout | unlock}
```

---

### Syntax Definitions

<i>username</i>	The username of the account to lock or unlock.
<b>lockout</b>	Locks the user account out of the switch.
<b>unlock</b>	Unlocks a locked user account.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is only available to the **admin** user or a user with read/write AAA privileges.
- The **admin** user account is protected from any type of lockout attempt.
- User lockouts and unlocks are saved *automatically*.

### Examples

```
-> user j_smith lockout
-> user j_smith unlock
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<a href="#">show user</a>	Displays information about all users or a particular user configured in the local user database on the switch.
<a href="#">show user lockout-setting</a>	Displays the global user lockout settings for the switch.

### MIB Objects

```
aaaUserTable
  aaauPasswordLockoutEnable
```

---

## show aaa server

Displays information about a particular AAA server or AAA servers.

**show aaa server** [*server\_name*]

---

### Syntax Definitions

*server\_name* The server name, which is defined through the **aaa radius-server**, **aaa tacacs+-server**, or **aaa ldap-server** commands.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If a server name is not included with this command, information for all of the servers is displayed.

### Examples

```
-> show aaa server
Server name = ldap2
  Server type           = LDAP,
  Host name 1           = ors40535,
  Retry number          = 3,
  Timeout (sec)         = 2,
  Port                  = 389,
  Domain name           = manager,
  Search base           = c=us,
  VRF                   = default
Server name = rad1
  Server type           = RADIUS,
  IP Address 1          = 10.10.2.1,
  IP Address 2          = 10.10.3.5,
  Retry number          = 3,
  Timeout (sec)         = 2,
  Authentication port   = 1645,
  Accounting port       = 1646
  SSL enable            = TRUE,
  VRF                   = default
Health Check           = ENABLED,
Primary Server:
  Status                = DOWN,
  Uptime                = -,
  Downtime              = -,
```

```

        Down to UP transitions = 0,
Backup Server :
    Status      = DOWN,
    Uptime      = -,
    Downtime    = -,
        Down to UP transitions = 0

    Status      = DOWN,
    Uptime      = -,
    Downtime    = -,
        Down to UP transitions = 0,
Backup Server :
    Status      = DOWN,
    Uptime      = -,
    Downtime    = -,
        Down to UP transitions = 0

```

```

-> show aaa server ldap2
Server name = ldap2
    Server type   = LDAP,
    Host name 1   = ors40535,
    Retry number  = 3,
    Timeout (in sec) = 2,
    Port        = 389,
    Domain name  = manager,
    Search base  = c=us,
    VRF         = default

```

### *output definitions*

---

<b>Server name</b>	The name of the server. A RADIUS, TACACS+ or LDAP server name is defined through the <b>aaa radius-server</b> , <b>aaa tacacs+-server</b> , and <b>aaa ldap-server</b> commands respectively.
<b>Server type</b>	The type of server (LDAP, TACACS+, or RADIUS).
<b>Host name</b>	The name of the primary LDAP, TACACS+, or RADIUS host.
<b>IP address</b>	The IP address of the server.

*output definitions*

---

<b>Retry number</b>	The number of retries the switch makes to authenticate a user before trying the backup server.
<b>Timeout</b>	The timeout for server replies to authentication requests.
<b>Port</b>	The port number for the primary LDAP or TACACS+ server.
<b>Encryption enabled</b>	The status of the encryption.
<b>Domain name</b>	The super-user or administrative distinguished name in the format recognized by the LDAP-enabled directory servers.
<b>Search base</b>	The search base recognized by the LDAP-enabled directory servers.
<b>Authentication port</b>	The UDP destination port for authentication requests.
<b>Accounting port</b>	The UDP destination port for accounting requests.
<b>SSL enable</b>	The SSL enable field is displayed for the RADIUS server only when the SSL is enabled for RADIUS server.
<b>VRF</b>	Name of the VRF associated with the server.
<b>Health Check</b>	Whether a health check session is enabled or disabled for the RADIUS server.
<b>Primary Server</b>	The operational status, up time, down time, and the number of transitions from down to up for the primary RADIUS server. This field displays information gathered when RADIUS health check is enabled for the server.
<b>Backup Server</b>	The operational status, up time, down time, and the number of transitions from down to up for the back-up RADIUS server. This field displays information gathered when RADIUS health check is enabled for the server.

---

**Release History**

Release 7.1.1; command was introduced.

Release 8.4.1; **SSL enable** output field added for RADIUS server.

Release 8.5R4; **Health Check**, **Primary Server**, and **Backup Server** fields added for RADIUS server.

**Related Commands**

<b>aaa radius-server</b>	Configures or modifies a RADIUS server for Authenticated Switch Access.
<b>aaa ldap-server</b>	Configures or modifies an LDAP server for Authenticated Switch Access.
<b>aaa tacacs+-server</b>	Configures or modifies an TACACS+ server for Authenticated Switch Access.
<b>aaa radius-server health-check</b>	Defines the RADIUS server health check configuration for a specific RADIUS server.
<b>show aaa radius health-check-config</b>	Displays the RADIUS server health check configuration.

## show aaa server statistics

Displays the authorization, authentication, accounting, and BYOD statistics for the specified RADIUS server.

**show aaa server** *server\_name* **statistics**

---

### Syntax Definitions

*server\_name* The name of the RADIUS server for which statistics will be displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command applies only to RADIUS servers known to the switch (servers are identified through the [aaa radius-server](#) command).
- All statistics displayed for authorization, authentication, and accounting are displayed as an aggregate of the primary and back-up RADIUS server; separate statistics are not displayed for the primary server and the back-up server.
- Use the [aaa radius-server clear-statistics](#) command to reset all the statistics counters to zero.

### Examples

```
-> show aaa server rad2 statistics
Statistics for rad2:
Authorization:
  Total No of Access-Request      : 2
  Total No of Access-Response     : 2
  Total No of Timedout Request    : 0
  Min RTT of Access Req/Res      usec: 938
  Avg RTT of Access Req/Res      usec: 1087
  Max RTT of Access Req/Res      usec: 1237
  Last RTT of Access Req/Res     usec: 1237
Authentication:
  Total No of Access-Request      : 1
  Total No of Access-Response     : 1
  Total No of Access-Accept       : 1
  Total No of Access-Reject       : 0
  Total No of Access-Challenge    : 0
  Total No of Timedout Request    : 0
  Min RTT of Access Req/Res      usec: 1176
```

```

Avg RTT of Access Req/Res usec: 1176
Max RTT of Access Req/Res usec: 1176
Last RTT of Access Req/Res usec: 1176
Accounting:
Total No of Acct-Request      : 2
Total No of Acct-Response    : 2
Total No of Timedout Request : 0
Min RTT of Acct Req/Res     usec: 76657
Avg RTT of Acct Req/Res     usec: 80182
Max RTT of Acct Req/Res     usec: 83708
Last RTT of Acct Req/Res    usec: 83708
BYOD:
Total No of COA Request      : 0
Total No of COA ACK Sent     : 0
Total No of COA NACK Sent    : 0
Total No of DM Request       : 0
Total No of DM ACK Sent      : 0
Total No of DM NACK Sent     : 0

Time of last statistics clear : Thu Feb  1 18:09:06 2018

-> show aaa server auth-serv1 statistics
ERROR: Statistics are supported only for RADIUS servers

```

### *output definitions*

---

<b>Authorization</b>	The statistics information displayed for authorization.
<b>Total No of Access-Request</b>	The total number of authorization access requests sent to the server.
<b>Total No of Access-Response</b>	The total number of authorization access responses received from the server.
<b>Total No of Timedout Request</b>	The total number of authorization access requests that timed out.
<b>Min RTT of Access Req/Res</b>	The minimum RTT of authorization access requests or responses for the last seven days.
<b>Avg RTT of Access Req/Res</b>	The average RTT of authorization access requests or responses for the last seven days.
<b>Max RTT of Access Req/Res</b>	The maximum RTT of authorization access requests or responses for the last seven days.
<b>Last RTT of Access Req/Res</b>	The last RTT of authorization access requests or responses.
<b>Authentication</b>	The statistics information displayed for authentication.
<b>Total No of Access-Request</b>	The total number of authentication access requests sent to the server.
<b>Total No of Access-Response</b>	The total number of authentication access responses received from the server.
<b>Total No of Access-Accept</b>	The total number of authentication access accepts received from the server.
<b>Total No of Access-Reject</b>	The total number of authentication access rejects received from the server.
<b>Total No of Access-Challenge</b>	The total number of authentication access challenges received from the server.
<b>Total No of Timedout Request</b>	The total number of authentication access requests that timed out.

*output definitions*

---

<b>Min RTT of Access Req/Res</b>	The minimum RTT of authentication access requests or responses for the last seven days.
<b>Avg RTT of Access Req/Res</b>	The average RTT of authentication access requests or responses for the last seven days.
<b>Max RTT of Access Req/Res</b>	The maximum RTT of authentication access requests or responses for the last seven days.
<b>Last RTT of Access Req/Res</b>	The last RTT of authentication access requests or responses.
<b>Accounting</b>	The statistics information displayed for accounting.
<b>Total No of Acct -Request</b>	The total number of accounting access requests sent to the server.
<b>Total No of Acct -Response</b>	The total number of accounting access responses received from the server.
<b>Total No of Timedout Request</b>	The total number of accounting access requests that timed out.
<b>Min RTT of Acct Req/Res</b>	The minimum RTT of accounting access requests or responses for the last seven days.
<b>Avg RTT of Acct Req/Res</b>	The average RTT of accounting access requests or responses for the last seven days.
<b>Max RTT of Acct Req/Res</b>	The maximum RTT of accounting access requests or responses for the last seven days.
<b>Last RTT of Acct Req/Res</b>	Displays the last RTT of accounting access requests or responses.
<b>BYOD</b>	Displays the BYOD statistics.
<b>Total No of COA Request</b>	The total number of Change of Authorization (CoA) requests received from the server.
<b>Total No of COA ACK Sent</b>	The total number of CoA-ACKs sent to the server.
<b>Total No of COA NACK Sent</b>	The total number of CoA-NACKs sent to the server.
<b>Total No of DM Request</b>	The total number of disconnect request messages received from the server.
<b>Total No of DM ACK Sent</b>	Displays the total number of disconnect ACKs sent to the server.
<b>Total No of DM NACK Sent</b>	Displays the total number of disconnect NACKs sent to the server.
<b>Time of last statistics clear</b>	The date and time the AAA statistics were last cleared for the server.

## aaa radius-server clear-statistics

Clears the AAA statistics collected for the specified RADIUS server.

**aaa radius-server** *server\_name* **clear-statistics**

---

### Syntax Definitions

*server\_name* The name of the RADIUS server on which the AAA statistics will be cleared.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the [show aaa server statistics](#) command to display the statistics collected for the specified server.

### Examples

```
-> aaa radius-server rad1 clear-statistics
-> aaa radius-server rad2 clear-statistics
```

### Release History

Release 8.5R4; command introduced.

### Related Commands

- [aaa radius-server](#) Configures or modifies a RADIUS server for Authenticated Switch Access and device authentication.
- [aaa radius-server health-check](#) Enables or disables a RADIUS server health check with the specified parameters.
- [show aaa server statistics](#) Displays authorization, authentication, accounting, and BYOD statistics collected for a RADIUS server.

### MIB Objects

```
aaaServerTable

```

---

## show aaa authentication

Displays information about the current authenticated switch session.

**show aaa authentication**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **show aaa authentication** command to display authentication information about switch management services (Telnet, FTP, console port, Secure Shell, etc.).

### Examples

```
-> show aaa authentication
Service type = Default
  1rst authentication server = RadiusServer
  2nd authentication server = local
Service type = Console
  1rst authentication server = local
Service type = Telnet
  Authentication = Use Default,
  1rst authentication server = RadiusServer
  2nd authentication server = local
Service type = FTP
  Authentication = Use Default,
  1rst authentication server = RadiusServer
  2nd authentication server = local
Service type = Http
  Authentication = Use Default,
  1rst authentication server = RadiusServer
  2nd authentication server = local
Service type = Snmp
  Authentication = Use Default,
  1rst authentication server = RadiusServer
  2nd authentication server = local
Service type = Ssh
  Authentication = Use Default,
  1rst authentication server = TacacsServer
  2nd authentication server = local
```

*output definitions*

---

<b>Authentication</b>	Displays <b>denied</b> if the management interface is disabled. Displays <b>Use Default</b> if the management interface is configured to use the default configuration.
<b>1st authentication server</b>	The first server to be polled for authentication information.
<b>2nd authentication server</b>	The next server to be polled for authentication information.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

[aaa authentication](#) Configures the interface for Authenticated Switch Access and specifies the server(s) to be used.

## show aaa device-authentication

Displays a list of RADIUS servers assigned to provide 802.1X, MAC, or Captive Portal authentication.

**show aaa device-authentication [802.1x | mac | captive-portal]**

---

### Syntax Definitions

<b>802.1x</b>	Displays the servers used for 802.1X authentication.
<b>mac</b>	Displays the servers used for MAC authentication.
<b>captive-portal</b>	Uses the servers used for Captive Portal authentication.

### Defaults

By default, all assigned servers are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the optional **802.1x**, **mac**, or **captive-portal** parameters to display the servers assigned to provide the specified type of authentication.

### Examples

```
-> show aaa device-authentication
Authentication type = mac
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1
    3rd authentication server = rad2,
    4th authentication server = rad3

Authentication type = 802.1x
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1

Authentication type = captive-portal
  Authentication Server:
    1st authentication server = cppm,
    2nd authentication server = rad1
```

*output definitions*

---

<b>Authentication type</b>	The type of authentication the server is assigned to provide ( <b>802.1x</b> , <b>mac</b> , or <b>captive-portal</b> )
<b>1st authentication server</b>	The first server to be polled for authentication information. Any backup servers are also displayed on subsequent lines.

---

**Release History**

Release 7.2.1; command was introduced.

Release 7.3.4; **802.1x** and **mac** parameters added.

Release 8.1.1; **captive-portal** parameter added.

aaaDaName4

---

## show aaa accounting

Displays information about accounting servers configured for authenticated switch access and device authentication sessions. Accounting servers keep track of network resources (time, packets, bytes, etc.) and user activity.

**show aaa accounting [802.1x | mac | captive-portal]**

---

### Syntax Definitions

<b>802.1x</b>	Displays the RADIUS or syslog server used to log accounting for 802.1X authenticated sessions.
<b>mac</b>	Displays the RADIUS or syslog server used to log accounting for MAC authenticated sessions.
<b>captive-portal</b>	Displays the RADIUS or syslog server to log accounting for Captive Portal authenticated sessions.

### Defaults

By default, the accounting server configuration is displayed for TACACS+ commands and management sessions (Telnet, FTP, console port, HTTP, or SNMP).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **802.1x**, **mac**, or **captive-portal** parameters to display the accounting server configuration for a specific type of device authentication.
- If no parameters are entered with this command, the accounting server configuration for authentication sessions and TACACS+ commands is displayed.

### Examples

```
-> show aaa accounting mac
Accounting type = mac
  Accounting Server:
    1st Accnt Server = rad1,
    2nd Accnt Server = rad2

-> show aaa accounting 802.1x
Accounting type = 802.1x
  Syslog Accnt Server:
    IP Address = 135.254.163.110,
    UDP port   = 514
```

```
-> show aaa accounting captive-portal
Accounting type = captive-portal
  Syslog Acct Server:
    IP Address = 135.254.163.110,
    UDP port   = 514
-> show aaa accounting
Session (telnet, ftp, ...)
  1st accounting server = rad1
Command accounting server
  1st accounting server = server1
```

## Release History

Release 7.1.1; command was introduced.

Release 8.1.1; **802.1x**, **mac**, and **captive-portal** parameters added.

## Related Commands

<a href="#">aaa accounting session</a>	Configures an accounting server for authenticated switch access sessions.
<a href="#">aaa accounting command</a>	Enables or disables the TACACS+ server for command accounting
<a href="#">aaa accounting</a>	Configures RADIUS server accounting or local Switch Logging (syslog) accounting for device authentication sessions.

```

---

## show aaa config

Displays the AAA parameter configuration for 802.1X, MAC, and Captive Portal sessions.

**show aaa {802.1x | mac | captive-portal} config**

---

### Syntax Definitions

**802.1x** Displays the parameter configuration for 802.1X authenticated sessions.

**mac** Displays the parameter configuration for MAC authenticated sessions.

**captive-portal** Displays the parameter configuration for Captive Portal authenticated sessions.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **802.1x**, **mac**, or **captive-portal** parameters to display the parameter configuration for a specific type of device authentication.

### Examples

```
-> show aaa 802.1x config
Authentication type = 802.1x
  Re-Authentication Timeout:
    Status                = enable,
    Interval (sec)        = 3600,
    Trust Radius           = disable

  Accounting Interim:
    Interval (sec)        = 600,
    Trust Radius           = disable

-> show aaa mac config
Authentication type = mac
  Session Timeout:
    Status                = disable,
    Interval (sec)        = 43200,
    Trust Radius           = disable

  Inactivity Timeout:
    Status                = disable,
    Interval (sec)        = 600
```

```

Accounting Interim:
  Interval (sec)          = 600,
  Trust Radius           = disable

-> show aaa captive-portal config
Authentication type = captive-portal
  Session Timeout:
    Status                = disable,
    Interval (sec)        = 43200,
    Trust Radius          = disable

  Inactivity Timeout:
    Status                = disable,
    Interval (sec)        = 600

Accounting Interim:
  Interval (sec)          = 600,
  Trust Radius           = disable

```

### *output definitions*

---

<b>Authentication type</b>	The type of authentication ( <b>802.1x</b> , <b>mac</b> , or <b>captive-portal</b> ).
<b>Session Timeout</b>	The parameter values for the AAA session timeout parameter. Does not apply to 802.1X authentication. Configured through the <b>aaa session-timeout</b> command.
<b>Inactivity Logout</b>	The parameter values for the AAA inactivity logout parameter. Does not apply to 802.1X authentication. Configured through the <b>aaa inactivity-logout</b> command.
<b>Accounting Interim</b>	The parameter values for the AAA accounting interim parameter. Configured through the <b>aaa interim-interval</b> command.
<b>Re-authentication Timeout</b>	The parameter values for the AAA 802.1X re-authentication timeout parameter. Does not apply to MAC or Captive Portal authentication. Configured through the <b>aaa 802.1x re-authentication</b> command.

---

### **Release History**

Release 8.1.1; command was introduced.

### **Related Commands**

## show aaa radius config

Displays the global AAA attribute values and MAC address format.

**show aaa radius config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The MAC address format determines the delimiter character used between MAC address octets and whether or not characters are in uppercase or lowercase. This format is applied only when the RADIUS attribute value is set to a MAC address.

### Examples

```
-> show aaa radius config
RADIUS client attributes:
  NAS port id           = default,
  NAS identifier        = default
  NAS IP address        = default
  MAC format delimiter:
    Username            = none, UserNameCase = uppercase,
    Password            = none, PasswordCase = uppercase,
    calling station id  = none, ClgStaIdCase = uppercase,
    called station id   = none, CldStaIdCase = uppercase
Unp Profile Precedence = Filter-Id
```

### output definitions

---

<b>NAS port id</b>	The RADIUS client NAS-Port attribute for authentication and accounting sessions.
<b>NAS identifier</b>	The RADIUS client NAS-Identifier attribute for authentication and accounting sessions.
<b>NAS IP address</b>	The RADIUS client NAS-IP address attribute for authentication and accounting sessions.

*output definitions*

---

<b>MAC format delimiter</b>	The MAC address format used in the specified RADIUS client attributes.
<b>UNP Profile Precedence</b>	The UNP profile precedence: <b>Filter-ID</b> or <b>Tunnel-Private-Group-ID</b>

---

**Release History**

Release 8.1.1; command was introduced.

Release 8.5R4; UNP Profile Precedence and NAS IP address field added.

**Related Commands**

## show aaa radius health-check-config

Displays the RADIUS server health check configuration for each RADIUS server.

**show aaa radius health-check-config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays the health check configuration for all RADIUS servers defined on the switch.

### Examples

```
-> show aaa radius health-check-config
Server          Health   Polling   Failover   Username
Name           Check   Interval Status
-----+-----+-----+-----+-----
RAD1           DISABLED 60        DISABLED  alcatel
RAD2           ENABLED  90        ENABLED   alcatel
```

#### *output definitions*

---

<b>Server Name</b>	The name of the RADIUS server.
<b>Health Check</b>	The operational status of the RADIUS health check feature for the server.
<b>Polling Interval</b>	The configured polling interval for the RADIUS server.
<b>Failover Status</b>	The status of the failover operation. When enabled, the re-authentication of users assigned to the authentication server down profile is triggered when the RADIUS server comes back up before the authentication server down timeout value expires).
<b>Username</b>	The configured user name for RADIUS server polling.

---

### Release History

Release 8.5R4; command was introduced.

## Related Commands

## show aaa profile

Displays the AAA profile configuration.

**show aaa profile** [*profile\_name*]

---

### Syntax Definitions

*profile\_name*                      The name of an existing AAA profile.

### Defaults

By default, all profiles are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter an AAA profile name with this command to display information about a specific profile.

### Examples

```
-> show aaa profile ap2
```

```
AAA profile name = ap2
Authentication type = mac
  Authentication Server:
    1st Auth Server   = rad1,
    2nd Auth Server   = rad2

  Accounting Server:
    1st Accnt Server  = rad1,
    2nd Accnt Server  = rad2

  Session Timeout:
    Status             = disable,
    Interval (sec)     = 43200,
    Trust Radius       = disable

  Inactivity Timeout:
    Status             = disable,
    Interval (sec)     = 600

  Accounting Interim:
    Interval (sec)     = 600,
    Trust Radius       = disable
```

```

Authentication type = 802.1x
  Re-Authentication Timeout:
    Status           = disable,
    Interval (sec)   = 3600,
    Trust Radius     = disable

  Accounting Interim:
    Interval (sec)   = 600,
    Trust Radius     = disable

Authentication type = captive-portal
  Session Timeout:
    Status           = disable,
    Interval (sec)   = 43200,
    Trust Radius     = disable

  Inactivity Timeout:
    Status           = disable,
    Interval (sec)   = 600

  Accounting Interim:
    Interval (sec)   = 600,
    Trust Radius     = disable

RADIUS client attributes:
  NAS port id       = default,
  NAS identifier    = default,
  NAS ip address    = default,
  MAC format delimiter:
    Username        = none, UserNameCase = uppercase,
    Password        = none, PasswordCase = uppercase,
    calling station id = none, ClgStaIdCase = uppercase,
    called station id = none, CldStaIdCase = uppercase

```

### *output definitions*

<b>Authentication type</b>	The type of authentication ( <b>802.1x</b> , <b>mac</b> , or <b>captive-portal</b> ) configured through the profile.
<b>Session Timeout</b>	The profile values defined for the AAA session timeout parameter. Does not apply to 802.1X authentication.
<b>Inactivity Logout</b>	The profile values defined for the AAA inactivity logout parameter. Does not apply to 802.1X authentication.
<b>Accounting Interim</b>	The profile values defined for the AAA accounting interim parameter.
<b>Re-authentication Timeout</b>	The profile values defined for the AAA re-authentication timeout parameter. Does not apply to MAC or Captive Portal authentication.
<b>RADIUS client attributes</b>	The profile values defined for the NAS-Port, NAS-Port-Identifier and the NAS-IP address attributes and the format to use when the specified attribute value is set to a MAC address.

### **Release History**

## show aaa session console config

Displays the current administrative state of the session console configuration.

**show aaa session console config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show aaa session console config
Console access admin-state: disabled
```

### Release History

Release 8.6R2; command introduced.

### Related Commands

[aaa session console](#)

Enables or disables switch access through the console port of the switch

### MIB Objects

N/A

---

## show user

Displays information about all users or a particular user configured in the local user database on the switch.

**show user** [*username*]

### Syntax Definitions

*username* The name of the user. Used for logging into the switch.

### Defaults

By default, all users are displayed if the *username* parameter is not specified with this command.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to display information about read/write access and partitioned management access (domains and families).

### Examples

```
-> show user
User name = Customer1,
  Password expiration      = 10/27/2010 11:01 (30 days from now),
  Password allow to be modified date      = 9/30/2010 10:59 (3 days from now),
  Account lockout         = Yes (Automatically unlocked after 19 minute(s)from now),
  Password bad attempts   = 3,
  Read Only for domains   = None,
  Read/Write for domains  = Admin System Physical Layer2 Services policy Security ,
  Read/Write for families = ip rip ospf bgp vrrp ip-routing ipx ipmr ipms ,
  Snmp allowed            = YES,
  Snmp authentication     = SHA,
  Snmp encryption        = DES
User name = admin,
  Password expiration      = 10/27/2010 11:01 (30 days from now),
  Password allow to be modified date      = 9/30/2010 10:59 (3 days from now),
  Account lockout         = None,
  Password bad attempts   = 0,
  Read Only for domains   = None,
  Read/Write for domains  = All ,
  Snmp allowed            = NO
```

*output definitions*

User name	The user name for this account.
Password expiration	The date and time on which the password will expire. This field only displays if the password expiration is configured specifically for a user, or a default password expiration is configured globally on the switch through the <b>user password-expiration</b> command. (Note that the date/time are based on the switch's default system date/time or the system date/time configured through the <b>system date</b> and <b>system time</b> commands.)
Password allow to be modified date	The earliest date and time on which the user may change the password. Configured through the <b>user password-min-age</b> command.
Account lockout	Indicates if the user account is locked out ( <b>Yes</b> or <b>No</b> ) and how many minutes remain until the user account is automatically unlocked. If no remaining time is displayed, the <b>admin</b> user or a user with admin privileges must manually unlock the account. Configured through the <b>user lockout-duration</b> and <b>user lockout unlock</b> commands.
Password bad attempts	The number of failed password login attempts for this user account.
<b>Read Only for domains</b>	The command domains available with the user's read-only access. See the table on the next page for a listing of valid domains.
<b>Read/Write for domains</b>	The command domains available with the user's read-write access. See the table on the next page for a listing of valid domains.
<b>Read Only for families</b>	The command families available with the user's read-only access. See the table on the next page for a listing of valid families.
<b>Read/Write for families</b>	The command families available with the user's read-write access. See the table on the next page for a listing of valid families.
Snmp allowed	Indicates whether or not the user is authorized to use SNMP ( <b>YES</b> or <b>NO</b> ). SNMP is allowed for the user account when SNMP authentication is specified for the account.
Snmp authentication	The level of SNMP authentication, if any, configured for the user. This field only displays if the user is authorized to use SNMP.
Snmp encryption	The level of SNMP encryption, if any, configured for the user. This field only displays if the user is authorized to use SNMP.

Possible values for command domains and families are listed here:

<b>Domain</b>	<b>Corresponding Families</b>
domain-admin	file telnet dshell debug
domain-system	system aip snmp rmon webmgt config
domain-physical	chassis module interface pmm health
domain-network	ip rip ospf bgp vrrp ip-routing ipx ipmr ipms
domain-layer2	vlan bridge stp 802.1q linkagg ip-helper
domain-service	dns
domain-policy	qos policy slb
domain-security	session avlan aaa

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">user</a>	Configures user entries in the local user database.
<a href="#">show user password-policy</a>	Displays the global password policy configuration for the switch.
<a href="#">show user lockout-setting</a>	Displays the global user lockout settings for the switch.

  aaauWriteRight1
  aaauWriteRight2
  aaauSnmpLevel
  aaauSnmpAuthkey
```

---

## show user password-policy

Displays the global password settings configured for the switch.

**show user password-policy**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The password policy contains parameter values that define configuration requirements for all passwords that are created on the switch. Use this command to display the current parameter values for the password policy.

### Examples

```
-> show user password-policy
Password Policy:
Contain username flag: Enable
Minimum number of English uppercase characters: 6
Minimum number of English lowercase characters: 4
Minimum number of base-10 digit: 2
Minimum number of non-alphanumeric: 3
Minimum size: 8
Password history: 4
Password minimum age: 20 (days)
Password expiration: 40 (days)
```

#### *output definitions*

---

<b>Contain username flag</b>	Indicates if the username is included with the password check ( <b>Enable</b> or <b>Disable</b> ). Configured through the <b>user password-policy cannot-contain-username</b> command.
<b>Minimum number of English uppercase characters</b>	The minimum number of uppercase characters required in a password. Configured through the <b>user password-policy min-uppercase</b> command.
<b>Minimum number of English lowercase characters</b>	The minimum number of lowercase characters required in a password. Configured through the <b>user password-policy min-lowercase</b> .

*output definitions*

---

<b>Minimum number of base-10 digit</b>	The minimum number of digits required in a password. Configured through the <b>user password-policy min-digit</b> command.
<b>Minimum number of non-alphanumeric</b>	The minimum number of non-alphanumeric characters required in a password. Configured through the <b>user password-policy min-nonalpha</b> command.
<b>Minimum size</b>	The minimum number of characters required for the password size. Configured through the <b>user password-size min</b> command.
<b>Password history</b>	The maximum number of old passwords retained in the password history. Configured through the <b>user password-history</b> command.
<b>Password minimum age</b>	The number of days a password is protected from any modification. Configured through the <b>user password-min-age</b> command.
<b>Password expiration</b>	The default expiration date applied to all passwords. Configured through the <b>user password-expiration</b> command.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

**show user password-policy** Displays the expiration date for passwords configured for user accounts stored on the switch.

**MIB Objects**

```

  aaaAsaPasswordMinLowerCase
  aaaAsaPasswordMinDigit
  aaaAsaPasswordMinNonAlpha
  aaaAsaPasswordHistory
  aaaAsaPasswordMinAge
  aaaAsaPasswordSizeMin
  aaaAsaDefaultPasswordExpirationInDays

```

---

## show user lockout-setting

Displays the global user lockout settings for the switch.

**show user lockout-setting**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The global lockout settings include parameter values that determine the length of a user observation window, the amount of time a locked user remains locked, and the number of failed password login attempts allowed.

### Examples

```
-> show user lockout-setting
Lockout Setting:
Observation window: 30 (minutes)
Duration: 200 (minutes)
Threshold: 20
```

#### *output definitions*

---

<b>Observation window</b>	The amount of time, in minutes, during which the number of failed password login attempts are counted. Configured through the <b>user lockout-window</b> command.
<b>Duration</b>	The amount of time, in minutes, that a locked user account remains locked out of the switch. Configured through the <b>user lockout-duration</b> command.
<b>Threshold</b>	The maximum number of failed password login attempts allowed before the user is locked out of the switch. Configured through the <b>user lockout-threshold</b> command.

---

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[user lockout unlock](#)

Manually locks or unlocks a user account on the switch.

[show user](#)

Displays information about all users or a particular user configured in the local user database on the switch.

## MIB Objects

---

## show aaa priv hexa

Displays hexadecimal values for command domains/families. Useful for determining how to express command families in hexadecimal; hexadecimal values are used in configuring user privileges in attributes on an external LDAP or RADIUS authentication server.

**show aaa priv hexa** [*domain or family*]

---

### Syntax Definitions

*domain or family*

The CLI command domain or particular command family for which you want to display hexadecimal values. See table in Usage Guidelines.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Valid values for the family parameter are listed in the Corresponding Families column of the following table:

<b>Domain</b>	<b>Corresponding Families</b>
<b>domain-admin</b>	<b>file telnet dshell debug</b>
<b>domain-system</b>	<b>system aip snmp rmon webmgt config</b>
<b>domain-physical</b>	<b>chassis module interface pmm health</b>
<b>domain-network</b>	<b>ip rip ospf bgp vrrp ip-routing ipx ipmr ipms</b>
<b>domain-layer2</b>	<b>vlan bridge stp 802.1q linkagg ip-helper</b>
<b>domain-service</b>	<b>dns</b>
<b>domain-policy</b>	<b>qos policy slb</b>
<b>domain-security</b>	<b>session avlan aaa</b>

- Note that some command families may not be supported depending on the hardware platform you are running.
- If you do not specify a command family, hexadecimal values for all commands sets will display.

## Examples

```

---

## show system fips

Displays the administrative and operational status of the FIPS mode on the switch.

**show system fips**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The **show system fips** command is the only command that can be used to view the FIPS mode status. The FIPS status is not shown in the **show configuration snapshot** command output.

### Examples

```
-> show system fips
Admin State: Enabled
Oper State: Enabled
```

### Release History

Release 8.1.1; command introduced.

### Related Commands

[aaa authentication](#)

Enable or disable the FIPS mode on the switch.

### MIB Objects

```
systemFipsAdminState
  systemFipsOperState
```

---

## aaa switch-access mode

Globally sets the access mode as enhanced or default.

```
aaa switch-access mode {default | enhanced}
```

---

### Syntax Definitions

<b>default</b>	Sets the access mode as default.
<b>enhanced</b>	Sets the access mode as enhanced.

### Defaults

parameter	default
default   enhanced	default

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

It is recommended to save configuration and reboot the switch when the ASA access mode is configured.

### Example

```
-> aaa switch-access mode default
```

```
-> aaa switch-access mode enhanced
```

```
WARNING: Recommended to save configuration and reload the switch upon switch access mode change.
```

### Release History

Release 8.3.1; command introduced.

### Related Commands

[show aaa switch-access mode](#) Displays the access mode configuration.

### MIB Objects

```
aaaAsaConfig
```

```
aaaAsaAccessMode
```

---

## aaa switch-access ip-lockout-threshold

Configures the threshold value for failed login attempts from an IP address after which the IP address will be banned from switch access.

**aaa switch-access ip-lockout-threshold** *number*

---

### Syntax Definitions

*number* Set the threshold value for login attempts in the range 0 to 999.

### Defaults

parameter	default
<i>number</i>	6

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The command is applicable only if ASA enhanced mode is enabled.
- Set the IP threshold value to '0' to disable the IP lockout thresholds.
- IP address is permanently blocked/banned if the number of authentication failures from a particular IP reaches IP lockout threshold limit within two times of the user lockout window.
- Only the switch access will be restricted from the banned IP address. Any IP packet (with monitored port number) destined to a switch IP interfaces will be discarded. IP packets normally bridged/routed by the switch will not be discarded.
- A maximum of 128 IP addresses can be added to the banned list. When the maximum limit has reached, oldest entry from the list is removed to accommodate the new entries.
- User lockout window ([user lockout-window](#)) is applicable for IP lockout threshold as well.
- IP lockout threshold shall share the same window as user lockout window, and by default, IP lockout threshold shall be two times that of user lockout window. Since user lockout is giving more priority, the IP lockout threshold must be greater than the user lockout threshold value.
- The IP address will remain blocked until it is released using the command [aaa switch-access banned-ip release](#).

### Example

```
-> aaa switch-access ip-lockout-threshold 2
```

## Release History

Release 8.3.1; command introduced.

## Related Commands

[aaa switch-access mode](#)

Globally sets the access mode as enhanced or default.

[show aaa switch-access ip-lockout-threshold](#)

Displays the lockout threshold configured for the remote IP addresses.

## MIB Objects

aaaAsaConfig

aaaAsaAccessIpLockoutThreshold

---

## aaa switch-access banned-ip release

Releases the banned IP addresses that are blocked due to failed login attempts.

**aaa switch-access banned-ip {all | *ip\_address*} release**

---

### Syntax Definitions

**all** Release all banned IP addresses from the banned list.

*ip\_address* Release a specific IP address from the banned list.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The IP addresses are banned if the failed login count reaches IP lockout threshold limit.

### Example

```
-> aaa switch-access banned-ip all release
-> aaa switch-access banned-ip 100.2.45.56 release
```

### Release History

Release 8.3.1; command introduced.

### Related Commands

**show aaa switch-access banned-ip** Displays the list of banned ip addresses.

### MIB Objects

```
aaaSwitchAccessBannedIpTable
  aaaSwitchAccessBannedIpAddress
  aaaSwitchAccessBannedIpRowStatus
```

---

## aaa switch-access priv-mask

Configure the functional privileges mask for the switch access based on the access type on top of the user privilege.

```
aaa switch-access priv-mask {console | telnet | ssh | http | https} {read-only | read-write} [families... / domains...] all | none | all-except families...]
```

---

### Syntax Definitions

<b>read-only</b>	Specifies that the user will have read-only access to the switch through a specific access type.
<b>read-write</b>	Specifies that the user will have read-write access to the switch through a specific access type.
<i>families</i>	Determines the command families available to the user on the switch for a specific access type. Each command family should be separated by a space. Command families are subsets of domains. See <i>Usage Guidelines</i> for more details.
<i>domains</i>	Determines the command domains available to the user on the switch for a specific access type. Each domain should be separated by a space. See the <i>Usage Guidelines</i> for more details.
<b>all</b>	Specifies that all command families and domains are available to the user for a specific access type.
<b>none</b>	Specifies that no command families or domains are available to the user for a specific access type.
<b>all-except</b>	Specifies that functional privileges for families followed by 'all-except' are disabled for a specific access type.

### Defaults

By default, the access types are enabled with read-write privileges for all the families.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- The access privileges for the SSH, TELNET, Console, HTTP, HTTPS can be defined.
- Possible values for domains and families are listed in the following table:

Domain	Corresponding Families
domain-admin	file telnet debug
domain-system	system aip snmp rmon webmgt config
domain-physical	chassis module interface pmm health
domain-network	ip rip ospf bgp vrrp ip-routing ipmr ipms
domain-layer2	vlan bridge stp 802.1q linkagg ip-helper
domain-service	dns
domain-policy	qos policy slb
domain-security	session avlan aaa
domain-mpls	mpls
domain-datacenter	fips, auto-fabric
domain-afn	sip-snooping, dpi, app-mon

## Example

```
-> aaa switch-access priv-mask ssh read-only webmgt vrrp vrf vlan udld
-> aaa switch-access priv-mask telnet read-write tftp-client telnet system stp ssh
-> aaa switch-access priv-mask ssh read-only all-except vlan
-> aaa switch-access priv-mask telnet read-write all-except ip
```

If privileges for specific families need to be applied, then remove the existing privilege using the **no** command, and re-apply the required family privilege.

```
-> no aaa switch-access priv-mask telnet read-write all
-> aaa switch-access priv-mask telnet read-write vlan aaa
```

## Release History

Release 8.3.1; command introduced.

## Related Commands

**aaa switch-access mode** Globally sets the access mode as enhanced or default.

**show aaa switch-access priv-mask** Displays the privilege details for the access types.

## MIB Objects

```
aaaSwitchAccessPrivMaskTable
  aaaSwitchAccessType
  aaaSwitchAccessReadRight1
  aaaSwitchAccessReadRight2

  aaaSwitchAccessWriteRight3
  aaaSwitchAccessWriteRight4
```

## aaa switch-access management-stations admin-state

Enables or disables the IP management station feature in a switch.

**aaa switch-access management-stations admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables the IP management station feature in the switch.

**disable** Disables the IP management station feature in the switch.

### Defaults

The IP management station feature is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The command is applicable only when ASA enhanced mode is enabled.
- When the IP management station is disabled, switch access from any IP address shall be allowed. If there is a login failure (based on the **ip-lockout threshold** value), the IP address will be banned/ blocked and added to the banned IP address list.
- When the IP management station is enabled, the switch access will be allowed only from those IPs configured in the management station list and only if those are not in banned list.
- It is recommended to enable this command from console since this may terminate the existing session, if enabled through telnet or SSH.

### Example

```
-> aaa switch-access management stations admin-state enable
-> aaa switch-access management stations admin-state disable
```

### Release History

Release 8.3.1; command introduced.

## Related Commands

**aaa switch-access mode**

Globally sets the access mode as enhanced or default.

**aaa switch-access  
management-stations**

Configure the management station in the switch, with or without mask value for the corresponding IP of the management station.

**show aaa switch-access  
management-stations**

Displays the list of configured management stations.

## MIB Objects

aaaSwitchAccessMgmtStationTable

aaaSwitchAccessMgmtStationRowStatus

---

## aaa switch-access management-stations

Configure the management station in the switch, with or without mask value for the corresponding IP of the management station. The remote access is allowed only from these IP addresses if management station feature is enabled.

**aaa switch-access management-stations** [*ip\_address* / *ip\_address /mask*]

**no aaa switch-access management-stations** *ip\_address*

---

### Syntax Definitions

*ip\_address* IP address and the mask of the management station.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The command is configurable when **aaa switch-access management-stations admin-state** is enabled.
- A maximum of 64 management stations can be configured.
- Removing an IP address from the management station list will not remove the IP from the banned list.
- Whenever an IP address is removed from the management station, switch will stop responding to that IP. However, the existing sessions are not terminated automatically.

### Example

```
-> aaa switch-access management stations 100.15.9.8
-> aaa switch-access management stations 100.15.9.9 255.255.255.0
```

### Release History

### MIB Objects

N/A

---

## aaa certificate update-ca-certificate

Updates the CA-bundle with the custom CA server certificate provided by CA.

**aaa certificate update-ca-certificate** *ca\_file*

---

### Syntax Definitions

*ca\_file*                      The custom CA server certificate (in PEM format) provided by the CA.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The custom CA server certificate should be copied in PEM format to the **/flash/switch/cert.d** directory via SFTP.
- This command appends the existing CA bundle (**certs.pem**) and the custom CA server certificate provided as input.
- The update of custom CA server certificates needs to be done before corresponding server configurations are done on the switch. If the update is done post server configuration, then a switch reboot needs to be done for the changes to take effect.

### Examples

```
-> aaa certificate update-ca-certificate ca.pem
```

### Release History

Release 8.3.1; command introduced.

Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Generates RSA 2048 bit key in **/flash/switch/cert.d** directory with the file name as the input key file.

### Examples

```
-> aaa certificate generate-rsa-key key-file myCliPrivate.key
```

### Release History

Release 8.3.1; command introduced.

### Related Commands

- [aaa certificate generate-self-signed](#)      Generates the X.509 self-signed certificate for TLS client authentication.
- [aaa certificate view](#)                      Displays the contents of the X.509 certificate.
- [aaa certificate delete](#)                  Deletes the X.509 certificate.

### MIB Objects

N/A

---

## aaa certificate generate-self-signed

Generates the X.509 self-signed certificate for TLS client authentication.

```
aaa certificate generate-self-signed {cert_file} key {key_file} [days valid_period] {CN common_name}
{ON org_name} {OU org_unit} {L locality} {ST state} {C country}
```

---

### Syntax Definitions

<i>cert_file</i>	The name of the X.509 certificate file to be created.
<i>key_file</i>	The name of the key file under which the RSA 2048 bit key is stored.
<i>valid_period</i>	Validity period (in days) of the X.509 certificate.
<i>common_name</i>	Common Name used in X.509 certificate.
<i>org_name</i>	The Organization Name used in X.509 certificate.
<i>org_unit</i>	The Organization Unit used in X.509 certificate.
<i>locality</i>	The Locality used in X.509 certificate.
<i>state</i>	The State used in X.509 certificate.
<i>country</i>	The Country used in X.509 certificate.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command generates the file in **/flash/switch/cert.d** directory.
- Default values will be taken for all other optional parameters while generating the X.509 certificate.
- The X.509 certificate needs to be done before corresponding server configurations are done on the switch. If the certificate is created post server configuration, then a switch reboot needs to be done for the changes to take effect.

### Examples

```
-> aaa certificate generate-self-signed myCliCert.pem key clientkey.key days 3650
cn client.ale.com on ALE ou ESD l BAN st KAR c IN
```

### Release History

Release 8.3.1; command introduced.

## Related Commands

**aaa certificate generate-rsa-key key-file** Generates the RSA 2048 bit key with the file name provided as input.

**aaa certificate view** Displays the contents of the X.509 certificate.

**aaa certificate delete** Deletes the X.509 certificate.

## MIB Objects

N/A

---

## aaa certificate view

Displays the contents of the X.509 certificate.

**aaa certificate view** *cert\_file*

---

### Syntax Definitions

*cert\_file*                      The X.509 certificate file (in PEM format) to be displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900

### Related Commands

[aaa certificate generate-self-signed](#) Generates the X.509 self-signed certificate for TLS client authentication.

[aaa certificate delete](#) Deletes the X.509 certificate.

### MIB Objects

N/A

---

## aaa certificate delete

Deletes the X.509 certificate.

**aaa certificate delete** *cert\_file*

---

### Syntax Definitions

*cert\_file*                      The X.509 certificate file (in PEM format) to be deleted.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> aaa certificate delete clientcert.pem
```

### Release History

Release 8.3.1; command introduced.

### Related Commands

[aaa certificate generate-self-signed](#)      Generates the X.509 self-signed certificate for TLS client authentication.

[aaa certificate view](#)                      Displays the contents of the X.509 certificate.

### MIB Objects

N/A

---

## aaa certificate generate-csr

Generates the CSR (Certificate Signing Request) to be sent to get a CA signed certificate for TLS client authentication.

```
aaa certificate generate-csr {csr_file} key {key_file} [dn domain_name] {CN common_name} {ON org_name} {OU org_unit} {L locality} {ST state} {C country}
```

---

### Syntax Definitions

<i>csr_file</i>	The name of the CSR certificate file to be created.
<i>key_file</i>	The name of the key file under which the RSA 2048 bit key is stored.
<i>domain_name</i>	Domain name to be used in the CSR.
<i>common_name</i>	Common Name used in X.509 certificate.
<i>org_name</i>	The Organization Name used in X.509 certificate.
<i>org_unit</i>	The Organization Unit used in X.509 certificate.
<i>locality</i>	The Locality used in X.509 certificate.
<i>state</i>	The State used in X.509 certificate.
<i>country</i>	The Country used in X.509 certificate.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Generates <csr\_file>.pem file in **/flash/switch** directory. The <csr\_file>.pem file created should be sent to CA signing authority to get the CA certificate.
- Default values will be taken for all other optional parameters while generating the CSR.
- The CSR needs to be created, sent to CA authority and the corresponding CA certificate (obtained from CA authority) should be uploaded to the **/flash/switch** directory before corresponding server configurations are done on the switch. If the CA certificate is uploaded post server configuration, then a switch reboot needs to be done for the changes to take effect.

### Examples

```
-> aaa certificate generate-csr myCliCert.pem key clientkey.key days 3650 cn
client.ale.com on ALE ou ESD l BAN st KAR c IN
```

## Release History

Release 8.3.1; command introduced.

## Related Commands

[show aaa common-criteria config](#) Displays the common criteria status on the switch.

## MIB Objects

N/A

---

## ssl pki client validate-certificate admin-state

Enables or disables the server's certification validation when the application on the switch acts as TLS client.

**ssl pki client validate-certificate admin-state {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables the server's certification validation for the client application on the switch.
<b>disable</b>	Disables the server's certification validation for the client application on the switch.

### Defaults

By default, the feature is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- When the feature is enabled, TLS client (LDAP, RADIUS, and SYSLOG) applications validate server certificate based on:
  - TLS mutual authentication using X.509 certificates.
  - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
  - X.509 certificate validation using OCSP and CRL.

### Examples

```
-> ssl pki client validate-certificate admin-state enable
-> ssl pki client validate-certificate admin-state disable
```

### Release History

Release 8.6R1; command introduced.

**Related Commands**[show ssl pki config](#)

---

## ssl pki client mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS client applications on the switch.

**ssl pki client mutual-authentication admin-state {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables the mutual authentication for the TLS client applications on the switch. When mutual-authentication is enabled, TLS client applications will need to load <b>myCliCert.pem</b> , <b>myCliPrivate.key</b> files in <b>/flash/switch/cert.d</b> and provide the certificate to server.
<b>disable</b>	Disables the mutual authentication for the TLS client applications on the switch.

### Defaults

By default, the feature is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- Enable this feature when the TLS client (LDAP, RADIUS, SYSLOG) applications needs to load the certificate **myCliCert.pem** and **myCliPrivate.key** file in **/flash/switch/cert.d/** directory and provide the certificate file to server while establishing TLS connection.
- If the server certificate does not meet the validation criteria, the TLS client application connection is terminated.

### Examples

```
-> ssl pki client mutual-authentication admin-state enable
-> ssl pki client mutual-authentication admin-state disable
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

[show ssl pki config](#)

Displays the Public Key Infrastructure (PKI) configuration.

[ssl pki server mutual-authentication admin-state](#)

Enables or disables the mutual authentication for the TLS server applications on the switch.

---

## ssl pki server mutual-authentication admin-state

Enables or disables the mutual authentication for the TLS server applications on the switch.

```
ssl pki server mutual-authentication admin-state {enable | disable}
```

---

### Syntax Definitions

<b>enable</b>	Enables the mutual authentication for the TLS server applications on the switch. When mutual-authentication is enabled, the TLS server (SNMP) application will require clients to provide their certificate to server while establishing TLS connection.
<b>disable</b>	Disables the mutual authentication for the TLS server applications on the switch.

### Defaults

By default, the feature is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the feature is enabled or disabled, the switch must be rebooted for the changes to be applied.
- Enable this feature when the TLS server (SNMP) application must require clients to provide their certificate to server while establishing TLS connection.
- When the feature is enabled, TLS server (SNMP) application validates client certificate based on:
  - TLS mutual authentication using X.509 certificates.
  - The presented identifier must match the reference identifier as per RFC 6125 Section 6.
  - X.509 certificate validation using OCSP and CRL.
- If the client certificate does not meet the validation criteria, the TLS server application connection is terminated.

### Examples

```
-> ssl pki server mutual-authentication admin-state enable
-> ssl pki server mutual-authentication admin-state disable
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

[show ssl pki config](#)

systemSslPkiServerMutualAuthentication

---

## ssl pki tls version

Configures the TLS version for both TLS client and server applications.

`ssl pki tls version {1.0 | 1.1 | 1.2}`

---

### Syntax Definitions

- 1.0** Sets the TLS version for client and server to 1.0.
- 1.1** Sets the TLS version for client and server to 1.1.
- 1.2** Sets the TLS version for client and server to 1.2.

### Defaults

By default, the SSL PKI TLS version is 1.0.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The switch must be rebooted for the changes to be applied.
- When the TLS version is configured, TLS client and server applications will deny all SSL and TLS versions which are lower than the configured version.
- The command is applicable only for LDAP, RADIUS, SYSLOG and SNMP applications.

### Examples

```
-> ssl pki tls version 1.0
-> ssl pki tls version 1.2
```

### Release History

Release 8.6R1; command introduced.

### Related Commands

[show ssl pki config](#) Displays the Public Key Infrastructure (PKI) configuration.

```

---

## show ssl pki config

Displays the Public Key Infrastructure (PKI) configuration.

**show ssl pki config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show ssl pki config
  SSL PKI Global Configuration:
  Client Validate Certificate = enabled
  Client Mutual Authentication = enabled
  Server Mutual Authentication = enabled
  TLS version = 1.2
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

**ssl pki client validate-certificate admin-state**

Enables or disables the server's certification validation when the application on the switch acts as client.

**ssl pki client mutual-authentication admin-state**

Enables or disables the mutual authentication for the TLS client applications on the switch.

**ssl pki server mutual-authentication admin-state**

Enables or disables the mutual authentication for the TLS server applications on the switch.

**ssl pki tls version**

Configures the TLS version for both TLS client and server applications.

## MIB Objects

```
systemSslPki
  systemSslPkiClientCertificateValidation
  systemSslPkiClientMutualAuthentication
  systemSslPkiServerMutualAuthentication
  systemSslPkiTlsVersion
```

---

## ssl cipher

Selects the cipher security level for the applications using the OpenSSL.

```
ssl cipher {[level {all | high | medium | low}] | [custom {string / file string}]}
```

---

### Syntax Definitions

<b>all</b>	Includes all the cipher suites, including NULL-SHA.
<b>high</b>	Includes only AES-256 with SHA-2 ciphers (Applicable only for TLSv1.2).
<b>medium</b>	Includes all ciphers suites, except NULL-SHA, DES-CBC-SHA, and RC4-MD5.
<b>low</b>	Includes all cipher suites, except NULL-SHA.
<i>string</i>	Name of the cipher suite. It can be list of ciphers or a collective cipher file name. The custom cipher can have a maximum length of 255 characters in CLI and the cipher file can be of maximum 1024 bytes in size.

### Defaults

By default, the SSL cipher security level is set to medium in default switch operation mode and high in common criteria mode.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To apply the new SSL cipher security level, switch must be rebooted.
- The command is applicable only for LDAP, Syslog, RADIUS, SNMP, and Captive Portal applications.
- Custom ciphers cannot be more than 255 characters. Hence, the cipher files can be used to configure ciphers more than 255 characters.
- The cipher file can be created by copying the required ciphers in the notepad and saving it as a cipher file with **“.cipher”** as the file extension.
- The ciphers for the custom cipher and cipher file must be from the supported list of ciphers. To view the supported ciphers, use the [show ssl ciphers all](#) command.
- The cipher file must be copied to the flash directory of the switch before using this command.
- In chassis based model, the cipher file needs to be copied in both the primary and secondary unit flash directory. In VC based models, the cipher file must be copied to all the flash directory of all the modules.

## Examples

```
-> ssl cipher level all
-> ssl cipher level low
-> ssl cipher level medium
-> ssl cipher level high
-> ssl cipher custom AECDH-AES256-SHA
-> ssl cipher custom file /flash/abc.cipher
```

## Release History

Release 8.6R1; command introduced.

## Related Commands

[show ssl ciphers all](#)

Displays all the supported OpenSSL ciphers.

[show ssl ciphers config](#)

Displays the current cipher security level configuration.

## MIB Objects

```

---

## show ssl ciphers all

Displays all the supported OpenSSL ciphers.

**show ssl ciphers all**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The custom cipher suite must be configured based on the supported ciphers displayed in this output.

### Examples

```
-> show ssl ciphers all
```

```

---

## show ssl ciphers config

Displays the current cipher security level configuration.

**show ssl ciphers config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show ssl ciphers config
  SSL Cipher Global Configuration:
  SSL Cipher Level = medium
  SSL Cipher Suite = ALL:eNULL:!NULL-SHA:!DES-CBC-SHA:!RC4-MD5
```

```
-> show ssl ciphers config
  SSL Cipher Global Configuration:
  SSL Cipher Level = custom-file
  SSL Cipher Suite File = /flash/abc.cipher
```

### Release History

---

## kerberos inactivity-timer

Configures global inactivity timer on the switch for Kerberos users.

**kerberos inactivity-timer** *num*

---

### Syntax Definitions

*num* Time interval in minutes.

### Defaults

By default, inactivity timer is set to 300 minutes.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- The valid range of inactivity timer is 10–600 minutes.
- Whenever a Kerberos user becomes inactive, then the inactivity timer will be started for that user. If Kerberos user becomes active before inactivity timer expiry, then timer will be stopped. User entry will be removed from the Kerberos user database on timer expiry.

### Examples

```
-> kerberos inactivity-timer 30
```

### Release History

Release 8.6R2; command introduced.

### Related Commands

[kerberos server-timeout](#)

Configures global server reply time-out timer value on the switch for Kerberos users.

[show kerberos configuration](#)

Displays Kerberos global configuration.

### MIB Objects

```
alaDaKerberosGlobalConfig
  alaDaKerberosGlobalInactivityTimer
```

---

## kerberos ip-address

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

**kerberos ip-address** *ip\_address* [**port num**]

**no kerberos ip-address** *ip\_address*

---

### Syntax Definitions

*ip\_address*

The IP address of the Kerberos server. (KDC)

*num*

UDP or TCP port number of the Kerberos application running on the Kerberos server. UDP port range is 1–65535.

### Defaults

Default value of the port is 88.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- At least one Kerberos server and one Kerberos enabled port must be configured on the switch for Kerberos snooping to function.
- A maximum of two Kerberos server IP addresses can be configured on a switch
- Server IP address cannot be configured as 0.0.0.0, and the octet value in the IP address cannot be greater than 255 (for example, 1.256.2.3).
- Use the **port** keyword to configure both UDP and TCP protocol port number.
- Use the **no** form of this command to delete the Kerberos server IP address. Only one server can be deleted at a time.
- The UDP/TCP port number is not required to remove the Kerberos server IP address configuration.
- If all the authentication servers are removed from the switch, then all the Kerberos users learned so far on all the ports are not removed from the database.

### Examples

```
-> kerberos ip-address 172.21.160.102 port 2001
-> kerberos ip-address 172.21.160.103 port 2003
-> no kerberos ip-address 172.21.160.102
```

## Release History

Release 8.6R2; command introduced.

## Related Commands

[kerberos inactivity-timer](#)

Configures a global inactivity timer on the switch for Kerberos users.

[kerberos server-timeout](#)

Configures a global server reply time-out timer value on the switch for Kerberos users.

[show kerberos configuration](#)

Displays the Kerberos global configuration.

## MIB Objects

```
alaDaKerberosServerTable  
  alaKerberosIpAddress  
  alaDaKerberosUdpPort  
  alaDaKerberosRowStatus
```

---

## kerberos server-timeout

Configures global server reply time-out timer value on the switch for Kerberos users.

**kerberos server-timeout** *num*

---

### Syntax Definitions

*secs* Server reply time-out time interval in seconds in the range 1 second to 30 seconds.

### Defaults

By default, reply-timeout is 2 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- All the users trying to get authenticated from a specific server will have the same value for reply-timeout timer.
- Whenever a Kerberos request packet is sent to the server, the server reply time-out starts. If the timer expires before receiving the reply from the server, the user authentication is marked as server-time-out and a trap is generated.

### Examples

```
-> kerberos server-timeout 20
```

### Release History

Release 8.6R2; command introduced.

### Related Commands

[show kerberos configuration](#) Displays Kerberos global configuration.

### MIB Objects

```
alaDaKerberosGlobalConfig
  alaDaKerberosGlobalServerTimeoutTimer
```

---

## kerberos authentication-pass policy-list-name

Configures a global classification QoS policy list on the switch for Kerberos users.

**kerberos authentication-pass policy-list-name** *policy\_list*

**no kerberos authentication-pass policy-list-name**

---

### Syntax Definitions

*policy\_list* Name of the QoS policy list.

### Defaults

By default, there is no Kerberos global QoS policy list configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- The QoS policy list must be created prior to this configuration.
- Per-user Kerberos policy list configuration is not supported.
- Use the **no** form of this command to remove the global classification QoS policy list from the switch.
- There is no validation done for QoS policy list in Kerberos. It is the user's responsibility to associate the correct QoS policy list with Kerberos.
- If the QoS policy list is deleted from the system, then the corresponding configuration in Kerberos will be removed and no error message will be thrown.
- If a domain level policy list is configured in the switch and any user belonging to that domain gets authenticated from the Kerberos server, then the domain level policy list is applied to the user over the global policy list.
- If a user gets authenticated from the Kerberos server and the domain level policy list is not configured on the switch for the authenticated user, then the global policy list is applied to the user if the global policy list is configured on the switch.
- If a user gets authenticated from the Kerberos server and neither the domain level policy list (for that user domain) nor the global policy list is configured, then the user traffic is classified on the basis of already applied non-suppliant authentication classification.

## Examples

```
-> kerberos authentication-pass policy-list-name p2
```

The following example shows that the **p2** is configured as the global classification QoS policy list on the switch for Kerberos users.

```
-> show kerberos configuration
Inactivity Timer      :30 (mins),
Server Timeout        :20 (secs),
Global QoS Policy List   :p2,

Servers               :
IP-Address            UDP Port
-----+-----
1.1.1.1                88

Per Domain QoS policy List :
Domain-Name           Policy-List-Name
-----+-----+-----
EXAMPLE.COM           p11
```

When the QoS policy list **p2** is removed from the system, the corresponding configuration in Kerberos is shown as below.

```
-> no policy list p2
-> qos apply

-> show kerberos configuration
Inactivity Timer      :30 (mins),
Server Timeout        :20 (secs),

Servers               :
IP-Address            UDP Port
-----+-----
1.1.1.1                88

Per Domain QoS policy List :
Domain-Name           Policy-List-Name      Status
-----+-----+-----
EXAMPLE.COM           p11                   active
```

The following command removes the global classification QoS policy list from the switch:

```
-> no kerberos authentication-pass policy-list-name
```

## Release History

Release 8.6R2; command introduced.

## Related Commands

### [kerberos ip-address](#)

Configures IP address of the Kerberos server (Key Distribution Centre - KDC) and UDP or TCP port number.

### [kerberos authentication-pass domain](#)

Configures "per domain" classification policy for the Kerberos users.

### [show kerberos configuration](#)

Displays Kerberos global configuration.

## MIB Objects

alaDaKerberosGlobalConfig  
alaDaKerberosGlobalPolicy

---

## kerberos authentication-pass domain

Configures a per-domain classification policy for the Kerberos users.

**kerberos authentication-pass domain** *domain\_name* **policy-list-name** *policy\_list*

**no kerberos authentication-pass domain** *domain\_name*

---

### Syntax Definitions

*domain\_name* Domain name on which the QoS policy is applied. Domain name length can be a maximum of 32 characters. Domain name is case sensitive.

*policy\_list* Name of the QoS policy list already configured.

### Defaults

By default, there is no Kerberos global QoS policy list configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the per-domain classification policy for Kerberos users.
- Domain name is case sensitive.

### Examples

```
-> kerberos authentication-pass domain EXAMPLE.COM policy-list-name p11
```

The following example shows that the **p11** is configured as the policy list associated with the domain EXAMPLE.COM:

```
-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88

Per Domain QoS policy List :
Domain-Name                Policy-List-Name
-----+-----
EXAMPLE.COM                p11
```

When the QoS policy list **p11** is removed from the system, the corresponding configuration in Kerberos is shown as below.

```
-> no policy list p11
-> qos apply

-> show kerberos configuration
Inactivity Timer           :30 (mins),
Server Timeout             :20 (secs),

Servers                    :
IP-Address                 UDP Port
-----+-----
1.1.1.1                    88

Per Domain QoS policy List :
Domain-Name                Policy-List-Name
-----+-----
EXAMPLE.COM                p11
```

The following command removes the per-domain classification policy for Kerberos users:

```
-> no kerberos authentication-pass domain EXAMPLE.COM
```

## Release History

Release 8.6R2; command introduced.

```

---

## show kerberos configuration

Displays Kerberos global configuration.

**show kerberos configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

Use this command to display information about Kerberos settings configured through the [kerberos inactivity-timer](#) command.

### Examples

```
-> show kerberos configuration
```

```
Inactivity Timer           :30 (mins),
Server Timeout             :9 (secs),
Global QoS Policy List    :p2,
```

```
Servers                    :
IP-Address                 UDP Port
-----+-----
1.2.3.5                    90
4.5.6.7                    88
11.22.33.55               80
```

```
Per Domain QoS policy List :
Domain-Name                Policy-List-Name          Status
-----+-----+-----
EXAMPLE.COM                pll                      Active
```

#### *output definitions*

---

<b>Inactivity Timer</b>	Global inactivity timer configured on the switch for Kerberos users.
<b>Server Timeout</b>	Global server reply time-out timer value configured on the switch for Kerberos users.
<b>Global QoS Policy List</b>	Global classification QoS policy list associated with the Kerberos users

*output definitions (continued)*

---

<b>Servers</b>	<b>IP Address:</b> IP address configured of the Kerberos server. <b>UDP Port:</b> UDP or TCP port of the Kerberos application running on the Kerberos server.
<b>Per Domain QoS policy List</b>	<b>Domain-Name:</b> Per-domain classification policy configured for Kerberos users. <b>Policy-List-Name:</b> Name of the QoS policy list associated with the domain. <b>Status:</b> Per-domain QoS policy list status ( <b>Active</b> or <b>Inactive</b> ). Inactive status indicates that the policy list does not exist in the switch or the policy list exists, but is not applied.

---

**Release History**

Release 8.6R2; command introduced.

**Related Commands**

---

## show kerberos users

Displays the learned Kerberos users information.

**show kerberos users** [**port** *chassis/slot/port* [**linkagg** *agg\_id* | **mac-address** *mac\_address* | **count**]

---

### Syntax Definitions

<i>chassis</i>	The Chassis Identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module (for example, 3/1 specifies port 1 on slot 3).
<i>agg_id</i>	Enter a link aggregate ID number.
<i>mac_address</i>	MAC address of the Kerberos user.
<b>count</b>	Displays the number of Kerberos users.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- If a *chassis/slot/port* is specified, the Kerberos users learned on that port are displayed.
- If *agg\_id* is specified, the Kerberos users learned on that link aggregate are displayed.
- If a MAC address is specified, then the information related to that Kerberos user is displayed.
- If none of the parameters are specified (*chassis/slot/port*, MAC address), then the information related to all the Kerberos users learned on the switch is displayed.

### Examples

```
-> show kerberos users
Port      Username      MAC Address      Auth Status      QOS Policy Domain
-----+-----+-----+-----+-----+-----+-----
2/1/18   root/admin    00:11:22:33:44:55 tgs-authenticated  pl1      AP01.ORG
2/1/19   guest         00:01:02:03:04:05 tgs-timeOut      AP01.ORG

-> show kerberos users port 2/1/18
Port      Username      MAC Address      Auth Status      QOS Policy Domain
-----+-----+-----+-----+-----+-----
2/1/18   root/admin    00:11:22:33:44:55 tgs-authenticated  pl1      AP01.ORG
```

*output definitions*

---

Port	The Kerberos chassis, slot, and port number.
Username	User name of the client.
MAC Address	MAC address of the Kerberos user.
Auth Status	Kerberos authentication process involves exchange of two requests (AS_REQ and AS_REP) and two response (AS_REP and TGS_REP). This field indicates up to which level the authentication has reached. On successful authentication, "tgs-authenticated" is displayed.
QoS Policy	QoS policy list configured on the switch for the Kerberos user.
Domain	Per-domain classification policy configured for the Kerberos user.

---

```
-> show kerberos users mac-address 00:11:22:33:44:55
```

```
Detail User Information:
```

```
MAC Address       : 00:11:22:33:44:55
Port              : 1/1/1
Authentication Status : tgs-authenticated
QoS Policy        : p11
Domain Name       : EXAMPLE.COM
User Name         : root\admin
User Entry State  : active
Inactivity Timer Left : NA
```

*output definitions*

---

MAC Address	MAC address of the Kerberos user.
Port	The Kerberos chassis, slot, and port number.
Authentication Status	Kerberos authentication process involves exchange of two requests (AS_REQ and AS_REP) and two response (AS_REP and TGS_REP). This field indicates up to which level the authentication has reached. On successful authentication, "tgs-authenticated" is displayed.
QoS Policy	QoS policy list configured on the switch for the Kerberos user.
Domain Name	Per-domain classification policy configured for the Kerberos user.
User Name	User name of the client.
User Entry State	The current state of the user.
Inactivity Timer Left	The amount of time left, in seconds, of the inactivity timer value.

---

**Release History**

Release 8.6R2; command introduced.

## show kerberos statistics

Displays global Kerberos statistics.

**show kerberos statistics**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

Use this command to display the global Kerberos statistics.

### Examples

```
-> show kerberos statistics
Total Client Packet Rx      : 52
Total Server Packet Rx     : 13
Total KRB-AS-REQ Packet Rx : 47
Total KRB-AS-REP Packet Rx : 8
Total KRB-TGS-REQ Packet Rx: 5
Total KRB-TGS-REP Packet Rx: 5
Total KRB-ERROR Packet Rx  : 0
Total Client Packet Sw Discard : 0
Total Server Packet Sw Discard : 2
```

### *output definitions*

---

Total Client Packet Rx	Total client request packets received.
Total Server Packet Rx	Total server response packets received.
Total KRB-AS-REQ Packet Rx	Total AS-REQ request packets received.
Total KRB-AS-REP Packet Rx	Total AS-REP response packets received.
Total KRB-TGS-REQ Packet Rx	Total TGS-REQ request packets received.
Total KRB-TGS-REP Packet Rx	Total TGS-REP response packets received.
Total KRB-ERROR Packet Rx	Total error packets received from the server.

*output definitions (continued)*

---

Total Client Packet Sw Discard	Total client's request packets discarded at software by Kerberos module.
Total Server Packet Sw Discard	Total server's response packets discarded at software by Kerberos module.

---

## aaa jitc admin-state

Enables or disables Joint Interoperability Test Command (JITC) mode on the switch.

**aaa jitc admin-state** {enable | disable}

---

### Syntax Definitions

**enable | disable** Enables or disables the JITC (Joint Interoperability Test Command) mode.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The configuration is applied only after a reload of the switch.
- The JITC mode is mutually exclusive of Common Criteria mode and Enhanced-mode. If the switch is already running in Common Criteria or enhanced-mode (NIS) it must be disabled before enabling JITC mode and vice versa.

### Examples

```
-> aaa jitc admin-state enable
WARNING: JITC mode configuration is applied only after reload
```

### Release History

Release 8.4.1; command introduced.

### Related Commands

[show aaa jitc config](#) Displays the JITC status on the switch.

# 39 Access Guardian Commands

Access Guardian refers to a set of OmniSwitch security functions that work together to provide a dynamic, proactive network security solution. This chapter provides information about the commands that are used to configure the following Access Guardian features through the Command Line Interface (CLI):

- **Universal Network Profile (UNP)**—Access Guardian is configured and applied through the framework of the UNP feature. UNP is enabled on switch ports to activate Access Guardian functionality that is used to authenticate and classify users into UNP profiles. Each profile is mapped to a VLAN ID or Service Access Point (SAP) to which the user is dynamically assigned. Specific UNP port configurations help to simplify and easily replicate the same configuration across multiple ports.
- **Bring Your Own Device (BYOD) - OmniSwitch / UPAM or ClearPass Integration:** The OmniSwitch leverages Access Guardian functionality along with the OmniVista Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) to provide an overall BYOD solution.
  - Configurable UNP port and profile attributes are used to redirect traffic from the OmniSwitch to the UPAM or CPPM server.
  - Configurable GRE tunnels allow the OmniSwitch to intercept and tunnel Multicast Domain Name System (mDNS) and Simple Service Discovery Protocol (SSDP) packets to or from a WLAN controller in a BYOD network.
- **Captive Portal**—Internal and external Captive Portal Web-based authentication. Internal Captive Portal authentication is provided through an internal Web server on the OmniSwitch that presents default or customized Web pages to the user. A post-authentication and/or post-classification process to validate user credentials and dynamically assign a new role (policy list) to enforce user access to the network. External, guest Captive Portal authentication is provided through the OmniSwitch Access Guardian interaction with the OmniVista Unified Policy Access Manager or the ClearPass Policy Manager.
- **Quarantine Manager and Remediation (QMR)**—QMR is a switch-based application that restricts the network access of known quarantined users and provides a remediation path to allow quarantined users to regain their network access.
- **IoT Device Profiling IoT**—Device Profiling allows the network administrators to support and manage smart phones, Tablets and other devices connecting to the network. The IoT Device Profiling uses DHCP FingerPrinting and MAC OUI (MAC Vendors) to identify IoT devices.

For commands used to configure device authentication, authorization, and accounting parameters that are used to support Access Guardian functionality, see [“Chapter 38, “AAA Commands.”](#)

For commands used to configure Learned Port Security (LPS), which is used by Access Guardian to help ensure that only certain devices are allowed to connect to the switch, see [“Chapter 46, “Learned Port Security Commands.”](#)

MIB information for the UNP commands is as follows:

*Filename:* ALCATEL-IND1-DA-MIB.mib  
*Module:* alcatelIND1DaMIB

*Filename:* ALCATEL-IND1-UDP-RELAY-MIB.mib  
*Module:* alcatelIND1UDPRelayMIB

A summary of the available commands is listed here:

## unp dynamic-vlan-configuration

Configures the UNP status for dynamic VLAN configuration. When this functionality is enabled and a VLAN mapping is configured with a VLAN ID that does not exist, the switch will dynamically create the necessary VLAN ID.

**unp dynamic-vlan-configuration**

**no unp dynamic-vlan-configuration**

---

### Syntax Definitions

N/A

### Defaults

By default, dynamic VLAN configuration is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

---

**Note.** Dynamic VLANs are not saved in the VLAN section of the **boot.cfg** file. However, the **unp** commands to enable dynamic VLAN configuration and create a UNP are saved in the UNP section of the **boot.cfg** file. As a result, the VLAN is created again on the next switch bootup.

---

- Use the **no** form of this command to disable dynamic VLAN configuration.
- When dynamic VLAN configuration is disabled, configuring a VLAN mapping with a VLAN ID that does not exist in the switch configuration is not allowed.
- The VLAN status and other port (non-UNP port) assignments for a dynamic UNP VLAN are configurable using standard VLAN commands. In addition, the STP status is configurable and enabled by default when the dynamic VLAN is created.
- A dynamic VLAN cannot be deleted using standard VLAN commands (**no vlan *vlan\_id***).
- UNP dynamic VLANs are identified as a separate type of VLAN. The **show vlan** command will display this type with the default name of “UNP-DYN-VLAN” and the designated type as “UNP Dynamic Vlan”.

### Examples

```
-> unp dynamic-vlan-configuration
-> no unp dynamic-vlan-configuration
```

## Release History

Release 7.2.1; command was introduced.

## Related Commands

### **unp profile**

Configures a UNP in the switch configuration.

### **show unp global configuration**

Displays the dynamic VLAN configuration status for the switch.

## MIB Objects

alaDaUNPGlobalConfiguration

alaDaUNPDynamicVlanConfigFlag

---

## unp dynamic-profile-configuration

Configures the UNP status for dynamic profile configuration. When this functionality is enabled, a UNP profile is dynamically created based on specific traffic conditions.

**unp dynamic-profile-configuration**

**no unp dynamic-profile-configuration**

---

### Syntax Definitions

N/A

### Defaults

By default, dynamic profile configuration is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable dynamic profile configuration.
- When dynamic profile configuration is enabled, a UNP profile is dynamically created when the trust VLAN tag option is enabled on the UNP port or link aggregate and one of the following conditions occurs:
  - A tagged packet received on the UNP port contains a VLAN tag that matches an existing MVRP VLAN in the switch configuration that is not assigned to a profile.
  - There is no matching VLAN in the switch configuration.
- Dynamically created profiles are saved in the **boot.cfg** file for the switch.
- By default, dynamically created profiles are automatically named **dynamic\_profile\_vlan\_id**, where the VLAN ID is the ID of the VLAN contained in the packet tag.
- After the dynamic profile is created, changing the profile name, the associated VLAN ID, or the QoS policy list is allowed. To avoid any confusion, change the profile name if the VLAN ID associated with the profile has changed.
- If the dynamic profile configuration option is enabled along with the dynamic VLAN configuration option and a dynamically created profile refers to a VLAN that is an MVRP VLAN, then the MVRP VLAN is automatically converted to a dynamic UNP VLAN (UNP-DYN-VLAN).

### Examples

```
-> unp dynamic-profile-configuration
-> no unp dynamic-profile-configuration
```

## Release History

Release 7.2.1.R02; command was introduced.

## Related Commands

### [unp profile](#)

Configures a UNP in the switch configuration.

### [unp dynamic-vlan-configuration](#)

Configures the status of dynamic VLAN configuration. When enabled, UNP will create a VLAN at the time a VLAN mapping for a profile is created that specifies a VLAN ID that does not exist in the switch configuration.

[show unp global configuration](#) Displays the dynamic profile configuration status for the switch.

## MIB Objects

alaDaUNPGlobalConfiguration

alaDaUNPDynamicProfileConfigFlag

---

## unp delay-learning

Configures the UNP delay learning time interval. This specifies the amount of time, in seconds, that UNP will delay learning packets received on UNP ports.

**unp delay-learning** *seconds*

---

### Syntax Definitions

*seconds* The amount of time to wait before UNP learning starts. The valid range is 0–600 seconds.

### Defaults

By default, the delay learning timer is disabled (timer value is set to 0).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To disable the delay learning timer, set the timer value to zero (the default).
- The configured time interval is triggered when the switch boots up. During this time, any packets received on all UNP ports are dropped until the timer expires.
- Configuring a delay learning interval gives the switch time to bring up IP interfaces and for route convergence to complete before any attempt to reach an authentication server is made.

### Examples

```
-> unp delay-learning 250
-> unp delay-learning 600
-> unp delay-learning 0
```

### Release History

Release 8.5R2; command was introduced.

**Related Commands**

- unp auth-server-down** Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.
- show unp global configuration** Displays the UNP delay learning timer value for the switch.

**MIB Objects**

alaDaUNPGlobalConfiguration  
alaDaUNPDelayLearning

---

## unp auth-server-down

Configures a UNP profile to which a device is classified if authentication fails because the RADIUS server is unreachable.

**unp auth-server-down** {**profile1** *profile\_name* [**profile2** *profile\_name*] [**profile3** *profile\_name*]}

**no unp auth-server-down** [**profile1**] [**profile2**] [**profile3**]

---

### Syntax Definitions

*profile\_name*                      The name of an existing profile to which the device is assigned when the authentication server is unreachable.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove an authentication server down UNP profile.
- When a device is classified into the specified profile, a configurable authentication down timer is started for that device. When the timer runs out, the authentication process is performed again. If authentication fails again, the device is classified back into the authentication server down profile. The switch will repeat this process until the device authentication is completed.
- Configuring an authentication server down UNP is highly recommended when MAC or 802.1X authentication is enabled on any UNP port or link aggregate. This is because after a switch reload, the traffic from devices connected to UNP ports and link aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.
  - If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
  - If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- If the authentication server down UNP is removed, the authentication server down timer is also removed.

- Up to three different profile names are configurable as authentication server down UNP profiles. The profile applied to the traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to device traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to device traffic received on UNP access ports.
  - When multiple profiles are configured, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the device traffic.
- Configuring both a VLAN profile and a service profile ensures that an authentication server down UNP is available for device traffic received on both types of UNP ports (bridge and access).

## Examples

```
-> unp auth-server-down profile1 un1-vlan
-> no unp auth-server-down profile1
-> unp auth-server-down profile1 un1-vlan profile2 un2-vxlan
-> no unp auth-server-down profile1 profile2
```

## Release History

Release 7.2.1; command was introduced.

Release 7.3.4; command syntax changed; **vxlan-profile** parameter added.

Release 8.3.1; **vlan-profile** and **vxlan-profile** parameters replaced with **profile1**, **profile2**, and **profile3** parameters.

## Related Commands

**unp auth-server-down-timeout** Configures the value for the authentication server down timer.

**show unp global configuration** Displays the profiles designated as the authentication server down UNP for the switch.

## MIB Objects

```
alaDaUNPGlobalConfiguration
  alaDaUNPAuthServerDownUnp
```

---

## unp auth-server-down-timeout

Configures the authentication server down timer value. This timer value is applied to devices that are learned in the authentication server down UNP.

**unp auth-server-down-timeout** *seconds*

**no unp auth-server-down-timeout**

---

### Syntax Definitions

*seconds* The number of seconds the authentication server down timer is active. The valid range is 10 to 1000 seconds.

### Defaults

By default, the timeout value is set to 60 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the timer value back to the default value (60 seconds).
- When this timer expires, devices learned in the authentication server down UNP are cleared from that UNP. The authentication and classification process is attempted again.
- When the authentication server down UNP is removed, the authentication server down timer is also cleared.

### Examples

```
-> unp auth-server-down-timeout 500
-> unp auth-server-down-timeout 120
-> no unp auth-server-down-timeout
```

### Release History

Release 7.2.1; command was introduced.

Release 7.3.4; command syntax changed; **vlan-profile** parameter added.

Release 8.3.1; **vlan-profile** and **vxlan-profile** parameters deprecated.

## Related Commands

- unp auth-server-down** Configures a UNP to which a device is classified if MAC or 802.1X authentication fails because the RADIUS server is not reachable.
- show unp global configuration** Displays the authentication server down timeout value for the switch.

---

## unp policy validity-period

Configures a UNP validity period policy that specifies the days and times during which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria.

**unp policy validity-period** *policy\_name* [**days** *days*] [**months** *months*] [**hours** *hh:mm to hh:mm*] [**interval** *mm:dd:yy hh:mm to mm:dd:yy hh:mm*] [**timezone** *zones*]

**no unp policy validity-period** *policy\_name* [**days** *days* | **months** *months* | **hours** / **interval** | **timezone**]

---

### Syntax Definitions

<i>policy_name</i>	The name of the validity period policy (up to 31 alphanumeric characters).
<i>days</i>	The day(s) of the week this validity period is active. Enter the actual day of the week (e.g., <b>monday</b> , <b>tuesday</b> , <b>wednesday</b> , etc.).
<i>months</i>	The month(s) in which the validity period is active. Enter the actual month (e.g., <b>january</b> , <b>february</b> , <b>march</b> , etc.).
<i>hh:mm</i>	The time of day, specified in hours and minutes, the validity period starts and the time of day the validity period ends (e.g., 10:30 to 11:30).
<i>mm:dd:yy hh:mm</i>	An interval of time during which the validity period is active. Specify a start and end to the interval period by entering a beginning date and time followed by an end date and time (e.g., 11:01:17 12:01 to 11:02:17 12:01).
<i>zones</i>	The timezone in which the validity period is active (for example, <b>pst</b> , <b>est</b> , <b>gmt</b> , etc.)

### Defaults

parameter	default
<i>days</i>	no restriction
<i>months</i>	no restriction
<i>hh:mm</i>	no specific time
<i>mm:dd:yyyy hh:mm</i>	no interval
<i>zones</i>	local timezone

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of the command to remove a UNP period policy from the configuration, or to remove parameters from a particular validity period policy.
- Any combination of the **days**, **months**, **hours**, **interval**, and **timezone** parameters is allowed. The validity period is only in effect when all specified parameters are true.
- Use the **unp profile period-policy** command to associate a period policy with a UNP profile.

## Examples

```
-> unp policy validity-period Office-Time
-> no unp policy validity-period Office-Time

-> unp policy validity-period Office-Time days monday
-> unp policy validity-period Office-Time days monday time-zone IST
-> no unp policy validity-period Office-Time time-zone
-> no unp policy validity-period Office-Time days monday

-> unp policy validity-period Office-Time days all
-> unp policy validity-period Office-Time days all time-zone PST
-> no unp policy validity-period Office-Time days saturday sunday

-> unp policy validity-period Office-Time hours 9:00 to 17:00
-> unp policy validity-period Office-Time hours 9:00 to 17:00 time-zone IST
-> no unp policy validity-period Office-Time hours

-> unp policy validity-period Holiday months december january
-> no unp policy validity-period Holiday months january

-> unp policy validity-period Holiday months december time-zone IST
-> no unp policy validity-period Holiday time-zone
-> no unp policy validity-period Holiday months december

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
-> no unp policy validity-period Seminar interval

-> unp policy validity-period Seminar interval 02/01/13 10:30 to 02/05/13 16:00
time-zone PST
-> no unp policy validity-period Seminar time-zone
-> no unp policy validity-period Seminar interval
```

## Release History

```

---

## unp policy validity-location

Configures a UNP validity location policy that defines a specific location from which a device can access the network. This type of policy is assigned to a UNP profile and applied to devices classified into the profile. A device must match all of the policy criteria defined.

**unp policy validity-location** *policy\_name* [**port** *chassis/slot/port[-port2]* | **linkagg** *agg\_id[-agg\_id2]* [**system-name** *system\_name*] [**system-location** *system\_location*]

**no unp policy validity-location** *policy\_name* [**port** | **linkagg** | **system-name** | **system-location**]

---

### Syntax Definitions

<i>policy_name</i>	The name of the validity location policy (up to 31 alphanumeric characters).
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1) of a UNP port. Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number of a UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>system_name</i>	The configured system name for the switch from which the device can access the network.
<i>system_location</i>	The configured system location for the switch from which the device can access the network.

### Defaults

parameter	default
<i>chassis/slot/port[-port2]</i>	no restriction
<i>agg_id[-agg_id2]</i>	no restriction
<i>system_name</i>	no restriction
<i>system_location</i>	no restriction

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a UNP location policy from the configuration, or to remove parameters from a particular location policy.
- Any combination of the **port**, **linkagg**, **system-name**, and **system-location** parameters is allowed. The location policy is only in effect when all specified parameters are true.

- Use the **unp profile location-policy** command to associate a location policy with a UNP profile.

## Examples

```
-> unp policy validity-location ALU-NA
-> no unp policy validity-location ALU-NA

-> unp policy validity-location ALU-NA port 1/1/10
-> unp policy validity-location ALU-NA port 1/1/1-5
-> no unp policy validity-location ALU-NA port

-> unp policy validity-location ALU-NA linkagg 10
-> unp policy validity-location ALU-NA linkagg 1-5
-> no unp policy validity-location ALU-NA linkagg

-> unp policy validity-location ALU-NA system-name OS6860
-> no unp policy validity-location ALU-NA system-name OS6860

-> unp policy validity-location ALU-NA system-location US-West
-> no unp policy validity-location ALU-NA system-location
```

## Release History

```

---

## unp domain description

Configures a customer domain ID to which UNP ports and classification rules are assigned.

**unp domain** *domain\_id* [**description** *domain\_description*]

**no unp domain** *domain\_id* **description** *domain\_description*

---

### Syntax Definitions

*domain\_id* A numerical customer domain ID.  
*domain\_description* An alphanumeric string (1–128 characters).

### Defaults

By default, customer domain ID zero (0) is assigned to all UNP ports.

parameter	default
<i>domain_description</i>	Domain ID

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the customer domain ID from the switch configuration. When a domain ID is removed, the following actions are triggered:
  - All UNP ports assigned to that domain are moved to the default domain ID 0.
  - Any classification rules assigned to that domain are removed.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain (see the [unp domain](#) command page), classification rules associated with the same customer domain ID are applied only to UNP ports associated with the same domain ID.

### Examples

```
-> unp domain 1
-> unp domain 2 description CustomerA
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

- unp domain** Assigns a UNP port or link aggregate to the specified customer domain (UNP group) ID.
- show unp domain** Displays the customer domain ID configuration for the switch.

## MIB Objects

  alaDaUnpCustomerDomainId  
  alaDaUnpCustomerDomainDesc

---

## unp redirect pause-timer

Configures the global pause timer value for the switch. Use this command to configure the amount of time the switch filters traffic from a non-suppliant (non-802.1X device) on a UNP port. This is done to allow enough time for the switch to clear the authentication state of the non-suppliant, at which time the device is re-authenticated.

**unp redirect pause-timer** *seconds*

**no redirect pause-timer**

---

### Syntax Definitions

*seconds* The pause timer value. The valid range is 60–65535

### Defaults

By default, the pause timer is set to zero.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to reset the pause time back to the default (timer no set).
- The pause timer is triggered when a Change of Authorization (COA) request is received that requires a VLAN change for a non-suppliant (non-802.1X device) *and* the port bounce action is not triggered for the device.
- During the pause time period, it is expected that the DHCP lease of the client IP in the old VLAN will expire and the client device will re-initiate DHCP resulting in new authentication and a UNP VLAN assignment.
- This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

### Examples

```
-> unp redirect pause-timer 180
-> no unp redirect pause-timer
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp redirect port-bounce** Configures the port bounce action for a port or globally for the switch.
- unp redirect proxy-server-port** Configures the HTTP proxy port number to use for redirection.
- unp redirect allowed-name** Configures a list of additional IP addresses to which a host can access.
- unp redirect-server** Configures an IP network address to allow HTTP traffic redirection.
- show unp global configuration** Displays the global UNP parameter settings for the switch.

## MIB Objects

alaDaUNPGlobalConfiguration  
alaDaUNPRedirectPauseTimer

---

## unp redirect proxy-server-port

Configures the HTTP proxy port number to use for redirection to the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) server.

**unp redirect proxy-server-port** *proxy\_port*

**no unp redirect proxy-server-port**

---

### Syntax Definitions

*proxy\_port* The HTTP proxy port number. The valid range is 1024–49151.

### Defaults

By default, the redirect proxy port number is set to 8080 (traps HTTP 80, 8080, and 443).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the proxy port number back to the default (8080).
- Configuring the switch to interact with the UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

### Examples

```
-> unp redirect proxy-server-port 8887
-> no unp redirect proxy-server-port
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>unp redirect port-bounce</b>	Configures the port bounce action for a port or globally for the switch.
<b>unp redirect pause-timer</b>	Configures the global pause timer value for the switch.
<b>unp redirect allowed-name</b>	Configures a list of additional IP addresses to which a host can access.
<b>unp redirect-server</b>	Configures an IP network address to allow HTTP traffic redirection.
<b>show unp global configuration</b>	Displays the global UNP parameter settings for the switch.

## MIB Objects

alaDaUNPGlobalConfiguration  
alaDaUNPRedirectServerIP

---

## unp redirect-server

Configures an IP network address or a Fully Qualified Domain Name (FQDN) to allow redirection of HTTP traffic to the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server. Specify the address or domain name that is associated with the dynamic URL returned from the UPAM or CPPM server.

**unp redirect-server** {*ip\_address* / *domain\_name*}

**no unp redirect-server**

---

### Syntax Definitions

*ip\_address*                      The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.

*domain\_name*                    An FQDN (e.g., upam.com) to which HTTP traffic is redirected.

### Defaults

By default, no redirect server IP address or FQDN is specified.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the redirect server IP or FQDN from the switch configuration.
- If the redirect server IP address or FQDN does not match the UPAM or CPPM server configuration, then redirection to the URL will not work. This provides additional security.
- Configuring the switch to interact with UPAM or CPPM is done as part of the OmniSwitch implementation of the Bring Your Own Devices (BYOD) solution.

### Examples

```
-> unp redirect-server 10.0.0.20
-> no unp redirect-server
-> unp redirect-server upam.com
-> no unp redirect-server
```

### Release History

Release 8.1.1; command was introduced.  
Release 8.5R1; *domain\_name* parameter added.

## Related Commands

- unp redirect port-bounce** Configures the port bounce action for a port or globally for the switch.
- unp redirect pause-timer** Configures the global pause timer value for the switch
- unp redirect proxy-server-port** Configures the HTTP proxy port number to use for redirection.
- unp redirect allowed-name** Configures a list of additional IP addresses to which a host can access.
- show unp global configuration** Displays the global UNP configuration for the switch.

## MIB Objects

```
alaDaUNPGlobalConfiguration  
  alaDaUNPRedirectServerIPType  
  alaDaUNPRedirectServerIP
```

---

## unp redirect allowed-name

Configures a list of additional IP addresses to which a host can access. This allows traffic to reach additional subnets other than that of the Unified Policy Access Manager (UPAM) server or the ClearPass Policy Manager (CPPM) server.

**unp redirect allowed-name** *name* **ip-address** *ip\_address* **ip-mask** *ip\_mask*

**no unp redirect allowed-name** *name*

---

### Syntax Definitions

<i>name</i>	Specify a name to assign to the allowed IP network address.
<i>ip_address</i>	An IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>ip_mask</i>	The IP subnet mask for the allowed IP network address.

### Defaults

By default, no allowed IP addresses are configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove an IP address from the allowed list.
- Explicitly configure and append the allowed IP list to the built-in "restrictedPolicyList" policy list.

### Examples

```
-> unp redirect allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no unp redirect allowed-name server2
```

### Release History

Release 8.1.1; command was introduced.

  alaDaUNPRedirectAllowedMaskIP
```

---

## unp force-l3-learning

Configures the status of UNP Layer 3 learning on the specified UNP port or globally on all UNP ports. When this functionality is enabled and IP-based classification rules are configured on the switch, only Layer 3 packets are used to learn devices connected to UNP ports. Layer 2 packets are not used for learning devices.

**unp** [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]] **force-l3-learning** [**port-bounce**]

**no unp** [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]] **force-l3-learning** [**port-bounce**]

---

### Syntax Definitions

<i>chassis/slot/port</i> [- <i>port2</i> ]	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>port-bounce</b>	Resets the context in which the user device is learned after the device is re-classified with a new IP address. This option is not supported on UNP link aggregates.

### Defaults

By default, UNP Layer 3 learning is disabled and the port bounce action is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To disable Layer 3 learning for a specific port or link aggregate, use the **no** form of this command with the **port** or **linkagg** parameter. To globally disable Layer 3 learning, use the **no** form of this command without the **port** or **linkagg** parameter.
- When UNP Layer 3 learning is enabled and there is at least one IP-based classification rule configured, the first packet of the following types of packets is used to learn the device:
  - An IP packet with a non-zero source IP address.
  - A valid ARP/GARP request/reply.
  - DHCP packets, even if the source IP address is 0.0.0.0.

However, the first packet of the following types of packets is *dropped* and not used to learn the device:

- Layer 2 frames.
- Invalid ARP/GARP request/reply (one with sender IP address 0.0.0.0 or 169.254.0.0/16).
- IP packet with a source IP address of 0.0.0.0, except for DHCP packets where the source IP address is 0.0.0.0.

- When Layer 3 learning is enabled and a device is learned and assigned to a UNP profile, any subsequent change to the IP address for that device (for example, the device is assigned a leased IP address) will trigger UNP to re-classify the device based on the new IP address.
- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate would not undergo IP reclassification:
  - 802.1x (supplicant) and MAC authenticated (non-supplicant).
  - Users learned through a non-IP-based classification rule that has a higher precedence over IP-based classification rules (such as any UNP extended classification rule, binding rule, MAC address rule, or MAC address range rule).
- When Layer 3 learning is enforced, the following users learned on a UNP port or link aggregate might undergo IP reclassification:
  - Users learned through a non-IP-based classification rule that has a lower precedence than IP-based classification rules (such as a VLAN rule).
  - IP-based classification rule.
- If the port bounce action is enabled for Layer 3 learning, IP reclassification for a user might result in obtaining a new UNP profile based on an IP-based classification rule, and the new UNP profile may assign a VLAN that is different from the initial UNP profile VLAN. If this occurs, the port would be toggled causing the user context to get flushed, and the subsequent packet from the user would then be used to relearn the user. It is assumed that user in this case would subsequently send either a valid ARP packet or an IP packet with a valid source IP address as the first packet, which would be used for re-learning the user directly into the final UNP profile.
- Note that the IP address update/change for an already learned UNP user can happen only when a valid ARP packet is sent from the user after the user is initially learned. As a result, Layer 3 enforcement relies on an ARP packet from the user.
- Whenever an additional port is configured as a UNP port, the Layer 3 learning status is derived from the global setting for the switch.
- When Layer 3 learning is changed at the global level, all port-level configurations are also changed unless a custom port template that configures this function is assigned to the port. For example, when Layer 3 learning is globally disabled, it is automatically disabled on any port that has Layer 3 learning enabled. However, if a port is assigned to a custom port template that enables this function, then the Layer 3 learning status for that port is not changed.
- The port-level setting of the Layer 3 learning function overrides the global setting for the switch. For example, if Layer 3 learning is globally disabled but enabled on port 1/1/20, then Layer 3 learning is active only on port 1/1/20.

## Examples

```
-> unp force-l3-learning
-> unp force-l3-learning port-bounce
-> no unp force-l3-learning port-bounce
-> no unp force-l3-learning

-> unp port 1/1/20 force-l3-learning
-> unp port 1/1/20 force-l3-learning port-bounce
-> no unp port 1/1/20 force-l3-learning port-bounce
-> no unp port 1/1/20 force-l3-learning
```

## Release History

Release 8.3.1; command was introduced.

Release 8.3.1.R02; **port**, **linkagg**, and **port-bounce** parameters added.

## Related Commands

## unp 802.1x-pass-through

Configures the global status of 802.1x pass through for the switch. When this functionality is enabled, 802.1x packets from supplicants attempting to authenticate are not processed on the local switch. Instead, the packets are passed along to another switch for authentication.

**unp 802.1x-pass-through**

**no unp 802.1x-pass-through**

---

### Syntax Definitions

N/A

### Defaults

By default, 802.1x pass through is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable 802.1x pass through for the switch.
- Enabling 802.1x pass through on a switch that has an existing UNP or LPS configuration is not recommended. This functionality is intended for a local or intermediate switch when the supplicant device requires authentication through an upstream switch.
- If 802.1x pass through is enabled on a switch that has an existing UNP or LPS configuration, consider the following:
  - 802.1x authentication, 802.1x authentication bypass, and MAC authentication allow EAP functionality is not supported on UNP ports.
  - The initial frame for unknown 802.1x traffic is learned on the switch. If the frame is learned in the forwarding mode, subsequent frames with the same source MAC address are passed through to the next switch. If the frame is learned in the filtering mode, subsequent frames with the same source MAC address are dropped and not passed through.

### Examples

```
-> unp 802.1x-pass-through
-> no unp 802.1x-pass-through
```

### Release History

Release 8.4.1.R02; command was introduced.

---

## unp ipv6-drop

Configures whether IPv6 packets received on UNP ports are learned or dropped. When this functionality is enabled, IPv6 packets are dropped by UNP on the local switch.

**unp ipv6-drop**

**no unp ipv6-drop**

---

### Syntax Definitions

N/A

### Defaults

By default, IPv6 packet drop is disabled. IPv6 packets are learned and processed by UNP.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of this command to disable IPv6 packet drop for the switch.

### Examples

```
-> unp ipv6-drop
-> no unp ipv6-drop
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

---

## unp ap-mode

Configures the global status of the Access Point (AP) mode. The global AP mode status determines the default AP mode status that is applied when a port or link aggregate is configured as a UNP port. For example, if the global status is disabled, the port-level status defaults to disabled; if the global status is enabled, the port-level status defaults to enabled.

**unp ap-mode {enable | disable}**

---

### Syntax Definitions

**enable**                                Sets the AP mode default status to enabled.  
**disable**                                Sets the AP mode default status to disabled.

### Defaults

By default, the AP mode is enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Changing the global AP mode status at any given time is allowed but does not change the port-level status set for any existing UNP ports. If the AP mode is disabled for the port, it remains disabled after the global status change; if the AP mode is enabled for the port, it remains enabled after the global status change and any devices or clients learned on the port are not disrupted.
- To change the AP mode status for a specific UNP bridge port, use the **unp port ap-mode** command.

### Examples

```
-> unp ap-mode disable
-> unp ap-mode enable
```

### Release History

Release 8.4.1.R02; command was introduced.

**Related Commands**

- unp port ap-mode** Configures AP mode functionality for a UNP bridge port.
- show unp global configuration** Displays the status of UNP Layer 3 learning for the switch.

**MIB Objects**

alaDaUNPGlobalConfiguration  
alaDaUNPAPMode

---

## unp mac-mobility

Configures the global status of MAC address mobility; any new UNP service profiles will inherit the global MAC mobility status when the profile is created. Enabling MAC address mobility for a UNP service profile supports VRRP router communication over a Shortest Path Bridging (SPB) service domain.

**unp mac-mobility**

**no unp mac-mobility**

---

### Syntax Definitions

N/A

### Defaults

By default, the global MAC address mobility status is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to globally disable UNP MAC address mobility.
- Although the MAC mobility status is configured for UNP profiles, it's functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.
- When a new UNP service profile is created, the MAC mobility status for the profile defaults to the global value. For example, if the global status is enabled, then the new service profile status is set to enabled by default; if the global status is disabled, then the new service profile status is set to disabled by default.
- If the global MAC mobility status is changed at any given time, it will not affect the MAC mobility status of any existing UNP service profiles; the global setting only applies at the time a service profile is created. Any subsequent profiles created will default to the new global MAC mobility status.
- To change the MAC mobility status for a specific UNP service profile, use the **unp profile mac-mobility** command.

### Examples

```
-> unp mac-mobility
-> no unp mac-mobility
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

**unp profile mac-mobility** Configures the MAC mobility status for the specified UNP service profile.

**show unp global configuration** Displays the status of MAC mobility for the switch.

## MIB Objects

---

## unp user flush

Performs a MAC address flush of Access Guardian users (devices learned on UNP ports) based on the specified port, link aggregate, authentication type, or MAC address.

**unp user flush** [**port** *chassis/slot/port1[-port2]* | **linkagg** *agg\_id[-agg\_id2]*] [**sap-id** [**linkagg**] *sap\_id*] [**service-id** *service\_id*] [**authentication-type** {**mac** | **802.1x** | **none**}] [**profile** *profile\_name*] [**mac-address** *mac\_address*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
[ <b>linkagg</b> ] <i>sap_id</i>	A Service Access Point (SAP) ID. Use the optional <b>linkagg</b> parameter if the SAP ID is for a link aggregate.
<i>service_id</i>	A service ID.
<b>mac</b>	Clears only the MAC authenticated users.
<b>802.1x</b>	Clears only the 802.1X authenticated users.
<b>none</b>	Clears only the users that have not been authenticated.
<i>mac_address</i>	A MAC address (e.g., 00:00:39:59:f1:0c).
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, all MAC addresses learned on all UNP ports are flushed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **port** or **linkagg** parameter to flush users on a specific port or link aggregate.
- Use the **sap-id** parameter to flush users learned on a specific SAP. A SAP ID is comprised of a device-facing port or link aggregate (referred to as a service access port) and an encapsulation value that is used to identify the type of device traffic to map to the associated service.
- Use the **service-id** parameter to flush users learned on a specific service.
- Use the **authentication-type** parameter with the **mac**, **802.1x**, or **none** options to flush users that were authenticated (MAC or 802.1X) or users that were not authenticated.

- Use the **mac-address** parameter to flush a specific device.
- Use the **profile** parameter to flush all users associated with the specified profile name. Combine this parameter with the **mac-address** parameter to flush a specific user associated with the specified profile name.
- Combine the **sap-id** or **service-id** parameter with the **profile** parameter option to flush only users on the SAP or service that are classified into the specified profile.
- Combine the **sap-id** or **service-id** parameter with the **authentication-type** parameter option to flush only users on the SAP or service that were authenticated with the specified authentication type.

## Examples

```
-> unp user flush
-> unp user flush port 1/1/6
-> unp user flush linkagg 10
-> unp user flush sap-id 1/1/2:50
-> unp user flush service-id 10
-> unp user flush authentication-type mac
-> unp user flush mac-address 00:11:22:33:44:55
-> unp user flush profile un1-vlan
-> unp user flush profile un1-vlan mac-address 00:da:95:11:22:01
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

## unp 802.1x eapol-version

Configures EAPoL version V1 or V3 globally on the switch for 802.1x authentication of users on UNP port.

**unp 802.1x eapol-version {v1 | v3}**

---

### Syntax Definitions

**v1** Configures EAPoL version V1 for 802.1x authentication.  
**v3** Configures EAPoL version V3 for 802.1x authentication.

### Defaults

By default, EAPoL version V1 is configured for 802.1x authentication.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The EAPoL version V3 must be configured on the switch only to authenticate 802.suplicants, which could co-operate with NAS switch using EAPoL version V3.
- When the switch is configured with EAPoL version as V1 or V3, the EAPoL header would carry version 802.1X-2001 (1) or 802.1X-2010 (3) respectively.

### Examples

```
-> unp 802.1x eapol-version v3
```

### Release History

Release 8.7R1; command was introduced.

### Related Commands

**show unp global configuration** Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

### MIB Objects

alaDaUNPEapolVersion

---

## unp profile

Configures a classification profile that is used to provide role-based access to the switch. This type of profile determines the VLAN or service a device can join and applies any additional profile-defined attributes to the device.

When a profile is created with this command, the base command (**unp profile** *profile\_name*) may be used with other command keywords to define attributes for the specified profile. These keywords are listed here and described as separate commands later in this chapter. In addition, some keywords have a **no** form to remove the parameter or return it to its default.

```
unp profile profile_name
  [qos-policy-list list_name]
  [location-policy policy_name]
  [period-policy policy_name]
  [captive-portal-authentication]
  [captive-portal-profile profile_name]
  [kerberos-authentication]
  [authentication-flag]
  [mobile-tag]
  [maximum ingress-bandwidth bps[k | m]]
  [maximum egress-bandwidth bps[k | m]]
  [maximum ingress-depth bps]
  [maximum egress-depth bps]
  [inactivity-interval seconds]
  [mac-mobility]
  [saa-profile profile_name]
```

```
no unp profile profile_name
```

---

### Syntax Definitions

*profile\_name*                      The name to assign to the UNP classification profile.

### Defaults

When a profile is created without specifying any parameter values, the profile parameters are set to the following default values:

parameter	default
<b>qos-policy-list</b> <i>list_name</i>	No list assigned
<b>location-policy</b>	No policy assigned
<b>period-policy</b>	No policy assigned
<b>captive-portal-authentication</b>	disabled
<b>captive-portal-profile</b>	No profile assigned
<b>kerberos-authentication</b>	disabled
<b>authentication-flag</b>	disabled

parameter	default
<b>mobile-tag</b>	disabled
<b>maximum ingress-bandwidth</b> <i>bps[k   m]</i>	None
<b>maximum egress-bandwidth</b> <i>bps[k   m]</i>	None
<b>maximum ingress-depth</b> <i>bps</i>	None
<b>maximum egress-depth</b> <i>bps</i>	None
<b>inactivity-interval</b> <i>seconds</i>	10
<b>mac-mobility</b>	disabled
<b>saa-profile</b> <i>profile_name</i>	No profile assigned

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to remove a profile from the switch configuration.
- Profiles are applied only to traffic received on UNP bridge and access ports or link aggregates.
- After a profile is created, use the **unp profile map** command to map the profile to a VLAN or service.
  - If the profile is mapped to a VLAN, the profile is used to classify traffic received on UNP bridge ports.
  - If the profile is mapped to a service (SPB, VXLAN, or static), the profile is used to classify traffic received on UNP access ports.
- Any configuration change to a profile will flush all MAC addresses learned on that profile.

## Examples

```
-> unp profile unp-profl
-> no unp profile unp-profl
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile qos-policy-list</b>	Assigns a QoS policy list to an existing profile.
<b>unp profile location-policy</b>	Assigns a UNP location policy to the specified profile.
<b>unp profile period-policy</b>	Assigns a UNP time-based policy to the specified profile.
<b>unp profile captive-portal-authentication</b>	Configures the status of Captive Portal authentication for the specified profile.
<b>unp profile captive-portal-profile</b>	Assigns a Captive Portal configuration to the specified profile.
<b>unp profile kerberos-authentication</b>	Configures the status of Kerberos snooping for the specified profile.
<b>unp profile authentication-flag</b>	Configures whether the specified profile only allows authenticated devices into the profile.
<b>unp profile mobile-tag</b>	Configures whether a tagged VLAN-port association is created for a device port that is classified into the specified profile.
<b>unp profile maximum-ingress-bandwidth</b>	Configures a maximum ingress bandwidth value that is applied to UNP ports associated with the specified profile.
<b>unp profile maximum-egress-bandwidth</b>	Configures a maximum egress bandwidth value that is applied to UNP ports associated with the specified profile.
<b>unp profile maximum-ingress-depth</b>	Configures a maximum ingress depth value that is applied to UNP ports associated with the specified profile.
<b>unp profile maximum-egress-depth</b>	Configures a maximum egress depth value that is applied to UNP ports associated with the specified profile.
<b>unp profile inactivity-interval</b>	Configures the inactivity interval timer for the specified profile.
<b>unp profile mac-mobility</b>	Configures the MAC address mobility status for the specified UNP service profile to support VRRP router communication over an SPB service domain.
<b>unp profile saa-profile</b>	Assigns an existing Service Assurance Agent (SAA) profile to the specified profile.
<b>show unp profile</b>	Displays the profile configuration for the switch.

## MIB Objects

```
alaDaUNPProfileTable
  alaDaUNPProfileName
```

---

## unp profile qos-policy-list

Configures the QoS policy list attribute for the specified profile. Use this command to assign the name of an existing QoS policy list to the profile. A policy list contains QoS policy rules/ACLs that are applied to devices classified with the associated profile.

**unp profile** *profile\_name* **qos-policy-list** *list\_name*

**no unp profile** *profile\_name* **qos-policy-list**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.

*list\_name*                              The name of a QoS policy list to associate with the specified UNP.

### Defaults

By default, no profile attributes are enabled or defined when the profile is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the QoS list name from the profile configuration.
- Specifying a QoS policy list name that is inactive or does not already exist in the switch configuration is allowed. However, the list will remain inactive for the UNP until the list is enabled or configured using the QoS **policy list** command.
- The QoS policy list is used to define the initial role for any UNP user learned in the profile.

### Examples

```
-> unp profile unp-profl qos-policy-list unp-list1
-> no unp profile unp-profl qos-policy-list unp-list2
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

### [unp profile](#)

Configures a UNP classification profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

### [policy list](#)

Configures a QoS policy list.

### [show unp profile](#)

Displays the profile configuration for the switch.

## MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileQoSPolicy
```

---

## unp profile location-policy

Configures the location policy attribute for the specified profile. Use this command to assign the name of an existing UNP location policy to a profile. This type of policy defines criteria (such as the slot/port, system name and location) to determine if a device is accessing the network from a valid location.

**unp profile** *profile\_name* **location-policy** *policy\_name*

**no unp profile** *profile\_name* **location-policy**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.  
*policy\_name*                      The name of an existing UNP location policy.

### Defaults

By default, no profile attributes are enabled or defined when the profile is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the location policy name from the profile configuration.
- The location policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the location policy, the device role is changed to unauthorized.

### Examples

```
-> unp profile unp-profl location-policy alu-na
-> no unp profile unp-profl location-policy
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile</b>	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
<b>unp policy validity-location</b>	Configures a UNP location policy.
<b>show unp profile</b>	Displays the profile configuration for the switch.

## MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileLocationPolicy
```

---

## unp profile period-policy

Configures the period policy attribute for the specified profile. Use this command to assign the name of an existing UNP period policy to a profile. This type of policy specifies the days and times during which a device can access the network.

**unp profile** *profile\_name* **period-policy** *policy\_name*

**no unp profile** *profile\_name* **period-policy**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.  
*policy\_name*                      The name of an existing UNP period policy.

### Defaults

By default, no profile attributes are enabled or defined when the profile is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the period policy name from the profile configuration.
- The period policy name specified with this command must already exist in the switch configuration.
- Profile location and time period policies are configurable on the switch or on the RADIUS server. If the policies are configured on both the switch and the RADIUS server, then the switch policies take precedence.
- If a UNP device does not meet the criteria applied through the period policy, the device role is changed to unauthorized.

### Examples

```
-> unp profile unp-profl period-policy office-time
-> no unp profile unp-profl period-policy
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile</b>	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
<b>unp policy validity-period</b>	Configures a UNP period policy.
<b>show unp profile</b>	Displays the profile configuration for the switch.

## MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfilePeriodPolicy
```

---

## unp profile captive-portal-authentication

Configures the status of Captive Portal (CP) authentication for the specified UNP profile. When enabled, the Captive Portal authentication process is triggered for devices classified into the profile.

**unp profile *profile\_name* captive-portal-authentication**

**no unp profile *profile\_name* captive-portal-authentication**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.

### Defaults

By default, Captive Portal authentication is disabled for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable Captive Portal authentication for the profile configuration.
- When CP authentication is enabled, the UNP user is assigned an implicit CP pre-login role to facilitate the CP authentication process with the configured CP RADIUS server.
- The CP profile associated with the UNP profile defines the CP RADIUS server to use for the CP authentication process. If a CP profile is not associated with the UNP profile, then the server defined in the global CP configuration for the switch is used instead.
- If CP authentication for the device is successful, the user role is automatically changed according to the CP pass policy list returned from the RADIUS server if it is the highest precedence role known for the user.
- If CP authentication for the device fails, the user role will be changed to the last known highest precedence role for the user.
- When successful CP authentication results in assigning the UNP user to a different profile, CP authentication does not need to be enabled for that profile. For example, if the user is initially assigned to a “Guest” profile and successful CP authentication assigns the user to the “Admin” profile, CP authentication must be enabled on the “Guest” profile but does not have to be enabled on the “Admin” profile.
- When CP authentication is disabled for the profile, BYOD redirection is automatically made available to devices assigned to the profile. When CP authentication is enabled, CP is enforced and BYOD redirection is not available.

## Examples

```
-> unp profile unp-profl captive-portal-authentication  
-> no unp profile unp-profl captive-portal-authentication
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<a href="#">unp profile</a>	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

```

---

## unp profile captive-portal-profile

Configures the Captive Portal (CP) profile attribute for the specified profile. Use this command to assign the name of an existing CP profile to a profile. This type of profile defines a CP configuration that is applied to devices when CP authentication is enabled for the profile.

**unp profile** *profile\_name* **captive-portal-profile** *cp\_profile\_name*

**no unp profile** *profile\_name* **captive-portal-profile**

---

### Syntax Definitions

*profile\_name*

The name of a UNP profile.

*cp\_profile\_name*

The name of an existing UNP Captive Portal profile.

### Defaults

By default, no CP profile is assigned to a profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the CP profile name from the profile configuration.
- The CP profile name specified with this command must already exist in the switch configuration.
- The configuration defined in the CP profile overrides the global CP configuration for the switch.

### Examples

```
-> unp profile unp-prof1 captive-portal-profile cp-prof
-> no unp profile unp-prof1 captive-portal-profile
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile</b>	Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.
<b>captive-portal-profile</b>	Configures a Captive Portal profile.

```

---

## unp profile kerberos-authentication

Enables or disables Kerberos snooping on UNP profile.

**unp profile *profile\_name* kerberos-authentication**

**no unp profile *profile\_name* kerberos-authentication**

### Syntax Definitions

*profile\_name* The name of a UNP profile.

### Defaults

By default, Kerberos is disabled on UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	Yes	Yes	No	Yes

### Usage Guidelines

- Use the **no** form of this command to disable Kerberos snooping on the UNP profile.
- When Kerberos is disabled on the UNP profile, all users learned in that profile are deleted.
- Although the status of Kerberos snooping is configurable for UNP profiles, it's functionality is supported only on profiles mapped to a VLAN.
- Kerberos is an L3 authentication. It will be available only after successful L2 authentication.
- Kerberos snooping will work only when the switch has at least one Kerberos server IP address configured.

### Examples

```
-> unp profile p1 kerberos-authentication
-> no unp profile p1 kerberos-authentication
```

### Release History

Release 8.6R2; command introduced.

## Related Commands

[kerberos inactivity-timer](#)

Configures the global inactivity timer for Kerberos users.

[show kerberos configuration](#)

Displays the Kerberos global configuration.

  alaDaUNPProfileKerberosAuthentication  
  alaDaUNPProfileRowStatus
```

---

## unp profile authentication-flag

Configures the authentication flag status for the specified UNP profile. When enabled, only devices successfully authenticated are classified into the profile.

**unp profile *profile\_name* authentication-flag**

**no unp profile *profile\_name* authentication-flag**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.

### Defaults

By default, the authentication flag is disabled for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the authentication flag for the profile configuration.
- When the authentication flag is enabled for a profile, devices that did not pass L2 authentication (802.1X or MAC) are not allowed into the profile. However, other configured classification options are applied to such devices to determine the appropriate network access control for that device.

### Examples

```
-> unp profile unp-profl authentication-flag
-> no unp profile unp-profl authentication-flag
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

alaDaUNPProfileName

alaDaUNPProfileAuthenticationFlag

---

## unp profile mobile-tag

Configures the mobile tag status for the specified UNP profile. When enabled, the first user that is learned on a UNP port and classified into the specified UNP profile will cause the UNP port to be added as a tagged member of the VLAN associated with the profile. If the profile is mapped to a service, a tagged virtual port association is created.

```
unp profile profile_name mobile-tag
```

```
no unp profile profile_name mobile-tag
```

---

### Syntax Definitions

*profile\_name*                                      The name of a UNP profile.

### Defaults

By default, the mobile tag status is disabled for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the mobile tag status for the profile configuration.
- When the mobile tag status is disabled for a profile, any user device classified into the profile will remain learned in that profile. In this case, the tagged/untagged VLAN-port association would be determined based on the user traffic which was learned as tagged or untagged, respectively.
- If the device port is already an untagged member of the VLAN associated with the profile, then a tagged association is not created.

### Examples

```
-> unp profile unp-profl mobile-tag  
-> no unp profile unp-profl mobile-tag
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

### **unp profile**

Configures a UNP profile. This type of profile is applied to traffic learned on UNP ports and link aggregates.

### **show unp profile**

Displays the UNP profile configuration for the switch.

## MIB Objects

```
alaDaUNPProfileTable  
  alaDaUNPProfileName  
  alaDaUNPProfileMobileTag
```

---

## unp profile maximum-ingress-bandwidth

Configures the maximum bandwidth limit allocated for ingress traffic on UNP ports assigned to the specified profile.

**unp profile** *profile\_name* **maximum-ingress-bandwidth** *bps*[**k** | **m**]

**no unp profile** *profile\_name* **maximum-ingress-bandwidth**

---

### Syntax Definitions

*profile\_name*

The name of a UNP profile.

*bps*[**k** | **m**]

The maximum amount of bandwidth, in bits-per-second. The valid range is 0–10485760. The value may be entered as an integer (for example, **10**) or with abbreviated units (for example, **10k**, **5m**).

### Defaults

By default, the maximum ingress bandwidth value is not defined for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the maximum ingress bandwidth value for the specified profile. If a maximum ingress depth value is set for the same profile, then both the maximum ingress bandwidth and depth values must be removed together (on the same command line).
- If the maximum ingress bandwidth value is specified as an integer without an abbreviated unit designation, the value is applied in Kbps by default. For example, if the number **10** is specified, **10K** is the value applied.
- If the maximum ingress bandwidth value is set to zero, then all ingress traffic is allowed on the UNP port.
- The maximum ingress bandwidth, egress bandwidth, and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

## Examples

```
-> unp profile unp-profl maximum-ingress-bandwidth 100
-> unp profile unp-profl maximum-ingress-bandwidth 10m
-> no unp profile unp-profl maximum-ingress-bandwidth
-> unp profile unp-profl maximum-ingress-bandwidth 100
-> unp profile unp-profl maximum-ingress-depth 50
-> no unp profile unp-profl maximum-ingress-bandwidth maximum-ingress-depth
```

## Release History

## unp profile maximum-egress-bandwidth

Configures the maximum bandwidth limit allocated for egress traffic on UNP ports assigned to the specified profile.

**unp profile** *profile\_name* **maximum-egress-bandwidth** *bps[k | m]*

**no unp profile** *profile\_name* **maximum-egress-bandwidth**

---

### Syntax Definitions

*profile\_name*

The name of a UNP profile.

*bps[k | m]*

The maximum amount of bandwidth, in bits-per-second. The valid range is 0–10485760. The value may be entered as an integer (for example, **10**) or with abbreviated units (for example, **10k**, **5m**).

### Defaults

By default, the maximum egress bandwidth value is not defined for the profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the maximum egress bandwidth value for the specified profile. If a maximum egress depth value is set for the same profile, then both the maximum egress bandwidth and depth values must be removed together (on the same command line).
- If the maximum egress bandwidth value is specified as an integer without an abbreviated unit designation, the value is applied in Kbps by default. For example, if the number **10** is specified, **10K** is the value applied.
- If the maximum egress bandwidth value is set to zero, then all egress traffic is allowed on the UNP port.
- The maximum ingress bandwidth, egress bandwidth, and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

## Examples

```
-> unp profile unp-profl maximum-egress-bandwidth 100
-> unp profile unp-profl maximum-egress-bandwidth 10m
-> no unp profile unp-profl maximum-egress-bandwidth
-> unp profile unp-profl maximum-egress-bandwidth 100
-> unp profile unp-profl maximum-egress-depth 50
-> no unp profile unp-profl maximum-egress-bandwidth maximum-egress-depth
```

---

## unp profile maximum-ingress-depth

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

**unp profile** *profile\_name* **maximum-ingress-depth** *bytes*

**no unp profile** *profile\_name* **maximum-ingress-depth**

---

### Syntax Definitions

*profile\_name* The name of a UNP profile.

*bytes* The maximum ingress depth value in bytes. The valid range is 0–16384.

### Defaults

By default, the maximum ingress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the maximum ingress depth value from the profile.
- The maximum ingress depth value is configured in conjunction with the maximum ingress bandwidth parameter. When the ingress depth value is reached, the switch starts to drop packets.
- Configure the maximum ingress bandwidth rate (**unp profile maximum-ingress-bandwidth**) before attempting to set the maximum ingress depth value.
- The maximum ingress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

### Examples

```
-> unp profile unp-profl maximum-ingress-bandwidth 10
-> unp profile unp-profl maximum-ingress-depth 5
-> no unp profile unp-profl maximum-ingress-depth
```

## unp profile maximum-egress-depth

Configures the maximum ingress queue depth or bucket size assigned to each port that is associated with the specified UNP profile. The depth value is configured in bytes and is used for traffic metering. The queue depth or bucket size determines the amount of buffers allocated to the UNP port. When the queue or bucket size is reached, the switch starts dropping packets.

**unp profile** *profile\_name* **maximum-egress-depth** *bytes*

**no unp profile** *profile\_name* **maximum-egress-depth**

---

### Syntax Definitions

*profile\_name*                      The name of a UNP profile.  
*bytes*                                The maximum egress depth value in bytes. The valid range is 0–16384.

### Defaults

By default, the maximum egress depth value is determined by dividing the maximum ingress bandwidth value by 25. If the result of this calculation is 0 or 1, then 2K is used as the ingress depth value.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the maximum egress depth value from the profile.
- The maximum egress depth value is configured in conjunction with the maximum egress bandwidth parameter. When the egress depth value is reached, the switch starts to drop packets.
- Configure the maximum egress bandwidth rate (**unp profile maximum-egress-bandwidth**) before attempting to set the maximum egress depth value.
- The maximum egress bandwidth and depth values are applied to the port of a user device that is classified into the specified profile.
  - If multiple user devices are classified into different profiles but learned on the same UNP port, the bandwidth parameter values obtained for the last user learned are applied on the port. Parameter values applied through previously learned users are overwritten.
  - Bandwidth parameter values are *not* applied to UNP link aggregates that are assigned to the profile.

### Examples

```
-> unp profile unp-profl maximum-egress-bandwidth 10
-> unp profile unp-profl maximum-egress-depth 5
-> no unp profile unp-profl maximum-egress-depth
```

```

---

## unp profile inactivity-interval

Configures whether or not an authenticated device is automatically logged out of the network after a specific period of inactivity (MAC address for the device has aged out). This timer value applies only to devices learned in the specified profile.

**unp profile *profile\_name* inactivity-interval *seconds***

---

### Syntax Definitions

*profile\_name* The name of a UNP profile.

*seconds* The inactivity timer value. The valid range is 10 to 600 seconds.

### Defaults

By default, the inactivity interval value is set to 10 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Make sure the configured inactivity interval time is set to a value greater than the MAC address aging time for the switch.
- When a specific time is configured for the inactivity interval timer, the device is not logged out of the network if the MAC address aging time expires before the configured timer value.
- When the inactivity interval time is changed for the profile, the new value does not apply to existing authenticated users until the user is flushed out or when the user is authenticated again.
- If a user undergoes MAC authentication and then secondary Captive Portal authentication, the higher of the two inactivity logout timer values returned is applied to the device.
- An inactivity logout timer value is also configurable through authentication, authorization, and accounting (AAA) commands. The value set through the AAA commands takes precedence over the inactivity interval value set for the UNP.

### Examples

```
-> unp profile unp-profl inactivity-interval 500
-> unp profile unp-profl inactivity-interval 10
```

### Release History

Release 8.3.1; command was introduced.

---

## unp profile mac-mobility

Configures the MAC address mobility status for the specified UNP service profile. Enable MAC address mobility for a UNP service profile to support VRRP router communication over an SPB service domain.

**unp profile** *profile\_name* **mac-mobility**

**no unp profile** *profile\_name* **mac-mobility**

---

### Syntax Definitions

*profile\_name* The name of a UNP profile that is mapped to SPB service parameters.

### Defaults

By default, the MAC mobility status for the SPB service-mapped profile is set to the global MAC mobility status when the profile is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the MAC mobility status for the profile configuration.
- When the MAC mobility status is disabled for a profile, VRRP MAC address movement that is required for the VRRP master/slave election process is disrupted. This may cause a VRRP configuration to generate two VRRP masters within the SPB service domain.
- Although the MAC mobility status is configured for UNP profiles, it's functionality is supported only on profiles mapped to SPB services. SPB service-mapped profiles generate Service Access Points (SAPs) on which a VRRP router can communicate with other VRRP routers across the SPB service domain.
- To support VRRP router communication over an SPB service domain, the following configuration is required:
  - Enable MAC address mobility for the SPB service-mapped UNP profile.
  - Assign the service profile to a UNP access port to create a persistent UNP SAP on which a VRRP router will communicate. A persistent SAP does not age out and will ensure an uninterrupted flow of VRRP advertisements between the VRRP master and slave routers.

### Examples

```
-> unp profile unp-profl mac-mobility
-> no unp profile unp-profl mac-mobility
```

## Release History

Release 8.6R1; command was introduced.

---

## unp profile saa-profile

Assigns a Service Assurance Agent (SAA) profile to the specified UNP profile. Although an SAA profile can be assigned to a UNP profile with this command, an SAA profile is mainly used by the OmniVista network management application to monitor connections between virtual machines (VMs) in a data center network.

**unp profile** *profile\_name* **saa-profile** *profile\_name*

**no unp profile** *profile\_name* **saa-profile**

---

### Syntax Definitions

**profile** *profile\_name*                      The name of a UNP profile.

**saa-profile** *profile\_name*                The name of the SAA profile to assign to the UNP profile.

### Defaults

By default, no SAA profile is assigned to a UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove an SAA profile assignment from a UNP profile configuration.
- The SAA profile specified with this command must already exist in the switch configuration.

### Examples

```
-> unp profile unp-profl saa-profile saal
-> no unp profile unp-profl saa-profile
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

  alaDaUNPProfileName  
  alaDaUNPProfileSaaProfile
```

---

## unp profile map vlan

Configures the mapping of a standard VLAN to a UNP profile. When a device is assigned to a profile through authentication or classification, the device and the port on which the device was learned are dynamically assigned to the VLAN that is mapped to the profile.

```
unp profile profile_name map vlan vlan_id
```

---

### Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<i>vlan_id</i>	The VLAN ID number to associate with the specified profile name. Devices assigned to the profile are assigned to the associated VLAN.

### Defaults

By default, no mapping configuration is applied to a profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Removing a VLAN mapping configuration requires deleting the entire profile from the switch configuration (**no unp profile *profile\_name***).
- The VLAN associated with a profile must already exist in the switch configuration, unless one of the following conditions occur:
  - The dynamic VLAN configuration functionality is enabled for the switch.
  - The VLAN mapping to a profile is done when the switch boots up.
- Configuring a new VLAN mapping for a profile will overwrite the existing VLAN mapping for that profile. Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN, SPB, VXLAN, or static) is associated with a profile at any given time.
- If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- If a profile is mapped to SPB, VXLAN, or static service parameters, then the profile is applied to traffic received on UNP access ports.

### Examples

```
-> unp profile unpl-vlan map vlan 10
-> no unp profile unpl-vlan
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile</b>	Configures a UNP profile.

## unp profile map service-type spb

Configures the mapping of Shortest Path Bridging (SPB) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an SPB service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

**unp profile** *profile\_name* **map service-type spb tag-value** {0 | *qtag* | *outer\_qtag:inner\_qtag*} **isid** *instance\_id* **bvlan** *bvlan\_id* [**multicast-mode** {**headend** | **tandem**}] [**vlan-xlation**] [**igmp-snooping** [**profile** {**default** | *ipms\_profile*}] [**mld-snooping** [**profile** {**default** | *ipms\_profile*}]

**no unp profile** *profile\_name* **map service-type spb** [**vlan-xlation**] [**igmp-snooping** [**profile**]] [**mld-snooping** [**profile**]]

---

### Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<b>0</b>	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>instance_id</i>	A service instance identifier (I-SID) that is used to identify an SPB service in a provider backbone bridge (PBB) network. The valid range is 256–16777214.
<i>bvlan_id</i>	The VLAN ID number of an existing SPB backbone VLAN (BVLAN).
<b>headend</b>	Specifies the head-end replication mode for the service associated with this UNP.
<b>tandem</b>	Specifies the tandem replication mode for the service associated with this UNP.
<b>vlan-translation</b>	Configures egress VLAN translation for the service associated with this UNP.
<b>igmp-snooping</b>	Configures IGMP snooping for the service associated with this UNP.
<b>mld-snooping</b>	Configures MLD snooping for the service associated with this UNP.
<i>ipms_profile_name</i>	The name of an optional IP Multicast Switching profile to use when IGMP or MLD snooping is enabled.
<b>default</b>	Use default IPMS profile settings for IGMP or MLD snooping.

## Defaults

By default, no mapping configuration is applied to a profile. When the SPB mapping is configured, the following default values are applied for the optional parameters:

parameter	default
<b>multicast-mode</b> { <b>headend</b>   <b>tandem</b> }	headend
<b>vlan-xlation</b>	disabled
<b>igmp-snooping</b>	disabled
<b>mld-snooping</b>	disabled
<b>default</b>   <i>ipms_profile_name</i>	default

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to disable VLAN translation, IGMP snooping, and MLD snooping for the UNP service profile. To remove any other SPB mapping parameter requires deleting the entire profile from the switch configuration (**no unp profile** *profile\_name*).
- Configuring a new SPB mapping for a profile will overwrite the existing SPB mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN, SPB, VXLAN, or static) is associated with a profile at any given time.
- If a profile is mapped to SPB, VXLAN, or static service parameters, then the profile is applied to traffic received on UNP access ports.
- If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the SPB service that is dynamically created based on the specified I-SID and BVLAN values.
- Consider the following when configuring the profile tag value:
  - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
  - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
  - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to

the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.

- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and I-SID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.
- If the I-SID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- The BVLAN ID specified with this command must already exist in the switch configuration.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.
- When an SPB service is configured to use the head-end multicast mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.
- When an SPB service is configured to use the tandem multicast mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.
- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled.
- When configuring the IGMP and MLD snooping mapping parameters, it is necessary to also configure the VLAN translation and multicast mode status for the profile mapping.

## Examples

```
-> unp profile unp1-spb map service-type spb tag-value 10 isid 1510 bvlan 4001
-> unp profile unp2-spb map service-type spb tag-value 20 isid 1520 bvlan 4002
multicast-mode tandem vlan-xlation
-> unp profile unp3-spb map service-type spb tag-value 30 isid 1530 bvlan 4003
vlan-xlation multicast-mode headend igmp-snooping mld-snooping
-> unp profile unp4-spb map service-type spb tag-value 40 isid 1540 bvlan 4004
vlan-xlation multicast-mode headend igmp-snooping profile ipms-prof1
-> unp profile unp4-spb map service-type spb tag-value 40 isid 1540 bvlan 4004
vlan-xlation multicast-mode headend mld-snooping profile default

-> no unp profile unp1-spb
-> no unp profile unp2-spb map service-type spb vlan-xlation
-> no unp profile unp3-spb map service-type igmp-snooping
-> no unp profile unp3-spb map service-type mld-snooping
-> no unp profile unp4-spb map service-type mld-snooping profile
-> no unp profile unp4-spb map service-type mld-snooping
```

## Release History

Release 8.3.1; command was introduced.

Release 8.6R1; **igmp-snooping** and **mld-snooping** parameters added.

## Related Commands

<b>unp profile</b>	Configures a UNP profile.

## unp profile map service-type vxlan

Configures the mapping of Virtual eXtensible LAN (VXLAN) parameters to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, a VXLAN service access point (SAP) is automatically created using the specified profile parameters. Traffic from the device is then forwarded on the SAP.

```
unp profile profile_name map service-type vxlan tag-value {0 | qtag | outer_qtag:inner_qtag} vnid
vxlan_id {far-end-ip-list ip_list_name [multicast-group mc_group_address] | multicast-group
mc_group_address [far-end-ip-list ip_list_name]} {multicast-mode [tandem | headend | hybrid] [vlan-
xlation] [mac-orchestration]}
```

```
no unp profile profile_name map service-type vxlan [far-end-ip-list | multicast-group | vlan-xlation]
[mac-orchestration]
```

---

### Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<b>0</b>	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>vxlan_id</i>	The VXLAN network identifier that identifies the VLAN segment form where the frames originate. This value is used to create the VXLAN service that is required to dynamically create the SAP.
<i>ip_list_name</i>	The name of an existing list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEPs). The valid range is 1–32 characters. The IP addresses in this list are used to dynamically create service distribution points (SDPs) for the VXLAN service.
<i>mc_group_address</i>	The multicast IP address of the group to which this service will join.
<b>tandem</b>	Specifies the tandem replication mode for the service associated with this UNP. This mode uses PIM routing and sends traffic through multicast SDPs.
<b>headend</b>	Specifies the head-end replication mode for the service associated with this UNP. This mode sends traffic through unicast SDPs.
<b>hybrid</b>	Specifies the hybrid replication mode for the service associated with this UNP. This mode uses both the head-end and tandem methods.
<b>vlan-translation</b>	Configures egress VLAN translation for the VXLAN service associated with this UNP.
<b>mac-orchestration</b>	This parameter is automatically configured through OmniSwitch integration with Open vSwitch Database (OVSD) protocols. See the "Web Services, CLI Scripting, OpenFlow, and AOS Micro Services (AMS)" chapter in the <i>OmniSwitch AOS Release 8 Switch Management Guide</i> for more information.

## Defaults

By default, no mapping configuration is applied to a profile. When the VXLAN mapping is configured, the following default values are applied for the optional parameters:

parameter	default
<b>multicast-mode</b> { <b>headend</b>   <b>tandem</b>   <b>hybrid</b> }	hybrid
<b>vlan-xlation</b> { <b>enable</b>   <b>disable</b> }	disabled
<b>mac-orchestration</b>	disabled

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	X72/Q32	Yes	Yes	No

## Usage Guidelines

- Use the **no** form of this command to disable VLAN translation, remove a far-end IP list, or remove a multicast group IP address for the profile. To remove any other VXLAN mapping parameter requires deleting the entire profile from the switch configuration (**no unp profile profile\_name**).
- Configuring a new VXLAN mapping for a profile will overwrite the existing VXLAN mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN, SPB, VXLAN, or static) is associated with a profile at any given time.
  - If a profile is mapped to SPB, VXLAN, or static service parameters, then the profile is applied to traffic received on UNP access ports.
  - If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the VXLAN service that is dynamically created based on the specified VXLAN ID value.
- Consider the following when configuring the profile tag value:
  - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
  - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP on which the traffic is forwarded.
  - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value** 10), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is forwarded on the SAP. If the traffic tags do not match, traffic is not forwarded on the SAP.

- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags). If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.
- If the VXLAN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the service profile are learned as filtering.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- Configuring both a far-end IP list and a multicast group IP address is allowed for the same profile.
- The following multicast modes are supported for a VXLAN service:
  - **Tandem:** In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
  - **Headend:** In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.
  - **Hybrid:** In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.
- Configuring a VXLAN service on an OmniSwitch 6900-V72/C32 or OmniSwitch 6900-X48C6/T48C6 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.
- Enabling VLAN translation at the service level is only applicable if the corresponding access ports for the SAPs also have VLAN translation enabled.

## Examples

```
-> unp profile unp1-vxlan map service-type vxlan tag-value 10:12 vnid 100
multicast-group 225.1.1.1
-> unp profile unp2-vxlan map service-type vxlan tag-value 15 vnid 200 far-end-ip-
list vtep-list1 vlan-xlation
-> unp profile unp3-vxlan map service-type vxlan tag-value 0 vnid 200 far-end-ip-
list vtep-list2 multicast-group 225.1.1.2
-> no unp profile unp3-vxlan map service-type vxlan vlan-xlation far-end-ip-list
-> no unp profile unp2-vxlan
```

## Release History

Release 8.3.1; command was introduced.

Release 8.7R1; **mac-orchestration** parameter added.

```

---

## unp vxlan far-end-ip-list

Configures a list of IP addresses, each of which is assigned to the Loopback0 interface of a far-end VXLAN node. The list name is assigned to a profile through the mapping of VXLAN service parameters to the profile. This allows multiple far-end nodes to be associated with the service created for the VXLAN Network ID (VNID) specified in the VXLAN profile.

**unp vxlan far-end-ip-list** *ip\_list\_name* *ip\_address* [*ip\_address*]

**no unp vxlan far-end-ip-list** *ip\_list\_name* [*ip\_address* [*ip\_address*]]

---

### Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEP). The valid range is 1–32 characters.
<i>ip_address</i>	The IP address of the Loopback0 interface for the far-end VTEP node. The Loopback0 address is required on every VXLAN node that serves as a VTEP. Use a space to specify a list of IP addresses to assign to the list name.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	X72/Q32	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to remove the far-end list from the switch configuration or to remove an individual IP address from the list.
- The reachability of a far-end IP address is not tested. Make sure the addresses are valid before adding them to the list.
- There is no limit to the number of IP addresses that can be assigned to a single list.
- The same far-end IP list can be used for multiple services that have to reach the same set of far-end VTEPs.
- The far-end IP list is used to build service distribution points (SDPs) for VXLAN services.
- When there is any change to the VXLAN profile, all users associated with that profile are flushed.
- Configuring VXLAN service on an OmniSwitch 6900-V72 or OmniSwitch 6900-C32 is supported only when the service is configured to use the head-end multicast mode; tandem mode services are not supported. If the hybrid mode is selected, only the head-end mode is active.

## Examples

```
-> unp vxlan far-end-ip-list vtep-list1 10.1.1.1 11.1.1.1 12.1.1.1 13.1.1.1
-> no unp vxlan far-end-ip-list vtep-list1 10.1.1.1
-> no unp vxlan far-end-ip-list vtep-list1
```

## Release History

Release 7.3.4; command was introduced.

## unp profile map service-type l2gre

Configures the mapping of a Layer 2 Generic Routing Encapsulation (L2 GRE) tunnel to the specified UNP profile. When a device is dynamically assigned to the profile through authentication or classification, an L2 GRE Service Access Point (SAP) is dynamically created using the specified service parameters. Traffic from the device is then encapsulated and forwarded through an L2 GRE tunnel to a tunnel aggregation switch.

```
unp profile profile_name map service-type l2gre tag-value {0 | qtag | outer_qtag:inner_qtag} vpnid
vpn_id [far-end-ip-list ip_list_name | far-end-ip ip_address] [port-isolation-disable] [vlan-xlation]
```

```
no unp profile profile_name map service-type l2gre [far-end-ip-list | far-end-ip | vlan-xlation]
```

---

### Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<b>0</b>	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>vpn_id</i>	A GRE tunnel Virtual Private Network (VPN) ID. This is a unique value that is used in the header of a GRE encapsulated packet and should be the same at both ends of a Guest Tunnel.
<i>ip_list_name</i>	The name of an existing list that contains the IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch. The valid range is 1–32 characters. The IP address in this list is used to dynamically create the L2 GRE tunnel from the edge switch to the tunnel aggregation switch.
<i>ip_address</i>	The IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch.
<b>vlan-xlation</b>	Configures egress VLAN translation for the service associated with this UNP.

### Defaults

By default, no mapping configuration is applied to a profile. When the L2 GRE tunnel service mapping is configured, the following default values are applied for the optional parameters:

parameter	default
<b>vlan-xlation</b>	disabled

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	X72/Q32	Yes	No	Yes

## Usage Guidelines

- Use the **no** form of this command to do the following;
  - remove a far-end IP list or a far-end IP address for the profile.
  - disable VLAN translation for the dynamic SAP.
- To remove any other L2 GRE mapping parameters requires deleting the entire profile from the switch configuration (**no unp profile profile\_name**).
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the L2 GRE tunnel that is dynamically created based on the specified VPN ID value.
- The same far-end IP address can be used for multiple L2 GRE tunnels that have to reach the same far-end tunnel aggregation switch.
- Configuring a new L2 GRE tunnel mapping for a profile will overwrite the existing tunnel mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.
- Only one type of profile mapping (VLAN, SPB, VXLAN, L2 GRE tunnel, or static) is associated with a profile at any given time.
- A UNP L2 GRE profile is applied to users learned on UNP bridge and access ports.
  - Classifying users learned on UNP bridge ports into an L2 GRE profile is supported on the OmniSwitch 6560, OmniSwitch 6860, OmniSwitch 6865, OmniSwitch 6900-X72/Q32, and OmniSwitch 9900.
  - Classifying users learned on UNP access ports into an L2 GRE profile is supported on the OmniSwitch 6860, OmniSwitch 6865, OmniSwitch 6900-X72/Q32, and OmniSwitch 9900.
  - Only one UNP L2 GRE profile (one L2 GRE service) can be applied to users learned on UNP bridge ports. The exception to this is on an OmniSwitch 6560 where up to eight UNP L2 GRE profiles (eight L2 GRE services) can be applied to users learned on UNP bridge ports.
  - Multiple UNP L2 GRE profiles (multiple L2 GRE services) can be applied to users learned on UNP access ports.
  - When users are learned on UNP bridge ports and classified into an L2 GRE profile, the VLAN translation status is not applied. VLAN translation only applies to user traffic learned on UNP access ports.
  - The mobile tag functionality is supported on UNP L2 GRE profiles and is applied when users learned on UNP access ports are dynamically assigned to the profile; this functionality is not supported for users learned on UNP bridge ports. Use the **unp profile mobile-tag** command to configure the mobile tag status for the profile.
  - There is no VLAN association with the SAP created for the L2 GRE tunnel, so all traffic egressing on the UNP bridge port will be untagged.

- UNP first checks the switch configuration to see if an L2 GRE tunnel SAP already exists for the expected VPN ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one based on the profile attributes for the profile traffic.
- If the GRE tunnel VPN ID specified with this command does not exist in the switch configuration, the switch will dynamically create the expected service and then the SAP as needed.
- Dynamically creating services and related SAPs is subject to available switch resources. If an attempt to dynamically create a service or SAP fails, the MAC addresses classified for the UNP GRE tunnel profile are learned as filtering.

## Examples

```
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-
ip 192.168.10.1
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 100 far-end-
ip-list l2greEndpoint
-> unp profile guest-profile map service-type l2gre tag-value 0 vpnid 200 far-end-
ip 192.168.10.1 vlan-xlation
-> no unp profile guest-profile map service-type l2gre far-end-ip-list
-> no unp profile guest-profile map service-type l2gre vlan-xlation
-> no unp profile guest-profile map service-type l2gre
-> no unp profile guest-profile
```

## Release History

Release 8.4.1.R02; command was introduced.

Release 8.6R1; **vlan-xlation** parameter added.

## unp l2gre far-end-ip-list

Configures an IP address list that contains the IP address of the Loopback0 interface configured on the far-end L2 GRE tunnel aggregation switch. The list name is assigned to a profile through the mapping of L2 GRE tunnel parameters to the profile.

**unp l2gre far-end-ip-list** *ip\_list\_name* *ip\_address*

**no unp l2gre far-end-ip-list** *ip\_list\_name* [*ip\_address*]

---

### Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP address for the far-end tunnel aggregation switch. The valid range is 1–32 characters.
<i>ip_address</i>	The IP address of the Loopback0 interface for the far-end tunnel aggregation switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	X72/Q32	Yes	No	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the far-end list from the switch configuration or to remove the IP address from the list.
- Only one IP address can be assigned to a single list.
- The reachability of a far-end IP address is not tested. Make sure the IP address is valid before adding the address to the list.
- The same far-end IP list can be used on multiple L2 GRE tunnel access switches that have to reach the same tunnel aggregation switch.
- The far-end IP list is used to build L2 GRE tunnels to the tunnel aggregation switch.
- When there is any change to the L2 GRE profile associated with the far-end IP list, all users associated with that profile are flushed.

### Examples

```
-> unp l2gre far-end-ip-list l2gre-ip-list 192.168.10.1
-> no unp l2gre far-end-ip-list l2gre-ip-list 192.168.10.1
-> no unp l2gre far-end-ip-list l2gre-ip-list
```

## Release History

```

---

## unp profile map service-type static

Configures the mapping of an existing Shortest Path Bridging (SPB) or Virtual eXtensible LAN (VXLAN) service ID to the specified UNP profile. This type of profile mapping is only valid if the specified SPB or VXLAN service is already configured; the switch does not dynamically create the service. The specified service ID is then used to dynamically create a service access point (SAP) based on the specified tag value.

**unp profile** *profile\_name* **map service-type static tag-value** {0 | *qtag* | *outer\_qtag:inner\_qtag*} **service-id** *service\_id*

---

### Syntax Definitions

<i>profile_name</i>	The name of an existing UNP profile.
<b>0</b>	Use VLAN tag information from classified traffic to create the Service Access Point (SAP) for the traffic. If the traffic is untagged, the SAP is created with 0 as the encapsulation value (for example, 1/12:0).
<i>qtag</i>	The outer VLAN ID tag to use when creating a SAP for single-tagged traffic.
<i>outer_qtag:inner_qtag</i>	An outer VLAN ID tag and an inner VLAN tag to use when creating a SAP for double-tagged (QinQ) classified traffic.
<i>service_id</i>	An existing (statically configured) numerical value that identifies a specific SPB or VXLAN service. The valid service ID range is 1–32767. <i>Specifying a VXLAN service ID is supported only on the OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6.</i>

### Defaults

By default, no mapping configuration is applied to a profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Removing a static service mapping configuration requires deleting the entire profile from the switch configuration (**no unp profile** *profile\_name*).
- Configuring a new static service mapping for a profile will overwrite the existing static service mapping for that profile.
- Any change to the mapping configuration of the profile will flush all MAC addresses learned on that profile.

- Only one type of profile mapping (VLAN, SPB, VXLAN, or static) is associated with a profile at any given time.
- If a profile is mapped to SPB, VXLAN, or static service parameters, then the profile is applied to traffic received on UNP access ports.
- If a profile is mapped to a VLAN, then the profile is applied to traffic received on UNP bridge ports.
- The **tag-value** parameter specifies the VLAN tag values that are used to create the SAP to which profile traffic is mapped. The SAP is then bound to the service ID value specified with this command.
- Consider the following when configuring the profile tag value:
  - If the tag value is set to zero, the SAP for the classified traffic is created using the VLAN tags of the traffic. For example, a SAP with an encapsulation value set to 1/12:5 is created when classified traffic received on port 1/12 is single-tagged with VLAN ID 5.
  - Enabling the trust VLAN tag option for the UNP service port triggers the same functionality as setting the service profile tag value to zero. In both cases, the VLAN tags of the classified traffic are used to specify the encapsulation value of the SAP to which the traffic is mapped.
  - If the trust VLAN tag option is disabled for the UNP port and the service profile tag value is *not* set to zero (for example, **tag-value 10**), the VLAN tag values of the classified traffic are compared to the configured profile tag value. If the traffic tag values match the profile tag value, the traffic is mapped to the appropriate SAP. If the traffic tags do not match, traffic is not mapped to a SAP.
- UNP first checks the switch configuration to see if a SAP already exists for the expected VLAN tag value (CVLAN tags) and service ID. If a SAP already exists, the MAC addresses are learned on that SAP. If the SAP does not exist, the switch dynamically creates one for the profile traffic.
- When there is a MAC flush for all UNP users learned and forwarded on the static service ID:
  - UNP triggers the removal of all dynamic SAPs associated with the service ID.
  - The service ID is not removed because the service was statically created; not dynamically generated through UNP.
- A static service ID cannot be removed until all the UNP users learned and forwarded on that service and associated SAPs are deleted.

## Examples

```
-> unp profile unp1-static map service-type static tag-value 10 service-id 1
-> unp profile unp2-static map service-type static tag-value 20 service-id 2
-> no unp profile unp1-static
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<b>unp profile</b>	Configures a UNP profile.
<b>unp profile map vlan</b>	Maps VLAN IDs to a UNP profile. Traffic assigned to the profile is forwarded on the associated VLAN IDs.
<b>unp profile map service-type spb</b>	Maps SPB parameters to a profile. The parameters are used for creating an SPB service access point (SAP) to forward profile traffic.
<b>unp profile map service-type vxlan</b>	Maps VXLAN parameters to a profile. The parameters are used for creating a VXLAN service access point (SAP) to forward profile traffic.
<b>show unp profile map</b>	Displays the VLAN or service mapping configuration for the profile.

## MIB Objects

```
alaDaUNPProfileTable  
    alaDaUNPProfileName  
alaDaUNPProfileMapStaticTable  
    alaDaUNPProfileMapStaticEncapVal  
    alaDaUNPProfileMapStaticServiceID
```

---

## unp system-default service-mod

Specifies the modulo number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

**unp system-default service-mod** {*mod\_number* | **default**}

---

### Syntax Definitions

<i>mod_number</i>	The modulo number to use for calculating an SPB I-SID or VNID value. The valid range is 1–4096.
<b>default</b>	Sets the modulo number value back to the default value.

### Defaults

By default, modulo 512 is used for the System Default profile calculation.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service based on the dynamic service setting for the UNP access port on which the traffic is received (see the **unp dynamic-service** command). For example:
  - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
  - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6.
- One of the attributes defined for a System Default profile is an SPB I-SID or VXLAN VNID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10000000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID or VXLAN VNID number:

$$10000000 + (10 * 10000) + (30 \% 512) = 10100030$$

Based on the above calculation, “10100030” is the resulting service instance value.

- Once the SPB I-SID or VXLAN VNID number is determined, that number is used to derive the System Default profile name. For example:
  - The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is 10100030, then the SPB profile “SystemDefault10100030” is created.
  - The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is 10000100, then the VXLAN profile “SystemDefault10001000” is created.
- When the modulo number value is changed, all users learned in System Default profiles are flushed (logged out of the network) and dynamic SAPs created for the profiles are cleared.

## Examples

```
-> unp system-default service-mod 800
-> unp system-default service-mod default
```

## Release History

Release 8.5R1; command was introduced.

```

## unp system-default service-base

Specifies the base service number that the switch will use to dynamically calculate an SPB Service Instance Identifier (I-SID) value or a VXLAN Network Identifier (VNID) value for a System Default profile. System Default profiles are dynamically created to accommodate device traffic received on UNP access ports that is not classified into a user-defined UNP service profile.

**unp system-default service-base** {*base\_number* | **default**}

---

### Syntax Definitions

<i>base_number</i>	The base service number to use for calculating an SPB I-SID or VNID value. The valid range is 1–10000000.
<b>default</b>	Sets the base service number value back to the default value.

### Defaults

By default, base service number 10,000,000 is used for the System Default profile calculation.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- A System Default profile is defined to carry traffic for an SPB service or for a VXLAN service based on the dynamic service setting for the UNP access port on which the traffic is received (see the **unp dynamic-service** command). For example:
  - If the dynamic service value is set to SPB, then the System Default profile is dynamically created with attributes to define an SPB SAP.
  - If the dynamic service value is set to VXLAN, then the System Default profile is dynamically created with attributes to define a VXLAN SAP. A System Default profile for a VXLAN SAP is supported only on the OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6.
- One of the attributes defined for a System Default profile is an SPB I-SID or VXLAN VNID. This value is dynamically calculated using the base service number, modulo number, VLAN tag of the UNP port traffic, and the UNP port domain value. For example, if the base service number is 10,000,000, the modulo number is 512, the VLAN tag is 30, and the domain is 10, then the following calculation is used to determine the SPB I-SID or VXLAN VNID number:

$$10,000,000 + (10 * 10,000) + (30 \% 512) = 10,100,030$$

Based on the above calculation, “10,100,030” is the resulting service instance value.

- Once the SPB I-SID or VXLAN VNID number is determined, that number is used to derive the System Default profile name. For example:
  - The name of an SPB System Default profile is “SystemDefaultISID”, where ISID is the calculated attribute value for the profile. For example, if the calculated I-SID number is “10,100,030”, then the SPB profile “SystemDefault10100030” is created.
  - The name of a VXLAN System Default profile is “SystemDefaultVNID”, where VNID is the calculated attribute value for the profile. For example, if the calculated VNID number is “10,001,000”, then the VXLAN profile “SystemDefault10001000” is created.
- When the base service number value is changed, subsequent System Default profiles are created with the new value while profiles created with the previous base value are retained.

## Examples

```
-> unp system-default service-base 5000
-> unp system-default service-base default
```

## Release History

Release 8.5R1; command was introduced.

## Related Commands

<b>unp system-default service-mod</b>	Specifies the modulo number that the switch will use to dynamically calculate an SPB I-SID value or a VXLAN VNID value for a System Default profile.

## unp system-default multicastmode

Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

**unp system-default multicastmode {tandem | headend | hybrid}**

---

### Syntax Definitions

<b>tandem</b>	Specifies the tandem replication mode for services dynamically created for System Default profiles.
<b>headend</b>	Specifies the head-end replication mode for services dynamically created for System Default profiles.
<b>hybrid</b>	Specifies the hybrid replication mode for services dynamically created for System Default profiles.

### Defaults

By default, System Default profile services are configured to use the head-end mode.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The multicast mode selection specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.
- The following multicast modes are supported for an SPB service:
  - **Tandem:** In this mode, a non-unicast packet received on an SPB access port is replicated once at each node using the multicast group address.
  - **Headend:** In this mode, a non-unicast packet received on an SPB access port is replicated once for each receiver in the provider backbone bridge (PBB) network using its unicast base MAC (BMAC) address.
- The following multicast modes are supported for a VXLAN service:
  - **Tandem:** In this mode, PIM multicast routing is required to discover the neighbor nodes and assign membership to VTEP nodes that desire to be in the same multicast group. This also requires the manual configuration of a multicast SDP object to tunnel traffic to the other VTEP nodes that belong to the same multicast group.
  - **Headend:** In this mode, unicast SDP objects are manually configured to tunnel traffic to the far-end nodes. In this case, PIM multicast routing is not required. Any BUM traffic is replicated and one copy is sent to each VTEP node as specified by the unicast SDP object.
  - **Hybrid:** In this mode, traffic is tunneled from this service instance to both a group of VTEPs that belong to the same multicast group address and to the VTEP nodes that are not associated with the same multicast group address.

- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6.

## Examples

```
-> unp system-default multicastmode tandem
-> unp system-default multicastmode headend
-> unp system-default multicastmode hybrid
```

## Release History

Release 8.5R1; command was introduced.

Release 8.6R2; **hybrid** parameter added.

## Related Commands

## MIB Objects

```
alaDaUNPGlobalConfiguration
  alaDaUNPServiceMulticastMode
```

---

## unp system-default vlan-xlation

Specifies the VLAN translation configuration to use for dynamic services that are created for System Default profiles.

**unp system-default vlan-translation {enable | disable}**

---

### Syntax Definitions

**enable** Enables egress translation of VLAN tags.  
**disable** Disables egress translation of VLAN tags.

### Defaults

By default, VLAN translation is enabled for System Default profile services.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The VLAN translation status specified with this command is a global setting that is applied to all of the dynamic services that are created for System Default profiles.
- When VLAN translation is enabled for a service, the VLAN tags for outgoing frames on SAPs associated with that service are processed according to the local SAP configuration (the SAP on which the frames will egress) and not according to the configuration of the SAP on which the frames were received.
- When VLAN translation is disabled, frames simply egress without any modification of the VLAN tags. In other words, the frames are transparently bridged without tag modification.
- A System Default profile for a dynamic VXLAN service is supported only on the OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6.

### Examples

```
-> unp system-default vlan-xlation disable
-> unp system-default vlan-xlation enable
```

### Release History

Release 8.5R1; command was introduced.

## Related Commands

<b>unp system-default multicastmode</b>	Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

<b>unp system-default far-end-ip-list</b>	Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles.
<b>show unp global configuration</b>	Displays the configurable System Default profile values for the switch.
<b>show unp profile map</b>	Displays the VLAN or service mapping configuration for the profile.

## MIB Objects

alaDaUNPGlobalConfiguration  
alaDaUNPServiceVlanXlation

---

## unp system-default multicastgroup

Specifies a multicast group IP address to associate with dynamic VXLAN services that are created for System Default profiles.

**unp system-default multicastgroup** {*mc\_group\_address* | **default**}

---

### Syntax Definitions

*mc\_group\_address*                      The multicast IP address of the group to which this service will join.  
**default**                                      Sets the multicast group IP address back to the default value (239.0.0.0).

### Defaults

By default, a VXLAN service associated with a System Default profile will join the 239.0.0.0 multicast group.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	X72/Q32	Yes	Yes	No

### Usage Guidelines

- The multicast group IP address specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.
- When a dynamic VXLAN service is created for a System Default profile, the specified multicast group IP address is used to build a VXLAN Service Distribution Point (SDP) tunnel for the VXLAN service traffic. VXLAN nodes that subscribe to the same multicast group will receive traffic through the associated SDP tunnel from all the other VXLAN nodes that belong to the same multicast group.

### Examples

```
-> unp system-default multicastgroup 225.1.1.2
-> unp system-default multicastgroup 239.0.0.0
-> unp system-default multicastgroup default
```

### Release History

Release 8.5R1; command was introduced.

## Related Commands

<b>unp system-default multicastmode</b>	Specifies the multicast replication mode configuration to use for dynamic services that are created for System Default profiles.

<b>show unp global configuration</b>	Displays the configurable System Default profile values for the switch.
<b>show unp profile map</b>	Displays the VLAN or service mapping configuration for the profile.

## MIB Objects

alaDaUNPGlobalConfiguration  
alaDaUNPServiceMulticastGroup

---

## unp system-default far-end-ip-list

Specifies the name of a far-end IP list to associate with dynamic VXLAN services that are created for System Default profiles. The list contains IP addresses assigned to the Loopback0 interfaces of far-end VXLAN nodes. This allows multiple far-end nodes to be associated with the dynamic service created for the VXLAN Network ID (VNID) specified in a VXLAN System Default profile.

**unp system-default far-end-ip-list** {*ip\_list\_name* / **default**}

---

### Syntax Definitions

<i>ip_list_name</i>	The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Point (VTEP) nodes. The valid range is 1–32 characters.
<b>default</b>	Sets the far-end list name to the default value (no list name is specified).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	X72/Q32	Yes	Yes	No

### Usage Guidelines

- The far-end IP list name specified with this command is a global setting that is applied to all of the dynamic VXLAN services that are created for System Default profiles.
- When a dynamic VXLAN service is created for a System Default profile, the specified IP address list name is used to build VXLAN Service Distribution Point (SDP) tunnels between the VXLAN nodes. Traffic associated with the dynamic VXLAN service is encapsulated and sent through an SDP tunnel to the destined far-end node.

### Examples

```
-> unp system-default far-end-ip-list vtep-list1
-> unp system-default far-end-ip-list default
```

### Release History

Release 8.5R1; command was introduced.  
Release 8.6R2; **default** parameter added.

<b>show unp profile map</b>	Displays the VLAN or service mapping configuration for the profile.

## MIB Objects

alaDaUNPGlobalConfiguration  
alaDaUNPServiceFarEndIpList

---

## unp saa-profile

Configures a Service Assurance Agent (SAA) performance monitoring profile. This type of profile is assigned to UNP profiles to specify jitter and latency threshold values for SAA sessions that apply to the assigned UNP profile.

**unp saa-profile** *profile\_name* [**jitter-threshold** *jitter\_thresh*] [**latency-threshold** *latency\_thresh*]

**no unp saa-profile** *profile\_name*

---

### Syntax Definitions

<i>profile_name</i>	The name to assign to the SAA profile.
<i>jitter_thresh</i>	The jitter threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.
<i>latency_thresh</i>	The latency threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.

### Defaults

parameter	default
<i>jitter_thresh</i>	0 (disabled)
<i>latency_thresh</i>	0 (disabled)

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the SAA profile from the switch configuration.
- Although SAA profiles can be configured and assigned to a UNP through the CLI, these profiles are mainly used by the OmniVista network management application to trigger SAA sessions that monitor connections between virtual machines (VMs) in a data center network.
- Assigning SAA profiles is supported only with UNP profiles that are assigned to UNP bridge ports. UNP access ports do not support this functionality.

### Examples

```
-> unp saa-profile unp_saa1 jitter-threshold 100 latency-threshold 500
-> unp saa-profile unp_saa2 jitter-threshold 150
-> unp saa-profile unp_saa3 latency-threshold 250
```

## Release History

Release 7.3.2; command was introduced.

<a href="#">unp profile saa-profile</a>	Assigns an SAA profile to the specified UNP profile.
<a href="#">show unp saa-profile</a>	Displays the SAA profile configuration for the switch.
<a href="#">show unp profile</a>	Displays the profile configuration for the switch.

## MIB Objects

```
alaDaSaaProfileTable  
  alaDaSaaProfileName  
  alaDaSaaProfileLatencyThreshold  
  alaDaSaaProfileJitterThreshold
```

---

## unp port-type

Configures UNP functionality for the specified port or link aggregate. This includes configuring the UNP port type (bridge or access). Traffic received on a UNP bridge port is classified using VLAN profiles and port attributes. Traffic received on a UNP access port is classified using service profiles and port attributes.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id1[-agg\_id2]*} port-type {access | bridge}

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id1[-agg\_id2]*}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1[-port]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id1[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
<b>access</b>	Configures the specified port or link aggregate as a service access port. This port type is used for classifying traffic into service-based profiles. <i>This parameter is not supported on the OmniSwitch 6465 or OmniSwitch 6560.</i>
<b>bridge</b>	Configures the specified port or link aggregate as a standard bridge port. This port type is used for classifying traffic into VLAN-based profiles.

### Defaults

By default, UNP is disabled on all ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the UNP configuration from a port or link aggregate.
- Any configuration change to a UNP-enabled port will flush all MAC addresses learned on that port. This applies only to CLI commands used to configure UNP port parameters.
- Only one UNP port type is configurable for a specific port or link aggregate. To change the port type of an existing UNP port, remove the current UNP configuration first using the **no unp port** or **no unp linkagg** command then use the **unp port-type** command to set the new port type.
- There is no limit to the number of switch ports that can have UNP enabled.

- Enabling UNP is *not* supported on the following switch ports:
  - 802.1q-tagged ports.
  - MVRP ports.
  - Port Mirroring destination ports (MTP).
  - Port Mapping network ports.
  - STP and ERP ports.
  - Ports on which a static MAC address is configured.
  - Ports on which dynamic Source Learning is disabled.
  - VLAN Stacking (Ethernet Services NNI or UNI) ports.
  - Service Manager access and network ports.
  - Ethernet OAM ports.
- UNP and Learned Port Security (LPS) are supported on the same port with the following conditions:
  - LPS is not supported on link aggregates.
  - The LPS learning window is set globally but not on a per-port basis. So the window applies to all UNP ports.
  - When LPS is enabled or disabled on a UNP bridge port (LPS is not supported on UNP access ports), MAC addresses already learned on that port are flushed.
  - Configuring a static MAC address is not allowed on a UNP port unless LPS is also enabled on the same port.
  - When both LPS and UNP are enabled on the same port, UNP first authenticates and classifies any MAC addresses received, then LPS rules are applied. If a MAC address violates any of the LPS rules for the port, the address may get filtered or the port violated even if UNP initially determined the address was valid. In other words, LPS rules take precedence over UNP to determine if a MAC address is bridged or filtered on the port.
  - If UNP classifies a MAC address as learning but LPS learns the address as filtering, an untagged packet will show as filtering in the default VLAN for the port and a tagged packet MAC will show as filtering in the specific tagged VLAN.
  - When a MAC address is filtered by LPS, the **show unp user** command will display “LPS-Blocked” as the classification source for that MAC address.
- UNP ports support both tagged and untagged packets. If the VLAN ID of a tagged packet matches the VLAN associated with a UNP into which the packet was classified, the packet is learned as forwarding and a tagged VLAN-port association is created. However, if the VLAN ID tag does not match the VLAN ID associated with the profile, the packet is filtered.
- UNP bridge and access ports support single-tagged and double-tagged packets with the following conditions:
  - Double-tagged packets are treated the same as single-tagged packets in that UNP will only use the outer VLAN tag to determine how the packet is processed on the UNP bridge port.
  - UNP access ports use the inner VLAN tag of double-tagged packets received on the port to determine the service access port (SAP) to use or create for forwarding the traffic on the network backbone.

## Examples

```
-> unp port 1/1 port-type access
-> unp port 1/1-3 port-type bridge
-> unp port 1/10 port-type access
-> no unp port 1/10
-> unp linkagg 5 port-type access
-> unp linkagg 8 port-type bridge
-> unp linkagg 2 port-type access
-> no unp linkagg 2
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<a href="#">unp admin-state</a>	Configures the administrative status of the UNP configuration for the specified port or link aggregate.
<a href="#">unp profile</a>	Configures a UNP profile that is used to classify traffic received on UNP ports.
<a href="#">show unp port</a>	Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortType
```

---

## unp l2-profile

Assigns an existing Layer 2 profile to the specified UNP access port. This profile determines how Layer 2 protocol frames received on the access port are processed.

**unp** {port chassis/slot/port[-port2] / linkagg agg\_id[-agg\_id2]} **l2-profile** l2profile\_name

**no unp** {port chassis/slot/port[-port2] / linkagg agg\_id[-agg\_id2]} **l2-profile**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The chassis number and the slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>l2profile_name</i>	The name of an existing Layer 2 profile.

### Defaults

By default, the Layer 2 profile “unp-def-access-profile” is assigned when a port is configured as a UNP access port.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the Layer 2 profile configuration from the UNP port.
- Specify only ports or link aggregates that are configured as UNP access ports. This command does not apply to UNP bridge ports.
- Specify a Layer 2 profile name that already exists in the switch configuration. Layer 2 profiles are created using the [service l2profile](#) command.

### Examples

```
-> unp port 1/1/3 l2-profile sap_1_profile
-> unp linkagg 10 l2-profile sap_1_profile
-> unp port 1/1/3 l2-profile unp-def-access-profile
-> unp linkagg 10 l2-profile unp-def-access-profile
-> no unp port 1/1/3 l2-profile
-> no unp linkagg 10 l2-profile
```

## Release History

Release 8.4.1; command was introduced.

## Related Commands

alaDaUNPPortTable  
  alaDaUNPPortIfIndex  
  alaDaUNPPortL2Profile
```

---

## unp redirect port-bounce

Enables or disables the port bounce action on the specified UNP bridge port or globally on all UNP bridge ports. When enabled, a port bounce is triggered upon receipt of a RADIUS Change of Authorization (COA) or a Disconnect request (DM) message from a redirection server to enforce a user role or terminate a user session.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} redirect port-bounce**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} redirect port-bounce**

**unp redirect port-bounce {enable | disable}**

---

### Syntax Definitions

<i>chassis/slot/port</i> [-port2]	The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [-agg_id2]	The link aggregate ID number for a specific UNP bridge link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>enable</b>	Globally enables the port bounce function for all UNP bridge ports.
<b>disable</b>	Globally disables the port bounce function for all UNP bridge ports.

### Defaults

By default, port bounce is disabled on all UNP bridge ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **port** or **linkagg** parameter to enable port bounce for a specific UNP bridge port or link aggregate. Use the **no** form of this command to disable port bounce for a specific UNP bridge port or link aggregate. Note that port bounce is not supported on UNP access ports.
- Use the **enable** or **disable** parameters to globally enable or disable the port bounce status for all UNP bridge ports or link aggregates on the entire switch.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.
- The port bounce action only applies to a MAC authenticated non-suppliant (non-802.1X device). If the device is a suppliant (802.1X device), then an EAP-Fail frame is sent instead. In both cases, re-authentication is triggered for both types of devices.

- The port-level setting of the port bounce action overrides the global setting for the switch. The following table indicates when a port is toggled based on the status of port bounce at the global and port level:

Global Port Bounce	Per-Port Bounce	Action
Enabled	Disabled	Port is not toggled
Enabled	Enabled	Port is toggled
Disabled	Enabled	Port is toggled
Disabled	Disabled	Port is not toggled

- This command is used when configuring the switch to interact with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.

## Examples

Port-level configuration example:

```
-> unp port 1/1/6 redirect port-bounce
-> no unp port 1/1/6 redirect port-bounce
```

Global configuration example:

```
-> unp redirect port-bounce enable
-> unp redirect port-bounce disable
```

## Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **no** form of this command added for specific port or link aggregate configuration.

## Related Commands

<b>unp port-type</b>	Configures UNP functionality on a port or link aggregate.
<b>unp redirect pause-timer</b>	Configures the global pause timer value for the switch
<b>unp redirect proxy-server-port</b>	Configures the HTTP proxy port number to use for redirection.
<b>unp redirect-server</b>	Configures an IP network address to allow HTTP traffic redirection.
<b>unp redirect allowed-name</b>	Configures a list of additional IP addresses to which a host can access.
<b>show unp port</b>	Displays the UNP configuration for the port.
<b>show unp global configuration</b>	Displays the profile designated as the authentication server down UNP for the switch.

  alaDaUNPPortRedirectPortBounce
alaDaUNPGlobalConfiguration
  alaDaUNPRedirectPortBounce
```

## unp 802.1x-authentication

Configures the status of 802.1X authentication for the specified UNP port. Enable this functionality to invoke 802.1X-based authentication for devices connected to the UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

By default, 802.1X authentication is enabled on UNP ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable 802.1X authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- An option exists to classify a device into an alternate UNP in the event successful 802.1X authentication does not return a UNP name. See the [unp 802.1x-authentication pass-alternate](#) command.
- If UNP MAC authentication, 802.1X authentication, and classification (see [unp classification](#) and [unp mac-authentication](#)) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured.
- Configuring an authentication server down UNP (see [unp auth-server-down](#)) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.

- If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
- If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- The authentication server down functionality is *not* supported on VXLAN access ports or aggregates.

## Examples

```
-> unp port 1/1/5 802.1x-authentication
-> no unp port 1/1/5 802.1x-authentication

-> unp port 1/1/10-15 802.1x-authentication
-> no unp port 1/1/10-15 802.1x-authentication

-> unp linkagg 10 802.1x-authentication
-> no unp linkagg 20 802.1x-authentication

-> unp linkagg 10-50 802.1x-authentication
-> no unp linkagg 10-50 802.1x-authentication
```

## Release History

Release 7.3.4; command was introduced.

```

---

## unp 802.1x-authentication pass-alternate

Configures the name of an existing UNP to use as an alternate profile. A device is assigned to the alternate profile when successful 802.1X authentication does not return the name of a profile.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} 802.1x-authentication pass-alternate profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id} 802.1X-authentication pass-alternate
```

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>profile_name</i>	The name of an existing VLAN, SPB, or VXLAN profile.

### Defaults

By default, no alternate UNP is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the alternate profile from the UNP port configuration.
- This command is only allowed on UNP-enabled ports and link aggregates.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports or aggregates within the range are skipped.
- The profile name specified with this command must already exist in the switch configuration.

### Examples

```
-> unp port 1/1/1 802.1x-authentication pass-alternate Finance
-> unp port 1/1/1-3 802.1x-authentication pass-alternate CustomerA
-> no unp port 1/1/1-3 802.1x-authentication pass-alternate

-> unp linkagg 5 802.1x-authentication pass-alternate AltUNP
-> unp linkagg 10-15 802.1x-authentication pass-alternate CustomerB
-> no linkagg 5 mac-authentication pass-alternate
```

## Release History

Release 7.3.4; command was introduced.

Release 8.3.1; **vlan-profile**, **spb-profile**, and **vlan-profile** parameters deprecated.

## Related Commands

```

---

## unp 802.1x-authentication tx-period

Configures the 802.1X authentication re-transmission time interval for the specified UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication tx-period seconds**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication tx-period**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>seconds</i>	The amount of time before an EAP Request Identity is retransmitted. The valid range is 1–60 seconds.

### Defaults

By default, the retransmission period is set to 30 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the re-transmission time interval back to the default value of 30 seconds.
- The re-transmission time period only applies to UNP ports on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

### Examples

```
-> unp port 1/1/5 802.1x-authentication tx-period 60
-> unp port 1/1/6-10 802.1x-authentication tx-period 20
-> no unp port 1/1/5 802.1x-authentication tx-period

-> unp linkagg 10 802.1x-authentication tx-period 60
-> unp linkagg 20-25 802.1x-authentication tx-period 20
-> no unp linkagg 10 802.1x-authentication tx-period
```

## Release History

Release 7.3.4; command was introduced.

alaDaUNPPortTable  
alaDaUNPPort8021XTxPeriod

---

## unp 802.1x-authentication supp-timeout

Configures the 802.1X authentication supplicant timeout for the specified UNP port. This value is the amount of time the switch will wait before timing out an 802.1X user that is attempting to authenticate.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication supp-timeout seconds**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication supp-timeout**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15)
<i>seconds</i>	The timeout value. The valid range is 1–120 seconds.

### Defaults

By default, the supplicant timeout value is set to 30 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the supplicant timeout back to the default value of 30 seconds.
- Increase the supplicant timeout value if the authentication process requires additional steps by the user (for example, entering a challenge).
- The supplicant timeout is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.

### Examples

```
-> unp port 1/1/5 802.1x-authentication supp-timeout 10
-> unp port 1/1/10-15 802.1x-authentication supp-timeout 60
-> no unp port 1/1/5 802.1x-authentication supp-timeout
```

```
-> unp linkagg 10 802.1x-authentication supp-timeout 40
-> unp linkagg 2-5 802.1x-authentication supp-timeout 40
-> no unp linkagg 10 802.1x-authentication supp-timeout
```

## Release History

Release 7.3.4; command was introduced.

```
alaDaUNPPortTable
  alaDaUNPPort8021XSuppTimeOut
```

---

## unp 802.1x-authentication max-req

Configures the maximum number of times the switch will retransmit a request for authentication information (request identity, password, challenge) to an 802.1X user on the specified UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication max-req max\_req**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication max-req**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>max_req</i>	The maximum number of times information requests are retransmitted. The valid range is 1–3.

### Defaults

By default, the maximum number of requests is set to two.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the maximum number of times information requests are retransmitted back to the default value of two.
- The 802.1X requests are transmitted, up to the maximum number allowed, until the authentication session is shut down based on the supplicant timeout value configured for the 802.1X port.
- The maximum number of requests is applied only to 802.1X users connected to a UNP port on which 802.1X authentication is enabled.
- If a range of ports or link aggregates is specified with this command, any non-UNP ports within the range are skipped.

### Examples

```
-> unp port 1/1/5 802.1x-authentication max-req 10
-> unp port 1/1/10-15 802.1x-authentication max-req 5
-> no unp port 1/1/5 802.1x-authentication max-req
```

```
-> unp linkagg 10 802.1x-authentication max-req 10
-> unp linkagg 2-5 802.1x-authentication max-req 5
-> no unp linkagg 10 802.1x-authentication max-req
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

```

---

## unp 802.1x-authentication bypass-8021x

Configures whether the 802.1X authentication process is bypassed on the specified UNP port. When enabled, the 802.1X device authentication process is skipped; only MAC authentication or rule-based classification is applied to device traffic on the UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication bypass-8021x**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x-authentication bypass-8021x**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

By default, 801.1X authentication bypass is disabled on the UNP port; 802.1X authentication is attempted first.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- This command is only allowed on UNP-enabled ports and link aggregates.
- Enabling 802.1X authentication bypass is not allowed on UNP ports that are configured with an 802.1X authentication failure policy.

### Examples

```
-> unp port 1/1/5 802.1x-authentication bypass-8021x
-> no unp port 1/1/5 802.1x-authentication bypass-8021x
-> unp port 1/1/10-15 802.1x-authentication bypass-8021x
-> no unp port 1/1/10-15 802.1x-authentication bypass-8021x

-> unp linkagg 10 802.1x-authentication bypass-8021x
-> no unp linkagg 10 802.1x-authentication bypass-8021x
-> unp linkagg 2-5 802.1x-authentication bypass-8021x
-> no unp linkagg 2-5 802.1x-authentication bypass-8021x
```

## Release History

---

## unp 802.1x-authentication failure-policy

Configures whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **802.1x-authentication failure-policy** {mac}

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **802.1x-authentication failure-policy**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>mac</b>	Perform MAC authentication if 802.1X authentication fails.

### Defaults

By default, device classification is performed after the initial 802.1X authentication process fails.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Configuring the 802.1X authentication failure policy is not allowed on UNP ports on which 802.1X authentication bypass is enabled.
- Device classification (the default) is performed based on the classification options configured for the UNP port.

### Examples

```
-> unp port 1/1/5 802.1x-authentication failure-policy mac
-> no unp port 1/1/10-15 802.1x-authentication failure-policy

-> unp linkagg 10 802.1x-authentication failure-policy mac
-> no unp linkagg 2-5 802.1x-authentication failure-policy
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

<b>unp port-type</b>	Configures UNP functionality on a port or link aggregate.
<b>unp 802.1x-authentication</b>	Configures the 802.1X authentication status for the UNP port.
<b>unp 802.1x-authentication bypass-8021x</b>	Configures the 802.1X bypass operation status for the UNP port.
<b>show unp port</b>	Displays the UNP configuration for the port.

## MIB Objects

alaDaUNPPortTable  
alaDaUNPPort8021XFailurePolicy

---

## unp mac-authentication

Configures the status of MAC authentication for the specified UNP port. Enable this functionality to invoke MAC-based authentication for devices connected to the UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} mac-authentication**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} mac-authentication**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, MAC authentication is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable MAC authentication on a UNP port or link aggregate.
- This command is only allowed on UNP-enabled ports (both bridge and access port types).
- MAC-based authentication is supported only through a RADIUS server.
- An option exists to classify a device into an alternate UNP in the event successful MAC authentication does not return a UNP name.
- If MAC authentication fails, any classification rules configured for the UNP port are applied.
- If UNP MAC authentication, 802.1X authentication, and classification (see [unp classification](#) and [unp 802.1x-authentication](#)) are disabled on the UNP port, all MAC addresses received on that port are blocked unless a default UNP is configured and/or trust VLAN tag is enabled for the port.
- Configuring an authentication server down UNP (see [unp auth-server-down](#)) is highly recommended when MAC or 802.1X authentication is enabled on VLAN bridge or SPB access ports or aggregates. This is because after a switch reload, traffic from devices connected to these types of ports and aggregates reaches the switch and triggers the authentication process before route convergence has completed and the server can be reached.

- If an authentication server down UNP is configured, devices are temporarily learned in that profile and authentication is automatically attempted again after the timeout period expires. This allows time for the server to become reachable from the switch after a reload.
- If an authentication server down UNP is not configured, devices are learned as filtering and will remain in that state. There is no further attempt to authenticate these devices again.
- The authentication server down functionality is *not* supported on VXLAN access ports or aggregates.

## Examples

```
-> unp port 1/1 mac-authentication
-> no unp port 1/1 mac-authentication
-> unp linkagg 2 mac-authentication
-> no unp linkagg 2 mac-authentication
```

## Release History

Release 7.2.1; command was introduced.

Release 7.2.1.R02; **linkagg** parameter added.

## Related Commands

<a href="#">unp port-type</a>	Configures UNP functionality on a port or link aggregate.
<a href="#">unp mac-authentication pass-alternate</a>	Assigns the device to another VLAN-based or service-based UNP when successful MAC authentication does not return a UNP name.
<a href="#">unp classification</a>	Configures the classification status for the UNP port.
<a href="#">show unp port</a>	Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortMacAuthFlag
```

---

## unp mac-authentication pass-alternate

Configures the name of an existing VLAN-based or service-based UNP to use as an alternate profile. A device is assigned to the alternate profile when successful MAC authentication does not return a UNP name.

```
unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate
profile_name
```

```
no unp {port chassis/slot/port1[-port2] | linkagg agg_id[-agg_id2]} mac-authentication pass-alternate
```

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>profile_name</i>	The name of an existing VLAN, SPB, or VXLAN profile.

### Defaults

By default, no alternate UNP is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the alternate profile from the UNP port configuration.
- Service-based profiles classify traffic received on UNP access ports; VLAN-based profiles classify traffic received on UNP bridge ports. Make sure the specified port is of the correct type for the specified profile.
- The UNP name specified with this command must already exist in the switch configuration.

### Examples

```
-> unp port 1/1 mac-authentication pass-alternate Finance
-> unp port 1/1-3 mac-authentication pass-alternate CustomerA
-> unp port 1/4-10 mac-authentication pass-alternate CustomerC
-> no unp port 1/1-3 mac-authentication pass-alternate
```

```
-> unp linkagg 5 mac-authentication pass-alternate AltUNP
-> unp linkagg 1-5 mac-authentication pass-alternate CustomerB
-> unp linkagg 10-12 mac-authentication pass-alternate CustomerD
-> no linkagg 5 mac-authentication pass-alternate
```

## Release History

Release 7.2.1; command was introduced.

Release 7.2.1.R02; **linkagg** parameter added.

Release 7.3.1; **spb-profile** parameter added, **unp-name** parameter changed to **vlan-profile**.

Release 7.3.4; **vxlan-profile** parameter added.

Release 8.3.1; **vlan-profile**, **spb-profile**, and **vxlan-profile** parameters deprecated.

## Related Commands

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortPassAltProfileName
```

---

## unp mac-authentication allow-eap

Configures whether the switch attempts subsequent 802.1X authentication for a device connected to a UNP port on which 802.1X authentication bypass is enabled. When 802.1X bypass is enabled on the port, MAC authentication is performed first on any device connected to that port. This command specifies the conditions under which 802.1X authentication is performed or bypassed after the initial MAC authentication process.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **mac-authentication allow-eap** {pass | fail | noauth}

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **mac-authentication allow-eap**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>pass</b>	Perform 802.1X (EAP frame) authentication if the device passes MAC authentication.
<b>fail</b>	Perform 802.1X (EAP frame) authentication if the device fails MAC authentication.
<b>noauth</b>	Perform 802.1X (EAP frame) authentication if MAC authentication is not configured on the UNP port.

### Defaults

By default, the allow 802.1X authentication option is not set.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to set the allow 802.1X authentication option back to the default value of none (option is not set).
- The port specified with this command must also have 802.1X bypass enabled (see the [unp 802.1x-authentication bypass-8021x](#) command). If bypass is not enabled, the option configured with this command does not apply.
- This command is only allowed on UNP-enabled ports and link aggregates.

## Examples

```
-> unp port 1/1/5 mac-authentication allow-eap pass
-> unp port 1/1/10-15 mac-authentication allow-eap fail
-> no unp port 1/1/5 mac-authentication allow-eap
-> unp linkagg 10 mac-authentication allow-eap noauth
-> unp linkagg 2-5 mac-authentication allow-eap none
-> no unp linkagg 10 mac-authentication allow-eap
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

<a href="#">show unp port</a>	Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortMacAllowEap
```

---

## unp classification

Configures the classification status for the specified UNP port. When classification is enabled but authentication is disabled or fails, UNP classification rules (such as MAC address, MAC address range, IP network address, or VLAN tag) are applied to the traffic received on the UNP port.

**unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} classification**

**no unp {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} classification**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

### Defaults

By default, classification is enabled on the UNP port.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the classification status for a UNP port or link aggregate.
- This command is allowed only on UNP-enabled ports (both bridge and access ports).
- UNP classification rules are applied if authentication is disabled on the port, is enabled on the port but the RADIUS server is not configured, or the authentication method fails.
- If untagged device traffic does not match any of the classification rules, the device is assigned to the default UNP configured for the port.
- If tagged device traffic does not match any of the classification rules and the trust VLAN tag option (see [unp trust-tag](#)) is enabled for the port, the device is classified based on the VLAN tag of the traffic if a VLAN matching the tag exists in the switch configuration.
- If all of the UNP authentication methods *and* UNP classification are disabled for the UNP port, then all MAC addresses received on that port are blocked unless a default VLAN is specified and/or trust VLAN tag is enabled for the port.

- When classification is enabled for the port, UNP classification rules are applied in the following order of precedence:
  - MAC address + VLAN tag
  - MAC address
  - MAC address range + VLAN tag
  - MAC address range
  - IP address + VLAN tag
  - IP address
  - VLAN tag

### Examples

```
-> unp port 1/1 classification
-> no unp port 1/1 classification
-> unp port 1/1-4 classification
ERROR: Port 1/3 is not a unp-port
-> unp linkagg 5 classification
-> no unp linkagg 5 classification
```

### Release History

Release 7.2.1; command was introduced.  
Release 7.2.1.R02; **linkagg** parameter added.

### Related Commands

<a href="#">show unp classification</a>	Displays the UNP classification rule configuration for the switch.
<a href="#">show unp port</a>	Displays the UNP configuration for the port.

### MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortClassificationFlag
```

---

## unp trust-tag

Configures the option of whether or not to trust the VLAN ID of a tagged packet to determine how the packet is classified.

**unp** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} **trust-tag**

**no** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} **trust-tag**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (10-20).

### Defaults

By default, the trust VLAN tag option is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the trust tag status for a UNP port or link aggregate.
- When this option is enabled, the device is classified into a VLAN or service access point (SAP) when one of the following conditions occur:
  - MAC or 802.1X authentication passes, but the RADIUS server returns a UNP that does not exist in the switch configuration.
  - MAC or 802.1X authentication passes, but the RADIUS server does not return a UNP and the alternate UNP option is disabled for the port.
  - Device traffic does not match any of the classification rules configured for the UNP port.
  - The UNP VLAN obtained from a matching classification rule does not exist in the switch configuration.
  - Auth-Server-Down UNP option is used, but the VLAN associated with that UNP does not exist in the switch configuration.
- When the trust tag option is triggered on a UNP bridge port and a VLAN exists in the switch configuration that matches the VLAN tag, a VLAN-port-association (VPA) is created between the UNP port and the matching VLAN even if the matching VLAN is *not* associated with a UNP.
- When the trust tag option is triggered on a UNP access port, the VLAN tag information is used to create a dynamic SAP (virtual port) to which the access port is associated.

- Enabling the trust VLAN ID tag option provides an implicit method of VLAN tag classification that will accept tagged traffic matching any of the existing UNPs without the need to create specific classification rules for those profiles.

## Examples

```
-> unp port 1/1 trust-tag
-> unp port 1/1-4 trust-tag
-> no unp port 1/1 trust-tag

-> unp linkagg 5 trust-tag
-> unp linkagg 6-10 trust-tag
-> no unp linkagg 5 trust-tag
```

## Release History

Release 7.2.1; command was introduced.

## Related Commands

<a href="#">show unp port</a>	Displays the UNP configuration for the port.
<a href="#">show unp user</a>	Displays information about the devices learned on a UNP port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortTrustTagStatus
```

---

## unp default-profile

Configures the name of an existing UNP classification profile to serve as the default UNP for the specified UNP port or link aggregate.

**unp** {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} **default-profile** profile\_name

**no unp** {port chassis/slot/port1[-port2] | linkagg agg\_id} **default-profile**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier when running in virtual chassis mode.
<i>slot/port[-port2]</i>	The slot and port number (3/1) of a UNP-enabled port. Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<i>profile_name</i>	The name of an existing UNP classification profile.

### Defaults

By default, there is no default profile configured for UNP ports or link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove the default UNP from the port configuration.
- This command is allowed only on UNP-enabled ports.
- The UNP classification profile specified with this command must already exist in the switch configuration.
- The default UNP is used to classify devices on the port when one of the following conditions occur:
  - UNP authentication and classification are not enabled on the port.
  - MAC authentication fails.
  - Device traffic does not match any UNP classification rules.
  - The UNP trust VLAN tag option (see [unp trust-tag](#)) is enabled for the port, but the VLAN ID specified in the tag field of the device traffic does not exist in the switch configuration.
  - Untagged device traffic is not classified.

## Examples

```
-> unp port 1/1 default-profile Sales
-> no unp port 1/1 default-profile
-> unp port 1/1-4 default-profile Sales
ERROR: Port 1/2 is not a unp port
ERROR: Port 1/3 is not a unp port
-> unp port 1/1 default-profile BAD-UNP
ERROR: UNP doesn't exist
-> no unp port 1/1-4 default-profile
-> unp linkagg 5 default-profile VM1-Server1
-> no unp linkagg 5 default-profile
```

## Release History

Release 8.3.1; command was introduced.

## Related Commands

<a href="#">unp profile</a>	Configures a UNP profile that is used to classify traffic received on UNP ports.
<a href="#">unp port-type</a>	Configures the status of UNP functionality on the port.
<a href="#">unp trust-tag</a>	Configures whether or not a device is classified into an existing VLAN that matches the VLAN ID tag of the packets received from the device.
<a href="#">show unp port</a>	Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortIfIndex
  alaDaUNPPortDefaultProfileName
```

---

## unp domain

Assigns a UNP port or link aggregate to a customer domain (UNP group).

**unp** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} domain *domain\_id*

**no unp** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} domain *domain\_id*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>domain_id</i>	The numerical domain ID to which the specified port or link aggregate is assigned.

### Defaults

By default, all UNP ports are assigned to customer domain zero (0).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The domain ID specified with this command must already exist in the switch configuration.
- Customer domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific customer domain, only classification rules associated with the same customer domain ID are applied to that port.

### Examples

```
-> unp port 1/1 domain 1
-> unp port 1/1-3 domain 2
-> no unp port 1/1 domain 1
-> unp linkagg 5 domain 5
-> unp linkagg 8-10 domain 6
-> no unp linkagg 5 domain 5
```

### Release History

Release 8.3.1; command was introduced.

## Related Commands

**unp port-type**

Configures the status of UNP for the specified port or link aggregate.

**unp domain description**

Creates a customer domain ID.

**show unp domain**

Displays the available customer domain IDs.

**show unp port**

Displays the UNP configuration for the port.

## MIB Objects

alaDaUNPPortTable

    alaDaUNPPortIfIndex

    alaDaUNPPortDomainId

---

## unp aaa-profile

Assigns the name of an existing authentication, authorization, and accounting (AAA) profile to the specified UNP port or link aggregate. This type of profile defines AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are applied to device traffic received on the UNP port to which the profile is assigned.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **aaa-profile** *profile\_name*

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **aaa-profile**

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>profile_name</i>	The name of an existing AAA profile.

### Defaults

By default, there is no AAA profile assigned to UNP ports or link aggregates. The global AAA configuration for the switch is applied.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove the AAA profile from the port configuration.
- The AAA profile specified with this command must already exist in the switch configuration.
- AAA profiles are configured using the **aaa profile** command. See the “AAA Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide* for more information.

### Examples

```
-> unp port 1/1/5 aaa-profile A1
-> no unp port 1/1/5 aaa-profile

-> unp port 1/1/1-5 aaa-profile A2
-> no unp port 1/1/1-5 aaa-profile

-> unp linkagg 10 aaa-profile A3
-> no unp linkagg 10 aaa-profile
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[unp port-type](#)

Configures UNP functionality for the specified port or link aggregate.

[aaa profile](#)

Configures an AAA configuration profile.

[show unp port](#)

Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable  
  alaDaUNPPortIfIndex  
  alaDaUNPPortAaaProfile
```

---

## unp port port-template

Assigns the name of an existing port template to the specified UNP port or link aggregate. A port template defines UNP port configuration options (such as the type of authentication, classification status, a default profile) that are applied to the UNP port to which the template is assigned.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **port-template** *template\_name*

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **port-template**

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>template_name</i>	The name of an existing port template.

### Defaults

By default, the “bridgeDefaultPortTemplate” port template is assigned to UNP bridge ports, and the “accessDefaultPortTemplate” port template is assigned to UNP access ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove the port template from the port configuration.
- When a custom template is removed from a UNP port, the port reverts back to using the default template to define UNP port parameter options.
- The port template specified with this command must already exist in the switch configuration.
- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.

### Examples

```
-> unp port 1/1/5 port-template up1

  alaDaUNPPortIfIndex
  alaDaUNPPortPortTemplate
```

---

## unp direction

Configures whether network access control is applied to both incoming and outgoing traffic or only applied to incoming traffic on the specified UNP bridge port or link aggregate.

**unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **direction** {**both** | **in**}

**no unp** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id[-agg\_id2]*} **direction**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>both</b>	Enables bidirectional network access control on the specified port or link aggregate.
<b>in</b>	Enables network access control for incoming traffic only on the specified port or link aggregate.

### Defaults

By default, bidirectional network access control is enabled on the port.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the network access control direction to the default (**both**).
- When the port control direction is set to **both**, egress broadcast, unknown unicast, and multicast traffic is blocked on the UNP port.
- When the port control direction is set to **in**, egress broadcast, unknown unicast, and multicast traffic is allowed on the UNP port.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.

### Examples

```
-> unp port 1/1/5 direction in
-> unp port 1/1/10-15 direction both
-> no unp port 1/1/10-15 direction
```

```
-> unp linkagg 10 direction in
-> unp linkagg 2-5 direction both
-> no unp linkagg 2-5 direction
```

## Release History

<a href="#">show unp port</a>	Displays the UNP configuration for the port.

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortAdminControlledDirections
```

---

## unp admin-state

Enables or disables the UNP configuration for a port or link aggregate.

**unp** {port {*chassis/slot/port1*[-*port2*] | linkagg *agg\_id1*[-*agg\_id2*]} admin-state {enable | disable}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id1</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
<b>enable</b>	Activates the UNP configuration for the UNP port or link aggregate. UNP functionality is applied to traffic received on the UNP port or link aggregate.
<b>disable</b>	Disables the UNP configuration for the UNP port or link aggregate. UNP functionality is not applied to traffic received on the UNP port or link aggregate.

### Defaults

By default, UNP is administratively enabled at the time UNP functionality is configured for the port or link aggregate.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

When UNP functionality is disabled, the UNP configuration for the port or link aggregate is retained but is not applied to traffic received on the port or link aggregate.

### Examples

```
-> unp port 1/1 admin-state disable
-> unp port 1/2-5 admin-state disable
-> unp port 1/1 admin-state enable
-> unp linkagg 5 admin-state disable
-> unp linkagg 8-10 admin-state disable
-> unp linkagg t admin-state enable
```

alaDaUNPPortAdminState

---

## unp dynamic-service

Configures whether the System Default service profile dynamically creates an SPB Service Access Point (SAP) or a VXLAN SAP based on the traffic received on the UNP access port.

```
unp {port [chassis_id/]slot/port1[-port2] | linkagg agg_id[-agg_id2]} dynamic-service {spb | vxlan | none}
```

---

### Syntax Definitions

<i>chassis_id</i>	The chassis identifier when running in virtual chassis mode.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>spb</b>	Dynamically creates an SPB SAP.
<b>vxlan</b>	Dynamically creates a VXLAN SAP ( <i>supported only on OmniSwitch 6900-X72/Q32, OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X48C6/T48C6</i> ).
<b>none</b>	No SPB or VXLAN SAP is dynamically created.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command applies only to ports and link aggregates configured as UNP access ports; this command does not apply to UNP bridge ports.
- Traffic received on UNP access ports that is not assigned to a user-defined service profile is assigned to the System Default service profile. The System Default profile attributes used to dynamically create a SAP for such traffic are derived based on the setting for this UNP port parameter.
  - If the dynamic service port parameter is set to SPB, then a calculated SPB control BVLAN, a calculated default I-SID number, and an incremental reserved service ID number are used to dynamically create a SAP for SPB service traffic received on the UNP access port.
  - If the dynamic service port parameter is set to VXLAN, then a calculated VNI number, a default multicast group IP address, and an incremental reserved service ID number are used to dynamically create a SAP for VXLAN service traffic received on the UNP access port.

## Examples

```
-> unp port 1/1/5 dynamic-service vxlan
-> unp port 1/1/10-15 dynamic-service spb
-> unp port 1/1/10-15 dynamic-service none
-> unp linkagg 10 dynamic-service vxlan
-> unp linkagg 2-5 dynamic-service spb
-> unp linkagg 2-5 dynamic-service none
```

  alaDaUNPPortDynamicService
```

---

## unp vlan

Configures an untagged or tagged VLAN-port association between the specified UNP bridge port and VLAN ID. This type of static VLAN assignment is particularly useful when connecting silent devices to UNP bridge ports.

**unp** {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} vlan vlan\_id [-vlan\_id2] [**tagged**]

**no unp** {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} vlan vlan\_id [-vlan\_id2]

---

### Syntax Definitions

<i>chassis/slot/port</i> [-port2]	The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [-agg_id2]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>vlan_id</i> [-vlan_id2]	The VLAN ID to assign to the UNP port. Use a hyphen to specify a range of VLAN IDs.
<b>tagged</b>	Configures a tagged VLAN association for the UNP bridge port.

### Defaults

By default, no VLAN associations are configured for UNP bridge ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a VLAN association from the UNP port configuration. The **tagged** keyword is not required to remove a tagged VLAN association.
- This command applies only to ports and link aggregates configured as UNP bridge ports; this command does not apply to UNP access ports.
- When the **tagged** parameter option is not specified, the VLAN-port association created is untagged.
- Configuring a UNP port or link aggregate with an untagged *and* tagged VLAN-port association is allowed as long as the untagged and tagged VLANs are different (for example, **unp port 1/4/45 vlan 100** and **unp port 1/4/45 vlan 200 tagged**).
- When this command is used to assign a VLAN to a UNP bridge port, the port goes into a forwarding state for egress traffic associated with the VLANs assigned to the port. This automatically occurs even when there is no MAC address learned on the UNP port in the assigned VLANs and regardless of the direction value (in or both) set for the port.

## Examples

```
-> unp port 1/1/5 vlan 500
-> unp port 1/1/5 vlan 600 tagged
-> unp port 1/1/10 vlan 100-105
-> unp port 1/1/10 vlan 200-205 tagged
-> no unp port 1/1/5 vlan 500
-> no unp port 1/1/5 vlan 600
-> no unp port 1/1/10 vlan 100-105
-> no unp port 1/1/10 vlan 200-205

-> unp linkagg 10 vlan 500
-> unp linkagg 10 vlan 600 tagged
-> unp linkagg 20 vlan 100-105
-> unp linkagg 20 vlan 200-205 tagged
-> no unp linkagg 10 vlan 500
-> no unp linkagg 10 vlan 600
-> no unp linkagg 20 vlan 100-105
-> no unp linkagg 20 vlan 200-205
```

## Release History

## MIB Objects

alaDaUNPPortVlanTable

alaDaUNPPortVlanVID

---

## unp port profile

Configures a UNP service profile as a static profile for the specified UNP port. This type of profile assignment is particularly useful for silent devices that are connected to a UNP port; the profile SAP won't age out when the device goes idle.

**unp** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} **profile** *profile\_name*

**no unp** {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} **profile** *profile\_name*

---

### Syntax Definitions

*chassis/slot/port*[-*port2*] The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id*[-*agg\_id2*] Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15).

*profile\_name* The name of an SPB, VXLAN, or L2 GRE service profile to statically assign to the specified UNP port.

### Defaults

By default, no static profile is configured for UNP ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a static profile association from the UNP port configuration.
- When a MAC address is learned on a UNP port and classified into a service profile, a SAP is dynamically created based on the parameter values of the service profile. Once the MAC address associated with the dynamic SAP ages out, the SAP ages out as well. To accommodate silent devices, use this command to assign a service profile to the UNP port. This will dynamically create a persistent SAP that will not age out when the device MAC address ages out; the SAP continues to receive broadcast and multicast packets for the silent device.
- Make sure the specified UNP profile name already exists in the switch configuration and is mapped to an SPB, VXLAN, L2 GRE, or static service.
  - Profiles mapped to SPB, VXLAN, or static services are configured as static profiles on UNP access ports.
  - Profiles mapped to an L2 GRE service are configured as static profiles on UNP bridge or access ports.

- There can be up to eight SPB or VXLAN service profiles statically assigned to one UNP access port, but mixing service types on the same port is not supported. For example, configure only eight SPB service profiles or eight VXLAN service profiles.
- There can only be one L2 GRE service profile statically assigned to a UNP bridge or access port.

## Examples

```
-> unp port 1/1/5 profile static-spb1
-> unp port 1/1/5 profile static-spb2
-> unp port 1/1/10 profile static-vxlan1
-> unp port 1/1/10 profile static-vxlan2
-> unp port 1/1/20 profile static-l2gre1
-> no unp port 1/1/20 profile static-l2gre1

-> unp linkagg 10 profile static-spb1
-> unp linkagg 20 profile static-vxlan1
-> unp linkagg 30 profile static-l2gre1
-> no unp linkagg 30 profile static-l2gre
```

## Release History

## MIB Objects

```
alaDaUNPPortTable
  alaDaUNPPortProfile
```

---

## unp port ap-mode

Configures the status of the Access Point (AP) mode for the specified UNP port or link aggregate.

**unp {port chassis/slot/port[-port2] | linkagg agg\_id[-agg\_id2]} ap-mode**

**no unp {port chassis/slot/port[-port2] | linkagg agg\_id[-agg\_id2]} ap-mode**

---

### Syntax Definitions

*chassis/slot/port[-port2]*

The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id[-agg\_id2]*

The link aggregate ID number for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

By default, the AP mode status for the port or link aggregate is set to the global AP mode status when UNP is enabled on the port or link aggregate. For example, if the global status is disabled, the port-level status is initially disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- AP mode functionality is supported on UNP bridge ports and on UNP access ports. On bridge ports, the AP device and AP clients are learned into the VLAN domain; on access ports, the AP device and AP clients are learned into the Shortest Path Bridging (SPB) service domain.
- When the AP mode is enabled on the specified UNP bridge port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):
  - The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP bridge port.
  - The trust tag status for the UNP bridge port is operationally enabled.
  - The global status for dynamic VLAN configuration is operationally enabled for the switch.
- When the AP mode is enabled on a UNP access port and an AP device is detected on that port, the following actions are triggered to automatically change the operational status of the specified options (the operational status overrides the configured status):
  - The transmission of LLDP Port VLAN ID and AP Location TLVs is operationally enabled on the UNP access port.
  - The trust tag function is not used; AP clients are not learned into VLAN-based profiles. Instead, AP clients are learned into a UNP profile that is mapped to SPB service parameters. The SAP that is dynamically created based on the service parameters carries the AP client traffic.

- MAC or 802.1X authentication is bypassed for AP clients. However, the other Layer 2 UNP port options for learning and assigning an AP client to a profile are available, such as rule classification, a default SPB service profile, or a dynamic SPB System Default profile.
- Once the AP MAC address is detected and learned, a built-in LLDP UNP classification rule for access points classifies the AP device into one of the following built-in default profiles:
  - **defaultWLANProfile** for AP devices connected to UNP bridge ports. This profile is mapped to a VLAN into which the AP device is classified. A VLAN-port association (VPA) is established between the UNP bridge port and profile VLAN on which the AP MAC address is learned and forwarded.
  - **defaultWLANAccessProfile** for AP devices connected to UNP access ports. The profile is mapped to SPB service parameters. When the AP device is classified into this profile, an SPB Service Access Point (SAP) is dynamically created. A SAP-port association is established between the UNP access port and the SAP on which the AP MAC address is learned and forwarded.
- If the UNP AP mode is not enabled, the detection, learning, and management of connected OmniAccess Stellar AP devices may not occur as expected.
- AP mode functionality is not supported on Learned Port Security (LPS) ports.

## Examples

```
-> unp port 1/1/6 ap-mode
-> unp linkagg 10 ap-mode
-> no unp port 1/1/6 ap-mode
-> no unp linkagg 10 ap-mode
```

## Release History

## unp port-template

Configures a UNP port template that is used to apply a pre-defined port configuration to a UNP port or link aggregate. Using a port template to configure UNP functionality on a port or link aggregate avoids having to configure each parameter with a separate CLI command. Applying a template configures all port-based parameters with a single CLI command.

This section describes the base command (**unp port-template**) along with optional command keywords that are used to configure port parameter values that are applied when the template is assigned to a UNP port or link aggregate. Optional keywords are listed separately but can be entered in combination on the same command line. Use the **no** form for the keywords to change a specific parameter value for the template.

There are two default port templates: “bridgeDefaultPortTemplate” (applied to UNP bridge ports) and “accessDefaultPortTemplate” (applied to UNP access ports). These templates define a default set of port parameter values that are applied at the time a port or link aggregate is configured as a UNP bridge or access port. The default templates cannot be deleted, but the template parameter values are configurable through this command.

**unp port-template** {*template\_name* | **bridgeDefaultPortTemplate** | **accessDefaultPortTemplate**}

[**802.1x-authentication**]

 [**ap-mode**]

**no unp port-template** *template\_name* [**802.1x-authentication** | **802.1x authentication pass-alternate** | **mac-authentication** | **mac-authentication pass-alternate** | ...]

## Syntax Definitions

<i>template_name</i>	The name to associate with the UNP port template.
<b>bridgeDefaultPortTemplate</b>	The name of the default port template applied to UNP bridge ports.
<b>accessDefaultPortTemplate</b>	The name of the default port template applied to UNP access ports. <i>This parameter is currently not supported on an OmniSwitch 6465 or OmniSwitch 6560.</i>

## Defaults

The following table contains the default values for the system-defined port templates (“accessDefaultPortTemplate” and “bridgeDefaultPortTemplate”):

parameter	system-defined port template values
<b>802.1x-authentication</b>	enabled
<b>802.1x-authentication pass-alternate profile_name</b>	none
<b>mac-authentication</b>	enabled
<b>mac-authentication pass-alternate profile_name</b>	none
<b>classification</b>	enabled
<b>trust-tag</b>	disabled
<b>default-profile profile_name</b>	none
<b>domain domain_id</b>	0
<b>aaa-profile profile_name</b>	none
<b>redirect port-bounce</b>	disabled

<b>802.1x-authentication tx-period seconds</b>	30
<b>802.1x-authentication supp-timeout seconds</b>	30
<b>802.1x-authentication max-req max_req</b>	2
<b>802.1x-authentication bypass</b>	disabled
<b>802.1x-authentication failure-policy {mac}</b>	default
<b>mac-authentication allow-eap {pass   fail   noauth}</b>	none
<b>force-l3-learning [port-bounce]</b>	disabled port bounce is enabled
<b>admin state {enable   disable}</b>	enabled
<b>dynamic-service {vxlan   spb}</b>	none for UNP bridge port template SPB for UNP access port template
<b>vlan vlan_id [-vlan_id2] [tagged]</b>	none
<b>l2-profile l2profile_name</b>	unp-def-access-profile

parameter	system-defined port template values
<b>ap-mode</b>	enabled
<b>profile</b> <i>profile_name</i>	none

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to remove a port template from the switch configuration.
- To change the value of a specific port template parameter, specify the parameter keyword with this command. For example, **no unp port-template port1 mac-authentication**, **unp port-template port1 domain 2**, or **unp port-template port1 default-profile defprof1**. The new parameter values are applied to all UNP ports to which the template is assigned.
- The **l2-profile** port template parameter is not supported on the OmniSwitch 9900.
- If the name of the template does not exist when this command is used to modify a port parameter, the switch will automatically create a new template using the name specified. For example, the **unp port-template port1 mac-authentication** command will create the “port1” template if it does not already exist in the switch configuration.
- When a port template is applied to a UNP port, the parameter values defined in the template will override any existing UNP port configuration. In addition, any attempt to explicitly configure a port that is associated with a template is not allowed.
- For more information about specific port parameter values, refer to the following explicit UNP port configuration commands for each template parameter:

Port Template Parameter	Explicit Port Configuration Command
<b>[802.1x-authentication]</b>	<b>unp 802.1x-authentication</b>
<b>[802.1x-authentication pass-alternate</b> <i>profile_name</i> ]	<b>unp 802.1x-authentication pass-alternate</b>
<b>[mac-authentication]</b>	<b>unp mac-authentication</b>
<b>[mac-authentication pass-alternate</b> <i>profile_name</i> ]	<b>unp mac-authentication pass-alternate</b>
<b>[classification]</b>	<b>unp classification</b>
<b>[default-profile</b> <i>profile_name</i> ]	<b>unp default-profile</b>
<b>[domain</b> <i>domain_id</i> ]	<b>unp domain</b>
<b>[aaa-profile</b> <i>profile_name</i> ]	<b>unp aaa-profile</b>
<b>[redirect port-bounce]</b>	<b>unp redirect port-bounce</b>
<b>[direction {in   both}]</b>	<b>unp direction</b>
<b>[802.1x-authentication tx-period</b> <i>seconds</i> ]	<b>unp 802.1x-authentication tx-period</b>

Port Template Parameter	Explicit Port Configuration Command
[802.1x-authentication supp-timeout <i>seconds</i> ]	<b>unp 802.1x-authentication supp-timeout</b>
[802.1x-authentication max-req <i>max_req</i> ]	<b>unp 802.1x-authentication max-req</b>
[802.1x-authentication bypass]	<b>unp 802.1x-authentication bypass-8021x</b>
[802.1x-authentication failure-policy { <i>mac</i> }]	<b>unp 802.1x-authentication failure-policy</b>
[mac-authentication allow-eap { <i>pass</i>   <i>fail</i>   <i>noauth</i> }]	<b>unp mac-authentication allow-eap</b>
[force-l3-learning [ <i>port-bounce</i> ]]	<b>unp force-l3-learning</b>
[trust-tag]	<b>unp trust-tag</b>
[admin-state { <i>enable</i>   <i>disable</i> }]	<b>unp admin-state</b>
[dynamic-service { <i>spb</i>   <i>vlan</i> }]	<b>unp dynamic-service</b>
[vlan <i>vlan_id</i> [ <i>-vlan_id2</i> ] [ <i>tagged</i> ]]	<b>unp vlan</b>
[l2-profile <i>l2profile_name</i> ]	<b>unp l2-profile</b>
[ap-mode]	<b>unp port ap-mode</b>
[profile <i>profile_name</i> ]	<b>unp port profile</b>

## Examples

```

-> unp port-template port1
-> unp port-template port1 mac-authentication
-> unp port-template port1 mac-authentication pass-alternate unpl
-> unp port-template port1 classification
-> no unp port-template port1 mac-authentication
-> no unp port-template port1
-> unp port-template port2 802.1x-authentication
-> unp port-template port2 classification
-> unp port-template port2 domain 10
-> no unp port-template port2 classification
-> no unp port-template port2

```

## Release History

Release 8.3.1; command was introduced.

Release 8.3.1.R02; **force-l3-learning** parameter added.

Release 8.4.1; **l2-profile** parameter added.

Release 8.5R4; **profile** parameter added, **tagged** option added to **vlan** parameter.

Release 8.6R1; **ap-mode** parameter added.

## Related Commands

<b>unp port port-template</b>	Assigns a port configuration template to a UNP port.
<b>show unp port config</b>	Displays the UNP configuration for the port, including the name of the port template associated with the port, if any.
<b>show unp port-template</b>	Displays the port template configuration.

---

## unp network-group

Configures a network group name and its associated IPv4 addresses. The group is used to specify source or destination IP networks for UNP router domain authentication. Users attempting to access networks defined in this group are challenged for authentication.

**unp network-group** *net\_group\_name* *ip\_address* [**mask** *net\_mask*] [*ip\_address2* [**mask** *net\_mask2*]...]

**no unp network-group** *net\_group\_name* [*ip\_address* [**mask** *net\_mask*] [*ip\_address2* [**mask** *net\_mask2*]...]

---

### Syntax Definitions

<i>net_group_name</i>	The name of the network group (up to 31 alphanumeric characters).
<i>ip_address</i>	An IPv4 address included in the network group.
<i>net_mask</i>	The mask for the IPv4 address. If no mask is entered, the IPv4 address is assumed to be a host address.
<i>ip_address2</i>	Optional. Another IPv4 address to be included in the network group. Multiple IPv4 addresses (up to a maximum of five) may be configured for a network group. Separate each address/mask combination with a space.
<i>net_mask2</i>	Optional mask for the IPv4 address. If no mask is entered, the natural mask for the address will be used.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a network group from the configuration or to remove an IP address from a network group.
- The network group defined with this command is used to configure a router authentication condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the group.
- Make sure that the IP networks/masks specified for a network group do not overlap.

### Examples

```
-> unp network-group net-grp1 10.10.12.5 mask 255.255.0.0
-> unp network-group net-grp1 20.10.12.5 mask 255.255.0.0 10.50.3.1
-> unp network-group net-grp1 30.12.12.5
```

```
-> unp network-group net-grp1 10.10.12.5 mask 255.255.0.0 20.10.12.5 mask  
255.255.0.0 10.50.3.1 30.12.12.5
```

```
-> no unp network-group net-grp1 10.10.12.5
```

```
-> no unp network group net-grp1
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

<b>unp router-auth user-group</b>	Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.
<b>unp router-auth cp-profile</b>	Configures a Captive Portal profile for router authentication.
<b>unp router-auth user flush</b>	Performs a MAC address flush of the specified router domain authentication users.
<b>show unp network-group</b>	Displays the UNP network group configuration.

## MIB Objects

```
alaDaUNPNetworkGroupTable  
  alaDaUNPNetworkGroupName  
  alaDaUNPNetworkGroupIpAddrType  
  alaDaUNPNetworkGroupIpAddr  
  alaDaUNPNetworkGroupIpMask
```

---

## unp router-auth user-group

Configures a user group as a condition for Layer 3 authentication. A user group specifies a destination network group and an optional source network group; traffic matching the networks in these groups is subject to router domain authentication.

```
unp router-auth user-group user_group_name {[src-network-group net_group] dst-network-group net_group_name}
```

```
no unp router-auth user-group user_group_name
```

---

### Syntax Definitions

<i>user_group_name</i>	The name of the router authentication condition (up to 31 alphanumeric characters).
<i>net_group_name</i>	The name of an existing network group (configured through the <b>unp network-group</b> command).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove a router authentication user group from the switch configuration.
- Make sure the network group specified with this command exists in the switch configuration before attempting to configure the router authentication user group.
- To configure an optional source network group; specify the source network group name first then the destination network group name.
- When the first router authentication user group is configured, the router domain authentication feature is enabled for the switch.
- HTTP/HTTPS traffic that matches a user group condition is challenged with Captive Portal authentication; other IPv4 traffic that matches a user group condition is challenged with IP-based authentication.
- Configuring multiple router authentication user groups is allowed.
  - Any two user groups can share the same source network group as long as the destination network group for each user group is different and the IP addresses do not overlap.
  - Any two user groups can share the same destination network group as long as the source network group for each user group is different and the IP addresses do not overlap.

## Examples

```
-> unp router-auth user-group ra-ugrp1 src-network-group net-grp1 dst-network-group
net-grp2
-> unp router-auth user-group ra-ugrp2 dst-network-group net-grp3

-> no unp router-auth user-group ra-ugrp1
-> no unp router-auth user-group ra-ugrp2

-> unp router-auth user-group ra-ugrp1 dst-network-group grp5
ERROR: Dst Network Group does not exist
-> unp router-auth user-group ra-ugrp2 src-network-group grp5 dst-network-group
net-grp2
ERROR: Src Network Group does not exist
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

<a href="#">unp network-group</a>	Configures a network group name and its associated IPv4 addresses.
<a href="#">unp router-auth cp-profile</a>	Configures a Captive Portal profile for router authentication.
<a href="#">unp router-auth user flush</a>	Performs a MAC address flush of the specified router domain authentication users.
<a href="#">show unp router-auth user-group</a>	Displays the router authentication user group configuration.

## MIB Objects

```
alaDaUNPRouterAuthUserGroupTable
  alaDaUNPRouterAuthenticationName
  alaDaUNPRouterAuthenticationSrcGroup
  alaDaUNPRouterAuthenticationDestGroup
```

---

## unp router-auth cp-profile

Specifies an existing Captive Portal (CP) profile to use for router authentication. This type of profile defines CP authentication parameter options that are applied to users that match router authentication user group conditions. If no CP profile is specified, then the global CP configuration is applied.

**unp router-auth cp-profile** *cp\_profile\_name*

**no unp router-auth cp-profile** *cp\_profile\_name*

---

### Syntax Definitions

*cp\_profile\_name*                      The name of an existing CP profile (configured through the **captive-portal-profile** command).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to remove the CP profile assignment.
- Make sure the CP profile name specified with this command exists in the switch configuration.
- The following global and CP profile settings are applied for CP authentication:
  - The RADIUS server to use for authentication.
  - Session timeout value (determines aging of an accept/deny entry).
  - CP maximum retry attempts (number of login attempts the user is given before access is blocked).
  - Success redirect URL (the URL to display to the client after successful CP authentication)
- The following global and CP profile settings are applied for IP-based authentication:
  - The RADIUS server to use for authentication.
  - Session timeout value (determines aging of an accept/deny entry).
- If the RADIUS server returns a session timeout value that is set to zero and the trust RADIUS option is enabled, then the session timeout for CP and IP authenticated users is set to infinity (the user session does not time out). A zero session timeout value is supported only when it is returned by the RADIUS server; setting the value to zero through the CLI is not supported.
- The router domain authentication feature is not enabled for the switch until at least one router authentication user group is configured.

- CP authentication is applied to HTTP/HTTPS traffic that matches a router authentication user group condition.

### Examples

```
-> unp router-auth cp-profile cp-1  
-> no unp router-auth cp-profile
```

### Release History

Release 8.5R4; command was introduced.

### Related Commands

<a href="#">unp network-group</a>	Configures a network group name and its associated IPv4 addresses.
<a href="#">unp router-auth user-group</a>	Configures a user group as a condition for Layer 3 authentication. A network group is specified when this type of condition is configured.
<a href="#">unp router-auth user flush</a>	Performs a MAC address flush of the specified router domain authentication users.
<a href="#">show unp router-auth configuration</a>	Displays the CP profile configuration that is used for router domain authentication.

### MIB Objects

```
alaDaUNPRouterAuthenticationConfig  
  alaDaUNPRouterAuthCpProfileName
```

---

## unp router-auth user flush

Performs a MAC address flush of the specified router domain authentication users.

**unp router-auth user flush** {**user-group** *user\_group\_name* | **user-name** *cp\_user\_name* | [**ip-address** *ipv4\_address* | **auth-type** {**cp** | **ip**} | **all**}

---

### Syntax Definitions

<i>user_group_name</i>	The name of an existing router authentication user group.
<i>cp_user_name</i>	The Captive Portal (CP) user name.
<i>ipv4_address</i>	The IPv4 address associated with the router authentication user.
<b>cp</b>	Clears only the CP-authenticated users.
<b>ip</b>	Clears only the IP-authenticated users.
<b>all</b>	Clears all of the router authentication users.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **user-group** parameter to flush all users associated with the specified router authentication user group.
- Use the **user-name** parameter to flush the CP user name associated with the router authentication user.
- Use the **ip-address** parameter to flush the IPv4 address associated with the router authentication user.
- Use the **auth-type** parameter with the **cp** or **ip** options to flush router authentication users that were authenticated through Captive Portal or IP-based mechanisms.
- Use the **all** parameter to flush all router authentication users learned on the switch.

### Examples

```
-> unp router-auth user flush all
-> unp router-auth user flush user-group ra-grp1
-> unp router-auth user flush user-name san
-> unp router-auth user flush ip-address 10.0.0.1
-> unp router-auth user flush auth-type cp
-> unp router-auth user flush auth-type ip
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

<b>unp network-group</b>	Configures a network group name and its associated IPv4 addresses.

<b>unp router-auth cp-profile</b>	Configures a Captive Portal profile for router authentication.
<b>show unp router-auth users</b>	Displays information about users authenticating through router domain authentication.

## MIB Objects

```
alaDaUNPRouterAuthenticationFlushTable
  alaDaUNPRouterAuthenticationFlushIndex
  alaDaUNPRouterAuthenticationFlushComplete
  alaDaUNPRouterAuthenticationFlushUserGroupName
  alaDaUNPRouterAuthenticationFlushType
  alaDaUNPRouterAuthenticationFlushUserName
  alaDaUNPRouterAuthenticationFlushIpAddressType
  alaDaUNPRouterAuthenticationFlushIpAddress
```

---

## show unip network-group

Displays the router authentication network group configuration.

```
show unip network-group
```

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

A UNP network group is used to configure a router authentication user group condition that will trigger authentication for user traffic that matches the IPv4 networks defined in the network group.

### Examples

```
-> show unip network-group
  Network Group Name      IP-Address/Mask
-----+-----
net-grp1                  10.0.0.1/255.255.0.0,
                           20.0.0.1/255.255.0.0,
                           30.0.0.1/255.0.0.0
net-grp2                  40.0.0.1/255.255.0.0
net-grp3                  10.0.0.1/255.255.0.0,
                           40.0.0.1/255.255.0.0
```

Total Network-Group Count: 3

#### *output definitions*

---

<b>Network Group Name</b>	The name of the UNP network group.
<b>IP-Address/Mask</b>	The IPv4 network addresses that are associated with the network group name.

---

### Release History

Release 8.5R4; command was introduced.

## Related Commands

### **unp network-group**

Configures a network group name and its associated IPv4 addresses.

## MIB Objects

```
alaDaUNPNetworkGroupTable  
  alaDaUNPNetworkGroupName  
  alaDaUNPNetworkGroupIpAddrType  
  alaDaUNPNetworkGroupIpAddr  
  alaDaUNPNetworkGroupIpMask
```

---

## show unip router-auth user-group

Displays the router authentication user group configuration.

```
show unip router-auth user-group [user_group_name]
```

---

### Syntax Definitions

*user\_group\_name*                      The name of an existing router authentication user group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

A router authentication user group specifies Layer 3 conditions for authentication; UNP network groups assigned to the router authentication user group contain IPv4 addresses. User traffic matching these networks are challenged with Captive Portal or IP-based authentication.

### Examples

```
-> show unip router-auth user-group
User-Group Name                      Src-Network-Group                      Dst-Network-Group
-----+-----+-----
ra-ugrp1                              net-grp1                              net-grp2
ra-ugrp2                              net-grp3                              net-grp2
ra-ugrp3                              net-grp1                              net-grp3
ra-ugrp4                              net-grp2                              net-grp3
ra-ugrp5                                                                     net-grp4
```

```
-> show unip router-auth user-group UserGrp1
User-Group Name                      Src-Network-Group                      Dst-Network-Group
-----+-----+-----
ra-ugrp3                              net-grp1                              net-grp3
```

Rule Status = ACTIVE

#### *output definitions*

---

<b>User-Group-Name</b>	The name of the router authentication user group.
<b>Src-Network-Group</b>	The name of the UNP network group that is designated as a group of source IPv4 networks. Specifying a source network group is optional when configuring a user group condition.

*output definitions*

---

<b>Dst-Network-Group</b>	The name of the UNP network group that is designated as a group of destination IPv4 networks.
--------------------------	---

---

**Release History**

Release 8.5R4; command was introduced.

**Related Commands**

[unip router-auth user-group](#) Configures a router authentication user group.

```
alaDaUNPRouterAuthUserGroupTable
  alaDaUNPRouterAuthenticationName
  alaDaUNPRouterAuthenticationSrcGroup
  alaDaUNPRouterAuthenticationDestGroup
```

---

## show unip router-auth configuration

Displays the Captive Portal (CP) profile configuration that is used for router domain authentication.

**show unip router-auth configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If no CP profile is designated for this feature, then the global CP configuration is used.

### Examples

```
-> show unip router-auth configuration
    CP-Profile Name      : cp-profl

    CP Params:
      Captive Portal AAA Profile Name      = a1
      Captive Portal Success Redirect URL  = http://server-1.com/pass.html
      Captive Portal Retry Count           = 3
```

#### *output definitions*

---

<b>CP-Profile Name</b>	The name of the Captive Portal profile to use for router authentication. Configured through the <b>captive-portal-profile</b> command.
<b>Captive Portal AAA Profile Name</b>	The name of the AAA profile assigned to the CP profile. The AAA profile defines the session timeout value. Configured through the <b>captive-portal-profile</b> command.
<b>Captive Portal Success Redirect URL</b>	The URL to which a user is redirected after successful CP authentication. Configured through the <b>captive-portal success-redirect-url</b> command.
<b>Captive Portal Retry Count</b>	The number of login attempts a client is allowed. Configured through the <b>captive-portal retry-count</b> command.

---

## Release History

Release 8.5R4; command was introduced.

## Related Commands

**unip router-auth cp-profile** Specifies an existing CP profile to use for router authentication.

## MIB Objects

```
alaDaUNPRouterAuthenticationConfig  
  alaDaUNPRouterAuthCpProfileName
```

---

## show unip router-auth users

Displays information about users authenticating through the router authentication process.

```
show unip router-auth users [user-name cp_user_name] [ip-address ipv4_address] [auth-type {cp | ip}] [auth-status {pass | fail}]
```

---

### Syntax Definitions

<i>cp_user_name</i>	The Captive Portal (CP) user name for the router authentication user.
<i>ipv4_address</i>	The IPv4 address of the router authentication user.
<b>cp</b>	Displays only Captive Portal authenticated users.
<b>ip</b>	Displays only IP authenticated users.
<b>pass</b>	Displays only users that have successfully authenticated.
<b>fail</b>	Displays only users that have failed authentication.

### Defaults

By default, all router authenticated users are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results.
- The “Username” field displays either the user name that was entered to authenticate a user device through the Captive Portal process or the IP address of the user device if IP-authentication was used to authenticate the user.

### Examples

```
-> show unip router-auth users
  UserName      Destination      User-Group  Intf-Name/  Auth Auth   LoginTime
              IP-Network      Vlan        Type Status
-----+-----+-----+-----+-----+-----+-----+-----+
Guest-user1    70.0.0.1        DST-GRP1    L3-auth1:20 CP    Pass    06/20/2018 06:43:47
Employee-002   70.0.0.2        DST-GRP2    L3-auth2/30 CP    Fail    06/50/2018 02:00:02
40.1.1.20      70.0.0.3        DST-GRP3    L3-auth3/40 IP    Fail    07/20/2018 10:10:05
50.1.1.20      70.0.0.4        DST-GRP4    L3-auth4/50 IP    Pass    07/10/2018 05:14:10

Total users : 4
```

```
-> show unip router-auth users ip-address 40.1.1.20

```

Total users : 2

### *output definitions*

<b>UserName</b>	Displays either the IP address or Captive Portal user name for the learned user device.
<b>Destination IP-Network</b>	The destination IP network address for the user device.
<b>User-Group</b>	The name of the router authentication user group condition that matches the user device traffic.
<b>Intf-Name/VLAN</b>	The name of the IP interface and VLAN associated with the user device.
<b>Auth Type</b>	Indicates whether the user device attempted Captive Portal or IP-based authentication.
<b>Auth Status</b>	Indicates whether the user device passed or failed authentication.
<b>LoginTime</b>	The date and time the user logged into the network.

```
-> show unip router-auth users user-name Guest-user1
User-Name      : Guest-user1
IP-Address     : 20.0.0.5,
Destination IP-Network : 70.0.0.1,
Access Timestamp : 06/20/2018 06:43:47,
Interface-Name/Vlan : L3-auth1/20,
User-Group     : DST-GRP1,
Authentication-Type : CP,
Authentication-Status : Pass,
Session-Time Remaining(sec) : 1000 sec
```

```

-> show unip router-auth users user-name 40.1.1.20
User-Name                : 40.1.1.20

---

## unp classification port

Defines a Port classification rule for the specified UNP profile. If the UNP port or link aggregate on which the device traffic is received matches the port or link aggregate defined for the rule, the specified profile is applied to the device.

**unp classification** {port *chassis/slot/port1[-port2]* | linkagg [*agg\_id[-agg\_id2]*]} [vlan-tag *vlan\_id* | *outer\_vlan\_id:inner\_vlan\_id*] {profile1 *profile\_name* [profile2 *profile\_name*] [profile3 *profile\_name*]}

**no unp classification** {port *chassis/slot/port1[-port2]* | linkagg *agg\_id*} [profile1] [profile2] [profile3]

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).
[ <i>agg_id[-agg_id2]</i> ]	The link aggregate ID for a specific UNP link aggregate. Use a hyphen to specify a range of IDs (5-10).
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the Port rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- The Port rule configured for the specified profile is applied only to traffic learned on the specified UNP port or link aggregate.
- If a range of ports is specified with this command, any non-UNP ports within the range are skipped.
- When configuring a Port classification rule, specify an optional VLAN tag before specifying the UNP for which the rule will classify traffic.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is applied only to tagged packets that are received on the specified UNP port *and* that contain the VLAN ID tag.
- Untagged packets are only classified using the specified UNP port; the VLAN ID tag is ignored if it is specified with this rule.
- A Port classification rule can be combined with a MAC address rule and IP address rule to configure a port-based binding rule.

## Examples

```
-> unp classification port 1/1/5 vlan-tag 100 profile1 un1-vxlan profile2 un2-spb
-> unp classification port 1/1/10-15 profile1 un1-vlan profile2 un2-spb
-> no unp classification port 1/1/5 profile2
-> no unp classification port 1/1/5
```

```
-> unp classification linkagg 5 profile1 un1-vlan profile2 un2-vxlan profile3
unp3-spb
-> unp classification linkagg 6-10 vlan-tag 10:20 profile1 un1-vlan
-> no unp classification linkagg 5 profile3
-> no unp classification linkagg 5
```

Port + MAC address + IP address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 port 1/1/15 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 port 1/1/15
```

Port + MAC address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 port 1/1/5 profile1 Pr1
-> no unp classification mac-address 00:11:22:33:44:55 port 1/1/5
```

Port + IP address binding rule example:

```
-> unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10 profile1
Pr2
-> no unp classification ip-address 10.0.0.20 mask 255.255.0.0 port 1/1/10
```

## Release History

  alaDaUNPPortRuleProfile2  
  alaDaUNPPortRuleProfile3
```

---

## unp classification domain

Defines a Domain ID classification rule for the specified UNP profile. If the port or link aggregate on which the device traffic is received belongs to a Domain ID that matches the Domain ID defined for the rule, the specified profile is applied to the device.

**unp classification domain** *domain\_id* [**vlan-tag** *vlan\_id* | *outer\_vlan\_id:inner\_vlan\_id*] {**profile1** *profile\_name* [**profile2** *profile\_name*] [**profile3** *profile\_name*]}

**no unp classification domain** *domain\_id* [**profile1**] [**profile2**] [**profile3**]

---

### Syntax Definitions

<i>domain_id</i>	A domain ID number.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the domain ID rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a Port classification rule, specify an optional VLAN tag before specifying the UNP for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.

- When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets received on a UNP port associated with the Domain ID *and* tagged with the specified VLAN ID.
- Untagged packets are only classified using the specified domain ID; the VLAN ID tag is ignored if it is specified with this rule.
- A domain ID classification rule can be combined with a MAC address rule and an IP address rule to configure a domain-based binding rule.

## Examples

```
-> unp classification domain 10 profile1 un1-vlan
-> unp classification domain 20 vlan-tag 100 profile1 un1-vxlan profile2 un2-spb
profile3 un3-vlan
-> no unp classification domain 20 profile3
-> no unp classification domain 20
```

Domain ID + MAC address + IP address binding rule example:

```
-> unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 domain 10 profile1 Pr3
-> no unp classification mac-address 00:11:22:33:44:55 ip-address 10.0.0.20 mask
255.255.0.0 domain 10
```

  alaDaUNPCustDomainRuleProfile2
  alaDaUNPCustDomainRuleProfile3
```

## unp classification mac-address

Defines a MAC address classification rule for the specified UNP. If the source MAC address of the device traffic matches the MAC address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-address mac_address [domain domain_id] [vlan-tag vlan_id |
outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification mac-address mac_address [profile1] [profile2] [profile3]
```

---

### Syntax Definitions

<i>mac_address</i>	MAC address (e.g., 00:00:39:59:f1:0c).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the MAC address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a MAC address classification rule, specify and optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.

- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source MAC address *and* the VLAN ID tag.
- Untagged packets are only classified using the specified MAC address; the VLAN ID tag is ignored if it is configured for this rule.

## Examples

```
-> unp classification mac-address 00:11:22:33:44:55 profile1 CustA
-> unp classification mac-address 00:2a:95:00:00:01 vlan-tag 200 profile1 VNP1
profile2 vxlp-1
-> unp classification mac-address 00:2b:96:11:22:03 profile1 CustA profile2 VNP1
profile3 vxlp-1

## unp classification mac-oui

Defines a MAC address Organizationally Unique Identifier (OUI) classification rule for the specified UNP profile. If the OUI of the source MAC address of the device traffic matches the OUI defined for the rule, the specified profile is applied to the device.

```
unp classification mac-oui mac_oui [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1
profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification mac-oui mac_oui [profile1] [profile2] [profile3]
```

---

### Syntax Definitions

<i>mac_oui</i>	The first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the MAC OUI rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a MAC address OUI classification rule, specify and optional VLAN tag before specifying the UNP for which the rule will classify traffic.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source MAC address OUI *and* the VLAN ID tag.
- Untagged packets are only classified using the specified MAC address OUI; the VLAN ID tag is ignored if it is specified with this rule.

## Examples

```
-> unp classification mac-oui 00:11:22 profile1 unp1-vlan
-> unp classification mac-oui 00:11:33 vlan-tag 10 profile1 unp1-vlan profile2
unp2-spb profile3 unp3-vxlan
-> no classification mac-oui 00:11:33 profile3
-> no unp classification mac-oui 00:11:22
```

## Release History

Release 8.3.1; command was introduced.

```

## unp classification mac-range

Defines a MAC address range classification rule for the specified UNP. If the source MAC address of the device traffic matches any address within the range of MAC addresses, the specified UNP is applied to the device. An optional VLAN ID tag parameter is also available to specify a VLAN tag that device traffic must also match in addition to the source MAC address.

```
unp classification mac-range low_mac_address high_mac_address [domain domain_id] [vlan-tag
vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3
profile_name]}
```

```
no unp classification mac-range low_mac_address high_mac_address [profile1] [profile2] [profile3]
```

---

### Syntax Definitions

<i>low_mac_address</i>	MAC address that defines the low end of the range (e.g., 00:00:39:59:f1:00).
<i>high_mac_address</i>	MAC address that defines the high end of the range (e.g., 00:00:39:59:f1:90).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to remove the MAC address range rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a MAC address range classification rule, specify and optional VLAN tag and/or an optional domain ID before specifying the UNP for which the rule will classify traffic.
- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing a source MAC address within the specified range *and* the VLAN ID tag.
- Untagged packets are only classified using the specified MAC address range; the VLAN ID tag is ignored if it is specified with this rule.

## unp classification ip-address

Defines an IP network address classification rule for the specified UNP. If the source IP address of the device traffic matches the IP address defined for the rule, the specified UNP is applied to the device. An optional VLAN ID tag parameter is available to specify a VLAN tag that device traffic must also match in addition to the source IP address.

```
unp classification ip-address ip_address mask subnet_mask [domain domain_id] [vlan-tag vlan_id | outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification ip-address ip_address mask subnet_mask [profile1] [profile2] [profile3]
```

---

### Syntax Definitions

<i>ip_address</i>	IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>subnet_mask</i>	An IP address mask to identify the IP subnet for the interface (supports class-less masking).
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>vlan_id</i>	none
<i>domain_id</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove an IP network address rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- When configuring an IP network address classification rule, specify an optional VLAN tag and/or an optional customer domain ID before specifying the UNP for which the rule will classify traffic.
- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified source IP address *and* the VLAN ID tag.
- Untagged packets are only classified using the specified IP address; the VLAN ID tag is ignored if it is specified with this rule.

## Examples

```
-> unp classification ip-address 10.1.1.1 mask 255.255.255.0 profile1 CustA
-> unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile1 vNP1 profile2
vNP2
-> unp classification ip-address 50.1.1.1 mask 255.255.255.0 vlan-tag 300 profile1
CustB
-> unp classification ip-address 60.1.1.1 mask 255.255.0.0 domain 2 profile1 unp2
profile2 unp3-spb
-> unp classification ip-address 70.1.1.1 mask 255.255.0.0 domain 1 vlan-tag 20:30
profile1 vNP3
-> no unp classification ip-address 20.1.1.1 mask 255.255.0.0 profile2
-> no unp classification ip-address 10.1.1.1 mask 255.255.255.0
```

## Release History

```

---

## unp classification vlan-tag

Defines a VLAN tag classification rule for the specified UNP. If the VLAN ID tag of the device traffic matches the VLAN ID defined for the rule, the specified UNP is applied to the device.

**unp classification vlan-tag** {*vlan\_id* | *outer\_vlan\_id:inner\_vlan\_id*} [**domain** *domain\_id*] {**profile1** *profile\_name* [**profile2** *profile\_name*] [**profile3** *profile\_name*]}

**no unp classification vlan-tag** *vlan\_id* [**profile1**] [**profile2**] [**profile3**]

---

### Syntax Definitions

<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>domain_id</i>	An existing customer domain ID to which this rule will apply.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP.

parameter	default
<i>domain_id</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a VLAN tag rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring a VLAN tag classification rule, specify an optional customer domain ID before specifying the name of the UNP for which the rule will classify traffic.
- When a customer domain ID is configured for this rule, the rule is applied only to traffic received on UNP ports that are associated with the same domain ID. All UNP ports are automatically assigned to customer domain 0 at the time the port is configured as a UNP port.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- Untagged packets are not classified with this rule.

## Examples

```
-> unp classification vlan-tag 400 profile1 CustA
-> unp classification vlan-tag 10:20 domain 3 profile1 unp1 profile2 spb1
-> no unp classification vlan-tag 10:20 profile1
-> no unp classification vlan-tag 400
```

  alaDaUNPCustDomainVlanTagRuleProfile1
  alaDaUNPCustDomainVlanTagRuleProfile2
  alaDaUNPCustDomainVlanTagRuleProfile3
```

---

## unp classification lldp med-endpoint

Defines a Link Layer Discovery Protocol (LLDP) classification rule for the specified UNP profile. This rule is used specifically for IP phones and OmniAccess Stellar Access Point (AP) devices.

```
unp classification lldp med-endpoint {ip-phone | access-point} {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification lldp med-endpoint {ip-phone | access-point} [profile1] [profile2] [profile3]
```

---

### Syntax Definitions

<b>ip-phone</b>	When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
<b>access-point</b>	When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- There is a built-in LLDP classification rule for access points that is assigned to built-in profiles named “defaultWLANProfile” and “defaultWLANAccessProfile”. This rule facilitates the automatic detection and classification of OmniAccess Stellar APs that are connected to UNP bridge and access ports. Consider the following regarding the built-in LLDP access point rule:
  - The rule cannot be removed from the switch configuration. However, the profile designation for the rule can be changed.
  - The rule does not appear in the configuration snapshot for the switch unless the profile assignment for the rule was changed.
  - When Stellar APs are detected on a UNP bridge port, they are classified and assigned to the VLAN that is mapped to the built-in “defaultWLANProfile”. This VLAN is advertised to the AP device as the management VLAN for untagged AP traffic.
  - When Stellar APs are detected on a UNP access port, they are classified and assigned to the Shortest Path Bridging (SPB) service that is mapped to the built-in “defaultWLANAccessProfile”. This service is advertised to the AP device as the management service for untagged AP traffic.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.

- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).

## Examples

```
-> unp classification lldp med-endpoint ip-phone profile1 un1-vlan profile2 un2-  
vlan  
-> no unp classification lldp med-endpoint ip-phone profile2  
-> no unp classification lldp med-endpoint ip-phone  
  
-> unp classification lldp med-endpoint access-point profile1 defaultWLANProfile  
-> no unp classification lldp med-endpoint access-point  
ERROR: BUILT-IN Access-Point LLDP Rule cannot be deleted
```

## Release History

Release 8.3.1; command was introduced.

Release 8.4.1.R02; **access-point** parameter added.

## Related Commands

<a href="#">unp classification</a>	Configures the classification status for the UNP port. Rules are not applied when classification is disabled for the port.
<a href="#">unp profile</a>	Configures a UNP profile.
<a href="#">show unp classification</a>	Displays the UNP classification rule configuration.

## MIB Objects

```
alaDaUNPEndPoinRuleTable  
alaDaUNPEndPoinRuleId  
alaDaUNPEndPoinProfile1  
alaDaUNPEndPoinProfile2  
alaDaUNPEndPoinProfile3
```

---

## unp classification authentication-type

Defines an Authentication Type classification rule for the specified UNP profile. If the type of authentication applied to the device traffic matches the authentication type defined for the rule, the specified profile is applied to the device.

```
unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [vlan-tag vlan_id |
outer_vlan_id:inner_vlan_id] {profile1 profile_name [profile2 profile_name] [profile3 profile_name]}
```

```
no unp classification authentication-type {none | mac [fail] | 802.1x [fail]} [profile1] [profile2]
[profile3]
```

---

### Syntax Definitions

<b>none</b>	No authentication was applied to the device.
<b>mac</b>	The device was successfully authenticated through MAC authentication.
<b>802.1x</b>	The device was successfully authenticated through 802.1X authentication.
<b>fail</b>	Optional parameter to specify failed MAC or 802.1X authentication.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.
<i>profile_name</i>	The name of an existing UNP profile.

### Defaults

By default, no classification rules are defined for a UNP profile.

parameter	default
<i>vlan_id</i>	none

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule or one or more of the associated profiles. When a classification rule is removed or modified, all MAC addresses classified with that rule are flushed.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.

- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.
- Adding a UNP classification rule to the switch configuration does not cause a MAC address flush.
- When configuring this type of classification rule, specify an optional VLAN tag before specifying the UNP profile name for which the rule will classify traffic.
- Up to three different profile names are configurable for a classification rule. The profile applied to matching traffic is based on the order of precedence and mapping of each profile. For example:
  - Profiles mapped to a VLAN are applied only to matching traffic received on UNP bridge ports.
  - Profiles mapped to a service (SPB, VXLAN, or static) are only applied to matching traffic received on UNP access ports.
  - When a classification rule is configured with multiple profiles and traffic received on a UNP port matches the rule, each profile is checked in the order of precedence (**profile1** first, **profile2** second, and **profile3** third) to determine which profile is applied to the matching traffic.
- Configuring both a VLAN profile and a service profile for the same rule ensures that the rule will be applied to traffic received on both types of UNP ports (bridge and access).
- If a VLAN ID tag is specified with this command, the UNP is only applied to tagged packets containing the specified authentication type *and* the VLAN ID tag.
- Untagged packets are only classified using the specified authentication type; the VLAN ID tag is ignored if it is specified with this rule.

## Examples

```
-> unp classification authentication-type 802.1X profile1 un1-vlan profile2 un2-
vlan profile3 un3-vlan
-> no unp classification authentication-type 802.1X profile2
-> no unp classification authentication-type 802.1X

-> unp classification authentication-type 802.1X fail profile1 un1-vlan profile2
unp2-vlan profile3 un3-vlan
-> no unp classification authentication-type 802.1X fail profile3
-> no unp classification authentication-type 802.1X fail

-> unp classification authentication-type MAC profile1 un1-vlan profile2 un2-vlan
profile3 un3-vlan
-> no unp classification authentication-type MAC profile2
-> no unp classification authentication-type MAC

-> unp classification authentication-type MAC fail profile1 un1-vlan profile2
unp2-vlan profile3 un3-vlan
-> no unp classification authentication-type MAC fail profile3
-> no unp classification authentication-type MAC fail

-> unp classification authentication-type MAC vlan-tag 10 profile1 un1-vlan
profile2 un2-vlan profile3 un3-vlan
-> no unp classification authentication-type MAC profile2
-> no unp classification authentication-type MAC
```

## Release History

Release 8.3.1; command was introduced.

  alaDaUNPAuthRuleType  
  alaDaUNPAuthRuleVlanTag  
  alaDaUNPAuthRuleProfile1  
  alaDaUNPAuthRuleProfile2  
  alaDaUNPAuthRuleProfile3
```

---

## unp classification-rule

Configures an extended classification rule name and assigns a precedence value to the specified name. This type of rule defines a list of rule conditions, all of which a device must match to be classified into the UNP profile associated with the extended rule name.

**unp classification-rule** *rule\_name* [**precedence** *precedence\_value*] [**profile1** *profile\_name* [**profile2** *profile\_name*] [**profile3** *profile\_name*]]

**no unp classification-rule** *rule\_name* [**profile1**] [**profile2**] [**profile3**]

---

### Syntax Definitions

<i>rule_name</i>	The name to associate with the extended classification rule.
<i>precedence_value</i>	The precedence level to assign to the extended rule. The valid range is 1–255 (1 = lowest, 255 = highest). Precedence value 255 is reserved for Device Profiling classification rules.
<i>profile_name</i>	The name of an existing UNP profile to assign to the extended rule.

### Defaults

parameter	default
<i>precedence_value</i>	1
<i>profile_name</i>	none

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the extended rule from the switch configuration or to remove a UNP profile name assigned to the rule.
- The precedence value specified with this command is used to determine precedence among extended classification rules.
- Extended rules take precedence over all other UNP classification rules (individual rules and binding rule combinations).
- Although some individual classification rules can be combined to form a binding rule, a binding rule is not assigned a rule name and does not have a configurable precedence value. In addition, extended classification rules offer more rule combinations than binding rules.

- The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (these rules cannot be removed):
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

## Examples

```
-> unp classification-rule ext-r1
-> unp classification-rule ext-r1 profile1 UNP1 profile2 UNP2
-> unp classification-rule ext-r1 precedence 250

-> unp classification-rule ext-r2
-> unp classification-rule ext-r2 precedence 255
ERROR: Precedence 255 is reserved for Device Profiling
-> unp classification-rule ext-r2 precedence 254
-> unp classification-rule ext-r2 profile1 UNP3 profile2 UNP4 profile3 UNP5

-> no unp classification-rule ext-r1 profile1 UNP1
-> no unp classification-rule ext-r1

-> no unp classification-rule ext-r2 profile1 UNP4
-> no unp classification-rule ext-r2

-> no unp classification-rule devProfPrinter
ERROR: Device Profiling Rule cannot be modified
```

## Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **edge-profile** parameter deprecated; **profile1**, **profile2**, and **profile3** parameters added.

Release 8.5R2; precedence value 255 reserved for Device Profiling extended classification rules.

```

---

## unp classification-rule port

Defines a Port rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* {port *chassis/slot/port1*[-*port2*] | linkagg *agg\_id*}

**no unp classification-rule** *rule\_name* {port | linkagg}

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>chassis/slot/port</i> [- <i>port2</i> ]	The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i>	Link aggregate ID.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the Port rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 port 1/1/10
-> no unp classification-rule ext-r1 port

-> unp classification-rule ext-r2 port 1/1/1-5
-> no unp classification-rule ext-r2 port

-> unp classification-rule ext-r3 linkagg 10
-> unp classification-rule ext-r3 linkagg
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

```

  alaDaUNPClassifRuleName  
  alaDaUNPClassifRulePort
```

---

## unp classification-rule domain

Defines a domain ID rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **domain** *domain\_id*

**no unp classification-rule** *rule\_name* **domain**

---

### Syntax Definitions

*rule\_name* The name of an extended classification rule to which the rule condition is assigned.

*domain\_id* Domain ID number.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the Domain ID rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 domain-id GRP1
-> no unp classification-rule ext-r1 domain-id
```

### Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **group-id** parameter changed to **domain**.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleCustomerDomain
```

---

## unp classification-rule mac-address

Defines a MAC address, rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **mac-address** *mac\_address*

**no unp classification-rule** *rule\_name* **mac-address**

---

### Syntax Definitions

*rule\_name* The name of an extended classification rule to which the rule condition is assigned.

*mac\_address* MAC address (e.g., 00:00:39:59:f1:0c).

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 mac-address 00:11:22:33:44:55
-> no unp classification-rule ext-r1 mac-address
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated UNP profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleMacAddr
```

---

## unp classification-rule mac-oui

Defines a MAC OUI rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **mac-oui** *mac\_oui*

**no unp classification-rule** *rule\_name* **mac-oui**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>mac_address</i>	MAC address (e.g., 00:00:39:59:f1:0c).
<i>mac_oui</i>	The Organizationally Unique Identifier (OUI) of the MAC address. The OUI is the first three octets of the MAC address (for example, e8:39:35 is the OUI of MAC address e8:39:35:10:fe:11).

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 mac-oui 00:11:22
-> no unp classification-rule ext-r1 mac-oui
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleMacOuiAddr
```

---

## unp classification-rule mac-range

Defines a MAC address range rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **mac-range** *low\_mac\_address* *high\_mac\_address*

**no unp classification-rule** *rule\_name* **mac-range**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>low_mac_address</i>	MAC address that defines the low end of the range (for example, 00:00:39:59:f1:00).
<i>high_mac_address</i>	MAC address that defines the high end of the range (for example, 00:00:39:59:f1:90).

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- Configuring all three types of MAC rules (MAC address, MAC OUI, and MAC address range) for the same extended classification rule is not allowed. Only one type of MAC rule is configurable for a given extended classification rule.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 mac-range 00:11:22:33:44:55 00:11:22:33:44:66
-> no unp classification-rule ext-r1 mac-range
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleMacRngLoaddr  
  alaDaUNPClassifRuleMacRngHiaddr
```

---

## unp classification-rule ip-address

Defines an IP network address rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **ip-address** *ip\_address* **mask** *subnet\_mask*

**no unp classification-rule** *rule\_name* **ip-address**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>ip_address</i>	IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).
<i>subnet_mask</i>	An IP address mask to identify the IP subnet for the interface (supports class-less masking).

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 ip-address 10.0.0.20 mask 255.0.0.0
-> no unp classification-rule ext-r1 ip-address
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

## MIB Objects

alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleIpAddressType  
  alaDaUNPClassifRuleIpAddress  
  alaDaUNPClassifRuleIpMaskType  
  alaDaUNPClassifRuleIpMask
```

---

## unp classification-rule vlan-tag

Defines a VLAN tag rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **vlan-tag** [*vlan\_id* | *outer\_vlan\_id:inner\_vlan\_id*]

**no unp classification-rule vlan-tag**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the rule condition is assigned.
<i>vlan_id</i>	A VLAN ID to match single-tagged packets or the outer VLAN tag of double-tagged packets. Specify a value of zero to classify untagged traffic.
<i>outer_vlan_id:inner_vlan_id</i>	An outer VLAN ID and an inner VLAN ID to match double-tagged packets. For example, 10:20 specifies that only packets with an outer tag of 10 and an inner tag of 20 will match this rule.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.

### Examples

```
-> unp classification-rule ext-r1 vlan-tag 200
-> unp classification-rule ext-r2 vlan-tag 10:20
-> unp classification-rule ext-r3 vlan-tag 0
-> no unp classification-rule ext-r1 vlan-tag
```

### Release History

Release 8.2.1; command was introduced.

**Related Commands**

- unp classification-rule** Configures an extended classification rule name and associated profile.
- show unp classification-rule** Displays the UNP extended classification rule configuration.

**MIB Objects**

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleVlanTag
```

---

## unp classification-rule lldp med-endpoint

Defines an LLDP rule condition for the specified extended classification rule name. This rule condition is specifically to detect IP phone TLVs or OmniAccess Stellar Access Point (AP) TLVs.

**unp classification-rule *rule\_name* lldp med-endpoint {ip-phone | access-point}**

**no unp classification-rule *rule\_name* lldp med-endpoint ip-phone**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the port condition is assigned.
<b>ip-phone</b>	When LLDP TLVs from an IP phone are detected, apply the specified profile to the IP phone.
<b>access-point</b>	When LLDP TLVs from an OmniAccess Stellar AP are detected, apply the specified profile to the AP device.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- When using the **access-point** option to define this rule condition, make sure “defaultWLANProfile” is assigned as the profile for the specified extended classification rule name.

### Examples

```
-> unp classification-rule ext-r1 lldp med-endpoint ip-phone
-> no unp classification-rule ext-r1 lldp med-endpoint ip-phone

-> unp classification-rule AP profile1 defaultWLANProfile
-> unp classification-rule AP lldp med-endpoint access-point
-> no unp classification-rule AP lldp med-endpoint access-point
```

## Release History

Release 8.1.1; command was introduced.

Release 8.4.1.R02; **access-point** parameter added.

## Related Commands

|-------------------------------------|---|
| <b>unp classification-rule</b>      | Configures an extended classification rule name and associated profile. |
| <b>show unp classification-rule</b> | Displays the UNP extended classification rule configuration.            |

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleEndPoin
```

---

## unp classification-rule authentication-type

Defines an authentication type rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **authentication-type** {**none** | **mac** [**fail**] | **802.1x** [**fail**]}

**no unp classification-rule** *rule\_name* **authentication-type**

---

### Syntax Definitions

<i>rule_name</i>	The name of an extended classification rule to which the port condition is assigned.
<b>none</b>	No authentication was applied to the device.
<b>mac</b>	The device was successfully authenticated through MAC authentication.
<b>802.1x</b>	The device was successfully authenticated through 802.1X authentication.
<b>fail</b>	Optional parameter to specify failed MAC or 802.1X authentication.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the profile is applied.
- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the profile is applied.

### Examples

```
-> unp classification-rule ext-r1 authentication-type 8021x
-> unp classification-rule ext-r1 authentication-type 8021X fail
-> unp classification-rule ext-r1 authentication-type mac
-> unp classification-rule ext-r1 authentication-type mac fail
-> no unp classification-rule ext-r1 authentication-type
```

## Release History

Release 8.1.1; command was introduced.

```

---

## unp classification-rule device-type

Defines a Device Profiling rule condition for the specified extended classification rule name.

**unp classification-rule** *rule\_name* **device-type** *device\_name*

**no unp classification-rule** *rule\_name* **device-type**

---

### Syntax Definitions

*rule\_name* The name of an extended classification rule to which the rule condition is assigned.

*device\_name* The name of a device type to which the condition is assigned.

### Defaults

By default, no conditions are defined when an extended classification rule is created.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the rule condition from the specified extended classification rule name.
- If the extended classification rule name specified with this command does not exist, the switch will automatically create the extended rule name and associate the port rule condition with that name.
- The following extended classification rules are automatically defined when Device Profiling is enabled for the switch (the device type for these rules cannot be removed):
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> unp classification-rule ext-r1 device-type Printer
```

```
-> no unp classification-rule ext-r1 device-type
```

```
-> no unp classification-rule devProfPrinter device-type
ERROR: Device-type cannot be modified on built-in rules
```

## Release History

Release 8.5R2; command was introduced.

|-------------------------------------|---|
| <b>unp classification-rule</b>      | Configures an extended classification rule name and associated profile. |
| <b>show unp classification-rule</b> | Displays the UNP extended classification rule configuration.            |

## MIB Objects

```
alaDaUNPClassifRuleTable  
  alaDaUNPClassifRuleName  
  alaDaUNPClassifRuleDeviceType
```

---

## unp user-role

Configures a user-defined role name and assigns a precedence value to the specified name. This type of role is used to define a list of conditions and a QoS policy list name. If the current context of a device matches all of the role conditions, then the policy list is applied to that device.

**unp user-role** *role\_name* [**precedence** *precedence\_value*]

**no unp user-role** *role\_name*

---

### Syntax Definitions

<i>role_name</i>	The name to associate with the user-defined role.
<i>precedence_value</i>	The precedence level to assign to the user-defined role. The valid range is 1–255 (1 = lowest, 255 = highest).

### Defaults

parameter	default
<i>precedence_value</i>	1

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the user-defined role from the switch configuration.
- The precedence value specified with this command is used to determine precedence among other user-defined roles.
- Every time the user context changes for a device, all the user-defined roles are checked to see if there is a role that matches the current user context.
- Only one user-defined role per user is allowed because only one QoS policy list per user is allowed.

### Examples

```
-> unp user-role role1
-> unp user-role role2 precedence 255
-> no unp user-role role2
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>unp user-role policy-list</b>	Assigns a QoS policy list to a user-defined role.
<b>unp user-role profile</b>	Configures a UNP profile condition for a user-defined role name.
<b>unp user-role authentication-type</b>	Defines an authentication type condition for a user-defined role name.
<b>unp user-role cp-status-post-login</b>	Configures the Captive Portal post login status as a condition for a user-defined role.
<b>show unp user-role</b>	Displays the user-defined role configuration for the switch.

## MIB Objects

```
alaDaUNPUserRoleTable  
  alaDaUNPUserRoleName  
  alaDaUNPUserRolePrecedenceNum
```

---

## unp user-role policy-list

Assigns a QoS policy list to the specified user-defined role name. When the context of a user device matches all the user-defined role conditions, the policy list associated with the role is applied to the device.

**unp user-role** *role\_name* **policy-list** *list\_name*

**no unp user-role** *role\_name* **policy-list**

---

### Syntax Definitions

*role\_name* The name of a user-defined role to which the QoS policy list is assigned.

*list\_name* The name of an existing QoS policy list.

### Defaults

By default, no QoS policy list is assigned to a user-defined role.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a QoS policy list from the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the QoS policy list with that name.
- The QoS policy list name specified with this command must already exist in the switch configuration.

### Examples

```
-> unp user-role role1 policy-list role1-list
-> unp user-role role2 policy-list role2-list
-> no unp user-role role2 policy-list
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>unp user-role</b>	Configures the name and precedence for a user-defined role.
<b>policy list</b>	Configures a QoS policy list.
<b>show unp user-role</b>	Displays the user-defined role configuration for the switch.

## MIB Objects

```
alaDaUNPUserRoleTable  
  alaDaUNPUserRoleName  
  alaDaUNPUserRolePolicyList
```

---

## unp user-role profile

Defines a UNP profile condition for the specified user-defined role name.

**unp user-role** *role\_name* {**profile1** *profile\_name* [**profile2** *profile\_name*] [**profile3** *profile\_name*]}

**no unp user-role** *role\_name* [**profile1**] [**profile2**] [**profile3**]

---

### Syntax Definitions

*role\_name*                                   The name of a user-defined role.  
*profile\_name*                                The name of an existing UNP profile.

### Defaults

By default, the profile condition is not configured for a user-defined role.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the profile name as a condition for the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.
- The profile name specified with this command must already exist in the switch configuration.

### Examples

```
-> unp user-role role1 profile1 unp1
-> unp user-role role2 profile1 unp1 profile2 unp2
-> unp user-role role3 profile1 unp1 profile2 unp2 profile3 unp3
-> no unp user-role role1 profile1
-> no unp user-role role2 profile1 profile2
-> no unp user-role role3 profile3
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

**unp user-role**

Configures the name and precedence for a user-defined role.

**unp user-role policy-list**

Assigns a QoS policy list to a user-defined role.

**show unp user-role**

Displays the user-defined role configuration for the switch.

## MIB Objects

```
alaDaUNPUserRoleTable  
  alaDaUNPUserRoleName  
  alaDaUNPUserRoleProfile1  
  alaDaUNPUserRoleProfile2  
  alaDaUNPUserRoleProfile3
```

---

## unp user-role authentication-type

Defines an authentication type condition for the specified user-defined role name.

**unp user-role** *role\_name* **authentication-type** {**none** | **mac** [**fail**] | **802.1x** [**fail**]}

**no unp user-role** *role\_name* **authentication-type**

---

### Syntax Definitions

<i>role_name</i>	The name of a user-defined role.
<b>none</b>	No authentication was applied to the device.
<b>mac</b>	The device was successfully authenticated through MAC authentication.
<b>802.1x</b>	The device was successfully authenticated through 802.1X authentication.
<b>fail</b>	Optional parameter to specify failed MAC or 802.1X authentication.

### Defaults

By default, the authentication type condition is not configured for a user-defined role.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the authentication type as a condition for the specified user-defined role.
- If the user-defined role name specified with this command does not exist, the switch will automatically create the role name and associate the profile with that name.
- The optional **fail** parameter is used only in combination with the **mac** or **802.1x** parameter. When configured, the device is checked for a failed MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.
- When the **fail** parameter is not specified (the default), the device is checked for a successful MAC or 802.1X authentication condition to determine whether or not the user role (policy list associated with the user role) is applied to the device.

### Examples

```
-> unp user-role role1 authentication-type 8021x
-> unp user-role role1 authentication-type 8021X fail
-> unp user-role role1 authentication-type mac
-> unp user-role role1 authentication-type mac fail
-> no unp user-role role1 authentication-type
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[unp user-role](#)

Configures the name and precedence for a user-defined role.

[unp user-role policy-list](#)

Assigns a QoS policy list to a user-defined role.

[show unp user-role](#)

Displays the user-defined role configuration for the switch.

## MIB Objects

alaDaUNPUserRoleTable

alaDaUNPUserRoleName

alaDaUNPUserRoleAuthType

---

## unp user-role cp-status-post-login

Configures the Captive Portal (CP) post login status as a condition for the specified user-defined role name.

**unp user-role** *role\_name* **cp-status-post-login**

**no unp user-role** *role\_name* **cp-status-post-login**

---

### Syntax Definitions

*role\_name* The name of an existing user-defined role.

### Defaults

By default, the CP post login status condition is not configured for a user-defined role.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the CP post login status as a condition for the specified user-defined role.
- When this condition is active for a user-defined role, the switch will check to see if a device is in a CP post login state before applying the QoS policy list associated with the user-defined role.

### Examples

```
-> unp user-role role1 cp-status-post-login
-> no unp user-role role1 cp-status-post-login
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

**unp user-role**

Configures the name and precedence for a user-defined role.

**unp user-role policy-list**

Assigns a QoS policy list to a user-defined role.

**show unp user-role**

Displays the user-defined role configuration for the switch.

## MIB Objects

alaDaUNPUserRoleTable

alaDaUNPUserRoleName

alaDaUNPUserRolePostLoginStatus

---

## unp restricted-role policy-list

Assigns an explicit QoS policy list to an implicit restricted role. When the switch assigns a user device to one of the restricted role states (unauthorized, Quarantine Manager, or Captive Portal pre-login), the explicit QoS policy list is applied instead of the built-in policy list associated with the restricted role.

**unp restricted-role {unauthorized | qmr | cp-prelogin} policy-list *list\_name***

**no unp restricted-role {unauthorized | qmr | cp-prelogin} policy-list**

---

### Syntax Definitions

<i>list_name</i>	The name of an existing QoS policy list.
<b>unauthorized</b>	Applies the explicit policy list to unauthorized devices.
<b>qmr</b>	Applies the explicit policy list to quarantined devices. <i>Supported only on OmniSwitch 6860 and OmniSwitch 6865.</i>
<b>cp-prelogin</b>	Applies the explicit policy list to devices in a Captive Portal pre-login state. <i>Not supported on OmniSwitch 6900.</i>

### Defaults

By default, the built-in policy list associated with the restricted role state.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the explicit QoS policy list assignment.
- An explicit QoS policy list overrides the built-in policy list associated with the restricted role state.
- When the explicit policy list assignment is removed, the switch reverts back to using the built-in policy list associated with the restricted role state.

### Examples

```
-> unp restricted-role unauthorized policy-list unauth1
-> unp restricted-role qmr policy-list quarantined1
-> unp restricted-role cp-prelogin policy-list cplogin1
-> no unp restricted-role unauthorized
-> no unp restricted-role qmr
-> no unp restricted-role cp-prelogin
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

[policy list](#)

Configures a QoS policy list.

[show unp restricted-role](#)

Displays the UNP restricted role policy list configuration.

## MIB Objects

alaDaUNPRstrctedRoleTable

alaDaUNPRstrctedRoleType

alaDaUNPRstrctedRolePolicyList

---

## captive-portal mode

Configures the Captive Portal mode of operation.

**captive-portal mode** {**internal** | **internal dhcp** [**ip-lease-time** *seconds*] [**ip-renew-time** *seconds*] [**ip-rebinding-time** *seconds*] | **external**}

**no captive-portal mode internal**

---

### Syntax Definitions

<b>internal</b>	Internal Captive Portal (Web server is on the switch. A VLAN change requires a port bounce).
<b>internal dhcp</b>	Internal DHCP Captive Portal (Web server is on the switch. IP address from Captive Portal subnet is leased to the client; VLAN change does not require a port bounce).
<b>ip-lease-time</b> <i>seconds</i>	The amount of time an IP address is leased to a client. The valid range is 20–120 seconds.
<b>ip-renew-time</b> <i>seconds</i>	The amount of time until a client with a leased IP address attempts to renew the leased IP address.
<b>ip-rebinding-time</b> <i>seconds</i>	The amount of time until a client attempts to obtain a new leased IP address (occurs when renew attempts fail).
<b>external</b>	Not supported; an external Captive Portal operation is provided through the OmniSwitch Bring Your Own Device (BYOD) solution.

### Defaults

By default, the mode is set to internal Captive Portal. When the internal DHCP Captive Portal mode is selected without specifying any optional parameter values, the following default values are set:

parameter	default
<b>ip-lease-time</b>	30 seconds
<b>ip-renew-time</b>	15 seconds
<b>ip-rebinding-time</b>	26 seconds

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to revert the Captive Portal mode back to the default internal mode (no internal DHCP functionality).
- Only the internal and internal DHCP Captive Portal modes (Web server on the switch) are configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.
- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. The Captive Portal mode determines how a device in the pre-login state obtains an IP address, the necessary DNS information, and whether a port bounce is required after a VLAN change.
  - If the internal Captive Portal mode (the default) is active, the device can directly contact a DHCP server to get an IP address and DNS information. A port bounce action is required if the initial VLAN assignment for the device is changed.
  - If the internal DHCP Captive Portal mode is active, the switch provides basic DHCP functionality to assign the device an IP address with a short-term lease from the Captive Portal subnet (10.123.0.0) and provide the necessary DNS information. A port bounce action is not required if the initial VLAN assignment for the device is changed.
- Consider the following when changing the internal DHCP parameter values:
  - The **ip-renew-time** is 50% of the **ip-lease-time**.
  - The **ip-rebinding-time** is 87.5% of the **ip-lease-time**.
  - When only the **ip-lease-time** is changed, the **ip-renew-time** and **ip-rebinding-time** are automatically recalculated based on the noted percentages.
  - Make sure the **ip-renew-time** specified is less than the **ip-rebinding-time**.
  - Make sure the **ip-rebinding-time** specified falls between the **ip-renew-time** and **ip-lease-time**.

## Examples

```
-> captive-portal mode internal-dhcp
-> captive-portal mode internal-dhcp ip-lease-time 120
-> captive-portal mode internal
-> no captive-portal mode internal
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

**show captive-portal configuration** Displays the global Captive Portal configuration for the switch.

alaDaCPortalGlobalConfig
  alaDaCPortalMode
  alaDaCPortalDHCPLeaseTime
  alaDaCPortalDHCPRenewTime
  alaDaCPortalDHCPRebindingTime
```

## captive-portal name

Configures an IP address or Fully Qualified Domain Name (FQDN) as a redirect URL to use for Captive Portal.

**captive-portal name** {*ip\_address* / *domain\_name*}

**no captive-portal name**

---

### Syntax Definitions

<i>ip_address</i>	The IPv4 network address (e.g., 171.15.0.0) to which HTTP traffic is redirected.
<i>domain_name</i>	An FQDN (up to 32 characters) to which HTTP traffic is redirected.

### Defaults

By default, the Captive Portal redirect name is set to “captive-portal.com”.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to revert the URL name back to the default “captive-portal.com”.
- Use this command to change the Captive Portal redirect URL name to match the common name (cn) used by the public certificate on the switch. Matching these two names prevents a certificate warning message caused when these names do not match.

---

**Note.** Do not preface the redirect URL domain name with **https://**; the switch automatically adds **https://** to the beginning of the domain name.

---

- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login state. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.
- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login Web pages to the user device.
- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.

## Examples

```
-> captive-portal name cert-name  
-> captive-portal name "20.2.2.1"  
-> no captive-portal name
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

<a href="#">captive-portal ip-address</a>	Configures the internal Captive Portal IP address for the switch.
<a href="#">show captive-portal configuration</a>	Displays the global Captive Portal configuration for the switch.

## MIB Objects

```
alaDaCPortalGlobalConfig  
  alaDaCPortalRedirectUrlName
```

---

## captive-portal ip-address

Configures the internal Captive Portal IP address for the switch.

**captive-portal ip-address** *ip\_address*

---

### Syntax Definitions

*ip\_address* IPv4 network address (e.g., 10.0.0.0, 171.15.0.0, 196.190.254.0).

### Defaults

By default, the internal Captive Portal IP address is set to 10.123.0.1.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the default 10.123.0.0 subnet is already in use, then use this command to change the Captive Portal IP address to another 10.x.0.0 subnet (only the second octet of the Captive Portal IP address can be changed).
- When a device is classified into a UNP profile that has the Captive Portal authentication attribute enabled, the device is placed into a Captive Portal pre-login role. In this state, the device can contact a DHCP server to get an IP address and get the DNS server address.
- Initial HTTP requests received from a user device are responded to with the Captive Portal redirect name. The user device contacts the DNS server to resolve the redirect URL name and receives the Captive Portal IP address. Requests are then sent to the Captive Portal IP address that is mapped internally to the OmniSwitch web server, which then presents login web pages to the user device.
- Make sure the DNS server configuration reflects the same Captive Portal name and IP address that is configured for the OmniSwitch.

### Examples

```
-> captive-portal ip-address 10.255.0.20
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

### **captive-portal name**

Configures the name of the redirect URL that is used for accessing a public certificate.

### **show captive-portal configuration**

Displays the global Captive Portal configuration for the switch.

## MIB Objects

alaDaCPortalGlobalConfig

alaDaCPortalIpAddress

---

## captive-portal success-redirect-url

Configures the URL of a specific site to which a user is redirected after a successful Captive Portal authentication.

**captive-portal success-redirect-url** *redirect\_url*

**no captive-portal success-redirect-url**

---

### Syntax Definitions

*redirect\_url*                      The redirect URL (up to 63 characters).

### Defaults

By default, no success redirect URL is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of this command to remove the success redirect URL from the Captive Portal global configuration.

### Examples

```
-> captive-portal success-redirect-url http://server-1.com/pass.html
-> no captive-portal success-redirect-url
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[show captive-portal configuration](#)                      Displays the global Captive Portal configuration for the switch.

### MIB Objects

```
alaDaCPortalGlobalConfig

```

---

## captive-portal proxy-server-port

Configures the proxy server port to use for Captive Portal.

**captive-portal proxy-server-port** *proxy\_port*

**no captive-portal proxy-server-port**

---

### Syntax Definitions

*proxy\_port* The HTTP proxy port number. The valid range is 1024–49151.

### Defaults

By default, the proxy server port number is set to 8080.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to set the proxy port number back to the default (8080).
- This command overwrites the existing proxy port number for the switch.
- The proxy port number only requires changing if the proxy port used is not 80 or 8080.

### Examples

```
-> captive-portal proxy-server-port 1200
-> no captive-portal proxy-server-port
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[show captive-portal configuration](#) Displays the global Captive Portal configuration for the switch.

### MIB Objects

```
alaDaCPortalGlobalConfig
  alaDaCPortalProxyPort
```

---

## captive-portal retry-count

Configures the number of times a device can try to login before Captive Portal determines that authentication for that device has failed.

**captive-portal retry-count** *retries*

---

### Syntax Definitions

*retries* The number of login attempts allowed. The valid range is 1–99.

### Defaults

By default, the retry count is set to 3.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

No access page is sent to devices that exceed the number of login retries allowed.

### Examples

```
-> captive-portal retry-count 5
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

**[show captive-portal configuration](#)** Displays the global Captive Portal configuration for the switch.

### MIB Objects

```
alaDaCPortalGlobalConfig
  alaDaCPortalRetryCnt
```

---

## captive-portal authentication-pass

Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process. Each policy can specify a QoS policy list and UNP profile name to assign to the authenticated devices.

```
captive-portal authentication-pass {policy-list list_name | profile profile_name | profile-change
{enable | disable}}
```

```
no captive-portal authentication-pass {policy-list | profile}
```

---

### Syntax Definitions

<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
<b>enable</b>	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
<b>disable</b>	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

### Defaults

By default, no policy list name or UNP profile name is specified for the global Captive Portal configuration.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal authentication pass policy from the global Captive Portal configuration.
- When the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal users is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is applied to the authenticated users.
- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.
- If the new UNP profile assigned also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.
- When the **profile-change** parameter is disabled, the QoS policy list name returned from the RADIUS server or the list name specified with this command is applied instead.

- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
  - The policy list name returned from the RADIUS server.
  - The policy list name specified with this command for the global Captive Portal configuration.
  - The policy list name associated with the UNP profile returned from the RADIUS server.
  - The policy list name associated with the UNP profile specified with this command for the global Captive Portal configuration.
- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

## Examples

```
-> captive-portal authentication-pass policy-list list1
-> captive-portal authentication-pass profile unpl-vlan profile-change enable
-> captive-portal authentication-pass profile-change disable
-> no captive-portal authentication-pass policy-list
-> no captive-portal authentication-pass profile
```

## Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

## Related Commands

**captive-portal authentication-pass domain** Configures a domain specific authentication pass policy to determine the QoS policy list or UNP profile name to apply to authenticated devices. This type of policy overrides the global Captive Portal configuration.

**show captive-portal configuration** Displays the global Captive Portal configuration for the switch.

## MIB Objects

```
alaDaCPortalGlobalConfig
  alaDaCPortalPolicyListName
  alaDaCPortalUNPProfile
  alaDaCPortalUNPProfileChange
```

---

## captive-portal authentication-pass domain

Configures a domain specific authentication pass policy. This type of policy is applied to all devices within the specified domain that were successfully authenticated through the Captive Portal process.

**captive-portal authentication-pass realm {prefix | suffix} domain *domain\_name* {policy-list *list\_name* | profile *profile\_name* | profile-change {enable | disable}}**

**no captive-portal authentication-pass [realm {prefix | suffix} domain *domain\_name*]**

---

### Syntax Definitions

<b>prefix</b>	Specifies a prefix domain name (for example, <i>domain_name</i> /user).
<b>suffix</b>	Specifies a suffix domain name (for example, user@ <i>domain_name</i> )
<i>domain_name</i>	The domain name for the user device.
<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
<b>enable</b>	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
<b>disable</b>	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

### Defaults

By default, no domain specific authentication pass policy is configured for the Captive Portal process.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the domain specific authentication pass policy from the Captive Portal configuration.
- Use the **realm prefix domain** or **realm suffix domain** parameter to apply the authentication policy list or UNP profile based on the domain name of the Captive Portal authenticated user device.
- If the **profile-change** parameter is enabled, the profile initially assigned to the Captive Portal user is changed to the profile derived through successful Captive Portal authentication. The QoS policy list associated with the new profile is then applied to the authenticated users.
- When a profile change occurs, the new profile may assign a different VLAN to the authenticated device. This new VLAN assignment is functional only after a port bounce or pause timer operation is completed. Existing Bring Your Own Device (BYOD) global commands are leveraged to configure the port bounce and pause timer values.

- If the new profile assigned to the user also has Captive Portal authentication enabled, the process is not started again. The results from the initial Captive Portal authentication process are used instead.
- If the **profile-change** parameter is disabled, then the QoS policy list name returned from the RADIUS server or the list name specified through the global (non-domain specific) Captive Portal configuration is applied.
- The QoS policy list to apply to Captive Portal authenticated devices is derived through one of the following methods:
  - The policy list name returned from the RADIUS server.
  - The policy list name specified with this command or through the global Captive Portal configuration.
  - The policy list name associated with the UNP profile returned from the RADIUS server.
  - The policy list name associated with the UNP profile specified with this command or through the global Captive Portal configuration.
- A policy list name or a UNP profile name returned from the RADIUS server takes precedence over the policy list name or UNP profile name configured through this command.

## Examples

```
-> captive-portal authentication-pass realm prefix domain asia-pacific policy-list
list2
-> captive-portal authentication-pass realm suffix domain north-america profile
unp2 profile-change enable
-> no captive-portal authentication-pass realm suffix domain north-america
```

## Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

## Related Commands

**captive-portal authentication-pass** Configures a global authentication pass policy. This type of policy is applied to all devices successfully authenticated through the Captive Portal process.

**show captive-portal configuration** Displays the global Captive Portal configuration for the switch.

## MIB Objects

```
alaDaCPortalAuthPassTable
  alaDaCPortalAuthDomainName
  alaDaCPortalAuthRealm
  alaDaCPortalAuthPolicyListName
  alaDaCPortalAuthRowStatus
  alaDaCPortalAuthUNPProfile
  alaDaCPortalAuthUNPProfileChange
```

## captive-portal-profile

Configures a Captive Portal profile that is assigned to a UNP profile. This type of profile defines Captive Portal configuration options that are applied to devices classified into the assigned UNP profile. This command page describes the base command (**captive-portal-profile** *profile\_name*) along with the other command keywords that are used to configure profile attributes.

```
captive-portal-profile profile_name
  [aaa-profile aaa_profile_name]
  [success-redirect-url redirect_url]
  [retry-count retries]
  [authentication-pass [realm {prefix | suffix} domain domain_name] {policy-list list_name | profile
profile_name | profile-change {enable | disable}}
```

```
no captive-portal-profile profile_name
```

---

### Syntax Definitions

<i>profile_name</i>	The name to assign to the Captive Portal profile (up to 32 characters).
<i>aaa_profile_name</i>	The name of an authentication, authorization, and accounting (AAA) profile to associate with the Captive Portal profile.
<i>redirect_url</i>	A URL (up to 63 characters) to which user devices are redirected after successful Captive Portal authentication.
<i>retries</i>	The number of login attempts allowed. The range is 1–99.
<b>realm prefix</b>	Specifies a prefix domain name (for example, <i>domain_name</i> /user).
<b>realm suffix</b>	Specifies a suffix domain name (for example, user@ <i>domain_name</i> ).
<i>domain_name</i>	The domain name for the user device.
<i>list_name</i>	The name of a QoS policy list to apply to the authenticated user device.
<i>profile_name</i>	The name of an existing UNP profile.
<b>enable</b>	Enables the profile change operation. Authenticated devices are assigned to the specified profile name.
<b>disable</b>	Disables the profile change operation. Authenticated devices are not assigned to a new profile.

### Defaults

parameter	default
<i>aaa_profile_name</i>	none
<i>redirect_url</i>	none
<i>retries</i>	3
<b>realm prefix   suffix</b>	none
<i>domain_name</i>	none
<i>list_name</i>	none
<i>profile_name</i>	none
<b>enable   disable</b>	disabled

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to remove the Captive Portal profile from the switch configuration.
- Creating a Captive Portal profile name with the base command (**captive-portal-profile** *profile\_name*) is not required to configure a profile attribute value. If the profile name does not exist, the switch will automatically create the name specified when the attribute is configured. For example, the **unp captive-portal-profile cp-prof1 retry-count 5** command will create the “cp-prof1” profile if it does not already exist in the switch configuration.
- When a Captive Portal profile is applied to a UNP profile, the parameter values defined in the profile override the global Captive Portal parameter values configured for the switch.
- A Captive Portal profile is applied only when Captive Portal authentication is enabled for the UNP profile. If there is no Captive Portal profile associated with a UNP profile, then the global Captive Portal configuration is applied.
- Assigning an AAA profile to a Captive Portal profile defines specific AAA configuration options (such as RADIUS servers and RADIUS client attributes) that are used for Captive Portal authentication. If there is no AAA profile assigned, then the global AAA configuration is used.
- AAA profiles are configured using the **aaa profile** command. See the “AAA Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide* for more information.

## Examples

```
-> captive-portal-profile cp-p1
-> captive-portal-profile cp-p1 aaa-profile aaa_p1
-> captive-portal-profile cp-p1 authentication-pass realm prefix domain asia-
pacific policy-list list1
-> no captive-portal-profile cp-p1 aaa-profile aaa_p1
-> no captive-portal-profile cp-p1

-> captive-portal-profile cp-p2 retry-count 5
-> captive-portal-profile cp-p2 authentication-pass profile ep-1
-> captive-portal-profile cp-p2 authentication-pass profile-change enable
-> captive-portal-profile cp-p2 success-redirect-url http://server-1.com/pass.html
-> captive-portal-profile cp-p2 authentication-pass profile-change disable
-> no captive-portal-profile cp-p2 authentication-pass profile
-> no captive-portal-profile cp-p2
```

## Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **edge-profile** and **edge-profile-change** parameters added.

Release 8.3.1; **edge-profile** and **edge-profile-change** parameters changed to **profile** and **profile-change**.

```

---

## captive-portal customization

Enables or disables the use of custom Web pages for Captive Portal authentication. When customization is enabled, Captive Portal presents Web pages stored in the “/flash/switch/captive\_portal/custom\_files/” directory on the switch. When customization is disabled, Captive Portal presents Web pages stored in the “/flash/switch/captive\_portal/release\_files/” directory on the switch.

**captive-portal customization {enable | disable}**

---

### Syntax Definitions

**enable** Displays custom web pages for Captive Portal authentication.

**disable** Displays default web pages for Captive Portal authentication.

### Defaults

By default, the web pages provided on the switch are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To create custom Web pages, create a folder in the same path as the “release\_files” folder and name the new folder “custom\_files” (for example “/flash/switch/captive\_portal/custom\_files/”). Next, copy the “assets” and “templates” folders found under “/flash/switch/captive\_portal/release\_files/” to the “custom\_files” folder. Modify the contents in the copied folders to create custom Web pages.
- The “release\_files” folder is overwritten each time the switch reboots, so **DO NOT** modify the files in this folder for custom use.
- The folders “assets” and “templates” under the /flash/switch/captive\_portal/custom\_files/ directory are used to create and display Web pages to Captive Portal users when the switch reboots or at runtime when Captive Portal customization is enabled for the switch, if the “custom\_files” folder exists.
- Anything in the custom “assets” folder is statically served by the internal Web server on the switch whenever they are requested. These pages are typically .css files, javascript files, or the acceptable use policy and are linked to files in the custom “templates” folder.
- The custom “templates” folder contains the Web pages that are dynamically served to users depending on the Captive Portal state of each user. The file names in this folder must not be changed. The login form field names and form action in these pages must not be changed. The variables in these pages, as denoted by “<?=\$(name)?>”, are substituted in place by the internal Web server.

### Examples

```
-> captive-portal customization enable
-> captive-portal customization disable
```

## Release History

Release 8.1.1; command was introduced.

## Related Commands

[show captive-portal configuration](#)

Displays the global Captive Portal configuration for the switch.

## MIB Objects

alaDaCPortalGlobalConfig  
alaDaCPortalCustomization

---

## show captive-portal configuration

Displays the global Captive Portal parameter settings configured for the switch.

### show captive-portal configuration

---

#### Syntax Definitions

N/A

#### Defaults

N/A

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

#### Usage Guidelines

- Currently only the internal Captive Portal mode (Web server on the switch) is configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.
- The parameter values configured and applied through a Captive Portal profile override any values set through the global Captive Portal configuration. A Captive Portal profile is associated with a UNP profile and is applied to devices classified into that profile.

#### Examples

```
-> show captive-portal configuration
Captive Portal Global Configuration:
```

```
Captive Portal Mode                = Internal
DHCP Parameters:
  DHCP Lease Time                   = 30
  DHCP Renew Time                   = 15
  DHCP Rebinding Time               = 26
Captive Portal IP address           = 10.123.0.1
Captive Portal Redirect String      = captive-portal.com
Captive Portal Success Redirect URL =
Captive Portal Proxy Server Port    = 8080
Captive Portal Retry Count          = 3
Captive Portal Global Auth Policy List=
Captive Portal Page Customization   = Disable
Captive Portal Profile Name         =
Captive Portal Profile Change       = Disable
Domain Specific Policy Lists:
  Domain      | Realm | Policy List | Profile Name | Profile
```

-----					Change			
na01		Suffix		qos-bw1		unp1-vlan		Enable
na02		Prefix		qos-bw2		unp2-vlan		Enable

### *output definitions*

<b>Captive Portal Mode</b>	The Captive Portal mode of operation. Only the internal and internal DHCP modes (Web server on the OmniSwitch) are supported at this time. Configured through the <b>captive-portal mode</b> command.
<b>DHCP Parameters:</b>	A list of DHCP parameter values that are applied when the internal DHCP mode is active. These fields display “N/A” when the internal DHCP mode is not active. Configured through the <b>captive-portal mode</b> command.
<b>DHCP Lease Time</b>	The amount of time an IP address is leased to a DHCP client.
<b>DHCP Renew Time</b>	The amount of time, in seconds, until an attempt is made to renew the leased IP address (50% of the DHCP Lease Time).
<b>DHCP Rebinding Time</b>	The amount of time until an attempt is made to obtain a new IP leased address (87.5% of the DHCP Lease Time).
<b>Captive Portal IP address</b>	The internal Captive Portal IP address for the switch. Configured through the <b>captive-portal ip-address</b> command.
<b>Captive Portal Redirect String</b>	The name of the redirect URL that is used for accessing a public certificate. Configured through the <b>captive-portal name</b> command.
<b>Captive Portal Success Redirect URL</b>	The URL of a specific site to which a user is redirected after a successful Captive Portal authentication. Configured through the <b>captive-portal success-redirect-url</b> command.
<b>Captive Portal Proxy Server Port</b>	The proxy server port to use for Captive Portal. Configured through the <b>captive-portal proxy-server-port</b> command.
<b>Captive Portal Retry Count</b>	The number of times a device can try to login before Captive Portal determines that authentication for that device has failed. Configured through the <b>captive-portal retry-count</b> command.
<b>Captive Portal Global Auth Policy List</b>	The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication. Configured through the <b>captive-portal authentication-pass</b> command.
<b>Captive Portal Page Customization</b>	Whether or not ( <b>Enable</b> or <b>Disable</b> ) customized Captive Portal pages are presented to the user.
<b>Captive Portal Profile Name</b>	The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled. Configured through the <b>captive-portal authentication-pass</b> command.
<b>Captive Portal Profile Change</b>	The status of profile change ( <b>Enable</b> or <b>Disable</b> ). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option. Configured through the <b>captive-portal authentication-pass</b> command.

---

*output definitions*

---

<b>Domain Specific Policy Lists:</b>	A list of Captive Portal domain specific policies. The policy list is applied when the domain for a Captive Portal authenticated device matches the domain criteria associated with the list. Domain specific policies take precedence over the global Captive Portal settings.
<b>Domain</b>	The domain name associated with a domain specific policy. Configured through the <b>captive-portal authentication-pass domain</b> command.
<b>Realm</b>	The realm of the domain name ( <b>prefix</b> or <b>suffix</b> ) associated with a domain specific policy. The realm identifies the domain name as a prefix ( <i>domain-name/user</i> ) or as a suffix ( <i>user@domain-name</i> ). Configured through the <b>captive-portal authentication-pass domain</b> command.
<b>Policy List</b>	The name of the QoS policy list that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the list name. Configured through the <b>captive-portal authentication-pass domain</b> command.
<b>Profile Name</b>	The name of the UNP profile that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the profile name. Configured through the <b>captive-portal authentication-pass domain</b> command.
<b>Profile Change</b>	The status of profile change ( <b>Enable</b> or <b>Disable</b> ) for the associated domain name. When enabled, the initial profile assigned to the Captive Portal device is changed to the profile specified through the profile change option associated with the domain name. Configured through the <b>captive-portal authentication-pass domain</b> command.

## show captive-portal profile-names

Displays the Captive Portal profile configuration for the switch. The parameter values configured and applied through a Captive Portal profile override any values set through the global Captive Portal configuration.

**show captive-portal {profile-names | profile-name *profile\_name* configuration}**

---

### Syntax Definitions

**profile-names** Displays a list of configured Captive Portal profiles.

**profile-name *profile\_name* configuration** Displays the Captive Portal parameter configuration for the specified profile name.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Currently only the internal Captive Portal mode (Web server on the switch) is configurable for the switch. An external Captive Portal operation is provided through interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch BYOD solution.

### Examples

```
-> show captive-portal profile-names
```

```

      Captive Portal Profile Names
-----
 1. cp1
 2. cp2
 3. cp3

```

```
-> show captive-portal profile-name cp1 configuration
```

```

Captive Portal Profile cp1 Configuration:
  Captive Portal Mode           = Internal
  Captive Portal AAA Profile Name =
  Captive Portal Success Redirect URL =
  Captive Portal Retry Count    = 3
  Captive Portal Global Auth Policy List =
  Captive Portal Profile Name   =
  Captive Portal Profile Change = Disable
  Domain Specific Policy Lists:

```

Domain	Realm	Policy List	Profile Name	Profile Change
na01	Suffix	qos-bw1	unp1-vlan	Enable
na02	Prefix	qos-bw2	unp2-vlan	Enable

### output definitions

<b>Captive Portal Mode</b>	The Captive Portal mode of operation. Only internal mode (Web server on the OmniSwitch) is supported at this time.
<b>Captive Portal AAA Profile Name</b>	The name of an authentication, authorization, and accounting (AAA) profile associated with the Captive Portal profile.
<b>Captive Portal Success Redirect URL</b>	The URL of a specific site to which a user is redirected after a successful Captive Portal authentication.
<b>Captive Portal Retry Count</b>	The number of times a device can try to login before Captive Portal determines that authentication for that device has failed.
<b>Captive Portal Global Auth Policy List</b>	The name of a QoS policy list for the global Captive Portal configuration. The specified list is applied to each device that passes Captive Portal authentication.
<b>Captive Portal Profile Name</b>	The name of a UNP profile for the global Captive Portal configuration. The specified profile is only applied to Captive Portal authenticated devices when the Captive Portal profile change option is enabled.
<b>Captive Portal Profile Change</b>	The status of profile change ( <b>Enable</b> or <b>Disable</b> ). When enabled, the profile initially assigned to the Captive Portal user is changed to the profile specified through the Captive Portal profile name option.
<b>Domain Specific Policy Lists:</b>	A list of Captive Portal domain specific policies. The policy list is applied when the domain for a Captive Portal authenticated device matches the domain criteria associated with the list. Domain specific policies take precedence over the global Captive Portal settings.
<b>Domain</b>	The domain name associated with a domain specific policy.
<b>Realm</b>	The realm of the domain name ( <b>prefix</b> or <b>suffix</b> ) associated with a domain specific policy. The realm identifies the domain name as a prefix ( <i>domain-name/user</i> ) or as a suffix ( <i>user@domain-name</i> ).
<b>Policy List</b>	The name of the QoS policy list that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the list name.
<b>Profile Name</b>	The name of the UNP profile that is applied when the domain of a Captive Portal authenticated user device matches the domain criteria associated with the profile name.
<b>Profile Change</b>	The status of profile change ( <b>Enable</b> or <b>Disable</b> ) for the associated domain name. When enabled, the initial profile assigned to the Captive Portal device is changed to the profile specified through the profile change option associated with the domain name.

## qmr quarantine path

Specifies the URL for a remediation server. This information is used by the Quarantine Manager and Remediation (QMR) application. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

**qmr quarantine path** *url*

**no qmr quarantine path**

---

### Syntax Definitions

*url* The URL for the QMR remediation server.

### Defaults

By default, no URL is configured.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Use the **no** form of the command to remove the remediation server URL from the configuration.
- Make sure to add the corresponding IP address for the remediation server to the QMR list of exception subnets, configured through the **qmr quarantine allowed-name** command.
- Configuring the URL *and* adding the server IP address to the allowed list is required to redirect quarantined MAC addresses to the remediation server.
- Redirecting quarantined users learned on UNP access ports for remediation is not supported; users learned on UNP bridge ports can be redirected for remediation.

### Examples

```
-> qos quarantine path www.remediate.com
-> no quarantine path
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>qmr quarantine page</b>	Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.
<b>qmr quarantine allowed-name</b>	Configures a list of IP addresses to which a restricted quarantined user can access.
<b>qmr quarantine custom-proxy-port</b>	Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.
<b>qos quarantine mac-group</b>	Configures the name of the Quarantine MAC address group.
<b>show qmr</b>	Displays the Access Guardian QMR configuration.
<b>show quarantine mac group</b>	Displays the contents of the QoS quarantined MAC address group.

## MIB Objects

alaDaQMRGlobalConfig

alaDaQMRPath

---

## qmr quarantine page

Configures the QMR application to send a “Quarantined” page to a client if a remediation server is not configured. This page is used to notify the client that QMR has quarantined the client.

**qmr qos quarantine page {enable | disable}**

---

### Syntax Definitions

**enable** Enables the sending of a “Quarantined” page to the client.  
**disable** Disables the sending of a “Quarantined” page to the client.

### Defaults

By default, no “Quarantined” page is sent to the client.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

A “Quarantined” page is only sent if a remediation server path was not configured for QMR. Note that even if the remediation server is not active, QMR will not send the page as long as there is a value set for the remediation server path.

### Examples

```
-> qmr quarantine page enable
-> qmr quarantine page disable
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>qmr quarantine path</b>	Specifies the URL for a remediation server.
<b>qmr quarantine allowed-name</b>	Configures a list of IP addresses to which a restricted quarantined user can access.
<b>qmr quarantine custom-proxy-port</b>	Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.
<b>qos quarantine mac-group</b>	Configures the name of the Quarantine MAC address group.
<b>show qmr</b>	Displays the Access Guardian QMR configuration.
<b>show quarantine mac group</b>	Displays the contents of the QoS quarantined MAC address group.

## MIB Objects

alaDaQMRGlobalConfig  
alaDaQMRPage

---

## qmr quarantine allowed-name

Configures a list of IP addresses that a restricted quarantined user is allowed to access.

**qmr quarantine allowed-name** *name* **ip-address** *ip\_address* [**ip-mask** *ip\_mask*]

**no qmr quarantine allowed-name** *name*

---

### Syntax Definitions

<i>name</i>	Specify a name to assign to the allowed IP network address.
<i>ip_address</i>	An IPv4 network address (for example, 10.0.0.0, 171.15.0.0, or 196.190.254.0).
<i>ip_mask</i>	A valid IP address mask for the allowed IP network address (for example, 255.0.0.0 or 255.255.0.0)

### Defaults

By default, no IP addresses are configured as QMR allowed addresses.

parameter	default
<i>ip_mask</i>	IP address class

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove an IP address from the allowed list.
- A maximum of two allowed IP addresses is supported.
- Make sure the IP address of the QMR remediation server is configured as an allowed IP address. A quarantined user is redirected to a remediation server to correct the condition that put the user into a quarantined state.

### Examples

```
-> qmr quarantine allowed-name server2 ip-address 10.0.0.20 ip-mask 255.0.0.0
-> no qmr quarantine allowed-name server2
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>qmr quarantine path</b>	Specifies the URL for a remediation server.
<b>qmr quarantine page</b>	Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.
<b>qmr quarantine custom-proxy-port</b>	Configures the HTTP proxy port number that is used to redirect traffic from a quarantined device.
<b>qos quarantine mac-group</b>	Configures the name of the Quarantine MAC address group.
<b>show qmr</b>	Displays the Access Guardian QMR configuration.
<b>show quarantine mac group</b>	Displays the contents of the QoS quarantined MAC address group.

## MIB Objects

```
alaDaQMRAAllowedTable  
  alaDaQMRAAllowedName  
  alaDaQMRAAllowedIpAddr  
  alaDaQMRAAllowedIpMask
```

---

## qmr quarantine custom-proxy-port

Configures the HTTP proxy port number used in the Web browser configuration of a host device. Quarantine Manager uses this information when trapping HTTP packets from a quarantined device and redirecting traffic from the device for remediation.

**qmr quarantine custom-proxy-port** *proxy\_port*

**no qmr quarantine custom-proxy-port**

---

### Syntax Definitions

*proxy\_port*                      The HTTP proxy port number. The valid range is 1025–65535.

### Defaults

By default, the redirect proxy port number is set to 8080.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use the **no** form of this command to set the proxy port number back to 8080 (the default).

### Examples

```
-> qmr quarantined custom-proxy-port 8887
-> no qmr quarantined custom-proxy-port
```

### Release History

Release 8.1.1; command was introduced.

## Related Commands

<b>qmr quarantine path</b>	Specifies the URL for a remediation server.
<b>qmr quarantine page</b>	Configures whether or not QMR will send a “Quarantined” page to a user when a remediation server is not configured.
<b>qmr quarantine allowed-name</b>	Configures a list of IP addresses to which a restricted quarantined user can access.
<b>qos quarantine mac-group</b>	Configures the name of the Quarantine MAC address group.
<b>show qmr</b>	Displays the Access Guardian QMR configuration.
<b>show quarantine mac group</b>	Displays the contents of the QoS quarantined MAC address group.

## MIB Objects

alaDaQMRGlobalConfig  
alaDaQMRCustomHttpProxyPort

---

## show qmr

Displays the Quarantine Manager and Remediation (QMR) configuration for the switch.

```
show qmr
```

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

QMR is an OmniSwitch application that interacts with the OmniVista Quarantine Manager (OVQM) application to restrict the network access of quarantined clients and provide a remediation path for such clients to regain their network access. This command displays the OmniSwitch QMR configuration.

### Examples

```
-> show qmr
```

```
Quarantine Mac Group Name      : Quarantine,
Allowed IP Subnets            : IT-HD 135.254.1.10 /255.255.255.248,
                                oss-lan 10.1.1.0 /255.255.255.0,
                                rem-ser 135.254.200.0 /255.255.255.0,
Custom Proxy port              : 8888,
Quarantine Path                : www.remediation-server.alu.com,
Quarantine Page                : enabled,
```

#### *output definitions*

---

<b>Quarantine MAC Group Name</b>	The name of the QoS Quarantine MAC address group. Configured through the <b>qos quarantine mac-group</b> command.
<b>Allowed IP Subnets</b>	A list of IP network addresses that devices can still access while in a quarantined state. Configured through the <b>qmr quarantine allowed-name</b> command.
<b>Custom Proxy port</b>	The HTTP proxy port number used for redirection of HTTP traffic from quarantined devices. Configured through the <b>qmr quarantine custom-proxy-port</b> command.

*output definitions*

---

<b>Quarantine Path</b>	The URL of a remediation server to which a device is redirected when the device is quarantined. Configured through the <b>qmr quarantine path</b> command.
<b>Quarantine Page</b>	Whether or not QMR sends a “Quarantined” page notification to a quarantined user when there is no remediation server configuration. Configured through the <b>qmr quarantine page</b> command.

---

**Release History**

Release 8.1.1; command was introduced.

  alaDaQMRPath
  alaDaQMRPage
```

---

## show quarantine mac group

Displays the contents of the QoS Quarantine MAC address group.

**show quarantine mac group**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

The QoS MAC address group contains the MAC addresses of clients that the OmniVista Quarantine Manager (OVQM) application has quarantined. This command displays the quarantined MAC addresses that belong to this group.

### Examples

```
-> show quarantine mac group
```

```
Group Name      : Quarantine,
Number of MACs quarantined : 6,
00:00:00:11:11:1b,
00:00:00:11:11:1a,
00:00:00:11:11:19,
00:00:00:11:11:18,
00:00:00:11:11:17,
00:00:00:11:11:16,
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

[qos quarantine mac-group](#) Configures the name of the QoS Quarantine MAC address group.

### MIB Objects

N/A

---

## zeroconf mdns admin-state

Enables or disables the Multicast DNS (mDNS) relay on the switch.

**zeroconf mdns admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables the mDNS relay on the switch.  
**disable** Disables the mDNS relay on the switch.

### Defaults

The mDNS relay feature is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Apple devices use mDNS (multicast DNS) as the underlying protocol for Bonjour exchanges.
- When mDNS relay is disabled on the switch, mDNS packets are handled in the same manner as conventional packets.

### Example

```
-> zeroconf mdns admin-state enable
-> zeroconf mdns admin-state disable
```

### Release History

Release 8.4.1 R02; command introduced.

### Related Commands

**zeroconf ssdp admin-state** Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch.  
**show zeroconf** Displays the zero configuration for the switch.

### MIB Objects

alaZeroConfMdnsAdminStatus

---

## zeroconf sstp admin-state

Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch. SSDP relay enables the OmniSwitch to allow non-Apple devices to discover services with minimal configuration by the administrator.

**zeroconf sstp admin-state {enable | disable}**

---

### Syntax Definitions

**enable**                      Enables the SSDP relay on the switch.  
**disable**                      Disables the SSDP relay on the switch.

### Defaults

The SSDP relay feature is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The Digital Living Network Alliance (DLNA) uses Universal Plug and Play (UPnP) for media management, discovery, and control. DLNA/UPnP uses SSDP to discover services, similar to how Bonjour uses mDNS for the same. All the SSDP packets coming in on an OmniSwitch are intercepted and tunneled through the GRE tunnel to the WLAN controller (acting as a gateway).
- When SSDP relay is disabled on the switch, SSDP packets are handled in the same manner as conventional packets.

### Example

```
-> zeroconf sstp admin-state enable
-> zeroconf sstp admin-state disable
```

### Release History

Release 8.4.1 R02; command introduced.

**Related Commands**

**zeroconf mdns admin-state** Enables or disables the Multicast DNS (mDNS) relay on the switch.  
**show zeroconf** Displays the zero configuration for the switch.

**MIB Objects**

alaZeroConfSsdpAdminStatus

---

## zeroconf mode

Configures the mode of the SSDP or MDNS packet processing.

**zeroconf mode** [tunnel [type standard] | gateway | responder]

---

### Syntax Definitions

<b>tunnel</b>	This is Aruba mode. The packets are sent to the responder through the configured GRE tunnel with protocol value of 0x0. The tunnel mode is configured on the edge switch.
<b>tunnel type standard</b>	The packets are sent to the responder through the configured GRE tunnel with protocol value of 0x6558.
<b>gateway</b>	The received packets are forwarded to all the VLANs in the gateway VLAN list. The gateway mode is configured on the gateway switch.
<b>responder</b>	This is responder mode. The responder mode is configured on the core switch. Responder mode is not supported on an OmniSwitch 9900.

### Defaults

The tunnel mode (Aruba mode) is enabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- In tunnel mode (both Aruba and Standard), the responder IP address must be configured to tunnel the mDNS or SSDP packets. The operational status will be DOWN until the responder IP address is configured.
- In tunnel mode (both Aruba and Standard) or responder mode, the mDNS and SSDP packets are processed only when the Loopback0 IP address is configured, which is considered as the source IP address for the tunneled packets. Use the [ip interface](#) command to configure the interface address.
- In responder mode, the tunnel for each edge switch must be configured manually.
- In responder mode if there are no service rules configured, the responder switch will learn all the services but will not process any query received from the mDNS or SSDP client.
- The switch can operate in only one mode at a time.

### Example

```
-> zeroconf mode gateway
-> zeroconf mode tunnel
-> zeroconf mode responder
```

## Release History

Release 8.4.1 R02; command introduced.

## Related Commands

<a href="#">zeroconf mdns admin-state</a>	Enables or disables the Multicast DNS (mDNS) relay on the switch.
<a href="#">zeroconf sdp admin-state</a>	Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch.
<a href="#">zeroconf responder-ip</a>	Configures the IP address of the tunnel endpoint (zero configuration responder).
<a href="#">zeroconf gateway-vlan-list</a>	Adds or deletes a VLAN from the gateway VLAN list
<a href="#">zeroconf access-vlan-list</a>	Adds or deletes a VLAN from the access VLAN list.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.

## MIB Objects

alaZeroConfMode  
alaZeroConfTunnelMode

---

## zeroconf responder-ip

Configures the IP address of the tunnel endpoint (zero configuration responder) on the edge switch.

**zeroconf responder-ip** *ip\_address*

**no zeroconf responder-ip** *ip\_address*

---

### Syntax Definitions

*ip\_address*                    The IPv4 address of the zero configuration responder.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Only IPv4 address can be configured as a responder IP address.
- In gateway mode, the responder IP address must not be configured.
- In tunnel mode, the responder IP address must be configured to tunnel the mDNS or SSDP packets. The operational status will be DOWN until the responder IP address is configured.
- To remove the responder IP address configuration, use the **no** form of the command.

### Example

```
-> zeroconf responder-ip 10.0.0.1
-> no zeroconf responder-ip 10.0.0.1
```

### Release History

Release 8.4.1 R02; command introduced.

## Related Commands

<a href="#">zeroconf sdp admin-state</a>	Enables or disables the Simple Service Discovery Protocol (SSDP) relay on the switch.
<a href="#">zeroconf mode</a>	Configures the mode of the SSDP or MDNS packet processing.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.

## MIB Objects

```
alaZeroConfResponderIpAddr  
  alaZeroConfResponderIpAddressType
```

---

## zeroconf gateway-vlan-list

Adds or deletes a VLAN from the gateway VLAN list.

**zeroconf gateway-vlan-list** *vlan\_id1...vlan\_idn*

**no zeroconf gateway-vlan-list** *vlan\_id1...vlan\_idn*

---

### Syntax Definitions

*vlan\_id*                      The existing VLAN ID to be added or deleted from the gateway VLAN list. The valid range is 1-4094.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The gateway VLAN list can be configured only in the gateway mode.
- A maximum of 10 gateway VLANs is supported.
- To remove a VLAN from the gateway VLAN list, use the **no** form of the command.

### Example

```
-> zeroconf gateway-vlan-list 1 2 4
-> no zeroconf gateway-vlan-list 4
```

### Release History

Release 8.4.1 R02; command introduced.

### Related Commands

**zeroconf mode**                      Configures the mode of the SSDP or mDNS packet processing.

**show zeroconf**                      Displays the zero configuration for the switch.

### MIB Objects

alaZeroConfGatewayVlanTable  
  alaZeroConfGatewayVlanEntry

---

## zeroconf access-vlan-list

Adds or deletes a VLAN from the access VLAN list.

**zeroconf access-vlan-list** *vlan\_id1...vlan\_idn*

**no zeroconf access-vlan-list** *vlan\_id1...vlan\_idn*

---

### Syntax Definitions

*vlan\_id*                      The existing VLAN ID to be added or deleted from the access VLAN list. The valid range is 1-4094.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The access VLAN list must be configured when the tunnel mode use GRE tunnel type standard.
- The query packets from the responder is sent to the VLANs configured in the access VLAN list.
- A maximum of 16 access VLANs is supported.
- To remove a VLAN from the access VLAN list, use the **no** form of the command.

### Example

```
-> zeroconf access-vlan-list 6 7 9
-> no zeroconf access-vlan-list 7
```

### Release History

Release 8.4.1 R02; command introduced.

**Related Commands**

<b>zeroconf mode</b>	Configures the mode of the SSDP or mDNS packet processing.
<b>show zeroconf</b>	Displays the zero configuration for the switch.

**MIB Objects**

```
alaZeroConfAccessVlanTable

```

---

## zeroconf server-policy

Configures the server policy.

**zeroconf server-policy** *policy\_name* [**role** | **vlan** | **location** | **username** | **mac-address**]

**no zeroconf server-policy** *policy\_name* [**role** | **vlan** | **location** | **username** | **mac-address**]

---

### Syntax Definitions

<i>policy_name</i>	The name of the zero configuration server policy. The policy name can be maximum 31 characters in length.
<b>role</b>	The server role to be mapped with the server policy. Multiple roles can be mapped to a server policy. The role name can be maximum 32 characters in length.
<b>vlan</b>	The VLAN ID to be mapped with the server policy. Multiple VLAN IDs can be mapped to a server policy.
<b>location</b>	The location name to be mapped with the server policy. Multiple locations can be mapped to a server policy. The location name can be maximum 32 characters in length.
<b>username</b>	The user name to be mapped with the server policy. Multiple user names can be mapped to a server policy. The user name can be maximum 64 bytes in length.
<b>mac-address</b>	The MAC address to be mapped with the server policy. Multiple macaddress can be mapped to a server policy. Maximum size of macaddress allowed is six bytes.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The configured server policy is not applied unless it is mapped to a service rule.
- A maximum of 16 roles, 16 locations, 16 VLANs, 16 username, and 16 MAC address can be configured for a server policy.
- The server policy can be modified even when it is mapped to a service rule.
- The server policy cannot be deleted if it is being used by a service rule.
- The server policy attribute can be deleted even when it is mapped to a service rule unless any one of the policy attributes remains configured for that policy.

- To remove the server policy, use the **no** form of the command. To remove specific attribute associated to the policy mention the attribute along with the **no** command.

### Example

```
-> zeroconf server-policy SP1 role employee
-> zeroconf server-policy SP1 vlan 10 20 30
-> zeroconf server-policy SP1 location meetingroom1 meetingroom2
-> zeroconf server-policy SP1 username user1 user2
-> zeroconf server-policy SP1 mac-address e8:e7:32:9a:53:3 e8:e7:32:9a:53:3
-> no zeroconf server-policy SP1
-> no zeroconf server-policy SP1 role employee
-> no zeroconf server-policy SP1 vlan 10 20
-> no zeroconf server-policy SP1 location meetingroom1
-> no zeroconf server-policy SP1 username user2
-> no zeroconf server-policy SP1 mac-address e8:e7:32:9a:53:3
```

### Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **username** and **mac-address** parameters included.

### Related Commands

<a href="#">zeroconf mode</a>	Configures the mode of the SSDP or mDNS packet processing.
<a href="#">zeroconf client-policy</a>	Configures the client policy.

<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.
<a href="#">show zeroconf server policies</a>	Displays the information of the server policies configured.

### MIB Objects

```
alaZeroConfServerPolicyTable
  alaZeroConfServerPolicyEntry
  alaZeroConfServerPolicyName
  alaZeroConfServerRoleMappingName
  alaZeroConfServerVlanMappingId
  alaZeroConfServerLocationMappingString
  alaZeroConfServerUsernameMappingString
  alaZeroConfServerMacAddressMapping
```

---

## zeroconf client-policy

Configures the client policy.

**zeroconf client-policy** *policy\_name* [**role** | **vlan** | **location** | **username** | **mac-address**]

**no zeroconf client-policy** *policy\_name* [**role** | **vlan** | **location** | **username** | **mac-address**]

---

### Syntax Definitions

<i>policy_name</i>	The name of the zero configuration client policy. The policy name can be maximum 31 characters in length.
<b>role</b>	The client role to be mapped with the client policy. A maximum of 16 roles can be mapped to a client policy. The role name can be maximum 32 characters in length.
<b>vlan</b>	The VLAN ID to be mapped with the client policy. Multiple VLAN IDs can be mapped to a client policy.
<b>location</b>	The location name to be mapped with the client policy. Multiple locations can be mapped to a client policy. The location name can be maximum 63 characters in length.
<b>username</b>	The user name to be mapped with the client policy. Multiple user names can be mapped to a client policy. The user name can be maximum 63 bytes in length.
<b>mac-address</b>	The MAC address to be mapped with the client policy. Multiple MAC addresses can be mapped to a client policy. Maximum size of MAC address allowed is 6 bytes.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The configured client policy is not applied unless it is mapped to a service rule.
- A maximum of 64 service rules can be configured.
- A maximum of 16 roles, 16 locations, 16 VLANs, 16 username, and 16 MAC address can be configured for a client policy.
- The client policy can be modified even when it is mapped to a service rule.
- The client policy cannot be deleted if it is being used by a service rule.

- The client policy attribute can be deleted even when it is mapped to a service rule unless any one of the policy attributes remains configured for that policy.
- To remove the client policy, use the **no** form of the command. To remove specific attribute associated to the policy mention the attribute along with the **no** command.

### Example

```
-> zeroconf client-policy SP1 role employee
-> zeroconf client-policy SP1 vlan 10 20 30
-> zeroconf client-policy SP1 location meetingroom1 meetingroom2
-> zeroconf client-policy SP1 username username1 username2
-> zeroconf client-policy SP1 mac-address e8:e7:32:9a:53:3 e8:e7:32:9a:53:3
-> no zeroconf client-policy SP1
-> no zeroconf client-policy SP1 role employee
-> no zeroconf client-policy SP1 vlan 10 20
-> no zeroconf client-policy SP1 location meetingroom1
-> no zeroconf client-policy SP1 username user2
-> no zeroconf client-policy SP1 mac-address e8:e7:32:9a:53:3
```

### Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **username** and **mac-address** parameters included.

Release 8.7.R1; **username**, **role**, and **location** maximum numbers updated.

### Related Commands

<a href="#">zeroconf mode</a>	Configures the mode of the SSDP or mDNS packet processing.
<a href="#">zeroconf server-policy</a>	Configures the server policy.
<a href="#">zeroconf service-rule policy</a>	Allows to define service rules for selective sharing of services with the clients.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.
<a href="#">show zeroconf client policies</a>	Displays the information of the client policies configured on the responder.

### MIB Objects

```
alaZeroConfClientPolicyTable
  alaZeroConfClientPolicyEntry
  alaZeroConfClientPolicyName
  alaZeroConfClientRoleMappingName
  alaZeroConfClientVlanMappingId
  alaZeroConfClientLocationMappingString
  alaZeroConfClientUsernameMappingString
  alaZeroConfClientMacAddressMapping
```

---

## zeroconf service-rule policy

Defines service rules for selective sharing of services with the clients.

**zeroconf service-rule** *rule\_name* **server-policy** *server\_policy\_name* **client-policy** *client\_policy\_name*

**no zeroconf service-rule** *rule\_name*

---

### Syntax Definitions

<i>rule_name</i>	The name of the service rule. The rule name can be maximum 31 characters in length.
<i>server_policy_name</i>	Name of the server policy to be mapped with service rule. A server policy cannot be mapped to multiple service rules.
<i>client_policy_name</i>	The name of the client policy to be mapped with the service rule. A client policy cannot be mapped to multiple service rules.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- There must be one-to-one mapping between the server and client policy.
- The responder will respond to a service query only when the server and client policy is matched.
- A service rule with an existing server and client policy mapping cannot be linked to a new server and client policy without deleting the existing mapping.
- A maximum of 64 service rule configuration is supported on a responder.
- To remove a service rule, use the **no** form of the command.

### Example

```
-> zeroconf service-rule SR1 server-policy SP1 client-policy CP1
-> no zeroconf service-rule SR1
```

### Release History

Release 8.4.1 R02; command introduced.

## Related Commands

<b>zeroconf mode</b>	Configures the mode of the SSDP or mDNS packet processing.
<b>zeroconf server-policy</b>	Configures the server policy.
<b>zeroconf client-policy</b>	Configures the client policy.
<b>zeroconf service-rule service-id</b>	Configures selective services for a service rule to be shared with the clients.
<b>show zeroconf</b>	Displays the zero configuration for the switch.
<b>show zeroconf service rules</b>	Displays the information of the service rules configured on the responder.

## MIB Objects

```
alaZeroConfServiceRuleTable  
  alaZeroConfServiceRuleEntry  
  alaZeroConfServiceRuleName  
  alaZeroConfServiceRuleServerPolicyName  
  alaZeroConfServiceRuleClientPolicyName
```

---

## zeroconf service-rule service-id

Configures selective services for a service rule.

```
zeroconf service-rule rule_name [mdns-service-id | ssdp-service-id] service_id1.....[service_idn]
```

```
no zeroconf service-rule rule_name [mdns-service-id | ssdp-service-id] service_id1.....[service_idn]
```

---

### Syntax Definitions

<i>rule_name</i>	The name of the service rule.
<b>mdns-service-id</b>	Configures the mDNS service ID list to be mapped with the service rule.
<b>ssdp-service-id</b>	Configures the SSDP service ID list to be mapped with the service rule.
<i>service_id</i>	The service ID to be mapped with the service rule. Multiple service IDs can be mapped with a service rule.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- A service ID can be part of multiple service rule or multiple service IDs can be mapped to a service rule.
- A service ID can be mapped or removed form a service rule without deleting the service rule.
- The responder will respond to a service query only when the server and client policy is matched.
- A maximum of 64 service IDs can be configured for a service rule.
- To remove a service ID, use the **no** form of the command.

### Example

```
-> zeroconf service-rule SR1 mdns-service-id _scanner._tcp.local _ipp._tcp.local
-> zeroconf service-rule SR2 ssdp-service-id urn:schemas-upnp-
org:device:MediaServer:1 upnp:rootdevice
-> no zeroconf service-rule SR1 mdns-service-id _scanner._tcp.local
-> no zeroconf service-rule SR2 ssdp-service-id upnp:rootdevice
```

## Release History

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; **ssdp-service-id** parameter added.

## Related Commands

<a href="#">zeroconf service-rule policy</a>	Defines service rules for selective sharing of services with the clients.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.
<a href="#">show zeroconf service rules</a>	Displays the information of the service rules configured on the responder.

## MIB Objects

```
alaZeroConfServiceRuleMdnsServiceMappingTable  
  alaZeroConfServiceRuleMdnsServiceMappingEntry  
  alaZeroConfServiceRuleSsdpServiceMappingEntry
```

---

## zeroconf service-list

Configures a list of known services for mDNS or SSDP service query.

**zeroconf** [**mdns service-list** | **ssdp service-list**] *service\_id1...service\_idn*

**no zeroconf** [**mdns service-list** | **ssdp service-list**] *service\_id1...service\_idn*

---

### Syntax Definitions

<b>mdns service-list</b>	Configures the list of mDNS services for the service query.
<b>ssdp service-list</b>	Configure the list of SSDP services for the service query.
<i>service_id</i>	The service ID to be included in the service list. A maximum of 64 service IDs can be configured in the list. The service ID can be maximum 63 characters in length.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The services in the list are queried for re-learning by the responder, in an event of reload or takeover on the responder.
- A maximum of 64 service IDs can be configured in a service list.
- The service ID can be maximum 63 characters in length.
- To remove a service ID from the service list, use the **no** form of the command.

### Example

```
-> zeroconf mdns service-list _scanner._tcp.local _ipp._tcp.local
-> zeroconf ssdp service-list urn:schemas-upnp-org:device:MediaServer:1
upnp:rootdevice
-> no zeroconf mdns service-list _scanner._tcp.local
-> no zeroconf ssdp service-list upnp:rootdevice
```

### Release History

Release 8.4.1 R02; command introduced.  
Release 8.4.1 R03; **ssdp service-list** parameter added.

## Related Commands

- zeroconf service-id query-request**      Queries a specific service.
- show zeroconf services-cache**      Displays the list of services assigned along with the service information.
- show zeroconf**      Displays the zero configuration for the switch.

## MIB Objects

```
alaZeroConfMdnsServiceTable  
  alaZeroConfMdnsServiceEntry  
  alaZeroConfSsdpServiceEntry
```

---

## zeroconf service-id query-request

Queries a specific service. If the responder does not learn a service, that specific service can be queried for re-learning by the responder.

**zeroconf {mdns | ssdp} service-id *service-id* query-request**

---

### Syntax Definitions

<b>mdns</b>	Sends mDNS query for the service ID to all the configured tunnels to re-learn the service instance.
<b>ssdp</b>	Sends SSDP query for the service ID to all the configured tunnels to re-learn the service instance.
<i>service_id</i>	The service ID to be queried for learning by the responder.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to manually query for a specific service.

### Example

```
-> zeroconf mdns service-id _scanner._tcp.local query-request
-> zeroconf ssdp service-id upnp:rootdevice
```

### Release History

Release 8.4.1 R02; command introduced.  
Release 8.4.1 R03; **ssdp** parameter added.

### Related Commands

<a href="#">zeroconf mode</a>	Configures the mode of the SSDP or mDNS packet processing.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.

### MIB Objects

```
alaZeroConfMdnsServiceTriggerQuery
alaZeroConfSsdpServiceTriggerQuery
```

---

## zeroconf edge-ip-list

Configures the list of tunnel edge endpoint IP addresses. The edge-ip-list must be configured for the responder.

**zeroconf edge-ip-list** *ip\_address1...ip\_addressn*

**no zeroconf edge-ip-list** *ip\_address1...ip\_addressn*

---

### Syntax Definitions

*ip\_address*                      The tunnel edge endpoint IP address, which is the Loopback0 IP address of the edge switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The configured tunnel edge endpoint IP address in the list must be reachable. If the IP addresses are not reachable then the operational status of the mDNS will be down.
- To remove a tunnel edge endpoint IP address from the list, use the **no** form of the command.

### Example

```
-> zeroconf edge-ip-list 10.1.1.1 10.2.2.2 10.3.3.3
-> no zeroconf edge-ip-list 10.1.1.1
```

### Release History

Release 8.4.1 R02; command introduced.

**Related Commands**

<a href="#">zeroconf mode</a>	Configures the mode of the SSDP or mDNS packet processing.
<a href="#">show zeroconf edge-details</a>	Displays the IP address and reachability status of the tunnel endpoints configured on the responder.
<a href="#">show zeroconf</a>	Displays the zero configuration for the switch.

**MIB Objects**

```
alaZeroConfEdgeIpTable  
  alaZeroConfEdgeIpEntry
```

---

## zeroconf edge-ip-list mode

Configures the edge IP mode as manual or auto.

**zeroconf edge-ip-list mode [manual | auto]**

---

### Syntax Definitions

**manual** In this mode, the admin has to configure the edge IPs manually.  
**auto** In this mode, edge IPs are automatically learned by the responder.

### Defaults

By default, the mode is manual.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- By default, the mode is manual.
- In manual mode, the admin has to configure the edge IPs manually.

### Example

```
-> zeroconf edge-ip-list mode manual
-> zeroconf edge-ip-list mode auto
```

### Release History

Release 8.7 R1; command introduced.

### Related Commands

**zeroconf mode** Configures the mode of the SSDP or mDNS packet processing.  
**show zeroconf edge-details** Displays the IP address and reachability status of the tunnel endpoints configured on the responder.  
**show zeroconf** Displays the zero configuration for the switch.

### MIB Objects

```
alaZeroConfEdgeIpTable
alaZeroConfEdgeIPMode
```

---

## zeroconf refresh-database

Refreshes the database (mDNS or SSDP records) with latest server policies, client policies, server rules, learned service instances, and service cache entry.

**zeroconf {mdns | ssdp} refresh-database**

---

### Syntax Definitions

**mdns** Refreshes the mDNS database. The files “mdns\_srvr\_plcy”, “mdns\_srvr\_plcy\_inst”, “mdns\_clnt\_plcy” and “mdns\_srvc\_rule” are updated.

**ssdp** Refreshes the SSDP database. The files “ssdp\_srvr\_plcy”, “ssdp\_srvr\_plcy\_inst”, “ssdp\_clnt\_plcy” and “ssdp\_srvc\_rule” are updated.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to update the latest server policies, server policy name along with learned service instance, client policies and server rules configuration.
- After refreshing the database, use the [show zeroconf services-cache](#) and [show zeroconf server policy-instances](#) commands to display the latest cache and service instances information.

### Example

```
-> zeroconf mdns refresh-database
-> zeroconf ssdp refresh-database
```

### Release History

Release 8.4.1 R02; command introduced.  
Release 8.4.1 R03; **ssdp** parameter included.

## Related Commands

- show zeroconf services-cache** Displays the list of services learned by mDNS or SSDP stack.
- show zeroconf server policy-instances** Displays the mDNS or SSDP service instance learned on the responder for each server policy.

## MIB Objects

alaZeroConfMdnsActions  
alaZeroConfSsdpActions

---

## show zeroconf

Displays the basic zero configuration details.

**show zeroconf**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Example

```
-> show zeroconf
zero-conf mode           : responder,
MDNS admin status       : enabled,
SSDP admin status       : disabled
MDNS operational status : up,
SSDP operational status : down,
Tunnel Source IP        : 172.16.1.1
```

```
-> show zeroconf
zero-conf mode           : gateway,
MDNS admin status       : disabled,
SSDP admin status       : disabled
MDNS operational status : down,
SSDP operational status : down,
Gateway vlans list      : 1, 2, 3
```

```
-> show zeroconf
zero-conf mode           : tunnel,
zero-conf tunnel type    : standard,
MDNS admin status       : disabled,
SSDP admin status       : disabled
MDNS operational status : down,
SSDP operational status : down,
Responder IP            : -
Tunnel source IP        : -
Access vlans list       : 4, 5, 6
```

```

-> show zeroconf
zero-conf mode           : tunnel,
zero-conf tunnel type   : aruba,
MDNS admin status       : disabled,
SSDP admin status       : disabled
MDNS operational status : down,
SSDP operational status : down,
Responder IP            : -
Tunnel source IP        : -

```

---

### *output definitions*

---

<b>zero-conf mode</b>	Displays the zero configuration mode configured.
<b>zero-conf tunnel type</b>	Displays if the tunnel type is Aruba or Standard. This is displayed if the mode type is tunnel.
<b>MDNS admin status</b>	Displays the administrative status of the mDNS.
<b>SSDP admin status</b>	Displays the administrative status of the SSDP.
<b>MDNS operational status</b>	Displays the operational status of mDNS. The operation status will be down if the responder IP address is not configured or not reachable.
<b>SSDP operational status</b>	Displays the operational status of SSDP. The operation status will be down if the responder IP address is not configured or not reachable.
<b>Responder IP</b>	Displays the configured responder IP address. This is displayed if the mode type is tunnel.
<b>Tunnel Source IP</b>	Displays the source IP address of the tunnel. This is displayed if the mode type is tunnel or responder.
<b>Gateway vlans list</b>	Displays the configured gateway VLANs list. This is displayed if the mode type is gateway.
<b>Access vlans list</b>	Displays the configured access VLANs list. This is displayed if the mode type is tunnel and the tunnel type is standard.

---

## **Release History**

Release 8.4.1 R02; command introduced.

## Related Commands

<a href="#">zeroconf mdns admin-state</a>	Enables or disables mDNS tunnel relay for the switch.
<a href="#">zeroconf sstp admin-state</a>	Associates a GRE tunnel interface with the mDNS relay feature.

---

## show zeroconf edge-details

Displays the IP address and reachability status of the tunnel endpoints configured on the responder.

**show zeroconf edge-details**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Example

```
-> show zeroconf edge-details
```

```
EdgeIP mode : Manual
```

```
Edge count  : 4
```

```
EdgeIP                Status
-----+-----
172.16.1.2            DOWN,
172.16.1.3            DOWN,
172.16.1.4            UP,
172.16.1.5            UP,
```

#### *output definitions*

---

<b>EdgeIP</b>	The tunnel endpoint IP address configured on the responder.
<b>Status</b>	The reachability status of the tunnel endpoint IP address.

---

### Release History

Release 8.4.1 R02; command introduced.

Release 8.7 R1; “EdgeIP mode” and “Edge count” fields added to command output display

## Related Commands

[zeroconf edge-ip-list](#) Configures the list of tunnel edge endpoint IP addresses.

---

## show zeroconf service rules

Displays information about the service rules configured on the responder.

**show zeroconf service rules**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Example

```
-> show zeroconf service rules
Service rules:
```

```
Rule name           : SR1
Client Policy       : CP1
Server Policy       : SP1
Attached mdns services : _ipp._tcp.local
Attached ssdp services : upnp:rootdevice
```

```
Rule name           : SR2
Client Policy       : CP2
Server Policy       : SP2
Attached mdns services : _ipp._tcp.local
Attached ssdp services : upnp:rootdevice
```

```
Rule name           : SR3
Client Policy       : CP3
Server Policy       : SP3
Attached mdns services : _ipp._tcp.local
Attached ssdp services : upnp:rootdevice
                    upnp:rootdevice
```

### *output definitions*

---

<b>Rule name</b>	Displays the name of the service rule.
<b>Client Policy</b>	Displays the name of the client policy mapped to the service rule.

*output definitions*

---

<b>Server Policy</b>	Displays the name of the server policy mapped to the service rule.
<b>Attached mdns services</b>	Displays the mDNS service instances learned for the service rule.
<b>Attached sssdp services</b>	Displays the SSDP service instances learned for the service rule.

---

**Release History**

Release 8.4.1 R02; command introduced.

Release 8.4.1 R03; “Attached sssdp services” output field added.

**Related Commands**

[zeroconf service-rule policy](#) Defines service rules for selective sharing of services with the clients.

```

---

## show zeroconf server policy-instances

Displays the mDNS or SSDP service instance learned on the responder for each server policy.

**show zeroconf [mdns | sstp] server policy-instances**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Example

```
-> show zeroconf mdns server policy-instances
```

```
MDNS server policy instances:
```

```

Policy name           : SP1
Attached service instance : -

Policy name           : SP2
Attached service instance : PRINTER_EDGE4
                        PRINTER_EDGE3

Policy name           : SP3
Attached service instance : -

Policy name           : SP4
Attached service instance : PRINTER_EDGE4

```

```
-> show zeroconf sstp server policy-instances
```

```
SSDP server policy instances :
```

```

Policy name           : SP1
Attached service instance:

Policy name           : SP3
Attached service instance: uuid:88618bb0-6790-4cb0-9166-
e1d15af5a87c::upnp:rootdevice

```

```
Policy name           : SP4
Attached service instance: uuid:88618bb0-6790-4cb0-9166-
e1d15af5a87c::upnp:rootdevice
```

### *output definitions*

---

<b>Policy name</b>	Displays the name of the server policy.
<b>Attached service instance</b>	Displays the service instance learned for the server policy.

---

### **Release History**

Release 8.4.1 R03; command introduced.

### **Related Commands**

[zeroconf service-rule policy](#) Defines service rules for selective sharing of services with the clients.

### **MIB Objects**

N/A

---

## show unip profile

Displays the UNP profile configuration for the switch.

**show unip profile** [*profile\_name*]

---

### Syntax Definitions

*profile\_name*                      The name of the UNP to display.

### Defaults

By default, the configuration for all profiles is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter a UNP profile name with this command to display information for a specific profile.
- Use the [show unip profile map](#) command to display the VLAN or service type (SPB, VXLAN, or static) that is mapped to the UNP profile.
- If Device Profiling is enabled for the switch, the following UNP profiles are automatically created on the switch and will be included in the display:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> show unip profile
Profile Name: unip2-spb
  Qos Policy      = qrules1,
  Location Policy = -,
  Period Policy   = -,
  CP Profile      = -,
  CP State        = Dis,
  Authen Flag     = Dis,
  Mobile Tag      = Dis,
  SAA Profile     = -,
  Ingress BW     = -,
  Egress BW      = -,
  Ingress Depth  = -,
```

```
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Ena
```

Profile Name: unpl-vlan

```
Qos Policy = -,
Location Policy = loclist1,
Period Policy = timelist1,
CP Profile = guest-profile,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
```

Profile Name: defaultWLANProfile

```
Qos Policy = -,
Location Policy = -,
Period Policy = -,
CP Profile = -,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
```

Total Profile Count: 3

-> show unip profile unpl-vlan

Profile Name: unpl-vlan

```
Qos Policy = -,
Location Policy = loclist1,
Period Policy = timelist1,
CP Profile = guest-profile,
CP State = Dis,
Authen Flag = Dis,
Mobile Tag = Dis,
SAA Profile = -,
Ingress BW = -,
Egress BW = -,
Ingress Depth = -,
Egress Depth = -,
Inact Interval = 10
Mac-Mobility = Dis
Kerberos Auth = Dis
```

*output definitions*

---

<b>Profile Name</b>	The name of the UNP profile. Configured through the <b>unip profile</b> command.
<b>QoS Policy</b>	The name of the QoS policy list associated with the profile. Configured through the <b>unip profile qos-policy-list</b> command.
<b>Location Policy</b>	The name of the location policy assigned to the UNP profile. Configured through the <b>unip profile location-policy</b> command.
<b>Period Policy</b>	The name of the period policy assigned to the UNP profile. Configured through the <b>unip profile period-policy</b> command.
<b>CP Profile</b>	The name of the Captive Portal (CP) profile assigned to the UNP profile. A CP profile defines a CP configuration that is applied to devices when CP authentication is enabled for the UNP profile. Configured through the <b>unip profile captive-portal-profile</b> command.
<b>CP State</b>	The CP authentication status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether CP authentication is triggered for devices classified into the profile. Configured through the <b>unip profile captive-portal-authentication</b> command.
<b>Authen Flag</b>	The authentication flag status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether only authenticated devices are allowed into the profile. Configured through the <b>unip profile authentication-flag</b> command.
<b>Mobile Tag</b>	The mobile tag status ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. When enabled, the first user that is learned on a UNP port and is classified into a UNP profile will cause the UNP port to be added as a tagged member of the VLAN associated with the profile. If the profile is mapped to a service, a tagged virtual port association is created. Configured through the <b>unip profile mobile-tag</b> command.
<b>SAA Profile</b>	The name of a Service Assurance Agent (SAA) profile that is associated with the UNP profile. Configured through the <b>unip profile saa-profile</b> command.
<b>Ingress BW</b>	The maximum ingress bandwidth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-ingress-bandwidth</b> command.
<b>Egress BW</b>	The maximum egress bandwidth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-egress-bandwidth</b> command.
<b>Ingress Depth</b>	The maximum ingress depth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-ingress-depth</b> command.
<b>Egress Depth</b>	The maximum egress depth setting that is applied to ports associated with the profile. Configured through the <b>unip profile maximum-egress-depth</b> command.
<b>Inact Interval</b>	The amount of time, in seconds, that a device can remain inactive after the MAC address for the device has aged out. When the timer reaches this value, inactive devices are automatically logged out of the network. Configured through the <b>unip profile inactivity-interval</b> command.

*output definitions*

---

<b>Mac-Mobility</b>	The status of MAC address mobility ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. MAC mobility functionality applies only to profiles that are mapped to SPB services and is <i>not supported on the OmniSwitch 6465 or OmniSwitch 6560</i> . Configured through the <b>unip profile mac-mobility</b> command.
<b>Kerberos Auth</b>	The status of Kerberos snooping ( <b>Ena</b> or <b>Dis</b> ) for the UNP profile. Indicates whether Kerberos snooping authentication is triggered for devices classified into the profile. Configured through the <b>unip profile kerberos-authentication</b> command.

---

**Release History**

Release 8.3.1; command was introduced.

Release 8.4.1.R02; the built-in “defaultWLANProfile” included in the display.

Release 8.4.1.R03; “Redirect State” field deprecated.

Release 8.5R2; default UNP profiles for Device Profiling included in the display.

Release 8.6R1; “Mac-Mobility” field added.

Release 8.6R2; “Kerberos Auth” field added.

**Related Commands**

<b>show unip classification</b>	Displays the UNP classification rule configuration for the switch.
<b>show unip global configuration</b>	Displays the UNP global parameter values configured for the switch.
<b>show unip port</b>	Displays the UNP configuration for the port.
<b>show unip user</b>	Displays information about the devices learned on a UNP port.

## show unip profile map

Displays the VLAN, service, or L2 GRE tunnel mapping configuration assigned to a UNP profile.

```
show unip profile [profile_name] map {vlan | service-type {spb | vxlan | static | l2gre}}
```

---

### Syntax Definitions

<i>profile_name</i>	The name of the UNP to display.
<b>vlan</b>	Displays the VLAN mapping configuration for a UNP profile.
<b>spb</b>	Displays the Shortest Path Bridging (SPB) service mapping configuration for a UNP profile.
<b>vxlan</b>	Displays the Virtual eXtensible Local Area Network (VXLAN) service mapping configuration for a UNP profile.
<b>static</b>	Displays the existing SPB or VXLAN service IDs that are statically assigned to a UNP profile. This type of mapping is used to map the profile to a known service ID.
<b>l2gre</b>	Displays the L2 GRE tunnel mapping configuration for a UNP profile.

### Defaults

By default, the VLAN, service, or L2 GRE tunnel mapping configuration for all profiles is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter a UNP profile name with this command to display the mapping information for a specific profile.
- Only one VLAN or service is mapped to a profile at any given time.

### Examples

```
-> show unip profile map vlan
Profile Name           Vlan-Id
-----+-----
unp1-vlan              300
unp2-vlan              301
unp3-vlan              500
unp4-vlan              501

Total Profile Vlan-Map Count: 4
```

```
-> show unip profile unip2-vlan map vlan
Profile Name          Vlan-Id
-----+-----
unip2-vlan           301
```

**output definitions**

<b>Profile Name</b>	The name of the UNP profile that is mapped to the VLAN ID.
<b>Vlan-Id</b>	The VLAN ID associated with the profile.

```
-> show unip profile map service-type spb
Profile          Tag          Vlan      Mcast   Igmp   Igmp   Mld   Mld
Name            Isid      Value BVlan  Xlation Mode   Snoop Profile Snoop Profile

```

Total Profile Spb-Map Count: 4

**output definitions**

<b>Profile Name</b>	The name of the UNP profile that is mapped to the SPB service.
<b>Isid</b>	The SPB service instance identifier (I-SID) that will be used to dynamically create the SPB service access point (SAP) for the profile.
<b>Tag Value</b>	The VLAN ID tags of the traffic that the dynamically created SPB SAP will carry for the profile.
<b>BVlan</b>	The SPB BVLAN ID that will be associated with the I-SID for the dynamically created SPB SAP.
<b>Vlan Xlation</b>	The status of egress VLAN translation ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created SPB SAP.
<b>Mcast Mode</b>	The multicast mode ( <b>Headend</b> or <b>Tandem</b> ) for the dynamically created SPB SAP.
<b>Igmp Snoop</b>	The status of IGMP snooping for the dynamically created SPB SAP.
<b>Igmp Profile</b>	The name of the optional IPMS profile that is applied to the IGMP snooping instance for the dynamically created SPB SAP
<b>Mld Snoop</b>	The status of MLD snooping for the dynamically created SPB SAP.
<b>Mld Profile</b>	The name of the optional MLD profile that is applied to the IGMP snooping instance for the dynamically created SPB SAP

```
-> show unip profile map service-type vxlan
Profile          Tag          Far-End-List Vlan      Mcast   Mcast   Mac

```

Total Profile Vxlan-Map Count: 2

*output definitions*

---

<b>Profile Name</b>	The name of the UNP profile that is mapped to the VXLAN service.
<b>Vnid</b>	The VXLAN network identifier for the VXLAN segment that will be used to dynamically create the VXLAN service access point (SAP) for the profile.
<b>Tag Value</b>	The VLAN ID tags of the traffic that the dynamically created VXLAN SAP will carry for the profile.
<b>Far-End-List</b>	The name of the list that contains the IP addresses for the far-end VXLAN Tunnel End Points (VTEPs). The VTEPs are used to create Service Distribution Points (SDPs) for the dynamically created VXLAN SAP.
<b>Vlan Xlation</b>	The status of egress VLAN translation ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created VXLAN SAP.
<b>Mcast Mode</b>	The multicast mode ( <b>Headend</b> , <b>Tandem</b> , or <b>Hybrid</b> ) for the dynamically created VXLAN SAP.
<b>Mcast Group</b>	The multicast group IP address that the dynamically created VXLAN SAP will use to forward traffic to participating VTEPs.
<b>Mac Orchest</b>	The status of Mac Orchestration ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created VXLAN SAP. This parameter is automatically configured through OmniSwitch integration with Open vSwitch Database (OVSD) protocols. See the "Web Services, CLI Scripting, OpenFlow, and AOS Micro Services (AMS)" chapter in the <i>OmniSwitch AOS Release 8 Switch Management Guide</i> for more information.

```

*output definitions*

---

<b>Profile Name</b>	The name of the UNP profile that is mapped to the L2 GRE tunnel.
<b>Vpnid</b>	The tunnel ID that identifies a GRE tunnel VPN.
<b>Tag Value</b>	The VLAN ID tags of the traffic that the dynamically created L2 GRE SAP will carry for the profile.
<b>Far-End-List</b>	The name of the list that contains the Loopback0 IP interface address for the far-end tunnel aggregation switch.
<b>Far-End-IP</b>	The Loopback0 IP interface address for the far-end tunnel aggregation switch.
<b>Port Isolation</b>	The status of port isolation for the dynamically created L2 GRE SAP. Port isolation is implicitly enabled and is not configurable in this release.
<b>Vlan Xlation</b>	The status of VLAN translation ( <b>Ena</b> or <b>Dis</b> ) for the dynamically created L2 GRE SAP.

---

```
-> show unprofile map service-type static
Profile
Name                               SvcId   Tag

unp1-staticSPB                     10      20
unp2-staticVXLAN                   20      40:50
```

Total Profile Static-Service-Map Count: 2

### output definitions

<b>Profile Name</b>	The name of the UNP profile that is mapped to the static service.
<b>SvcId</b>	The service ID for the existing SPB or VXLAN service.
<b>Tag Value</b>	The VLAN ID tags of the traffic that the SAP associated with the service ID will carry.

### Release History

Release 8.3.1; command was introduced.

Release 8.4.1.R02; **l2gre** parameter added.

Release 8.6R1; IGMP and MLD snooping related fields added to SPB service-mapped profile display; “Port-Isolation” and “Vlan Xlation” fields added to L2 GRE service-mapped profile display.

Release 8.7R1; “Mac Orchest” field added to VXLAN service-mapped profile display.

### Related Commands

<b>unprofile map vlan</b>	Configures the mapping of a standard VLAN to a UNP profile.
<b>unprofile map service-type spb</b>	Configures the mapping of SPB parameters that are used to dynamically create an SPB SAP to carry profile traffic.
<b>unprofile map service-type vxlan</b>	Configures the mapping of VXLAN parameters that are used to dynamically create a VXLAN SAP to carry profile traffic.
<b>unprofile map service-type l2gre</b>	Configures the mapping of L2 GRE tunnel parameters that are used to dynamically create an L2 GRE tunnel SAP to carry profile traffic.
<b>unprofile map service-type static</b>	Configures the mapping of an existing SPB or VXLAN service to the profile.
<b>show unprofile</b>	Displays the UNP profile configuration for the switch.
<b>show unprofile vxlan far-end-ip-list</b>	Displays the contents of a far-end IP address list that is used to map VXLAN service parameters to a profile.
<b>show unprofile l2gre far-end-ip-list</b>	Displays the contents of a far-end IP address list that is used to map L2 GRE service parameters to a profile.

## show unip vxlan far-end-ip-list

Displays the contents of an IP address list. Each address represents a VXLAN Tunnel End Point (VTEP). A far-end IP list is associated with a VXLAN service to identify all the VTEPs that will participate in that service.

**show unip vxlan far-end-ip-list** [*ip\_list\_name*]

---

### Syntax Definitions

*ip\_list\_name* The name of a list that contains the IP addresses for the far-end VTEPs.

### Defaults

By default, the contents of all the VXLAN far-end IP address lists is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	V72/C32	Yes	Yes	No

### Usage Guidelines

Enter a list name with this command to display information for a specific list.

### Examples

```
-> show unip vxlan far-end-ip-list
Far-End-IP-List Name: toDataCenter1, IP-Count: 3,
  IP-Addresses:
    101.1.1.1
    102.1.1.1
    103.1.1.1
Far-End-IP-List Name: toDataCenter2, IP-Count: 3,
  IP-Addresses:
    201.1.1.1
    202.1.1.1
    203.1.1.1
```

```
-> show unip vxlan far-end-ip-list toDataCenter2
Far-End-IP-List Name: toDataCenter2, IP-Count: 3,
  IP-Addresses:
    201.1.1.1
    202.1.1.1
    203.1.1.1
```

### output definitions

---

<b>Far-End-IP-List Name</b>	The name of the far-end IP address list.
<b>IP-Count</b>	The number of IP addresses in the list.
<b>IP-Addresses</b>	The IP addresses that are members of the specified list name.

---

## Release History

Release 7.3.4; command was introduced.

## Related Commands

**unip vxlan far-end-ip-list**

Configures a UNP VXLAN far-end IP list.

**show unip profile map**

Displays the VXLAN service profile mapping configuration for the switch.

## show unip l2gre far-end-ip-list

Displays the contents of an IP address list that contains the IP address of the Loopback0 interface configured on the far-end tunnel aggregation switch.

```
show unip l2gre far-end-ip-list [ip_list_name]
```

---

### Syntax Definitions

*ip\_list\_name*                      The name of a list that contains the IP address for the far-end tunnel aggregation switch.

### Defaults

By default, the contents of all the far-end IP address lists is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	Yes	No	Yes	V72/C32	Yes	No	Yes

### Usage Guidelines

Enter a list name with this command to display information for a specific list.

### Examples

```
-> show unip l2gre far-end-ip-list
Far-End-IP-List Name: toDataCenter1, IP-Count: 1,
  IP-Addresses:
    100.1.1.1
Far-End-IP-List Name: toDataCenter2, IP-Count: 1,
  IP-Addresses:
    202.1.1.1

-> show unip l2gre far-end-ip-list toDataCenter2
Far-End-IP-List Name: toDataCenter2, IP-Count: 1,
  IP-Addresses:
    202.1.1.1
```

### output definitions

---

<b>Far-End-IP-List Name</b>	The name of the far-end IP address list.
<b>IP-Count</b>	The number of IP addresses in the list.
<b>IP-Addresses</b>	The IP address that is a member of the specified list name.

---

### Release History

Release 8.5R2; command was introduced.

## Related Commands

[unp l2gre far-end-ip-list](#)

Configures an L2 GRE far-end IP list.

[show unp profile map](#)

Displays the L2 GRE service profile mapping configuration for the switch.

    alaDaUNPL2GreFarEndIPListName

    alaDaUNPL2GreFarEndIPListIPAddressCount

---

## show unp saa-profile

Displays the Service Assurance Agent (SAA) performance monitoring profile configuration for the switch. SAA profiles are assigned to UNP VLAN profiles to specify jitter and latency threshold values for SAA sessions that apply to the assigned UNP VLAN profile.

**show unp saa-profile** [*profile\_name*]

---

### Syntax Definitions

*profile\_name*                      The name of an existing SAA profile to display.

### Defaults

By default, all SAA profiles are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- Enter an SAA profile name with this command to display information for a specific profile.
- This command does not provide the UNP assignment for each SAA profile. Use the [show unp profile](#) command to display the assignment information.

### Examples

```
-> show unp saa-profile
```

```
Profile Name                Latency Threshold    Jitter Threshold    MC Conf Status
-----+-----+-----+-----
unp_saa1                    500                  100                 Local
unp_saa2                     0                   150                 Local
unp_saa3                    250                   0                  Local
```

#### *output definitions*

---

<b>Profile Name</b>	The name of the SAA profile.
<b>Latency Threshold</b>	The latency threshold value applied with this profile. A value of “0” indicates no threshold value is applied.
<b>Jitter Threshold</b>	The jitter threshold value applied with this profile. A value of “0” indicates no threshold value is applied.
<b>MC Conf Status</b>	The MCLAG consistency check status of the UNP configuration ( <b>Sync</b> , <b>Out-Of-Sync</b> , or <b>Local</b> ). <i>Note that MCLAG is not supported in this release.</i>

---

## Release History

Release 7.3.2; command was introduced.

## Related Commands

---

## show unp global configuration

Displays the switch configuration for the global Universal Network Profile (UNP) parameter settings.

**show unp global configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- UNP global parameter settings determine specific actions related to the following:
  - Dynamically creating VLANs and/or profiles.
  - Whether or not devices attempting to authenticate are assigned to a temporary profile if the authentication server is unreachable.
  - Interaction with the Unified Policy Access Manager (UPAM) or the ClearPass Policy Manager (CPPM) as part of the OmniSwitch Bring Your Own Devices (BYOD) solution.
- A hyphen, “-”, indicates that a value has not been configured for the global UNP parameter.

### Examples

```
-> show unp global configuration

802.1x EAP Version                 = v3

```

### output definitions

<b>Dynamic Vlan Configuration</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of dynamic VLAN configuration. Configured through the <a href="#">unip dynamic-vlan-configuration</a> command.
<b>Dynamic Profile Configuration</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of dynamic profile configuration. Configured through the <a href="#">unip dynamic-profile-configuration</a> command.
<b>Auth Server Down Profile1</b> <b>Auth Server Down Profile2</b> <b>Auth Server Down Profile3</b>	The name of a UNP that a device is assigned to in the event the RADIUS server is unreachable. Up to three different profile names are configurable as authentication server down UNP profiles. Configured through the <a href="#">unip auth-server-down</a> command.
<b>Auth Server Down Voice Profile1</b> <b>Auth Server Down Voice Profile2</b> <b>Auth Server Down Voice Profile3</b>	<i>Not supported in this release.</i>
<b>Auth Server Down Port Bounce</b>	<i>Not supported in this release.</i>
<b>Auth Server Down Timeout</b>	The amount of time, in seconds, that devices remain assigned to the authentication server down UNP. Configured through the <a href="#">unip auth-server-down-timeout</a> command.
<b>Redirect Port Bounce</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of the port bounce operation for non-suppliant devices. Configured through the <a href="#">unip redirect port-bounce</a> command.
<b>Redirect Pause Timer</b>	The amount of time, in seconds, the switch pauses to clear all device authentication states and trigger re-authentication. Configured through the <a href="#">unip redirect pause-timer</a> command.
<b>Redirect http proxy-port</b>	The HTTP proxy port number to use for redirection to a server. Configured through the <a href="#">unip redirect proxy-server-port</a> command.
<b>Redirect Server FQDN</b>	The Fully Qualified Domain Name of a redirection server. Configured through the <a href="#">unip redirect-server</a> command. This field is blank if an IP address was configured for the redirect server.
<b>Redirect Server IP</b>	The IP network address of a redirection server. Configured through the <a href="#">unip redirect-server</a> command. If an FQDN was configured for the redirect server, then the resolved IP address for that domain will appear in this field.
<b>Allowed IP</b>	A list of IP addresses to which a host can access additional servers. Configured through the <a href="#">unip redirect allowed-name</a> command.

*output definitions*

---

<b>Force L3-Learning</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of UNP Layer 3 learning. Configured through the <b>unip force-l3-learning</b> command.
<b>Force L3-Learning Port Bounce</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of the port bounce action, which is associated with the Layer 3 learning function. Configured through the <b>unip force-l3-learning</b> command.
<b>802.1x Pass Through Mode</b>	Whether a supplicant device is authenticated locally ( <b>Enabled</b> ) or passed through to another switch for authentication ( <b>Disabled</b> ). Configured through the <b>unip 802.1x-pass-through</b> command.
<b>AP Mode</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of the Access Point (AP) mode. This mode is enabled to support the detection of connected OmniAccess Stellar AP devices. Configured through the <b>unip ap-mode</b> command.
<b>System-default service-mod</b>	The modulo number that is used to dynamically calculate an SPB I-SID value or a VXLAN VNID value for a System Default profile. Configured through the <b>unip system-default service-mod</b> command.
<b>System-default service-base</b>	The base service number that is used to dynamically calculate an SPB I-SID value or a VXLAN VNID value for a System Default profile. Configured through the <b>unip system-default service-base</b> command.
<b>System-default Multicast-Mode</b>	The multicast replication mode ( <b>Headend</b> or <b>Tandem</b> ) for dynamic services that are created for System Default profiles. Configured through the <b>unip system-default multicastmode</b> command.
<b>System-default Vlan-Xlation</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of VLAN translation for dynamic services that are created for System Default profiles. Configured through the <b>unip system-default vlan-xlation</b> command.
<b>System-default Multicast-Group</b>	The multicast group IP address for dynamic VXLAN services that are created for System Default profiles. Configured through the <b>unip system-default multicastgroup</b> command.
<b>System-default far-end-ip-list</b>	The name of a far-end IP list associated with dynamic VXLAN services that are created for System Default profiles.. Configured through the <b>unip system-default far-end-ip-list</b> command.
<b>IPv6 Drop Packets</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of IPv6 packet drop on UNP ports. Configured through the <b>unip ipv6-drop</b> command.
<b>Delayed Learning Interval</b>	The amount of time, in seconds, that UNP will wait before starting to learn packets received on UNP ports. Configured through the <b>unip delay-learning</b> command.
<b>Global Mac-Mobility</b>	The status ( <b>Enabled</b> or <b>Disabled</b> ) of MAC address mobility. The global status specifies the default status that is applied to new UNP profiles that are mapped to SPB service parameters. MAC mobility functionality is <i>not supported on the OmniSwitch 6465 or OmniSwitch 6560</i> . Configured through the <b>unip mac-mobility</b> command.
<b>802.1x EAP Version</b>	EAPOL version ( <b>V1</b> or <b>V3</b> ) configured for 802.1x authentication. Configured through the <b>unip 802.1x eapol-version</b> command.

---

## Release History

Release 7.2.1; command was introduced.

Release 7.2.1.R02; **Dynamic Profile Configuration** and **MC Conf Status** fields added.

Release 7.3.4; VXLAN fields added; **MC Conf Status** fields deprecated.

Release 8.3.1; **Auth Server Down UNP** field replaced with **Auth Server Down UNP Profile1**, **Auth Server Down UNP Profile2**, and **Auth Server Down UNP Profile3** fields; **Force L3-Learning** field added.

Release 8.3.1.R02; **Force L3-Learning Port Bounce** field added.

Release 8.4.1.R02; **802.1x Pass Through Mode** and **AP Mode** fields added.

Release 8.5R1; **Redirect Server FQDN** and all of the **System-default** fields added.

Release 8.5R2; **IPv6 Drop Packets** and **Delayed Learning Interval** fields added.

Release 8.6R1; **Global Mac-Mobility** field added.

Release 8.7R1; **802.1x EAP Version** field added.

## Related Commands

## show unip domain

Displays the UNP domain configuration for the switch.

**show unip domain**

---

### Syntax Definitions

N/A

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Domains are used to group physical UNP ports or link aggregates into one logical domain.
- Once a port is assigned to a specific domain, classification rules associated with the same domain ID are applied only to UNP ports associated with that same domain ID.

### Examples

```
-> show unip domain
```

```
Domain  Description
-----+-----
0       Default-Domain
1       UNP Domain 1
2       UNP Domain 2
```

### Release History

Release 8.3.1; command was introduced.

**Related Commands**

<a href="#">unip domain description</a>	Configures a domain ID to which UNP ports and classification rules are assigned.
<a href="#">unip domain</a>	Assigns a UNP port to a customer domain ID.
<a href="#">show unip port</a>	Displays the UNP configuration for the port.

**MIB Objects**

```
alaDaUnpCustomerDomainTable  
  alaDaUnpCustomerDomainId  
  alaDaUnpCustomerDomainDesc
```

---

## show unp classification

Displays the UNP classification rule configuration for the switch.

**show unp classification** *rule\_type*

---

### Syntax Definitions

*rule\_type* The rule type to display (refer to the table in the “Usage Guidelines” section of this command page for a list of rule type parameters).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Specifying one of the following classification rule type parameters is required with this command:

Standard Rule Parameters	Binding Rule Parameters
<b>mac-rule</b>	<b>mac-port-rule</b>
<b>mac-domain-rule</b>	<b>mac-ip-port-rule</b>
<b>mac-oui-rule</b>	<b>mac-ip-domain-rule</b>
<b>mac-range-rule</b>	<b>ip-port-rule</b>
<b>mac-range-domain-rule</b>	
<b>ip-rule</b>	
<b>ip-domain-rule</b>	
<b>vlan-tag-rule</b>	
<b>vlan-domain-rule</b>	
<b>port-rule</b>	
<b>domain</b>	
<b>authentication-type-rule</b>	
<b>lldp-rule</b>	

- Standard classification rule parameters are combined at the time a rule is created to define a binding classification rule. The parameter combinations provided with this command reflect the allowed binding rule parameter combinations.
- An extended classification rule defines a list of rules and allows more combinations of standard rules than the binding rule configuration (see the **show unp classification-rule** command).

**Examples**

```
-> show unip classification mac-rule
```

MAC Address	VLAN Tag	Profile1 Name	Profile2 Name	Profile3 Name
00:2a:da:11:22:01	-	unp1-vlan	unp2-vxlan	unp3-vlan
00:0f:b5:46:d7:56	20	unp4-spb	-	-

IP-Phone	unp1-vlan	-	-
Access-Point	defaultWLANProfile	defaultWLANAccessProfile	-

```
Total LLDP Rule Count: 2
```

*output definitions*

---

<b>Domain</b>	The customer domain ID assigned to the classification rule for the specified profiles. The rule is applied to traffic received on UNP ports that are assigned to the same domain ID. This rule is also supported in combination with each of the other classification rules. Configured through the <b>unip domain</b> command or as a parameter with the other classification rule commands.
<b>MAC Address</b>	The MAC address value to match for this profile rule. Configured through the <b>unip classification mac-address</b> command.
<b>Low MAC Address</b> <b>High MAC Address</b>	The lowest and highest MAC address values used to specify a range of addresses to match for this rule. Configured through the <b>unip classification mac-range</b> command.
<b>IP Address</b> <b>IP Mask</b>	The IP network address and mask values to match for this rule. Configured through the <b>unip classification ip-address</b> command.
<b>Profile1, Profile2, Profile3</b>	The name of the UNP profile to which the rule is applied. Configured through the <b>unip profile</b> command.
<b>VLAN Tag</b>	The VLAN ID value to match for this profile rule. <ul style="list-style-type: none"> <li>• If one VLAN ID is displayed, the rule will match single-tagged packets or the outer VLAN tag of double-tagged packets.</li> <li>• If two VLAN IDs are displayed, the rule will match double-tagged packets (for example, 10:20 will match outer VLAN tag 10 <i>and</i> inner VLAN tag 20).</li> </ul> This rule is also supported in combination with each of the other classification rules. Configured through the <b>unip classification vlan-tag</b> or as a parameter with the other classification rule commands.
<b>MED Endpoint</b>	The LLDP Media Endpoint Device to match for this profile rule ( <b>IP-Phone</b> or <b>Access-Point</b> ). Configured through the <b>unip classification lldp med-endpoint</b> command.

---

**Release History**

Release 8.3.1; command was introduced.

**Related Commands**

<b>show unip classification-rule</b>	Displays the extended classification rule configuration for the switch.
<b>show zeroconf server policy-instances</b>	Displays the UNP configuration for the switch.
<b>show unip port</b>	Displays the UNP configuration for the port.
<b>show unip user</b>	Displays information about the devices learned on a UNP port.

**MIB Objects**

---

## show unp classification-rule

Displays the UNP extended classification rule configuration for the switch. An extended classification rule defines a list of rule conditions, all of which a device must match to be classified into the UNP profile associated with the extended rule name. A name and precedence value is also assigned to the list of rule conditions.

**show unp classification-rule** [*rule-name*]

---

### Syntax Definitions

*rule\_name*                                      The name of an existing extended classification rule.

### Defaults

By default, the configuration for all extended rules is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter the name of an extended classification rule to display information for a specific rule.
- An extended classification rule defines a list of rules and allows more combinations of standard rules than a binding rule configuration.
- An extended classification rule is associated with a UNP profile and applied to traffic learned on UNP ports.
- If Device Profiling is enabled for the switch, the following "built-in" extended classification rules are also displayed:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets

### Examples

```
-> show unp classification-rule
```

```
Rule Name: "ext_rule1"
  Precedence           = 10,
  Profile1             = unpl-vlan,
  Conditions:
    Domain             = 2,
```

```
Mac-OUI          = 00:22:11,
VLAN Tag         = 100

Rule Name: "ext_rule2"
Precedence       = 1,
Profile1         = unp1-vlan,
Profile2         = unp2-vxlan,
Profile3         = unp3-vlan,
Conditions:
  Domain         = 20,
  Mac-Address    = 00:2a:94:11:22:01,
  Port           = 1/11 ,
  LLDP MED Endpoint = IP-Phone,
  Authentication-Type = None,

Rule Name: "devProfPrinter"
Precedence       = 255,
Profile1         = devProfPrinter,
Conditions:
  Device-Type    = Printer,

Rule Name: "devProfWindows"
Precedence       = 255,
Profile1         = devProfWindows,
Conditions:
  Device-Type    = Windows,

Rule Name: "devProfIP-Phone"
Precedence       = 255,
Profile1         = devProfIP-Phone,
Conditions:
  Device-Type    = IP-Phone,

Rule Name: "devProfWireless-Router"
Precedence       = 255,
Profile1         = devProfWireless-Router,
Conditions:
  Device-Type    = Wireless-Router,

Rule Name: "devProfSmartPhone/PDA/Tablets"
Precedence       = 255,
Profile1         = devProfSmartPhone/PDA/Tablets,
Conditions:
  Device-Type    = SmartPhone/PDA/Tablets,

Total Extended Classification Rule Count: 7

-> show unp classification-rule ext_rule2
Rule Name: "ext_rule2"
Precedence       = 1,
Profile1         = unp1-vlan,
Profile2         = unp2-vxlan,
Profile3         = unp3-vlan,
Conditions:
  Domain         = 1,
  Mac-Address    = 00:2a:94:11:22:01,
  Port           = 1/11 ,
  LLDP MED Endpoint = IP-Phone,
  Authentication-Type = None,
```

```
-> show unp classification-rule devProfPrinter
```

```
Rule Name: "devProfPrinter"
  Precedence           = 255,
  Profile1             = devProfPrinter,
  Conditions:
    Device-Type       = Printer,
```

## Release History

Release 8.1.1; command was introduced.

Release 8.2.1; **VLAN Tag** field added.

Release 8.3.1; **Edge-Profile** field replaced with **Profile1**, **Profile2**, and **Profile3** fields.

Release 8.5R2; support added for displaying Device Profile extended classification rules.

## Related Commands

## show unpr user-role

Displays the user-defined role configuration for the switch.

```
show unpr user-role [role_name]
```

---

### Syntax Definitions

*role\_name*    The name of an existing user-defined role.

### Defaults

By default, all user-defined role are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter a user-defined role name with this command to display information for a specific role.

### Examples

```
-> show unpr user-role
Role Name: url
  Qos Policy List      : qlist1
  Priority              : 1
  Conditions:
    Profile1           : unpr-vlan
    Profile2           : unpr-spb
    Profile3           : -
  Authentication-Type  : Mac
  CP Status            : Enabled

Role Name: ur2
  Qos Policy List      : qlist-allow
  Priority              : 1
  Conditions:
    Profile1           : -
    Profile2           : -
    Profile3           : -
  Authentication-Type  : 802.1x Fail
  CP Status            : Disabled

Total User Role Derivation Rule Count: 2
```

```
-> show unip user-role ur2
```

Role Name	QoS Policy List Name	Priority
ur2	qlist-allow	1

### output definitions

<b>Role Name</b>	The name of the user-defined role. Configured through the <b>unip user-role</b> command.
<b>Qos Policy List</b>	The name of the QoS policy list associated with the role name. The specified list defines the user role for the device. Configured through the <b>unip user-role policy-list</b> command.
<b>Priority</b>	The role precedence, which assigns a priority value to the user-defined role. This value determines which role to apply if a device matches the conditions of more than one user-defined role. Configured through the <b>unip user-role</b> command.
<b>Profile1, Profile2, Profile3</b>	The name of a UNP profile. The user-defined role is only applied to devices classified into the specified profile name. Configured through the <b>unip user-role profile</b> command.
<b>Authentication-Type</b>	The type of authentication applied to a device ( <b>none</b> , <b>mac</b> , or <b>802.1x</b> ). The user-defined role is only applied to devices authenticated with the specified type. Configured through the <b>unip user-role authentication-type</b> command.
<b>CP Status</b>	The Captive Portal post login status. If enabled, the role is only applied to devices in this state. Configured through the <b>unip user-role cp-status-post-login</b> command.

### Release History

Release 8.1.1; command was introduced.

Release 8.3.1; **Edge-Profile** field replaced with **Profile1**, **Profile2**, and **Profile3** fields.

### Related Commands

<b>unip user-role</b>	Configures a user-defined role.
<b>show unip user</b>	Displays information about devices learned on UNP ports.

### MIB Objects

```
alaDaUNPUserRoleTable
  alaDaUNPUserRoleName
  alaDaUNPUserRolePrecedenceNum
  alaDaUNPUserRolePolicyList
  alaDaUNPUserRoleProfile1
  alaDaUNPUserRoleProfile2
  alaDaUNPUserRoleProfile3
  alaDaUNPUserRoleAuthType
  alaDaUNPUserRolePostLoginStatus
```

## show unpr restricted-role

Displays the names of the explicit QoS policy lists assigned to the built-in restricted role states (Captive Portal pre-login, Unauthorized, and QMR) used by the switch.

**show unpr restricted-role**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

An explicit QoS policy list overrides the built-in policy list associated with the restricted role state. When the explicit policy list assignment is removed, the switch reverts back to using the built-in policy list associated with the restricted role state.

### Examples

```
-> show unpr restricted-role
Role name      Qos Policy List Name
-----+-----
UNAUTHORIZED  qlist-bad
QMR           qlist-qmr
CP PRE-LOGIN  qlist-cp

Total Restricted Role Count: 3
```

#### *output definitions*

---

<b>Role Name</b>	The restricted role name.
<b>Qos Policy List</b>	The name of the QoS policy list associated with the restricted role name.

---

### Release History

Release 8.1.1; command was introduced.

**Related Commands**

- unpr restricted-role policy-list** Configures a user-defined role.
- show unpr user** Displays information about devices learned on UNP ports.

**MIB Objects**

```
alaDaUNPRstrctedRoleTable  
  alaDaUNPRstrctedRoleType  
  alaDaUNPRstrctedRolePolicyList
```

---

## show unip port

Displays the UNP configuration for the port. Includes only ports and link aggregates on which UNP is enabled.

**show unip** {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]]} [type {**bridge** | **access**}]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15).
<b>bridge</b>	Displays only UNP bridge ports.
<b>access</b>	Displays only UNP access ports.

### Defaults

By default, configuration information for all UNP ports or link aggregates is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter a port or link aggregate ID number to display information specific to the port or link aggregate.
- Specify a UNP port type (**bridge** or **access**) to display information only for that type of UNP port.

### Examples

```
-> show unip port
Port  Port  Type  802.1x  Mac    Class.  Default  802.1X  MAC  Trust-Tag
      Domain  Auth  Auth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
1/16      1 Bridge Disabled Disabled Enabled  unip-1001  -      -      Disabled
1/17      0 Bridge Disabled Disabled Disabled unip-1001  -      -      Disabled
1/18      0 Access Disabled Enabled  Enabled  spb1001    -      -      Enabled
1/35      0 Access Disabled Enabled  Disabled -          -      -      Disabled
1/36      5 Bridge Enabled  Enabled  Disabled DefUnp     1XProf1  MacPAS  Enabled
1/37      5 Access Enabled  Disabled Enabled    -          1XProf2  -      Enabled
```

```

-> show unip port 1/17
Port  Port      Type  802.1x  Mac      Class.  Default  802.1X  MAC      Trust-Tag
   Domain          Auth   Auth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/17      0 Bridge Disabled Disabled Disabled unip-1001 - - Disabled

-> show unip linkagg type bridge
LagID Port      Type  802.1x  Mac      Class.  Default  802.1X  MAC      Trust-Tag
   Domain          Auth   Auth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
10        1 Bridge Disabled Disabled Enabled  unip-1001 - - Disabled
15        0 Bridge Disabled Disabled Disabled unip-1001 - - Disabled

```

### output definitions

<b>Port/LagID</b>	The port or link aggregate on which UNP is enabled. Configured through the <b>unip port-type</b> command.
<b>Port Domain</b>	The customer domain ID assigned to the UNP port. Traffic received on the port is classified with UNP profile rules that are assigned to the same domain ID. Configured through the <b>unip domain</b> command.
<b>Type</b>	The type of UNP port ( <b>Bridge</b> or <b>Access</b> ). UNP bridge ports classify traffic into VLAN profiles; UNP access ports classify traffic into service profiles. Configured through the <b>unip port-type</b> command.
<b>802.1x Auth</b>	The status of 802.1X authentication ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip 802.1x-authentication</b> command.
<b>Mac Auth</b>	The status of MAC authentication ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip mac-authentication</b> command.
<b>Class.</b>	The status of classification ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unip classification</b> command.
<b>Default</b>	The name of the default UNP assigned to the port or link aggregate. Configured through the <b>unip default-profile</b> command.
<b>802.1X Pass-Alt</b>	The name of the 802.1X authentication pass alternate UNP assigned to the port or link aggregate. Configured through the <b>unip 802.1x-authentication pass-alternate</b> command.
<b>MAC Pass-Alt</b>	The name of the MAC authentication pass alternate UNP assigned to the port or link aggregate. Configured through the <b>unip mac-authentication pass-alternate</b> command.
<b>Trust-Tag</b>	The status of the trust VLAN tag option for the UNP port or link aggregate. Configured through the <b>unip trust-tag</b> command.

### Release History

Release 8.3.1; command was introduced.

## Related Commands

<code>show unp profile</code>	Displays the UNP configuration for the switch.
<code>show unp port config</code>	Displays detailed configuration information for UNP ports and link aggregates.
<code>show unp user</code>	Displays information about the devices learned on a UNP port.

## show unnp port config

Displays detailed configuration information for UNP ports and link aggregates.

**show unnp {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]]} config**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	Link aggregate ID. Use a hyphen to specify a range of link aggregates IDs (10-15).

### Defaults

By default, configuration information for all ports or link aggregates is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **port** or **linkagg** parameter to display information for a specific port or link aggregate ID.

### Examples

```
-> show unnp port 1/1/10 config
Port 1/1/10
  Port-Type                = BRIDGE,

```

### output definitions

<b>Port or Linkagg ID</b>	The port or link aggregate on which UNP is enabled. Configured through the <b>unnp port-type</b> command. A “0” indicates the port is a link aggregate (for example, 0/12 is link aggregate ID 12).
<b>Port Type</b>	The type of UNP port ( <b>Bridge</b> or <b>Access</b> ).
<b>Redirect Port Bounce</b>	The status of the port bounce operation ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp redirect port-bounce</b> command. This field applies only to UNP bridge ports and link aggregates.
<b>802.1x Authentication</b>	The 802.1X authentication status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp 802.1x-authentication</b> command.
<b>802.1x Pass Alternate Profile</b>	The name of the 802.1X authentication pass alternate profile assigned to the port or link aggregate. Configured through the <b>unnp 802.1x-authentication pass-alternate</b> command
<b>802.1x Bypass</b>	The status of 802.1X bypass ( <b>Enabled</b> or <b>Disabled</b> ).
<b>802.1x failure-policy</b>	Whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails ( <b>default</b> = no MAC authentication or <b>mac-authentication</b> ).
<b>Mac-auth allow-eap</b>	Indicates the conditions under which 802.1X authentication is performed or bypassed based on the initial MAC authentication process ( <b>pass</b> = MAC authentication passes, <b>fail</b> = if MAC authentication fails, <b>noauth</b> = no MAC authentication, or <b>none</b> = do not attempt 802.1X authentication). This parameter option only applies to a UNP port or link aggregate on which 802.1X authentication bypass is enabled. Configured through the <b>unnp mac-authentication allow-eap</b> command.
<b>Mac Authentication</b>	The MAC authentication status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp mac-authentication</b> command.
<b>Mac Pass Alternate Profile</b>	The name of the MAC authentication pass alternate profile assigned to the port or link aggregate. Configured through the <b>unnp mac-authentication pass-alternate</b> command.
<b>Classification</b>	The classification status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp classification</b> command.
<b>Trust-Tag</b>	The status of the trust VLAN tag option for the UNP port or link aggregate. Configured through the <b>unnp trust-tag</b> command.
<b>Default Profile</b>	The name of the default UNP profile assigned to the UNP port or link aggregate. Configured through the <b>unnp default-profile</b> command.

*output definitions*

---

<b>Port Domain Name</b>	The domain ID number assigned to the UNP port or link aggregate. Configured through the <b>unnp domain</b> command.
<b>AAA Profile</b>	The name of an AAA profile assigned to the UNP port or link aggregate. Configured through the <b>unnp aaa-profile</b> command.
<b>Port Template</b>	The name of a port template assigned to the UNP port or link aggregate. A port template defines and saves UNP port configuration options (such as the type of authentication, classification status, a default profile). Configured through the <b>unnp port port-template</b> command.
<b>Port Control Direction</b>	Whether 802.1X access control is applied to ingress and egress traffic ( <b>both</b> ) or just ingress traffic ( <b>in</b> ). Configured through the <b>unnp direction</b> command. This field applies only to UNP bridge ports and link aggregates.
<b>Egress Flooding</b>	Indicates whether egress broadcast, unknown unicast, and multicast traffic is blocked ( <b>Not Allowed</b> ) or unblocked ( <b>Allowed</b> ) on the UNP port. The value displayed in this field is based on the port control direction setting for the port ( <b>both</b> = Not Allowed; <b>in</b> = Allowed). This field is displayed only for UNP bridge ports and link aggregates.
<b>Admin State</b>	The administrative status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp admin-state</b> command.
<b>Dynamic Service</b>	The type of dynamic service ( <b>vlan</b> or <b>spb</b> ) to generate on the UNP port or link aggregate. Configured through the <b>unnp dynamic-service</b> command. This field applies only to UNP access ports and link aggregates.
<b>PVLAN Port Type</b>	The Private VLAN (PVLAN) port type for the UNP port or link aggregate ( <b>promiscuous</b> , <b>isl</b> , <b>community</b> , or <b>isolated</b> ). This field is displayed only for UNP access ports, not link aggregates.
<b>Force L3-Learning</b>	The status of Layer 3 learning ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp force-l3-learning</b> command.
<b>Force L3-Learning Port Bounce</b>	The status of the port bounce action, which is an optional parameter associated with the Layer 3 learning function. Configured through the <b>unnp force-l3-learning</b> command.
<b>AP Mode</b>	The Access Point mode status ( <b>Enabled</b> or <b>Disabled</b> ) for the UNP port or link aggregate. Configured through the <b>unnp port ap-mode</b> command.
<b>802.1x Tx-Period</b>	The amount of time, in seconds, before an EAP Request Identity is retransmitted. Configured through the <b>unnp 802.1x-authentication tx-period</b> command.
<b>802.1x Supp-Timeout</b>	The amount of time, in seconds, the switch waits before timing out an 802.1X user (supplicant) that is attempting to authenticate. Configured through the <b>unnp 802.1x-authentication supp-timeout</b> command.
<b>802.1x Max-Req</b>	The maximum number of times the switch will retransmit a request for authentication information. Configured through the <b>unnp 802.1x-authentication max-req</b> command.
<b>L2 Profile</b>	The name of a Layer 2 profile that is assigned to the UNP port or link aggregate. Configured through the <b>unnp l2-profile</b> command. This field applies only to UNP access ports and link aggregates.

---

## Release History

Release 8.3.1; command was introduced.

Release 8.3.1.R02; “Force L3-Learning” and “Force L3-Learning Port Bounce” fields added.

Release 8.4.1; “L2 Profile” field added.

Release 8.6R1; “AP Mode” field added.

## Related Commands

<code>show unnp port</code>	Displays the UNP port configuration for the switch.
<code>show unnp profile</code>	Displays the UNP configuration for the switch.
<code>show unnp user</code>	Displays information about the devices learned on a UNP port.

## show unip port bandwidth

Displays the bandwidth parameter values applied to a UNP port or link aggregate. These values are optionally assigned through the UNP profile to which a UNP port is associated.

**show unip {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} bandwidth**

---

### Syntax Definitions

<i>chassis/slot/port</i> [-port2]	The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>agg_id</i> [-agg_id2]	Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific port or link aggregate ID.
- Bandwidth parameter values are not applied to UNP link aggregates that are assigned to the profile. As a result, this command will always show the bandwidth parameter values as not set for link aggregates.
- The optional bandwidth parameter values are applied when a UNP port is classified into a UNP profile. The profile name is obtained through local classification or returned from the RADIUS server.
- The source from which the bandwidth parameter values was last updated is also included in the display information. The source updates are based on the following conditions:
  - The UNP profile applies the bandwidth values at the time the UNP port is classified into the profile. This overrides any existing QoS bandwidth policies configured on the physical port.
  - QoS bandwidth policies defined in a QoS policy list associated with the profile are applied after the port is classified into the profile. This overrides the profile bandwidth values initially applied.
  - User-configured QoS bandwidth policies are applied after the port is classified into the profile.

## Examples

The following example shows the default display of UNP rate limit parameters when no users are learned on the UNP port:

```
-> show unip port 1/1/11 bandwidth
Port  Port  Type  Max Ingress Ingress BW Ingr BW  Max Egress Egress BW Egress BW Max Ingress Max Egress
   Domain Bandwidth Source  profile Bandwidth Source  profile Depth  Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0      Bridge 0              -        0              -        0              0              0
```

The following example shows the UNP rate limit parameters that are applied when user devices are assigned to a UNP profile that specifies bandwidth parameter values:

```
-> show unip port 1/1/11 bandwidth
Port  Port  Type  Max Ingress Ingress BW Ingr BW  Max Egress Egress BW Egress BW Max Ingress Max Egress
   Domain Bandwidth Source  profile Bandwidth Source  profile Depth  Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0      Bridge 50.0M      UNP      Ingress50 30.0M      UNP      Egress30 0          0
```

The following example shows the rate limit parameter values that are applied when QoS policies override the bandwidth parameter values that were applied through UNP profile settings:

```
-> qos port 1/1/11 maximum ingress-bandwidth 60M maximum egress-bandwidth 60M

-> show unip port 1/1/11 bandwidth
Port  Port  Type  Max Ingress Ingress BW Ingr BW  Max Egress Egress BW Egress BW Max Ingress Max Egress
   Domain Bandwidth Source  profile Bandwidth Source  profile Depth  Depth
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
1/1/11 0      Bridge 60.0M      QoS      -          60.0M      QoS      -          0          0
```

### output definitions

<b>Port</b>	The port or link aggregate on which UNP is enabled. A “0” indicates the port is a link aggregate (for example, 0/11 is link aggregate ID 11). Configured through the <b>unip port-type</b> command.
<b>Port Domain</b>	The domain ID assigned to the UNP port or link aggregate. Configured through the <b>unip domain</b> command.
<b>Type</b>	The type of UNP port ( <b>Bridge</b> or <b>Access</b> ). Configured through the <b>unip port-type</b> command.
<b>Max Ingress Bandwidth</b>	The maximum ingress bandwidth value applied to the UNP port. Configured through the <b>unip profile maximum-ingress-bandwidth</b> command.
<b>Ingress BW Source</b>	The source from which the maximum ingress bandwidth value was updated on the port ( <b>UNP</b> or <b>QoS</b> ).
<b>Ingr BW Profile</b>	The name of the UNP profile responsible for setting the maximum ingress bandwidth value on the UNP port. This field is only applicable when UNP classification applies the bandwidth setting on the port.
<b>Max Egress Bandwidth</b>	The maximum egress bandwidth value applied to the UNP port. Configured through the <b>unip profile maximum-egress-bandwidth</b> command.
<b>Egress BW Source</b>	The source from which the maximum egress bandwidth value was updated on the port ( <b>UNP</b> or <b>QoS</b> ).
<b>Egress BW Profile</b>	The name of the UNP profile responsible for setting the maximum egress bandwidth value on the UNP port. This field is only applicable when UNP classification applies the bandwidth setting on the port.

*output definitions*

---

<b>Max Ingress Depth</b>	The maximum ingress depth value that is applied to the UNP port. This value determines how much the traffic can burst over the maximum ingress bandwidth rate. Configured through the <b>unnp profile maximum-ingress-depth</b> command.
<b>Max Egress Depth</b>	The maximum egress depth value that is applied to the UNP port. This value determines how much the traffic can burst over the maximum egress bandwidth rate. Configured through the <b>unnp profile maximum-egress-depth</b> command.

---

**Release History**

Release 8.2.1; command was introduced.

**Related Commands**

<b>show unnp port</b>	Displays the UNP port configuration for the switch.
<b>show unnp profile</b>	Displays the UNP profile configuration for the switch.

## show unip port 802.1x statistics

Displays 802.1X statistics for a UNP port or link aggregate on which 802.1X authentication is enabled.

**show unip {port chassis/slot/port1[-port2] | linkagg agg\_id[-agg\_id2]} 802.1x statistics**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	Link aggregate ID. Use a hyphen to specify a range of link aggregates IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **port** or **linkagg** parameter to display information for a specific UNP port or link aggregate ID.

### Examples

```
-> show unip port 1/1/13 802.1x statistics
Port 1/1
  Mac-address=00:00:00:00:00:01,
  Vlan=0,
  Rx EAP Frames=0,
  Tx EAP Frames=0,
  Rx EAP Logoff Frames=0,
  Tx EAP Request Frames=0,
  Tx EAP Request ID Frames=0,
  Rx EAP Response Frames=0,
  Rx EAP Response ID Frames=0,
  Rx EAP Start Frames=0,
  Rx Invalid EAP Frames=0,
  Rx Length Error EAP Frames=0,
  Last EAP Frame Version=0,
  Last EAP Frame Version=0,
  Last EAP Source=00:00:00:00:00:00
```

```
-> show unip linkagg 20 802.1x statistics
Linkagg ID 0/10
  Mac-address=00:00:00:00:00:01,
  Vlan=0,
  Rx EAP Frames=0,
  Tx EAP Frames=0,
  Rx EAP Logoff Frames=0,
  Tx EAP Request Frames=0,
  Tx EAP Request ID Frames=0,
  Rx EAP Response Frames=0,
  Rx EAP Response ID Frames=0,
  Rx EAP Start Frames=0,
  Rx Invalid EAP Frames=0,
  Rx Length Error EAP Frames=0,
  Last EAP Frame Version=0,
  Last EAP Frame Version=0,
  Last EAP Source=00:00:00:00:00:00
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

[show unip port](#)

Displays the UNP port configuration for the switch.

[show unip user](#)

Displays information about the devices learned on a UNP port.

## MIB Objects

N/A

---

## show unip port configured-vlans

Displays the VLANs assigned to UNP bridge ports or link aggregates.

**show unip {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]} configured-vlans**

---

### Syntax Definitions

*chassis/slot/port*[-*port2*]      The chassis ID, slot, and port number (3/1/1) for a specific UNP bridge port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id*[-*agg\_id2*]      Link aggregate ID for a specific UNP bridge link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific UNP bridge port or link aggregate ID.
- If the **port** or **linkagg** parameter is used without specifying an individual port, a range of ports, or link aggregate ID, then the configured VLAN information for all UNP ports and link aggregates is displayed.
- The “Type” field indicates if the VLAN assignment is untagged (unpUntag) or tagged (unpQtag).

### Examples

```
-> show unip port configured-vlans
Port      Vlan  Type
-----+-----+-----
0/10      500   unpUntag
0/10      501   unpUntag
1/1/10    600   unpQtag
1/1/11    601   unpUntag
1/1/11    602   unpQtag
1/1/11    603   unpQtag

-> show unip port 1/1/11 configured-vlans
Port      Vlan  Type
-----+-----+-----
1/1/11    601   unpUntag
1/1/11    602   unpQtag
1/1/11    603   unpQtag
```

```
-> show unip linkagg configured-vlans
LagId   Vlan   Type
-----+-----+-----
0/10    500   unipUntag
0/10    501   unipQtag
0/100   100   unipQtag
0/100   101   unipUntag
0/101   200   unipQtag
0/101   201   unipQtag
```

```
-> show unip linkagg 100 configured-vlans
LagId   Vlan   Type
-----+-----+-----

```

## Release History

Release 8.2.1; command was introduced.

Release 8.5R4; “Type” field added.

## Related Commands

[unip vlan](#)

Configures VLAN assignments for UNIP bridge ports.

[show unip port](#)

Displays the UNIP port and link aggregate configuration for the switch.

## MIB Objects

alaDaUNIPPortVlanTable

alaDaUNIPPortVlanVID

---

## show unip port profile

Displays the UNP service profiles that are statically assigned to UNP ports or link aggregates.

**show unip {port [*chassis/slot/port1*[-*port2*]] | linkagg [*agg\_id*[-*agg\_id2*]} profile**

---

### Syntax Definitions

*chassis/slot/port*[-*port2*]      The chassis ID, slot, and port number (3/1/1) for a specific UNP port. Use a hyphen to specify a range of ports (3/1/1-8).

*agg\_id*[-*agg\_id2*]              Link aggregate ID for a specific UNP link aggregate. Use a hyphen to specify a range of link aggregate IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display information for a specific UNP port or link aggregate ID.
- If the **port** or **linkagg** parameter is used without specifying an individual port, a range of ports, or link aggregate ID, then the static profile information for all UNP ports and link aggregates is displayed.

### Examples

```
-> show unip port profile
Port      Profile
-----+-----
1/1/5     static-spb1
1/1/5     static-spb2
1/1/10    static-vxlan1
1/1/10    static-vxlan2
1/1/20    static-l2gre

-> show unip port 1/1/5 profile
Port      Profile
-----+-----
1/1/5     static-spb1
1/1/5     static-spb2
```

### Release History

Release 8.5R4; command was introduced.

**Related Commands****unport profile**

Configures static profile assignments for UNP ports.

**show unport**

Displays the UNP port and link aggregate configuration for the switch.

**MIB Objects**

    alaDaUNPPortProfile

---

## show unp port-template

Displays the port template configuration for the switch.

**show unp port-template** [*template\_name*] [**config** | **configured-vlans** | **profile**]

---

### Syntax Definitions

<i>template_name</i>	The name of the UNP port template to display.
<b>config</b>	Displays additional details about the parameter configuration for the template.
<b>configured-vlans</b>	Displays the VLAN IDs that the specified template assigns to a UNP port.
<b>profile</b>	Displays the names of UNP service profiles that the specified template assigns as static profiles to a UNP port.

### Defaults

By default, displays a summary of the configuration information for all port templates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter a template name with this command to display information for a specific port template.
- Use the **config** option with this command to display the full configuration for each template.
- Use the **configured-vlans** option with this command to display the VLAN IDs that a port template will statically assign to a UNP bridge port when the template is applied on the port. Configuring a static VLAN-port association (VPA) applies only to UNP bridge ports.
- Use the **profile** option with this command to display the names of UNP service profiles that a port template will assign as a static profile to a UNP port when the template is applied on the port.

### Examples

```
-> show unp port-template
```

Template Name	802.1x	802.1x Pass-Alt Profile	Mac-Auth Mac-Auth	Mac-Auth Pass-Alt Profile	Redirect Port-Bounce	Class.	Trust-Tag

---

**output definitions**

---

<b>Port Template</b>	The name of the port template. By default, the “accessDefaultPortTemplate” is assigned to UNP access ports and the “bridgeDefaultPortTemplate” is assigned to UNP bridge ports.
<b>802.1x Authentication</b>	The 802.1X authentication status ( <b>Enabled</b> or <b>Disabled</b> ).
<b>802.1x Pass Alternate Profile</b>	The name of an alternate profile for devices that pass 802.1X authentication.
<b>Mac Authentication</b>	The MAC authentication status ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Mac-Auth Pass Alternate Profile</b>	The name of an alternate profile for devices that pass MAC authentication.
<b>Classification</b>	The classification status ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Trust-Tag</b>	The trust VLAN ID tag status ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Default Profile</b>	The name of a default profile for devices that are not classified by any other classification methods.
<b>Port Domain Num</b>	The domain ID number assignment for the UNP port.
<b>Redirect Port Bounce</b>	The status of port bounce ( <b>Enabled</b> or <b>Disabled</b> ) for BYOD registration and authorization. This parameter is only configurable on UNP bridge ports.
<b>AAA Profile</b>	The name of an AAA profile to apply to the port.
<b>Port Control Direction</b>	Whether 802.1X access control is applied to ingress and egress traffic ( <b>both</b> ) or just ingress traffic ( <b>in</b> ). This parameter is only configurable on UNP bridge ports.
<b>802.1x Tx-Period</b>	The amount of time, in seconds, before an EAP Request Identity is retransmitted.
<b>802.1x Supp-Timeout</b>	The amount of time, in seconds, the switch will wait before timing out an 802.1X user that is attempting to authenticate.
<b>802.1x Max-Req</b>	The maximum number of times the switch will retransmit a request for authentication information.
<b>802.1x Bypass</b>	The status of 802.1X bypass ( <b>Enabled</b> or <b>Disabled</b> ).
<b>802.1x failure-policy</b>	Whether the switch attempts subsequent MAC authentication for a device after the initial 802.1X authentication process fails ( <b>default</b> = no MAC authentication is attempted or <b>mac-authentication</b> ).
<b>Mac-auth allow-eap</b>	The conditions under which 802.1X authentication is performed or bypassed based on the initial MAC authentication process ( <b>pass</b> = if MAC authentication passes, <b>fail</b> = if MAC authentication fails, or <b>noauth</b> = if MAC authentication is not configured). This parameter option only applies to UNP ports on which 802.1X authentication bypass is enabled.
<b>Force L3-Learning</b>	The status of Layer 3 learning ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Force L3-Learning Port Bounce</b>	The status of the port bounce action, which is an optional parameter associated with the Layer 3 learning function.

*output definitions*

---

<b>Admin State</b>	The administrative status of the UNP port configuration ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Dynamic Service</b>	Whether the UNP port generates dynamic SPB or VXLAN services. This parameter is only configurable on UNP access ports.
<b>L2 Profile</b>	The name of a Layer 2 service profile to apply to a UNP access port. This parameter is not configurable when the template is assigned to a UNP bridge port.
<b>AP Mode</b>	The status of Access Point (AP) mode functionality ( <b>Enabled</b> or <b>Disabled</b> ). This parameter is only configurable on UNP bridge ports.

---

```
-> show unnp port-template unnp-pt1 configured-vlans
Template Name          Vlan  Type
-----+-----+-----
unnp-pt1              200   unnpUntag
unnp-pt1              201   unnpQtag
```

*output definitions*

---

<b>Template Name</b>	The name of a UNP port template.
<b>VLAN</b>	The VLAN IDs that are assigned to a UNP bridge port when the template is applied to the port.
<b>Type</b>	Indicates if the VLAN assignment is untagged ( <b>unnpUntag</b> ) or tagged ( <b>unnpQtag</b> ).

---

```
-> show unnp port-template unnp-port1 profile
Template Name          Profile
-----+-----
unnp-port1            static-spb1
                     static-spb2
```

*output definitions*

---

<b>Template Name</b>	The name of a UNP port template.
<b>Profile</b>	The name of UNP service profiles that are statically assigned to a UNP port when the template is applied to the port.

---

**Release History**

Release 8.3.1; command was introduced.

Release 8.3.1.R02; “Force L3-Learning” and “Force L3-Learning Port Bounce” fields added.

Release 8.4.1; “L2 Profile” field added.

Release 8.5R4; **profile** parameter added, “Type” field added to configured VLANs display.

Release 8.6R1; “AP Mode” field added.

## show unp user

Displays information about the MAC addresses learned on a UNP port or link aggregate.

**show unp user** [**port** *chassis/slot/port[-port2]*] [**linkagg** *agg\_id[-agg\_id2]*] [**sap-id** *sap\_id*] [**service-id** *service\_id*] [**profile** *profile\_name*] [**authentication-type** {**none** | **mac** | **802.1x**}] [**mac-address** *mac\_address*] [**count**]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). This parameter displays all UNP users learned on the specified port number.
<i>agg_id[-agg_id2]</i>	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15). This parameter displays all UNP users learned on the specified link aggregate ID.
<i>sap_id</i>	A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID.
<i>service_id</i>	A service ID number. This parameter displays all UNP users associated with the specified service ID.
<i>profile_name</i>	The name of an existing UNP profile. This parameter displays all UNP users associated with the specified profile name.
<b>none</b>	Displays all UNP users that did not undergo the authentication process.
<b>mac</b>	Displays all UNP users that were authenticated through the MAC authentication process.
<b>802.1x</b>	Displays all UNP users that were authenticated through the 802.1X authentication process.
<i>mac_address</i>	A source MAC address. This parameter displays the UNP user device with the specified source MAC address.
<b>count</b>	Displays the number of UNP users learned on the switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> <b>V72/C32</b>	<b>6900</b> <b>X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results. In addition, some parameters can be combined to further narrow the display results. For example:
  - Combine the **port** or **linkagg** parameter with the **profile** parameter option to display users learned on the port or link aggregate that are classified into the specified profile.
  - Combine the **port** or **linkagg** parameter with the **authentication-type** parameter option to display users on the port or link aggregate that were authenticated with the specified authentication type.
- The “Username” field displays the user name that was entered to authenticate an 802.1X user device or the user name that was entered to successfully authenticate a user device through the Captive Portal process. However, if a user device first undergoes 802.1X authentication and then undergoes successful Captive Portal authentication, the user name entered during the Captive Portal process is displayed in this field.
- IPv6 is supported only for users learned into a VLAN or service which has an IP interface configured.

## Examples

```
-> show unip user count
Total users: 6
```

```
-> show unip user
User
Port Username          Mac address          IP(V4/V6) Vlan Profile  Type    Status
-----+-----+-----+-----+-----+-----+-----+-----

0/12 00:00:00:00:00:14  00:00:00:00:00:14  2100::9   20 unip-7   Bridge  Active
```

```
Total users : 6
```

### output definitions

<b>Port</b>	The port or link aggregate on which the MAC address was learned. A “0” indicates the UNP port is a link aggregate (e.g., 0/10 refers to link aggregate ID 10).
<b>Username</b>	Displays either a source MAC address or a Captive Portal user name for the learned user device.
<b>MAC address</b>	The MAC address of the user device. This field and the <b>Username</b> field may contain the same MAC address, depending on how the user device was authenticated.
<b>User IP (V4/V6)</b>	The IP network address of the user device (IPv4 or IPv6).
<b>Vlan</b>	The UNP VLAN ID to which the user device was assigned. This only applies for users authenticated into VLAN profiles.
<b>Profile</b>	The name of the UNP profile to which the user device was assigned.

*output definitions*

<b>Type</b>	The type of UNP port on which the device was learned ( <b>Bridge</b> or <b>Access</b> ).
<b>Status</b>	The status of the device: <ul style="list-style-type: none"> <li>• <b>In progress</b>—device learning is in progress.</li> <li>• <b>Active</b>—device is learned in forwarding state.</li> <li>• <b>Block</b>—device is learned in filtering state.</li> </ul>

```
-> show unip user port 1/1/3

```
Total users : 2
```

*output definitions*

<b>Port</b>	The port or link aggregate on which the MAC address was learned. A “0” indicates the UNP port is a link aggregate (e.g., 0/10 refers to link aggregate ID 10).
<b>Username</b>	Displays either a source MAC address or a Captive Portal user name for the learned user device.
<b>MAC address</b>	The MAC address of the user device. This field and the <b>Username</b> field may contain the same MAC address, depending on how the user device was authenticated.

*output definitions*

---

<b>User IP (V4/V6)</b>	The IP network address of the user device, IPv4 or IPv6.
<b>Vlan</b>	The UNP VLAN ID to which the user device was assigned. This only applies for users authenticated into VLAN profiles.
<b>Profile</b>	The name of the UNP profile to which the user device was assigned.
<b>Auth</b>	The type of authentication applied to the user ( <b>none</b> , <b>mac</b> , or <b>802.1X</b> ).
<b>Role</b>	The user role (QoS policy list) applied to the user device.

---

**Release History**

Release 8.1.1; command was introduced.

Release 8.7R1; Support for IPv6 added.

## show unp user status

Displays the status of the authentication and validation process for MAC addresses learned on a UNP port or link aggregate.

**show unp user status** [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*] [**sap-id** *sap\_id*] [**service-id** *service\_id*] [**profile** *profile\_name*] [**authentication-type** {**none** | **mac** | **802.1x**}] [**mac-address** *mac\_address*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	Link aggregate ID. Use a hyphen to specify a range of link aggregate IDs (10-15).
<i>sap_id</i>	A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID.
<i>service_id</i>	A service ID number. This parameter displays all UNP users associated with the specified service ID.
<i>profile_name</i>	The name of an existing UNP profile.
<b>none</b>	Displays users that did not undergo the authentication process.
<b>mac</b>	Displays users that were authenticated through MAC authentication.
<b>802.1x</b>	Displays users that were authenticated through 802.1X authentication.
<i>mac_address</i>	The user device MAC address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

### output definitions

<b>Port</b>	The port or link aggregate on which the MAC address was learned. A “0” indicates the UNP port is a link aggregate (e.g., 0/10 refers to link aggregate ID 10).
<b>MAC address</b>	The MAC address of the user device.
<b>Profile Name</b>	The name of the UNP to which the user device was assigned.
<b>Profile Source</b>	The source of the profile assignment (e.g., Radius, Alt).
<b>Authentication Type</b>	The type of authentication applied to the user ( <b>none</b> , <b>mac</b> , or <b>802.1X</b> ).
<b>Authentication Status</b>	The authentication status for the device.
<b>Role Name</b>	The name of the user role applied to the user device.
<b>Role Source</b>	The source of the user role applied to the user device.
<b>CP</b>	Indicates if the device was authenticated through Captive Portal.
<b>Redirect</b>	The redirection status.
<b>Restricted Access</b>	Whether or not access is restricted for the user.

## Release History

Release 8.1.1; command was introduced.

**Related Commands**

<a href="#">show unp user</a>	Displays information about users learned on a UNP ports.
<a href="#">show unp user details</a>	Displays detailed information about users learned on a UNP ports.
<a href="#">show zeroconf server policy-instances</a>	Displays the UNP configuration for the switch.
<a href="#">show unp port</a>	Displays the UNP configuration for the port.

**MIB Objects**N/A

---

## show unp user details

Displays additional details about the MAC addresses learned on a UNP port or link aggregate.

**show unp user details** [**port** *chassis/slot/port*[-*port2*]] | [**linkagg** *agg\_id*[-*agg\_id2*]] [**sap-id** *sap\_id*] [**service-id** *service\_id*] [**profile** *profile\_name*] [**authentication-type** {**none** | **mac** | **802.1x**}] [**mac-address** *mac\_address*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). This parameter displays all UNP users learned on the specified port number.
<i>agg_id</i> [- <i>agg_id2</i> ]	Link aggregate ID number. Use a hyphen to specify a range of link aggregate IDs (10-15). This parameter displays all UNP users learned on the specified link aggregate ID.
<i>sap_id</i>	A Service Access Point (SAP) ID. This parameter displays all UNP users associated with the specified SAP ID.
<i>service_id</i>	A service ID number. This parameter displays all UNP users associated with the specified service ID.
<i>profile_name</i>	The name of an existing UNP profile. This parameter displays all UNP users associated with the specified profile name.
<b>none</b>	Displays all UNP users that did not undergo the authentication process.
<b>mac</b>	Displays all UNP users that were authenticated through the MAC authentication process.
<b>802.1x</b>	Displays all UNP users that were authenticated through the 802.1X authentication process.
<i>mac_address</i>	A source MAC address. This parameter displays the UNP user device with the specified source MAC address.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the optional parameters provided with this command to filter the output display results. In addition, some parameters can be combined to further narrow the display results. For example:
  - Combine the **port** or **linkagg** parameter with the **profile** parameter option to display users learned on the port or link aggregate that are classified into the specified profile.
  - Combine the **port** or **linkagg** parameter with the **authentication-type** parameter option to display users on the port or link aggregate that were authenticated with the specified authentication type.
- The “User Name” field displays the user name that was entered to authenticate an 802.1X user device or the user name that was entered to successfully authenticate a user device through the Captive Portal process. However, if a user device first undergoes 802.1X authentication and then undergoes successful Captive Portal authentication, the user name entered during the Captive Portal process is displayed in this field.

## Examples

```
-> show unip user details port 1/1/10

*output definitions*

---

<b>Port</b>	The UNP port or link aggregate on which the device was learned.
<b>Mac-address</b>	The MAC address of the device.
<b>SAP</b>	The port or link aggregate and encapsulation value for an SPB or VXLAN Service Access Point (SAP).
<b>Service ID</b>	The SPB or VXLAN service ID number.
<b>VNID</b>	The VXLAN Network Identifier. This value is associated with a VXLAN service ID.
<b>ISID</b>	The SPB service instance identifier. This value is associated with an SPB service ID.
<b>VPNID</b>	The L2 GRE tunnel VPN ID.
<b>Access Timestamp</b>	The date and time the device was learned.
<b>User Name</b>	The MAC address of the user.
<b>IP-Address</b>	The IP network address of the device.
<b>Vlan</b>	The VLAN ID number for the VLAN in which the device was learned.
<b>Authentication Type</b>	The type of authentication used ( <b>Mac-Authentication</b> or <b>802.1x-Authentication</b> ).
<b>Authentication Status</b>	The status of the authentication process ( <b>blank “-”</b> , <b>Authenticated</b> , <b>Failed</b> , or <b>In Progress</b> ).
<b>Authentication Failure Reason</b>	The reason authentication failed.
<b>Authentication Retry Count</b>	The number of times authentication has been attempted.
<b>Authentication Server IP Used</b>	The IP address of the authentication server.
<b>Authentication Server Used</b>	The name of the authentication server used.
<b>Server Reply-Message</b>	Reply message from the authentication server.
<b>Profile</b>	The name of the UNP profile to which the user was assigned.
<b>Profile Source</b>	The source of the profile (returned from the server or assigned through the UNP process on the switch).
<b>Profile From Auth Server</b>	The name of the UNP profile returned from the authentication server.
<b>Classification profile rule</b>	The rule that resulted in the device classification into the UNP profile.
<b>QMR Status</b>	The Quarantine Manager Remediation status for the device.
<b>Redirect Url</b>	The URL to which the device is redirected upon classification.
<b>SIP Call Type</b>	The Session Initiation Protocol (SIP) call type status for a non-suppliant (non-802.1X) device.
<b>SIP Media Type</b>	The SIP media type status for a non-suppliant device.
<b>Applications</b>	The applications a non-suppliant device is running.

## Release History

Release 8.1.1; command was introduced.  
Release 8.4.1.R02; **VPNID** field added.

## Related Commands

<a href="#">show unip user status</a>	Displays information about the authentication and validation status of users learned on UNP ports.
<a href="#">unip user flush</a>	Performs a MAC address flush of Access Guardian users (devices learned on UNP ports).
<a href="#">show zeroconf server policy-instances</a>	Displays the UNP configuration for the switch.
<a href="#">show unip port</a>	Displays the UNP configuration for the port.

## MIB Objects

N/A

---

## show unip policy validity-period

Displays the UNP period policy configuration for the switch. This type of policy is assigned to a UNP profile and applied to devices classified into the profile.

**show unip policy validity-period** [*policy\_name*]

---

### Syntax Definitions

*policy\_name*                      The name of an existing UNP period policy.

### Defaults

By default, all UNP period policies are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter a UNP period policy name to display information about a specific policy.

### Examples

```
-> show unip policy validity-period
Policy Days      Months      Hours      Interval      TZ Active
-----+-----+-----+-----+-----+-----+-----+-----+-----+
tp1      SMTWTFS JFMAMJJASOND 08:00 - 17:00      - - -      - NO
tp2      -----      - - -      01/01/13 00:00 - 01/02/13 00:00 CST NO
```

Total Period Policy Count: 2

```
-> show unip policy validity-period tp1
Policy Days      Months      Hours      Interval      TZ Active
-----+-----+-----+-----+-----+-----+-----+-----+-----+
tp1      SMTWTFS JFMAMJJASOND 08:00 - 17:00      - - -      - NO
```

### Release History

Release 8.1.1; command introduced.

## Related Commands

**unip policy validity-period**

Configures a UNP period policy.

**unip profile period-policy**

Assigns a UNP period policy to a UNP profile.

## MIB Objects

```

---

## show unip policy validity-location

Displays the UNP location policy configuration for the switch. This type of policy is assigned to a UNP profile and applied to devices classified into the profile.

**show unip policy validity-location** [*policy\_name*]

---

### Syntax Definitions

*policy\_name*                      The name of an existing UNP location policy.

### Defaults

By default, all UNP location policies are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter a location policy name to display information about a specific policy.

### Examples

```
-> show unip policy validity location
Policy: l1
  Port           = 1/1
  System Name    = shasta
  System Location = Bangalore
```

```
Total Location Policy Count: 1
```

### Release History

Release 8.1.1; command introduced.

## Related Commands

- unip policy validity-location** Configures a UNP location policy.
- unip profile location-policy** Assigns a UNP location policy to a UNP profile.

## MIB Objects

```
alaDaUNPLocationPolicyTable  
  alaDaUNPLocationPolicyName

  alaDaUNPLocationPolicySystemLocation
```

---

## device-profile admin-state

Enables or disables the Device Profiling configuration on the switch.

**device-profile admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables Device Profiling configuration on the switch.

**disable** Disables Device Profiling configuration on the switch.

### Defaults

By default Device Profiling configuration is disabled globally on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

When Device Profiling is globally enabled for the switch, Device Profiling functionality is automatically enabled on all ports and link aggregates.

### Example

```
-> device-profile admin-state enable
-> device-profile admin-state disable
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

[device-profile port linkagg](#) Enables or disables the Device Profiling on the ports or linkagg interface.

[show device-profile config](#) Displays the global configuration of the Device Profile.

### MIB Objects

alaDpAdminState

---

## device-profile port linkagg

Enables or disables the Device Profiling on the ports or linkagg interface.

**device-profile** [**port** *chassis*/]slot/port1[-port2] | **linkagg** *agg\_id1*[-*agg\_id2*] **admin-state** {**enable** | **disable**}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id1</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of link aggregate ID numbers (5-10).
<b>enable</b>	Enables the Device Profiling on the specified port or linkagg.
<b>disable</b>	Disables the Device Profiling on the specified port or linkagg.

### Defaults

By default Device Profiling is enabled on all ports or linkagg when the Device Profiling feature is enabled globally on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- Use this command to disable Device Profiling on specific ports or linkagg when the Device Profiling is globally enabled on the switch.
- Device Profiling configuration is not allowed on VFL or HiGig ports.

### Example

```
-> device-profile linkagg 1 admin-state enable
-> device-profile port 2/1/2-5 admin-state enable
-> device-profile port 1/1/2 admin-state enable
-> device-profile port 1/1/2 admin-state disable
-> device-profile linkagg 1-5 admin-state disable
```

### Release History

Release 8.5R2; command was introduced.

## Related Commands

[show device-profile config](#)

Displays the global configuration of the Device Profile.

[show device-profile catalog](#)

Displays the details of known and unknown devices identified in the network.

## MIB Objects

alaDpIfTable

alaDpIfAdminStatus

---

## device-profile device-type

Adds or removes a new device type and category in the Device Profile.

**device-profile device-type** *type\_name* **device-name** *device\_name* **from** {**mac-address** *mac\_address* | **dhcp-option-55** *dhcp\_option*}

**no device-profile device-type** *type\_name*

---

### Syntax Definitions

<i>type_name</i>	The type of the device. The device type name can be of maximum size 32 alphanumeric characters.
<i>device_name</i>	The name of the device type. The device name can be of maximum size 32 alphanumeric characters.
<i>mac_address</i>	The MAC address of the device. The device with that MAC address must be in the unknown cataloged devices.
<i>dhcp_option</i>	The DHCP option 55 codes of the device.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- The unknown cataloged devices can be identified or moved to trusted identity in the Device Profile using this command.
- While specifying the MAC address of the device for identity, the device must first be present in the unknown cataloged devices. Otherwise, the MAC address will not be recognized.
- Custom signatures can be created using the DHCP option 55.
- The new signatures created will not be persistent unless it is saved. Use the [device-profile update-signature](#) CLI command to update the flash or signature database.
- Use the **no** form of the command to remove the device and its category from the trusted device list.

### Example

```
-> device-profile device-type Printer-Fax device-name Kyocera-Printer mac-address
00:aa:bb:12:43:55
-> device-profile device-type IP-Camera device-name netgear dhcp-option-55
1,3,6,15,119,252
-> no device-profile device-type Printer-Fax
```

## Release History

Release 8.5R2; command was introduced.

## Related Commands

- |   |  |
|---|--|
| <b>device-profile auto-unp-assignment</b>   | Enables auto assignment of UNP profile when the device gets identified and categorized into existing device types. |
| <b>show device-profile catalog</b>          | Displays the details of known and unknown devices identified in the network.                                       |
| <b>device-profile update-signature</b>      | Updates the custom or user-defined device type to the flash and signature database.                                |
| <b>device-profile update-signature from</b> | Apply the new signature file in the system.  |

## MIB Objects

```
alaDpDeviceTable
  alaDpDeviceType
  alaDpDeviceName
  alaDpDeviceMacAddress
  alaDpDeviceDhcpOpt55
  alaDpDeviceRowStatus
```

---

## device-profile update-signature

Updates the custom or user-defined device type to the flash and signature database.

**device-profile update-signature**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

If the flash or the signature database is not updated with the new device type, it will not be persistent.

### Example

```
-> device-profile update-signature
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

**show device-profile catalog** Displays the details of known and unknown devices identified in the network.

**device-profile update-signature from** Apply the new signature file in the system.

**show device-profile signatures** Displays the device types in the local database and indicates the signatures which are not saved to the flash.

### MIB Objects

```
alaDpUpdateSignature  
  alaDpUpdateSignature
```

---

## device-profile update-signature from

Applies the new signature file in the system.

**device-profile update-signature from** *file-name*

---

### Syntax Definitions

*file\_name*                      The name of the file which contains device signatures.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- Use this command to update the signature file in the system. Currently, only DHCP option 55 based signature is updated.
- The command also updates the custom signature into the flash.

### Example

```
-> device-profile update-signature from /flash/dhcp_option55_list.txt
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

**show device-profile catalog**      Displays the details of known and unknown devices identified in the network.

**show device-profile signatures**    Displays the device types in the local database and indicates the signatures which are not saved to the flash.

**show device-profile signatures from**    Displays the contents of the signature file.

### MIB Objects

alaDpGlobalConfig  
  alaDpUpdateSignatureFileName

---

## device-profile auto-unp-assignment

Configures the status of automatic assignment to a UNP profile when the device gets identified and categorized into existing device types.

**device-profile auto-unp-assignment**

**no device-profile auto-unp-assignment**

---

### Syntax Definitions

N/A

### Defaults

By default, automatic assignment to a UNP profile is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- If the device profile is from a different VLAN, then it must be port bounced using the [unp redirect port-bounce](#) command to toggle.
- Use the **no** form of the command to disable the auto assignment of the UNP profile.
- When Device Profiling is globally enabled for the switch, the following UNP profiles and extended classification rules are automatically created on the switch:
  - devProfPrinter
  - devProfWindows
  - devProfIP-Phone
  - devProfWireless-Router
  - devProfSmartPhone/PDA/Tablets
- Automatically created UNP profiles are not mapped to a VLAN; manually configuring the VLAN assignment for the profile is still required.
- UNP profiles automatically created for the device types still require mapping the profiles to a VLAN.

### Example

```
-> device-profile auto-unp-assignment
-> no device profile auto-unp-assignment
```

## Release History

Release 8.5R2; command was introduced.

## Related Commands

<a href="#">device-profile device-type</a>	Adds or removes new device type and category in Device Profile.
<a href="#">show unp user</a>	Displays information about the MAC addresses learned on a UNP port or link aggregate.
<a href="#">show unp profile</a>	Displays the UNP profile configuration for the switch.
<a href="#">show unp classification-rule</a>	Displays the UNP extended classification rule configuration for the switch.
<a href="#">show device-profile summary</a>	Displays the number of devices identified based on the device type.

## MIB Objects

```
alaDpGlobalConfig  
  alaDpAutoUnpAssignment
```

---

## show device-profile config

Displays the global configuration for Device Profiling.

**show device-profile config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- The command displays the non-default status per physical port and linkagg.
- The UNP profile auto-assignment status is also displayed.

### Examples

```
-> show device-profile config
```

```
Admin-State: Enable
UNP Auto-Assignment: Disable
Interface    Admin-Status
-----+-----
1/1/1          Disable
1/1/2          Disable
1/1/4          Disable
0/1           Disable
```

#### *output definitions*

---

<b>Admin-State</b>	Displays the administrative status of Device Profiling.
<b>UNP Auto-Assignment</b>	Displays the status of automatic UNP profile assignment for the identified devices.
<b>Interface</b>	Displays the interface on which Device Profiling is configured.
<b>Admin-Status</b>	Displays the administrative status of Device Profiling on the interface.

---

### Release History

Release 8.5R2; command was introduced.

## Related Commands

**device-profile admin-state**

Enables or disables the Device Profiling configuration on the switch.

**device-profile port linkagg**

Enables or disables Device Profiling on the ports or linkagg interface.

## MIB Objects

```
alaDpGlobalConfig
  alaDpAdminState
  alaDpAutoUnpAssignment
  alaDpDeviceRowStatus
```

---

## show device-profile summary

Displays the number of devices identified based on the device type. Also displays information about the number of devices identified in the last one hour and one day.

**show device-profile summary**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

N/A

### Examples

```
-> show device-profile summary
```

Device-Type	Total Count	1 Hr Count	1 Day Count
SmartPhone/PDA/Tablets	10	2	4
Windows	5	0	2
IP-Camera	2	0	2
IP-Phone	3	3	3
Access-Points	1	1	1
Printers	1	1	1

#### *output definitions*

---

<b>Device-Type</b>	Displays the name of the device type.
<b>Total Count</b>	Displays the total number of devices identified for the device type.
<b>1 Hr Count</b>	Displays the number of device identified in the last one hour for the device type.
<b>1 Day Count</b>	Displays the number of device identified in the last one day for the device type.

---

## Release History

Release 8.5R2; command was introduced.

## Related Commands

**device-profile device-type** Adds or removes new device type and category in Device Profile.

## MIB Objects

alaDpDeviceType  
alaDpDeviceRowStatus

---

## show device-profile catalog

Displays the details of known and unknown devices identified in the network.

**show device-profile catalog [unknown]**

---

### Syntax Definitions

**unknown** Displays only the unknown devices discovered.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

Use the option **unknown** in the CLI to display the unknown devices.

### Examples

```
-> show device-profile catalog
Legend: * indicates 'Unknown/Un-catalogued' devices
```

```
Port/LAGG Device Type Device Name Mac-Address IP Address TimeStamp Initial TimeStamp Most-Recent
-----+-----+-----+-----+-----+-----+-----+-----+-----+

```

### output definitions

---

<b>Port/ LAGG</b>	Displays the port number or the linkagg ID on which the device is identified.
<b>Device Type</b>	Displays the device type identified.
<b>Device Name</b>	Displays the name of the device type.
<b>MAC-Address</b>	Displays the MAC address of the device.
<b>IP-Address</b>	Displays the IP address of the device.
<b>TimeStamp Initial</b>	Displays the time stamp when the device was first identified.
<b>TimeStamp Most-Recent</b>	Displays the time stamp when the device was recently active.

---

```
-> show device-profile catalog unknown
```

Port/LAGG	Mac-Address	DHCP VCI (Option 60)	DHCP Option 55	Mac-Vendor
1/1/15	34:E7:0B:03:C5:B0	HAP.1-OAW-AP1221-US	1,3,6,12,15,28,42,43,66,67,138,212	HANNetwork
1/1/13	34:E7:0B:03:C5:B1	HAP.1-OAW-AP1220-US	1,3,6,12,15,28,42,43,66,67,138,212	HANNetwork
1/1/3	11:32:54:0A:32:54	alcatel.noe.0	1,3,28,43,58,59	
0/1	16:56:34:0B:33:21	-	1,3,6,15,119,252	

### output definitions

<b>Port/ LAGG</b>	Displays the port number or the linkagg ID on which the device is identified.
<b>MAC-Address</b>	Displays the MAC address of the device.
<b>DHCP VCI (Option 60)</b>	Displays the DHCP option 60 information of the device.
<b>DHCP Option 55</b>	Displays the DHCP option 55 information of the device.
<b>Mac-Vendor</b>	Displays the unique MAC identifier for the vendor.

### Release History

Release 8.5R2; command was introduced.

Release 8.6R1; "IP Address" field added.

### Related Commands

[device-profile port linkagg](#) Enables or disables the Device Profiling on the ports or linkagg interface.

### MIB Objects

```
alaDpDeviceTable
  alaDpDeviceType
  alaDpDeviceName
  alaDpDeviceMacAddress
```

## show device-profile signatures from

Displays the contents of the signature file.

**show device-profile signatures from** *file-name*

---

### Syntax Definitions

*file\_name*                      The name of the file which contains device signatures.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

N/A

### Examples

```
-> show device-profile signatures from device_profile_sigs.csv
```

```
Device Type           Device Name           DHCP Option 55

```

```
-----
Number of Signatures: 7
```

#### *output definitions*

---

<b>Device Type</b>	Displays the type of device identified.
<b>Device Name</b>	Displays the name of the identified device.
<b>DHCP Option 55</b>	Displays the DHCP Option 55 information of the identified device.

---

### Release History

Release 8.5R2; command was introduced.

## Related Commands

**device-profile update-signature from** Applies the new signature file in the system.

## MIB Objects

alaDpUpdateSignature  
alaDpUpdateSignatureFileName

---

## show device-profile signatures

Displays the device types in the local database and indicates the signatures which are not saved to the flash.

**show device-profile signatures**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	Yes

### Usage Guidelines

- Displays all the device types in the local database (/flash file).
- An asterisk (\*) next to the device type indicates that the device signature is not saved to the flash.

### Examples

```
-> show device-profile signatures
```

```

Device Type                Device Name                DHCP Option 55

# 40 Application Monitoring and Enforcement Commands

Application usage patterns in the enterprise network is changing with the increase in use of the social networking, browser based file sharing, and peer to peer applications. The use of these applications result in the new traffic patterns in the network that are not straightforward to distinguish. There is also an increase in consumerization of IT with multiplication of thin clients, HTTP based, and virtual desktop clients.

OmniSwitch Application Monitoring and Enforcement (AppMon) feature addresses the key challenges of real time classification of flows at application level by providing differential QoS treatment in the form of higher priority marking and security policies at application level. AppMon feature improves the quality of user experience through application aware network optimization and control.

---

**Note.** AppMon is supported in a virtual chassis of OmniSwitch 6860 and OmniSwitch 6860E platforms where at least one OmniSwitch 6860E is mandatory for the feature to work.

---

MIB information for the AppMon commands is as follows:

*Filename:* ALCATEL-IND1-APP-MON-MIB.mib  
*Module:* alaAppMonMIB

A summary of the available commands is listed here:

---

**app-mon admin-state**  
**app-mon port admin-state**  
**app-mon auto-group create**  
**app-mon app-group**  
**app-mon app-list**  
**app-mon apply**  
**app-mon l3-mode**  
**app-mon l4-mode**  
**app-mon l4port-exclude**  
**app-mon flow-table flush**  
**app-mon flow-table enforcement stats**  
**app-mon aging enforcement**  
**app-mon logging-threshold**  
**app-mon flow-sync enforcement interval**  
**app-mon force-flow-sync**  
**app-mon separate-config-file**  
**app-mon data**  
**show app-mon config**  
**show app-mon port**  
**show app-mon app-pool**  
**show app-mon app-list**  
**show app-mon app-group**  
**show app-mon app-record**  
**show app-mon ipv4-flow-table**  
**show app-mon ipv6-flow-table**  
**show app-mon l4port-exclude**  
**show app-mon stats**  
**show app-mon aging enforcement**  
**show app-mon vc-topology**  
**clear app-mon app-list**

---

## app-mon admin-state

Enable or disable the Application Monitoring and Enforcement (AppMon) feature.

**app-mon admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables AppMon support on the switch.  
**disable** Disables AppMon support on the switch.

### Defaults

By default, AppMon is disabled on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- AppMon cannot be enabled globally when,
  - all the mirroring sessions are used by port mirroring or monitoring features.
  - mirroring session is used by policy manager.
- When AppMon is enabled globally, it reserves a mirroring session in the system.
- If AppMon functionality is enabled at a port level, disabling AppMon globally overrides the functionality of all AppMon ports; however, configuration on the ports remain the same.
- AppMon is supported in a virtual chassis of OmniSwitch 6860 and OmniSwitch 6860E platforms where at least one OmniSwitch 6860E is mandatory for the feature to work.

### Examples

```
-> app-mon admin-state enable
-> app-mon admin-state disable
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

[app-mon port admin-state](#)

Enable or disable AppMon on one or more switch ports.

[show app-mon config](#)

Displays global AppMon configuration, which includes information about admin-state, running mode, IP mode, aging-timer, and total signatures.

## MIB Objects

alaAppMonAdminStatus

---

## app-mon port admin-state

Enable or disable AppMon Monitoring and Enforcement on one or more switch ports.

**app-mon {port chassis/slot/port[-port2] | slot chassis/slot [-slot]} admin-state {enable | disable}**

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>chassis/slot</i>	The chassis ID and slot number (3/1) for a specific slot.
<b>enable</b>	Enables AppMon on the port.
<b>disable</b>	Disables AppMon on the port.

### Defaults

By default, AppMon is disabled on all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- It is mandatory to enable AppMon globally for the port level AppMon to function.
- When slot option is used, then AppMon configuration is applied on all the physical ports of that particular slot.
- AppMon configuration is not allowed on Virtual Fabric Link, ERP, or VLAN stacking ports.
- AppMon cannot be configured on a port that is part of a link aggregate or a port mirroring port.
- AppMon must not be configured on user ports and uplink ports at the same time.

### Examples

```
-> app-mon slot 1/1 admin-state enable
-> app-mon port 1/1/2-5 admin-state enable
-> app-mon slot 1/1 admin-state disable
```

### Release History

Release 8.2.1; command introduced.

Release 8.7R1; AppMon support on SPB/UNP access ports added.

## Related Commands

**app-mon admin-state**

Enable or disable the Application Monitoring feature.

**show app-mon port**

Displays AppMon status per physical port or per slot for the switch.

## MIB Objects

alaAppMonPortConfigTable

alaAppMonPortConfigSlotPortIndex

alaAppMonPortConfigPortStatus

---

## app-mon auto-group create

Creates application groups automatically on the switch. The application groups are automatically created based on the 'category' field of each application present in the application pool.

**app-mon auto-group create**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- Modifications are allowed in auto application groups with addition or deletion of applications using the **app-mon app-group** command.
- Enter **app-mon apply** and **write memory** to save the auto group configuration or modification on the switch.
- The **show app-mon app-pool** command displays the application categories in the signature file. The application group names are derived from the category name.

### Examples

```
-> app-mon auto-group create
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

<a href="#">app-mon apply</a>	Updates the set of application signatures configured for application monitoring.
<a href="#">show app-mon app-group</a>	Displays the details of all the applications in an application group.
<a href="#">show app-mon app-pool</a>	Displays all the applications that are part of an application pool.

### MIB Objects

alaAppMonAutoGroupCreation

---

## app-mon app-group

Creates an application group. Applications can be added or removed from the application group.

**app-mon app-group** *app\_group\_name* {**add** | **remove**} {**app-name** *app\_name* | **from** *app\_name* **to** *app\_name*}

**no app-mon app-group** *app\_group\_name*

---

### Syntax Definitions

<i>app_group_name</i>	Name of the application group. The group name can be a maximum of 32 alphanumeric characters.
<i>app_name</i>	The name of the application to be added to the application group. The application name can be a maximum of 32 alphanumeric characters.
<b>from</b> <i>app_name</i>	The first application name when adding a range of applications to an application group.
<b>to</b> <i>app_name</i>	The last application name when adding a range of applications to an application group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove an application group.
- This command can be used to add or delete applications for the auto application groups as well.
- One application can belong to more than one application group.
- Only those applications that are part of an application pool are allowed to be added to an application group.
- To add a range of applications or multiple applications to an application group, use the **from** and **to** options. Range is expanded based on the list of applications in the app-pool list (application pool). Use the **show app-mon app-pool** command to view the application names.
- If an application is removed from an application group which has only one application, then the complete application group is removed.
- If any application is added to a user group (group name same name as category name), and signature toolkit update operation or 'app-mon auto-group create' is done, then added group is not deleted. Only update happens.

- If an application group contains a single application and the group is part of an application list, then this single application cannot be removed from the application group.
- An application group cannot be deleted when it is part of an application list.
- When the last application from the application group is removed, the application group is automatically deleted.
- The list of applications (added or deleted) to an application group is displayed in **show configuration snapshot** command after **app-mon apply** command is entered. A list of applications (added or deleted) are displayed with the **show app-mon app-group** command even without using the **app-mon apply** command.

## Examples

```
-> app-mon app-group apg2 add app-name whatsapp
-> app-mon app-group apg2 remove app-name whatsapp
-> no app-mon app-group apg2
```

To add a range of applications or multiple applications to an application group, use the **show app-mon app-pool** command to view the application names. For example:

```
-> show app-mon app-pool
Legend: Application-name: *= Not present in recently updated kit,
AppId      Application-name      Revision      Category
-----+-----+-----+-----
968        amazon                 1.0.0         Web
244        facebook               1.0.0         Web
182        sip                    1.0.0         Audio/Video
183        skype                  1.1.0         Instant Messaging
211        tftp                   1.0.0         File Server
503        twitter                1.0.0         Web
597        viber                  1.0.0         Audio/Video
890        webex                  1.0.0         Audio/Video
1093       whatsapp               1.0.0         Instant Messaging
240        youtube                1.0.0         Web
-----+-----+-----+-----
Number of Applications: 10
```

Select any two applications for the range option using the **app-mon app-group** command.

```
-> app-mon app-group apg1 add from sip to viber
```

This command adds the applications from sip to viber to the application group (sip, skype, tftp, twitter, and viber).

If an application is removed from an application group which has only one application, then the complete application group is removed. For example:

```
-> show app-mon app-group group1
AppGrp-Id  App-group              App-name
-----+-----+-----
1093       whatsapp               Instant Messaging
```

Now, remove the application name 'whatsapp' from the application group. The complete application group gets removed as shown below.

```
-> app-mon app-group group1 remove app-name whatsapp
-> show app-mon app-group group1
AppGrp-Id  App-group              App-name
-----+-----+-----
```

## Release History

Release 8.2.1; command introduced.

## Related Commands

<a href="#">app-mon apply</a>	Updates the set of application signatures configured for application monitoring.
<a href="#">show app-mon app-group</a>	Displays the details of all the applications in an application group.
<a href="#">show app-mon app-list</a>	Displays a list of applications and application groups added to an application list.
<a href="#">show app-mon app-pool</a>	Displays all the applications that are part of an application pool.

## MIB Objects

```
alaAppMonAppGroupTable
  alaAppMonAppGroupName
  alaAppMonAppGroupMember
  alaAppMonAppGroupStatus
  alaAppMonAppGrpFromAppName
  alaAppMonAppGrpToAppName
  alaAppMonAddAppGrpName
  alaAppMonAppGroupBuiltIn
  alaAppMonAppGroupCategoryName
  alaAppMonAppGrpId
  alaAppMonAppGroupAppStatus
```

---

## app-mon app-list

Add or remove applications or application groups to an application list for enforcement or monitoring.

```
app-mon app-list {enforcement | monitor} {add | remove} {app-name app_name | app-group
app_group_name}
```

---

### Syntax Definitions

<b>add</b>	Adds the specified application or application group to an application list.
<b>remove</b>	Removes the specified application or application group from an application list.
<i>app_name</i>	Name of the application to be added to the application list. This adds the specified application to the application list.
<i>app_group_name</i>	Name of the application group to be added to the application list. This enables the addition of multiple applications in the application group to the application list.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- The application group can be user created or generated automatically (see [app-mon app-group](#) and [app-mon auto-group create](#) command).
- Separate application list is maintained for enforcement and monitoring.
- The **show configuration snapshot** command displays the applications added or removed from the application list only after the **app-mon apply** command is used. The **app-mon apply** command saves the list of applications added or removed to the application list. The saved list of applications are displayed with the **show app-mon app-list active** command.
- QoS policy rules can be configured for a given application as well as an application group where the same application also exists. QoS matches policies based on the application-name or application-group name configured in an application list. For more information on configuring enforcement for QoS policy rules, see the “**QoS Policy Commands**” chapter.

### Examples

```
-> app-mon app-list enforcement add app-name whatsapp
-> app-mon app-list enforcement add app-group app1
```

```
-> app-mon app-list monitor add app-group apg2  
-> app-mon app-list enforcement remove app-name whatsapp
```

## Release History

Release 8.2.1; command introduced.

## Related Commands

<b>app-mon auto-group create</b>	Enables or disables Auto-Group functionality on the switch.
<b>app-mon app-group</b>	Creates an application group. Applications can be added or removed from the application group.
<b>show app-mon app-list</b>	Displays list of applications and application groups added to an application list.
<b>clear app-mon app-list</b>	Removes all applications signatures from the application list.

## MIB Objects

```
alaAppMonAppListTable  
  alaAppMonAppListMemberName  
  alaAppMonAppListMemberType  
  alaAppMonAppListMemberStatus  
  alaAppMonAppListAppId  
  alaAppMonAppListAppStatus
```

---

## app-mon apply

This activates both enforcement and monitoring application lists for flow classification.

**app-mon apply**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

The following operations are performed with the **app-mon apply** command:

- Saves the current application-list, application-group, and auto-groups to flash when 'write memory' command is used.
- The application list is checked for any application configured more than once in an application list (individually or as a part of application group).
  - The **app-mon apply** command will not be successful until the conflict is resolved.
  - The **show app-mon app-list** command with the **monitor conflict** or the **enforcement conflict** parameter displays the available conflicts in an application list.
  - The duplicate application names must be removed for a successful **app-mon apply** operation.
- QoS is applied to the flows learned for the activated applications based on the configured QoS policies for Enforcement application list.

### Examples

```
-> app-mon apply
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

### **show app-mon config**

Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.

### **show app-mon port**

Displays AppMon status per physical port or per slot for the switch.

### **show app-mon app-list**

Displays a list of applications and application groups added to an application list.

## MIB Objects

alaAppMonUpdateAppList

---

## app-mon l3-mode

Enables or disables monitoring and enforcement for IPv4 flows, IPv6 flows, or both.

**app-mon l3-mode {ipv4 | ipv6} admin-state {enable | disable}**

---

### Syntax Definitions

<b>IPv4</b>	Applies monitoring and enforcement to IPv4 flows.
<b>IPv6</b>	Applies monitoring and enforcement to IPv6 flows.
<b>enable</b>	Enables the specified L3 mode on the switch.
<b>disable</b>	Disables the specified L3 mode on the switch.

### Defaults

By default, monitoring and enforcement is enabled for both IPv4 and IPv6 flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> app-mon l3-mode ipv4 admin-state disable
-> app-mon l3-mode ipv4 admin-state enable
-> app-mon l3-mode ipv6 admin-state disable
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

- show app-mon ipv4-flow-table** Displays the flow table for IPv4 flows entries for enforcement and monitor flows.
- show app-mon ipv6-flow-table** Displays the flow table for IPv6 flows entries for enforcement and monitor flows.
- show app-mon config** Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.

## MIB Objects

alaAppMonEnforcementIpv4  
alaAppMonEnforcementIpv6

---

## app-mon l4-mode

Enables or disables monitoring and enforcement for TCP or UDP flows.

**app-mon** {port *chassis/slot/port[-port2]* | slot *chassis/slot*} **l4-mode** {tcp | udp} **admin-state** {enable | disable}

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).
<i>chassis/slot</i>	The chassis ID and slot number (3/1) for a specific slot.
<b>tcp</b>	Applies monitoring and enforcement to TCP flows.
<b>udp</b>	Applies monitoring and enforcement to UDP flows.
<b>enable</b>	Enables the specified L4 mode on the switch.
<b>disable</b>	Disables the specified L4 mode on the switch.

### Defaults

By default, both TCP and UDP flows are processed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> app-mon port 1/1/2 l4-mode udp admin-state disable
-> app-mon slot 1/1 l4-mode tcp admin-state enable
-> app-mon port 1/1/2 l4-mode udp admin-state enable
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

<b>app-mon l4port-exclude</b>	Configures the L4 port range to exclude from the AppMon operation.
<b>show app-mon ipv4-flow-table</b>	Displays the flow table for IPv4 flows entries for enforcement and monitor flows.
<b>show app-mon ipv6-flow-table</b>	Displays the flow table for IPv6 flows entries for enforcement and monitor flows.
<b>show app-mon config</b>	Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.

## MIB Objects

```
alaAppMonPortConfigTable  
  alaAppMonPortConfigSlotPortIndex  
  alaAppMonEnforcementPortConfigTcpStatus  
  alaAppMonEnforcementPortConfigUdpStatus
```

---

## app-mon l4port-exclude

Configures the L4 port range to exclude from the AppMon operation.

**app-mon l4port-exclude range-id** *number* {**tcp-service-port** | **udp-port**} **start** *number* **end** *number*

**no app-mon l4port-exclude range-id**

---

### Syntax Definitions

<b>range-id</b> <i>number</i>	The range ID number. The valid range is 1–8.
<b>tcp-service-port</b>	Specifies TCP service ports.
<b>udp-port</b>	Specifies UDP ports.
<b>start</b> <i>number</i>	The first port associated with the range ID number. The valid port range is 1–65535.
<b>end</b> <i>number</i>	The last port associated with the range ID number. The valid port range is 1–65535.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove an L4 exclude range ID from the switch configuration.
- For the **udp-port** option, the AppMon operation is not performed on the flows with a source or destination port that is in the excluded port range.
- For the **tcp-service-port** option, the AppMon operation is not performed on the flows with a destination TCP port of TCP-SYN packet or a source TCP port of TCP-SYN-ACK packet that is in the excluded port range.
- This configuration applies to both enforcement and monitor features.

### Examples

```
-> app-mon l4port-exclude range-id 5 tcp-service-port start 20 end 30
-> app-mon l4port-exclude range-id 6 udp-port start 90 end 100
-> no app-mon l4port-exclude range-id 6
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

**show app-mon l4port-exclude** Displays the port range excluded from AppMon operation.

## MIB Objects

```
alaAppMonEnforcementL4PortRangeTable  
  alaAppMonEnforcementL4PortRangeStart  
  alaAppMonEnforcementL4PortRangeEnd  
  alaAppMonEnforcementL4PortType  
  alaAppMonEnforcementL4PortStatus
```

---

## app-mon flow-table flush

Clears all the learned flow-table entries for both IPv4 and IPv6 flow tables.

**app-mon flow-table {enforcement | monitor} flush**

---

### Syntax Definitions

**enforcement** Flushes all the learned flow-table entries from the enforcement application.

**monitor** Flushes all the learned flow-table entries from the monitor application.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- When the **enforcement** option is used, all the active flows information are cleared; no QoS treatment is provided (if configured). The data (active, gross counters, statistics, and flow information) in the following commands are cleared: **show app-mon app-list enforcement active**, **show app-mon app-list enforcement active stats**, **show app-mon ipv4-flow-table enforcement**, **show app-mon ipv6-flow-table enforcement**, **show app-mon stats**.
- When the **monitor** option is used, all the learned flows information will be cleared. The data (gross counters and flow information) in the following commands are cleared: **show app-mon app-list monitor active**, **show app-mon ipv4-flow-table monitor**, **show app-mon ipv6-flow-table monitor**.
- When this command is used, application-record information is not cleared.

### Examples

```
-> app-mon flow-table enforcement flush
-> app-mon flow-table monitor flush
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

- show app-mon config** Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.
- show app-mon app-list** Displays a list of applications and application groups added to an application list. 'stats' option in this command displays active or gross packets/byte counters on per application basis.
- show app-mon ipv4-flow-table** Displays the flow table for IPv4 flows entries for enforcement and monitor flows.
- show app-mon ipv6-flow-table** Displays the flow table for IPv6 flows entries for enforcement and monitor flows.

## MIB Objects

alaAppMonFlowTableFlush

---

## app-mon flow-table enforcement stats

Enable or disable flow table statistics update for enforcement applications.

**app-mon flow-table enforcement stats admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enable flow-table statistics update.  
**disable** Disable flow-table statistics update.

### Defaults

By default, statistics admin status is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- This command is applicable only for enforcement applications.
- The statistics collection capability is shared with Service Manager, which means that either the Service Manager feature or AppMon can use this capability at any given time. Hence, disabling the counter usage in Service Manager using the **service stats disable** command is required to view the flow table statistics update for enforcement applications. For more information about this command, see the “Service Manager Commands” chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide*.
- When update statistics is enabled, the updated statistics is displayed in the **show app-mon ipv4-flow-table enforcement verbose**, **show app-mon ipv6-flow-table enforcement verbose**, and **show app-mon app-list enforcement active stats** commands. Statistics are refreshed every 160 seconds from data path, and based on the flow sync interval between the data path and the control path.

### Examples

```
-> app-mon flow-table enforcement stats admin-state enable
-> app-mon flow-table enforcement stats admin-state disable
```

### Release History

Release 8.2.1; command introduced.

**Related Commands****show app-mon config**

Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.

**MIB Objects**

alaAppMonEnforcementFlowTableStatsAdminStatus

---

## app-mon aging enforcement

Configures aging time for dynamically learned TCP/UDP flows for each application for Enforcement applications.

**app-mon aging enforcement app-name** *app\_name* [tcp | udp] interval {120m | 60m | 30m | 10m | 5m | 3m | default}

---

### Syntax Definitions

<i>app_name</i>	Name of the application to configure its aging interval. The application must be part of the application pool.
<b>interval</b>	The aging time interval for dynamically learned flows in the flow table, in minutes.
<b>default</b>	Configures the default aging interval.

### Defaults

By default, aging interval is set per application and TCP or UDP flow type basis.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- User can set separate TCP or UDP flows aging interval for an given application.
- When TCP option is used to configure aging interval for an application, TCP flows generated by a given application age out with configured value.
- When UDP option is used to configure aging interval for an application, UDP flows generated by a given application age out with configured value.
- Flow aging is supported for the applications that are part of the enforcement application list. Flows related with enforcement application list are made active for QoS treatment as well statistics collection.
- Flow aging is not supported for applications that are part of Monitor application list. Monitor flow tables log these flows when they are detected until logging threshold is reached.

### Examples

```
-> app-mon aging enforcement app-name sip tcp interval 60m
-> app-mon aging enforcement app-name tftp udp interval 120m
```

### Release History

Release 8.2.1; command introduced.

## Related Commands

### **show app-mon config**

Displays global AppMon configuration, which includes information like admin-state, running mode, IP mode, aging-timer, and total signatures.

### **show app-mon aging enforcement**

Displays the aging interval for each application for enforcement feature.

## MIB Objects

alaAppMonEnforcementAgingTimerTable

alaAppMonEnforcementAgingTimerValue

---

## app-mon logging-threshold

Configures the threshold for the number of matched flows for enforcement and monitor applications.

**app-mon logging-threshold {enforcement | monitor} num-of-flows {number | default}**

---

### Syntax Definitions

**number** Threshold value for the number of matched flows. The valid range is 1000–60000.

**default** Sets the threshold back to the default value of 20K.

### Defaults

By default, 20000 flows are logged.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- When the logging threshold value is set to '0', flows are not logged to the log file.
- When used with enforcement option, it configures the threshold for the number of matched flows to be saved on to the log file for enforcement applications.
- When used with monitor option, it configures the threshold for the number of matched flows to be displayed in the monitor flow table commands.

### Examples

```
-> app-mon logging-threshold monitor num-of-flows 10000
-> app-mon logging-threshold monitor num-of-flows default
-> app-mon logging-threshold enforcement num-of-flows 10000
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

**show app-mon config** Displays global AppMon configuration, which includes admin-state, running mode, IP mode, aging-timer, and total signatures.

### MIB Objects

alaAppMonThresholdNumberOfFlows

---

## app-mon flow-sync enforcement interval

Configures the interval at which the enforcement flows information is refreshed.

**app-mon flow-sync enforcement interval** {*number* | **default**}

---

### Syntax Definitions

<i>number</i>	Flow sync interval at which the enforcement flows information is refreshed. The valid range is 10–3600 seconds. The interval can be configured only for the enforcement feature.
<b>default</b>	Configures the default flow-sync interval.

### Defaults

Default flow-sync interval is 60 seconds for enforcement.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

The refreshed information is shown in the following show commands: **show app-mon applist enforcement active**, **show app-mon applist enforcement active stats**, **show app-mon ipv4-flow-table enforcement**, **show app-mon stats**.

### Examples

```
-> app-mon flow-sync enforcement interval 10
-> app-mon flow-sync enforcement interval default
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

[show app-mon ipv4-flow-table](#) Displays the flow table for IPv4 flows entries.

[show app-mon ipv6-flow-table](#) Displays the flow table for IPv6 flows entries.

### MIB Objects

alaAppMonFlowSyncEnforcementInterval

---

## app-mon force-flow-sync

Synchronizes flows learned in the data path.

**app-mon force-flow-sync {enforcement | monitor}**

---

### Syntax Definitions

**enforcement** Synchronizes flows learned in the data path for the enforcement feature from the hardware.

**monitor** Synchronizes flows learned in the data path for the monitor feature from the hardware.

### Defaults

By default, flow synchronization occurs every 5 minutes for monitor flows and 60 seconds for enforcement flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

Use this command to force a flow synchronization with the control path database in real time.

### Examples

```
-> app-mon force-flow-sync enforcement
-> app-mon force-flow-sync monitor
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

[show app-mon ipv4-flow-table](#) Displays the flow table for IPv4 flows entries.

[show app-mon ipv6-flow-table](#) Displays the flow table for IPv6 flows entries.

### MIB Objects

alaAppMonForceFlowSyncStatus

---

## app-mon separate-config-file

Reduces the per-application level AppMon configuration display in the **show configuration snapshot** output as well as in “vcboot.cfg”.

**app-mon separate-config-file**

**no app-mon separate-config-file**

---

### Syntax Definitions

N/A

### Defaults

By default, the separate configuration file option is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- When this command is used, per-application level AppMon configuration is moved to a separate file called “appmon\_vcboot.cfg” from “vcboot.cfg” on **write memory**.
- Use the **no** form of this command to disable the separate configuration file feature.

### Examples

```
-> app-mon separate-config-file
-> no app-mon separate-config-file
```

### Release History

Release 8.7R1; command introduced.

### Related Commands

[show app-mon config](#)

Displays global AppMon configuration, which includes admin-state, running mode, IP mode, aging-timer, and total signatures.

### MIB Objects

alaAppMonSeparateConfigFile

---

## app-mon data

Provides an option to extract pre-defined attributes of a given application for debugging and monitoring purposes. Use this command to view the interface information for an application attribute flow.

**app-mon data** *app\_name* [**filter** *filter\_header* | **no-page**]

---

### Syntax Definitions

<i>app_name</i>	Name of the application from which to extract pre-defined attributes.
<i>filter_header</i>	Filter the data attributes based on various fields like time, interface, source MAC, destination MAC and so on.
<b>no-page</b>	Filter with this option to display all the records.

### Default

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- This is a meta CLI, and does not have corresponding SNMP MIB object.
- This command does not allow any configuration; can be used to view the attribute records for a specific application. Currently, this command can be used only for **IEC104** application.
- The data attributes can be filtered based on various fields like time, interface, source MAC, destination MAC and so on. Filter with 'no-page' option to display all the records.

### Examples

```
-> app-mon data
Please wait...
Usage: app-mon data <app-name> [filter <"string">] [no-page]
app-name: display attribute records of an application name
filter: to display attribute records based on given column name (s)
no-page: display all the attribute records
Filter Usage: app-mon data <app-name> filter "ColumnNmae1=value1, ColumnN-
mae2=value2 ..." [no-page]
Header:
Time | Interface | SrcMac | SrcIp | SrcPort | DesMac | DesIp | DesPort | CauseTx |
acpi_type | acpi_utype | asdu | Total
```

Examples:

```
app-mon data <app-name> filter "interface=1/1/18"
app-mon data <app-name> filter "interface=1/1/18, SrcIp= 135.254.163.134"
```

**Example 1:**

```
-> app-mon data iec104
```

```
Please wait...
```

### **Release History**

Release 8.7R1; command introduced.

### **Related Commands**

N/A

### **MIB Objects**

N/A

---

## show app-mon config

Displays global AppMon configuration, which includes information about admin-state, aging-timer, and total signatures.

**show app-mon config [app-snapshot]**

---

### Syntax Definitions

**app-snapshot** Displays per-application level AppMon configuration.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- The operational state is enabled if there is at least one OmniSwitch 6860E chassis in the virtual chassis (VC). If there is no OmniSwitch 6860E in the VC, the operational-state is disabled.
- Use **app-snapshot** option to view the AppMon configuration at an application level.

### Examples

```
-> show app-mon config
Admin State                : Enable,
Operational State         : Enable,
Separate Config File Status : Yes,
L3-IPv4                   : Enable,
L3-IPv6                   : Enable,
Enforcement Flow-Table Stats : Enable,
Enforcement Flow-Sync Interval : 10 seconds,
Monitor Logging Threshold  : 20000,
Enforcement Logging Threshold : 20000,
App-Pool Applications      : 10,
Monitor Applied Applications : 10,
Enforcement Applied Applications : 10,
Upgraded Signature File Type : Factory,
AOS Compatible Signature Kit Version : 1,
Signature Kit version       : 1.1.1
```

```
-> show app-mon config app-snapshot
! APP-MONITORING:
app-mon app-group "Web" add app-name "01net"
app-mon app-group "Web" add app-name "0zz0"
app-mon app-group "Web" add app-name "104com"
...
```

```
app-mon app-list monitor add app-group "Web"p
app-mon app-list enforcement add app-group "Web"
...
```

### output definitions

---

<b>Admin-state</b>	The AppMon administrative status ( <b>Enabled</b> or <b>Disabled</b> ). Configured through the <b>app-mon admin-state</b> command.
<b>Operational State</b>	The operational status ( <b>Enabled</b> or <b>Disabled</b> ).
<b>Separate Config File Status</b>	Separate configuration file status ( <b>Yes</b> or <b>No</b> ).
<b>L3-IPv4</b>	Status of IPv4 l3 mode on the switch ( <b>Enable</b> or <b>Disable</b> ).
<b>L3-IPv6</b>	Status of IPv6 l3 mode on the switch ( <b>Enable</b> or <b>Disable</b> ).
<b>Enforcement Flow-Table Stats</b>	Status of the enforcement flow table statistics update.
<b>Enforcement Flow Sync interval</b>	Enforcement flow sync interval at which the switch polls for flow information.
<b>Monitor Logging-Threshold</b>	Monitor threshold value for the flows to be saved in the IPv4 or IPv6 flow table.
<b>Enforcement Logging-Threshold</b>	Enforcement threshold value for the flows to be saved into the log file.
<b>App-Pool Applications</b>	The number of application signatures in the application pool.
<b>Monitor Applied Applications</b>	The number of active applications in the Monitor application list.
<b>Enforcement Applied Applications</b>	The number of active applications in the enforcement application list.
<b>Upgraded Signature File Type</b>	The signature file type: Factory or Production
<b>AOS Compatible Signature Kit Version</b>	Determines the compatibility between AOS software and the signature file.
<b>Signature Kit version</b>	The signature file version that contains the application signatures.

---

### Release History

Release 8.2.1; command introduced.

Release 8.7R1; **app-snapshot** keyword added, “Separate Config File Status” field added.

### Related Commands

**show app-mon port** Displays AppMon status per physical port or per slot.

### MIB Objects

alaAppMonAutoGroupCreation
```

---

## show app-mon port

Displays AppMon status per physical port or per slot for the switch.

**show app-mon** [**port** *chassis/slot/port* | **slot** *chassis/slot*]

---

### Syntax Definitions

*chassis/slot/port*[-*port2*]      The chassis ID, slot, and port number (3/1/1) for a specific port. Use a hyphen to specify a range of ports (3/1/1-8).

*chassis/slot*      The chassis ID and slot number (3/1) for a specific slot.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show app-mon port
  Port      Admin-Status  Oper-Status  L4-mode
-----+-----+-----+-----
1/1/1      Enable        Up           TCP-UDP
1/1/2      Enable        Up           TCP-UDP
1/1/3      Enable        Up           TCP-UDP
1/1/4      Enable        Up           TCP-UDP
1/1/5      Enable        Up           TCP-UDP
1/1/6      Enable        Up           TCP-UDP
1/1/7      Enable        Up           TCP-UDP
.
.
.

-> show app-mon slot 1/1
  Port      Admin-Status  Oper-Status  L4-mode
-----+-----+-----+-----
1/1/1      Enable        Up           TCP-UDP
1/1/2      Enable        Up           TCP-UDP
1/1/3      Enable        Up           TCP-UDP
1/1/4      Enable        Up           TCP-UDP
1/1/5      Enable        Up           TCP-UDP
1/1/6      Enable        Up           TCP-UDP
```

```

1/1/7      Enable      Up           TCP-UDP
1/1/8      Enable      Up           TCP-UDP
.
.
.

```

**output definitions**

---

<b>Port</b>	The chassis identifier, slot, and port on which AppMon is enabled or disabled.
<b>Admin-Status</b>	Indicates the admin status of the port.
<b>Oper-Status</b>	Indicates the operational status of the port.
<b>L4-mode</b>	Indicates the L4 mode: TCP or UDP.

---

## show app-mon app-list

Displays a list of applications and application groups added to an application list.

**show app-mon app-list** {**monitor** | **enforcement**} [**active** [**stats**]] [**conflict**]

---

### Syntax Definitions

<b>monitor</b>	Displays information for applications added for monitoring.
<b>enforcement</b>	Displays information for applications added for enforcement.
<b>active</b> [ <b>stats</b> ]	Displays the list of activated applications in an application list. Use the <b>stats</b> option together with the <b>enforcement</b> option.
<b>conflict</b>	Displays the list of applications that are present more than once in an application list.

### Defaults

By default, all applications and application groups that belong to an application list are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- Use the **conflict** option to identify applications that are present more than once in an application list. This needs to be checked and resolved for **app-mon apply** to be successful.
- The **active** option displays active and gross number of flows detected on per application basis.
- For monitor feature, **active** option displays only the gross counters.
- The **stats** option is used only for the **enforcement** option. This displays active or gross packets/byte counters per application basis.

**Examples**

```
-> show app-mon app-list monitor
```

App-Id/ AppGrp-Id	Application-List Member Name	Application-List Member Type
244	facebook	APP
182	sip	APP-GRP

**output definitions**

<b>App-Id/AppGrp-Id</b>	Identity of the application or application group.
<b>Application-List Member Name</b>	Name of the application group or application.
<b>Application-List Member Type</b>	Specifies the application type: individual application or whether the application belongs to any application group.

```
-> show app-mon app-list monitor active
```

Legend: Application-name: \*= Not present in recently updated kit,

App-Id	Application Name	App-Grp Name	Matched Gross Count
968	amazon	APP	0
244	facebook	APP	0
211	tftp	APP-GRP	24508

Number of Applications: 3

**output definitions**

<b>App-ID</b>	Identity of the application group.
<b>Application Name</b>	Name of the application.
<b>App-Grp Name</b>	Name of the application group.
<b>Matched Gross Count</b>	Total number of matched active flows per application.
<b>Number of Applications</b>	Total number of active applications in the application list.

```
-> show app-mon app-list monitor conflict
```

Sn	App-ID	Application-Name	Application-Group	Error-Type
1	244	facebook	APP	Duplicate
2	244	facebook	APP	Duplicate

**output definitions**

<b>Sn</b>	The serial number.
<b>App-ID</b>	Identity of the application group.
<b>Application-Name</b>	Name of the application.
<b>Application-Group</b>	Name of the application group.
<b>Error-Type</b>	Displays the type of error.

```
-> show app-mon app-list enforcement

## show app-mon app-group

Displays the details of all the applications in an application group.

**show app-mon app-group** [*group-name* *group\_name*]

---

### Syntax Definitions

*group\_name*                      The name of an application group. This is a case sensitive string.

### Defaults

By default, information is displayed for all application groups.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

- This command displays both user created and automatically created application groups and the applications added to the respective group.
- Application names which are added to group and not yet activated are also displayed.
- This also display the auto application groups.

### Examples

```
-> show app-mon app-group
```

Legend: Application-name: \*= Not present in recently updated kit,

```
AppGrp-Id  App-group                               App-name

## show app-mon app-record

Displays current-hour application-record information as well the historic application-records on the hourly or 24-hours basis for monitored applications.

**show app-mon app-record [hourly | twenty-four-hours | current-hour] [verbose]**

---

### Syntax Definitions

<b>hourly</b>	Displays flows detected for an applications in an hour. An Hour is defined with fixed boundary (for example, 1:30 p.m to 2:30 p.m).
<b>twenty-four-hours</b>	Displays aggregate of available 'hourly' records for each application, flows detected in last 24-hours since last hour boundary. 'current-hour' data will not be part of this. This information is updated every one hour when 'hourly' record is updated.
<b>current-hour</b>	Displays new flow detected for an application in the current hour which is not part of 'hourly' historic data. When current-hour reaches an hour boundary, this data is moved to 'hourly' records. For example, if current time is 2.40 p.m, then information between 2.30 p.m to 2.40 p.m is displayed. On 3.30 p.m, current-hour information is moved to the latest hourly record.
<b>verbose</b>	Select this option to view detail information for each option. Detail information include minimum, maximum and average flows detected for each application.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

This is supported for monitoring.

### Examples

```

## show app-mon ipv4-flow-table

Displays the flow table for IPv4 flows entries for enforcement and monitor flows.

```
show app-mon ipv4-flow-table {monitor | enforcement [verbose]} [{src-ipv4 | dest-ipv4} ip_address]
[app-name app_name | app-group grp_name]
```

---

### Syntax Definitions

<b>verbose</b>	Displays detailed information of the flows.
<b>src-ipv4</b> <i>ip_address</i>	Filter flow table based on the specified source IPv4 address.
<b>dest-ipv4</b> <i>ip_address</i>	Filter flow table based on the specified destination IPv4 address.
<i>app_name</i>	Filter flow table based on application name.
<i>grp_name</i>	Filter flow table based on application group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

The **verbose** option displays additional information about the flow start time, statistics counters, associated application group, policy rule, and so on. This option is supported only for enforcement feature.

```

## show app-mon l4port-exclude

Displays the port range excluded from AppMon operation.

**show app-mon l4port-exclude range-id** [*number*]

---

### Syntax Definitions

*number*                                      A range ID number. The valid range is 1–8.

### Defaults

By default, information is displayed for all range ID numbers.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

Enter a range ID number with this command to display information for a specific range.

### Examples

```
-> show app-mon l4port-exclude range-id
Range-Id      Start-port    End-port      Port-type
-----+-----+-----+-----
1              100           200           UDP-Port
2              20            25            TCP-Service-Port

-> show app-mon l4port-exclude range-id 1
Range-Id      Start-port    End-port      Port-type
-----+-----+-----+-----
1              100           200           UDP-Port
```

### output definitions

---

<b>Range-Id</b>	The service port range ID.
<b>Start-port</b>	The start port associated with the range ID.
<b>End-port</b>	The end port associated with the range ID.
<b>Port-type</b>	Indicates the port type (TCP or UDP)

---

### Release History

Release 8.2.1; command introduced.

## Related Commands

[app-mon l4port-exclude](#) Configures the L4 port range to exclude from the AppMon operation.

## MIB Objects

```
alaAppMonEnforcementL4PortRangeTable  
  alaAppMonEnforcementL4PortRangeID  
  alaAppMonEnforcementL4PortRangeStart  
  alaAppMonEnforcementL4PortRangeEnd  
  alaAppMonEnforcementL4PortType  
  alaAppMonEnforcementL4PortStatus
```

---

## show app-mon stats

Displays the number of flow statistics.

**show app-mon stats**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

Use the **app-mon flow-table enforcement flush** command to clear the counters.

### Examples

```
-> show app-mon stats
Chassis/  Total Enforcement Total          Total TCP          Total UDP
Slot      Matched Flows    Used Flows    Overflow Flows    Overflow Packets
-----+-----+-----+-----+-----
1/1        8192              8192           1422              0
2/1         0                 3              0                 0
3/1         0                 0              0                 0
4/1         0                 0              0                 0
Total      8192             8195           1422              0
```

#### *output definitions*

---

<b>Chassis/Slot</b>	The chassis ID and slot number.
<b>Total Enforcement Matched Flows</b>	Total number of active flows that matched to any active application signature for enforcement feature.
<b>Total Used Flows</b>	Total number of active flows (including unmatched and enforcement matched) on a given chassis/slot. Each IPv4 flow takes one entry count, while each IPv6 flow takes two entries for Total Used Flows count.
<b>Total TCP Overflow Flows</b>	Total number of TCP flows missed to create flow entry in flow table due to hash collision.
<b>Total UDP Overflow Packets</b>	Cumulative number of UDP packets missed to create flow entry in flow table due to hash collision.

---

## Release History

Release 8.2.1; command introduced.

## Related Commands

[app-mon flow-table enforcement stats](#)

Enable or disable flow table statistics update for enforcement applications.

## MIB Objects

```
alaAppMonStatisticsTable  
  alaAppMonStatsSlotIndex  
  alaAppMonTotalEnforcementActiveFlows  
  alaAppMonTotalFlowTableInUseFlows  
  alaAppMonTCPOverflowFlows  
  alaAppMonUDPOverflowPackets
```

---

## show app-mon aging enforcement

Displays the aging interval for each application for enforcement feature.

**show app-mon aging enforcement** [**app-name** *app\_name*]

---

### Syntax Definitions

*app\_name* The name of the application. This is a case sensitive string.

### Defaults

By default, the aging time for all applications is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show app-mon aging enforcement
AppId      Application-name      TCP Aging-time/
                UDP Aging-time(minutes)
-----+-----+-----
968         amazon              6/1
244         facebook           6/1
182         sip                 60/60
183         skype              6/1
211         tftp               15/15
503         twitter            6/1
597         viber              6/1
890         webex              6/1
1093        whatsapp           6/1
240         youtube            6/1
```

```
-> show app-mon aging enforcement app-name sip
AppId      Application-name      TCP Aging-time/
                UDP Aging-time(minutes)
-----+-----+-----
182         sip                 60/60
```

### output definitions

---

**AppId** Identity of the application.  
**Application-name** Name of the application.

*output definitions (continued)*

---

<b>TCP Aging-time/UDP Aging-time (minutes)</b>	Aging time configured for the application.
--	--

---

**Release History**

Release 8.2.1; command introduced.

**Related Commands**

[app-mon aging enforcement](#) Configures the aging time for dynamically learned flows for each application for enforcement feature.

**MIB Objects**

```
alaAppMonEnforcementAgingTimerTable  
  alaAppMonEnforcementAgingTimerAppName  
  alaAppMonEnforcementAgingTimerValue
```

---

## show app-mon vc-topology

Displays the AppMon virtual chassis topology.

**show app-mon vc-topology**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

Displays the topology of the available OmniSwitch 6860 and OmniSwitch 6860E chassis. This also displays the connectivity between the chassis for flow classification.

### Examples

```
-> show app-mon vc-topology
```

```
Chassis/   Node           Designated
Slot       Type           Chassis/Slot
-----+-----+-----
1/1        OS6860         2/1
2/1        OS6860E       2/1
3/1        OS6860E       3/1
```

#### *output definitions*

---

<b>Chassis/Slot</b>	The chassis ID and slot number.
<b>Node Type</b>	Indicates the switch type.
<b>Designated Chassis/Slot</b>	The chassis and slot of the switch.

---

### Release History

Release 8.2.1; command introduced

**Related Commands**

N/A

**MIB Objects**

```
alaAppMonVCTopologyTable  
  alaAppMonVCTopologyChassisIndex

  alaAppMonVCTopologyDesignatedChassisIndex
```

---

## clear app-mon app-list

Removes all applications from the enforcement or monitor application list.

```
clear app-mon app-list {monitor| enforcement}
```

---

### Syntax Definitions

**monitor** Removes all applications from the monitor application list.

**enforcement** Removes all applications from the enforcement application list.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	No	No	No	No

### Usage Guidelines

This command does not clear the active application list until the **app-mon apply** command is used.

### Examples

```
-> clear app-mon app-list enforcement
-> clear app-mon app-list monitor
```

### Release History

Release 8.2.1; command introduced.

### Related Commands

**app-mon app-list** Add or remove applications or application groups to an application list for enforcement or monitoring.

### MIB Objects

alaAppMonClearAppList

---

# 41 Application Fingerprinting Commands

The OmniSwitch Application Fingerprinting feature attempts to detect and identify remote applications by scanning IP packets and comparing them to pre-defined bit patterns (application signatures). Once an application is identified, Application Fingerprinting collects and stores information about the application flow in a database on the local switch. Additional configurable options for this feature include the ability to apply QoS policy list rules to the identified flow and generating SNMP traps when a signature match occurs.

Using this implementation of Application Fingerprinting, an administrator can obtain more detailed information about protocols running on a specific device or make sure that certain QoS actions are automatically applied wherever an application might be running.

MIB information for the Application Fingerprinting commands is as follows:

*Filename:* ALCATEL-IND1-APP-FINGERPRINT-MIB.mib  
*Module:* alcatelIND1AppFPMIB

A summary of the available commands is listed here:

---

**app-fingerprint admin-state**  
**app-fingerprint port**  
**app-fingerprint signature-file**  
**app-fingerprint reload-signature-file**  
**app-fingerprint trap**  
**show app-fingerprint configuration**  
**show app-fingerprint port**  
**show app-fingerprint app-name**  
**show app-fingerprint app-group**  
**show app-fingerprint database**  
**show app-fingerprint statistics**

---

## app-fingerprint admin-state

Enables or disables the Application Fingerprinting process on all Application Fingerprinting ports.

**app-fingerprint admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables Application Fingerprinting.  
**disable** Disables Application Fingerprinting.

### Defaults

By default, Application Fingerprinting is enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When Application Fingerprinting is enabled for the switch, traffic flows on Application Fingerprinting ports are sampled and compared to REGEX application signatures defined in the “app-regex.txt” file located in the **/flash/app-signature** directory on the local switch. This is done to identify the presence of remote applications on a flow-by-flow basis.
- Disabling the administrative status of the Application Fingerprinting feature does not remove the Application Fingerprinting configuration from the switch.

### Examples

```
-> app-fingerprint admin-state disable
-> app-fingerprint admin-state enable
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**show app-fingerprint configuration** Displays the Application Fingerprinting configuration for the switch.

### MIB Objects

```
alaAppFPGlobalMIBConfigObjects
alaAppFPGlobalAdminState
```

---

## app-fingerprint port

Configures a port or link aggregate as an Application Fingerprinting interface. Once the interface is configured and Application Fingerprinting is enabled for the switch, IP packets received on the interface are sampled to determine if they match pre-defined patterns in application signature files that reside on the local switch. When a match occurs, the flow is monitored and/or subject to QoS policy rules.

**app-fingerprint** {port *chassis/slot/port*[-*port*] | linkagg *agg\_id*[-*agg\_id2*]} {**monitor-app-group** *group\_name* | **policy-list-name** *policy\_list* | **unp-profile**}

**no app-fingerprint** {port *chassis/slot/port*[-*port*] | linkagg *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports.
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of ID numbers (5-10).
<i>group_name</i>	The name of an existing signature application group.
<i>policy_list</i>	The name of an existing QoS policy list.
<b>unp-profile</b>	Apply QoS policy list from UNP to which matching traffic is classified.

### Defaults

By default, Application Fingerprinting is disabled on all switch ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to disable the Application Fingerprinting service on the specified port or link aggregate.
- Use the **monitor-app-group** parameter to specify a group (profile) that represents a set of application signature files. All of the signature files in the group are checked against the IP packets received on the port. When a packet match is detected, the flow is identified and monitored. No other action is taken.
- Use the **policy-list-name** parameter to associate a QoS policy list with the Application Fingerprinting port. When a packet match is detected, the policy rules in the specified policy list are applied to the matching traffic flow.
- Use the **unp-profile** parameter to specify that if traffic received on an Application Fingerprinting interface is classified into a Universal Network Profile (UNP), then the QoS policy list rules associated with that profile are applied to the traffic.

- The QoS policy list specified with the **policy-list-name** parameter or assigned to a UNP for Application Fingerprinting traffic, must contain policy rules with the **appfp-group** condition.
- The QoS policy list specified with the **policy-list-name** parameter must be configured as an **appfp** list. However, the UNP policy list must be configured as a UNP list.
- Application Fingerprinting uses the sFlow mechanism to sample packets. Do not run Application Fingerprinting and other sFlow services on the same port or link aggregate.

## Examples

```
-> app-fingerprint port 2/1-5 monitor-app-group my-p2p
-> app-fingerprint linkagg 10 policy-list-name list1
-> app-fingerprint port 1/11 unp
-> no app-fingerprint port 2/1-5
-> no app-fingerprint linkagg 10
```

## Release History

Release 7.3.2; command was introduced.

## Related Commands

[show app-fingerprint port](#) Displays the Application Fingerprinting port configuration.

## MIB Objects

```
alaAppFPPortTable
  alaAppFPPort
  alaAppFPGroupNameOrPolicyList
  alaAppFPPortOperationMode
  alaAppFPPortStatus
  alaAppFPPortRowStatus
```

---

## app-fingerprint signature-file

Specifies the name of the Application Fingerprinting signature file. This file contains the REGEX signatures that are used to identify applications accessing the network on Application Fingerprinting ports.

**app-fingerprint signature-file** *filename*

---

### Syntax Definitions

*filename*                      The name of an existing REGEX application signature file.

### Defaults

By default, the “app-regex.txt” file is used.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- This command is only required to use a REGEX signature file that has a filename that is different from the default “app-regex.txt” name..
- The signature file must reside in the **/flash/app-signature** directory on the local switch.
- After specifying the signature filename to use, upload the signature file into the switch memory using the **app-fingerprint reload-signature-file** command.

### Examples

```
-> app-fingerprint signature-file app2_regex.txt
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**app-fingerprint reload-  
signature-file**

Reloads the contents of the active application signature file into the switch memory.

### MIB Objects

alaAppFPGlobalMIBConfigObjects  
alaAppFPGlobalSignatureFile

---

## app-fingerprint reload-signature-file

Reloads the contents of the active application signature file into the switch memory. Use this command after making any changes to the current signature file.

**app-fingerprint reload-signature-file**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- This command reloads the application signature file that was previously applied to the switch. This may be the default “app-regex.txt” file or another signature file that was applied through the **app-fingerprint signature-file** command.
- A switch reboot is *not* required after the signature file is reloaded.

### Examples

```
-> app-fingerprint reload-signature-file
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**app-fingerprint signature-file** Specifies a different signature file to use for Application Fingerprinting.

### MIB Objects

```
alaAppFPGlobalMIBConfigObjects
alaAppFPGlobalReloadSignatureFile
```

---

## app-fingerprint trap

Enables or disables trap generation for the Application Fingerprinting feature.

**app-fingerprint trap {enable | disable}**

---

### Syntax Definitions

**enable** Enables Application Fingerprinting traps.  
**disable** Disables Application Fingerprinting traps.

### Defaults

By default, traps are disabled for this feature.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

A trap is generated when a traffic flow matches an application signature.

### Examples

```
-> app-fingerprint trap enable
-> app-fingerprint trap disable
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**show app-fingerprint configuration** Displays the Application Fingerprinting status and configuration for the switch.

### MIB Objects

```
alaAppFPGlobalMIBConfigObjects
alaAppFPGlobalTrapConfig
```

---

## show app-fingerprint configuration

Displays the Application Fingerprinting status and configuration information for the switch.

**show app-fingerprint configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show app-fingerprint configuration
```

```
Admin-state:           Enabled,
SNMP Trap:             Disabled,
Signature File:        app-regex.txt
```

#### *output definitions*

---

<b>Admin-state</b>	The administrative status of Application Fingerprinting for the switch ( <b>Enabled</b> or <b>Disabled</b> ). Configured through the <b>app-fingerprint admin-state</b> command.
<b>SNMP Trap</b>	The status of SNMP trap generation for the switch ( <b>Enabled</b> or <b>Disabled</b> ). Configured through the <b>app-fingerprint trap</b> command.
<b>Signature File</b>	The name of the text file that contains the REGEX application signatures used to identify traffic flows. This file resides in the <b>/flash/app-signature</b> directory on the switch. Configured through the <b>app-fingerprint signature-file</b> and <b>app-fingerprint reload-signature-file</b> commands.

---

### Release History

Release 7.3.2; command was introduced.

## Related Commands

**show app-fingerprint port**      Displays the Application Fingerprinting port configuration.

## MIB Objects

```
alaAppFPGlobalMIBConfigObjects
  alaAppFPGlobalAdminState
  alaAppFPGlobalSignatureFile
  alaAppFPGlobalReloadSignatureFile
  alaAppFPGlobalTrapConfig
```

---

## show app-fingerprint port

Displays the Application Fingerprinting port configuration for the switch.

**show app-fingerprint** [**port** *chassis/slot/port* | **linkagg** *agg\_id*]

---

### Syntax Definitions

*chassis*                                    The chassis identifier.  
*slot/port[-port]*                        The slot and port number (3/1).  
*agg\_id*                                      The link aggregate ID number.

### Defaults

By default, the configuration for all Application Fingerprinting ports is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.

### Examples

```
-> show app-fingerprint port
```

Legend: \* = Port or App-Group is invalid

```

  Port      Operation Mode      App-group/Policy-list
  -----+-----+-----
  1/2/1     Monitoring          Testing13
  1/2/1     QoS                 list1
  1/2/1     QoS                 list2

```

```
-> show app-fingerprint linkagg
```

Legend: \* = Port or App-Group is invalid

```

  Port      Operation Mode      App-group/Policy-list
  -----+-----+-----
  0/100     Monitoring          Testing16
  0/100     QoS                 list3
  0/100     QoS                 list4

```

*output definitions*

---

<b>Port</b>	The slot/port or link aggregate ID of the Application Fingerprinting interface. A “0” slot number indicates that the interface is a link aggregate.
<b>Operation Mode</b>	The Application Fingerprinting mode ( <b>Monitoring, QoS, or UNP</b> ) in which the port is operating.
<b>App-group/Policy-list</b>	The name of the group of application signatures or the QoS policy list that is applied to the traffic flows on the port.

---

**Release History**

Release 7.3.2; command was introduced.

**Related Commands**

<a href="#">show app-fingerprint port</a>	Displays the Application Fingerprinting interface configuration.
<a href="#">show app-fingerprint configuration</a>	Displays the Application Fingerprinting status and configuration for the switch.

**MIB Objects**

```
alaAppFPPortTable
  alaAppFPPort
  alaAppFPGroupNameOrPolicyList
  alaAppFPPortOperationMode
  alaAppFPPortStatus
  alaAppFPPortRowStatus
```

---

## show app-fingerprint app-name

Displays the REGEX application signature configuration for the switch. When the switch samples Application Fingerprinting ports, the traffic flow patterns on these ports are compared against the REGEX signatures specified in the “app-regex.txt” file. When a match occurs, the traffic flow is classified and monitored. In addition, QoS policies can be applied to these flows based on a specific match to an application signature group.

**show app-fingerprint app-name** [*app\_name*]

---

### Syntax Definitions

*app\_name* The name of an existing application signature.

### Defaults

By default, all application signatures are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Application signatures are defined in the “app-regex.txt” file that resides in the **/flash/app-signature** directory on the switch. A default version of this file is available, but the file is user-configurable and new files can also be created.
- Application signatures can also be combined into an application group. This type of group is then assigned to one or more Application Fingerprinting ports. All the application signatures that are members of the assigned group are then applied to traffic flows on that same port.
- Use the *app\_name* parameter to display information for a specific application signature.

### Examples

```
-> show app-fingerprint app-name
App Name: ciscovpn
  Description: VPN client software to a Cisco VPN server
  REGEX Signature: \x01\xfa\x01\xfa

App Name: citrix
  Description: Citrix ICA - proprietary remote desktop application
  REGEX Signature: \x32\x26\x85\x92\x58

App Name: dhcp
  Description: Dynamic Host Configuration Protocol
  REGEX Signature: [\x01\x02][\x01- ]\x06.*c\x82sc
```

```
-> show app-fingerprint app-name citrix
```

```
App Name: citrix
  Description: Citrix ICA - proprietary remote desktop application
  REGEX Signature: \x32\x26\x85\x92\x58
```

### *output definitions*

---

<b>App-name</b>	The name of the application for which this signature applies.
<b>Description</b>	A description of the application.
<b>REGEX signature</b>	The regular expression (REGEX) that identifies this application.

---

### **Release History**

Release 7.3.2; command was introduced.

### **Related Commands**

<b>show app-fingerprint app-group</b>	Displays the application group configuration.
<b>show app-fingerprint configuration</b>	Displays the Application Fingerprinting status and configuration.

### **MIB Objects**

```
alaAppFPAppGrpNameTable
  alaAppFPGrpAppName
```

---

## show app-fingerprint app-group

Displays the Application Fingerprinting application group configuration for the switch. An application group contains a user-configured list of REGEX application signatures that are represented by the group name. The group name is then assigned to Application Fingerprinting ports or link aggregates.

**show app-fingerprint app-group** [*group\_name*]

---

### Syntax Definitions

*group\_name*                      The name of an existing application group.

### Defaults

By default, all application groups are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Application groups are defined in the “app-regex.txt” file that is located in the **/flash/app-signature** directory on the switch. A default version of this file is available, but the file is user-configurable and new files can also be created.
- Use the *group\_name* parameter to display information for a specific application group.

### Examples

```
-> show app-fingerprint app-group
```

```
App Group: chatting
  App names: jabber
```

```
App Group: mail
  App names: smtp
```

```
App Group: network
  App names: bgp dhcp rtsp smb
```

```
App Group: p2p
  App names: hotline
```

```
App Group: remote_access
  App names: ciscovpn citrix rdp ssh vnc
```

```
App Group: voip
  App names: h323 sip
```

```
-> show app-fingerprint app-group network
```

```
App Group: network
App names: bgp dhcp rtsp smb
```

### *output definitions*

---

<b>App-Group</b>	The name of the application group file.
<b>App names</b>	The names of the application signature files that belong to this group.

---

## **Release History**

Release 7.3.2; command was introduced.

## **Related Commands**

**show app-fingerprint app-name** Displays the contents of the REGEX application signatures that are stored in the “app-regex.txt” file on the switch.

**show app-fingerprint configuration** Displays the Application Fingerprinting status and configuration.

## **MIB Objects**

```
alaAppFPAppGrpNameTable
  alaAppFPAppGroupName
  alaAppFPGrpAppName
```

---

## show app-fingerprint database

Displays Application Fingerprinting database entries. When a match occurs between an IP traffic flow and a REGEX application signature, a multi-tuple classifier and the name of the matching application group and signature are stored in a local switch database to identify and track the application associated with the flow.

**show app-fingerprint database** [*port chassis/slot/port* | *linkagg agg\_id*] [**detail**]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and the port number (3/1).
<i>agg_id</i>	The link aggregate ID number.
<b>detail</b>	Displays additional information about the classified traffic flow.

### Defaults

By default, all application flow database entries are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- The following multi-tuple classifier is used to identify an application traffic flow:
  - Ingress Port
  - Dest MAC
  - Src MAC
  - VLAN
  - Dest IP
  - Src IP
  - Dest Port
  - Src Port
- Each database entry is subject to a 15 minute aging period. If the database fills up, older entries are aged out before the 15 minute limit (fast aging). However, fast aging is not applied to database entries associated with QoS. In this case, the QoS is removed after the regular 15 minute aging time period expires.
- When a database entry is removed due to regular aging or fast aging conditions, any corresponding QoS is also removed for that flow.

## Examples

```
-> show app-fingerprint database
```

Port	App-Group/Name	SRC MAC	VLAN	SRC IP/Port
0/1/2	P2P/aim	00:00:22:33:44:55	20	2.3.4.4/200
0/1/2	P2P/ares	00:00:22:33:44:55	20	2.3.4.4/200
0/1/2	Mail/smtP	00:00:22:33:44:55	20	2.3.4.4/100

### output definitions

<b>Port</b>	The slot/port or link aggregate ID of the AFP interface on which the flow was classified. A "0" slot number indicates a link aggregate.
<b>App-Group/Name</b>	The name of the application group and signature that matched the flow.
<b>SRC MAC</b>	The source MAC address of the flow.
<b>VLAN</b>	The VLAN on which the flow is learned and forwarded.
<b>SRC IP/Port</b>	The source IP network address and port.

```
-> show app-fingerprint database detail
```

```
Port 1/2/1:
```

```
App-Group/Name: Testing2/App_4
SRC-DST MAC:    00:00:00:00:04:01 - 00:e0:b1:e6:f9:b5,
VLAN:          20,
SRC IP/PORT:    20.20.20.21/65,
DST IP/PORT:    10.10.10.11/55
```

```
App-Group/Name: Testing2/App_5
SRC-DST MAC:    00:00:00:00:04:02 - 00:e0:b1:e6:f9:b5,
VLAN:          20,
SRC IP/PORT:    20.20.20.21/64,
DST IP/PORT:    10.10.10.11/54
```

```
App-Group/Name: Testing2/App_6
SRC-DST MAC:    00:00:00:00:04:03 - 00:e0:b1:e6:f9:b5,

SRC IP/PORT:    20.20.20.21/66,
DST IP/PORT:    10.10.10.11/56
```

```
Port 2/3/23:
```

```
App-Group/Name: Testing1/App_1
SRC-DST MAC:    00:00:00:00:03:01 - 00:e0:b1:e6:f9:b5,
VLAN:          10,
SRC IP/PORT:    10.10.10.11/115,
DST IP/PORT:    20.20.20.21/137
```

```
App-Group/Name: Testing1/App_2
SRC-DST MAC:    00:00:00:00:03:02 - 00:e0:b1:e6:f9:b5,
VLAN:          10,
SRC IP/PORT:    10.10.10.11/114,
DST IP/PORT:    20.20.20.21/138
```

```
App-Group/Name: Testing1/App_3
SRC-DST MAC:    00:00:00:00:03:03 - 00:e0:b1:e6:f9:b5,
VLAN:          10,
SRC IP/PORT:    10.10.10.11/113,
DST IP/PORT:    20.20.20.21/135
```

*output definitions*

---

<b>Port</b>	The slot and port number on which the flow was classified.
<b>App-Group/Name</b>	The name of the application group and signature that matched the flow.
<b>SRC-DST MAC</b>	The source and destination MAC addresses of the flow.
<b>VLAN</b>	The VLAN on which the flow is learned and forwarded.
<b>SRC IP/Port</b>	The source IP network address and port.
<b>DST IP/Port</b>	The destination IP network address and port.

---

**Release History**

Release 7.3.2; command was introduced.

**Related Commands**

<a href="#">show app-fingerprint app-group</a>	Displays the application group configuration.

---

## show app-fingerprint statistics

Displays statistics for each application flow on an Application Fingerprinting ingress port.

**show app-fingerprint statistics** [**port** *chassis/slot/port* | **linkagg** *agg\_id*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and the port number (3/1).
<i>agg_id</i>	The link aggregate ID number.

### Defaults

By default, statistics are displayed for all application flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- Statistics displayed with this command include total number of packets matched, the number of unmatched packets, and the packets matched for each application signature.

### Examples

```
-> show app-fingerprint statistics
      Port      Group/App name                               Last 1 hour      Last 1 day
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
1/2/1      Testing2/App_4                               19976            19976
1/2/1      Testing2/App_5                               20000            20000
1/2/1      Testing2/App_6                               20000            20000
2/3/23     Testing1/App_1                               19975            19975
2/3/23     Testing1/App_2                               20000            20000
2/3/23     Testing1/App_3                               20000            20000
```

### Release History

# 42 FIP Snooping Commands

The OmniSwitch implementation of Fibre Channel over Ethernet (FCoE) Initiation Protocol (FIP) snooping supports the FCoE technology used to tunnel Fibre Channel (FC) frames within Ethernet MAC frames. When the FCoE and FIP snooping functionality is enabled, the OmniSwitch serves as an FCoE transit switch. In this role, the OmniSwitch implementation of Data Center Bridging (DCB) is also used to provide the lossless Ethernet network required to support FCoE.

This implementation of FIP snooping ensures the security of the FCoE network and maintains a virtual point-to-point network connection between FCoE Nodes (ENodes) and FCoE Forwarder (FCF) devices. In addition, FIP snooping is also required to support OmniSwitch FCoE/FC gateway functionality that allows the switch to provide FCoE forwarding services between an FCoE network and a native FC storage area network (SAN).

- An OmniSwitch FCoE transit switch is placed between ENodes (servers or other bridges) and an FCF or an OmniSwitch FCoE/FC gateway to extend the reach of the FCoE network without extending the physical FC connections.
- An OmniSwitch FCoE/FC gateway runs FIP snooping on the 10G Ethernet FCoE ports that connect to an FCoE network. On the same switch, FC ports connect to native FC switches or nodes. Traffic is transmitted between the FCoE network and the FC SAN through the gateway switch.

This chapter provides information about configuring FCoE and FIP global and port parameters through the Command Line Interface (CLI). See [Chapter 43, “FCoE/FC Gateway Commands,”](#) for more information about configuring OmniSwitch FCoE/FC gateway functionality.

MIB information for the FCoE and FIP snooping commands is as follows:

*Filename:* ALCATEL-IND1-FIPS-MIB.mib  
*Module:* alcatelIND1FipsMIB

The FCoE and FIP Snooping commands are listed here:

<b>Global commands</b>	<b><a href="#">fcoe fip-snooping</a></b> <b><a href="#">fcoe address-mode</a></b> <b><a href="#">fcoe priority</a></b> <b><a href="#">fcoe priority-protection</a></b> <b><a href="#">fcoe priority-protection action</a></b> <b><a href="#">fcoe filtering-resource trap-threshold</a></b> <b><a href="#">fcoe house-keeping-time-period</a></b>
<b>VLAN and Port commands</b>	<b><a href="#">fcoe vlan</a></b> <b><a href="#">fcoe fcf mac</a></b> <b><a href="#">fcoe fc-map</a></b> <b><a href="#">fcoe discovery-advertisement</a></b> <b><a href="#">fcoe role</a></b>

---

<b>Show commands</b>	<code>show fcoe</code> <code>show fcoe ports</code> <code>show fcoe sessions</code> <code>show fcoe enode</code> <code>show fcoe fc</code> <code>show fcoe fc-map</code> <code>show fcoe discovery-advertisement</code>
----------------------	---

---

<b>Statistics commands</b>	<code>show fcoe statistics</code> <code>clear fcoe statistics</code>
----------------------------	---

---

## fcoe fip-snooping

Enables or disables Fibre Channel Initiation Protocol (FIP) snooping on the switch. FIP Snooping is enabled to allow the OmniSwitch to serve as an FCoE transit switch.

**fcoe fip-snooping admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables FIP Snooping.  
**disable** Disables FIP Snooping.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

When FIP Snooping is enabled, traffic with an Ethertype of FCoE is dropped on all switch VLANs and ports that are not configured as FCoE VLANs and ports.

### Examples

```
-> fcoe fip-snooping admin-state enable
-> fcoe fip-snooping admin-state disable
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

**show fcoe** Displays the FCoE and FIP snooping status and configuration for the switch.

### MIB Objects

```
alaFipsConfig
  alaFipsConfigFIPAdmin
```

---

## fcoe address-mode

Configures the FCoE addressing mode. This mode determines whether a server-provided MAC address (SPMA) or a fabric-provided MAC address (FPMA) is assigned to virtual FCoE entities.

**fcoe address-mode {spma | fpma}**

---

### Syntax Definitions

**spma** Selects the SPMA address mode.  
**fpma** Selects the FPMA address mode.

### Defaults

parameter	default
spma   fpma	FPMA

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- The FCoE Node (ENode) and the FCoE Forwarder (FCF) must use the same addressing mode to establish virtual links between the ENode and FCF. Configure the global OmniSwitch addressing mode to match the mode used by the ENode and FCF.
- When the FPMA mode is active, a MAC address is assigned by an FCF to a single ENode MAC. This MAC address is not assigned to any other ENode MAC in the same VLAN.
- When the SPMA mode is active, MAC addresses are assigned by the ENode server.
- To change the addressing mode selection, disable FIP Snooping for the switch then make the change and enable FIP Snooping again.

### Examples

```
-> fcoe address-mode spma
-> fcoe address-mode fpma
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

**fcoe fip-snooping**

Enables or disables FIP Snooping on the switch

**show fcoe**

Displays the FCoE and FIP snooping status and configuration for the switch.

## MIB Objects

alaFipsConfig

  alaFipsConfigAddressMode

---

## fcoe priority

Configures up to two global priority values that are designated as lossless for FCoE traffic.

**fcoe priority** {*priority*} [*priority*]

---

### Syntax Definitions

*priority* A priority value between 0–7.

### Defaults

parameter	default
<i>priority</i>	3

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- This command overwrites the existing FCoE priority values used by the switch.
- If two priority values are configured but there is a need to change only one of the values, both priority values must be specified with this command. For example, if the current priority is set to 2 and 5, to change priority 2 to 3, specify both 3 and 5 as the priority values.
- Specify a priority value of 3 to set the priority back to the default value.
- The FCoE priority values are used when FCoE priority protection is enabled for the switch.
- In addition to enabling priority protection, a lossless DCB FCoE profile with the same FCoE priority values must be assigned to the FCoE interfaces.

### Examples

```
-> fcoe priority 2 5
-> fcoe priority 3 5
-> fcoe priority 3
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

<b>fcoe priority-protection</b>	Configures the status of priority protection for the switch.
<b>fcoe priority-protection action</b>	Configures the action taken when traffic is not FCoE or FIP.
<b>fcoe fip-snooping</b>	Enables or disables FIP Snooping on the switch
<b>show fcoe</b>	Displays the FCoE and FIP snooping status and configuration for the switch.

## MIB Objects

```
alaFipsConfig  
  alaFipsConfigPriorityOne  
  alaFipsConfigPriorityTwo
```

---

## fcoe priority-protection

Enables or disables priority protection.

**fcoe priority-protection {enable | disable}**

---

### Syntax Definitions

**enable** Enables priority protection for the switch.  
**disable** Disables priority protection for the switch.

### Defaults

By default, priority protection is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When priority protection is enabled, only FCoE and FIP traffic that matches the FCoE lossless priority values is allowed. All other traffic is either marked or dropped, based on the priority protection action configured for the switch.
- This command applies only to the priority value that is specified using the **fcoe priority** command.
- The FCoE priority value is advertised to FCoE-enabled hosts using the Data Center Bridging Exchange (DCBx) protocol.

### Examples

```
-> fcoe priority-protection enable
-> fcoe priority-protection disable
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

<b>fcoe priority</b>	Configures the lossless priority values for the switch.
<b>fcoe priority-protection action</b>	Determines whether non-FCoE and non-FIP traffic is dropped or marked with a lower priority value.
<b>fcoe fip-snooping</b>	Enables or disables FIP Snooping on the switch
<b>show fcoe</b>	Displays the FCoE and FIP snooping status and configuration for the switch.

## MIB Objects

```
alaFipsConfig  
  alaFipsConfigPrioProtection
```

---

## fcoe priority-protection action

Specifies whether non-FCoE and non-FIP traffic is dropped or marked with a lower priority value. This action is only valid when FCoE priority protection is enabled for the switch.

**fcoe priority-protection action** {**drop** | **remark** *priority*}

---

### Syntax Definitions

**drop** All non-FCoE and non-FIP traffic is dropped.

*priority* Specifies the priority value to use for remarking non-FCoE and non-FIP traffic.

### Defaults

By default, non-FCoE and non-FIP traffic is dropped when priority protection is enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When priority protection is enabled, only FCoE traffic that matches the protected priority values is allowed in the priority queues. All other traffic is either re-marked or dropped, based on the priority protection action configured for the switch.
- If the re-mark action is configured, traffic is marked with the specified priority value and forwarded on the switch.

### Examples

```
-> fcoe priority-protection action drop
-> fcoe priority-protection action remark 0
```

### Release History

Release 7.3.2; command was introduced.

## Related Commands

**fcoe priority**

Configures the lossless priority values for the switch.

**fcoe priority-protection**

Configures the status of priority protection for the switch

**fcoe fip-snooping**

Enables or disables FIP Snooping on the switch

**show fcoe**

Displays the FCoE and FIP snooping status and configuration for the switch.

## MIB Objects

alaFipsConfig

alaFipsConfigPriorityProtectionAction

---

## fcoe filtering-resource trap-threshold

Configures the percentage of filtering resources used as a trap threshold value. When this percentage is reached, a trap is generated by the switch.

**fcoe filtering-resource trap-threshold** *percentage*

---

### Syntax Definitions

*percentage*                              The percentage of filtering resources used.

### Defaults

By default, the filtering resource trap threshold percentage is set to 80%.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

To disable the generation of filtering resource traps, set the trap threshold value to “0”.

### Examples

```
-> fcoe filtering-resource trap-threshold 50
-> fcoe filtering-resource trap-threshold 0
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

[show fcoe](#)                              Displays the FCoE and FIP snooping status and configuration for the switch.

### MIB Objects

Notifications (Traps)

```
alaFipsResourceThresholdReached
alaFipsFilterResourceUsage
```

---

## fcoe house-keeping-time-period

Configures the amount of time the FCoE switch waits to receive keep alive messages from the ENode and FCF for a given FCoE session. When this time expires and no keep alive messages were received for any entity of the session, the session information is removed.

**fcoe house-keeping-time-period** *seconds*

---

### Syntax Definitions

*seconds*                                      The keep alive wait time, in seconds.

### Defaults

By default, the housekeeping timer is set to 300 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

To disable the housekeeping timer, set the timer value to “0”

### Examples

```
-> fcoe house-keeping-time-period 120
-> fcoe house-keeping-time-period 0
```

### Release History

Release 7.3.2; command was introduced.

### Related Commands

[show fcoe](#)                                      Displays the FCoE and FIP snooping status and configuration for the switch.

### MIB Objects

```
alaFipsConfig
  alaFipsConfigHouseKeepingTimePeriod
```

---

## fcoe vlan

Configures an FCoE VLAN. This type of VLAN is used to deploy the OmniSwitch implementation of FIP snooping.

**fcoe vlan** *vlan\_id* [**admin-state** {**enable** | **disable**}] [**name** *description*]

**no fcoe vlan** *vlan\_id*

---

### Syntax Definitions

<i>vlan_id</i>	A numeric value that uniquely identifies an individual FCoE VLAN. The valid ID range is 2–4094.
<b>enable</b>	Enables the FCoE VLAN administrative status.
<b>disable</b>	Disables the FCoE VLAN administrative status.
<i>description</i>	An alphanumeric string. Optional name description for the VLAN ID. Enclose the description in double quotes if it contains more than one word with a space in between.

### Defaults

parameter	default
<b>enable   disable</b>	<b>enable</b>
<i>description</i>	<b>VLAN ID</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove a FCoE VLAN from the switch configuration. All VLAN ports are detached before the VLAN is removed.
- Specify a VLAN ID that does not exist in the switch configuration, or the ID of a dynamically created MVRP VLAN.
- Only 802.1q-tagged FCoE ports and link aggregates can be members of FCoE VLANs.
- Configuring a FCoE VLAN as a default VLAN for a port or link aggregate is not allowed. All port associations are created by tagging FCoE ports with the FCoE VLAN ID.
- Configuring default VLAN 1 as an FCoE VLAN is not allowed.

- The following features are not supported on FCoE VLANs:
  - IGMP Snooping
  - IP interface
  - HA VLANs
  - SVLAN and CVLAN
  - Shortest Path Bridging (SPB)
  - UDP Relay, DHCP Snooping
  - Universal Network Profile (UNP)
- An OmniSwitch FCoE transit switch operates between an FCoE Node (ENode) and a FCoE Forwarder (FCF). Manual configuration of the FCoE VLAN is required along the transit switch path. However, the ENode and FCF may invoke FIP VLAN discovery to discover the FCoE VLANs within the transit path. If not, manual configuration of the FCoE VLANs may also be required on the appropriate ENodes and FCFs.

## Examples

```
-> fcoe vlan 100
-> no fcoe vlan 100
-> fcoe vlan 100 admin-state enable name fcoe-vlan1
-> fcoe vlan 100 admin-state enable
```

## Release History

Release 7.3.2; command introduced.

## Related Commands

<a href="#">fcoe fcf mac</a>	Configures a static Fibre Channel Forwarder (FCF) MAC address for the specified FCoE VLAN.
<a href="#">fcoe fip-snooping</a>	Enables or disables FIP Snooping on the switch
<a href="#">show vlan</a>	Displays the VLAN configuration for the switch.

## MIB Objects

```
alaFipsVlanTable
  alaFipsVlanId
  alaFipsVlanFCMap
  alaFipsVlanRowStatus
```

---

## fcoe fcf mac

Configures a static Fibre Channel Forwarder (FCF) MAC address for the specified FCoE VLAN. Virtual Fibre Channel (FC) links that traverse the lossless Ethernet network send FCoE frames to and from the FCF MAC address.

**fcoe fcf mac** *mac\_address* **vlan** *vlan\_id*

**no fcoe fcf mac** *mac\_address* **vlan** *vlan\_id*

---

### Syntax Definitions

*mac\_address* Enter the FCF MAC Address (for example, 00:00:39:59:f1:0c).

*vlan\_id* An existing FCoE VLAN ID. The valid ID range is 2–4094.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the FCF MAC address from the specified FCoE VLAN.
- The FCoE VLAN ID must already exist in the switch configuration.

### Examples

```
-> fcoe fcf mac 30:10:94:01:00:00 vlan 100
-> no fcoe fcf 30:10:94:01:00:00
```

### Release History

Release 7.3.2; command introduced.

## Related Commands

## MIB Objects

```
alaFipsVlanTable  
  alaFipsVlanId  
  alaFipsVlanFCMap
```

---

## fcoe fc-map

Configures a static Fibre Channel Mapped Address Prefix (FC-MAP) for the specified FCoE VLAN. The FC-MAP is a 24-bit value used by the Fibre Channel Forwarder (FCF) to identify an individual fabric.

**fcoe fc-map** *prefix* **vlan** *vlan\_id*

**no fcoe fc-map** *prefix* **vlan** *vlan\_id*

---

### Syntax Definitions

*prefix* Enter the FC-MAP prefix value. The valid range is 0EFC00–0EFCFF.  
*vlan\_id* An existing FCoE VLAN ID. The valid ID range is 2–4094.

### Defaults

By default, the FC-MAP is set to 0E:FC:00.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- On an OmniSwitch 6900, use the **no** form of this command to set the FC-MAP back to the default value (0E:FC:00) for the specified FCoE VLAN.
- The FCoE VLAN ID must already exist in the switch configuration.
- The configured FC-MAP value assigned to an FCoE VLAN must match the FC-MAP value used by the FCF device. FCF advertisement packets that contain a different FC-MAP are not processed by the switch.
- When the FCoE address mode is set to Fabric-Provided MAC Address (FPMA), the FCF uses the FC-MAP value (upper 24 bits) combined with an FCID value (lower 24 bits) to generate a unique MAC address to identify an ENode VN\_Port for FCoE transactions.

### Examples

```
-> fcoe fc-map 0E:FC:04 vlan 30
-> no fcoe fc-map 0E:FC:04 vlan 30
```

### Release History

Release 7.3.2; command introduced.

```
alaFipsVlanTable  
  alaFipsVlanId  
  alaFipsVlanFCMap
```

---

## fcoe discovery-advertisement

Configures FIP discovery advertisement message parameters for the specified FCoE VLAN. These parameter values are advertised in both unicast and multicast advertisements.

**fcoe discovery-advertisement** *vlan* *vlan\_id*[-*vlan\_id2*] [**a-bit** {**enable** | **disable**}] [**fka-adv-period** *adv\_seconds*] [**priority** *priority*] [**uds-retries** *retries*]

---

### Syntax Definitions

<i>vlan_id</i> [- <i>vlan_id2</i> ]	An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25).
<b>enable</b>	Enables the available-for-login bit (A-bit) in the discovery advertisement message to indicate that the switch can accept fabric logins from ENodes.
<b>disable</b>	Disables the A-bit in the discovery advertisement message to indicate that the switch cannot accept fabric logins from ENodes.
<i>adv_seconds</i>	The discovery advertisement transmission interval and the number of FIP ENode keep alive packets expected. The valid range is 1–90 seconds.
<i>priority</i>	The priority value assigned to the switch, indicated in the priority descriptor of the discovery advertisement message. The valid range is 0–255 (0 = highest priority, 255 = lowest priority).
<i>retries</i>	The number of times a unicast discovery solicitation is transmitted after a port on which an FCF MAC was learned goes down. The valid range is 0–10.

### Defaults

parameter	default
<b>a-bit</b> <i>enable</i>   <i>disable</i>	<b>enable</b>
<b>fka-adv-period</b> <i>adv_seconds</i>	<b>8</b>
<b>priority</b> <i>priority</i>	<b>128</b>
<b>uds-retries</b> <i>retries</i>	<b>0</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

## Usage Guidelines

- When the A-bit parameter is disabled, the switch will not process any new logins for the FCoE VLAN. However, there is no impact on existing VN\_Port sessions, which are allowed to continue.
- Transmitting unicast discovery solicitations helps to find out if the same FCF is reachable on some other port of the same FCoE VLAN.

## Examples

```
-> fcoe discovery-advertisement vlan 100 priority 10
-> fcoe discovery-advertisement uds-retries 3
-> no fcoe discovery-advertisement vlan 100
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

  alaFipsDiscAdvtPriority,
  alaFipsDiscAdvtUdsRetries,
  alaFipsDiscAdvtRowStatus
```

---

## fcoe role

Configures the specified port or link aggregate as an FCoE interface and defines the role of the interface in the FCoE network.

**fcoe** {port *chassis/slot/port*[-*port2*] / linkagg *agg\_id*[-*agg\_id2*]} **role** {**edge** | **enode-only** | **fcf-only** | **mixed** | **trusted** | **ve**}

**no fcoe** {port *chassis/slot/port*[-*port2*] / linkagg *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier when running in virtual chassis mode.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). FCoE is only supported on 10G or faster ports.
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<b>edge</b>	Port connects directly to an ENode for transmission of FCoE and FIP frames from the ENode to the FCF.
<b>enode-only</b>	Link between FCoE switches that carries traffic from ENode to FCF.
<b>fcf-only</b>	Link between FCoE switches that carries traffic from FCF to ENode.
<b>mixed</b>	Link between FCoE switches that carries traffic in both directions (from FCF to ENode or from ENode to FCF).
<b>trusted</b>	Trust the FCoE Edge port; traffic on this port is not filtered by FIP ACLs. This port role type is typically assigned to the switch FCoE port that connects to an Ethernet port on the FCF.
<b>ve</b>	Configures port as a virtual expansion port (VE_Port) that is associated with an E2E-tunnel session. A VE_Port emulates an E_Port in an FCoE network, providing connectivity between FC switches. VE_Ports discover FCFs.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

## Usage Guidelines

- Use the **no** form of this command to revert the FCoE port back to a regular switch port. Before doing so, however, delete any associations the port may have with an FCoE VLAN.
- To change the role of an FCoE port, first remove the FCoE configuration from the port, then configure FCoE and the new role again for that same port.
- FCoE is only supported on 10G or faster ports that are associated with an FCoE lossless DCB profile. In addition, DCBX must be enabled on the port with both PFC and ETS in an active state (either forced or negotiated via DCBX). The DCB configuration is done separately using QoS port and profile commands.
- The maximum frame size for an FCoE port must be at least 2500 bytes to accommodate FCoE encapsulated frames, which are larger than the standard Ethernet frame size. In addition, make sure the FCoE port frame size is configured the same end-to-end.
- When configuring a link aggregate as an FCoE port, make sure the link aggregate ID number already exists in the switch configuration. Ports already configured as FCoE ports cannot be added to a link aggregate.
- FCoE ports must be manually assigned to a default VLAN and then tagged with the FCoE VLAN that will carry the FCoE and FIP frames on that port.
- The following features are not supported on FCoE ports:
  - Learned Port Security (LPS)
  - Port Mirroring and Remote Port Mirroring
  - Shortest Path Bridging (SPB)
- Enabling FCoE on a Universal Network Profile (UNP) port is only supported to allow UNP dynamic assignment of a default VLAN for an FCoE port. Manual tagging of the FCoE UNP port with FCoE VLAN IDs is still required.
- FCoE VLANs may be dynamically learned through the transmission of MVRP join PDU, but any port associations with that VLAN must be manually configured.
- Assigning FCoE interfaces to different FCoE VLANs provides a method for configuring multiple FC fabrics through the same FCoE switch.

## Examples

```
-> fcoe port 1/1 role edge
-> fcoe port 1/1/1 role edge
-> fcoe port 2/1 role fcf-only
-> no fcoe port 2/1
```

## Release History

Used Filter Resources   : 0,
Trap threshold (%)      : 80,
House Keeping Time Period : 300
```

#### *output definitions*

---

#### **FIP Snooping**

The administrative status of FIP snooping for the switch (**Enable** or **Disable**). Configured through the **fcoe fip-snooping** command.

#### **Address-mode**

Indicates whether a server-provided MAC address (**SPMA**) or a fabric-provided MAC address (**FPMA**) is assigned to virtual FCoE entities. Configured through the **fcoe address-mode** command.

*output definitions (continued)*

---

<b>Priority 1</b>	One of two global lossless priority values for FCoE traffic. Configured through <b>fcoe priority</b> command.
<b>Priority 2</b>	Two of two global lossless priority values for FCoE traffic. Configured through <b>fcoe priority</b> command.
<b>Priority Protection</b>	The status of priority protection for the switch ( <b>Enable</b> or <b>Disable</b> ). Configured through the <b>fcoe priority-protection</b> command.
<b>Priority Protection Action</b>	The action applied to traffic that does not match the FCoE/FIP Ethertype and configured FCoE priority value ( <b>Drop</b> or <b>Remark</b> ). Configured through the <b>fcoe priority-protection action</b> command.
<b>Re-mark Priority</b>	The priority value to use for marking traffic that does not match the FCoE/FIP Ethertype and configured FCoE priority value. This value is only applied when the priority protection action is set to <b>Remark</b> . Configured through the <b>fcoe priority-protection action</b> command.
<b>Total Filtering Resources</b>	The number of ACL entries available for filtering of FCoE traffic.
<b>Used Filtering Resources</b>	The number of ACL entries currently in use for filtering FCoE traffic.
<b>Trap threshold (%)</b>	The percentage of filtering resources used for FIP. When this percentage is reached, a trap is sent indicating the available and maximum percentage of filtering resources. Configured through the <b>fcoe filtering-resource trap-threshold</b> command.
<b>House Keeping Time Period</b>	The amount of time the FCoE switch will wait to receive keep alive messages from the ENode and FCF. When this amount of time expires, information for the specific FCoE session is removed. Configured through the <b>fcoe house-keeping-time-period</b> command

---

## show fcoe sessions

Displays the FIP snooping session status and configuration for the switch.

```
show fcoe sessions [[fips | npiv-proxy | r-npiv] [port chassis/slot/port] / vlan vlan_id | linkagg agg_id] |
[e-tunnel [tunnel_id]]
```

---

### Syntax Definitions

<b>fips</b>	Displays FIP snooping sessions on FCoE ports.
<b>npiv-proxy</b>	Displays N_Port proxy (NPIV) sessions between ENode and FC switch.
<b>r-npiv</b>	Displays F_Port proxy (R- NPIV) sessions between the HBA and the gateway switch.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number (3/1).
<i>vlan_id</i>	An existing FCoE VLAN ID. The valid ID range is 2–4094.
<i>agg_id</i>	The link aggregate ID number.
<i>tunnel_id</i>	Displays E2E tunnel sessions between two E_Ports on different FC switches. Optionally enter a tunnel ID to display information for a specific tunnel.

### Defaults

By default, all FCoE sessions are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** or **linkagg** parameter to display sessions for a specific FCoE port or link aggregate ID.
- Use the **vlan** parameter to display the sessions for a specific FCoE VLAN ID.
- The output displays for this command include FIP snooping, N\_Port proxy (NPIV), F\_Port proxy (reverse-NPIV), and E2E tunnel sessions. However, the N\_Port proxy, F\_Port proxy, and E2E tunnel sessions are only displayed on an OmniSwitch 6900 that is configured as an FCoE/FC gateway (see [Chapter 43, “FCoE/FC Gateway Commands”](#) for more information).

**Examples**

```
-> show fcoe sessions
```

```
Total FIP Snooping Sessions: 2
```

```

**output definitions**

<b>PORT</b>	The FCoE port or link aggregate ID for a FIP snooping session. A “0” slot number indicates that the FCoE interface is a link aggregate. Configured through the <b>fcoe role</b> command.
<b>ENODE MAC</b>	The MAC address of the ENode for this session.
<b>VN_PORT MAC</b>	The MAC address of the virtual node (VN) port for this session.
<b>FCF MAC</b>	The MAC address of the FCoE Forwarder (FCF) for this session.

*output definitions*

---

<b>VLAN</b>	The FCoE VLAN used for this session. Configured through the <b>fcoe vlan</b> command.
<b>STATUS</b>	The operational status of this session.
<b>IN-PORT</b>	The FCoE port or link aggregate ID for an N_Port proxy (NPIV) or F_Port proxy (R-NPIV) session. Configured through the <b>fcoe role</b> command.
<b>OUT-PORT</b>	The FC port for an N_Port proxy (NPIV) or F_Port proxy (R-NPIV) session. Configured through the <b>fibre-channel port mode</b> command.
<b>VSAN</b>	The VSAN ID mapped to the FCoE VLAN ID for an F_Port proxy (R-NPIV) session. Configured through the <b>fibre-channel vsan</b> command.
<b>FCID</b>	The FC port ID (also referred to as N_Port ID) received after successful login for an F_Port proxy (R-NPIV) session.
<b>TUNNEL-ID</b>	The E2E tunnel ID associated with the session. Configured through the <b>fcoe e-tunnel</b> command.
<b>PORT1, PORT2</b>	The FCoE port (in VE_Port role) and/or FC port (in TE_Port mode) for this session. The FCoE port rule is configured through the <b>fcoe role</b> command. The FC port mode is configured through the <b>fibre-channel port mode</b> command.
<b>PAIR MODE</b>	The type of E2E tunnel ( <b>TE to VE</b> or <b>TE to TE</b> ).

---

**Release History**

Release 7.3.2; command introduced.

Release 7.3.3; fields added to display NPIV, reverse-NPIV, and E2E tunnel sessions.

**Related Commands**

<b>show fcoe</b>	Displays the global FCoE and FIP snooping configuration for the switch.
<b>show fcoe ports</b>	Displays the FCoE port configuration for the switch.
<b>show fibre-channel port</b>	Displays the FC port configuration for the switch.

## show fcoe enode

Displays FCoE Node (ENode) information for FIP Snooping sessions associated with the switch.

**show fcoe enode** [*mac\_address*]

---

### Syntax Definitions

*mac\_address* Enter an ENode MAC Address (for example, 00:00:39:59:f1:0c).

### Defaults

By default, information is displayed for all ENodes associated with the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Specify an ENode MAC address to display more detailed information about a specific ENode.

### Examples

```
-> show fcoe enode
Port   Enode MAC           VLAN   Sessions
-----+-----+-----+-----
1/1    00:10:00:00:00:02   100    2
2/1    00:00:a0:bb:00:01   200    1
```

```
->show fcoe enode 00:10:00:00:00:02
Enode MAC: 00:10:00:00:00:02   Port : 1/1
```

```

      VN-Port-MAC           FCF-MAC           Vlan   Login time
-----+-----+-----+-----
0E:FC:00:00:00:15   00:AE:00:00:00:01   100   Thu Feb 14 07:22:54 2013
0E:FC:00:00:00:09   0E:AE:00:00:00:01   200   Thu Feb 14 07:12:22 2013
```

### output definitions

---

<b>Port</b>	The slot/port or link aggregate ID of the FCoE interface that is connected to the FCoE Node (ENode). A "0" slot number indicates that the FCoE interface is a link aggregate.
<b>Enode MAC</b>	The MAC address of the ENode connected to the FCoE interface.
<b>VLAN</b>	The FCoE VLAN ID.
<b>Sessions</b>	The number of sessions associated with the ENode MAC.
<b>VN-Port-MAC</b>	The MAC address of the virtual node port (VN_port) for this session.

*output definitions*

---

<b>FCF-MAC</b>	The MAC address of the FCoE Forwarder (FCF).
<b>Login time</b>	The date and time the ENode logged into the FCoE fabric.

---

## show fcoe fcf

Displays FCoE Forwarder (FCF) information for FIP Snooping sessions associated with the switch.

**show fcoe fcf** [*mac\_address*]

---

### Syntax Definitions

*mac\_address*                      Enter an FCF Address (for example, 00:00:39:59:f1:0c).

### Defaults

By default, information is displayed for all FCFs associated with the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Specify an FCF MAC address with this command to display more detailed information for a specific FCF.

### Examples

```
-> show fcoe fcf
      FCF-MAC          VLAN    Config    Sessions  A-bit    MaxFrmVer  Priority
-----+-----+-----+-----+-----+-----+-----

  E8:E7:32:94:68:17   4000    Dynamic   0          1         0          128
  E8:E7:32:94:68:E8   3000    Static    0          1         1           0
  E8:E7:32:94:68:EE   4000    Static    0          1         1           0
```

```
-> show fcoe fcf E8:E7:32:3F:FD:F0
FCF : E8:E7:32:3F:FD:F0
```

```
VLAN      VN-Port-MAC
-----+-----
  46      0E:FC:00:01:00:03
  46      0E:FC:00:01:00:80
  46      0E:FC:00:01:00:82
  46      0E:FC:00:01:00:81
```

#### output definitions

---

<b>FCF-MAC</b>	The MAC address of the FCoE Forwarder (FCF).
<b>VLAN</b>	The FCoE VLAN ID.
<b>Config</b>	Whether the FCF MAC address was user-configured or learned through the FIP Snooping session for the given FCoE VLAN.

*output definitions*

---

<b>Sessions</b>	The number of sessions associated with the FCF MAC for the given FCoE VLAN.
<b>A-bit</b>	Whether or not the available-for-login bit is set for this FCF.
<b>MaxFrmVer</b>	Whether or not the maximum frame size was verified for this FCF.
<b>VN-Port-MAC</b>	The MAC address of the virtual node port (VN_Port) for this session. This address is comprised of the FCID that the FCF assigned to the port combined with the FC-MAP.

---

**Release History**

Release 7.3.2; command introduced.

Release 7.3.3; **A-bit** and **MaxFrmVer** fields added.

**Related Commands**

<a href="#">show fcoe sessions</a>	Displays FCoE FIP snooping session status and configuration for the switch.
<a href="#">show fcoe enode</a>	Displays FCoE Node (ENode) information for the switch.

**MIB Objects**

  alaFipsSessionVlanId
  alaFipsFcfConfigType
  alaFipsFcfAvailForLogin
  alaFipsFcfMaxFcoeFrmSizeVerified

```

---

## show fcoe fc-map

Displays the Fibre Channel Mapped Address Prefix (FC-MAP) for each FCoE VLAN.

**show fcoe fc-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

When the FCoE address mode is set to Fabric-Provided MAC Address (FPMA), the FC-MAP value is the required upper 24 bits of a MAC address that is assigned to a Virtual N\_Port (VN\_Port).

### Examples

```
-> show fcoe fc-map
  VLAN      FC-MAP
-----+-----
    10      0E:FC:00
   100      0E:FC:22
   200      0E:FC:23
   300      0E:FC:23
```

### Release History

Release 7.3.2; command introduced.

**Related Commands****fcoe vlan**

Configures an FCoE VLAN for the switch.

**fcoe fc-map**

Configures the FC-MAP for and FCoE VLAN.

**show vlan**

Displays the VLAN configuration for the switch.

---

## show fcoe discovery-advertisement

Displays the FIP discovery advertisement message parameter values for the specified FCoE VLAN.

**show fcoe discovery-advertisement** [**vlan** *vlan\_id*[-*vlan\_id2*]]

---

### Syntax Definitions

*vlan\_id*[-*vlan\_id2*]                      An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25).

### Defaults

By default, the discovery advertisement parameters are displayed for all FCoE VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the *vlan\_id*[-*vlan\_id2*] parameter to display information for a specific FCoE VLAN or for a range of FCoE VLANs.

### Examples

```
-> show fcoe discovery-advertisement
VLAN  A-Bit   FKA Pd Priority  UDS-Retries
-----+-----+-----+-----+-----
46     ENABLE  8      128      3
56     ENABLE  8      128      3
76     ENABLE  8      128      3
3000  ENABLE  8      128      3
4000  ENABLE  8      128      3
```

```
-> show fcoe discovery-advertisement vlan 3000
  VLAN    A-Bit      FKA Period    Priority    UDS-Retries
-----+-----+-----+-----+-----
   3000   ENABLE          8             128         3
```

#### *output definitions*

---

<b>VLAN</b>	The FCoE VLAN ID. Configured through the <a href="#">fcoe vlan</a> command.
<b>A-Bit</b>	The status of the available-for-login bit (Enabled or Disabled). When enabled, indicates the switch can accept fabric logins from ENodes.
<b>FKA-PD</b>	The discovery advertisement transmission interval, in seconds.

*output definitions (continued)*

---

<b>Priority</b>	The priority value assigned to the switch (0 = highest priority, 255 = lowest priority).
<b>UDS-Retrieves</b>	The number of times a unicast discovery solicitation is transmitted after a port on which an FCF MAC was learned goes down.

---

**Release History**

Release 7.3.3; command introduced.

**Related Commands**

[fcoe discovery-advertisement](#) Configures FIP discovery advertisement parameter values.

**MIB Objects**

```
alaFipsDiscAdvtTable
  alaFipsDiscAdvtVlanId

```

---

## show fcoe statistics

Displays both ENode and FCF generated statistics for FCoE interfaces or specific VLANs.

```
show fcoe statistics [enode | fcf] {interface | vlan [vlan_id[vlan_id2] | port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

<b>enode</b>	Display statistics only for ENode traffic.
<b>fcf</b>	Display statistics only for FCF traffic.
<b>interface</b>	Display statistics for all FCoE interfaces (ports and link aggregates).
<i>vlan_id</i> [- <i>vlan_id2</i> ]	An existing FCoE VLAN ID. Use a hyphen to specify a range of FCoE VLAN IDs (10-25).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, FCF and ENode statistics are displayed for all FCoE interfaces and VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.
- The output displays for this command include FIP snooping, N\_Port proxy (NPIV), and F\_Port proxy (reverse-NPIV) statistics. However, the N\_Port proxy and F\_Port proxy statistics are only displayed on an OmniSwitch 6900 that is configured as an FCoE/FC gateway (see [Chapter 43, “FCoE/FC Gateway Commands”](#) for more information).

*output definitions*

---

<b>Port</b>	The slot/port or link aggregate ID of the FCoE interface. A “0” slot number indicates that the FCoE interface is a link aggregate.
<b>Sess</b>	The number of FIP Snooping sessions.
<b>MDS</b>	The number of Multicast Discovery Solicitation packets.
<b>UDS</b>	The number of Unicast Discovery Solicitation packets.
<b>FLOGI</b>	The number of Fabric Login packets.
<b>FDISC</b>	The number of Fabric Discovery packets.
<b>LOGO</b>	The number of Fabric Logout packets.
<b>E KA</b>	The number of ENode keep-alive packets.
<b>VN KA</b>	The number of VN_Port keep-alive packets
<b>VLAN</b>	The FCoE VLAN ID.
<b>MDA</b>	The number of Multicast Discovery Advertisement packets.
<b>UDA</b>	The number of Unicast Discovery Advertisement packets.
<b>FLOGI_ACC</b>	The number of Fabric Login Accept packets.
<b>FLOGI_RJT</b>	The number of Fabric Login Reject packets.
<b>FDISC_ACC</b>	The number of Fabric Discovery Accept packets.
<b>FDISC_RJT</b>	The number of Fabric Discover Reject packets.
<b>LOGO_ACC</b>	The number of Fabric Logout Accept packets.
<b>LOGO_RJT</b>	The number of Fabric Logout Reject packets.
<b>CVL</b>	The number of Clear Virtual Link packets.

---

**Release History**

Release 7.3.2; command introduced.

Release 7.3.3; N\_Port proxy and F\_Port proxy statistics displayed only on an OmniSwitch 6900.

**Related Commands**

[clear fcoe statistics](#) Clears ENode and FCF statistics.

**MIB Objects**

```
alaFipsIntfEnodeStatsTable
alaFipsIntfFcfStatsTable
alaFipsVlanEnodeStatsTable
alaFipsVlanFcfStatsTable
```

---

## clear fcoe statistics

Clears ENode and FCF generated statistics on FCoE interfaces or specific VLANs.

**clear fcoe statistics** [**enode** | **fcf**] [**interface** | **vlan** [*vlan\_id*[*vlan\_id2*] | **port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]]

---

### Syntax Definitions

<b>enode</b>	Clears statistics only for ENode traffic.
<b>fcf</b>	Clears statistics only for FCF traffic.
<b>interface</b>	Clears statistics on all FCoE interfaces (ports and link aggregates).
<i>vlan_id</i> [ <i>vlan_id2</i> ]	An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, statistics are cleared for all FCoE interfaces and VLANs.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** or **linkagg** parameters to clear the statistics for a specific FCoE port or link aggregate ID.
- Use the **vlan** parameter to clear the statistics for a specific FCoE VLAN ID.

### Examples

```
->clear fcoe statistics

->clear fcoe statistics interface

->clear fcoe statistics vlan
->clear fcoe statistics vlan 2
->clear fcoe statistics vlan 2-3

->clear fcoe statistics port 1/2
->clear fcoe statistics port 1/2-3
->clear fcoe statistics port 1/1/2
->clear fcoe statistics port 1/1/2-3
```

```
->clear fcoe statistics linkagg 2
->clear fcoe statistics linkagg 2-6
->clear fcoe statistics enode interface

->clear fcoe statistics enode vlan
->clear fcoe statistics enode vlan 2
->clear fcoe statistics enode vlan 2-3

->clear fcoe statistics enode port 1/2
->clear fcoe statistics enode port 1/2-3
->clear fcoe statistics enode port 1/1/2
->clear fcoe statistics enode port 1/1/2-3

->clear fcoe statistics enode linkagg 2
->clear fcoe statistics enode linkagg 2-6

->clear fcoe statistics fcf interface
->clear fcoe statistics fcf vlan
->clear fcoe statistics fcf vlan 2
->clear fcoe statistics fcf vlan 2-3

->clear fcoe statistics fcf port 1/2
->clear fcoe statistics fcf port 1/2-3
->clear fcoe statistics fcf port 1/1/2
->clear fcoe statistics fcf port 1/1/2-3

->clear fcoe statistics fcf linkagg 2
->clear fcoe statistics fcf linkagg 2-6
```

## Release History

Release 7.3.2; command introduced.

## Related Commands

# 43 FCoE/FC Gateway Commands

The OmniSwitch implementation of FCoE/FC gateway functionality allows the switch to transparently connect FCoE and FC nodes with an FC SAN across an FCoE (lossless Ethernet) network. To provide this type of connectivity, an OmniSwitch FCoE/FC gateway supports the following three modes of operation that are used to converge FC over Ethernet and FC-to-FC over Ethernet:

- **N\_Port Proxy mode**—allows ENodes in an FCoE network and FC switches in an FC SAN to communicate with each other. To an ENode the OmniSwitch gateway emulates an FCoE forwarder; to an FC switch the OmniSwitch gateway emulates an N\_Port ID Virtualization (NPIV) host.
- **F\_Port Proxy mode**—allows FC nodes to connect with FC switches and FCFs across an FCoE network. The OmniSwitch gateway forwards login requests from an FC node (N\_Port on a server or storage with an HBA) across Ethernet via an FCoE VLAN to an NPIV node or FCF. This mode is sometimes referred to as reverse-NPIV proxy (R-NPIV).
- **E\_Port Proxy mode**—allows FC switches to set up inter-switch link trunking between FC fabrics over an FCoE network. The OmniSwitch gateway provides an E\_Port to E\_Port (E2E) tunneling function that emulates a point-to-point FC link between E\_Ports on native FC switches.

The OmniSwitch FCoE/FC gateway sits at the entry point of an FC fabric, which is required to handle the login process for ENodes and FC nodes accessing the fabric through the gateway switch.

OmniSwitch FCoE/FC gateway operations are not automatically activated for the switch; there is no single command to enable or disable gateway functionality. Instead, the configuration of the following software components enables one or more of the supported gateway operations:

- **FIP snooping**—FCoE/FC gateway functionality requires an active FIP snooping configuration. FIP Snooping ensures the security of an FCoE network.
- **Virtual Storage Area Network (VSAN)**—an FC port is assigned to a VSAN to create an NP\_Port or F\_Port connection to an FC switch or node in that VSAN. Not required for E2E Tunnel configuration.
- **VSAN-to-FCoE VLAN mapping**—identifies the FCoE/FC gateway fabric for the ENode or FC node login process via the FCoE VLAN. Not required for E\_Port proxy (E2E Tunnel) configuration.
- **FC port mode**—the operational mode of the FC port determines the type of gateway functionality provided on that port. There are three modes supported: N\_Port proxy, F\_Port proxy, and E\_Port proxy.
- **FCoE port role**—an FCoE port serves as an E2E tunnel endpoint in an FCoE network only when the port is configured as a virtual E\_Port (VE\_Port). The role of other FCoE ports is configured based on the FIP snooping configuration for the gateway switch.

This chapter and the [Chapter 42, “FIP Snooping Commands,”](#) describe the command line interface (CLI) commands used to configure these components.

MIB information for the FCoE/FC gateway commands is as follows:

*Filename:* ALCATEL-IND1-FIPS-MIB.mib  
*Module:* alcatelIND1FipsMIB

The acronyms used in this chapter are defined here:

<b>CNA</b>	Converged Network Adapter
<b>CVL</b>	Clear Virtual Link
<b>E2E</b>	E_Port-to-E_Port Tunnel
<b>ELP</b>	Exchange Link Parameters
<b>ENode</b>	FCoE Node
<b>E_Port</b>	Expansion Port
<b>F_Port</b>	Fabric Port
<b>FC</b>	Fibre Channel
<b>FCF</b>	FCoE Forwarder
<b>FDISC</b>	Fabric Discovery
<b>FCID</b>	Fabric Port ID (same as N_Port ID).
<b>FCoE</b>	Fibre Channel over Ethernet
<b>FIP</b>	FCoE Initialization Protocol
<b>FLOGI</b>	Fabric Login
<b>FLOGO</b>	Fabric Logout
<b>HBA</b>	Host Bus Adapter
<b>ISL</b>	Inter-switch Link
<b>NPIV</b>	N_Port ID Virtualization
<b>N_Port</b>	Node Port
<b>NP_Port</b>	Proxy Node Port
<b>TE_Port</b>	Tunnel Expansion Port
<b>VE_Port</b>	Virtual E_Port
<b>VF_Port</b>	Virtual F_Port
<b>VN_Port</b>	Virtual N_Port
<b>VSAN</b>	Virtual Storage Area Network
<b>WWNN</b>	World Wide Node Name
<b>WWPN</b>	World Wide Port Name

The FCoE/FC gateway commands are listed here:

## fibre-channel vsan

Configures an OmniSwitch VSAN with the specified VSAN ID and an optional description. This type of VSAN is used to segment OmniSwitch Fibre Channel ports into a virtual FCoE/FC gateway fabric.

**Note.** The VSAN created with this command only applies to the local switch configuration. There is no correlation between an OmniSwitch VSAN and a VSAN created within a native FC SAN.

**fibre-channel vsan** {*vsan\_id*[-*vsan\_id2*]} [**admin-state** {**enable** | **disable**}] [**name** *description*]

**no fibre-channel vsan** {*vsan\_id*[-*vsan\_id2*]}

### Syntax Definitions

<i>vsan_id</i> [- <i>vsan_id2</i> ]	A numeric value that will uniquely identify the VSAN. Use a hyphen to specify a range of VSAN IDs (for example, 100-105). The valid range is 2–4094).
<b>enable</b>	Enable the VSAN administrative status.
<b>disable</b>	Disable the VSAN administrative status.
<i>description</i>	An alphanumeric string. Optional name description for the VSAN ID.

### Defaults

By default, VSAN 1 is created on the switch and all unassigned FC ports are assigned to VSAN 1.

parameter	default
<b>enable   disable</b>	<b>enable</b>
<b>name</b> <i>description</i>	<b>VSAN ID</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to delete a VSAN from the configuration.
- When a VSAN is administratively disabled, all sessions established over that VSAN are cleared and the switch stops sending periodic FIP multicast discovery advertisement messages for the corresponding FCoE VLAN.
- The description can be any alphanumeric string. Enclose the description in double quotes if it contains more than one word with space in between.
- Only FC switch ports can be assigned to a VSAN.

- Assigning multiple FC ports to the same VSAN is allowed, but an FC port can only belong to one VSAN.
- Configuring N\_Port and F\_Port proxy functionality requires mapping a VSAN to an FCoE VLAN. Note that only one VSAN is mapped to one FCoE VLAN (one-to-one) at any given time. This mapping defines a single traffic path through the gateway switch.
- If an FCoE VLAN is not mapped to a VSAN, then the FCoE VLAN participates only in the FIP snooping process.

## Examples

```
-> fibre-channel vsan 200 name "Fabric A"  
-> fibre-channel vsan 100-105 admin-state disable  
-> no fibre-channel vsan 200
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

<a href="#">fibre-channel vsan members</a>	Assigns FC switch ports to a VSAN.

<a href="#">show fcoe vsan-map</a>	Displays the VSAN-VLAN mapping configuration for the switch.
<a href="#">show fibre-channel vsan members</a>	Displays FC port assignments for each VSAN.

## MIB Objects

```
alaFcVsanTable  
  alaFcVsanNumber  
  alaFcVsanDescription,  
  alaFcVsanAdmStatus  
  alaFcVsanOperStatus
```

---

## fibre-channel port mode

Configures the port type and operational mode for an eligible FC port. The port type is only set to Fibre Channel and the specified operational mode determines the type of gateway functionality provided on that port. There are three modes supported: N\_Port proxy, F\_Port proxy, and E\_Port proxy.

**fibre-channel port** *chassis/slot/port[-port2]* **mode** {np | f | te} [**bb-sc-n** *buffer\_num*]

**no fibre-channel port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8). Only ports on an OmniSwitch 6900 OS-XNI-U12E module with an SFP-FC-SR transceiver are eligible for this command.
<b>np</b>	Activates N_Port proxy functionality on the port. In this mode the port serves as a proxy node port (NP_Port) that aggregates N_Port transactions between FCoE devices and FC switches.
<b>f</b>	Activates F_Port proxy functionality on the port. In this mode the port operates as a fabric port (F_Port), which connects to an N_Port in a point-to-point link between FC devices.
<b>te</b>	Activates E_Port functionality on the port. In this mode, the port operates as a tunnel expansion port (TE_Port) that connects to an E_Port on an FC switch. TE_Ports allow E_Ports to connect across an FCoE network as part of an inter-switch link (ISL) tunnel that is used to expand the native FC fabric over Ethernet.
<i>buffer_num</i>	The buffer-to-buffer state change (BB_SC) number. FC ports exchange BB_SC primitives after 2^BB_SC_N frames. These primitives are used to recalculate buffer credits as part of a buffer-to-buffer flow control function between FC switch connections. The valid range is 0–15.

### Defaults

By default, no operational mode is configured for the FC ports and the port type is set to Ethernet.

parameter	default
<b>bb-sc-n</b> <i>buffer_num</i>	<b>0</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

## Usage Guidelines

- Use the **no** form of this command to remove the operational mode configuration from the FC port. The port type reverts back to Ethernet.
- To change the FC mode for the port, use the **no** form of this command to remove the current mode configuration then configure the FC mode again for the same port.
- Changing the **bb-sc-n** parameter value can be changed at any time (removing the FC mode configuration is not required to change this parameter value).
- Make sure the **bb-sc-n** parameter value is the same on both ends of the connection between the OmniSwitch FCoE/FC gateway and an FC switch. If the value is different on each end of the connection then the greater value is used. However, if this value is set to zero for one of the ports on the connection, then the buffer-to-buffer state change function is disabled.
- FC ports do not participate in Ethernet features, such as a link aggregates, a virtual fabric links (VFLs) in virtual chassis (VC) configurations, standard VLANs, or FCoE VLANs.
- To ensure end-to-end lossless connectivity through the gateway switch, assign a PAUSE-enabled DCB profile to each FC port. For more information, see Chapter 5, “Configuring an FCoE Gateway”, in the *OmniSwitch AOS Release 8 Data Center Switching Guide*.

## Examples

```
-> fibre-channel port 2/1 mode np
-> fibre-channel port 2/3 mode f
-> fibre-channel port 2/5 mode te
-> no fibre-channel port 2/5
```

To change the FC port mode:

```
-> no fibre-channel port 2/1
-> fibre-channel port 2/1 f
```

To change the **bb-sc-n** parameter value:

```
-> fibre-channel port 2/1 bb-sc-n 3
```

## Release History

Release 7.3.3; command introduced.

  alaFcIntfRowStatus
```

## fibre-channel vsan members

Configures the VSAN assignment for the specified FC port.

**fibre-channel vsan** *vsan\_id* **members port** *chassis/slot/port[-port2]*

**no fibre-channel vsan** *vsan\_id* **members port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

<i>vsan_id</i>	An existing VSAN ID number.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

### Defaults

By default, all FC ports are assigned to VSAN 1.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the association between the specified FC port and VSAN.
- When an NP\_Port is removed from a VSAN, a FIP CVL is generated for all the VN\_Ports that are logged in through that NP\_Port and an FC LOGO is sent on the FC port. An FC LOGO is also sent for any R-NPIV sessions that exist when the CVL is generated.
- When an F\_Port (used for R-NPIV) is removed from a VSAN, then FC LOGO is sent to the host and also to the FCF.
- When an FC port is moved from VSAN 1 to another VSAN, traffic loss will occur for all existing sessions. Moving FC ports between other VSANs (for example, between VSAN 2 and 3) is not allowed.
- Multiple FC ports can belong to the same VSAN, but an FC port can belong to only one VSAN. In other words, it is not possible to tag FC ports with multiple VSANs.
- When a VSAN is mapped to an FCoE VLAN and an active FC port is assigned to that VSAN, the FC mode configured for that port determines the FCoE/FC gateway functionality provided. For example, if the FC port mode is set to operate as:
  - an NP\_Port, then NPIV proxy functionality is automatically enabled.
  - an F\_Port, then the R-NPIV functionality is automatically enabled.
  - a TE\_Port and an FCoE port is set to operate as a virtual E\_Port (VE\_Port), then E2E tunneling functionality is automatically enabled.

- When more than one NP\_Port is associated with the same VSAN, the OmniSwitch will load balance ENode FLOGI requests across the NP\_Ports for that VSAN. By default, the NP\_Port with the lowest number of logins provided is selected. If all the NP\_Ports have the same number of logins provided, then the switch will select a port using a round robin algorithm.

## Examples

```
-> fibre-channel vsan 10 members port 2/1
-> fibre-channel vsan 10 members port 2/1-3
-> no fibre-channel vsan 10 members port 2/1-3
```

## Release History

## MIB Objects

```
alaFcVfpaTable
  alaFcVfpaVsanNumber
  alaFcVfpaIfIndex
  alaFcVfpaRowStatus
```

---

## fcoe vsan-map

Maps an FC VSAN to an FCoE VLAN. This mapping is required to activate the processing of specific FCoE ENode traffic traveling to and from the designated virtual FC fabric through the FCoE/FC gateway OmniSwitch.

**fcoe vsan-map vsan** *vsan\_id* **vlan** *vlan\_id*

**no fcoe vsan-map vsan** *vsan\_id* **vlan** *vlan\_id*

---

### Syntax Definitions

*vsan\_id*                                   An existing VSAN ID number.  
*vlan\_id*                                    An existing FCoE VLAN ID number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the VSAN-to-FCoE VLAN mapping.
- When a mapping is removed, all sessions associated with the FCoE VLAN are cleared.
- Only one VSAN is mapped to one FCoE VLAN.
- The FCoE/FC gateway does not participate in FCoE discovery mechanisms for FCoE VLANs not mapped to a VSAN.
- If an FCoE VLAN is not mapped to a VSAN, then only FIP snooping functionality is applied to that VLAN.

### Examples

```
-> fcoe vsan-map vsan 10 vlan 100
-> no fcoe vsan-map vsan 10 vlan 100
```

### Release History

Release 7.3.3; command introduced.

  alaFipsVsanVlanMapVsanNumber  
  alaFipsVsanVlanMapVlanNumber  
  alaFipsVsanVlanMapRowStatus
```

---

## fibre-channel npiv-proxy load-balance

Configures the dynamic load balancing method that is applied to ENode FLOGI requests when more than one FC port is associated with the same VSAN. Load balancing is not applied to FDISC requests.

**fibre-channel npiv-proxy load-balance static {default | dynamic-reorder | enode-based}**

---

### Syntax Definitions

<b>default</b>	Selects the default load balancing method.
<b>dynamic-reorder</b>	Ensures that all sessions are load balanced evenly at any given time.
<b>enode-based</b>	Selects the FC for the new session based on the ENode MAC address.

### Defaults

By default, the FC port with the lowest number of logins provided is selected for new FLOGI requests. If all the ports have the same number of logins provided, then the switch will select a port using a round robin algorithm.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- The load balancing method is globally applied to the switch, and only one method is applied at a time.
- Using the dynamic reorder load balancing method may trigger the tearing down of some sessions, so that upon re-login the ENode FLOGI is processed on a different NP\_Port in the same VSAN. For example, when a new FC NP\_Port is added to the VSAN, some of the sessions are torn down and logged in again on the newly added port to distribute sessions across all ports in the VSAN.
- When the ENode-based load balancing method is used, each NP\_Port in the VSAN will send a multicast discovery advertisement to all ENodes in the mapped FCoE VLAN. The FCF MAC address in the discovery advertisement is the MAC address of the FC port. The ENode then decides which FCF (NP\_Port) to use for the login.
- The default and ENode-based load balancing methods do not disturb existing sessions.
- The load balancing method is *not* applied to statically mapped FCoE and FC ports.

### Examples

```
-> fibre-channel npiv-proxy load-balance dynamic-reorder
-> fibre-channel npiv-proxy load-balance enode-based
-> fibre-channel npiv-proxy load-balance default
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

- fibre-channel npiv-proxy load-balance static** Configures a static mapping between an FCoE port and an FC NP\_Port. Load balancing does not apply to statically mapped ports.
- show fibre-channel** Displays the global load balancing method applied to NP\_Ports.

## MIB Objects

alaFcInfo  
  alaFcConfigNpivLoadBalance

---

## fibre-channel npiv-proxy load-balance static

Configures a static port association between an FCoE port and an FC NP\_Port to ensure that FC sessions on the specified FCoE port are mapped to the specified NP\_Port.

**fibre-channel npiv-proxy load-balance static** {port *chassis/slot/port* / linkagg *agg\_id*} **fc-port** *chassis/slot/port*

**no fibre-channel npiv-proxy load-balance static** {port *chassis/slot/port* / linkagg *agg\_id*} **fc-port** *chassis/slot/port*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<b>port</b> <i>slot/port</i>	The slot and port number (3/1) of an FCoE port.
<i>agg_id</i>	The link aggregate ID number.
<b>fc-port</b> <i>slot/port</i>	The slot and port number (3/1) of an FC port.

### Defaults

By default, there are no static FCoE-to-FC port associations. The dynamic load balancing method is applied to the FC NP\_ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the static association between the FCoE port and the FC port. When this association is removed, the dynamic load balancing method is applied.
- Use caution when configuring static FCoE-to-FC port assignments. Static assignments exempt both the FCoE port and the FC NP\_Port from dynamic load balancing of sessions when multiple FC ports belong to the same VSAN.

### Examples

```
-> fibre-channel npiv-proxy load-balance static port 1/1 fc-port 2/1
-> no fibre-channel npiv-proxy load-balance static port 1/1 fc-port 2/1

-> fibre-channel npiv-proxy load-balance static linkagg 10 fc-port 2/1
-> no fibre-channel npiv-proxy load-balance static linkagg 10 fc-port 2/1
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**show fibre-channel npiv-proxy load-balance** Displays the static FCoE port/FC NP\_Port mapping and FC port session counts.

---

## fcoe e-tunnel

Configures an E2E tunnel identifier and associates the identifier with tunnel endpoints and an FCoE VLAN. An E2E tunnel allows FC switches to set up ISLs between fabrics over an FCoE network.

**fcoe e-tunnel** *tunnel\_id* {**fc-port1** *chassis/slot/port*} {**fc-port2** *chassis/slot/port* | **vlan** *vlan\_id*}

**no fcoe e-tunnel** *tunnel\_id*

---

### Syntax Definitions

<i>tunnel_id</i>	A unique ID number to assign to this tunnel session.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number (3/1) of an FC tunnel edge (TE) port.
<i>vlan_id</i>	An existing FCoE VLAN ID number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the tunnel configuration.
- An OmniSwitch FC port is configured as a tunnel E\_Port (TE\_Port) and connects to an E\_Port on an FC switch. TE\_Ports can carry traffic from multiple VSANs. This command is used to associate the TE port with an FCoE VLAN or with another TE port on the same switch.
- An OmniSwitch FCoE port is configured as a virtual expansion port (VE\_Port) on the FCoE network side. The VE port is associated with an FCoE VLAN by tagging the VE port with the FCoE VLAN ID.
- This command does not establish a connection. Once the required tunnel components are configured, successful exchange of exchange link parameters (ELP) between a TE\_Port and a VE\_Port or between two TE\_Ports will establish the tunnel session.
- To create a tunnel connection between two FC switches across the FCoE network requires the following steps:
  - Configure the FCoE port that will connect to the FCoE network as a virtual expansion port (VE\_Port).
  - Tag the VE\_Port to the FCoE VLAN that will carry traffic through the tunnel.
  - Configure the FC port that will connect to an E\_Port on an FC as a TE\_Port.
  - Use this command (**fcoe e-tunnel**) with the **fc-port1** and **vlan** parameters to associate the TE\_Port with the FCoE VLAN to which the VE\_Port is tagged.

- To create a tunnel between two FC TE\_Ports on the same switch or in a virtual chassis configuration, use the **fc-port1** and **fc-port2** parameters to specify the slot and port number of the two TE ports.

## Examples

```
-> fcoe e-tunnel 1 fc-port1 2/1 fc-port2 2/2
-> fcoe e-tunnel 10 fc-port1 2/3 vlan 200
-> fcoe e-tunnel 11 fc-port1 2/4 vlan 200
-> no fcoe e-tunnel 10
```

## Release History

Release 7.3.3; command introduced.

## show fibre-channel vsan

Displays the VSAN configuration for the switch.

**show fibre-channel vsan** [*vsan\_id*]-*vsan\_id2*]

---

### Syntax Definitions

*vsan\_id*[-*vsan\_id2*]                      An existing VSAN ID. Use a hyphen to specify a range of VSAN IDs (10-25).

### Defaults

By default, a list of all VSANs is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Specify a VSAN ID with this command to display information about a specific VSAN.

### Examples

```
-> show fibre-channel vsan
```

```
vsan  oper admin  name
-----+-----+-----+-----
      1  Ena   Dis  test1
     1000 Dis   Dis  test2
     2000 Ena   Dis  test3
```

```
-> show fibre-channel vsan 101
```

```
vsan  oper admin  name
-----+-----+-----+-----
     1000 Dis   Dis  test2
```

### output definitions

---

<b>vsan</b>	The numerical VSAN ID.
<b>oper</b>	The operational status of the VSAN: <b>Ena</b> (enabled) or <b>Dis</b> (disabled). The operational status remains disabled until an active FC port is assigned to the VSAN. A VSAN must have an enabled administrative status before it can become operationally enabled.

*output definitions (continued)*

---

<b>admin</b>	The administrative status of the VSAN: <b>Ena</b> specifies that VSAN functions are enabled; <b>Dis</b> specifies that VLAN functions are disabled.
<b>name</b>	The user-defined text description for the VSAN. By default, the VSAN ID is displayed if the VLAN description is not specified.

---

**Release History**

## show fibre-channel vsan members

Displays the VSAN port assignments.

**show fibre-channel vsan** [*vsan\_id* [-*vsan\_id2*]] **members** [**port** *chassis/slot/port*[-*port2*]]

---

### Syntax Definitions

<i>vsan_id</i> [- <i>vsan_id2</i> ]	An existing VSAN ID number. Use a hyphen to specify a range of VSAN IDs (10-25).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

### Defaults

By default, all VSAN port assignments are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- If the *vsan\_id* is specified without a *slot/port*, then all port assignments for that VSAN are displayed.
- If both the *vsan\_id* and *slot/port* are specified, then information only for that VSAN and slot/port is displayed.
- Only OmniSwitch FC ports can be assigned to a VSAN.

### Examples

```
-> show fibre-channel vsan members
vsan  port  status
-----+-----
   1  2/2/1  Enabled
 1003 2/2/12 Enabled
 1005 3/2/5  Disbled

-> show fibre-channel vsan 1003 members
port  status
-----+-----
2/2/12 Enabled

-> show fibre-channel vsan 1005 members port 3/2/5
vsan  : 1005,
port   : 3/2/5,
status : disabled
```

*output definitions*

---

<b>vsan</b>	The numerical VSAN ID. Configured through the <b>fibre-channel vsan</b> command.
<b>port</b>	The FC port number associated with the VSAN ID. Configured through the <b>fibre-channel vsan members</b> command.
<b>status</b>	The operational status of the port ( <b>enabled</b> or <b>disabled</b> ).

---

**Release History**

Release 7.3.3; command introduced.

  alaFcVfpaRowStatus

---

## show fibre-channel port

Displays the FC port configuration for the switch.

**show fibre-channel port [info]**

---

### Syntax Definitions

**info** Displays session details for each FC port.

### Defaults

By default, the parameters for each FC port are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When the **info** parameter is used with this command, the **fcid** field shows an FC port ID for NP\_Ports. For all other port modes, this field is blank. Only NP\_Ports perform fabric login (FLOGI) and obtain a port ID from an FC switch.
- If an FC port is configured to operate in the fabric or tunnel E\_Port mode, there is no fabric login process performed. Ports running in these modes will come up immediately.
- FLOGI is triggered only after an NP\_Port is assigned to a VSAN.

### Examples

```
-> show fibre-channel port
```

Legend: NP=Proxy N\_Port, F=Fabric Port connected to N\_port, TE=Tunnel E-Port

```
ports  oper-status mode  BB-SC-N  service class
-----+-----+-----+-----+-----
 2/1      Up      NP      3          3
 2/2      Up      F       0          3
 2/3      Up      TE      3          3/F
 2/4      Down    NP      0          3
```

#### *output definitions*

---

<b>ports</b>	The slot and port number of the FC port.
<b>oper-status</b>	The operational status of the FC port.
<b>mode</b>	The operational mode for the FC port.

*output definitions (continued)*

---

<b>BB-SC-N</b>	The buffer-to-buffer state change number configured for the FC port.
<b>service class</b>	The service class for the FC port session ( <b>2</b> , <b>3</b> , <b>F</b> , or <b>3/F</b> ). This value indicates the level of delivery integrity required for an application.

---

-> show fibre-channel port info

Legend: NP=Proxy N\_Port, F=Fabric Port connected to N\_port, TE=Tunnel E-Port

ports	mode	fcid	wwpn	state
2/1	NP	010010c	10:00:01:00:00:0a:22:11	Up
2/2	F	-	10:00:01:00:00:0b:22:1a	Up
2/3	TE	-	10:00:01:00:00:0b:23:22	Up
2/4	NP	-	10:00:01:00:00:0b:23:23	FLOGI_Sent
2/5	NP	-	10:00:01:00:00:0b:23:24	Not_Init

*output definitions*

---

<b>ports</b>	The slot and port number of the FC port.
<b>mode</b>	The operational mode for the FC port ( <b>NP</b> = proxy N_Port, <b>F</b> = fabric port, <b>TE</b> = tunnel E_Port). Configured through the <b>fibre-channel port mode</b> command.
<b>fcid</b>	The FC port_ID obtained after successful fabric login. This field applies only to NP_Ports.
<b>wwpn</b>	The world-wide port name assigned to the OmniSwitch FC port.
<b>state</b>	The operational state of the fabric login process ( <b>Up</b> , <b>Down</b> , <b>FLOGI_Sent</b> , <b>Not_Init</b> , <b>ELP_Sent</b> , <b>Sess_Clear</b> ).

---

## show fcoe vsan-map

Displays the VSAN-to-FCoE VLAN mapping configuration.

**show fcoe vsan-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Mapping a VSAN to an FCoE VLAN is required to activate the processing of specific ENode traffic traveling to and from the designated virtual FC fabric through the NPIV OmniSwitch.

### Examples

```
-> show fcoe vsan-map
vsan   vlan
-----+-----
    10    10
   2000  2000
   3000  3000
```

#### *output definitions*

---

<b>vsan</b>	The VSAN ID. Configured through the <a href="#">fibre-channel vsan</a> command.
<b>vlan</b>	The FCoE VLAN ID. Configured through the <a href="#">fcoe vlan</a> command.

---

### Release History

Release 7.3.3; command introduced.

## Related Commands

**fcoe vsan-map**

Configures a one-to-one mapping between a VSAN and FCoE VLAN.

**show vlan**

Displays the FCoE VLAN configuration.

## show fibre-channel sessions

Displays the sessions established on the OmniSwitch FC ports.

**show fibre-channel sessions** [**vsan** *vsan\_id* | **e-tunnel** *tunnel\_id*] [**port** *chassis/slot/port*] [**summary**]

---

### Syntax Definitions

<i>vsan_id</i>	An existing VSAN ID number.
<i>tunnel_id</i>	An existing E-Tunnel (E2E Tunnel) ID.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number (3/1).

### Defaults

By default, all FC sessions are displayed for all FC ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

The **port** parameter can be combined with the **vsan** or **e-tunnel** parameters to display sessions for a specific FC port within a VSAN or E2E tunnel.

### Examples

```
-> show fibre-channel sessions summary
Total FIBRE-CHANNEL Sessions      : 7
Total NPIV Sessions                : 4
Total R-NPIV Sessions              : 1
Total E-TUNNEL Sessions            : 2
```

```
-> show fibre-channel sessions
Total FIBRE-CHANNEL Sessions      : 4
Total NPIV Sessions                : 2
Total R-NPIV Sessions              : 1
Total E-TUNNEL Sessions            : 1
```

## show fibre-channel node

Displays a list of FC nodes connected to OmniSwitch FC ports.

**show fibre-channel node** [**vsan** *vsan\_id* | **port** *chassis/slot/port*]

---

### Syntax Definitions

<i>vsan_id</i>	An existing VSAN ID number.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot and port number (3/1).

### Defaults

By default, a list of all FC nodes is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Specify a VSAN ID to display nodes associated with a specific VSAN.
- Specify an FC port number to display nodes connected on a specific FC port.

### Examples

```
-> show fibre-channel node
```

```
VSAN  VLAN      WWNN                      WWPN                      Port  FC-ID

---

## show fcoe e-tunnel

Displays the E2E tunnel configuration for the switch.

`show fcoe e-tunnel [tunnel_id]`

---

### Syntax Definitions

*tunnel\_id* An existing tunnel ID number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the *tunnel\_id* to display parameters for a specific tunnel.

### Examples

```
-> show fcoe e-tunnel
```

```
tunnel  vlan  Port1  Port2
-----+-----+-----+-----
  1     1000  1/1/1    -
  2      -   1/1/2    3/3/1
  3     3000  1/1/3    -
```

```
-> show fcoe e-tunnel 2
```

```
tunnel  vlan  Port1  Port2
-----+-----+-----+-----
  2      -   1/1/2    3/3/1
```

### output definitions

---

<b>Tunnel</b>	The E2E tunnel ID associated with the session. Configured through
<b>Vlan</b>	The FCoE VLAN on which the tunnel is defined. Configured through the <b>fcoe vlan</b> command.
<b>Port1, Port2</b>	The FCoE port (in VE_Port role) and/or FC port (in TE_Port mode) for this session. The FCoE port rule is configured through the <b>fcoe role</b> command. The FC port mode is configured through the <b>fibre-channel port mode</b> command.

---

## Release History

Release 7.3.3; command introduced.

## Related Commands

### [fcoe e-tunnel](#)

Configures E2E tunnel parameters.

## MIB Objects

  alaFipsEtunnelIfIndexTwo
```

---

## show fibre-channel

Displays global Fibre Channel parameter values.

**show fibre-channel**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

This command currently displays the following:

- The load-balancing method that is applied to FLOGI requests when there is more than one NPIV proxy port assigned to the same VSAN. This mode does not apply to FC ports configured to operate in the F\_Port proxy mode (R-NPIV) or as E2E tunnel ports.
- The World Wide Node Name (WWNN) for the switch. The WWNN is comprised of “10:00” combined with the next available increment of the switch based MAC address.

### Examples

```
-> show fibre-channel
Fibre Channel Global Configurations      :
-----
NPIV Proxy Global Load Balance Method   : Default
Local WWNN                               : 10:00:00:E0:B1:E7:09:A4
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**fibre-channel npiv-proxy load-balance** Configures the load balancing method applied to multiple FC ports that belong to the same VSAN.

```

---

## show fibre-channel statistics

Displays FC port statistics.

**show fibre-channel statistics** [**npiv** | **r-npiv**] [**vsan** *vsan\_id*[*vsan\_id2*] [**port** *chassis/slot/port*[-*port2*] [**e-tunnel** *port* *chassis/slot/port*[-*port2*]]

---

### Syntax Definitions

<b>npiv</b>	Displays statistics for N_Port proxy sessions.
<b>r-npiv</b>	Displays statistics for F_Port proxy sessions.
<b>e-tunnel</b> [ <i>tunnel_id</i> ]	Displays E2E tunnel (E_Port proxy) statistics. Optionally enter a tunnel ID to display information for a specific tunnel.
<i>vsan_id</i> [ <i>vsan_id2</i> ]	An existing VSAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VSAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

### Defaults

By default, all statistics are displayed

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vsan** parameter to display statistics for a specific VSAN ID. The **vsan** parameter is not used with the **e-tunnel** parameter, because tunnel ports are not associated with a VSAN.
- Use the **port** parameter to display statistics for a specific FC port.

## show fcoe statistics npiv-proxy

Displays ENode fabric login or ENode discovery statistics for FCoE interfaces or specific VLANs.

```
show fcoe statistics npiv-proxy {enode-login | enode-discovery} {interface | vlan [vlan_id[vlan_id2] |
port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]}
```

---

### Syntax Definitions

<b>enode-login</b>	Displays ENode login statistics.
<b>enode-discovery</b>	Displays ENode discovery statistics.
<b>interface</b>	Display statistics for all FCoE interfaces (ports and link aggregates).
<i>vlan_id[vlan_id2]</i>	An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

### Examples

```
->show fcoe statistics npiv-proxy enode-discovery interface

## show fcoe statistics r-npiv

Displays FCF discovery fabric login or ENode discovery statistics for FCoE interfaces or specific VLANs.

**show fcoe statistics r-npiv** {**node-login** | **fcf-discovery**} {**interface** | **vlan** [*vlan\_id*[*vlan\_id2*] | **port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<b>node-login</b>	Displays FC node login statistics.
<b>fcf-discovery</b>	Displays FCF discovery statistics.
<b>interface</b>	Display statistics for all FCoE interfaces (ports and link aggregates).
<i>vlan_id</i> [ <i>vlan_id2</i> ]	An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

## show fcoe statistics e-tunnel

Displays E2E tunnel statistics.

**show fcoe statistics e-tunnel** [**ve** | **te**] [*tunnel\_id*[-*tunnel\_id*]]

---

### Syntax Definitions

<b>ve</b>	Displays VE_Port statistics.
<b>te</b>	Displays TE_Port statistics.
<i>tunnel_id</i> [- <i>tunnel_id</i> ]	The ID of an existing E2E tunnel. Use a hyphen to specify a range of tunnel IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to display statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to display statistics for a specific FCoE port or link aggregate ID.

### Examples

```

## show fibre-channel npiv-proxy load-balance

Displays the NPIV proxy load balancing static mapping and session count.

**show fibre-channel npiv-proxy load balance {static | session-count}**

---

### Syntax Definitions

**static** Displays the static FCoE port/FC NP\_Port mapping.  
**session-count** Displays the number of sessions on each FC port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- This command displays information only for FC ports operating in the NP\_Port mode.
- Use the **static** parameter to display only the static mapping of FCoE ports to FC NP\_Ports.
- When the **sessions-count** parameter is used, the “FC Port” field includes all NP\_Ports.

### Examples

```
-> show fibre-channel npiv-proxy load-balance static
```

```
FCoE Port   FC port
-----+-----
 1/1         2/1
 1/2         2/1
```

```
-> show fibre-channel npiv-proxy load-balance sessions-count
```

```
FC Port   session_count
-----+-----
 2/1             2
 2/2             0
 2/3             5
```

### output definitions

---

<b>FCoE Port</b>	The slot/port of the FCoE port that is mapped to the FC port.
<b>FC Port</b>	The slot/port of the FC NP_Port.
<b>Session Count</b>	The number of sessions per FC port.

---

## Release History

Release 7.3.3; command introduced.

## Related Commands

**fibre-channel npiv-proxy load-balance static** Configures a static mapping between an FCoE port and an FC NP\_Port.

**fibre-channel npiv-proxy load-balance** Configures the NPIV proxy load-balancing method applied to all FC NP\_Ports on the switch.

## clear fibre-channel statistics

Clears FC port statistics.

**clear fibre-channel statistics** [**npiv** | **r-npiv**] [**port** *chassis/slot/port[-port2]*] [**e-tunnel port** *chassis/slot/port[-port2]*]

---

### Syntax Definitions

<b>npiv</b>	Clears statistics for N_Port proxy sessions.
<b>r-npiv</b>	Clears statistics for F_Port proxy sessions.
<b>e-tunnel</b> [ <i>tunnel_id</i> ]	Clears E2E tunnel (E_Port proxy) statistics. Optionally enter a tunnel ID to display information for a specific tunnel.
<i>vsan_id</i> [ <i>vsan_id2</i> ]	An existing VSAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VSAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).

### Defaults

By default, all statistics are cleared.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vsan** parameter to clear statistics for a specific VSAN ID. The **vsan** parameter is not used with the **e-tunnel** parameter, because tunnel ports are not associated with a VSAN.
- Use the **port** parameter to clear statistics for a specific FC port.

### Examples

```
-> clear fibre-channel statistics
-> clear fibre-channel statistics port 2/2/5
-> clear fibre-channel statistics npiv
-> clear fibre-channel statistics r-npiv
-> clear fibre-channel statistics e-tunnel
-> clear fibre-channel statistics npiv port 2/2/1
-> clear fibre-channel statistics r-npiv port 2/2/3
-> clear fibre-channel statistics e-tunnel port 2/2/4
```

## Release History

Release 7.3.3; command introduced.

## Related Commands

## clear fibre-channel sessions

Clears the specified sessions on all FC ports.

**clear fibre-channel sessions** {npiv-proxy | r-proxy | e-tunnel | all}

---

### Syntax Definitions

<b>npiv-proxy</b>	Clears NP_Port proxy sessions.
<b>r-proxy</b>	Clears reverse NP_Port proxy sessions.
<b>e-tunnel</b>	Clears E-Tunnel (E2E Tunnel) sessions.
<b>all</b>	Clears all NP_Port proxy, reverse proxy, and E-Tunnel sessions.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Only the sessions associated with the specified parameter are cleared. For example, if the **npiv-proxy** parameter is used, only NPIV proxy sessions are cleared. All other session types remain active.
- When sessions are cleared on FC ports, the corresponding sessions on the FCoE ports are also cleared.

### Examples

```
-> clear fibre-channel sessions npiv-proxy
-> clear fibre-channel sessions r-npiv
-> clear fibre-channel sessions e-tunnel
-> clear fibre-channel sessions all
```

### Release History

Release 7.3.3; command introduced.

## clear fcoe statistics npiv

Clears N\_Port proxy (NP\_Port) statistics for FCoE interfaces or specific FCoE VLANs.

**clear fcoe statistics npiv-proxy** {**interface** | **vlan** [*vlan\_id*[*vlan\_id2*] | **port** *chassis/slot/port*[-*port2*] / **linkagg** *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<b>interface</b>	Clears statistics for all FCoE interfaces (ports and link aggregates).
<i>vlan_id</i> [ <i>vlan_id2</i> ]	An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to clear statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to clear statistics for a specific FCoE port or link aggregate ID.

### Examples

```
-> clear fcoe statistics npiv-proxy interface
-> clear fcoe statistics npiv-proxy vlan 100
-> clear fcoe statistics npiv-proxy vlan 200-205
-> clear fcoe statistics npiv-proxy port 1/1
-> clear fcoe statistics npiv-proxy port 1/5-10
-> clear fcoe statistics npiv-proxy port 1/1/1
-> clear fcoe statistics npiv-proxy linkagg 10
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**show fcoe statistics npiv-proxy** Displays N\_Port proxy statistics.

## MIB Objects

```

```

---

## clear fcoe statistics r-npiv

Clears F\_Port proxy (reverse-NPIV) statistics for FCoE interfaces or specific FCoE VLANs.

**clear fcoe statistics r-npiv** {**interface** | **vlan** [*vlan\_id*[*vlan\_id2*] | **port** *chassis/slot/port*[-*port2*] / **linkagg** *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<b>interface</b>	Clears statistics for all FCoE interfaces (ports and link aggregates).
<i>vlan_id</i> [ <i>vlan_id2</i> ]	An existing FCoE VLAN ID. The valid ID range is 2–4094. Use a hyphen to specify a range of VLAN IDs (100-150).
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **vlan** parameter to clear statistics for a specific FCoE VLAN ID.
- Use the **port** or **linkagg** parameters to clear statistics for a specific FCoE port or link aggregate ID.

### Examples

```
-> clear fcoe statistics r-npiv interface
-> clear fcoe statistics r-npiv vlan 100
-> clear fcoe statistics r-npiv vlan 200-205
-> clear fcoe statistics r-npiv port 1/1
-> clear fcoe statistics r-npiv port 1/5-10
-> clear fcoe statistics r-npiv port 1/1/1
-> clear fcoe statistics r-npiv linkagg 10
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**show fcoe statistics r-npiv**      Displays F\_Port proxy statistics.

## MIB Objects

```

  alaFipsIntfStatsFnreClear
```

---

## clear fcoe statistics e-tunnel

Clears E\_Port proxy (E2E tunnel) statistics.

```
clear fcoe statistics e-tunnel [ve | te] {tunnel_id[-tunnel_id]}
```

---

### Syntax Definitions

<b>ve</b>	Clears VE_Port statistics.
<b>te</b>	Clears TE_Port statistics.
<i>tunnel_id[-tunnel_id]</i>	The ID of an existing E2E tunnel. Use a hyphen to specify a range of tunnel IDs (10-15).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **ve** parameter to clear only VE\_Port statistics for the specified tunnel ID.
- Use the **te** parameter to clear only TE\_Port statistics for the specified tunnel ID.

### Examples

```
-> clear fcoe statistics e-tunnel 1
-> clear fcoe statistics e-tunnel ve 2
-> clear fcoe statistics e-tunnel te 2
```

### Release History

Release 7.3.3; command introduced.

## Related Commands

**show fcoe statistics e-tunnel** Displays E\_Port proxy (E2E tunnel) statistics.

## MIB Objects

```
alaFipsEtunnelVePortStatsTable
  alaFipsEtunnelVePortStatsTunnelId
  alaFipsEtunnelVePortStatsClear
alaFipsEtunnelTePortStatsTable
  alaFipsEtunnelTePortStatsTunnelId
  alaFipsEtunnelTePortStatsClear
```

---

## clear fcoe sessions

Clears the specified sessions on all FCoE ports.

**clear fcoe sessions** [**fips** | **npiv-proxy** | **r-proxy** | **e-tunnel** | **all**]

---

### Syntax Definitions

<b>fips</b>	Clears FIP snooping sessions.
<b>npiv-proxy</b>	Clears NP_Port proxy sessions.
<b>r-proxy</b>	Clears reverse NP_Port proxy sessions.
<b>e-tunnel</b>	Clears E-Tunnel (E2E Tunnel) sessions.
<b>all</b>	Clears all FCoE, NP_Port proxy, reverse proxy, and E-Tunnel sessions.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When FIP snooping sessions are cleared, a clear virtual link (CVL) request is sent for all logged ENodes.
- When R-NPIV sessions are cleared, FIP FLOGO is sent to the FCF and FC FLOGO is sent to the HBA for each R-NPIV session created.
- Once sessions are cleared, NP\_Ports will trigger a fabric login to the connected fabric.

### Examples

```
-> clear fcoe sessions fips
-> clear fcoe sessions npiv-proxy
-> clear fcoe sessions r-npiv
-> clear fcoe sessions e-tunnel
-> clear fcoe sessions all
```

### Release History

Release 7.3.3; command introduced.

---

# 44 VXLAN Snooping Commands

The OmniSwitch Virtual eXtensible LAN (VXLAN) Snooping feature attempts to detect and identify VXLAN traffic by sampling packets to determine if they are VXLAN encapsulated packets. Once this type of traffic is identified, VXLAN Snooping collects and stores information about the flow in a database on the local switch. Additional configurable options for this feature include the ability to apply QoS policy list rules to the identified flow and SNMP trap generation.

A VXLAN segment is a Layer 2 overlay network through which devices can communicate. Traffic from such devices is encapsulated into VXLAN frames and then tunneled through the VXLAN segment. Using this implementation of VXLAN Snooping, an administrator can obtain more detailed information about the traffic flow through the overlay network.

---

**Note.** Throughout this chapter, the terms “VXLAN Snooping” and “VM Snooping” are interchangeable.

---

MIB information for the VXLAN Snooping commands is as follows:

*Filename:* ALCATEL-IND1-VM-SNOOPING-MIB.mib  
*Module:* alaVMSnoopingMIB

A summary of the available commands is listed here:

---

**vm-snooping admin-state**  
**vm-snooping policy-mode**  
**vm-snooping trap**  
**vm-snooping filtering-resource trap threshold**  
**vm-snooping sampling-rate**  
**vm-snooping aging-timer**  
**vm-snooping vxlan udp-port**  
**vm-snooping static-policy rule**  
**vm-snooping logging-threshold**  
**vm-snooping port**  
**show vm-snooping config**  
**show vm-snooping port**  
**show vm-snooping database**  
**show vm-snooping virtual-machines**  
**show vm-snooping filtering-resource**  
**show vm-snooping statistics**  
**show vm-snooping static-policy**  
**clear vm-snooping database**  
**clear vm-snooping statistics**

---

## vm-snooping admin-state

Configures the global status of the VXLAN Snooping process for the switch.

**vm-snooping admin-state** {enable | disable}

---

### Syntax Definitions

**enable** Enables VXLAN Snooping for the switch.  
**disable** Disables VXLAN Snooping for the switch.

### Defaults

By default, VXLAN Snooping is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Enable VXLAN Snooping first before attempting any other VXLAN Snooping command. When enabled, the switch allocates resources for this feature. When disabled, switch resources are released for other purposes.
- This command enables or disables this feature on all VXLAN Snooping ports.

### Examples

```
-> vm-snooping admin-state enable
-> vm-snooping admin-state disable
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

**show vm-snooping config** Displays the VXLAN Snooping configuration for the switch.

### MIB Objects

```
alaVMSnoopingConfig
  alaVMSnoopingAdminStatus
```

---

## vm-snooping policy-mode

Configures the allocation of hardware resources for VXLAN Snooping. Use this command to change the policy lookup mode to basic or advanced and specify the number of policies reserved for VXLAN Snooping. In addition, an optional inner header parameter is available to specify if the header of the inner Ethernet frame is tagged or untagged.

```
vm-snooping policy-mode {basic | advance} [policy-resource {extended | default}] [inner-header {tagged | untagged | default}]
```

---

### Syntax Definitions

<b>basic</b>	Reserves resources for VNI, VXLAN UDP port, inner source MAC address, and inner IPv4 source address policy conditions.
<b>advance</b>	For IPv4 packets, reserves resources for VNI, VXLAN UDP port, inner source MAC address, inner IPv4 source address, IP protocol, and Layer 4 source and destination port policy conditions.  For IPv6 packets, reserves resources for VNI, VXLAN UDP port, inner source IPv6 address, Layer 4 source and destination port for policy conditions.
<b>policy-resource extended</b>	Doubles the amount of resources for VXLAN Snooping policies.
<b>policy-resource default</b>	Reserves the minimum amount of resources for VXLAN Snooping policies.
<b>inner-header tagged</b>	The header of the inner frame is tagged.
<b>inner-header untagged</b>	The header of the inner frame is untagged.
<b>inner-header default</b>	The header of the inner frame is either tagged or untagged (basic mode) or just tagged (advance mode).

### Defaults

parameter	default
[basic   advance]	basic
[extended   default]	default

By default, the inner header option is set to the following values based on the current policy lookup mode:

- Basic mode—untagged and tagged header for the inner frame.
- Advanced mode—tagged header for the inner frame.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

## Usage Guidelines

- To change the policy mode, globally disable VXLAN Snooping then make the changes and enable VXLAN Snooping again to apply the changes to the switch. This command is also allowed when the VXLAN Snooping feature is globally disabled.
- When the VXLAN Snooping policy mode is changed, all database and QoS entries are flushed.
- When the VXLAN policy mode is set to **basic**, any QoS policy rules with advanced mode policy conditions will not work. When the mode is set to **advance**, QoS policy rules with basic *and* advance policy conditions will work.
- When configuring the **inner-header** parameter for **basic** mode, specifying only tagged or only untagged may increase the number of policies allowed. In other words, specifying both tagged and untagged (the default) may reduce the number of policies allowed.
- When configuring the **inner-header** parameter for **advance** mode, specifying both tagged and untagged is not allowed. In this case, the **default** option sets the parameter to tagged.
- Other applications, such as QoS user policies, VLAN Stacking, Application Fingerprinting, DHCP Snooping, Open Flow, IP multicast, and FIP Snooping also use up system resources. Depending on which application comes first, other applications may not be able to get the required hardware resources.
- If the resources are increased by two times (**policy-resource extended**), then none of the above-mentioned applications can work simultaneously.
- Only one set of hardware resources are reserved for the VXLAN Snooping application when VXLAN Snooping is globally enabled.

## Examples

```
-> vm-snooping admin-state disable
-> vm-snooping policy-mode basic policy-resource extended inner-header tagged
-> vm-snooping admin-state enable

-> vm-snooping admin-state disable
-> vm-snooping policy-mode advance policy-resource extended inner-header untagged
-> vm-snooping admin-state enable

-> vm-snooping admin-state disable
-> vm-snooping policy-mode basic inner-header default
-> vm-snooping policy-mode advance inner-header default
-> vm-snooping admin-state enable
```

## Release History

Release 7.3.4; command was introduced.

## Related Commands

**show vm-snooping config**      Displays the VXLAN Snooping configuration for the switch.

## MIB Objects

```
alaVMSnoopingConfig  
  alaVMSnoopingPolicyMode  
  alaVMSnoopingPolicyResource  
  alaVMSnoopingVMTrafficTagged
```

---

## vm-snooping trap

Enables or disables trap generation for the VXLAN Snooping feature.

**vm-snooping trap {enable | disable}**

---

### Syntax Definitions

**enable** Enables VXLAN Snooping trap generation.

**disable** Disables VXLAN Snooping trap generation.

### Defaults

By default, trap generation for this feature is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

A trap is generated when one of the following occurs:

- A new VXLAN database entry is learned or ages out.
- The usage of system resources allocated for VXLAN Snooping exceeds a configurable threshold value.

### Examples

```
-> vm-snooping trap enable
-> vm-snooping trap disable
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

**vm-snooping filtering-resource trap threshold** Configures the threshold value at which point the switch generates a trap to indicate that VXLAN Snooping has utilized the specified level of system resources.

**show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

## MIB Objects

alaVMSnoopingConfig  
alaVMSnoopingTrapStatus

---

## vm-snooping filtering-resource trap threshold

Configures the threshold value at which point the switch generates a trap to indicate that VXLAN Snooping has utilized the specified level of system resources.

**vm-snooping filtering-resource trap threshold** {*percentage* | **default**}

---

### Syntax Definitions

*percentage*                      The percentage of system resources used by VXLAN Snooping.  
**default**                              Sets the trap threshold value back to 80 percent (the default).

### Defaults

By default, the filtering resource threshold is set to 80 percent.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

A trap is generated when the system resources used by VXLAN Snooping reach the specified threshold value.

### Examples

```
-> vm-snooping filtering-resource trap threshold 50
-> vm-snooping filtering-resource trap threshold default
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

**show vm-snooping config**              Displays the VXLAN Snooping status and configuration for the switch.  
**show vm-snooping filtering-resource**      Displays the system resources used by VXLAN Snooping on a per-port basis.

### MIB Objects

alaVMSnoopingConfig  
 alaVMSnoopingFilteringResourceTrapThreshold

---

## vm-snooping sampling-rate

Configures the packets-per-second (pps) sampling rate for the VXLAN Snooping feature.

**vm-snooping sampling-rate** *pps*

---

### Syntax Definitions

*pps* The number of packets-per-second to sample on all VXLAN Snooping ports. The valid range is 1–1000.

### Defaults

By default, the sampling rate is set to 1000 pps.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

The sampling rate value specified with this command is applied to every VXLAN Snooping port on the switch.

### Examples

```
-> vm-snooping sampling-rate 500
-> vm-snooping sampling-rate 1000
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

**show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

### MIB Objects

```
alaVMSnoopingConfig
  alaVMSnoopingSamplingRate
```

---

## vm-snooping aging-timer

Configures the aging time value for VXLAN packet flows learned in the VXLAN Snooping database on the local switch.

**vm-snooping aging-timer** *seconds*

---

### Syntax Definitions

*seconds* The number of seconds to wait before aging out a learned VM. The valid range is 60–86400 seconds.

### Defaults

By default, the aging timer is set to 300 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Set this timer to zero to prevent the learned VMs from aging out.
- Note that an inactive VXLAN packet flow (no packets received for the flow) can take up to twice as long as the aging time value specified to be removed from the VXLAN Snooping database. For example, if an aging time of 300 seconds is specified, the database entry for the flow ages out any time between 300 and 600 seconds of inactivity.

### Examples

```
-> vm-snooping aging-timer 100
-> vm-snooping aging-timer 300
-> vm-snooping aging-timer 0
```

### Release History

Release 7.3.4; command was introduced.

**Related Commands****show vm-snooping config**

Displays the VXLAN Snooping status and configuration for the switch.

**MIB Objects**

alaVMSnoopingConfig  
alaVMSnoopingAgingTimer

---

## vm-snooping vxlan udp-port

Configures additional UDP destination port numbers to look for when the switch inspects packets received on VXLAN Snooping ports. This value is used to identify encapsulated VXLAN packets.

**vm-snooping vxlan udp-port** {*udp\_port\_num*[-*udp\_port\_num2*]}

**no vm-snooping vxlan udp-port** {*udp\_port\_num*[-*udp\_port\_num2*]}

---

### Syntax Definitions

*udp\_port\_num*[-*udp\_port\_num2*] The UDP destination port number. Use a hyphen to specify a range of port numbers. Do not specify a range that configures more than seven UDP ports.

### Defaults

By default, the well-known UDP port number 4789 is used.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove a UDP destination port number. Note that the default UDP port number of 4789 is not configurable, so it can not be removed with this command. Only port numbers that were added through this command can be removed.
- Avoid using the well-known UDP ports that are already reserved by IANA for other applications.
- Including the default UDP port number (4789), up to eight UDP ports are allowed. However, configuring multiple UDP ports may slow down the VXLAN Snooping process.
- Changing the UDP port number on the fly might stop the VXLAN traffic until the VXLAN Tunnel End Points (VTEPs) in the network are configured with the same destination UDP port.

### Examples

```
-> vm-snooping vxlan udp-port 8472
-> no vm-snooping vxlan udp-port 8472
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

### `show vm-snooping config`

Displays the destination UDP port value that is used to identify VXLAN traffic.

## MIB Objects

```
alaVMSnoopingUDPPortTable
  alaVMSnoopingUDPPortIndex
  alaVMSnoopingUDPRowStatus
```

---

## vm-snooping static-policy rule

Configures a static QoS policy rule. When configured, QoS resources are automatically allocated for the specified rule even if there is no VXLAN packet flow that matches the rule conditions.

**vm-snooping static-policy rule** *rule\_name* [**list** *list\_name*]

**no vm-snooping static-policy rule** *rule\_name* [**list** *list\_name*]

---

### Syntax Definitions

*rule\_name* The name of the policy rule (alphanumeric string up to 32 characters).

*list\_name* The name of the policy list (alphanumeric string up to 32 characters).

### Defaults

parameter	default
<i>list_name</i>	“Default”

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove a static VXLAN Snooping policy rule. If the rule is associated with a user-configured policy list (not the default list), then the list name must be specified as well to remove the static policy rule. If the rule is associated with the default list, then specifying a list name is not required to remove the static policy rule.
- The default policy list available in every switch has no name and is not configurable. All QoS policy rules are assigned to the default list unless the **no default-list** option of the **policy rule** command is used at the time the rule is created.

### Examples

```
-> vm-snooping static-policy rule r1
-> vm-snooping static-policy rule r2 list l2
-> no vm-snooping static-policy rule r1
-> no vm-snooping static-policy rule r2 list l2
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

**show vm-snooping static-policy** Displays the static policy configuration.

  alaVMSnoopingStaticPolicyRuleName  
  alaVMSnoopingStaticPolicyListName  
  alaVMSnoopingStaticPolicyRowStatus
```

---

## vm-snooping logging-threshold

Configures the threshold value that determines how many entries for VXLAN packet flows and statistics are logged into a .csv file on the local switch.

**vm-snooping logging-threshold number-of-flows** *{flow\_num | default}*

---

### Syntax Definitions

*flow\_num* The number of VXLAN packet flows to log. The range is 1000–6000.

**default** Sets the logging threshold value back to 5000 (the default).

### Defaults

By default, the logging threshold value is set to 5000 packet flows.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Set the logging threshold value to zero to turn off the logging function.
- When the logging function is on, setting the VXLAN Snooping aging timer to 300 seconds is recommended. If the aging timer is set to zero, no logging occurs regardless of this threshold setting.
- The packet flows and hardware statistics are logged to the **vm\_snoop\_db\_flow\_rec.csv** file and the **vm\_snoop\_hw\_stats\_rec.csv** file in the **/flash/switch/bridge/vm\_snoop/** directory on the local switch to maintain a packet flow history.
- When the number of records logged to the .csv files exceeds the logging threshold value, the corresponding files are renamed to **/flash/switch/bridge/vm\_snoop/vm\_snoop\_db\_flow\_old\_rec.csv** and to **/flash/switch/bridge/vm\_snoop/vm\_snoop\_hw\_stats\_old\_rec.csv**.
- These files are accessed and used by Alcatel-Lucent Enterprise network management tools to provide management and visibility of the overlay network traffic.

### Examples

```
-> vm-snooping logging-threshold number-of-flows 1000
-> vm-snooping logging-threshold number-of-flows 0
-> vm-snooping logging-threshold number-of-flows default
```

### Release History

Release 7.3.4; command was introduced.

**Related Commands****show vm-snooping config**

Displays the VXLAN Snooping status and configuration for the switch.

**MIB Objects**

alaVMSnoopingConfig

alaVMSnoopingLoggingThresholdFlows

---

## vm-snooping port

Configures a switch port or link aggregate as a VXLAN Snooping interface. Once the interface is configured and enabled and VXLAN Snooping is enabled for the switch, IP packets received on the interface are sampled to determine if they contain the designated UDP destination port.

**vm-snooping** {port *chassis/slot/port*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]} [admin-state {enable | disable}]

**no vm-snooping** {port *chassis/slot/port*[-*port2*] | linkagg *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).
<b>enable</b>	Enables the VXLAN Snooping administrative status on the port or link aggregate ID.
<b>disable</b>	Disables the VXLAN Snooping administrative status on the port or link aggregate ID.

### Defaults

By default, VXLAN Snooping is disabled on all switch ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to revert the VXLAN Snooping interface back to a regular switch port or link aggregate. This will clear the VXLAN Snooping configuration from the interface.
- Disabling the administrative status of a VXLAN Snooping interface does not remove the VXLAN Snooping configuration from the interface.
- Make sure the VXLAN Snooping feature is globally enabled for the switch to ensure that VXLAN Snooping ports will process VXLAN packets.
- VXLAN Snooping uses the sFlow mechanism to sample packets.

## Examples

```
-> vm-snooping port 1/1/1
-> vm-snooping port 1/1/5-10
-> no vm-snooping port 1/1/1
-> no vm-snooping port 1/1/5-10
-> vm-snooping port 1/1/1 admin-state enable
-> vm-snooping port 1/1/5-10 admin-state enable
-> vm-snooping port 1/1/1 admin-state disable
-> vm-snooping port 1/1/5-10 admin-state disable

-> vm-snooping linkagg 1
-> vm-snooping linkagg 5-10
-> no vm-snooping linkagg 1
-> no vm-snooping linkagg 5-10
-> vm-snooping linkagg 1 admin-state enable
-> vm-snooping linkagg 5-10 admin-state enable
-> vm-snooping linkagg 1 admin-state disable
-> vm-snooping linkagg 5-10 admin-state disable
```

### Examples

```
-> show vm-snooping config
VM-Snooping Status           : Enable,
Trap                          : Disable,
Trap-Threshold                : 80,
Policy-Mode                   : Basic
Policy-Resource               : Default
VM Inner Header               : Tagged and Untagged,
Aging-Timer                   : 300 seconds,
UDP-Port(s)                   : 4789,
Sampling-Rate                  : 1000
Logging-Threshold              : 5000
Qos Allocation Status         : Success
```

#### output definitions

---

<b>VM-Snooping Status</b>	The global administrative status of VXLAN Snooping for the switch ( <b>Enabled</b> or <b>Disabled</b> ). Configured through the <b>vm-snooping admin-state</b> command.
<b>Trap</b>	The status of SNMP trap generation for the switch ( <b>Enabled</b> or <b>Disabled</b> ). Configured through the <b>vm-snooping trap</b> command.
<b>Trap-Threshold</b>	The percentage of switch resources used that will trigger the switch to generate a trap. Configured through the <b>vm-snooping filtering-resource trap threshold</b> command.

*output definitions (continued)*

---

<b>Policy-Mode</b>	The policy mode setting that designates switch resources for VXLAN Snooping. Configured through the <b>vm-snooping policy-mode</b> command.
<b>Policy Resource</b>	Indicates the number of VXLAN Snooping policies allowed ( <b>Default</b> or <b>Extended</b> ). Configured through the <b>vm-snooping policy-mode</b> command.
<b>VM Inner Header</b>	Whether to check tagged and/or untagged VM traffic. Configured through the <b>vm-snooping policy-mode</b> command.
<b>Aging-Timer</b>	The number of seconds before a learned VM is aged out. Configured through the <b>vm-snooping aging-timer</b> command.
<b>UDP-Port(s)</b>	The UDP port numbers to snoop for VXLAN packets. Configured through the <b>vm-snooping vxlan udp-port</b> command.
<b>Sampling-Rate</b>	The number of packets-per-second (pps) to sample. Configured through the <b>vm-snooping sampling-rate</b> command.
<b>Logging-Threshold</b>	The number of VXLAN packet flow entries and statistics logged to a .csv file on the local switch.
<b>Qos Allocation Status</b>	The status of QoS resource allocation ( <b>Success</b> , <b>InProgress</b> , or <b>Failed</b> ). This field is blank when VXLAN Snooping is disabled.

---

---

## show vm-snooping port

Displays the VXLAN Snooping port configuration for the switch.

**show vm-snooping port**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- The display output also indicates whether or not the VXLAN Snooping port is a virtual machine network profile (vNP) port.

### Examples

```
-> show vm-snooping port
Port      VM-Snooping  vNP
-----+-----+-----
1/2/1     Enable       Yes
1/2/2     Enable       No
1/2/2     Enable       Yes
1/2/2     Enable       Yes
0/12     Disable      No
```

#### output definitions

---

<b>Port</b>	The slot/port or link aggregate ID of the VXLAN Snooping interface. A “0” slot number indicates that the interface is a link aggregate.
<b>VM-Snooping</b>	The administrative status ( <b>Enable</b> or <b>Disable</b> ) of VXLAN Snooping on the port or link aggregate. Configured through the <b>vm-snooping port</b> command.
<b>vNP</b>	Whether the port is also a vNP port ( <b>Yes</b> or <b>No</b> ).

  alaVMSnoopingPortIsVNP
  alaVMSnoopingPortRowStatus
```

---

## show vm-snooping database

Displays VXLAN Snooping database entries. When a VXLAN packet is detected and the packet contains the designated UDP destination port, VXLAN Snooping creates an entry in the local switch database to identify and track the VXLAN packet flow.

**show vm-snooping database** [**vxlan udp-port** *udp\_port\_num* | **vtep-ip** *ip\_address* | **vni** *vlan\_id* | **vm-src-mac** *mac\_address* | **vm-ip** *ip\_address*] [**detail**] [**port** *chassis/slot/port[-port2]* | **linkagg** *agg\_id[-agg\_id2]*] [**detail**]

---

### Syntax Definitions

<i>udp_port_num</i>	The UDP destination port number used to identify VXLAN traffic.
<b>vtep-ip</b> <i>ip_address</i>	The IP address of the VXLAN Tunnel End Point (VTEP). This is the Loopback0 interface address on the OmniSwitch.
<i>vlan_id</i>	The VXLAN Network Identifier (VNI) for the VXLAN segment on which the VM was learned.
<i>mac_address</i>	The source MAC address of a VM.
<b>vm-ip</b> <i>ip_address</i>	The source IP address of a VM.
<b>detail</b>	Displays additional information about the classified traffic flow.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, all database entries are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.
- Each database entry is subject to a VXLAN Snooping aging period. If the database fills up, older entries are aged out before the limit (fast aging).
- When a database entry is removed due to regular aging or fast aging conditions, any corresponding QoS is also removed for that flow.

## Examples

```
-> show vm-snooping database
Total number of VM Flows: 15
```

Port	VXLAN PORT	VNI	VM SRC MAC	VM VLAN	VM SRC IP

## clear vm-snooping database

Clears the local database entries for each virtual machine (VM) flow.

**clear vm-snooping database** [**port** *chassis/slot/port[-port2]*] | **linkagg** *agg\_id[-agg\_id2]*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, all database entries are cleared for all VXLAN Snooping ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the **port** and **linkagg** parameters to clear database entries for a specific port or link aggregate.

### Examples

```
-> clear vm-snooping database
-> clear vm-snooping database port 3/1/1
-> clear vm-snooping database linkagg 10
```

### Release History

Release 7.3.4; command introduced.

### Related Commands

**show vm-snooping database** Displays the contents of the VXLAN Snooping database.

### MIB Objects

  alaVMSnoopingDBTable
  alaVMSnoopingDBCclearStats
```

---

## show vm-snooping virtual-machines

Displays the port, source MAC address, and VLAN associated with Virtual Machines (VMs) discovered through the VXLAN Snooping process.

**show vm-snooping virtual-machines**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

The output display of this command shows the port, source MAC address, and VLAN associated with each VM learned through the VXLAN Snooping process.

### Examples

```
-> show vm-snooping virtual-machines
Port          SRC MAC          VLAN
-----+-----+-----+
1/1/2  00:00:00:88:00:01  -

#### *output definitions*

---

<b>Port</b>	The slot/port or link aggregate ID of the VXLAN Snooping interface. A "0" slot number indicates a link aggregate.
<b>SRC MAC</b>	The source MAC address of the VM.
<b>VLAN</b>	The VLAN on which the VM is learned and forwarded.

---

### Release History

Release 7.3.4; command was introduced.

## Related Commands

- show vm-snooping config** Displays the VXLAN Snooping configuration for the switch.
- show vm-snooping database** Displays the contents of the local VXLAN Snooping database.

## MIB Objects

```
alaVMSnoopingLearntVMTable  
  alaVMSnoopingLearntVMIfIndex,  
  alaVMSnoopingLearntVMSrcMac,  
  alaVMSnoopingLearntVMVlanId
```

---

## show vm-snooping filtering-resource

Displays the amount of switch resources available for and used by QoS policies that contain VXLAN conditions.

**show vm-snooping filtering-resource**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- VXLAN Snooping uses the amount of resources used to calculate the percentage of switch resources used and then determine if that percentage exceeds the value set for the filtering trap threshold. An SNMP trap is generated when the percentage used meets or exceeds the trap threshold value.
- The output display of this command shows the percentage of switch resources used by VXLAN policies on a per-slot basis.

### Examples

```
-> show vm-snooping filtering-resource
Total Filtering Resources      :256,
Chassis/Slot   Filtering Resources Used
-----+-----
  1/SLOT-1      0
  2/SLOT-1      0
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

- vm-snooping filtering-resource trap threshold** Configures the trap threshold value for system resources used by VXLAN Snooping.
- show vm-snooping config** Displays the VXLAN Snooping status and configuration for the switch.

## MIB Objects

```
alaVMSnoopingFilterResourceTable  
  alaVMSnoopingFilterResourceChassisId  
  alaVMSnoopingFilterResourceSlotNum  
  alaVMSnoopingFilterResourceMax  
  alaVMSnoopingFilterResourceUsed
```

---

## show vm-snooping statistics

Displays statistics for each VXLAN packet flow on a VXLAN Snooping port or link aggregate.

**show vm-snooping statistics** [**hardware** | **sampling**] [**port** *chassis/slot/port*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]]

---

### Syntax Definitions

<b>hardware</b>	Displays the VXLAN policy rule and list and the number of packets and bytes on which the policy rule was applied.
<b>sampling</b>	Displays the number of VXLAN packets that were sampled for a specific flow.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, statistics are displayed for all VXLAN Snooping ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the **port** and **linkagg** parameters to display information for a specific port or link aggregate.

### Examples

```
-> show vm-snooping statistics
Total number of Hardware Statistics: 0

Policy Rule                Policy List                Number of pkts            Number of Bytes
-----+-----+-----+-----+
Total number of Sampling Statistics: 1

      VXLAN    VXLAN      VM          VM          Pkts
Port  UDP PORT  VNI        SRC MAC      SRC IP
-----+-----+-----+-----+-----+
2/1/2      4789      43 00:00:00:88:00:01      88.0.0.1      15
```

```
-> show vm-snooping statistics sampling
Total number of Sampling Statistics: 1
```

Port	VXLAN UDP PORT	VXLAN VNI	VM SRC MAC	VM SRC IP	Pkts
1/1/2	4789	43	00:00:00:99:00:01	99.0.0.1	10

```
-> show vm-snooping statistics hardware
Total number of Hardware Statistics: 1
```

Policy Rule	Policy List	Number of pkts	Number of Bytes
r1	Default	497	45724

## Release History

Release 7.3.4; command introduced.

## Related Commands

[clear vm-snooping statistics](#) Clears VXLAN Snooping statistics.

## MIB Objects

```
alaVMSnoopingHardwareStatsTable
  alaVMSnoopingHardwareStatsPolicylist
  alaVMSnoopingHardwareStatsPolicyrule
  alaVMSnoopingHardwareStatsNumOfPackets
  alaVMSnoopingHardwareStatsNumOfBytes
```

## show vm-snooping static-policy

Displays the static QoS policy rule configuration for VXLAN Snooping.

**show vm-snooping static-policy**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

- When a static policy rule is configured for VXLAN Snooping, QoS resources are automatically allocated for the specified rule even if there is no VXLAN packet flow that matches the rule conditions.
- If the static policy rule was created with a user-configured policy list (not the default list), then the list name appears in the “Policy List” field. However, if the static policy rule was created without specifying a policy list name, then the “Default” list name appears in the “Policy List” field.

### Examples

```
-> show vm-snooping static-policy
Total number of Static-Policy: 5
```

```
Policy Rule          Policy List
-----+-----
r0                   Default
r1                   Default
r2                   L1
r2                   l3
r2                   Default
```

#### *output definitions*

---

<b>Policy Rule</b>	The name of the QoS policy rule that was specified when the static policy rule was created.
<b>Policy List</b>	The name of the QoS policy list associated with the static policy rule.

---

## Release History

Release 7.3.4; command was introduced.

## Related Commands

[vm-snooping static-policy rule](#) Configures a VXLAN Snooping static policy rule.

## MIB Objects

```
alaVMSnoopingStaticPolicyTable  
  alaVMSnoopingStaticPolicyRuleName  
  alaVMSnoopingStaticPolicyListName  
  alaVMSnoopingStaticPolicyRowStatus
```

---

## clear vm-snooping statistics

Clears the collected statistics for each VXLAN packet flow on a VXLAN Snooping port or link aggregate.

```
clear vm-snooping statistics [sampling [port chassis/slot/port[-port2] | linkagg agg_id[-agg_id2]]]
[hardware]
```

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>agg_id[-agg_id2]</i>	The link aggregate ID number. Use a hyphen to specify a range of IDs (10-20).

### Defaults

By default, statistics are cleared on all VXLAN Snooping ports and link aggregates.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	No	No	No

### Usage Guidelines

Use the **port** and **linkagg** parameters to clear statistics for a specific port or link aggregate.

### Examples

```
-> clear vm-snooping statistics
-> clear vm-snooping statistics sampling port 3/1/1
-> clear vm-snooping statistics sampling linkagg 10
-> clear vm-snooping statistics hardware
```

### Release History

Release 7.3.4; command introduced.

## Related Commands

[show vm-snooping statistics](#) Displays VXLAN Snooping statistics.

## MIB Objects

```
alaVMSnoopingConfig
  alaVMSnoopingClearAllData
alaVMSnoopingSamplingStatsTable
  alaVMSnoopingSamplingStatsClear
```

---

# 45 Port Mapping Commands

Port Mapping is a security feature that controls communication between peer users. Each session comprises of a session ID and a set of user ports and/or a set of network ports. The user ports within a session cannot communicate with each other and can only communicate through network ports. In a port mapping session with user port set A and network port set B, ports in set A can communicate with ports in set B only. If set B is empty, the ports in set A can communicate with the rest of the ports in the system.

A port mapping session can be configured in a unidirectional or bidirectional mode. In the unidirectional mode, the network ports can communicate with each other within the same session. In the bidirectional mode, the network ports cannot communicate with each other. Network ports of a unidirectional port mapping session can be shared with other unidirectional sessions, but cannot be shared with any session that is configured in bidirectional mode. Network ports of different sessions can communicate with each other.

MIB information for the Port Mapping commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MAPPING.mib  
*Module:* alcatelIND1PortMappingMIB

A summary of the available commands is listed here:

---

**port-mapping user-port network-port**  
**port-mapping** (configures port mapping status and direction)  
**port-mapping unidirectional bidirectional**  
**port-mapping unknown-unicast-flooding**  
**port-mapping dynamic-proxy-arp**  
**show port-mapping status**  
**show port-mapping**  
**show ip dynamic-proxy-arp**

---

## port-mapping user-port network-port

Creates a port mapping session with the user ports, network ports, or both user ports and network ports. Use the **no** form of the command to delete ports or a link aggregate group from a session.

**port-mapping** *session\_id* [**user-port** {**slot** *chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]  
[**network-port** {**slot** *chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]

**no port-mapping** *session\_id* [**user-port** {**slot** *chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]  
[**network-port** {**slot** *chassis/slot* | *chassis/slot/port[-port2]*} | **linkagg** *agg\_id*]

---

### Syntax Definitions

<i>session_id</i>	The port mapping session ID.
<b>user-port</b>	Specifies a user port of the mapping session.
<b>network-port</b>	Specifies a network port of the mapping session.
<i>chassis</i>	The chassis identifier.
<i>slot</i>	The slot number to be assigned to the mapping session.
<i>slot/port[-port2]</i>	The slot and port number to assign to the mapping session. Use a hyphen to specify a range of ports (1/5-10).
<i>agg_id</i>	The link aggregate ID number to assign to the mapping session.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- User ports that are part of one session cannot communicate with each other. The user ports can communicate only through network ports of the session to the other elements of the system.
- User ports can be part of only one port mapping session.
- An aggregable port of a link aggregation group cannot be a mapped port and a mapped port cannot be an aggregable port of a link aggregation group.
- A mirrored port cannot be a mapped port and a mapped port cannot be a mirrored port.

### Examples

```
-> port-mapping 3 user-port 2/3 network-port 6/4
-> port-mapping 4 user-port 2/5-8
-> port-mapping 5 user-port 2/3 network-port slot 3
```

```
-> no port-mapping 5 user-port 2/3  
-> no port-mapping 6 network-port linkagg 7
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

<a href="#">port-mapping</a>	Enables, disables, or deletes a port mapping session.
<a href="#">port-mapping unidirectional bidirectional</a>	Configures the direction of a port mapping session.
<a href="#">port-mapping unknown- unicast-flooding</a>	Enables or disables flooding of unknown unicast traffic from all ports to user ports for a particular session.
<a href="#">show port-mapping</a>	Displays the configuration of one or more port mapping sessions.

## MIB Objects

```
PortMappingSessionTable  
    pmapSessionNumber  
portMappingTable  
    pmapPortIfindex  
    pmapPortType
```

---

## port-mapping

Enables, disables, or deletes a port mapping session.

**port-mapping** *session\_id* {**enable** | **disable**}

**no port-mapping** *session\_id*

---

### Syntax Definitions

<i>session_id</i>	The port mapping session ID.
<b>enable</b>	Enables a port mapping session.
<b>disable</b>	Disables a port mapping session.

### Defaults

parameter	default
<b>enable   disable</b>	<b>disable</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

To be enabled, a session should have a minimum of two ports.

### Examples

```
-> port-mapping 3 enable
-> port-mapping 4 disable
-> no port-mapping 5
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

<b>port-mapping user-port network-port</b>	Creates a port mapping session with or without the user ports, network ports, or both.
<b>port-mapping unidirectional bidirectional</b>	Configures the direction of a port mapping session.
<b>show port-mapping status</b>	Displays the status of one or more port mapping sessions.
<b>show port-mapping</b>	Displays the configuration of one or more port mapping sessions.

## MIB Objects

PortMappingSessionTable  
    pmapSessionNumber  
    pmapSessionStatus

---

## port-mapping unidirectional bidirectional

Configures the direction of a port mapping session.

**port-mapping** *session\_id* [**unidirectional** | **bidirectional**]

---

### Syntax Definitions

<i>session_id</i>	The port mapping session ID.
<b>unidirectional</b>	Specifies unidirectional port mapping.
<b>bidirectional</b>	Specifies bidirectional port mapping.

### Defaults

parameter	default
<b>enable</b>   <b>disable</b>	<b>enable</b>
<b>unidirectional</b>   <b>bidirectional</b>	<b>bidirectional</b>

### Platform Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- In the bidirectional mode, the network ports of a session cannot communicate with each other. Also, the network ports of that session cannot be a part of a network port set of another session.
- In the unidirectional mode, the network ports of a session can communicate with each other. Also, the network ports of that session can be part of a network port set of another session that is in the unidirectional mode.
- To change the directional mode of an active session with network ports, delete the network ports of the session, change the direction, and recreate the network ports.

### Examples

```
-> port-mapping 5 enable unidirectional
-> port-mapping 5 disable unidirectional
-> port-mapping 6 enable bidirectional
-> port-mapping 5 disable bidirectional
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

**port-mapping user-port  
network-port**

Creates a port mapping session with or without the user ports, network ports or both.

**port-mapping**

Enables, disables, or deletes a port mapping session.

**show port-mapping**

Displays the configuration of one or more port mapping sessions.

## MIB Objects

PortMappingSessionTable

  PmapSessionNumber

  PmapSessionDirection

---

## port-mapping unknown-unicast-flooding

Enables or disables flooding of unicast traffic from all the switch ports to the user ports related to a particular session.

**port-mapping *session\_id* unknown-unicast-flooding {enable | disable}**

---

### Syntax Definitions

<i>session_id</i>	The port mapping session ID.
<b>enable</b>	Enables the flooding of unknown unicast traffic from all ports to the user ports for a particular session.
<b>disable</b>	Disables the flooding of unknown unicast traffic from all ports to the user ports for a particular session.

### Defaults

parameter	default
enable   disable	enable

### Platform Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Configuring unknown unicast flooding creates a new port mapping session if there is no existing session.
- When a link aggregate is configured as a user port, the unknown unicast flooding configuration is applied to all the member ports of the aggregate.

### Examples

```
-> port-mapping 1 unknown-unicast-flooding enable
-> port-mapping 2 unknown-unicast-flooding disable
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

<b>port-mapping user-port network-port</b>	Creates a port mapping session with or without the user ports, network ports or both.
<b>port-mapping</b>	Enables, disables, or deletes a port mapping session.
<b>show port-mapping</b>	Displays the configuration of one or more port mapping sessions.
<b>show port-mapping status</b>	Displays the status of one or more port mapping sessions.

## MIB Objects

portMappingSessionTable  
pmapSessionUnknownUnicastFloodStatus

---

## port-mapping dynamic-proxy-arp

Enables or disables the dynamic proxy ARP functionality for the port mapping session.

**port-mapping** *session\_id* **dynamic-proxy-arp** {enable | disable}

---

### Syntax Definitions

<i>session_id</i>	The port mapping session for which the dynamic proxy ARP status is enabled or disabled.
<b>enable</b>	Enables the dynamic proxy ARP status.
<b>disable</b>	Disables the dynamic proxy ARP status.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Clients must be connected to the user-ports and the head end routers connected to the network-ports of the port mapping session for dynamic proxy ARP to function properly.
- DHCP snooping must be enabled for dynamic proxy ARP to function.
- Using dynamic proxy ARP in conjunction with DHCP snooping allows for the configuration of the MAC Forced Forwarding feature.
- When dynamic proxy ARP is enabled, port-group allocation will be triggered. The TCAM manager will respond as success if the port-group allocation is a success. If QoS is already using the port-groups, the TCAM manager will respond with a failure and an error is displayed.
- Dynamic proxy ARP can be enabled on only two port-groups. If QoS is already using the port-groups, an error message is displayed.

### Examples

```
-> port-mapping 1 dynamic-proxy-arp enable
-> port-mapping 1 dynamic-proxy-arp disable
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

<b>port-mapping user-port network-port</b>	Creates a port mapping session with or without the user ports, network ports or both.
<b>port-mapping</b>	Enables, disables, or deletes a port mapping session.
<b>show port-mapping</b>	Displays the configuration of one or more port mapping session.
<b>show port-mapping status</b>	Displays the status of one or more port mapping session.
<b>show ip dynamic-proxy-arp</b>	Displays the ARPs learned through dynamic proxy.

## MIB Objects

portMappingSessionTable  
pmapSessionDynProxyARP

---

## show port-mapping status

Displays the status of one or more port mapping sessions.

**show port-mapping** [*session\_id*] **status**

### Syntax definitions

*session\_id* The port mapping session ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

If you do not specify the port mapping session ID, then the status of all the port mapping sessions are displayed.

### Examples

```
-> show port-mapping status
```

SessionID	Direction	Status	Unknown Unicast	DPA Status
1	bi	disable	flood	enable
1	bi	enable	drop	disable
2	bi	disable	flood	disable

### *output definitions*

<b>SessionID</b>	Displays the port mapping session ID.
<b>Direction</b>	Displays the direction of a port mapping session.
<b>Status</b>	Displays status of a port mapping session.
<b>Unknown Unicast</b>	Whether unknown unicast traffic is dropped or flooded from all the switch ports to the user ports related to the port mapping session
<b>DPA Status</b>	Displays the status of Dynamic Proxy ARP for the port mapping session. <i>This functionality is supported only on the OmniSwitch 6465 and OmniSwitch 6865.</i>

## Release History

Release 7.1.1; command introduced.

Release 8.6R1; “DPA Status” field added.

## Related Commands

[port-mapping user-port

---

## show port-mapping

Displays the configuration of one or more port mapping sessions.

**show port-mapping** [*session\_id*]

---

### Syntax Definitions

*session\_id*                      The port mapping session ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

If you do not specify the port mapping session ID, then the user port and network port information are displayed for all the port mapping sessions active on the switch.

### Examples

```
-> show port-mapping 3
```

```
SessionID      USR-PORT      NETWORK-PORT
-----+-----+-----
           1             1/2             1/3
           1             1/6
           1             1/7
```

#### *output definitions*

---

<b>SessionID</b>	Displays the port mapping session ID.
<b>USR-PORT</b>	Displays the set of user ports of a port mapping session.
<b>NETWORK-PORT</b>	Displays the set of network ports of a port mapping session.

---

### Release History

Displays the ARPs learned through dynamic proxy.

**show ip dynamic-proxy-arp**

---

### Syntax definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- This command shows the information related to the router IP.
- To view the output, dynamic proxy must be enabled on the port mapping session, DHCP snooping must be enabled on the VLAN.

### Examples

```
-> show ip dynamic-proxy-arp
```

```

Router IP Addr      Hardware Addr      Vlan      Interface
-----+-----+-----+-----
10.20.35.3         e9:ca:ab:e3:23:4c  500       1/1/23

```

#### *output definitions*

---

<b>Router IP Addr</b>	Displays the IP address of the router learned through option-3 in DHCPACK message.
<b>Hardware Addr</b>	Displays the MAC address of the router.
<b>Vlan</b>	Displays the VLAN associated with the router.
<b>Interface</b>	The exact interface on which the router IP was learned.

---

# 46 Learned Port Security Commands

Learned Port Security (LPS) provides a mechanism for controlling network device communication on one or more switch ports. Configurable LPS parameters allow the user to restrict source learning on a port to:

- A maximum number of learned source MAC addresses.
- A specific amount of time in which source MAC addresses are learned.
- An individual learned source MAC address.
- A range of learned source MAC addresses.

This chapter includes descriptions of the CLI commands used to define LPS parameters and display information about the current LPS configuration.

MIB information for Learned Port Security commands is as follows:

*Filename:* ALCATEL-IND1-LPS-MIB.mib  
*Module:* alcatelIND1LearnedPortSecurityMIB

A summary of the available commands is listed here:

---

**port-security learn-trap-threshold**  
**show port-security**  
**show port-security mac-range**  
**show port-security learning-window**

---

## port-security

Enables or disables Learned Port Security (LPS) on the switch port(s). When LPS is enabled, only devices that have a source MAC address that complies with LPS restrictions are learned on the port(s).

**port-security** {**port** *chassis/slot/port[-port2]* | **chassis**} [**admin-state** {**enable** | **disable** | **locked**}]

**no port-security port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<b>chassis</b>	Specifies all LPS ports.
<b>enable</b>	Administratively enables LPS on the specified port(s).
<b>disable</b>	Administratively disables LPS on the specified port(s). All bridged and filtered MAC addresses are cleared, but the static MAC address and LPS configuration for the port is retained. Learning is unrestricted.
<b>locked</b>	Administratively disables all learning on the port. Existing MAC addresses are retained but no additional learning of addresses, except for static MAC addresses, is allowed.

### Defaults

By default, LPS functionality is disabled on all ports.

The following default value applies if the **admin-state** parameter is *not* specified with this command:

parameter	default
<b>admin-state</b>	<b>enable</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove the LPS configuration from the specified port *and* clear all MAC addresses learned on the port. Note that the **chassis** parameter is not supported when using the **no** form of this command.
- The **admin-state disable** option disables LPS on the port but does not clear the LPS configuration.

- Use the **chassis** parameter to administratively disable or enable all active LPS ports with one command. This option does not apply to ports on which LPS was not previously enabled.
- LPS is supported on Ethernet fixed and 802.1Q-tagged ports. However, LPS is *not* supported on ports that are configured as service access ports.
- LPS is not supported on link aggregates, 802.1Q tagged (trunked) link aggregates, or link aggregate member ports.
- Note that when LPS is enabled on an active port, all MAC addresses previously learned on that port are cleared from the source learning MAC address table.
- LPS is also supported on ports that have Universal Network Profile (UNP) functionality enabled, with the following conditions:
  - When LPS is enabled or disabled on a UNP bridge port (LPS is not supported on UNP access ports), MAC addresses already learned on that port are flushed.
  - UNP authentication and classification is applied first, then LPS rules.
  - If UNP classifies a MAC address as forwarding but LPS learns the address as filtering, an untagged packet will show as filtering in the default VLAN for the port and a tagged packet MAC will show as filtering in the specific tagged VLAN.
  - When a MAC address is filtered by LPS, the **show unp user status** command will display “LPS-B” as the profile classification source for that MAC address.
- LPS allows for the configuration of the following source MAC address learning restrictions:
  - A source learning time limit window to specify the length of time learning is allowed on a port.
  - A maximum number of bridged and filtered MAC addresses allowed on a specific port
  - A list of MAC addresses (individual or range of addresses) allowed on a port.
  - How a port handles traffic that is unauthorized.

## Examples

```
-> port-security port 4/8 admin-state enable
-> port-security port 2/1-10 admin-state enable
-> port-security chassis admin-state disable
-> no port-security port 1/1-12
```

## Release History

Release 7.1.1; command introduced.

**Related Commands**

<b>port-security mac-range</b>	Configures a list of authorized MAC addresses by defining a range of addresses allowed on the port.
<b>port-security maximum</b>	Specifies the maximum number of source MAC addresses that an LPS port(s) is allowed to learn.
<b>port-security learning-window</b>	Configures the amount of time, in minutes, to allow source learning on all LPS ports.
<b>port-security port violation</b>	Selects the method for handling traffic that does not comply with LPS restrictions for the specified port(s).

**MIB Objects**

learnedPortSecurityTable  
lpsAdminStatus

---

## port-security learning-window

Configures the amount of time, in minutes, to allow source learning on all LPS ports. This LPS parameter applies to the entire switch, so when the time limit expires, source learning of *new* MAC addresses is stopped on all LPS ports. Only authorized MAC addresses are allowed to be associated on LPS ports after this timer expires. This command also enables or disables the conversion of dynamic MAC addresses to static MAC addresses on LPS ports.

**port-security learning-window** *minutes* [**convert-to-static** {**enable** | **disable**}] [**no-aging** {**enable** | **disable**}] [**mac-move** {**enable** | **disable**}] [**learn-as-static** {**enable** | **disable**}] [**boot-up** {**enable** | **disable**}]

**no port-security learning-window**

---

### Syntax Definitions

<i>minutes</i>	The number of minutes during which LPS allows source learning across all LPS ports. This amount of time defines the LPS learning window. The valid range is 0–2880. When this value is set to zero, the learning window time is set to infinity (no source learning time restriction on LPS ports).
<b>convert-to-static enable</b>	Enables the <b>convert-to-static</b> option for the learning window. Dynamically learned bridged (not filtered) MAC addresses are automatically converted to static addresses when the learning window closes. This option is automatically disabled when the LPS learning window is set to infinity (zero).
<b>convert-to-static disable</b>	Disables the <b>convert-to-static</b> option for the learning window. Dynamically learned bridged MAC addresses are not converted to static addresses and will start to age out when the learning window closes.
<b>no-aging enable</b>	Enables the <b>no-aging</b> option for the learning window. Dynamically learned bridged MAC addresses are learned as <i>pseudo-static</i> MACs, which do not age out but are not saved in the switch configuration. MAC movement is not allowed for pseudo-static MAC addresses unless the <b>mac-move</b> option is also enabled.
<b>no-aging disable</b>	Disables the <b>no-aging</b> option for the learning window. MAC addresses are learned as dynamic addresses that will age out.
<b>mac-move enable</b>	Enables the <b>mac-move</b> option. Allows a pseudo-static MAC address to move to a different port in the same VLAN without getting dropped. The <b>mac-move</b> option is used with the <b>no-aging</b> option to allow MAC movement for pseudo-static MAC addresses.
<b>mac-move disable</b>	Disables the <b>mac-move</b> option. If the <b>no-aging</b> option is enabled, MAC movement for pseudo-static MAC addresses is not allowed. Frames from a duplicate pseudo-static MAC address are dropped.
<b>learn-as-static enable</b>	Enables the <b>learn-as-static</b> option for the learning window. Dynamically learned bridged MAC addresses are converted to permanent static MAC addresses during the learning window time (even if the <b>convert-to-static</b> option is disabled). MAC movement is allowed for the permanent static MAC addresses. This option and the <b>no-aging</b> option are mutually exclusive.

<b>learn-as-static disable</b>	Disables the <b>learn-as-static</b> option for the learning window. Dynamically learned bridged MAC addresses are not converted to permanent static MAC addresses during the learning window time.
<b>boot-up enable</b>	Enables the automatic start of the LPS learning window timer when the switch restarts.
<b>boot-up disable</b>	Disables the automatic start of the LPS learning window timer when the switch restarts.

## Defaults

By default, the LPS source learning time limit is not set for the switch; the learning window defaults to infinity (source learning is not limited to a specific time frame).

parameter	default
<b>convert-to-static</b>	<b>disable</b>
<b>no-aging</b>	<b>disable</b>
<b>mac-move</b>	<b>disable</b>
<b>learn-as-static</b>	<b>disable</b>
<b>boot-up</b>	<b>enable</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to clear the learning window time (no learning window time limit is applied to the port).
- The LPS source learning time window is started and/or reset each time the **port-security learning-window** command is issued or when the **port-security learning-window boot-up** option is enabled and the switch restarts.
- Setting the LPS learning window time to 0 (zero) configures an infinite source learning time period for all LPS ports. The learning of MAC addresses on LPS ports never times out.
- When the LPS learning window time is set to zero, all options except the **convert-to-static** option are still valid. For example, the **no-aging** option setting still applies.
- After the LPS learning window time expires, MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of bridged MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

- Enabling the **no-aging** option triggers the following LPS learning window behavior:
  - All new bridged MAC addresses are learned as pseudo-static MAC addresses during the learning window time period. Pseudo-static addresses do not age out but are not saved to the switch configuration.
  - MAC movement is not allowed for pseudo-static MAC addresses unless the **mac-move** option is also enabled. The **mac-move** status (enabled or disabled) applies only to the **no-aging** option.
  - Enabling the **mac-move** option is not allowed unless the **no-aging** option is also enabled. When the **mac-move** option is enabled, disabling the **no-aging** option is *not* allowed.
  - When the learning window starts, any MAC addresses that were learned prior to the learning window time period are retained as dynamic addresses; they are not converted to pseudo-static MAC addresses.
- The **learn-as-static** and **no-aging** options are mutually exclusive; if both are enabled, then the **learn-as-static** option takes precedence.
- If the **convert-to-static** option is enabled, then all dynamic bridged and pseudo-static MAC addresses are converted to static MAC addresses when the learning window closes. Static MAC addresses do not age out and are saved to the switch configuration.

---

**Note.** When UNP is enabled on any one LPS port, the **convert-to-static**, **no-aging**, and **boot-up** parameter options are not supported on *all* LPS-enabled ports. This is because the learning window configuration is global and applies to all LPS ports.

---

## Examples

```
-> port-security learning-window 25
-> port-security learning-window 2 convert-to-static enable
-> port-security learning-window 60 no-aging enable mac-move enable
-> port-security learning-window 0 learn-as-static enable
-> port-security learning-window 500 boot-up disable
-> port-security learning-window 2 convert-to-static enable no-aging enable
-> port-security learning-window 2 no-aging enable convert-to-static enable boot-up
enable learn-as-static enable mac-move enable
-> no port-security learning-window
```

## Release History

Release 7.1.1; command introduced.

Release 7.2.1.R02; **no-aging** and **boot-up** parameters added.

Release 8.2.1; **learn-as-static** and **mac-move** parameters added.

## Related Commands

<b>port-security</b>	Enables or disables Learned Port Security (LPS) on the switch port(s).
<b>port-security maximum</b>	Specifies the maximum number of source MAC addresses that an LPS port(s) is allowed to learn.
<b>port-security port max-filtering</b>	Configures the maximum number of MAC addresses that can be filtered on the LPS port.
<b>port-security port violation</b>	Selects the method for handling traffic that does not comply with LPS restrictions for the specified port.
<b>show port-security learning-window</b>	Displays the source learning window configuration.

```

---

## port-security convert-to-static

Converts all MAC addresses dynamically learned on the LPS port(s) to static MAC addresses. This command does not apply to MAC addresses that are filtered.

**port-security {port chassis/slot/port[-port2] / chassis} convert-to-static**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<b>chassis</b>	Specifies all the LPS ports on the chassis.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Converting dynamic MAC addresses to static MAC addresses is not supported on Universal Network Profile (UNP) ports.
- You can stop the aging out of dynamic MAC addresses on the LPS port(s) by converting them to static MAC addresses.
- The number of converted static MAC addresses cannot exceed the maximum number of MAC addresses allowed on the port(s).

---

**Note.** The **port-security convert-to-static** command is not supported on UNP ports.

---

### Examples

```
-> port-security port 4/8 convert-to-static
-> port-security chassis convert-to-static
```

### Release History

Release 7.2.1.R02; command was introduced.

**Related Commands****port-security**

Enables or disables Learned Port Security (LPS) on the switch port(s).

**port-security maximum**

Specifies the maximum number of source MAC addresses that an LPS port(s) is allowed to learn.

**MIB Objects**

learnedPortSecurityGlobalGroup

lpsConvertToStatic

---

## port-security mac

Configures a static MAC address on the specified LPS port. This command also enables LPS on the specified port, if LPS is not already active on the port.

**port-security port** *chassis/slot/port[-port2]* **mac** *mac\_address* [**vlan** *vlan\_id*]

**no port-security port** *chassis/slot/port[-port2]* **mac** [**all** | *mac\_address*] [**vlan** *vlan\_id*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>mac_address</i>	MAC address to configure as a static MAC address on the specified LPS port (for example, 00:20:95:00:10:2A).
<b>vlan</b>	The VLAN ID to associate with the specified LPS port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to remove a specific static MAC address or all of the static MAC addresses configured on the specified LPS port. Note that even when all statically configured MAC addresses are removed, LPS remains active on the port.
- A VLAN-port association (VPS) must exist between the specified VLAN and the LPS port. If no VLAN ID is specified with this command, the default VLAN for the LPS port is used.
- The following conditions will display an error or warning message:
  - A VLAN ID is specified that is not associated with the LPS port:
  - An attempt is made to configure a MAC address more than once on the same LPS port with the same VLAN association.
  - A duplicate MAC address is configured on different LPS ports.
- Configuring a multicast MAC address, an all zero MAC address, or a broadcast MAC address is not allowed with this command.
- Use this command instead of the **mac-learning static mac-address** command to create a static MAC address on an LPS port.

## Examples

```
-> port-security port 1/1/20 mac 00:20:95:00:fa:5c
-> port-security port 1/1/1-15 mac 00:da:95:00:00:10
-> no port-security port 1/1/20 mac 00:20:95:00:fa:5c
-> no port-security port 1/1/1-15 mac 00:da:95:00:00:10

-> port-security port 1/1/20 mac 00:2a:95:11:22:10 vlan 200
ERROR: Vlan 200 is not valid on this port

-> port-security port 1/1/20 mac 00:2a:95:11:22:10 vlan 200
-> port-security port 1/1/20 mac 00:2a:95:11:22:10 vlan 200
ERROR: Mac 00:2a:95:11:22:10 ALREADY exists on Vlan 200 for port 1/1/20

-> port-security port 1/1/20 mac 00:2a:95:11:22:10 vlan 200
-> port-security port 1/1/21 mac 00:2a:95:11:22:10 vlan 200
WARNING: LPS Static MAC 00:2a:95:11:22:10 already exists on vlan 200 on a different
port
```

## Release History

Release 8.4.1; command introduced.

## MIB Objects

```
learnedPortSecurityAgL2MacAddressTable
  lpsAgL2MacAddress
  lpsAgL2VlanId
  lpsAgL2MacAddressRowStatus
```

---

## port-security maximum

Specifies the maximum number of bridged MAC addresses that an LPS port(s) is allowed to learn.

**port-security port chassis/slot/port[-port2] maximum number**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>number</i>	The number of source MAC addresses that are allowed on this port. The valid range is 1–1000.

### Defaults

By default, the number of MAC addresses allowed is set to 1.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Any additional source MAC addresses received that exceed the maximum number of bridged addresses allowed are filtered on the port, regardless of the LPS learning window time limit. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.
- Note that source learning of configured authorized MAC addresses is still allowed after the LPS time limit has expired; however, all learning is stopped if the number of MAC addresses learned meets or exceeds the maximum number of addresses allowed, even if the LPS time limit has not expired.

### Examples

```
-> port-security port 2/14 maximum 25
-> port-security port 4/10-15 maximum 100
```

### Release History

Release 7.1.1; command introduced.

<b>port-security learn-trap-threshold</b>	Configures the number of bridged MAC addresses to learn before sending a SNMP trap.
<b>port-security port violation</b>	Selects the method for handling traffic that does not comply with LPS restrictions for the specified port.

## MIB Objects

learnedPortSecurityTable  
lpsMaxMacNum

---

## port-security learn-trap-threshold

Configures the number of bridged MAC addresses to learn before sending a SNMP trap.

**port-security port chassis/slot/port[-port2] learn-trap-threshold number**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>number</i>	The number of bridged MAC addresses to learn before sending a trap. The valid range is 0–1000.

### Defaults

By default, the number of bridged MAC addresses to learn before sending a trap is set to the same value as the maximum number of bridged MAC addresses allowed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the number of bridged MAC addresses learned on the port matches the specified threshold amount, a trap is sent for every bridged MAC address learned thereafter.
- Sending a trap when this threshold is reached provides notification of newly learned bridged MAC addresses. Trap contents includes identifying information about the MAC, such as the address itself, the corresponding IP address, switch identification, and the slot and port number on which the MAC was learned.
- If this threshold value is set to zero, a trap is sent for every MAC address learned on the LPS port.

### Examples

```
-> port-security port 1/10 learn-trap-threshold 6
-> port-security port 1/10-13 learn-trap-threshold 18
```

### Release History

Release 7.1.1; command introduced.

lpsLearnTrapThreshold

---

## port-security port max-filtering

Configures the maximum number of MAC addresses that can be filtered on the LPS port(s).

**port-security port** *chassis/slot/port[-port2]* **max-filtering** *number*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>number</i>	The maximum number of filtered MAC addresses that are allowed on this port. The valid range is 0–100.

### Defaults

By default, the maximum number of MAC addresses that can be filtered on an LPS port is 5.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the number of filtered MAC addresses learned on the port reaches the maximum, the violation mode (restrict, discard, or shutdown) configured for the port is applied.
- Any additional source MAC addresses received that exceed the maximum number of bridged addresses allowed are filtered on the port, regardless of the LPS learning window time limit. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.
- Even after the LPS learning window time expires, MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

### Examples

```
-> port-security port 1/10 max-filtering 6
-> port-security port 1/10-13 max-filtering 18
```

### Release History

Release 7.1.1; command introduced.

learnedPortSecurityTable  
lpsMaxFilteredMacNum

---

## port-security mac-range

Configures a list of authorized MAC addresses by defining a range of addresses allowed on the port. This command also enables LPS on the specified port, if LPS is not already active on the port.

**port-security port chassis/slot/port[-port2] mac-range [low mac\_address / high mac\_address]**

**no port-security port chassis/slot/port[-port2] mac-range [low mac\_address]**

---

### Syntax Definitions

<i>chassis/slot/port[-port2]</i>	The chassis, slot and port number (1/1/1). Use a hyphen to specify a range of ports (1/1/1-8). On the OmniSwitch 6900 only, configuring multiple MAC address ranges for the same port is supported.
<b>low mac_address</b>	MAC address that defines the low end of a range of MACs (for example, 00:20:95:00:10:2A).
<b>high mac_address</b>	MAC address that defines the high end of a range of MACs (for example, 00:20:95:00:10:2F).

### Defaults

parameter	default
<b>high mac_address</b>	ff:ff:ff:ff:ff:ff
<b>low mac_address</b>	00:00:00:00:00:00

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- By default, each LPS port is set to a range of 00:00:00:00:00:00–ff:ff:ff:ff:ff:ff, which includes all MAC addresses.
- Source MAC addresses received on an LPS port that fall within the authorized range are allowed on the port. An additional entry is made in the LPS table for each of these learned addresses.
- Any additional source MAC addresses received that do not match the configured authorized addresses are not allowed (filtered) on the port, regardless of the LPS learning window time limit or the maximum number of bridged addresses allowed. Once the number of filtered MAC addresses reaches the maximum number of filtered addresses allowed, the port violation mode is applied.

- Configuring more than one MAC address range per port is supported. When attempting to configure multiple MAC address ranges on the same port, consider the following:
  - A maximum of eight multiple MAC address ranges can be configured per port.
  - On a newly configured LPS port, the first user configured MAC range would overwrite the default MAC range.
  - A MAC range cannot overlap with another MAC range configured for the port.
  - Modifying a MAC range is allowed only if the lower MAC address is not changed and the defined new range does not overlap with the existing range. To modify the lower MAC address, the existing range must be deleted before adding the new range.
    - When modifying a MAC range, the new range must match or accommodate any existing static MACs on the port, else an error will be thrown indicating some static MACs exist on the port that fall outside the new/resultant MAC range being configured. (Note: It is required to flush such static MACs on the port, if user needs to configure the new MAC range, which was not accommodating the static MACs).
    - When the MAC range size is increased, all the dynamic filtering MACs on the port would be flushed.
    - When the MAC range size is reduced, any existing dynamic forwarding MACs learned on the port would be flushed if they fall outside any MAC ranges configured on the port at that point of time.
    - All the dynamic filtering MACs learned on the port would be flushed.
- Use the **no** form of this command to delete the configured MAC range.
- The default MAC range is automatically applied when all the configured MAC ranges for the port are deleted.
- The default MAC range on the port cannot be deleted.

## Examples

```
-> port-security port 1/5/11-15 mac-range low 00:da:95:00:00:10 high
00:da:95:00:00:1f

```

## Release History

Release 7.1.1; command introduced.

Release 8.5R3; ability to configure multiple MAC ranges per port added.

## Related Commands

<a href="#">port-security</a>	Enables or disables Learned Port Security (LPS) on the switch port(s).
<a href="#">port-security learning-window</a>	Configures the amount of time in minutes to allow source learning on all LPS ports.
<a href="#">port-security maximum</a>	Specifies the maximum number of source MAC addresses that an LPS port(s) is allowed to learn.
<a href="#">port-security port max-filtering</a>	Configures the maximum number of MAC addresses that can be filtered on the LPS port.
<a href="#">port-security port violation</a>	Selects the method for handling traffic that does not comply with LPS restrictions for the specified port.
<a href="#">show port-security</a>	Displays the LPS configuration and table entries.
<a href="#">show port-security mac-range</a>	Displays the MAC ranges configured on the LPS ports.

## MIB Objects

  lpsL2LowMacAddress
  lpsL2HighMacAddress
```

---

## port-security port violation

Selects the method for handling traffic that does not comply with LPS restrictions for the specified port(s).

**port-security port chassis/slot/port[-port2] violation {shutdown | restrict | discard}**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<b>shutdown</b>	The port is administratively disabled when the port receives unauthorized traffic. No further traffic is allowed on the port.
<b>restrict</b>	Filters (blocks) unauthorized traffic but allows traffic that complies with LPS restrictions to forward on the port. The port remains administratively enabled.
<b>discard</b>	Disables learning on the port when unauthorized traffic is received or the configured maximum number of MAC addresses is reached. The port remains administratively enabled.

### Defaults

By default, the security violation mode is set to **restrict** when LPS is enabled on the port.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When a traffic violation occurs on an LPS port, a notice is sent to the switch log.
- If the violation mode is set to **restrict**, unauthorized source MAC addresses are not learned in the LPS table, but they are recorded in the source learning MAC address table with a filtered operational status. This allows the user to view MAC addresses attempting unauthorized access to the LPS port.

### Examples

```
-> port-security port 2/14 violation restrict
-> port-security port 4/10-15 violation shutdown
-> port-security port 1/37 violation discard
```

### Release History

Release 7.1.1; command introduced.  
Release 7.2.1.R02; **discard** parameter added.

**Related Commands****port-security**

Enables or disables Learned Port Security (LPS) on the switch port(s).

**interfaces fec**

Clears all port violations; allows the port to resume normal operation without a manual reset of the port or module.

**show port-security**

Displays Learned Port Security (LPS) configuration and table entries.

**MIB Objects**

learnedPortSecurityTable

lpsViolationOption

---

## show port-security

Displays the Learned Port Security (LPS) configuration and table entries.

**show port-security** {**port** [*chassis/slot/port*[-*port2*] / **slot** *chassis/slot*]}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i> [- <i>port2</i> ]	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-8).
<i>slot</i>	Enter the slot number for a module to specify that the command should include all ports on that module (for example, 6 specifies all ports on the module found in slot 6 of the switch chassis).

### Defaults

By default, all ports with an LPS configuration are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Displays ports that have an LPS configuration, even if LPS is disabled on the port.
- Use the **port** parameter with this command to display the LPS configuration for a specific port or a range of ports.
- Use the **slot** parameter with this command to display the LPS configuration for all the ports on a specific slot.
- In addition, MAC addresses learned on the LPS enabled port that are within the specified MAC address range appear as a separate entries in the LPS table as dynamic MAC type addresses.
- The MAC Type field is blank if an authorized MAC address range is configured for the LPS port.

### Examples

```
-> show port-security port 1/1/20
Legend: Mac Address: * = address not valid,
        Mac Address: & = duplicate static address,

Port: 1/1/20
Admin-State      :          ENABLED,
Operation Mode   :          ENABLED,
Max MAC bridged  :          3,
```

```

Trap Threshold      :          1,
Violation          :          RESTRICT
Max MAC filtered   :          5,
Violating MAC      :          NULL
    
```

MAC	VLAN	MAC TYPE	OPERATION
00:11:22:22:22:21	1	STATIC	bridging
00:11:22:22:22:22	1	STATIC	bridging
00:11:22:22:22:23	1	PSEUDO-STATIC	bridging

*output definitions*

<b>Port</b>	The module slot number and the physical port number on that module.
<b>Admin-State</b>	The LPS administrative state for the port ( <b>Enabled</b> , <b>Disabled</b> , or <b>Locked</b> ). Configured through the <b>port-security</b> command.
<b>Operation Mode</b>	The LPS operational mode for the port ( <b>Enabled</b> , <b>Disabled</b> , <b>Restricted</b> , <b>Shutdown</b> , <b>Discard</b> , <b>Locked</b> , or <b>Filtered-only</b> ).
<b>Max MAC bridged</b>	The maximum number of bridged MAC addresses that are allowed on this port. Configured through the <b>port-security maximum</b> command.
<b>Trap Threshold</b>	The number of bridged MACs to learn before sending a trap. After this number is reached, a trap is sent out for every MAC learned thereafter. If <b>disabled</b> is displayed in this field, the trap threshold is not in force. Configured through the <b>port-security learn-trap-threshold</b> command.
<b>Violation</b>	The security violation mode for the port ( <b>restrict</b> , <b>shutdown</b> , or <b>discard</b> ). Configured through the <b>port-security port violation</b> command.
<b>Max MAC filtered</b>	The maximum number of filtered MAC addresses that the LPS port can learn. Configured through the <b>port-security port max-filtering</b> command.
<b>Violating MAC</b>	The MAC Address that caused the violation on this port.
<b>MAC</b>	The MAC address learned dynamically or configured statically on the LPS port. Static MAC addresses configured through the <b>port-security mac</b> command.
<b>VLAN</b>	The VLAN to which the LPS port belongs.
<b>MAC TYPE</b>	Indicates if the MAC address was dynamically learned or statically configured as an authorized MAC address for the port.
<b>OPERATION</b>	The operational status of the MAC address ( <b>bridging</b> or <b>filtering</b> ).

**Release History**

Release 7.1.1; command introduced.

Release 7.2.1.R02: **Admin-State** and **Violating MAC** fields added.

Release 8.4.1; **MAC Address: \*** = **address not valid** and **MAC Address: &** = **duplicate static address** legend added.

## show port-security mac-range

Displays the MAC range configured on the Learned Port Security (LPS) ports.

**show port-security [port chassis/slot/port[-port2]] mac-range**

---

### Syntax Definitions

*chassis/slot/port[-port2]* The chassis, slot and port number (1/1/1). Use a hyphen to specify a range of ports (1/1/1-8).

### Defaults

By default, all the LPS ports configured with MAC range are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Specify the chassis, slot, and port to view the MAC range configured for the specific port.

### Examples

```
-> show port-security port 1/1/4 mac-range
Port: 1/1/4:
      Low MAC Range                High MAC Range
-----+-----
00:00:00:00:00:00                00:00:00:00:00:10
00:00:00:44:00:01                00:00:00:66:ff:ff
```

```
-> show port-security mac-range
Port: 1/1/2:
      Low MAC Range                High MAC Range
-----+-----
00:00:00:00:00:01                00:00:00:00:00:20
00:00:00:00:55:01                00:00:00:00:55:ff
00:00:00:66:00:01                00:00:00:99:ff:ff
```

```
Port: 1/1/4:
      Low MAC Range                High MAC Range
-----+-----
00:00:00:00:00:00                00:00:00:00:00:10
00:00:00:44:00:01                00:00:00:66:ff:ff
```

*output definitions*

---

<b>Port</b>	The chassis slot number and the physical port number on that chassis.
<b>Low MAC Range</b>	MAC address that defines the lower end of a MAC address range. Configured through the <b>port-security mac-range</b> command.
<b>High MAC Range</b>	MAC address that defines the higher end of a MAC address range. Configured through the <b>port-security mac-range</b> command.

---

**Release History**

Release 8.5R3; command introduced.

**Related Commands**

**port-security mac-range** Configures a list of authorized MAC addresses by defining a range of addresses allowed on the port.

**MIB Objects**

learnedPortSecurityL2MacRangeTable  
lpsL2LowMacAddress  
lpsL2HighMacAddress

---

## show port-security brief

Displays the LPS port configuration for all the LPS ports.

**show port-security brief**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The LPS port parameter values are displayed even if the LPS is disabled on the port.
- The operation mode displayed for the LPS port is based on a combination of the existing administrative status and the operational status of the port, the result of which is one of the following values:
  - Enabled
  - Restricted (only when the administrative status is enabled)
  - Shutdown (only when the administrative status is enabled)
  - Discard (only when the administrative status is enabled)
  - Disabled
  - Locked
  - Filtered\_only

### Examples

```
-> show port-security brief
Slot/      Max      Max      Nb Macs  Nb Macs  Nb Macs  Nb Macs
Port  Operation Mode  Bridge  Filter  Dyn Br   Dyn Fltr  Static Br  Static Fltr
-----+-----+-----+-----+-----+-----+-----+
1/1    ENABLED           5       100     5         10         0         0
1/2    ENABLED           5       100     0         10         5         0
1/3    RESTRICTED       5       100     5         100        0         0
1/4    SHUTDOWN         5       100     -          -          -         0
1/5    DISABLED         5       100     -          -          -         0
1/6    LOCKED           5       100     -          -          3         0
```

*output definitions*

---

<b>Slot/Port</b>	The slot number for the module and the physical port number on that module (e.g., 1/2 specifies port 2 on slot 1).
<b>Operation Mode</b>	Displays the status of the LPS port.
<b>Max Bridge</b>	The maximum number of bridged MAC addresses that are allowed on the LPS port. Configured through the <a href="#">port-security maximum</a> command.
<b>Max Filter</b>	The maximum number of filtered MAC addresses that the LPS port can learn. Configured through the <a href="#">port-security port max-filtering</a> command.
<b>Nb Macs Dyn Br</b>	Total number of bridged MAC addresses learned on the LPS port.
<b>Nb Macs Dyn Fltr</b>	Total number of filtered MAC addresses learned on the LPS port.
<b>Nb Macs Static Br</b>	Total number of bridged static MAC addresses (configured static and MAC addresses learned as pseudo-static) on the LPS port.
<b>Nb Macs Static Fltr</b>	Total number of filtered static MAC addresses configured on the LPS port.

---

**Release History**

Release 7.2.1.R02; command was introduced.

**Related Commands**

[show port-security](#) Displays the LPS configuration and table entries for individual LPS ports.

**MIB Objects**

```
learnedPortSecurityTable
  lpsMaxMacNum
  lpsMaxFilteredMacNum
  lpsMaxStaticMacNum
  lpsOperStatus
  lpsAdminStatus
```

---

## show port-security learning-window

Displays the source learning window configuration.

**show port-security learning-window**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The source learning time limit is a switch-wide parameter that applies to all ports that have LPS enabled.
- If the learning window time is not set, then no source learning time limit is applied to LPS ports.
- Even after the LPS learning window time expires, dynamic MAC addresses are learned as filtered addresses until the maximum number of filtered MAC addresses allowed for the LPS port is reached. For example, if the maximum number of bridged MAC addresses allowed is set to 30 and the learning window expires when the port has only learned 15, the port is still allowed to learn an additional 15 filtered MAC addresses.

### Examples

```
-> show port-security learning-window
Learning-Window           = 2 min,
Convert-to-static         = DISABLE,
No Aging                  = DISABLE,
Boot Up                   = ENABLE,
Remaining Learning Window = 120 sec
Learn As Static           = ENABLE,
Mac Move                  = DISABLE,
```

*output definitions*

---

<b>Learning-Window</b>	The configured amount of time during which the LPS port can learn new MAC addresses. This value of this field is set to <b>INFINITY</b> when the learning time window is set to zero (no source learning time restriction on LPS ports).
<b>Convert-to-static</b>	Indicates whether or not dynamic bridged or pseudo-static MACs are converted to static MACs ( <b>ENABLED</b> or <b>DISABLED</b> ). This option is always disabled when the LPS learning window is set to infinity (zero).
<b>No Aging</b>	Indicates whether or not bridged MAC addresses are learned as pseudo-static MAC addresses, which do not age out during the LPS learning window time period ( <b>DISABLED</b> or <b>ENABLED</b> ).
<b>Boot Up</b>	Indicates whether or not the LPS learning window automatically starts when the switch boots up ( <b>enabled</b> or <b>disabled</b> ).
<b>Learn As Static</b>	Indicates whether or not dynamic MAC addresses are automatically learned as static MAC addresses during the LPS learning window time period. The <b>Learn As Static</b> and <b>No Aging</b> learning window options are mutually exclusive.
<b>Mac Move</b>	Indicates whether or not pseudo-static MAC addresses are allowed to move to a different port in the same VLAN during the LPS learning window time period. The <b>Mac Move</b> learning window option applies only when the <b>No Aging</b> option is enabled.
<b>Remaining Learning Window</b>	The remaining amount of time during which the LPS port can learn MAC addresses. If the learning time window is set to <b>INFINITY</b> (zero), this field does not display in the show command output.

---

**Release History**

Release 7.1.1; command introduced.

Release 7.2.1.R02; **LPS Shutdown Config** field changed to **Learning-Window**, **No Aging** and **Boot Up** fields added.

---

# 47 Port Mirroring and Monitoring Commands

The Port Mirroring and Port Monitoring features are primarily used as diagnostic tools.

The Port Mirroring feature allows you to have all the inbound and outbound traffic of an Ethernet port sent to another port on the switch. When you enable port mirroring, the active, or “mirrored,” port transmits and receives network traffic normally and the “mirroring” port receives a copy of all transmit and receive traffic to the active port. You can connect an RMON probe or network analysis device to the mirroring port to see an exact duplication of traffic on the mirrored port without disrupting network traffic to and from the mirrored port.

The Port Monitoring feature allows you to capture and examine the data traffic to and from a monitored Ethernet port.

MIB information for the Port Mirroring commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MIRRORING-MONITORING-MIB.mib  
*Module:* alcatelIND1PortMirrorMonitoringMIB

The following table summarizes the available commands:

<b>Port Mirroring Commands</b>	<a href="#">port-mirroring source destination</a> <a href="#">port-mirroring</a> <a href="#">show port-mirroring status</a>
<b>Port Monitoring Commands</b>	<a href="#">port-monitoring source</a> <a href="#">port-monitoring</a> <a href="#">show port-monitoring status</a> <a href="#">show port-monitoring file</a>

## port-mirroring source destination

Defines the port to mirror and the port that is to receive data from the mirrored port. Also, enables or disables remote port mirroring.

**port-mirroring** *port\_mirror\_sessionid* **source** {**port** *chassis/slot/port[-port2]*} **destination** {**port** *chassis/slot/port[-port2]* / **linkagg** *linkagg[-linkagg2]*} [**rpmir-vlan** *vlan\_id*] [**bidirectional** | **inport** | **outport**] [**unblocked-vlan** *vlan\_id*] [**tag-remove**] [**enable** | **disable**]

**port-mirroring** *port\_mirror\_sessionid* **no source** {**port** *chassis/slot/port[-port2]*} [*chassis/slot/port[-port2]*...]

**port-mirroring** *port\_mirror\_sessionid* **no destination** {**port** *chassis/slot/port[-port2]*} [*chassis/slot/port[-port2]*...] | **linkagg** *linkagg[-linkagg2]* [*linkagg[-linkagg2]*...]

---

### Syntax Definitions

<i>port_mirror_sessionid</i>	Mirroring session identifier.
<b>source</b>	Specifies source port, or range of ports desired to be mirrored.
<b>destination</b>	Specifies the destination port or linkagg that receives all the mirrored packets.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number. Use a hyphen to specify a range of ports.
<i>linkagg[-linkagg2]</i>	The destination link aggregate. Use a hyphen to specify a range. <i>This parameter is supported only on the OmniSwitch 6860, OmniSwitch 6900, and OmniSwitch 9900.</i>
<b>rpmir-vlan</b> <i>vlan_id</i>	Specifies a reserved VLAN to carry the mirroring traffic. Use this parameter to configure remote port mirroring. See “Usage Guidelines - Remote Port Mirroring” below for more information.
<b>bidirectional</b>	Specifies bidirectional port mirroring.
<b>inport</b>	Specifies incoming unidirectional port mirroring.
<b>outport</b>	Specifies outgoing unidirectional port mirroring.
<b>unblocked-vlan</b> <i>vlan_id</i>	Specifies the VLAN that is to be protected from Spanning Tree changes when port mirroring is active. Ports in this VLAN remain unblocked.
<b>tag-remove</b>	Removes the VLAN tag on mirrored traffic that egresses out of the destination mirroring ports. <i>This parameter is supported only on the OmniSwitch 9900.</i>
<b>enable</b>	Enables port mirroring status.
<b>disable</b>	Disables port mirroring status.

### Defaults

parameter	default
<b>bidirectional</b>   <b>inport</b>   <b>outport</b>	<b>bidirectional</b>
<b>enable</b>   <b>disable</b>	<b>disable</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Port mirroring cannot be configured on an AppMon enabled port.
- You can configure a port mirroring and a port monitoring session on the same network interface module.
- A mirroring port can not be assigned to a tagged VLAN port.
- When a port is configured as a mirroring port, it does not belong to any VLAN. Inbound traffic to the mirroring port is dropped since it does not belong to any VLAN.
- To mirror traffic from SAP port to destination port, explicitly create a VLAN same as the SAP VLAN.
- Spanning tree is disabled by default on a mirroring port.
- Port mirroring is not supported on logical link aggregate ports. However, it is supported on individual ports that are members of a link aggregate.
- Port mirroring destination port can be a link aggregate. This functionality is supported on OmniSwitch 6900 and OmniSwitch 6860 platforms only.
- Use the **port mirroring source destination** command to define the mirrored port and enable port mirroring status. Use the **port mirroring** command to enable the port mirroring session.
- Specify the *vlan\_id* number of the mirroring port that is to remain **unblocked** when the command is executed. The **unblocked** VLAN becomes the default VLAN for the mirroring port. This VLAN handles the inbound traffic for the mirroring port. Spanning Tree remains disabled on the unblocked VLAN.
- A maximum of 128 source mirroring ports can be configured. In case of mirroring to LACP Link Aggregate, only the first 8 aggregable ports will be used for mirroring.
- Unblocked VLAN and RPMIR configuration cannot co-exist in the same port mirroring session.
- A port/link aggregate which is to be configured as a mirroring destination should have no prior configuration on it, for example, a MVRP enabled port/link aggregate cannot be configured as a mirroring destination. The only exception to this rule is that a port can be a untagged or a tagged member of a standard VLAN.
- Any protocol/feature configurations on existing mirroring destinations would fail. All such configuration attempts would result in an error. The only exception to this is that if a mirroring destination is part of a mirroring session which has remote port mirroring VLAN configured (RPMIR VLAN) then such a destination can be made a tagged and/or untagged member of standard VLAN(s).
- Supports single destination mirroring port per session and seven port mirroring sessions in a system on OmniSwitch 6465 and OmniSwitch 6560 platforms.

- Supports multiple destination mirroring port and link aggregates per session and seven port mirroring sessions, and 128 destination mirroring ports or link aggregates in a system. This functionality is supported on OmniSwitch 9900.
- Supports policy based multiple destination mirroring on a single port mirroring session. This functionality is supported on OmniSwitch 9900.
  - To enable this functionality, configure port mirroring session with destination port and then apply policy based configuration on the port mirroring session.
  - Use the QoS mirror session attribute to support policy based multiple destination mirroring. QoS mirroring session attribute can be specified as a part of policy action in the **policy action** command. Mirroring can be done on the ingress packets only. Only one session ID is supported for policy based mirroring, thus all the policies must specify the same session ID. For more information on policy based mirroring, see [Chapter 36, “QoS Policy Commands.”](#)
- Use the **tag remove** option to remove the VLAN tag on mirrored traffic that egresses out of destination mirroring ports. For double tagged mirrored packet, this option removes the outer VLAN tag.
- RPMIR and **tag remove** configuration is mutually exclusive and hence cannot co-exist in the same port mirroring session.

### Usage Guidelines - Remote Port Mirroring

- Use the **rpmir-vlan** parameter and VLAN ID with this command to configure remote port mirroring and to assign the VLAN ID for remote port mirroring.
  - Remote port mirroring is *not* supported on the OmniSwitch 6900-V72/C32, OmniSwitch 6900-X48C6/T48C6, and OmniSwitch 9900.
  - Remote port mirroring over a link aggregate is *not* supported on the OmniSwitch 6465, OmniSwitch 6560, OmniSwitch 6900-V72/C32, OmniSwitch 6900-X48C6/T48C6, and OmniSwitch 9900.
- The VLAN ID assigned for remote port mirroring cannot be assigned to a general port mirroring port.
- There must not be any physical loop present in the remote port mirroring VLAN.
- Source learning must be disabled or overridden on the ports belonging to the remote port mirroring VLAN on intermediate and destination switches.
- The QoS redirect feature can be used to override source learning.
- The **mac-learning** command can also be used to disable learning on the RPMIR VLAN ID.
- VLAN 1 cannot be configured as the RPMIR VLAN.
- When mirroring configuration is removed from a mirroring destination, the port/link aggregate is made an untagged member of VLAN 1. The only exception to this is when the destination in a mirroring session with RPMIR configuration.

### Examples

```
-> port-mirroring 6 source port 1/2/2 destination port 1/1/3
-> port-mirroring 6 destination port 1/1/3 rpmir-vlan 7
-> port-mirroring 6 no source port 1/2/2

-> port-mirroring 7 source port 1/2/3 destination linkagg 3 unblocked-vlan 750
-> port-mirroring 7 source port 1/2/3 output

-> port-mirroring 7 source port 1/2/3 destination linkagg 3 tag-remove
```

```
-> port-mirroring 9 source port 1/1/23 destination port 1/1/24  
-> port-mirroring 9 disable
```

## Release History

Release 7.1.1; command introduced.

Release 8.4.1.R03; Mirroring to a link aggregate supported on OmniSwitch 6900 and OmniSwitch 6860.

Release 8.6.R1; **tag-remove** keyword added, policy based multiple destination mirroring supported on OmniSwitch 9900.

## Related Commands

### [port-mirroring](#)

Enables, disables, or deletes a port mirroring session.

### [show port-mirroring status](#)

Displays the status of mirrored ports. This value may be enabled or disabled.

## MIB Objects

mirrorTable

```
mirrorMirroringIfindex  
mirrorDirection  
mirrorStatus  
mirrorUnblockedVLAN  
mirrorRowStatus  
mirrorDirection  
mirrorSessOperStatus  
mirrorTaggedVLAN  
mirrorDstTagRemove
```

---

## port-mirroring

Enables, disables, or deletes a port mirroring session.

**port-mirroring** *port\_mirror\_sessionid* {**enable** | **disable**}

**no port-mirroring** *port\_mirror\_sessionid*

---

### Syntax Definitions

*port\_mirror\_sessionid* Mirroring session identifier.

**enable** Enables port mirroring.

**disable** Disables port mirroring.

### Defaults

parameter	default
<b>enable</b>   <b>disable</b>	<b>disable</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to delete a port mirroring session.
- Use the [port-mirroring source destination](#) command to specify the mirrored ports and destination port. before using this command to enable or disable port mirroring activity for the particular port mirroring session.

### Examples

```
-> port-mirroring 6 enable
-> port-mirroring 6 disable
-> no port-mirroring 6
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

[port-mirroring source destination](#)

Defines a port to mirror and the port that is to receive data from the mirrored port, and enables or disables port mirroring status.

[show port-mirroring status](#)

Displays the status of mirrored ports. This value may be enabled or disabled.

## MIB Objects

mirrorTable

mirrorMirroringIfindex

mirrorStatus

---

## port-monitoring source

Configures a port monitoring session.

**port-monitoring** *port\_monitor\_sessionid* **source port** *chassis/slot/port[-port2]* [**file** *filename* [**size** *filesize*] | **no file** | **overwrite** {**on** | **off**}] [**inport** | **outport** | **bidirectional**] [**timeout** *seconds*] [**enable** | **disable**] [**capture-type** {**full** | **brief**}]

**port-monitoring** *port\_monitor\_sessionid* **no source port** *chassis/slot/port[-port2]*

---

### Syntax Definitions

<i>port_monitor_sessionid</i>	Monitoring session identifier.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port2]</i>	The slot and port number. Use a hyphen to specify a range of ports.
<i>filename</i>	Specifies a file name and pathname for capturing information related to the monitoring session (for example, <b>/flash/port2.enc</b> ).
<i>filesize</i>	Specifies the size of the file in 64K byte increments. For example, a value of 3 would specify a size of (3 x 64K) bytes.
<b>no file</b>	<i>This option is not supported at this time.</i>
<b>on</b>	Specifies that capturing of data packets into the port monitoring file continues and old information is overwritten if the total data exceeds the specified file size.
<b>off</b>	Specifies that capturing of data packets into the port monitoring file is stopped when the maximum file size is reached.
<b>inport</b>	Specifies incoming unidirectional port monitoring.
<b>outport</b>	Specifies outgoing unidirectional port monitoring.
<i>seconds</i>	Specifies the number of seconds after which the session is disabled.
<b>enable</b>	Enables the port monitoring status.
<b>disable</b>	Disables the port monitoring status.
<b>full</b>	Captures port monitoring information in detail.
<b>brief</b>	Captures only the concise port monitoring data transmitted.

### Defaults

parameter	default
<i>filesize</i>	1
<b>on</b>   <b>off</b>	<b>on</b>
<b>bidirectional</b>   <b>inport</b>   <b>outport</b>	<b>bidirectional</b>
<i>seconds</i>	0
<b>enable</b>   <b>disable</b>	<b>disable</b>
<b>capture-type</b>	<b>brief</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Port monitoring cannot be configured on an AppMon enabled port.
- You can configure a port mirroring and a port monitoring session on the same NI.
- If the port monitoring capture-type is set to **brief**, the first 64 bytes of the traffic is captured. If the port-monitoring capture-type is set to **full**, the entire packet is captured.
- By default, a file called **pmonitor.enc** is created in the **/flash** directory when you configure and enable a port monitoring session. Use the **file** option to create a user-specified file.
- The **/flash** directory is the default and the only directory used to capture the port monitoring files.
- The format of the file created is compliant with the ENC file format (Network General Sniffer Network Analyzer Format).
- By default, the recent frames overwrite the older frames in a port monitoring file if the total data exceeds the specified file size. Use the **overwrite off** option to prevent this from occurring.

## Examples

```
-> port-monitoring 6 source port 1/2/3
-> port-monitoring 6 source port 1/2/3 file /flash/user_port size 2 enable
-> port-monitoring 6 source port 1/2/3 file /flash/user_port capture-type full
-> port-monitoring 10 source port 1/4/22-30
-> port-monitoring 10 no source port 1/4/30
```

## port-monitoring

Disables, pauses, resume, or deletes an existing port monitoring session.

**port-monitoring** *port\_monitor\_sessionid* {**disable** | **pause** | **resume**}

**no port-monitoring** *port\_monitor\_sessionid*

---

### Syntax Definitions

<i>port_monitor_sessionid</i>	Monitoring session identifier.
<b>disable</b>	Disables the port monitoring session.
<b>pause</b>	Pauses the port monitoring session.
<b>resumes</b>	Resumes the port monitoring session.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of this command to delete a port monitoring session.

### Examples

```
-> port-monitoring 6 pause
-> port-monitoring 6 disable
-> port-monitoring 6 resume
-> no port-monitoring 6
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

## show port-mirroring status

Displays the status of mirrored ports.

**show port-mirroring status** [*port\_mirror\_sessionid*]

---

### Syntax Definitions

*port\_mirror\_sessionid*                      Mirroring session identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If a port mirroring session identifier is not specified with this command, then all port mirroring sessions are displayed.

### Examples

```
-> show port-mirroring status
Session      Mirror      Mirror      Unblocked   RPMIR      Config      Oper
  Destination Direction   Vlan        Vlan        Status      Status
-----+-----+-----+-----+-----+-----+-----
    1.      1/1/11      bidirectional  NONE        NONE        Enable      on

          Mirror
          Source
-----+-----+-----+-----+-----+-----+-----
    1.      1/1/2      bidirectional   -           -           Enable      On
    1.      1/1/3      bidirectional   -           -           Enable      On
    1.      1/1/4      bidirectional   -           -           Enable      On
    1.      1/1/5      bidirectional   -           -           Enable      On
```

#### output definitions

---

<b>Session</b>	The port mirroring session identifier.
<b>Mirror Destination</b>	The location of the mirrored port.
<b>Mirror Direction</b>	The direction of the mirroring or mirrored port, which can be <b>bidirectional</b> (the default), <b>import</b> , or <b>export</b> .
<b>Unblocked VLAN</b>	The mirroring VLAN ID number.
<b>RPMIR VLAN</b>	The reserved VLAN to carry the mirroring traffic.
<b>Config Status</b>	The configuration status of the session.

*output definitions (continued)*

---

<b>Oper Status</b>	The current status of the mirroring or mirrored port.
<b>Mirror Source</b>	The location of the mirroring port.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<a href="#">port-mirroring</a>	Enables, disables, or deletes a port mirroring session.

```

---

## show port-monitoring status

Displays port monitoring status.

**show port-monitoring status** [*port\_monitor\_sessionid*]

---

### Syntax Definitions

*port\_monitor\_sessionid*            Monitoring session identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If a port monitoring session identifier is not specified with this command, then all port monitoring sessions are displayed.

### Examples

```
-> show port-monitoring status
```

```

Sess Mon. Mon. Over Oper. Admin Capt. Max. File
     Src Dir write Stat Stat Type Size Name
-----+-----+-----+-----+-----+-----+-----+-----+-----
  1. 1/1/2  Out OFF   OFF  OFF  Brief   64K /flash/pm.enc

```

### output definitions

---

<b>Sess</b>	<b>Session</b> - The port monitoring session identifier.
<b>Mon. Src</b>	<b>Monitor Source</b> - The source ports that are monitored.
<b>Mon Dir</b>	<b>Monitor Direction</b> - The direction of the monitoring session, which can be <b>bidirectional</b> (the default), <b>inport</b> , or <b>outport</b> .
<b>Overwrite</b>	Whether files created by a port monitoring session can be overwritten. The default is ON.
<b>Oper Stat</b>	<b>Operating Status</b> - The current operating status of the port monitoring session (on/off).
<b>Admin Stat</b>	<b>Admin Status</b> - The current administrative status of the port monitoring session (on/off).

*output definitions (continued)*

---

<b>Capt Type</b>	<b>Capture type:</b> <b>Brief</b> - captures only 64 bytes of data per traffic data packet. <b>Full</b> - captures the entire packet.
<b>Max Size</b>	<b>Maximum Size</b> - The maximum size of the port monitoring file.
<b>File Name</b>	The name of the port monitoring file.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<a href="#">port-monitoring source</a>	Configures a port monitoring session.

```

---

## show port-monitoring file

Displays port monitoring data.

**show port-monitoring file** *port\_monitor\_sessionid*

---

### Syntax Definitions

*port\_monitor\_sessionid*                      Monitoring session identifier.

### Defaults

A single line from the captured packet is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Only a single line from the captured packet is displayed, even though the full packet is captured. To view the entire packet, download the file and view it using compatible network analyzer tool.

### Examples

```
-> show port-monitoring file 1
```

Destination	Source	Type	Data
01:80:C2:00:00:00	00:20:DA:8F:92:C6	BPDU	00:26:42:42:03:00:00:00:00:00

# 48 sFlow Commands

sFlow is a network monitoring technology that gives visibility in to the activity of the network, by providing network usage information. It provides the data required to effectively control and manage the network usage. sFlow is a sampling technology that meets the requirements for a network traffic monitoring solution.

sFlow provides a network-wide view of usage and active routes. It is used for measuring network traffic, collecting, storing, and analyzing the traffic data. As it is scalable, that doesn't add significant network load. sFlow is an industry standard with many vendors delivering products with this support. Some of the applications of the sFlow data include:

- Detecting, diagnosing, and fixing network problems
- Real-time congestion management
- Detecting unauthorized network activity
- Usage accounting and billing
- Understanding application mix
- Route profiling and peer optimization
- Capacity planning

sFlow is a sampling technology embedded within switches/routers. It provides the ability to monitor the traffic flows. It requires an sFlow agent software process running as part of the switch software and a sFlow collector which receives and analyses the monitored data. The sFlow collector makes use of SNMP to communicate with an sFlow agent in order to configure sFlow monitoring on the device (switch).

An sFlow agent running on the switch/router combines interface counters and traffic flow (packet) samples, preferably, on all the interfaces into sFlow datagrams that are sent across the network to an sFlow collector.

Packet sampling on the switch/router is typically performed by the switching/routing ASICs, providing wire-speed performance. In this case, an sFlow agent does very little processing, by packaging data into sFlow datagrams that are immediately sent on network. This minimizes the memory and CPU utilization by the sFlow agent.

MIB information for the sFlow commands is as follows:

*Filename:* ALCATEL-IND1-PORT-MIRRORING-MONITORING-MIB.mib  
*Module:* alcatelIND1PortMirrorMonitoringMIB

*Filename:* SFLOW-MIB.MIB.mib  
*Module:* sFlow

A summary of the available commands is listed here:

---

**sflow agent**  
**sflow receiver**  
**sflow sampler**  
**sflow poller**  
**show sflow agent**  
**show sflow receiver**  
**show sflow sampler**  
**show sflow poller**

---

## sflow agent

Configures a specific sFlow agent IP address.

**sflow agent ip** *ip\_address*

**no sflow agent ip** *ip\_address*

---

### Syntax Definitions

*ip\_address* The sFlow agent IP address.

### Defaults

parameter	default
<i>ip-address</i>	0.0.0.0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to delete the IP address.
- If no IP address is configured, 0.0.0.0 is used.
- If no IP address is configured but the Loopback0 address is configured, the Loopback0 address is used.

### Examples

```
-> sflow agent ip 192.168.1.1
-> no sflow agent ip 192.168.1.1
```

### Release History

Release 7.1.1; command was introduced.  
Release 7.3.4; command deprecated. Use **ip service source-ip**.

## Related Commands

**show sflow agent**                      Displays the agent table.

## MIB Objects

```
mirmonSFlowObjects  
  alasFlowAgentConfigType  
  alasFlowAgentAddressType  
  alasFlowAgentAddress
```

---

## sflow receiver

Sets the destination hosts where the sFlow datagrams are sent out. If there are multiple destinations, then each destination has an instance of the receiver. All these receivers are attached to the sFlow manager instance and to an associated sampler/poller.

**sflow receiver** *receiver\_index* {**name** *string* | **timeout** {*seconds* | **forever**} | **address** {*ip\_address* | *ipv6\_address* | *domain\_name*} | **udp-port** *port* | **packet-size** *size* **version** *num* | **release**}

---

### Syntax Definitions

<i>receiver_index</i>	The receiver index number.
<i>string</i>	The name.
<i>seconds</i> / <b>forever</b>	Specifies the timeout value.
<i>ip_address</i>	Specifies the 32-bit IPv4 address.
<i>ipv6_address</i>	Specifies the 128-bit IPv6 address.
<i>domain_name</i>	Specifies a Fully Qualified Domain Name (FQDN). The domain name can be up to 255 characters in length.
<i>port</i>	Specifies the UDP (destination) port.
<i>size</i>	Specifies the maximum number of data bytes (size) that can be sent.
<i>num</i>	Specifies the version number.

### Defaults

parameter	default
<i>string</i>	empty
<i>seconds</i>	0
<i>ip_address</i>	0.0.0.0(ipv4)
<i>port</i>	6343
<i>size</i>	1400
<i>version num</i>	5

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **release** parameter at the end of the command to delete a receiver.
- Use the *domain\_name* option to specify an FQDN instead of an IPv4 or IPv6 address. The switch will then resolve the domain name to an IP address. Make sure the specified domain name maps to a valid

and reachable address. If the address is not valid or cannot be reached, then flow and counter samples may not be sent out of the sFlow agent as expected.

- After the IPv4 or IPv6 address for the specified domain name is determined, a refresh is triggered every 30 seconds. If the mapping of the domain name to an IP address changes before the next refresh, both flow and counter samples are not sent to the new address until the next refresh occurs.

## Examples

```
-> sflow receiver 1 name Golden Rcvr1 address 198.206.181.3
-> sflow receiver 1 name Golden Rcvr1 address upam.omnivista.com
-> sflow receiver 1 release
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; *domain\_name* parameter option added.

## Related Commands

[show sflow receiver](#) Displays the receiver table.

## MIB Objects

```
sFlowRcvrTable
  sFlowRcvrIndex
  sFlowRcvrOwner
  sFlowRcvrTimeout
  sFlowRcvrMaximumDatagramSize
  sFlowRcvrAddressType
  sFlowRcvrAddress
  sFlowRcvrPort
  sFlowRcvrDatagramVersion
```

---

## sflow sampler

Gets the hardware sampled from Q-dispatcher and fills up the sampler part of the UDP datagram.

**sflow sampler** *num* **port** *chassis/slot/port[-port]* {**receiver** *receiver\_index* | **rate** *value* | **sample-hdr-size** *size*}

**no sflow sampler** *num* **port** [*chassis\_id*]/*slot/port[-port]*

---

### Syntax Definitions

<i>num</i>	Specifies the instance ID.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-5).
<i>receiver_index</i>	Specifies the receiver index.
<i>value</i>	Specifies the rate value for packet sampling.
<i>size</i>	Specifies the maximum number of bytes (size) that can be copied from a sampled packet.

### Defaults

parameter	default
<i>receiver_index</i>	0
<i>value</i>	0
<i>size</i>	128

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to delete a sampler.
- A sampling rate of 1 counts all packets. A sampling rate of 0 disables sampling.

### Examples

```
-> sflow sampler 1 port 1/2/1 receiver 1 rate 5 sample-hdr-size 64
-> no sflow sampler 1 port 1/2/1-5
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

[show sflow sampler](#)                      Displays the sampler table.

## MIB Objects

```
sFlowFsTable
  sFlowFsDataSource
  sFlowFsInstance
  sFlowFsReceiver
  sFlowFsPacketSamplingRate
  sFlowFsMaximumHeaderSize
```

---

## sflow poller

Gets counter samples from ethernet driver and fills up the counter part of the UDP datagram.

**sflow poller** *num port chassis/slot/port[-port]* {**receiver** *receiver\_index* | **interval** *value*}

**no sflow poller** *num port [chassis\_id/]slot/port[-port]*

---

### Syntax Definitions

<i>num</i>	Specifies the instance ID.
<i>chassis</i>	The chassis identifier.
<i>slot/port[-port]</i>	The slot and port number (3/1). Use a hyphen to specify a range of ports (3/1-5).
<i>receiver_index</i>	Specifies the receiver index.
<i>value</i>	Specifies the maximum number of seconds between successive samples (interval value).

### Defaults

parameter	default
<i>receiver_index</i>	0
<i>value</i>	0

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **no** form of this command to delete a poller.

### Examples

```
-> sflow poller 1 port 1/1/1 receiver 2 interval 20
-> sflow poller 1 port 1/2/6-10 receiver 1 interval 30
-> no sflow poller 1 port 1/2/6-10
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

**show sflow poller** Displays the poller table.

## MIB Objects

    sFlowCpDataSource  
    sFlowCpInstance  
    sFlowCpReceiver  
    sFlowCpInterval

---

## show sflow agent

Displays the sFlow agent table.

**show sflow agent**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- It is necessary to execute the **ip interface** command to make a loopback0 IP address as the fixed primary address of the switch to avoid interface changes, which might need the collector software to be restarted for it to communicate using the new agent IP address. Normally, the primary IP address could change depending on the IP interface going up/down. Therefore, the sFlow agent always needs to send a fixed IP address in the datagram.
- The loopback address should be an IP interface configured on the switch.

### Examples

```
-> ip interface loopback0 address 198.206.181.100
-> show sflow agent
Agent Version = 1.3; Alcatel; 6.1.1
Agent IP      = 127.0.0.1
```

#### *output definitions*

---

<b>Agent Version</b>	Identifies the version which includes the MIB version, organization name, and the specific software build of the agent.
<b>Agent address</b>	IP address associated with the agent. Configured through the <b>sflow agent</b> command.

---

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[show sflow receiver](#) Displays the receiver table.

## MIB Objects

```
sFlowAgent  
  sFlowVersion  
  sFlowAgentAddressType  
  sFlowAgentAddress
```

---

## show sflow receiver

Displays the sFlow receiver table.

**show sflow receiver** [*num*]

---

### Syntax Definitions

*num* Specifies the receiver index.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show sflow receiver
```

```
Receiver 1
```

```
Name      = Golden
```

```
Address   = IP_V4  198.206.181.3
```

```
UDP Port  = 6343
```

```
Timeout   = 65535
```

```
Packet Size= 1400
```

```
DatagramVer= 5
```

```
-> show sflow receiver
```

```
Receiver 1
```

```
Name      = Golden
```

```
Address   = Domain Name  upam.omnivista.com IP_V4  198.206.181.3
```

```
UDP Port  = 6343
```

```
Timeout   = 65535
```

```
Packet Size= 1400
```

```
DatagramVer= 5
```

***output definitions***

---

<b>Name</b>	Name of the entry to claim.
<b>Address</b>	IP address of the sFlow collector. If a receiver address was configured as a domain name, then both the domain name and IP address for that domain are displayed. If the domain name did not translate to a valid IP address, a hyphen is displayed instead of an address.
<b>UDP Port</b>	Destination port for sFlow datagrams.
<b>Timeout</b>	Time remaining before the sampler is released and stops sampling.
<b>Packet size</b>	Maximum number of data bytes that can be sent in a single sample datagram.
<b>Datagram ver</b>	Version of sFlow datagrams that should be sent.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

[sflow receiver](#) Sets the destination hosts where the sFlow datagrams are sent out.

## show sflow sampler

Displays the sFlow sampler table.

**show sflow sampler** [*num*]

---

### Syntax Definitions

*num* Specifies the instance ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A.

### Examples

```
-> show sflow sampler
```

Instance	Interface	Receiver	Sample-rate	Sample-hdr-size
1	2/1/1	1	2048	128
1	2/1/2	1	2048	128
1	2/1/3	1	2048	128
1	2/1/4	1	2048	128
1	2/1/5	1	2048	128

#### output definitions

---

<b>Instance</b>	Instance for the flow sampler.
<b>Interface</b>	Interface used for the flow sampler.
<b>Receiver</b>	Receiver associated with the flow sampler.
<b>Sample-rate</b>	Statistical sampling rate for packet sampling from the source.
<b>Sample-hdr-size</b>	Maximum number of bytes that should be copied from a sampled packet.

---

# 49 RMON Commands

Remote Network Monitoring (RMON) probes can be used to monitor, manage, and compile statistical data about network traffic from designated active ports in a LAN segment without negatively impacting network performance. This feature supports basic RMON 4 group implementation compliant with RFC 2819 (Remote Network Monitoring Management Information Base), but does not support RMON 10 group or RMON 2. This chapter includes descriptions of RMON commands used to enable or disable individual (or a group of a certain flavor type) RMON probes, show a list of (or individual) RMON probes and show a list of (or individual) RMON logged events.

MIB information for the RMON commands is as follows:

*Filename:* RMON-MIB.mib  
*Module:* rmonMibModule

The following table summarizes the available commands:

---

**rmon probes**  
**show rmon probes**  
**show rmon events**

---

## rmon probes

This command enables or disables types of RMON probes.

**rmon probes** {**stats** | **history** | **alarm**} [*entry\_number*] {**enable** | **disable**}

---

### Syntax Definitions

<b>stats</b>	Ethernet Statistics Table probe entries.
<b>history</b>	History Control Table probe entries.
<b>alarm</b>	Alarm Table probe entries.
<i>entry_number</i>	The entry number in the list of probes ( <i>optional</i> ).
<b>enable</b>	Enables the RMON probe.
<b>disable</b>	Disables the RMON probe.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	No	Yes	Yes	No	No	No

### Usage Guidelines

- Network activity on subnetworks attached to the RMON probe can be monitored by NMS applications.
- RMON will not monitor activities on the CMM onboard Ethernet Management port.

### Examples

```
-> rmon probes stats 4012 enable
-> rmon probes history 10240 disable
-> rmon probes alarm 11235 enable
-> rmon probes stats enable
-> rmon probes history disable
-> rmon probes alarm enable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[show rmon probes](#)

Displays a list of RMON probes or a single RMON probe.

[show rmon events](#)

Displays a list of RMON logged events or a single RMON event.

## MIB Objects

ETHERSTATSTABLE

etherStatsStatus

HISTORYCONTROLTABLE

historyControlStatus

ALARMTABLE

alarmStatus

---

## show rmon probes

Displays a list of RMON probes or a single RMON probe.

**show rmon probes** [**stats** | **history** | **alarm**] [*entry\_number*]

---

### Syntax Definitions

**stats** Ethernet Statistics Table probe entries.  
**history** History Control Table probe entries.  
**alarm** Alarm Table probe entries.  
*entry\_number* The entry number in the list of probes (*optional*).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	No	Yes	Yes	No	No	No

### Usage Guidelines

- To display a list of current probes, omit the *entry-number* from the command line.
- To display statistics for a particular probe, include the probe's *entry\_number* in the command line.
- The **show rmon probes** command displays the following information: Entry number, Slot/Port, Flavor (whether the probe type is Ethernet, History or Alarm), Status (Active or Inactive), Duration (time since the last change in status, in hours/minutes) and System Resources (the amount of memory allocated to this probe).
- The **show rmon probes** *entry-number* command displays the following information: Probe's Owner (probe type and location), Slot/Port, Entry number, Flavor (whether the probe type is Ethernet, History or Alarm), Status (Active or Inactive), Time since the last change in status (hours/minutes), and System Resources (the amount of memory allocated to this probe). Displayed statistics may vary, depending on whether the probe type is Ethernet, History or Alarm.

### Examples

```
-> show rmon probes stats
```

```

          Chassis/
Entry  Slot/Port  Flavor  Status  Duration  System Resources
-----+-----+-----+-----+-----+-----
    1026  1/1/26    Ethernet  Active  71:49:41    301 bytes
    1025  1/1/25    Ethernet  Active  71:49:20    301 bytes
    1001  1/1/1      Ethernet  Active  71:48:05    300 bytes

```

-> show rmon probes history

Entry	Chassis/ Slot/Port	Flavor	Status	Duration	System Resources
1	1/1/26	History	Active	71:50:08	5471 bytes
2	1/1/25	History	Active	71:49:47	5471 bytes
3	1/1/1	History	Active	71:48:32	5470 bytes
4	1/1/22	History	Active	71:48:30	5471 bytes
5	1/1/23	History	Active	71:48:30	5471 bytes

-> show rmon probes alarm

Entry	Slot/Port	Flavor	Status	Duration	System Resources
11235	1/4/8	Alarm	Active	00:07:00	835 bytes

-> show rmon probes 4005

Probe's Owner: Switch Auto Probe on Chassis 1, Slot 4, Port 5, ifindex 4005

```

Entry      4005
  Flavor = Ethernet, Status = Active,
  Time = 48 hrs 54 mins,
  System Resources (bytes) = 301
    
```

-> show rmon probes history 30562

Probe's Owner: Switch Auto Probe on Chassis 8, Slot 1, Port 29

```

History Control Buckets Requested = 50,
History Control Buckets Granted   = 50,
History Control Interval           = 30 seconds,
History Sample Index               = 287
    
```

```

Entry      9
  Flavor = History, Status = Active,
  Time = 71 hrs 48 mins,
  System Resources (bytes) = 5471
    
```

-> show rmon probes alarm 11235

Probe's Owner:

```

Alarm Rising Threshold      = 5
Alarm Falling Threshold     = 0
Alarm Rising Event Index    = 26020
Alarm Falling Event Index   = 0
Alarm Interval              = 10 seconds
Alarm Sample Type           = delta value
Alarm Startup Alarm         = rising alarm
Alarm Variable = 1.3.6.1.2.1.16.1.1.1.5.4008
    
```

```

Entry 11235
  Flavor = Alarm, Status = Active
  Time = 48 hrs 48 mins,
  System Resources (bytes) = 1677
    
```

*output definitions*

---

<b>Probe's Owner</b>	Description and interface (location) of the probe.
<b>Slot/Port</b>	The Slot/Port number (interface) that this probe is monitoring.
<b>Entry</b>	The Entry number in the list of probes.
<b>Flavor</b>	Whether the probe type is Ethernet, History, or Alarm.
<b>Status</b>	The status of the probe— <b>Creating</b> (the probe is under creation), <b>Active</b> (the probe is Active), or <b>Inactive</b> (the probe is inactive).
<b>Duration</b>	Elapsed time (hours/minutes/seconds) since the last change in status.
<b>System Resources</b>	Amount of memory that has been allocated to this probe.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">rmon probes</a>	Enables or disables types of RMON probes.
<a href="#">show rmon events</a>	Displays RMON logged events.

**MIB Objects**

```

    historyControlIndex
ALARMTABLE
    alarmIndex
```

---

## show rmon events

Displays RMON events (actions that take place based on alarm conditions detected by the RMON probe).

**show rmon events** [*entry\_number*]

---

### Syntax Definitions

*entry\_number*                      The entry number in the list of probes (*optional*).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	Yes	No	No	No

### Usage Guidelines

- To display a list of logged events, omit the *entry\_number* from the command line.
- To display statistics for a particular event, include the *entry\_number* in the command line.
- The **show rmon events** command displays the following information for all RMON Logged Events: Entry number, Time (hours/minutes/seconds) since the last change in status and Description (nature of the event).
- The **show rmon events entry\_number** command displays the following information for a particular RMON Logged Event: Entry number, Time (hours/minutes/seconds) since the last change in status and Description (nature of the event).

### Examples

```
-> show rmon events
```

```
Entry           Time           Description
-----+-----+-----
1                00:08:00      etherStatsPkts.4008: [Falling trap] "Falling Event"
2                00:26:00      etherStatsCollisions.2008: "Rising Event"
```

```
-> show rmon events 2
```

```
Entry           Time           Description
-----+-----+-----
2                00:26:00      etherStatsCollisions.2008: "Rising Event"
```

*output definitions*

---

<b>Entry</b>	The entry number in the list of probes.
<b>Time</b>	Time (hours, minutes, and seconds) since the last change in status.
<b>Description</b>	Description of the Alarm condition detected by the probe.

---

# 50 Switch Logging Commands

This chapter includes descriptions for Switch Logging commands. These commands are used to configure parameters for the Switch Logging utility.

MIB information for the system commands is as follows:

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

A summary of the available commands is listed here.

---

**swlog**  
**swlog syslog-facility-id**  
**swlog appid**  
**swlog output**  
**swlog output flash-file-size**  
**swlog advanced**  
**swlog size-trap-threshold**  
**swlog clear**  
**show log swlog**  
**show swlog**  
**swlog console level**  
**show log events**  
**show log events output**

---

## swlog

Enables or disables switch logging. Switch logging allows you to view a history of various switch activities in a text format.

**swlog** { **enable** | **disable** | **preamble** | **hash-time-limit** *seconds* | **duplicate-detect** | **console level** *num* }

**no swlog** [**preamble** | **duplicate-detect**]

---

### Syntax Definitions

<b>enable</b>	Enables the switch logging functionality.
<b>disable</b>	Disables the switch logging functionality.
<b>preamble</b>	Enables or disables the display of the preamble to the console.
<b>hash-time-limit</b> <i>seconds</i>	Configures the amount of elapsed time for an entry to no longer be considered a duplicate entry.
<b>duplicate-detect</b>	Enables or disables the duplicate detection capability.
<b>console level</b> <i>num</i>	The severity level filter keyword or numeric value for the application ID. (see table for <a href="#">swlog appid</a> command).

### Defaults

parameter	default
<b>enable</b>   <b>disable</b>	<b>enable</b>
<b>preamble</b>	<b>enable</b>
<b>hash-time-limit</b> <i>num</i>	<b>60 seconds</b>
<b>duplicate-detect</b>	<b>enable</b>
<b>console level</b> <i>num</i>	<b>6 (info)</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of the command to enable or disable the **preamble** and **duplicate-detect** setting.
- The syslog preamble includes the level, appid, and timestamp that precedes the actual log messages.
- If duplicate entries are received within the configured **hash-time-limit**, only a single entry will be logged along with the number of times duplicated.
- Use the [swlog console level](#) command to set the switch logs of different levels to be displayed on the console.

## Examples

```
-> swlog enable
-> swlog hash-time-limit 30
-> no swlog preamble
```

## Release History

Release 7.1.1; command was introduced.  
Release 8.3.1.R02; **gmt-time** parameter added.  
Release 8.4.1; **gmt-time** parameter removed.

## Related Commands

<a href="#">swlog appid</a>	Defines the level at which switch logging information will be filtered for the specified application.
<a href="#">swlog output</a>	Enables or disables switch logging output to the console, file, or data socket.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.
<a href="#">swlog console level</a>	Allows to set the switch logs of different levels to be displayed on the console. All application events of defined level and lower are displayed on the console.

## MIB Objects

```
systemSwitchLogging
  systemSwitchLoggingEnable
  systemSwitchLoggingPreamble
  systemSwitchLoggingHashAgeLimit
  systemSwitchLoggingDuplicateDetect
  systemSwitchLoggingConsoleLevel
  systemSwitchLoggingGmtTime
```

---

## swlog syslog-facility-id

Specifies a facility ID that switch logging includes in the priority (PRI) section of the event message.

**swlog syslog-facility-id** {*facility\_id* | *num*}

---

### Syntax Definitions

<i>facility_id</i>	A facility identification keyword. Current facility IDs are listed in the table below.
<i>num</i>	A numerical equivalent value for the facility ID. The range is 0–23. Current numeric equivalent values are listed in the table below.

---

### Supported Facility IDs with Numerical Equivalents

kernel - 0	NTP - 12
user - 1	log-audit - 13
mail - 2	log-alert - 14
system - 3	clock2 - 15
sec-auth1-2	local0 - 16
syslog - 5	local1 - 17
lptr - 6	local2 - 18
net-news - 7	local3 - 19
UUCP - 8	local4 - 20
clock1- 9	local5 - 21
sec-auth2 - 10	local6 - 22
FTP - 11	local7 - 23

### Defaults

parameter	default
<i>facility_id</i>	local0
<i>num</i>	16

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the ID name (**system**) or the numeric equivalent to specify the facility ID.

### Examples

```
-> swlog syslog-facility-id system
-> swlog syslog-facility-id 3
```

```
-> swlog syslog-facility-id user
-> swlog syslog-facility-id 1
```

## Release History

Release 8.3.1; command introduced.

## Related Commands

<a href="#">swlog</a>	Enables or disables switch logging.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.

## MIB Objects

```
systemSwitchLogging
  systemSwitchLoggingSysLogFacilityId
```

---

## swlog appid

Defines the level at which switch logging information will be filtered for the specified application. All application events of the defined level and lower are captured.

**swlog appid** {**all** | *string*} {**library** {**all** | *string*} | **subapp** {**all** | *num*} | **exclude** {**all** | *num*}} {**disable** | **enable** | **level** {*level* | *num*} [**vrf** *num*]}

---

### Syntax Definitions

<i>string</i>	An application or library identification keyword. Enter a question mark (?) on the command line to get a list of application or library IDs.
<b>subapp</b> <i>num</i>	A numerical equivalent value for the subapp ID. Enter a question mark (?) on the command line to get a list of subapp IDs.
<b>exclude</b> <i>num</i>	A numerical equivalent value for the subapp ID. Enter a question mark (?) on the command line to get a list of subapp IDs.
<b>disable</b>	Disables the logging of the associated application.
<b>enable</b>	Enables the logging of the associated application.
<b>level</b> <i>level</i>   <i>num</i>	The severity level filter keyword or numerical equivalent value for the application ID ( <i>see table below</i> ). All switch logging messages of the specified level and lower will be captured. The severity level is a value assigned to the relative severity of the switch logging message. A lower value indicates messages that are more severe, a higher value indicates messages that are less severe.
<b>vrf</b> <i>num</i>	The VRF ID.

Supported Levels	Numeric Equivalents	Description
<b>off</b>	<b>0</b>	Disabled
<b>alarm</b>	<b>1</b>	Highest severity. The system is about to crash and reboot.
<b>error</b>	<b>2</b>	System functionality is reduced.
<b>alert</b>	<b>3</b>	A violation has occurred.
<b>warning</b>	<b>4</b>	A unexpected, non-critical event has occurred.
<b>event</b>	<b>5</b>	A clear readable customer event.
<b>info</b>	<b>6</b>	Any other non-debug message (default).
<b>debug1</b>	<b>7</b>	A normal event debug message.
<b>debug2</b>	<b>8</b>	A debug-specific message.
<b>debug3</b>	<b>9</b>	All debug messages.

### Defaults

Default severity level is **info**.

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **show swlog appid** command to display available registered applications.
- Specify the **event** severity level keyword to define the new event level at which switch logging information will be filtered for the specified application.

## Examples

```
-> swlog appid all subid all enable
-> swlog appid mvrpNi subapp 1 level 8
-> swlog appid all supapp all level event
-> swlog appid all library all level event
-> swlog appid all exclude all level event
-> show swlog appid mvrpNi
```

```
Application Name                : mvrpNi,
```

```
SubAppl ID Sub Application Name Level          VRF Level
-----+-----+-----+-----+-----+-----
      1 main                error      VRF 1-64 info
```

## Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **exclude** parameter added.

Release 8.6.R1; **event** severity level keyword added.

## Related Commands

<a href="#">swlog</a>	Enables or disables switch logging.
<a href="#">swlog output</a>	Enables or disables switch logging output to the console, file, or data socket.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.
<a href="#">swlog console level</a>	Allows to set the switch logs of different levels to be displayed on the console. All application events of defined level and lower are displayed on the console.

## MIB Objects

```
systemSwitchLogging
  systemSwitchLoggingAppName
  systemSwitchLoggingLibraryName
  systemSwitchLoggingLevel
```

---

## swlog output

Enables or disables switch logging output to the console, file, data socket (remote session), or external syslog server.

```
swlog output {tty {enable | disable} | console | flash | socket {ip_address | ipv6Address | domain_name}
[tls] [remote command-log] [vrf-name name]}
```

```
no swlog output {console | flash | socket {ip_address | ipv6Address | domain_name}}
```

---

### Syntax Definitions

<b>tty enable</b>	Enables switch logging to a connected Telnet session.
<b>tty disable</b>	Disables switch logging to a connected Telnet session.
<b>console</b>	Specifies console output. When enabled, switch logging output is printed to the user console.
<b>flash</b>	Specifies /flash file output. When enabled, switch logging output is printed to a file in the switch's /flash file system.
<b>socket</b>	Specifies data socket output. When enabled, switch logging output is printed to a remote session.
<i>ip_address</i>	The IPv4 address for the remote session host.
<i>ipv6Address</i>	The IPv6 address for the remote session host.
<i>domain_name</i>	A Fully Qualified Domain Name (FQDN) for the remote session host. Specify a domain name up to 128 characters in length.
<b>tls</b>	Enables or disables syslog over TLS.
<b>remote command-log</b>	Enables command logging to a remote session host.
<i>name</i>	Specifies the VRF to be used to access the remote syslog server.

### Defaults

parameter	default
console   flash   socket	flash and console

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable one or more configured output IP addresses.
- This command can also be used on the secondary CMM.

- Use the **socket** keyword to send output to a syslog server, followed by the IP address or FQDN of the remote host. Up to 12 servers can be configured. When an FQDN is specified, the switch will resolve the domain name to an IP address. Make sure the domain name maps to a valid and reachable IP address.
- Syslog over TLS:
  - Remote command log will not work when syslog over TLS is enabled.
  - VRF cannot be used to access the syslog server when syslog over TLS is enabled.
  - In OmniSwitch 9900 only CMM swlog is transferred to the external syslog server over TLS.
  - Dying Gasp syslog messages are not captured in syslog over TLS.
  - Use the **no** form of the command to disable syslog over TLS.
- VRF name must either be 'default' or a pre-defined VRF (user-defined).

## Examples

```
-> swlog output console
-> no swlog output flash
-> swlog output socket 14.1.1.1
-> swlog output socket 14.1.1.1 remote command-log
-> swlog output socket 14.1.1.1 vrf-name vrf1
-> no swlog output socket 14.1.1.1

-> swlog output socket upam.omnivista.com
-> swlog output socket upam.omnivista.com remote command-log
-> swlog output socket upam.omnivista.com vrf-name vrf1
-> no swlog output socket upam.omnivista.com
-> swlog output socket opendaylight.com
ERROR: DNS lookup failed, unknown host opendaylight.com
-> swlog output socket 192.168.120.140 tls
-> swlog output socket 2001::1 tls
-> no swlog output socket 2001::1
```

## Release History

Release 7.1.1; command was introduced.  
Release 7.3.1; **vrf-name** parameter added.  
Release 8.3.1; **remote command-log** parameter added.  
Release 8.5R1; *domain\_name* parameter option added.  
Release 8.6R1; **tls** parameter added.

## swlog output flash-file-size

Configures the size of the switch logging file.

**swlog output flash-file-size** *kilobytes*

---

### Syntax Definitions

*kilobytes* The size of the switch logging file in kilobytes. The range is 125–12500.

### Defaults

parameter	default
<i>kilobytes</i>	1250

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the [show hardware-info](#) command to determine the amount of available flash memory.
- This command can also be used on the secondary CMM.

### Examples

```
-> swlog output flash-file-size 256
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<a href="#">swlog advanced</a>	Clears the files that store switch logging data.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.

### MIB Objects

```
systemSwitchLogging
  systemSwitchLoggingFileSize
```

---

## swlog advanced

Enable or disable switch logging in RFC5424 format.

**swlog advanced** {enable | disable}

---

### Syntax Definitions

**enable** Enable switch logging in RFC5424 format.  
**disable** Disable switch logging in RFC5424 format.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- By default, the switch logs the messages in BSD syslog format (RFC3164) to files and remote syslog servers.
- When switch logging RFC5424 format is enabled, the old RFC3164 syslog messages are reformatted to comply with the RFC5424 before writing to files or sending to remote syslog servers.

### Examples

```
-> swlog advanced enable
-> swlog advanced disable
```

### Release History

Release 8.4.1; command introduced.

### Related Commands

[show swlog](#) Displays switch logging information.

### MIB Objects

systemSwitchLoggingSyslogProtocol

---

## swlog size-trap-threshold

Configures the threshold limit of the storage space used for swlog record storage. When the storage reaches the configured threshold limit a notification is displayed in the swlog message.

**swlog size-trap-threshold** *threshold*

---

### Syntax Definitions

*threshold* The percentage of storage space to be set as threshold limit. The valid range is 50–90.

### Defaults

parameter	default
<i>threshold</i>	90

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure the threshold limit of the storage space used for swlog record storage.
- Use the [swlog clear](#) command to clear the files that store switch logging data.

### Examples

```
-> swlog size-trap-threshold 90
```

### Release History

Release 8.4.1; command introduced.

### Related Commands

<a href="#">swlog clear</a>	Clears the files that store switch logging data.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.

### MIB Objects

systemSwitchLoggingSizeTrapThreshold

---

## swlog clear

Clears the files that store switch logging data.

**swlog clear** [**all**]

---

### Syntax Definitions

**all** Clears all the contents of the switch log file.

### Defaults

By default, the contents of the switch log file is cleared but the event logs are retained.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command when the switch logging display is too long due to some of the data being old or out of date.
- This command can also be used on the secondary CMM.
- To clear all the contents including the event log use the “**all**” parameter with swlog clear command.

### Examples

```
-> swlog clear  
-> swlog clear all
```

### Release History

Release 7.1.1; command was introduced.

Release 8.6R2; **all** parameter added.

**Related Commands**

<b>swlog output</b>	Enables or disables switch logging output to the console, file, or data socket.
<b>show log swlog</b>	Displays stored switch logging information from flash.
<b>show swlog</b>	Displays switch logging information.

**MIB Objects**

systemSwitchLogging  
systemSwitchLoggingClear

---

## show log swlog

Displays stored switch logging information.

**show log swlog**

**show log swlog [timestamp *mm/dd/yyyy hh:mm:ss*] [slot *num*]**

---

### Syntax Definitions

*mm/dd/yyyy hh:mm:ss*

Specify the starting time for the switch logging information to be displayed. Use the format *mm/dd/yyyy hh:mm:ss* where *mm* represents the month, *dd* is the day, *yyyy* is the year, *hh* is the hour, *mm* is the minutes and *ss* is the seconds. Use four digits to specify the year.

*num*

The slot number to display the logging information for. *Currently not supported.*

### Default

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the switch logging display is too long, you may use the [swlog advanced](#) command to clear all of the switch logging information.
- The use of **grep** and the **timestamp** parameter can be used to filter the log files.
- When the switch is in ASA enhanced mode, both user name and password is prompted to view the SWLOG data using [show log swlog](#) command. Only those users who provide the valid ASA credentials are allowed to view the data. For more information on Authenticated Switch Access - Enhanced Mode mode, refer to the “Managing Switch Security” chapter in *OmniSwitch AOS Release 8 Switch Management Guide*.

### Examples

```
-> show log swlog timestamp 09/30/2011 13:27:00
Displaying file contents for '/flash/swlog.6'
Displaying file contents for '/flash/swlog.5'
<output truncated>
```

```
Sep 30 13:27:16 Chassis6900 local0.info swlogd: ChassisSupervisor fan & temp Mgr
info(5) Alert: PS1 airFlow unknown yet- duplicated 5 times!
```

```
-> show log swlog | grep ChassisSupervisor
Displaying file contents for '/flash/swlog.6'
Displaying file contents for '/flash/swlog.5'
<output truncated>
```

```
Sep 28 13:25:15 Chassis6900 local0.info swlogd: ChassisSupervisor fan & temp Mgr
info(5) Alert: PS1 airFlow unknown yet- duplicated 5 times!
```

```
Sep 30 13:26:16 Chassis6900 local0.info swlogd: ChassisSupervisor fan & temp Mgr
info(5) Alert: PS1 airFlow unknown yet- duplicated 5 times!
```

```
Sep 30 13:27:16 Chassis6900 local0.info swlogd: ChassisSupervisor fan & temp Mgr
info(5) Alert: PS1 airFlow unknown yet- duplicated 5 times!
```

When the switch is in ASA enhanced mode, both user name and password is prompted to view the SWLOG data using **show log swlog** command.

```
-> show log swlog
Username: test
Password:  *****
```

**show log swlog | grep error** and **show log swlog | grep more** commands are not supported in enhanced mode.

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<b>swlog</b>	Enables or disables switch logging.
<b>swlog appid</b>	Adds or removes a filter level for a specified subsystem.
<b>swlog output</b>	Enables or disables switch logging output to the console, file, or data socket.
<b>swlog advanced</b>	Clears the files that store switch logging data.
<b>show swlog</b>	Displays switch logging information.

## MIB Objects

N/A

---

## show swlog

Displays switch logging information (for example, switch logging status, log devices, application IDs with non-default severity level settings).

**show swlog** [**library** | **appid** {**all** | *string*} | **dying-gasp-station**]

---

### Syntax Definitions

<b>library</b>	Displays the entire library for all application IDs.
<i>string</i>	The name of the application ID to display. Enter a question mark (?) on the command line to get a list of application IDs.
<b>dying gasp-station</b>	Displays switch logging information for Dying Gasp entries.

### Defaults

By default, the switch logging configuration for the switch is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command can also be used on the secondary CMM.

### Examples

```
-> show swlog

## swlog console level

Allows to set the switch logs of different levels to be displayed on the console. All application events of defined level and lower are displayed on the console.

**swlog console level** {*num* | **alarm** | **alert** | **debug1** | **debug2** | **debug3** | **error** | **info** | **off** | **warning** }

---

### Syntax Definitions

<b>console level</b> <i>num</i>	The severity level filter keyword or numeric value for the application ID. (see table for <b>swlog appid</b> command).
<b>alarm</b>	Sets the log level to display highest severity. (The system is about to crash and reboot)
<b>alert</b>	Sets the log level to display on console when a violation has occurred.
<b>debug1</b>	Sets the log level to display normal event debug message to be displayed on console.
<b>debug2</b>	Sets the log level to display a debug-specific message to be displayed on console.
<b>debug3</b>	Sets the log level to display all debug messages on the console.
<b>error</b>	Sets the log level to display on console when system functionality is reduced.
<b>info</b>	Sets the log level to display any other non-debug message on the console.
<b>off</b>	Sets the log level as disabled. No logs are displayed on the console.
<b>warning</b>	Sets the log level to display on console when an unexpected, non-critical event has occurred.

### Defaults

parameter	default
<b>console level</b> <i>num</i>	<b>6 (info)</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **show swlog** command to display the console display level.

## Examples

```
-> swlog console level 5
-> swlog console level info
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

<a href="#">swlog appid</a>	Defines the level at which switch logging information will be filtered for the specified application.
<a href="#">swlog output</a>	Enables or disables switch logging output to the console, file, or data socket.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.
<a href="#">show log events</a>	Displays customer event logs on the switch.
<a href="#">show log events output</a>	Captures all event log to a specified file name on the switch.

## MIB Objects

```
systemSwitchLogging
  systemSwitchLoggingConsoleLevel
```

---

## show log events

Displays customer event logs on the switch.

**show log events**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to display customer event logs.

### Examples

```
-> show log events
2019 Apr 28 19:17: 8.83 : CMM : ChassisSupervisor : chassisTrapsAlert - CERTIFY w/
FLASH SYNCHRO process started
2019 Apr 28 19:17:32.697 : CMM : ChassisSupervisor : chassisTrapsAlert - CERTIFY
process completed successfully
2019 Apr 28 19:21:33.154 : CMM : ChassisSupervisor : chassisTrapsAlert - ACTIVATE
process scheduled
2019 Apr 28 19:21:57.462 : CMM : ChassisSupervisor : System Reboot
2019 Apr 28 19:25:25.302 : CMM : ChassisSupervisor : chassisTrapsAlert - Power
supply is OK
2019 Apr 28 19:25:25.303 : CMM : ChassisSupervisor : The switch was restarted by
the user
2019 Apr 28 19:25:25.304 : CMM : ChassisSupervisor : chassisTrapsAlert - CMM
startup completed
```

### *output definitions*

---

The log output is in the following format:

<SWLOG\_TIMESTAMP> : <CMM>/<NI> : <MODULE\_NAME> : <LOG\_DESCRIPTION>

---

### Release History

Release 8.6R1; command was introduced.

**Related Commands****show log events output**

Captures all event log to a specified file name on the switch.

**swlog output**

Enables or disables switch logging output to the console, file, or data socket.

**show log swlog**

Displays stored switch logging information from flash.

**show swlog**

Displays switch logging information.

**MIB Objects**N/A

---

## show log events output

Captures all event log to a specified file name on the switch.

`show log events output filename`

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to capture all event log to a filename.
- All the logs related to customer events will be appended “CUSTLOG” to the prefix to differentiate events from normal debug logs.

### Examples

```
-> show log events output /flash/myevents
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

<a href="#">show log events</a>	Displays customer event logs on the switch.
<a href="#">swlog output</a>	Enables or disables switch logging output to the console, file, or data socket.
<a href="#">show log swlog</a>	Displays stored switch logging information from flash.
<a href="#">show swlog</a>	Displays switch logging information.

# 51 Health Monitoring Commands

The Health Monitoring function monitors the consumable resources of the switch (for example, bandwidth usage, CPU usage) and provides a single integrated resource for a Network Management System (NMS). This function monitors the switch, and at fixed intervals, collects the current values for each resource being monitored. Users specify resource threshold limits and traps are sent to an NMS if a value falls above or below a user-specified threshold.

The Health Monitoring commands comply with RFC1212.

MIB information for the Health Monitoring commands is as follows:

*Filename:* ALCATEL-IND1-HEALTH-MIB.mib  
*Module:* alcatelIND1HealthMonitorMIB

A summary of the available commands is listed here:

---

**health threshold**  
**health interval**  
**show health configuration**  
**show health**  
**show health all**

---

## health threshold

Configures thresholds for input traffic (RX), output/input traffic (TX/RX), memory usage, CPU usage, and flash usage.

Input traffic, output/input traffic, memory usage, and CPU usage thresholds specify the maximum percentage for each resource that may be consumed before a trap is sent to the user.

**health threshold** {*rx percent* | *txrx percent* | **memory percent** | **cpu percent** | **flash percent**}

---

### Syntax Definitions

<b>rx</b>	Specifies the maximum input (RX) traffic threshold.
<b>txrx</b>	Specifies the maximum output/input (TX/RX) traffic threshold.
<b>memory</b>	Specifies the maximum RAM memory usage threshold.
<b>cpu</b>	Specifies the maximum CPU usage threshold.
<b>flash</b>	Specifies the maximum flash usage threshold.
<i>percent</i>	The new threshold value, in percent, for the corresponding resource ( <b>rx</b> , <b>txrx</b> , <b>memory</b> , <b>cpu</b> , <b>flash</b> ). The valid range is 1–100.

### Defaults

parameter	default
<i>percentage</i>	80

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When a resource falls back below the configured threshold, an additional trap is sent to the user. This indicates that the resource is no longer operating beyond its configured threshold limit.
- Changing a threshold value sets the value for all levels of the switch (the switch, module, and port). You cannot set different threshold values for each level.
- For detailed information on each threshold type, refer to [page 51-5](#), or refer to the chapter titled “Diagnosing Switch Problems” in the *OmniSwitch AOS Release 8 Network Configuration Guide*.
- To view the current health threshold values, use the [show health configuration](#) command.

## Examples

```
-> health threshold rx 85
-> health threshold txrx 55
-> health threshold memory 95
-> health threshold cpu 85
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

[show health configuration](#)      Displays the current health threshold settings.

## MIB Objects

```
HealthThreshInfo
  healthThreshDeviceRxLimit
  healthThreshDeviceTxRxLimit
  healthThreshDeviceMemoryLimit
  healthThreshDeviceCpuLimit
  healthThreshFlashLimit
```

---

## health interval

Configures the sampling interval between health statistics checks. The sampling interval is the time interval between polls of the consumable resources of the switch to see if it is performing within set thresholds.

**health interval** *seconds*

---

### Syntax Definitions

*seconds* Sampling interval (in seconds). Valid entries are 10, 12, 15, 20, 30.

### Defaults

parameter	default
<i>seconds</i>	10

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Decreasing the polling interval may impact switch performance.

### Examples

```
-> health interval 20
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[show health](#) Displays the current health sampling interval.

### MIB Objects

HealthThreshInfo  
healthSamplingInterval

---

## show health configuration

Displays current health configuration settings.

**show health configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show health configuration
Rx Threshold                = 80,
TxRx Threshold              = 80,
CPU Threshold                = 80,
Memory Threshold            = 80,
Flash Threshold              = 80,
Sampling Interval (Secs)    = 10
```

### output definitions

---

#### Rx Threshold

The current device input (RX) threshold. This value displays the maximum percentage of total bandwidth allowed for *incoming traffic* on the switch. The total bandwidth is defined as the Ethernet port capacity for all NI modules currently operating in the switch, in Mbps. For example, a chassis with 48 100Base-T Ethernet ports installed has a total bandwidth of 4800 Mbps. The default value is 80 percent and can be changed using the [health threshold](#) command.

#### TxRx Threshold

The current device output/input (TX/RX) threshold. This value displays the maximum percentage of total bandwidth allowed for *all incoming and outgoing traffic*. As with the RX threshold described above, the total bandwidth is defined as the Ethernet port capacity for all the NI modules currently operating in the switch, in Mbps. The default value is 80 percent and can be changed using the [health threshold](#) command.

---

*output definitions (continued)*

---

<b>CPU Threshold</b>	Displays the current CPU usage threshold. CPU usage refers to the total amount of CPU processor capacity currently used by switch applications. The default value is 80 percent and can be changed using the <b>health threshold</b> command.
<b>Memory Threshold</b>	Displays the current memory usage threshold. Memory usage refers to the total amount of RAM memory currently used by switch applications. The default value is 80 percent and can be changed using the <b>health threshold</b> command.
<b>Flash Threshold</b>	Displays the current flash usage threshold. The default value is 80 percent and can be changed using the <b>health threshold</b> command.
<b>Sampling Interval</b>	Displays the sampling interval time period in seconds. Sampling interval can be changed using the <b>health interval</b> command.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<b>health threshold</b>	Configures thresholds for input traffic (RX), output/input traffic (TX/RX), memory usage and CPU usage.
<b>health interval</b>	Configures the sampling interval between health statistics checks.

**MIB Objects**

HealthThreshInfo

```
healthThreshDeviceRxLimit  
healthThreshDeviceTxRxLimit  
healthThreshDeviceMemoryLimit  
healthThreshDeviceCpuLimit
```

---

## show health

Displays the health statistics for the switch. Statistics are displayed as percentages of total resource capacity and represent data taken from the last sampling interval.

**show health** [*port chassis/slot/port* | *slot chassis/slot[-slot2]*] [*statistics*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	To view a specific port, enter the slot and port number (3/1) along with the <b>port</b> keyword (port 3/1).
<i>slot[-slot2]</i>	To view a series of slots, enter the range of slot numbers along with the <b>slot</b> keyword (1-10).
<i>statistics</i>	Optional command syntax. It displays the same information as the <b>show health</b> command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If no slot or port information is specified, the aggregate health statistics for all ports is displayed.

### Examples

```
-> show health
CMM                Current    1 Min    1 Hr    1 Day
Resources          Avg      Avg      Avg      Avg
-----+-----+-----+-----+-----
CPU                0        0        0        0
Memory            30       30       24       24

-> show health port 1/1/24
Port 1/1/24      Limit  Current  1 Min    1 Hr    1 Day
Resources        Avg     Avg      Avg      Avg
-----+-----+-----+-----+-----
Receive          80     01       01       01       01
Transmit/Receive 80     01       01       01       01
```

*output definitions*

---

<b>Receive</b>	Traffic received by the switch.
<b>Transmit/Receive</b>	Traffic transmitted and received by the switch.
<b>Memory</b>	Switch memory.
<b>CPU</b>	Switch CPU.
<b>Limit</b>	Currently configured device threshold levels.
<b>Curr</b>	Current device bandwidth usage.
<b>1 Min Avg</b>	Average device bandwidth usage over a 1-minute period.
<b>1 Hr Avg</b>	Average device bandwidth usage over a 1-hour period.
<b>1 Hr Max</b>	Maximum device bandwidth usage over a 1-hour period (the maximum of the 1 minute averages).

---

**Release History**

Release 7.1.1; command introduced.  
 Release 8.5R1; **Limit** output field included.

**Related Commands**

**show health all** Displays health statistics for a specified resource on *all* NIs currently operating in the chassis.

**MIB Objects**

```
healthModuleTable
  healthModuleSlot
  healthModuleRxLatest
  healthModuleRx1MinAvg
  healthModuleRx1HrAvg
  healthModuleRx1HrMax
  healthModuleRxTxLatest
  healthModuleRxTx1MinAvg
  healthModuleRxTx1HrAvg
  healthModuleRxTx1HrMax
  healthModuleMemoryLatest
  healthModuleMemory1MinAvg
  healthModuleMemory1HrAvg
  healthModuleMemory1HrMax
  healthModuleCpuLatest
  healthModuleCpu1MinAvg
  healthModuleCpu1HrAvg
  healthModuleCpu1HrMax
```

---

## show health all

Displays health statistics for a specified resource on all *active NI modules* installed in the chassis.

**show health all {memory | cpu | rx | txrx}**

---

### Syntax Definitions

<b>memory</b>	Displays the RAM memory health statistics for all active NI modules in the switch.
<b>cpu</b>	Displays the CPU health statistics for all active NI modules.
<b>rx</b>	Displays the health statistics for traffic <i>received</i> on all active NI modules.
<b>txrx</b>	Displays the health statistics for traffic both <i>transmitted and received</i> on all active NI modules.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show health all memory
```

\* - current value exceeds threshold

Memory	Curr	1 Min	1 Hr	1 Hr
		Avg	Avg	Max
01	40	40	40	40
02	40	40	40	40
03	40	40	40	40
04	40	40	40	40
05	40	40	40	40
06	40	40	40	40
07	40	40	40	40
13	40	40	40	40

*output definitions*

---

<b>Memory (Cpu, TXRX, RX)</b>	A list of all currently-active NI modules (i.e., active slots) on the switch. The column header corresponds with the resource keyword entered. For example, if <b>show health all cpu</b> is entered, <b>Cpu</b> is used as the column header.
<b>Curr</b>	Current usage of the resource on the corresponding slot, in percent (the amount of the total resource bandwidth actually being used by the switch applications).
<b>1 Min Avg</b>	Average usage of the resource on the corresponding slot over a one minute period.
<b>1 Hr Avg</b>	Average usage of the resource on the corresponding slot over a one hour period.
<b>1 Hr Max</b>	The highest average hourly usage for the resource on the corresponding slot.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<a href="#">show health</a>	Displays the health statistics for the switch.
<a href="#">health threshold</a>	Configures thresholds for input traffic (RX), output/input traffic (TX/RX), memory usage, and CPU usage.

# 52 Ethernet OAM Commands

Service provider networks are large and complex with a wide user base, and they often involve different operators that must work together in order to provide end-to-end services to enterprise customers. Operations, Administration, and Maintenance (OAM) provides service assurance over a converged network that service providers are looking for in an Ethernet network. Ethernet OAM addresses areas such as availability, mean time to repair and more. Ethernet OAM focuses on two main areas that are most in need by service providers and are rapidly evolving in the standards bodies, Service OAM and Link OAM. These two OAM protocols have unique objectives but are complementary to each other. Service OAM provides monitoring and troubleshooting of end-to-end Ethernet service instances, while Link OAM allows a provider to monitor and troubleshoot an individual Ethernet link.

MIB information for the Ethernet OAM commands is as follows:

*Filename:* Alcatel-IND1-ETHERNET-OAM-MIB.mib  
*Module:* alcatelIND1EoamMIB

*Filename:* IEEE8021-CFM-MIB.mib  
*Module:* ieee8021CfmMib

A summary of the available commands is listed here:

<b>EthOAM vlan Configuration Commands</b>	<a href="#">ethoam vlan</a>

---

## ethoam vlan

Creates an association between Primary VID and Non-Primary VID(s).

**ethoam vlan** *vlanid\_list* **primary-vlan** *vlan\_id*

**no ethoam vlan** *vlanid\_list*

---

### Syntax Definitions

*vlanid\_list* A list of VLAN Identifiers (e.g., '10 30-40' or '10').

*vlan\_id* VLAN Identifier (e.g., '20').

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Each VLAN ID specified must be created before creating any association.
- Each VLAN ID specified must be between 1 and 4094.
- Each VLAN ID specified must be static.
- A Non-Primary VID can only be associated with single Primary VID.
- Once Primary VID is associated with Non-Primary VID, then it can not be configured as Non-Primary VID. Its association must be removed before it is configured as Non-Primary VID.
- This CLI shall trigger Automip for this VLAN, if either 'mhf' is enabled for MA or default-MD with primary VLAN same as the primary VLAN of this VLAN.
- If the VLAN is deleted using VLAN CLI (no vlan *vlan\_id*) and VLAN is non-primary, then the entry for this VLAN in the VLAN table will be deleted. This shall in turn delete all MEPs and MIPs associated with it. If the deleted VLAN is primary VLAN, then all its associated VLAN entries in the VLAN table shall be deleted. This shall in turn delete all MAs on this deleted VLAN.
- Use the **no** form of this command to dissociate Primary VID from the Non-Primary VID(s).

### Examples

```
-> ethoam vlan 10 primary-vlan 20
-> ethoam vlan 11-15 primary-vlan 20
-> ethoam vlan 30 40-50 primary-vlan 20
-> no ethoam vlan 10
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

### [show ethoam vlan](#)

Displays the Ethernet OAM statistics of all the Management Domains configured on the bridge.

## MIB Objects

```
dotlagCfmVlanTable  
  dotlagCfmVlanComponentId  
  dotlagCfmVlanVid  
  dotlagCfmVlanPrimaryVid  
  dotlagCfmVlanRowStatus
```

---

## ethoam domain

Creates an Ethernet domain with a specific name.

**ethoam domain** *md\_name* **format** {none | dnsname | mac-address-uint | string} **level** *num*

**no ethoam domain** *name*

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name.
<b>none</b>	This format is supported for the inter-op with ITU-T Y.1731.
<b>dnsname</b>	Domain Name like string, globally unique text string derived from a DNS name.
<b>mac-address-uint</b>	MAC address + 2-octet (unsigned) integer.
<b>string</b>	Character String.
<i>num</i>	MD Level and it ranges from 0 to 7.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Maximum domain length is 43.
- Use format as 'none' for inter-op with ITU-T Y.1731.
- Domain name is unique in a system.
- Deletion of MD shall result in the deletion of all MAs, MEPs, and MIPs configured in the MD.

### Examples

```
-> ethoam domain MD format none level 3
-> ethoam domain MD1 format string level 4
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

### [show ethoam](#)

Displays the information of all the Management Domains (MD) configured on the bridge.

### [show ethoam domain](#)

Displays the information of a specific Management Domain configured on the bridge.

## MIB Objects

dot1agCfmMdTable

dot1agCfmMdName

dot1agCfmMdFormat

dot1agCfmMdLevel

---

## ethoam domain mhf

Configure the Message Handling Function (MHF) value for MD entry.

```
ethoam domain md_name mhf {none | explicit | default}
```

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.
<b>none</b>	No MHFs can be created.
<b>explicit</b>	MHFs can be created only if a MEP is created at some lower MD Level.
<b>default</b>	MHFs can be created.

### Defaults

parameter	default
none   explicit   default	none

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Domain must be created before it is modified.

### Examples

```
-> ethoam domain MD mhf default
```

### Release History

Release 7.3.1; command was introduced.

### Related Commands

[show ethoam](#) Displays the information of all the Management Domains (MD) configured on the bridge.

### MIB Objects

```
dotlagCfmMdTable
  dotlagCfmMdName
  dotlagCfmMdMhfCreation
```

---

## ethoam domain id-permission

Configures the ID-permission value for MD entry.

**ethoam domain** *md\_name* **id-permission** {**none** | **chassisid**}

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.
<b>none</b>	Sender ID TLV is not to be sent.
<b>chassisid</b>	Chassis ID Length, Chassis ID Subtype and Chassis ID TLV are to be present. System name shall be filled as Chassis ID.

### Defaults

parameter	default
<b>none</b>   <b>chassisid</b>	<b>none</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Domain must be created before it is modified.

### Examples

```
-> ethoam domain MD id-permission chassisid
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

**show ethoam default-domain configuration** Displays the values of scalar Default-MD objects.

**show ethoam domain** Displays the information of a specific Management Domain configured on the bridge.

## MIB Objects

dot1agCfmMdTable  
  dot1agCfmMdName  
  dot1agCfmMdIdPermission

---

## ethoam association

Creates Maintenance Association (MA) entry.

**ethoam association** *ma\_name* **format** {**vpnid** | **unsignedint** | **string** | **primaryvid** | **icc-based**} **domain** *md\_name*

**no ethoam association** *ma\_name* **domain** *md\_name*

---

### Syntax Definitions

<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<b>vpnid</b>	As specified in RFC 2685 VPN ID.
<b>unsignedint</b>	2-octet unsigned integer.
<b>string</b>	Character String.
<b>primaryvid</b>	Primary VLAN ID (12 bits represented in a 2-octet integer).
<b>icc-based</b>	This format is supported for inter-op with ITU-T.
<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Maximum association name is name 44 minus the length of its domain name.
- Use format as 'icc-based' to inter-op with ITU-T Y.1731.
- Domain must be created before the creation of MA.
- VLAN must be created before the creation of MA.
- VLAN specified must be a primary VID.
- Deletion of MA shall result in the deletion of MIPs and MEPs (on primary and non-primary VLAN) configured in it.
- Use the **no** form of the command to delete the Maintenance Association (MA) entry.

## Examples

```
-> ethoam association MA format string domain MD
-> no ethoam association MA format string domain MD
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

[show ethoam domain association](#)

Displays the information of a specified MA in a Management Domain configured on the bridge.

## MIB Objects

```
dotlagCfmMaNetTable
  dotlagCfmMaNetFormat
  dotlagCfmMaNetName
  dotlagCfmMaNetRowStatus
dotlagCfmMaCompTable
  dotlagCfmMaComponentId
  dotlagCfmMaCompPrimaryVid
  dotlagCfmMaCompRowStatus
```

---

## ethoam association primary vlan

Creates a primary VLAN for the Maintenance Association (MA) entry.

**ethoam association** *ma\_name* **domain** *md\_name* **primary-vlan** *vlan\_id*

**no ethoam association** *ma\_name* **domain** *md\_name* **primary-vlan** *vlan\_id*

---

### Syntax Definitions

<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.
<i>vlan_id</i>	Primary VLAN Identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Domain must be created before the creation of MA.
- VLAN ID specified must be between 1 and 4094.
- Deletion of MA shall result in the deletion of MIPs and MEPs (on primary and non-primary VLAN) configured in it.
- Use the **no** form of the command to remove the Primary VLAN association.

### Examples

```
-> ethoam association MA domain MD primary-vlan 100
-> no ethoam association MA domain MD primary-vlan 100
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

### [show ethoam domain association](#)

Displays the information of a specified MA in a Management Domain configured on the bridge.

## MIB Objects

```
dotlagCfmMaCompTable  
  dotlagCfmMaComponentId  
  dotlagCfmMaCompPrimaryVid  
  dotlagCfmMaCompRowStatus
```

---

## ethoam association mhf

Configures the MIP Half Function (MHF) value for MA Entry.

**ethoam association** *ma\_name* **domain** *md\_name* **mhf** {**none** | **default** | **explicit** | **defer**}

---

### Syntax Definitions

<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.
<b>none</b>	No MHFs can be created.
<b>default</b>	MHFs can be created.
<b>explicit</b>	MHFs can be created only if a MEP is created at some lower MD Level.
<b>defer</b>	The creation of MHFs is determined by the corresponding MD object 'dot1agCfmMdMhfCreation'.

### Defaults

parameter	default
<b>none</b>   <b>explicit</b>   <b>default</b>   <b>defer</b>	<b>defer</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- MA must be created before it is modified.
- On modification of 'mhf' for any MA, Automip shall also be invoked for all VLANS associated with this primary VID.

### Examples

```
-> ethoam association MA domain MD mhf-creation defer
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

**show ethoam domain  
association**

Displays the information of a specified MA in a Management Domain configured on the bridge.

**show ethoam default-domain**

Displays the information of the default MA.

## ethoam association id-permission

Configure id-permission value for MA Entry.

**ethoam association** *ma\_name* **domain** *md\_name* **id-permission** {**none** | **chassisid** | **defer**}

---

### Syntax Definitions

<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name used while creating the management domain for which this management association is created.
<b>none</b>	Sender ID TLV is not to be sent.
<b>chassisid</b>	Chassis ID Length, Chassis ID Subtype and Chassis ID TLV are to be present.
<b>defer</b>	The contents of the Sender ID TLV are determined by the corresponding MD object 'dot1agCfmMdIdPermission'.

### Defaults

parameter	default
<b>none  chassisid   defer</b>	<b>defer</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

MA must be created before it is modified.

### Examples

```
-> ethoam association MA domain MD id-permission defer
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

[show ethoam domain association](#)

Displays the information of a specified MA in a Management Domain configured on the bridge.

Displays the information of a specific Management Domain configured on the bridge.

## MIB Objects

dot1agCfmMaNetTable

dot1agCfmMaNetName

dot1agCfmMaCompTable

dot1agCfmMaCompMidPermission

---

## ethoam association ccm-interval

Modifies the Continuity Check Message (CCM) transmission interval of an Ethernet OAM Maintenance Association.

**ethoam association** *ma\_name* **domain** {*md\_name* | *mac\_address*} **ccm-interval** {**interval-invalid** | **interval100ms** | **interval1s** | **interval10s** | **interval1m** | **interval10m**}

---

### Syntax Definitions

<i>ma_name</i>	Name of the Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain command on page 52-5</a> .
<b>interval-invalid</b>	Specifies that no CCMs are sent by a MEP.
<b>interval100ms</b>	Specifies the CCMs are sent every 100 milli seconds.
<b>interval1s</b>	Specifies that CCMs are sent every 1 second.
<b>interval10s</b>	Specifies that CCMs are sent every 10 seconds.
<b>interval1m</b>	Specifies that CCMs are sent every minute.
<b>interval10m</b>	Specifies that CCMs are sent every 10 minutes.

### Defaults

parameter	default
<b>interval-invalid</b>   <b>interval100ms</b>   <b>interval1s</b>   <b>interval10s</b>   <b>interval1m</b>   <b>interval10m</b>	<b>interval10s</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The *ma\_name* should be unique amid all those used by or available to the service provider within a domain.

### Examples

```
-> ethoam association MA domain MD ccm-interval interval10s
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

### [show ethoam domain](#)

Displays the information of a specific Management Domain configured on the bridge.

## MIB Objects

## ethoam association endpoint-list

Modifies the MEP list of an Ethernet OAM Maintenance Association.

**ethoam association** *ma\_name* **domain** {*md\_name* | *mac\_add*} **endpoint-list** *mep\_id*[-*mep\_id2*]

**no ethoam association** *ma\_name* **domain** {*md\_name* | *mac\_add*} **endpoint-list** *mep\_id*[-*mep\_id2*]

---

### Syntax Definitions

<i>ma_name</i>	Name of the Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain command on page 52-5</a> .
<i>mac_add</i>	Specifies the CFM system MAC address.
<i>mep_id</i> [- <i>mep_id2</i> ]	Specifies the MEP number. Use a hyphen to specify a range of MEP numbers.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to remove the MEP list.
- Note that only the MEP that is associated with the MEP list of the MA can be configured locally on the bridge or monitored remotely.
- The *ma\_name* should be unique within a domain.

### Examples

```
-> ethoam association MA domain MD endpoint-list 100-200
-> no ethoam association MA domain MD endpoint-list 100-200
```

### Release History

Release 7.3.1; command was introduced.

## clear ethoam statistics

Clear statistics for all MEPs or for a particular MEP.

**clear ethoam statistics** [**domain** *md\_name* **association** *ma\_name* **endpoint** *mep\_id*]

---

### Syntax Definitions

<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mep_id</i>	MEP Identifier. Valid Range is 1-8191.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Statistics are cleared for all MEPs if a specific MEP is not entered with this command.

### Examples

```
-> clear ethoam statistics
-> clear ethoam statistics domain MD association MA endpoint 10
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

### [show ethoam statistics](#)

```

---

## ethoam default-domain level

Configure the effective level of all default domain entries with the level value set to **no level**.

**ethoam default-domain level** *num*

**no ethoam default-domain**

---

### Syntax Definitions

*num* The MD level value. The valid range is 0-7.

### Defaults

Default value is 0.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The MD level specified with this command applies to all default domain values that are currently set to **no level**.

### Examples

```
-> ethoam default-domain level 1
```

### Release History

Release 7.3.1; command was introduced.

### Related Commands

[show ethoam default-domain configuration](#) Displays the values of scalar Default-MD objects.

### MIB Objects

Dot1agCfmDefaultMdLevel

---

## ethoam default-domain mhf

Configure the effective MHF value for all default domain entries with MHF value set to **defer**.

**ethoam default-domain mhf {none | default | explicit}**

**no ethoam default-domain**

---

### Syntax Definitions

<b>none</b>	No MHFs can be created.
<b>default</b>	MHFs can be created.
<b>explicit</b>	MHFs can be created only if a MEP is created at some lower MD Level.

### Defaults

Default value is none.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> ethoam default-domain mhf default
```

### Release History

Release 7.3.1; command was introduced.

### Related Commands

[show ethoam default-domain configuration](#) Displays the values of scalar Default-MD objects.

### MIB Objects

dot1agCfmDefaultMdDefMhfCreation

---

## ethoam default-domain id-permission

Configures the effective ID permission value for all default domain entries with the ID permission value set to **defer**.

**ethoam default-domain id-permission {none | chassisid}**

**no ethoam default-domain**

---

### Syntax Definitions

**none**

Sender ID TLV is not to be sent.

**chassisid**

Chassis ID Length, Chassis ID Subtype and Chassis ID TLV are to be present.

### Defaults

Default value is none.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> ethoam default-domain id-permission chassisid
```

### Release History

Release 7.3.1; command was introduced.

### Related Commands

[show ethoam default-domain configuration](#) Displays the default domain configuration.

### MIB Objects

dot1agCfmDefaultMdDefIdPermission

---

## ethoam default-domain primary-vlan

Configures the default domain settings for the specified primary VLAN.

**ethoam default-domain primary-vlan** {*vlan\_id*} [**level** {**no-level** | *num*}] [**mhf** {**none** | **default** | **explicit** | **defer**}] [**id-permission** {**none** | **chassisid** | **defer**}]

**no ethoam default-domain**

---

### Syntax Definitions

<i>vlan_id</i>	VLAN Identifier.
<b>no-level</b>	MD level is inherited from the default domain level.
<i>num</i>	MD Level. Valid range is 0 to 7.
<b>none</b>	No MHFs can be created.
<b>default</b>	MHFs can be created.
<b>explicit</b>	MHFs can be created only if a MEP is created at some lower MD Level.
<b>defer</b>	MHF defers to the default domain MHF value.
<b>none</b>	Sender ID TLV is not to be sent.
<b>chassisid</b>	Chassis ID Length, Chassis ID Subtype, and Chassis ID TLV are to be present.
<b>defer</b>	ID permission defers to the default domain ID permission value.

### Defaults

parameter	default
<b>no-level</b> / <i>num</i>	<b>no-level</b>
<b>none</b>   <b>explicit</b>   <b>default</b>   <b>defer</b>	<b>defer</b>
<b>none</b>   <b>chassisid</b>   <b>defer</b>	<b>defer</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

On modification of MHF for any primary VID, Automip is invoked for all VLANs associated with this primary VID.

## Examples

```
-> ethoam default-domain primary-vlan 10 id-permission chassisid level 3 mhf default.  
-> ethoam default-domain primary-vlan 10 id-permission chassisid  
-> ethoam default-domain primary-vlan 10 level 3  
-> ethoam default-domain primary-vlan 10 mhf default  
-> ethoam default-domain primary-vlan 10 level 3 mhf default
```

## Release History

Release 7.3.1; command was introduced..

## Related Commands

[show ethoam default-domain](#) Displays the information of all the default MD.

## MIB Objects

```
dotlagCfmDefaultMdTable  
  dotlagCfmDefaultMdComponentId  
  dotlagCfmDefaultMdPrimaryVid  
  dotlagCfmDefaultMdLevel
```

---

## ethoam endpoint

Creates a Maintenance End Point (MEP) and virtual MEP.

**ethoam endpoint** *mep\_id* **domain** *md\_name* **association** *ma\_name* **direction** {**up** | **down**} {**port** *chassis/slot/port* | **virtual** | **linkagg** *agg\_id*} [**primary-vlan** *vlan\_id*]

**no ethoam endpoint** *mep\_id* **domain** *md\_name* **association** *ma\_name*

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Association name for the created Ethernet OAM Association.
<b>up</b>	For UP MEP.
<b>down</b>	For DOWN MEP.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Physical slot and port number on which MEP needs to be created.
<b>virtual</b>	Keyword for creating virtual MEP.
<i>agg_id</i>	Linkagg Identifier on which MEP needs to be created.
<i>vlan_id</i>	VLAN Identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to delete a maintenance endpoint.
- The *mep\_id* must be unique amid all those used by or available to the service provider in the specified MA.
- The direction for virtual MEP must always be up.
- For creating a virtual MEP the value of port must be given the keyword “virtual”.

## Examples

```
-> ethoam endpoint 10 domain MD association MA direction up port 1/1
-> ethoam endpoint 10 domain MD association MA direction down linkagg 1
-> ethoam endpoint 10 domain MD association MA direction down linkagg 1 vlan 10
-> ethoam endpoint 1 domain md1 association ma1 direction up port virtual primary-
vlan 100
-> no ethoam endpoint 10 domain MD association MA
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

[show ethoam domain  
association end-point](#)

Displays the information of a specific MEP in a Management Domain configured on the bridge.

    dotlagCfmMepDirection
    dotlagCfmMepIfIndex
    dotlagCfmMepPrimaryVid
```

---

## ethoam endpoint admin-state

Configures the administrative state of MEP.

```
ethoam endpoint mep_id domain {md_name | mac_address} association ma_name admin-state
{enable | disable}
```

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Association name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<b>enable</b>	Administratively enables MEP.
<b>disable</b>	Administratively disables MEP.

### Defaults

The default value is disable.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The *mep\_id* specified must already exist in the switch configuration.

### Examples

```
-> ethoam endpoint 100 domain MD association MA admin-state enable
```

### Release History

Release 7.3.1; command was introduced.

## ethoam endpoint rfp

Enables or disables the Remote Fault Propagation (RFP) on MEP.

**ethoam endpoint** *mep\_id* **domain** {*md\_name* | *mac\_address*} **association** *ma\_name* **rfp** {**enable** | **disable**}

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Association name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<b>enable</b>	Administratively enables RFP on MEP.
<b>disable</b>	Administratively disables RFP on MEP.

### Defaults

The default value of RFP is disable.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- The *mep\_id* specified must already exist in the switch configuration.
- The domain and association must be created before RFP can be enabled.
- The MEP must be an UP MEP. If down MEP is specified, CLI returns with an error.
- The admin state of the MEP must be enabled in order to report faults.
- RFP cannot be enabled on virtual UP MEP since it is not associated with a physical interface.
- It is recommended that if RFP is enabled on a port, then any other violation feature (Link Monitoring or Link Fault Propagation) should not be configured.
- It is recommended that if RFP is enabled on a port, then automatic recovery is disabled for that port.
- If Link Monitoring is configured on a RFP enabled port, then the wait-to-restore timer must be less than the CCM interval.

## Examples

```
-> ethoam endpoint 1 domain md1 association ma1 rfp enable
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

[show ethoam domain association end-point](#)

Displays the information of a specific MEP in a Management Domain configured on the bridge.

## MIB Objects

```
DotlagCfmMDTable  
    dotlagCfmMdName  
dotlagCfmMaNetTable  
    dotlagCfmMaNetName  
dotlagCfmMepTable

    dotlagCfmRfpEnabled
```

---

## ethoam endpoint ccm

Configures the MEP to generate Continuity Check Messages (CCM).

```
ethoam endpoint mep_id domain {md_name | mac_address} association ma_name ccm {enable | disable}
```

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Name of the Ethernet OAM association. Up to 48 (minus the domain name length) characters may be used.
<b>enable</b>	Enables MEP to generate CCMs.
<b>disable</b>	Disables MEP to generate CCMs.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The *mep\_id* should be unique amid all those used by or available to the service provider in the specified MA.

### Examples

```
-> ethoam endpoint 100 domain MD association MA ccm enable
```

### Release History

Release 7.3.1; command was introduced.

## ethoam endpoint priority

Configures the priority values for CCMs and Linktrace Messages (LTMs) transmitted by a MEP.

**ethoam endpoint** *mep\_id* **domain** {*md\_name* | *mac\_address*} **association** *ma\_name* **priority**  
*ccm\_ltm\_priority*

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>ccm_ltm_priority</i>	Priority value for CCMs and LTMs transmitted by the MEP. The valid range is 0–7.

### Defaults

parameter	default
<i>ccm_ltm_priority</i>	7

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The *mep\_id* should be unique amid all those used by or available to the service provider in the specified MA.

### Examples

```
-> ethoam endpoint 100 domain MD association MA priority 6
```

### Release History

Release 7.3.1; command was introduced.

## ethoam endpoint lowest-priority-defect

Configures the lowest priority fault alarm for the lowest priority defect for a MEP.

**ethoam endpoint** *mep\_id* **domain** {*md\_name* | *mac\_address*} **association** *ma\_name* **lowest-priority-defect** *lowest\_priority\_defect*

---

### Syntax Definitions

<i>mep_id</i>	Specifies the Maintenance Association End Point. The range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>lowest_priority_defect</i>	The lowest priority defect that can generate a Fault alarm. Possible values are <b>xcon</b> , <b>rem-err-xcon</b> , <b>no-defect</b> , <b>mac-rem-err-xcon</b> , <b>err-xcon</b> , and <b>all-defect</b> .

### Defaults

parameter	default
<i>lowest_priority_defect</i>	mac-rem-err-xcon

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

The *mep\_id* should be unique amid all those used by or available to the service provider in the specified MA.

### Examples

```
-> ethoam endpoint 100 domain esd.ale.com association ale-sales lowest-priority-defect all-defect
```

### Release History

## ethoam linktrace

Enables the maintenance entity to initiate transmitting Link Trace Messages (LTM).

**ethoam linktrace** {**target-macaddress** *mac\_address* | **target-endpoint** *t\_mepid*} **source-endpoint** *s\_mepid* **domain** {*md\_name* | *mac\_address*} **association** *ma\_name* [**flag** [**fdb-mpdb** | **fdbonly**]] [**hop-count** *hop\_count*]

---

### Syntax Definitions

<i>mac_address</i>	Target MAC address to be transmitted.
<i>t_mepid</i>	Specifies the MEP for which the Loopback message is targeted.
<i>s_mepid</i>	Specifies the MEP that transmits the Loopback message. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<b>domain</b> <i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<b>fdbonly</b>	Specifies that only the MAC addresses learned in a bridge's active data forwarding table will be used to decide the egress port.
<i>hop_count</i>	Indicates the number of hops remaining in this LTM. Each bridge that handles the LTM decreases the value by 1. This decreased value is returned to the LTM. The valid range is 1–2 <sup>32</sup> .

### Defaults

parameter	default
<b>flag</b>	<b>fdbonly</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- This command allows an operator to generate a LTM for the specified MEP.
- This command signals the MEP that it should transmit a Linktrace message and detect the presence or lack of the corresponding Linktrace messages.

## Examples

```
-> ethoam linktrace target-macaddress 10:aa:ac:12:12:ad source 4 domain MD
association flag fdbonly hop-count 32
Transaction Id: 6943
```

```
-> ethoam linktrace target-endpoint 15 source 4 domain MD association
Transaction Id: 6934
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

dotlagCfmMepTransmitLtmResult
dotlagCfmMepTransmitEgressIdentifier
```

---

## ethoam loopback

Initiates the transmission of loopback messages from the specified source MEP to the specified target MEP or MAC address. Also triggers the source MEP to detect the presence or lack of a corresponding loopback reply from the target.

**ethoam loopback** {**target-endpoint** *t\_mepid* | **target-macaddress** *mac\_address*} **source-endpoint** *s\_mepid* **domain** *md\_name* **association** *ma\_name* [**number** *num*] [**data** *string*] [**vlan-priority** *vlan\_priority*] [**drop-eligible** {**true** | **false**}]

---

### Syntax Definitions

<i>t_mepid</i>	Specifies the MEP for which the Loopback message is targeted. The valid range is 1-8191.
<i>mac_address</i>	Target MAC address to be transmitted.
<i>s_mepid</i>	Specifies the MEP that transmits the Loopback message. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>num</i>	Number of loopback messages. The valid range is 1-10.
<i>string</i>	Specifies the amount of data to be included in the Data Type Length Value (TLV), if the Data TLV is selected to be sent. The valid range is 1–255.
<i>vlan_priority</i>	VLAN Priority. The valid range is 0-7.
<b>true</b>	Sets the drop eligibility bit in the VLAN tag to true.
<b>false</b>	Sets the drop eligibility bit in the VLAN tag to false.

### Defaults

parameter	default
<i>num</i>	1
<i>vlan_priority</i>	CCM priority
<b>drop-eligible</b> { <b>true</b>   <b>false</b> }	<b>true</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

## Usage Guidelines

- Source and target MEP-ID, MD and MA must already exist before loopback is initiated.
- If data TLV is not set, then it is not sent in the loopback message.

## Examples

```
-> ethoam loopback target-endpoint 10 source-endpoint 20 domain MD association MA
number 3
Reply from 00:0E:B1:6B:43:89: bytes=64 seq=0 time=100ms
Reply form 00:0E:B1:6B:43:89: bytes=64 seq=0 time=112ms
Request timed out.
----00:E0:B1:6B:43:89 ETH-LB Statistics----
3 packets transmitted, 2 packets received, 33% packet loss
round-trip (ms)  min/avg/max = 100/106/112
```

```

---

## ethoam fault-alarm-time

Configures the timeout value for the Fault Notification Generation Alarm time that specifies the time interval during which one or more defects should be detected before the fault alarm is issued.

**ethoam fault-alarm-time** *centiseconds* **endpoint** *mep\_id* **domain** *md\_name* **association** *ma\_name*

**no ethoam fault-alarm-time** **endpoint** *mep\_id* **domain** *md\_name* **association** *ma\_name*

---

### Syntax Definitions

<i>centiseconds</i>	The Fault Notification Generation Alarm timeout value, in centiseconds. The valid range is 250–1000.
<i>mep_id</i>	Specifies the MEP of a specific MA. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.

### Defaults

parameter	default
<i>centiseconds</i>	250

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to restore the Fault Notification Generation Alarm timeout value to the default value.
- The Fault Notification Generation Alarm timeout value is configurable per MEP.

### Examples

```
-> ethoam fault-alarm-time 500 endpoint 100 domain esd.ale.com association
ale_sales
-> no ethoam fault-alarm-time endpoint 100 domain esd.ale.com association ale_sales
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

---

## ethoam fault-reset-time

Configures the timer value for the Fault Notification Generation Reset time that specifies the time interval during which the fault alarm is re-enabled to process faults. The fault alarm will only be re-enabled if no new faults are received during this time interval.

**ethoam fault-reset-time** *centiseconds* **endpoint** *mep\_id* **domain** *md\_name* **association** *ma\_name*

**no ethoam fault-reset-time endpoint** *mep\_id* **domain** *ma\_name* **association** *ma\_name*

---

### Syntax Definitions

<i>centiseconds</i>	The Fault Notification Generation Reset timer value, in centi seconds. The valid range is 250–1000.
<i>mep_id</i>	Specifies the MEP of a specific MA. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.

### Defaults

parameter	default
<i>centiseconds</i>	1000

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to restore the Fault Notification Generation Reset timeout value to the default value.
- The Fault Notification Generation Reset timer value is configurable per MEP.

### Examples

```
-> ethoam fault-reset-time 250 end-point 100 domain esd.ale.com association
ale_sales
-> no ethoam fault-reset-time end-point 100 domain esd.ale.com association
ale_sales
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

dot1agCfmMepFngResetTime

---

## ethoam one-way-delay

Initiates a one-way-delay measurement (1DM) to determine the one-way frame delay (latency) and delay variation (jitter) between two MEPs.

**ethoam one-way-delay** {**target-endpoint** *t\_mepid* | **target-macaddress** *mac\_address*} **source-endpoint** *s\_mepid* **domain** *md\_name* **association** *ma\_name* [**vlan-priority** *vlan\_priority*]

---

### Syntax Definitions

<i>t_mepid</i>	Target MEP ID. The valid range is 1-8191.
<i>mac_address</i>	Target MAC address.
<i>s_mepid</i>	Source MEP ID. The valid range is 1-8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>vlan_priority</i>	VLAN Priority. The valid range is 0-7.

### Defaults

parameter	default
<i>vlan_priority</i>	7

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Source MEP-ID, MD and MA must be created before initiating 1DM.
- When **target-endpoint** is specified then entry must be present in the RMEP table, no matter if its status is RMEP\_OK or RMEP\_FAILED, before initiating 1DM. So **target-macaddress** can be used to bypass such a restriction.
- Although the OmniSwitch implementation of Ethernet frame delay measurement (ETH-DM) is compliant with ITU-T Y.1731, delay measurement can be performed for both ITU-T Y.1731 and IEEE 802.1ag MEPs.
- If the 1DM is initiated with a **target-macaddress** and an egress port is found for this MAC address, then the 1DM frames are transmitted from that port. Otherwise, 1DM frames are flooded in the MEP's VLAN.
- One-way delay measurement requires NTP clock synchronization between the sending and receiving MEPs.

## Examples

```
-> ethoam one-way-delay target-endpoint 10 source-endpoint 12 domain MD association
MA vlan-priority 4
-> ethoam one-way-dealy target-macaddress 00:e0:b1:6a:52:4c source-endpoint 12
domain MD association MA vlan-priority 4
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

    alaCfmMepOWDTMepIdentifier
    alaCfmMepOWDTPriority
```

---

## ethoam two-way-delay

Initiate a two-way-delay measurement to determine the round-trip latency and jitter between two MEPs. The initiating MEP sends delay measurement message (DMM) frames to the receiving MEP. The receiving MEP responds with delay measurement reply (DMR) frames.

**ethoam two-way-delay** {**target-endpoint** *t\_mepid* | **target-macaddress** *mac\_address*} **source-endpoint** *s\_mepid* **domain** *md\_name* **association** *ma\_name* [**vlan-priority** *vlan\_priority*]

---

### Syntax Definitions

<i>t_mepid</i>	Target MEP ID. The valid range is 1-8191.
<i>mac_address</i>	Target MAC address.
<i>s_mepid</i>	Source MEP ID. The valid range is 1–8191.
<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>vlan_priority</i>	VLAN Priority. The valid range is 0-7.

### Defaults

parameter	default
<i>vlan_priority</i>	7

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Source MEP-ID, MD and MA must be created before initiating a two-way delay measurement.
- When **target-endpoint** is specified then entry must be present in the RMEP table, no matter if the status is RMEP\_OK or RMEP\_FAILED, before initiating two-way-delay. So **target-macaddress** can be used to bypass such a restriction.
- The CLI console will pause until all DMRs are received or maximum of 3 seconds to ensure that all the DMRs have been returned. If the operation fails, then the appropriate message is displayed. If the operation is successful, no message is displayed.
- If the DMM is initiated by UP MEP with a **target-macaddress** and the egress port is found for this MAC address, then DMM frames are transmitted from that port. Otherwise, DMM frames are flooded in the MEP's VLAN.

- Two-way delay measurement does *not* require NTP clock synchronization on the sending and receiving MEPs.
- Although the OmniSwitch implementation of Ethernet frame delay measurement (ETH-DM) is compliant with ITU-T Y.1731, delay measurement can be performed for both ITU-T Y.1731 and IEEE 802.1ag MEPs.
- This command initiates an on-demand OAM performance measurement. To set up continuous two-way delay measurement, see the “Service Assurance Agent Commands” chapter for information about how to configure an SAA for continuous two-way frame delay measurement.

## Examples

```
-> ethoam two-way-delay target-endpoint 10 source-endpoint 12 domain MD association
MA vlan-priority 4
Reply from 00:0E:B1:6B:43:89 delay=2584us jitter=282us
-> ethoam two-way-delay target-macaddress 00:e0:b1:6a:52:4c source-endpoint 12
domain MD association MA vlan-priority 4
Reply from 00:E0:B1:6A:52:4C: delay=2584us jitter=282us
```

## Release History

Release 7.3.1; command was introduced.

### Related Commands

**ethoam one-way-delay** Initiates the two one-way-delay messages from a particular MEP to an RMEP.

### MIB Objects

```
alaCfmGlobalOWDClear
  alaCfmGlobalTWDClear
```

---

## show ethoam

Displays the information of all the Management Domains (MD) configured on the bridge.

**show ethoam**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command displays all the MAs for all the MDs.

### Examples

```
-> show ethoam
System Configuration
  Ethernet OAM system mac address: 00:D0:95:EC:84:B0,
  Number of Maintenance Domains: 1
  Maintenance Domain: esd.ale.com
  Maintenance Association: ale-sales
```

#### *output definitions*

---

<b>Ethernet OAM system mac address</b>	The MAC address of the Ethernet OAM system.
<b>Number of Maintenance Domains</b>	The number of maintenance domains configured on the bridge.
<b>Maintenance Domain</b>	The name of the maintenance domain.
<b>Maintenance Association</b>	The name of the maintenance association.

---

### Release History

Release 7.3.1; command was introduced.

## Related Commands

### [ethoam domain](#)

Creates an Ethernet domain with a specific name.

## MIB Objects

---

## show ethoam domain

Displays the information of a specific Management Domain configured on the bridge.

**show ethoam domain** *md\_name*

---

### Syntax Definitions

*md\_name* Specifies the management domain name.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam domain MD
Total number of MAs configured in this MD = 1
MD Attributes
  MD-Format : string,
  MD-Level : level-3,
  MD-MHFstatus : mhfNone,
  MD-IdPermission : sendIdNone
  Maintenance Association : MA
    MA-Format : string,
    Primary Vlan : 199,
    Associated Vlan-list : none,
    Total Number of Vlans : 1,
    MA-MHFstatus : mhfNone,
    MA-IdPermission : sendIdNone,
    CCM-interval : interval10s,
    MEP-List(MEP-Id) : 10
```

#### *output definitions*

---

<b>MD-level</b>	The level at which the MD was created.
<b>MD-MHFstatus</b>	Indicates whether the maintenance entity can create MHFs for this MD. Options include <b>none</b> , <b>explicit</b> , or <b>default</b> .
<b>Maintenance Association</b>	The name of the maintenance association.
<b>Vlan</b>	The VLAN ID monitored by this MA. If the MA is not attached to any VLAN, 0 will be displayed.

*output definitions (continued)*

---

<b>MA-MHFstatus</b>	Indicates whether the maintenance entity can create MHFs for this MA. Options include <b>none</b> , <b>explicit</b> , or <b>default</b> .
<b>CCM-interval</b>	The interval between the CCM transmissions.
<b>MEP-Id</b>	Indicates the Maintenance End Point.

### Usage Guidelines

N/A

### Examples

```
-> show ethoam domain MD association MA
Total number of MEPs configured in this MA = 1
MA-Format : string,
Primary Vlan : 100,
Associated Vlan-list : none,
Total Number of Vlans : 1,
MA-MHFstatus : mhfDefer,
MA-IdPermission : sendIdDefer,
CCM-interval : interval10s,
MEP-List(MEP-Id) : 1-5,
```

Legend: MEP-Id: \* = Inactive Endpoint

```
MEP-ID   Admin State Direction   Mac-Address           Port           Primary Vlan
-----+-----+-----+-----+-----+-----+-----
      1      disable         up      00:E0:B1:A0:78:A3     virtual        100
```

### output definitions

---

**Primary Vlan** The VLAN ID monitored by this MA. If the MA is not attached to any VLAN, 0 will be displayed.

**MA-MHFstatus** Indicates whether the maintenance entity can create MHFs for this MA. Options include **none**, **explicit**, or **default**.

**CCM-interval** The interval between the CCM transmissions.

*output definitions (continued)*

---

<b>MEP-ID</b>	Indicates the Maintenance End Point.
<b>Admin State</b>	Indicates the administrative state ( <b>up</b> or <b>down</b> ) of the MEP.
<b>Direction</b>	The direction of the MEP.
<b>MAC Address</b>	The MAC address of the MEP.
<b>Port</b>	The slot/port number of the Bridge port to which the MEP is attached.

## show ethoam domain association end-point

Displays the information of a specific MEP in a Management Domain configured on the bridge.

**show ethoam domain** *md\_name* **association** *ma\_name* **end-point** *mep\_id*

---

### Syntax Definitions

*md\_name* Specifies the management domain name.

*ma\_name* Specifies the name of the Ethernet OAM Association.

*mep\_id* Specifies the MEP of a specific MA. The valid range is 1–8191.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam domain MD association MA endpoint 10
Admin State : disable,
Direction : up,
Slot/Port: virtual,
MacAddress: 00:E0:B1:A0:78:A3,
Fault Notification : FNG_RESET,
CCM Enabled : disabled,
RFP Status : enabled,
CCM Linktrace Priority : 7,
CCM Not Received : false,
CCM Error defect : false,
CCM Xcon defect : false,
MEP RDI defect : false,
MEP Last CCM Fault : not specified,
MEP Xcon Last CCM Fault : not specified,
MEP Error Mac Status : false,
MEP Lbm NextSeqNumber : 0,
MEP Ltm NextSeqNumber : 32157,
Fault Alarm Time : 250,
Fault Reset Time : 1000,
Lowest PrDefect Allowed : DEF_MAC_REM_ERR_XCON,
Highest PrDefect Present : DEF_NONE
```

*output definitions*

---

<b>Admin State</b>	Indicates the administrative state ( <b>up</b> or <b>down</b> ) of the MEP.
<b>Direction</b>	The direction of the MEP.
<b>Slot/Port</b>	The slot/port number of the Bridge port to which the MEP is attached. If the value is virtual, it indicates a virtual port.
<b>MAC Address</b>	The MAC address of the MEP.
<b>Fault Notification</b>	Indicates the current state of the MEP Fault Notification Generator State Machine, which can be <b>FNG_RESET</b> , <b>FNG_DEFECT</b> , <b>FNG_REPORT_DEFECT</b> , <b>FNG_DEFECT_REPORTED</b> , or <b>FNG_DEFECT_CLEARING</b> .
<b>RFP Status</b>	Indicates the status of the RFP.
<b>CCM Enabled</b>	Indicates whether the MEP generates CCMs ( <b>enabled</b> ) or not ( <b>disabled</b> ).
<b>CCM Linktrace Priority</b>	Indicates the priority value for CCMs and LTM s transmitted by the MEP.
<b>CCM Not Received</b>	Indicates if CCMs are not being received ( <b>true</b> ) or received ( <b>false</b> ) from at least one of the configured remote MEPs.
<b>CCM Error defect</b>	Indicates if a stream of erroneous CCMs is being received ( <b>true</b> ) or not ( <b>false</b> ) from a MEP in this MA.
<b>CCM Xcon defect</b>	Indicates if a stream of CCMs is being received ( <b>true</b> ) or not ( <b>false</b> ) from a MEP that belongs to another MA.
<b>MEP RDI Received</b>	Indicates that any other MEP in this MA is transmitting the RDI bit. Options include <b>true</b> or <b>false</b> .
<b>MEP Last CCM Fault</b>	The last-received CCM that triggered a MA fault.
<b>MEP Xcon Last CCM Fault</b>	The last-received CCM that triggered a cross-connect fault.
<b>MEP Error Mac Status</b>	Indicates a port status TLV. Options include <b>true</b> or <b>false</b> .
<b>MEP Lbm NextSeqNumber</b>	The next Transaction Identifier or Sequence Number to be sent in an LBM.
<b>MEP Ltm NextSeqNumber</b>	The next Transaction Identifier or Sequence Number to be sent in an LTM.
<b>Fault Alarm Time</b>	The time interval during which one or more defects should be detected before the fault alarm is issued
<b>Fault Reset Time</b>	The time interval during which the fault alarm is re-enabled to process faults.
<b>Lowest PrDefect Allowed</b>	The lowest priority defect that allowed to generate fault alarm.
<b>Highest PrDefect Present</b>	The highest priority defect since the MEPs Fault Notification Generator in reset state.

---

## show ethoam default-domain configuration

Displays the level, MHF, and ID permission values for the default domain.

**show ethoam default-domain configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam default-domain configuration
Level : 3,
MHF-Creation : mhfdefault,
ID-Permission : sendIdnone
```

#### *output definitions*

---

<b>Level</b>	The level assigned to the default domain. Configured through the <a href="#">ethoam default-domain level</a> command.
<b>MHF-creation</b>	Indicates the MHF value for a VLAN that is part of the default MD Options include <b>none</b> , <b>explicit</b> , or <b>default</b> . Configured through the <a href="#">ethoam default-domain mhf</a> command.
<b>ID-Permission</b>	The ID permission of the default domain. Configured through the <a href="#">ethoam default-domain id-permission</a> command.

---

### Release History

Release 7.3.1; command was introduced.

## Related Commands

**show ethoam default-domain** Displays the primary VLAN configuration for the default domain.

## MIB Objects

```
dotlagCfmMaDefaultMdDefLevel  
  dotlagCfmMaDefaultMdDefMhfCreation  
  dotlagCfmMaDefaultMdDefIdPermission
```

---

## show ethoam default-domain

Displays all the default MD information for all the primary VLANs or for a specific primary VLAN.

**show ethoam default-domain** [**primary-vlan** *vlan\_id*]

### Syntax Definitions

*vlan\_id* The primary VLAN ID.

### Defaults

By default, the default MD information for all primary VLANs is displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

Use the *vlan\_id* parameter with this command to view information about the default MD for a specific primary VLAN.

### Examples

```
-> show ethoam default-domain
```

```
Primary-Vlan  Mhf-creation  Level  Id-Permission  Status
-----+-----+-----+-----+-----
          1      mhfer          no-level  sendIdDefer    true
          10     mhDefault         3        sendIdNone     true
```

```
-> show ethoam default-domain primary-vlan 10
```

```
Primary-Vlan  Mhf-creation  Level  Id-Permission  Status
-----+-----+-----+-----+-----
          10     mhDefault         3        sendIdNone     true
```

### output definitions

<b>Primary Vlan</b>	The primary VLAN ID of the default MD.
<b>Mhf-creation</b>	The primary VLAN ID MHF value ( <b>none</b> , <b>explicit</b> , or <b>default</b> ).
<b>Level</b>	The primary VLAN level ( <b>no-level</b> , <b>0–7</b> ).
<b>Id-Permission</b>	The primary VLAN ID permission ( <b>none</b> , <b>chassid</b> , or <b>defer</b> ).

### Release History

Release 7.3.1; command was introduced.

## Related Commands

**ethoam default-domain  
primary-vlan**

Modifies the default domain for the specified primary VLAN.

## MIB Objects

```

  dotlagCfmDefaultMdLevelVid  
  dotlagCfmDefaultMdLevelMhfCreation  
  dotlagCfmDefaultMdLevelLevel
```

---

## show ethoam remote-endpoint domain

Displays the information of all remote MEPs learned as a part of the CCM message exchange.

**show ethoam remote-endpoint domain** *md\_name* **association** *ma\_name* **end-point** *s\_mepid* [**remote-mep** *r\_mepid*]

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name.
<i>ma_name</i>	Specifies the name of the Ethernet OAM Association.
<i>s_mepid</i>	Specifies the MEP of a specific MA. The valid range is 1–8191.
<i>r_mepid</i>	The remote MEP. The valid range is 1–8191.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam remote-endpoint domain MD association MA endpoint 10
Legends: PortStatusTlv: 1 = psBlocked, 2 = psUp, 0 = psNoTlv
         InterfaceStatusTlv: 1 = ifUp, 2 = ifDown, 4 = ifUnknown, 0=ifNoTlv
```

```
RMEP-ID RMEP      OkFailed  Mac Address      port I/f  RDI  Ch-id  Ch-id
      Status      Time
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
  20  RMEP_OK      634600  00:E0:B1:6E:41:65  2   1   false LCL-ASND DUT-1
  30  RMEP_OK      334600  00:E0:B1:6E:41:64  2   1   false LCL-ASND DUT-2
```

### output definitions

---

<b>MEP-ID</b>	Indicates the Maintenance End Point.
<b>RMEP Status</b>	The operational state of the remote MEP Remote State machines for this MEP, which can be <b>RMEP_IDLE</b> , <b>RMEP_START</b> , <b>RMEP_FAILED</b> , or <b>RMEP_OK</b> .
<b>OkFailed Time</b>	The time (SysUpTime) when the Remote MEP state machine last entered either the <b>RMEP_FAILED</b> or <b>RMEP_OK</b> .
<b>MacAddress</b>	The MAC address of the remote MEP.

*output definitions (continued)*

---

<b>Port Status Tlv</b>	The MAC status TLV last received.
<b>I/f Status Tlv</b>	The interface status TLV last received.

---

**Note:** Output shown above is not accurate as it is adjusted to display it in the single row. Following are modified:

P/S Tlv - Port Status Tlv  
 I/F Tlv - I/F Status Tlv  
 Ch-id Subtype - Chassis ID Subtype  
 Ch-id - Chassis ID  
 LCL-ASND - LOCALLY\_ASSIGNED

**Release History**

Release 7.3.1; command was introduced.

**Related Commands**

```

---

## show ethoam cfmstack

Displays the contents of CFM Stack Managed Object, which determines the relationships among MEPs and MIPs on a specific bridge port.

**show ethoam cfmstack** {port *chassis/slot/port* | **virtual** | **linkagg** *agg\_id*}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Slot and port number for which the contents of the configured MEP or MIP will be displayed.
<b>virtual</b>	Virtual port.
<i>agg_id</i>	The aggregate ID for which the contents of the configured MEP or MIP will be displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam cfmstack port 1/3
Up MHF Configured:
  Vlan-id: 100,
  Direction: up,
  MAC-Address: 00:D0:95:EC:84:B0,
  Maintenance Association: ale-sales,
  Maintenance Domain: esd.ale.com,
  MD-level: 3
Down MHF Configured:
  Vlan-id: 100,
  Direction: down,
  MAC-Address: 00:D0:95:F6:33:DA,
  Maintenance Association: ale-sales,
  Maintenance Domain: esd.ale.com,
  MD-level: 3
```

```
-> show ethoam cfmstack port virtual
MEP-Id 32 - Vlan 30:
  Direction: up,
  MAC-Address: 00:E0:B1:A5:F2:34,
  Maintenance Association: MA4,
  Maintenance Domain: MD4,
  MD-level: 4
```

### *output definitions*

---

<b>Vlan-id</b>	The VLAN ID to which the MEP is attached.
<b>Direction</b>	Indicates the direction ( <b>Inward</b> or <b>Outward</b> ) of the Maintenance Point (MP) on the Bridge port.
<b>MAC-Address</b>	The MEP ID configured on this port.
<b>Maintenance Domain</b>	The name of the maintenance domain.
<b>Maintenance Association</b>	The name of the maintenance association.
<b>MD-level</b>	The MD level at which the MD was created.

---

## Release History

Release 7.3.1; command was introduced.

## Related Commands

**ethoam endpoint admin-state** Creates an Ethernet OAM Maintenance End Point in the specified MA.

---

## show ethoam linktrace-reply

Displays the content of the Linktrace reply (LTR) returned by a previously transmitted LTM. This command displays the LTR based on the transaction identifier or sequence number of the LTM for which the LTR is to be displayed.

**show ethoam linktrace-reply domain *md\_name* association *ma\_name* endpoint *s\_mepid* tran-id *num***

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name.
<i>ma_name</i>	Name of the Ethernet OAM Association.
<i>s_mepid</i>	Specifies the MEP for which the LTR is to be displayed. The valid range is 1-8191.
<i>num</i>	Specifies the Transaction ID or sequence number returned from a previously transmitted LTM.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- “LTM operation successful. Target is reachable.” – This message suggests that LTM has reached the target and all the expected LTRs have been received.
- “LTM operation unsuccessful. Target not reachable.” – This message suggests that LTM is successfully initiated but the target is not reachable.
- “LTM operation unsuccessful. Target is reachable.” – This message suggest that Target is reachable but at least one of the LTR from intermediate hop is not received.
- “LTM operation in progress.” – This message suggests that LTM operation is in progress. This message will appear if show CLI is fired before LTM Time-out time.
- “LTM Timed out.”- This message suggests that either LTM is not initiated properly or when none of the expected LTRs is received in LTM Time-out duration which is 5 seconds.

## Examples

```
-> show ethoam linktrace-reply domain MD association MA endpoint 10 tran-id 1256
LTM operation successful. Target is reachable.
```

```

### *output definitions*

---

<b>Ttl</b>	Time to live field for the returned LTR.
<b>LTM Forwarded</b>	Indicates whether the LTM was forwarded or not.
<b>Terminal MEP</b>	Indicates whether the MP reported in the reply Ingress/Egress TLV is a MEP.
<b>Last Egress Identifier</b>	Identifies the MEP linktrace initiator that originated, or the responder that forwarded, the LTM to which this LTR is the response.
<b>Next Egress Identifier</b>	Identifies the linktrace responder that transmitted this LTR, and can forward the LTM to the next hop.
<b>Relay Action</b>	Indicates how the dataframe targeted by the LTM would be passed to Egress bridge port. Options include <b>RLY_HIT</b> , <b>RLY_FDB</b> , or <b>RLY_MPDB</b> .
<b>Ingress Action</b>	Indicates how the dataframe targeted by the LTM would be received on the receiving MP. Options include <b>ING_NONE</b> , <b>ING_OK</b> , <b>ING_DOWN</b> , <b>ING_BLOCKED</b> , or <b>ING_VID</b> .
<b>Ingress Mac</b>	The MAC address returned in the ingress MAC address field.

*output definitions*

---

<b>Egress Action</b>	Indicates how the dataframe targeted by the LTM would be passed through Egress bridge port. Options include <b>ING_NONE</b> , <b>ING_OK</b> , <b>ING_DOWN</b> , <b>ING_BLOCKED</b> , or <b>ING_VID</b> .
<b>Egress Mac</b>	The MAC address returned in the egress MAC address field.

---

**Release History**

Release 7.3.1; command was introduced.

---

## show ethoam linktrace-tran-id

Displays the transaction identifiers returned by previously generated LTMs from a specified MEP.

**show ethoam linktrace-tran-id domain** {*md\_name* / *mac\_address*} **association** *ma\_name* **endpoint** *mep\_id*

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name.
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Name of the Ethernet OAM Association.
<i>mep_id</i>	Specifies the MEP for which the LTR is to be displayed. The valid range is 1-8191.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam linktrace-tran-id domain esd.ale.com association ale-sales endpoint
3
S.No   Transaction Id
-----+-----
      1    13357,
      2    13358,
      3    13359,
```

#### *output definitions*

---

<b>S.No</b>	Indicates the sequence number.
<b>Transaction Id</b>	Indicates the Transaction Identifier returned from a previously transmitted LTM.

---

### Release History

Release 7.3.1; command was introduced.

## show ethoam vlan

Displays the Ethernet OAM statistics of all the Management Domains configured on the bridge. Also, displays the statistics of all the MAs and matching MEPs for all the MDs.

**show ethoam vlan** *vlan\_id*

---

### Syntax Definitions

*vlan\_id* VLAN ID, primary or non-primary VID (e.g. '10').

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam vlan 10
Primary Vlan : 10,
Associated Vlan-list : 15-20 25 50-80
```

```
-> show ethoam vlan 15
Primary Vlan : 10,
Associated Vlan-list : 15-20 25 50-80
```

## show ethoam statistics

Displays the Ethernet OAM of all the Management Domains configured on the bridge. Also, displays the statistics of all the MAs and matching MEPs for all the MDs.

**show ethoam statistics domain** {*md\_name* / *mac\_address*} [**association** *ma\_name*] [**end-point** *mep\_id*]

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name.
<i>mac_address</i>	Specifies the CFM system MAC address.
<i>ma_name</i>	Specifies the name of Ethernet OAM Association.
<i>mep_id</i>	Specifies a MEP for a specific MA.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

## show ethoam config-error

Displays the configuration error for a specified VLAN and port or linkagg.

**show ethoam config-error** [**vlan** *vlan\_id*] [{**port** *chassis/slot/port* | **linkagg** *agg\_id*}]

---

### Syntax Definitions

<i>vlan_id</i>	VLAN Identifier.
<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Physical slot and port number.
<i>agg_id</i>	Logical link aggregate ID number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show ethoam config-error

  dotlagCfmConfigErrorListVid
  dotlagCfmConfigErrorListIfIndex
  dotlagCfmConfigErrorListErrorType
```

---

## show ethoam one-way-delay

Displays the one-way ETH-DM delay (latency) and jitter parameters either for all entries or for a specified MAC address for a particular source MEP-ID.

**show ethoam one-way-delay domain** *md\_name* **association** *ma\_name* **endpoint** *s\_mepid* [**mac-address** *mac\_address*]

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>s_mepid</i>	Source MEP ID. The valid range is 1–8191.
<i>mac_address</i>	MAC Address of the remote MEP.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Dash ('-') in the output in Jitter column signifies that the value can not be calculated as the previous delay value is unknown. This will happen only when 1DM is received for the first time.
- Maximum entries that Delay Result table can store are 1024. After that, the oldest entry is deleted from the table whenever a new entry is required.

### Examples

```
-> show ethoam one-way-delay domain MD association MA endpoint 10
```

```
Legend: Jitter: - = undefined value
```

```
Remote Mac address          Delay (us)  Jitter (us)
-----+-----+-----
00:d0:95:ef:44:44          2369        1258
00:d0:95:ef:66:88          5896         282
00:d0:95:ef:88:88          2584         -
00:d0:95:ef:66:55          2698        4782
```

```

-> show ethoam one-way-delay domain MD association MA endpoint 10 mac-address
00:d0:95:ef:44:44
Legend: Jitter: - = undefined value
Remote Mac address      Delay (us)   Jitter (us)
-----+-----+-----
00:d0:95:ef:44:44      2369        1258

```

### *output definitions*

<b>Remote Mac address</b>	Remote MAC address.
<b>Delay</b>	Physical slot and port number.
<b>eJitter</b>	Type of an error.

## Release History

Release 7.3.1; command was introduced.

## Related Commands

[ethoam one-way-delay](#) Initiates one-way-delay messages from a particular MEP to an RMEP.

## MIB Objects

```

dotlagCfmMdTable
  dotlagCfmMdName
dotlagCfmMaNetTable
  dotlagCfmMaNetName
dotlagCfmMepTable
  dotlagCfmMepIdentifier

  alaCfmMepDelayTestType
  alaCfmMepDelayTestDelay
  alaCfmMepDelayVariation

```

## show ethoam two-way-delay

Displays the two-way ETH-DM delay and jitter parameters for a specific remote MAC-Address or for all the MAC-Addresses for which two-way-delay was initiated for a particular source MEP-ID.

**show ethoam two-way-delay domain** *md\_name* **association** *ma\_name* **endpoint** *s\_mepid* [**mac-address** *mac\_address*]

---

### Syntax Definitions

<i>md_name</i>	Specifies the domain name. For more information on the different formats of the domain name, refer to <a href="#">ethoam domain</a> .
<i>ma_name</i>	Name of the Ethernet OAM Association. Up to 48 (minus the domain name length) characters may be used.
<i>s_mepid</i>	Source MEP ID. The valid range is 1–8191.
<i>mac_address</i>	MAC Address of the remote MEP.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- If '0' appears in the output in RMEP-ID column signifies that the DMM was initiated with target-macaddress. As multiple RMEPs can have same mac-address.
- If a dash ('-') appears in the output in Jitter column signifies that the value can not be calculated as the previous delay value is unknown, i.e. if only one reply for DMM (DMR) is received and this was the first time DMM was initiated from the MEP, then jitter will not be calculated.
- Maximum entries that Delay Result table can store are 1024. After that, the DMM request shall be rejected if a new entry needs to be created for the MEP. If entry for the MEP already exists in the table, that entry shall be updated with the new one.

### Examples

```
-> show ethoam two-way-delay domain MD association MA endpoint 10 mac-address
00:d0:95:ef:44:44
Legend: Jitter: - = undefined value
       : RMEP-ID: 0 = two-way-delay was initiated with target mac-address
```

```

# 53 LINK OAM Commands

Ethernet in the First Mile (EFM), also known as LINK OAM, is a collection of protocols specified in IEEE 802.3ah, defining Ethernet in the access networks that connects subscribers to their immediate service provider. EFM, EFM-OAM and LINKOAM refers to IEEE 802.3ah standard.

LINK OAM (operation, administration, and maintenance) is a tool which monitors Layer-2 link status on the network by sending OAM protocol data units (OAMPDUs) between the network devices. OAMPDUs contain control and status information used to monitor, test and troubleshoot OAM-enabled links. By enabling LINK OAM on switch ports, network administrators can monitor the link-related issues on the first mile. LINK OAM provides network administrators the ability to monitor link performance, remote fault detection and remote loopback control.

---

**Note.** EFM (LINK OAM) does not include functions such as station management, bandwidth allocation or provisioning functions.

---

MIB information for the EFM (LINK OAM) commands is as

*Filename:* alcatel-ind1-dot3-oam-mib.mib  
*Module:* ALCATEL-IND1-DOT3-OAM-MIB

*Filename:* dot3-oam-mib.mib  
*Module:* DOT3-OAM-MIB

## efm-oam admin-state

Enables or disables the LINK OAM protocol on the switch.

**efm-oam admin-state {enable | disable}**

---

### Syntax Definitions

**enable** Enables the LINK OAM protocol.  
**disable** Disables the LINK OAM protocol.

### Defaults

By default, the LINK OAM protocol is disabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- LINK OAM must be enabled globally for the OAM to be functional on all the ports.
- When LINK OAM is disabled globally, all dynamically learned information on the port, including peer information, is deleted. However, the LINK OAM configuration for the port is retained.

### Examples

```
-> efm-oam admin-state enable
-> efm-oam admin-state disable
```

### Release History

Release 8.5R4; command was introduced.

### Related Commands

**efm-oam port admin-state** Enables or disables LINK OAM protocol on the specified port or on a range of ports.

**efm-oam port mode** Configures the LINK OAM mode on the port or on the range of ports to active or passive.

**show efm-oam configuration** Displays the global LINK OAM configuration.

### MIB Objects

alaDot3OamStatus

---

## efm-oam port admin-state

Enables or disables LINK OAM protocol on the specified port or on a range of ports.

**efm-oam port** *chassis/slot/port [-port2]* **admin-state** {enable | disable}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number of the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<b>enable</b>	Enables LINK OAM protocol on the specified port.
<b>disable</b>	Disables LINK OAM protocol on the specified port.

### Defaults

By default, the LINK OAM protocol is disabled on all ports for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- LINK OAM must be enabled globally for the OAM to be functional on all the ports.
- If LINK OAM is disabled for the port or globally disabled for the switch, any OAMPDUs received are discarded.
- When LINK OAM is disabled for the port, all dynamically learned information on the port, including peer information, is deleted. However, the LINK OAM configuration for the port is retained.
- LINK OAM is not supported on the mirroring ports.
- In link aggregates, LINK OAM is supported on an individual aggregable port only.

### Examples

```
-> efm-oam port 1/1/1 admin-state enable
-> efm-oam port 1/1/1 admin-state disable
-> efm-oam port 2/1/1-10 admin-state enable
-> efm-oam port 2/1/1-4 admin-state disable
```

### Release History

Release 8.5R4; command was introduced.

## Related Commands

<a href="#">efm-oam port mode</a>	Configure a LINK OAM mode on the port or on the range of ports to active or passive.
<a href="#">show efm-oam configuration</a>	Displays the global LINK OAM configuration.
<a href="#">show efm-oam port</a>	Displays the status of LINK OAM on all the ports in the system, along with other relevant information such as OAM mode, operational status and loopback status of the port.
<a href="#">show efm-oam port detail</a>	Displays the configuration and other related parameters for a port.

## MIB Objects

dot3OamTable  
dot3OamAdminState

---

## efm-oam port mode

Configures the LINK OAM mode on the port or on the range of ports to active or passive.

**efm-oam port** *chassis/slot/port[-port2]* **mode** {**active** | **passive**}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<b>active</b>	Configures the LINK OAM mode to active.
<b>passive</b>	Configures the LINK OAM mode to passive.

### Defaults

By default, LINK OAM mode is set to active on all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- LINK OAM discovery process is never initiated from a port when it is in passive mode. At least one of the two peer ports should be in active mode.
- An active port will respond to Loopback-control OAMPDUs only if the peer EFM-OAM client is also in active mode.

### Examples

```
-> efm-oam port 1/1/1 mode active
-> efm-oam port 1/1/1 mode passive
-> efm-oam port 2/1/1-10 mode active
-> efm-oam port 2/1/1-4 mode passive
```

### Release History

Release 8.5R4; command was introduced.

**Related Commands**

- efm-oam port admin-state** Enables or disables LINK OAM protocol on the specified port or on a range of ports.
- show efm-oam port** Displays the status of LINK OAM on all the ports in the system, along with other relevant information such as OAM mode, operational status and loopback status of the port.
- show efm-oam configuration** Displays the global LINK OAM configuration.

---

## efm-oam port keepalive-interval

Configures the timeout interval for the dynamically learned neighboring devices on a port or on a range of ports. Keepalive-interval is the maximum time period for which a LINK OAM port shall wait for a hello message from its peer before resetting a discovery session.

**efm-oam port** *chassis/slot/port[-port2]* **keepalive-interval** *seconds*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<i>seconds</i>	Specifies the keep-alive interval value in seconds. The range for this interval is 5 to 120 seconds.

### Defaults

By default, the keep-alive interval value is 5 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Even if unsupported OAMPDU is received on the port, keep-alive timer is reset on the port.
- To set the timer to its default value, set 5 seconds as the keepalive-interval.

### Examples

```
-> efm-oam port 1/1/1 keepalive-interval 10
-> efm-oam port 2/1/1-10 keepalive-interval 10
```

### Release History

Release 8.5R4; command was introduced.

**Related Commands**

**efm-oam port hello-interval** Configures the time interval (in seconds) by which the information OAMPDUs are transmitted out of a LINK OAM enabled port.

## efm-oam port hello-interval

Configures the time interval (in seconds) by which the information OAMPDUs are transmitted out of an LINK OAM enabled port.

**efm-oam port** *chassis/slot/port[-port2]* **hello-interval** *seconds*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<i>seconds</i>	Specifies the time interval (in seconds) this port waits before sending out the next hello packet. The range for this timer is 1 to 60 seconds.

### Defaults

By default, the hello-interval value is set to 1 second.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Use the hello-interval value of 1 second to reset the timer to its default value.
- On a given port, hello interval time period should not be more than half of keep alive timer on the peer port.

### Examples

```
-> efm-oam port 1/1/1 hello-interval 5
-> efm-oam port 2/1/1-10 hello-interval 10
```

### Release History

Release 8.5R4; command was introduced.

## Related Commands

<a href="#">efm-oam port hello-interval</a>	Configures the time interval (in seconds) by which the information OAMPDUs are transmitted out of a LINK OAM enabled port.

## efm-oam port remote-loopback

Specifies whether loopback requests from peers are processed or ignored on the specified port.

**efm-oam port *chassis/slot/port*[-*port2*] remote-loopback {*process* | *ignore*}**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<b>process</b>	Processes incoming loopback request from peer LINK OAM port.
<b>ignore</b>	Ignore (discard) incoming loopback requests.

### Defaults

By default, the incoming loopback requests are ignored.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- When the remote-loopback is in **process** mode, the session started by peer LINK OAM client will be processed by local LINK OAM port. As a result, remote port will be in remote-loopback state and the local port will be local-loopback state.
- When the remote-loopback is in **ignore** mode, the session started by peer LINK OAM will not be processed by the local port.

### Examples

```
-> efm-oam port 1/1/1 remote-loopback process
-> efm-oam port 1/1/1 remote-loopback ignore
-> efm-oam port 2/1/1-10 remote-loopback process
-> efm-oam port 2/1/1-4 remote-loopback ignore
```

### Release History

Release 8.5R4; command was introduced.

## Related Commands

- efm-oam port remote-loopback start** Initiates the loopback control PDU towards the peer port to start or stop the loopback session on the specified port.
- show efm-oam port detail** Displays the LINK OAM configuration and other related parameters for a port.
- show efm-oam port remote detail** Displays the configuration and details of the related parameters of the remote port.

## MIB Objects

dot3OamLoopbackIgnoreRx

---

## efm-oam port remote-loopback start

Initiates the loopback control PDU towards the peer port to start or stop the loopback session on the specified port.

**efm-oam port *chassis/slot/port* remote-loopback {start | stop}**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<b>start</b>	Specifies whether to start the loopback request.
<b>stop</b>	Specifies whether to stop the loopback request.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- Before issuing this command, the LINK OAM port has to be in active mode and discovery of peer ports has to be completed.
- When loopback is started from a port towards a peer port which is configured to ignore the loopback request, the loopback response timer will timeout and no error is displayed. In such case, verify the loopback-state of two ports by using the command [show efm-oam port remote detail](#).
- The maximum number of simultaneous loopback sessions supported per network interface is 2. If a third loopback is started through CLI, an error will be displayed at the CLI prompt.

### Examples

```
-> efm-oam port 1/1/1 remote-loopback start
-> efm-oam port 1/1/1 remote-loopback stop
```

### Release History

Release 8.5R4; command was introduced.

## Related Commands

- efm-oam port remote-loopback** Specifies an action that should perform when a loopback request is received from the peer on a port or on a range of ports.
- show efm-oam port remote detail** Displays the configuration and details of the related parameters of the remote port.
- show efm-oam configuration** Displays the global LINK OAM configuration.

---

## efm-oam port propagate-events

Configures whether or not the specified port or range of ports will propagate local event notifications to the remote peer.

```
efm-oam port chassis/slot/port[-port2] propagate-events {critical-event | dying-gasp} {enable | disable}
```

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.
<b>critical-event</b>	Configures the notification status for critical events.
<b>dying-gasp</b>	Configures the notification status for dying gasp events.
<b>enable</b>	Enables the notification of critical-event or dying-gasp events to the peer.
<b>disable</b>	Disables the notification of critical-event or dying-gasp events to the peer.

### Defaults

By default, the notification status for both critical-event and dying-gasp events is set to enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- When the system is set for critical event or a dying-gasp event, the local OAM entity indicates the event through the OAMPDU flags to its peer OAM entity.
- In case of port admin down, the OAM IFU-PDU with dying-gasp bit set will be sent to peer as soon as a failure is detected and transmission will continue till the specific port actually goes down.
- In case of takeover or reload of the switch, the OAM IFU-PDU with dying-gasp bit set will be sent to peer as soon as a failure is detected and transmission will continue till the specific device actually goes down.
- The information PDUs with dying gasp bit set is transmitted towards peer as soon as link-down is detected at NI. However, if there is a link flap (i.e link comes again) before the expiry of link-flap timer, then normal information PDU transmission with dying-gasp bit reset shall resume. This will cause clearing of alarms or trap on the peer port.

## Examples

```
-> efm-oam port 1/1/1 propagate-events critical-event enable
-> efm-oam port 1/1/1 propagate-events critical-event disable
-> efm-oam port 2/1/1-10 propagate-events dying-gasp enable
-> efm-oam port 2/1-4 propagate-events dying-gasp disable
```

## Release History

## efm-oam errored-frame-period

Configures the threshold, window frame values and the status for notification when the number of frame-errors exceed the threshold in a given period of time (specified) by window. When the number of frame errors exceeds a threshold within a given window defined by a number of frames (for example, 10 frames out of 1000 had errors), an Errored Frame Period event is generated.

**efm-oam port** *chassis/slot/port*[-*port2*] **errored-frame-period** [**threshold** *threshold\_symbols*] [**window** *window\_frames*] [**notify** {**enable** | **disable**}]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	The last port number in a range of ports that you want to configure on the same slot.
<i>threshold_symbols</i>	Specifies the frame error threshold number. The range supported is 1 to maximum 4 byte integer value (4294967295).
<i>window_frames</i>	Specifies the number of frames used to define a window within which the frame period errors are measured.
<b>enable</b>	Enables notification of the Errored Frame Period event.
<b>disable</b>	Disables notification of the Errored Frame Period event.

### Defaults

parameter	default
<i>threshold_symbols</i>	1 frame error
<b>enable</b>   <b>disable</b>	enable

The default for *window\_frames* depends on the port-types. The default, minimum and maximum supported values for various port-types are:

port-type	default value	minimum value	maximum value
100 mbps	200000	20000	12000000
1000 X	2000000	200000	120000000
1000 T	2000000	200000	120000000
10 Gig	20000000	2000000	1200000000

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

## Usage Guidelines

- The command can be issued in any order like window, threshold, and notify. However, at least one option needs to be entered.
- To enter many ports in a single command, use a hyphen to specify a range of ports (e.g. 3/1-16).

## Examples

```
-> efm-oam port 1/1/1 errored-frame-period threshold 1 window 3000000 notify enable
-> efm-oam port 1/1/1 errored-frame-period notify disable
-> efm-oam port 2/1/1-4 errored-frame-period threshold 1 window 3000000 notify
enable
-> efm-oam port 2/1/1-2 errored-frame-period notify disable
```

## Release History

Release 8.5R4; command was introduced.

## Related Commands

---

## efm-oam errored-frame

Configures an error frame threshold or window on a LINK OAM port and set notification status for errored frame events. When the number of frame errors exceeds a threshold within a given window defined by a period of time (for example, 10 frames in 1 second had errors), an Errored Frame Event is generated.

**efm-oam port** *chassis/slot/port[-port2]* **errored-frame** [**threshold** *threshold\_symbols*] [**window** *window\_seconds*] [**notify** {**enable** | **disable**}]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	The last port number in a range of ports that you want to configure on the same slot.
<i>threshold_symbols</i>	Specifies the frame error threshold number.
<i>window_seconds</i>	Specifies the window of time, in which the frame errors will be measured. The duration should be in units of 100ms.
<b>enable</b>	Enables notification of the Errored Frame event.
<b>disable</b>	Disables notification of the Errored Frame event.

### Defaults

parameter	default
<i>threshold_symbols</i>	1 frame error
<i>window_seconds</i>	1 second (10 dsec)
<b>enable</b>   <b>disable</b>	enable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- The various options, threshold, window and notify can be issued in any order. However, at least one option has to be entered.
- To enter many ports in a single command, use a hyphen to specify a range of ports (e.g. 3/1-16).

## Examples

```
-> efm-oam port 1/1/1 errored-frame threshold 10 window 32 notify enable
-> efm-oam port 1/1/1 errored-frame notify disable
-> efm-oam port 2/1/1-4 errored-frame threshold 10 window 32 notify enable
-> efm-oam port 2/1/1-2 errored-frame notify disable
```

## Release History

## efm-oam errored-frame-seconds-summary

Configures the threshold, window and notify-status for errored-frame-seconds-summary on a port. The Errored Seconds are the time in seconds in which at least one frame error has occurred.

**efm-oam port** *chassis/slot/port[-port2]* **errored-frame-seconds-summary** [**threshold** *threshold\_seconds*] [**window** *window\_seconds*] [**notify** {**enable** | **disable**}]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	The last port number in a range of ports that you want to configure on the same slot.
<i>threshold_symbols</i>	Specifies the frame error threshold number.
<i>window_seconds</i>	Specifies the window of time in which the frame errors will be measured.
<b>enable</b>	Enables notification of the Errored Frame Seconds Summary event.
<b>disable</b>	Disables notification of the Errored Frame Seconds Summary event.

### Defaults

parameter	default
<i>threshold_symbols</i>	1 errored frame second
<i>window_seconds</i>	60 seconds. (600 dsec).
<b>enable</b>   <b>disable</b>	enable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900

## efm-oam multiple-pdu-count

Configures the value of multiple PDU count. When multiple PDU count is set to a specific number in case of any of the threshold cross events, the same event notification PDU will be transmitted that many times towards the peer.

**efm-oam multiple-pdu-count** *count*

---

### Syntax Definitions

*count* Specifies the number of PDUs that have to be sent in case of event-notification TLVs. The range is 1 to 10 PDUs.

### Defaults

By default, the PDU-count value is set to 3.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> efm-oam multiple-pdu-count 5
```

### Release History

Release 8.5R4; command was introduced.

### Related Commands

---

## efm-oam port l1-ping

Configures the number of frames to be sent by the current LINK OAM port to the remote port's MAC address (l1 ping) and the delay between each consecutive sent frames and to start the ping operation.

**efm-oam port chassis/slot/port l1-ping [num-frames number] [delay milliseconds] [start]**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Specifies the slot number for the module and the physical port number on that module.
<i>number</i>	Specifies the number of frames that needs to be sent during ping operation. The allowed range of numbers is between 1 to 20.
<i>milliseconds</i>	Specifies time interval between two consecutive PDUs. The allowed range of delay is between 100 to 1000 milliseconds.
<b>start</b>	Specifies to start the ping operation.

### Defaults

parameter	default
<i>number</i>	5 frames
<i>milliseconds</i>	1000 milliseconds

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

- The command is valid only when the LINK OAM is enabled globally, port is in active mode, discovery is done, and the port is in remote loopback mode.
- L1 ping can be started only when the port is in remote loopback mode.

### Examples

```
-> efm-oam port 1/1/12 l1-ping num-frames 6 delay 300 start
-> efm-oam port 1/1/20 l1-ping num-frames 12 delay 500 start
-> efm-oam port 1/1/15 l1-ping num-frames 5 delay 100 start
-> efm-oam port 1/1/15 l1-ping num-frames 4 delay 200 start
-> efm-oam port 1/1/5 l1-ping num-frames 100 delay 300 start
```

## show efm-oam port

Displays the status of LINK OAM on all the ports in the system, along with other relevant information such as OAM mode, operational status and loopback status of the port.

**show efm-oam port** [*chassis/slot/port1-port2*] [**enable** | **disable**] [**active** | **passive**]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port1</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	The last port number in a range of ports that you want to configure on the same slot (e.g. 3/1-4 specifies ports 1,2,3, and 4 on slot 3).
<b>enable</b>	Specifies whether to display the LINK OAM enabled ports.
<b>disable</b>	Specifies whether to display the LINK OAM disabled ports.
<b>active</b>	Specifies whether to display the LINK OAM active ports.
<b>passive</b>	Specifies whether to display the LINK OAM passive ports.

### Defaults

By default, displays the LINK OAM status on all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use this command to display the state of LINK OAM on the basis of enabled or disabled port and on the basis of active or passive port.

### Examples

```
-> show efm-oam port
Port      EFM-OAM Status      Mode Operational Status Loopback Status
-----+-----+-----+-----+-----
1/1/1      enabled      active      operational      remoteLoopback
1/1/2      disabled     active      activeSendLocal  noLoopback

### *output definitions*

<b>Port</b>	Displays the chassis/slot/port number.
<b>EFM-OAM Status</b>	The state of the EFM-OAM. LINK OAM instance can have any of the following status. <ul style="list-style-type: none"> <li>• <b>Enabled</b> : Specifies that the LINK OAM is disabled on the interface.</li> <li>• <b>Disabled</b> : Specifies that the LINK OAM is disabled on the interface.</li> </ul>

*output definitions (continued)*

---

<b>Operational Status</b>	<p>The status of the port in discovering whether the peer has LINK OAM capability or not. It has the following states:</p> <ul style="list-style-type: none"> <li>• <b>activeSendLocal</b>: Specifies that the LINK OAM port is actively trying to discover whether the peer has LINK OAM capability but has not yet made that determination.</li> <li>• <b>sendLocalAndRemote</b>: Specifies that the local LINK OAM port has discovered the peer but has not yet accepted or rejected the configuration of the peer. The local device will then decide that the peer device is acceptable or unacceptable and then accept or decline LINK OAM peering.</li> <li>• <b>sendLocalAndRemoteOk</b>: Specifies the state when LINK OAM peering is allowed by the local port.</li> <li>• <b>oamPeeringLocallyRejected</b>: Specifies the state when the local OAM entity rejects the peer OAM entity.</li> <li>• <b>oamPeeringRemotelyRejected</b>: Specifies the state when the remote LINK OAM port rejects the peering.</li> <li>• <b>operational</b>: Specifies the state when the local LINK OAM port learns that both the local LINK OAM entity and the remote LINK OAM entity have accepted the peering.</li> <li>• <b>nonOperHalfDuplex</b>: Specifies the value nonOperHalfDuplex is returned whenever LINK OAM is enabled. Since LINK OAM functions are not designed to work completely over half-duplex interfaces, the value nonOperHalfDuplex is returned whenever LINK OAM is enabled but the interface is in half-duplex operation.</li> <li>• <b>linkFault</b>: Specifies that the link between the host and the peer has detected a fault.</li> <li>• <b>passiveWait</b>: Specifies that the LINK OAM ports are in passive mode.</li> </ul>
<b>Loopback Status</b>	<p>The state of remote loopback. It can be <b>initiatingLoopback</b>, <b>terminatingLoopback</b>, <b>localLoopback</b>, <b>remoteLoopback</b>, <b>noLoopback</b>, or <b>unknown</b>.</p>
<b>Mode</b>	<p>The state of LINK OAM mode, <b>active</b> or <b>passive</b>.</p>

---

**Release History**

Release 8.5R4; command was introduced.

## Related Commands

**efm-oam multiple-pdu-count** Configures the value of multiple PDU count. When multiple PDU count is set to a specific number in case of any of the threshold cross events, the same event notification PDU will be transmitted that many times towards the peer.

## show efm-oam port detail

Displays the LINK OAM configuration and other related parameters for a port.

**show efm-oam port *chassis/slot/port* detail**

---

### Syntax Definitions

*chassis*                                    The chassis identifier.

*slot/port*                                The slot number for the module and the physical port number on that module.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use this command when you want to get LINK OAM configuration details for a specific port.

### Examples

```
-> show efm-oam port 1/1/1 detail
OAM Status           : enable,
Operational Status   : activeSendLocal,
Mode                 : active,
Max OamPDU size      : 1518,
Config Revision      : 0,
Functions Supported   : loopback,event notification,
Loopback Status      : noLoopback,
Loopback Rx Status   : ignore,
Max OamPDUs          : 10,
KeepAlive Interval(seconds) : 10,
Hello Interval(seconds) : 5,
Dying Gasp Notify Status : enable,
Critical Event Notify Status : enable
```

Link Monitoring	Window	Threshold (errors)	Notify Status
errored-frame	10 dsec	10 frames	enable
errored-frame-period	2000000 frames	10 frames	enable
errored-frame-seconds-summary	600 dsec	1 framesec	enable

*output definitions*

---

<b>OAM Status</b>	The state of LINK OAM on the port.
<b>Operational Status</b>	The state of the port in discovering whether the peer has LINK OAM capability or not.
<b>Mode</b>	The state of LINK OAM mode on the port, <b>active</b> or <b>passive</b> .
<b>Max OamPDU size</b>	Displays the maximum OAMPDU that the LINK OAM port can support.
<b>Config Revision</b>	Displays the configuration revision of the LINK OAM port as reflected in the latest OAMPDU sent by the peer port.
<b>Functions Supported</b>	Displays the LINK OAM functions supported by the specified port.
<b>Loopback Status</b>	Displays the loopback status of the specified LINK OAM port.
<b>Loopback Rx Status</b>	The action that should be performed by the LINK OAM port when a loopback request is received from the peer port.
<b>Max OamPDUs</b>	Specifies the maximum OAMPDUs that can be exchanged between two peers.
<b>KeepAlive Interval</b>	Displays the timeout interval of the specified LINK OAM port for the dynamically learned peer port.
<b>Hello Interval</b>	Displays the time interval between two OAMPDUs in seconds.
<b>Dying Gasp Notify Status</b>	The state of notification for dying gasp events, <b>enable</b> or <b>disable</b> .
<b>Critical Event Notify Status</b>	The state of notification for critical events, <b>enable</b> or <b>disable</b> .
<b>Link Monitoring</b>	Displays the errors detected on the remote link.
<b>Window</b>	The frame error event window in the received OAMPDU.
<b>Threshold</b>	The number of errored frames in the period required for the event to be generated.
<b>Notify Status</b>	The state of notification for LINK OAM errors on the port, <b>enable</b> or <b>disable</b> .

---

## show efm-oam port statistics

Displays the LINK OAM statistics on a port, or a range of ports or on all ports.

**show efm-oam port *chassis/slot/port*[-*port2*] statistics**

**show efm-oam port statistics**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Specifies the slot number for the module and the physical port number on that module
<i>-port2</i>	The last port number in a range of ports that you want to configure on the same slot.

### Defaults

By default, the statistics of all ports are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use the **port** parameter to display the statistics of a specific port.

### Examples

```
-> show efm-oam port 1/1/1 statistics
Port 1/1/1:
  Information OAMPDU Tx           : 1035,
  Information OAMPDU Rx           : 988,
  Unique Event Notification OAMPDU Tx : 0,
  Unique Event Notification OAMPDU Rx : 0,
  Duplicate Event Notification OAMPDU TX : 0,
  Duplicate Event Notification OAMPDU Rx : 0,
  Loopback Control OAMPDU Tx      : 1,
  Loopback Control OAMPDU Rx      : 0,
  Unsupported OAMPDU Tx           : 0,
  Unsupported OAMPDU Rx           : 0,
  Frames Lost due to OAM          : 0
```

```
-> show efm-oam port 1/1-4 statistics
Port 1/1:
  Information OAMPDU Tx           : 1035,
  Information OAMPDU Rx           : 988,
  Unique Event Notification OAMPDU Tx : 0,
  Unique Event Notification OAMPDU Rx : 0,
  Duplicate Event Notification OAMPDU TX : 0,

## show efm-oam port remote detail

Displays the LINK OAM configuration and details of the related parameters of the remote port.

**show efm-oam port *chassis/slot/port* remote detail**

---

### Syntax Definitions

*chassis* The chassis identifier.

*slot/port* Specifies the slot number for the module and the physical port number on that module.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

N/A.

### Examples

```
-> show efm-oam port 1/1/1 remote detail
Remote MAC address : 00:30:96:fd:6b:fa,
Remote Vendor (info): 0x15a1
Remote Vendor (oui) : XYZ
Mode                : active,
Max OAMPDU size    : 1518,
Config Revision    : 0,
Functions Supported : loopbackSupportEventSupport
```

#### *output definitions*

---

<b>Remote MAC address</b>	Displays the MAC address of the remote peer.
<b>Remote Vendor (info)</b>	Displays the vendor number in hexadecimal of the remote peer.
<b>Remote Vendor (oui)</b>	Displays the Organizationally Unique Identifier (OUI) number of the remote peer.
<b>Mode</b>	The state of LINK OAM mode on the remote port, <b>active</b> or <b>passive</b> .
<b>Max OAMPDU size</b>	Displays the maximum OAMPDU size that the remote LINK OAM port can support.
<b>Config Revision</b>	Displays the configuration revision of the remote LINK OAM port.
<b>Functions Supported</b>	Displays the LINK OAM functions supported by the remote port.

## show efm-oam port history

Displays the log of events that have occurred on a port. Use this command to display specific event logs on a port.

**show efm-oam port *chassis/slot/port* history [log-type { link-fault | errored-frame | errored-frame-period | errored-frame-seconds | dying-gasp | critical}]**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Specifies the slot number for the module and the physical port number on that module.
<b>link-fault</b>	Displays link fault event logs. Specifies the loss of signal is detected by the receiver. This is sent once per second in the Information OAMPDU
<b>errored-frame</b>	Displays errored-frame event log. an errored frame event occurs when the number of detected error frames over a specific interval exceeds the predefined threshold.
<b>errored-frame-period</b>	Displays an errored-frame-period event logs. An errored frame period event occurs if the number of frame errors in specific number of received frames exceeds the predefined threshold.
<b>errored-frame-seconds</b>	Displays errored-frame-seconds event logs. When the number of error frame seconds detected on a port over a detection interval reaches the error threshold, an errored frame seconds event occurs.
<b>dying-gasp</b>	Specifies an unrecoverable condition (e.g., a power failure).
<b>critical</b>	Specifies a crucial event that has occurred on the port.

### Defaults

By default, all log types are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Timestamp will be in following format:

*DAY MON Date hh:mm:ss yyyy*

## Examples

```
-> show efm-oam port 1/1/1 history
Legend: Location: * - Remote, # - Local
LogID   TimeStamp                Log Type                Event
                                     Total
-----+-----+-----+-----+-----+
*   1   TUE JAN 06 19:44:51 2009   linkFault               1
#   2   TUE JAN 06 19:45:51 2009   erroredFrame            1
-> show efm-oam port 1/1/1 history log-type link-fault
Legend: Location: * - Remote, # - Local
LogID   TimeStamp                Event
                                     Total
-----+-----+-----+-----+
*   1   TUE JAN 06 19:46:51 2009   1
#   2   TUE JAN 06 19:46:51 2009   1
```

### output definitions

<b>LogID</b>	Specifies individual events within the event log.
<b>Timestamp</b>	The value of actual time at the time of the logged event.
<b>Log Type</b>	Specifies the type of event log.
<b>Event Total</b>	Specifies the total number of times one or more of these occurrences have resulted in an Event Notification.

## Release History

Release 8.5R4; command was introduced.

## Related Commands

- [show efm-oam port statistics](#) Displays the LINK OAM statistics on a port, or a range of ports or on all ports.

## show efm-oam port l1-ping detail

Displays the frames lost during a loopback session.

**show efm-oam port *chassis/slot/port* l1-ping detail**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	Specifies the slot number for the module and the physical port number on that module.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

The command can also be used even on a port on which LINK OAM is not enabled.

### Examples

```
-> show efm-oam port 1/1/1 l1-ping detail
frames configured          = 5,
frames delay(msec)        = 100,
L1 ping status            = Successful,
frames sent                = 4,
frames received           = 4,
avg delay (msec)         = 5
```

```
-> show efm-oam port 1/1/4 l1-ping detail
frames configured          = 5,
frames delay(msec)        = 200,
L1 ping status            = Successful,
frames sent                = 4,
frames received           = 2,
avg delay (msec)         = 15
```

#### *output definitions*

---

<b>frames configured</b>	Specifies the number of frames that are sent during l1-ping.
<b>delay configured</b>	Specifies the delay between transmission of two consecutive frames during L1 ping.
<b>L1 ping status</b>	The status of the L1 ping operation. The status can be <b>Successful</b> , <b>Unsuccessful</b> or <b>default</b> .

*output definitions (continued)*

---

<b>frames sent</b>	Specifies the frames sent during last L1 ping.
<b>frames received</b>	Specifies the frames received during last L1 ping.
<b>average delay</b>	Specifies the average delay taken by frames during last L1 ping.

---

**Release History**

Release 8.5R4; command was introduced.

**Related Commands****[efm-oam port l1-ping](#)**

Configures the number of frames that needs to be sent during L1-ping, the delay between each consecutive sent frames and to start the L1-ping operation.

---

## clear efm-oam statistics

Clears the LINK OAM statistics on a port, range of ports or all ports.

**clear efm-oam statistics** [**port** *chassis/slot/port*[-*port2*]]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.

### Defaults

By default, the statistics are cleared for all the ports if no port is specified in the command.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use the port parameter with this command to clear the statistics for a specific port or range of ports.

### Examples

```
-> clear efm-oam statistics
-> clear efm-oam statistics port 1/1/1
-> clear efm-oam statistics port 2/1/1-3
```

### Release History

Release 8.5R4; command was introduced.

### Related Commands

[show efm-oam port statistics](#) Displays the LINK OAM statistics on a port, or a range of ports or on all ports.

[clear efm-oam log-history](#) Clears the LINK OAM event logs history on a port.

### MIB Objects

```
alaDot3OamGlobalClearStats
  alaDot3OamStatsTable
  alaDot3OamPortClearStats
```

---

## clear efm-oam log-history

Clears the LINK OAM event logs history a port, range of ports or all ports.

**clear efm-oam log-history** [**port** *chassis/slot/port*[-*port2*]]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot/port</i>	The slot number for the module and the physical port number on that module.
<i>-port2</i>	Specifies the last port in the range of ports.

### Defaults

By default, the event logs are cleared for all the ports if no port is specified in the command.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	No	Yes	No	No	No	No

### Usage Guidelines

Use the port parameter with this command to clear the statistics for a specific port or range of ports.

### Examples

```
-> clear efm-oam log-history
-> clear efm-oam log-history port 1/1/1
-> clear efm-oam log-history port 2/1/1-3
```

### Release History

Release 8.5R4; command was introduced.

### Related Commands

<a href="#">show efm-oam port statistics</a>	Displays the LINK OAM statistics on a port, or a range of ports or on all ports.
<a href="#">show efm-oam port history</a>	Displays the log of events that have occurred on a port. Use this command to display specific event logs on a port.

### MIB Objects

# 54 CPE Test Head Commands

The Customer Provider Edge (CPE) Test Head traffic generator and analyzer is a Test-OAM (Operation, Administration, and Maintenance) tool used in the Metro Ethernet Network to validate the customer Service Level Agreements (SLA). This functionality allows the operator to validate the Metro Ethernet Network between customer end points, which is critical when provisioning or troubleshooting network services.

This implementation of CPE Test Head supports unidirectional and bidirectional ingress tests. Traffic is generated at the UNI port as if the traffic was generated from a test head connected to the UNI port. This validates the actual customer SLA by subjecting the test traffic to the ingress QoS defined at the UNI port (Ethernet SAP profile or QoS policy rules for priority and bandwidth control) and the egress QoS defined at the egress NNI port and carrier network.

The CPE test is non-disruptive to traffic running on other UNI ports that are associated with the same SAP profile as the test UNI port. All UNI ports, including CPE test ports, are subject to any SAP profile or QoS configuration associated with the port. This is important to consider when analyzing test results.

The feature provides a multi-stream test capability. The CPE multi-test feature is supported on non-metro switches with metro license. The feature supports a stack containing up to eight switches.

Multi-stream test requires a free port. The port must not be used and not have any configuration. When a multi-stream test starts, the port is made out of service. The port is made operational again and the configuration is retained when the test is stopped.

MIB information for the CPE Test Head commands are:

*Filename:* alcatelIND1testoam.mib  
*Module:* ALCATEL-IND1-TEST-OAM-MIB

A summary of available commands is listed here:

---

Single-test	<b>test-oam</b> <b>test-oam direction</b> <b>test-oam src-endpoint dst-endpoint</b> <b>test-oam port</b> <b>test-oam vlan test-frame</b> <b>test-oam role</b> <b>test-oam duration rate packet-size</b> <b>test-oam frame</b> <b>test-oam l2-saa</b> <b>test-oam start stop</b> <b>test-oam remote-sys-mac</b> <b>test-oam statistics flash-logging</b> <b>show test-oam</b> <b>show test-oam saa statistics</b> <b>clear test-oam statistics</b>

---

## test-oam

Configures the CPE test name and an optional description. The test name is used to identify and configure a CPE test profile.

**test-oam** *string* [*descr description*]

**no test-oam** *string*

---

### Syntax Definitions

<i>string</i>	The name of the CPE test, an alphanumeric string between 1 and 32 characters. This name is used to identify a specific CPE test and is also referred to as the test ID.
<i>description</i>	The description to assign to the test name, an alphanumeric string between 1 and 32 characters.

### Defaults

parameter	default
<i>description</i>	DEFAULT

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the specified CPE test configuration.
- This command creates a new CPE test profile that is identified by the test name. Make sure the name specified does not exist in the switch configuration.
- A maximum of 32 tests can be configured.
- Only one test can be active on the switch at any given time.

### Examples

```
-> test-oam Test1
-> test-oam Test2 descr second-test
-> no test-oam Test2
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

[show test-oam](#)

Displays the CPE test configuration and status.

[show test-oam statistics](#)

Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

## MIB Objects

alaTestOamConfigTable

    alaTestOamConfigTestName

    alaTestOamConfigTestDescription

    alaTestOamConfigRowStatus

---

## test-oam direction

Configures the CPE test direction.

**test-oam** *string* [direction {**unidirectional** | **bidirectional**}]

---

### Syntax Definitions

<i>string</i>	The name of the CPE test, an alphanumeric string between 1 and 32 characters. This name is used to identify a specific CPE test and is also referred to as the test ID.
<b>direction</b>	The direction of the CPE test.

### Defaults

parameter	default
<b>unidirectional</b>   <b>bidirectional</b>	unidirectional

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

This command assigns the direction to the CPE test.

### Examples

```
-> test-oam Test1 direction unidirectional
-> test-oam Test1 direction bidirectional
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

[show test-oam](#)

Displays the CPE test configuration and status.

[show test-oam statistics](#)

Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

## MIB Objects

alaTestOamConfigTable

    alaTestOamConfigTestName

    alaTestOamConfigDirection

---

## test-oam src-endpoint dst-endpoint

Configures the source and destination endpoints for the specified test.

**test-oam** *string* [**src-endpoint** *src-string*] [**dst-endpoint** *dst-string*]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test. The string can be of length 1 to 32 characters.
<i>src-string</i>	This represents the local or transmitting device. The management IP address or DNS host name of the switch that will transmit test traffic. In case of bidirectional test this also identifies the analyzer device. The string can be of length 1 to 32 characters.
<i>dst-string</i>	This represents the remote device. The management IP address or DNS host name of the switch that will receive test traffic. This is the switch on which traffic analysis is done. For unidirectional test this represents the analyzer device. For bidirectional test this identifies the device on which the loopback mode must be active. The string can be of length 1 to 32 characters.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- The end point can be set as switch hostname or switch management IP address.
- Using the DNS host name of the switch is highly recommended, as this name is unique and is mapped to an IP address configured for the switch.
- This command automatically overwrites the source and destination endpoint values previously configured for the specified CPE test.
- Multicast and broadcast address must not be configured for bidirectional test.

### Examples

```
-> test-oam Test1 src-endpoint SW1 dst-endpoint SW2
-> test-oam Test1 src-endpoint SW1
-> test-oam Test1 dst-endpoint SW2
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

[test-oam port](#)

Configures the port on which the CPE test will run.

[show test-oam](#)

Displays the CPE test configuration and status.

## MIB Objects

alaTestOamConfigTable

alaTestOamConfigTestName

alaTestOamConfigSourceEndpoint

alaTestOamConfigDestinationEndpoint

---

## test-oam port

Configures the port on which the CPE test will run. Use this command on the switch that will generate the test traffic. If the switch is going to receive test traffic, configuring a test port is not necessary.

**test-oam** *string port chassis/slot/port*

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>chassis/slot/port</i>	The port on which the CPE test will generate traffic.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- In an Ethernet Service environment, the UNI port is designated as the test port on the generator switch to simulate traffic coming in on the port as if it was sent from a test head device. This will subject the test traffic to the SAP profile.
- Note that the customer traffic is disrupted on ports configured as CPE test ports. Configuring a port that is not in use is recommended. In addition, if the test port is a UNI port associated with an SAP profile, only that UNI port is used for the test. Traffic on other UNI ports associated with the same profile is *not* disrupted by the CPE test.
- All UNI ports, including CPE test ports, are subject to any SAP profile or QoS configuration associated with the port. This must be considered when test results are analyzed.
- This command automatically overwrites the port value previously configured for the specified CPE test.

### Examples

```
-> test-oam Test1 port 1/1/2
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

### **test-oam vlan test-frame**

Configures the source mac-address, destination mac-address, and the SVLAN for the test-frame used in the test.

### **show test-oam**

Displays the CPE test configuration and status.

## MIB Objects

alaTestOamConfigTable

    alaTestOamConfigTestName

    alaTestOamConfigPort

---

## test-oam vlan test-frame

Configures the SVLAN and the source and destination MAC addresses for the test frame. Use this command to configure these test parameters on both the generator (local) switch and the analyzer (remote) switch for the specified CPE test.

**test-oam** *string* [vlan *svlan*] [[test-frame [src-mac *src-address*] [dst-mac *dst-address*]]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>svlan</i>	The service VLAN ID. This is used for traffic analysis and test-frame accounting.
<i>src-address</i>	Source mac-address of the test-frame.
<i>dst-address</i>	Destination mac-address of the test-frame.

### Defaults

parameter	default
<i>src-address</i>	00:00:00:00:00:00
<i>dst-address</i>	00:00:00:00:00:00

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Although the source and destination MAC addresses are optional parameters with this command, the test will not run if these addresses are set to all zeros (the default).
- Make sure that routing is disabled on the specified SVLAN.
- Avoid configuring any IEEE reserved MAC addresses as the destination MAC address for the test.
- This command automatically overwrites the SVLAN, source MAC, or destination MAC values previously configured for the specified CPE test.

### Examples

```
-> test-oam Test1 vlan 100 test-frame src-mac 00:01:02:00:00:02 dst-mac
00:00:01:00:00:90
-> test-oam Test1 vlan 100
-> test-oam Test1 test-frame src-mac 00:01:02:00:00:02 dst-mac 00:00:01:00:00:90
-> test-oam Test1 test-frame src-mac 00:01:02:00:00:02
-> test-oam Test test-frame dst-mac 00:00:01:00:00:90
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

[test-oam role](#)

Configures the switch as a generator or analyzer for the test.

[show test-oam](#)

Displays the CPE test configuration and status.

## MIB Objects

alaTestOamConfigTable

  alaTestOamConfigTestName

  alaTestOamConfigVlan

  alaTestOamConfigFrameSrcMacAddress

  alaTestOamConfigFrameDstMacAddress

---

## test-oam role

Configures the role the switch will perform for the specified CPE test. The type of role assigned determines whether the switch transmits (generator) or receives (analyzer) or loopback test frames.

**test-oam** *string* **role** {**generator** | **analyzer** | **loopback**}

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<b>generator</b>	Configures the switch as the test generator.
<b>analyzer</b>	Configures the switch as the test analyzer.
<b>loopback</b>	Configures the switch as loopback.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use this command on the switch that will perform the specified role.
- Configuring a generator and an analyzer switch for each test is required.
- Only one role can be assigned to the switch for a particular test.
- This command automatically overwrites the previously configured switch role for the specified CPE test.

### Examples

```
-> test-oam Test1 role generator
-> test-oam Test2 role analyzer
-> test-oam Test2 role loopback
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

**test-oam duration rate packet-size** Configures the test frame duration, rate and packet-size for the test.

**show test-oam** Displays the CPE test configuration and status.

## MIB Objects

```
alaTestOamConfigTable  
  alaTestOamConfigTestName  
  alaTestOamConfigRole
```

---

## test-oam duration rate packet-size

Configures the duration, rate, and packet-size for the specified test. Use this command to configure these test parameters on the generator switch.

**test-oam** *string* [**duration** *secs*] [**rate** *rate*] [**packet-size** *bytes*]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>secs</i>	The duration of the test, in seconds. This is the amount of time the generator will actively transmit test packets to the remote (analyzer) switch. The valid time range is 1–3600 seconds
<i>rate</i>	The rate, in Kbps or Mbps, at which test traffic is generated. The minimum value allowed is 8 Kbps to line rate. The granularity of the transmit rate is 8 Kbps for 100 Mbps port and 2 Mbps for 1Gig ports.
<i>bytes</i>	The packet size, in bytes. The valid range is 64–9212 bytes.

### Defaults

Parameter	Default
<i>secs</i>	5 secs
<i>rate</i>	8 k
<i>bytes</i>	64 byte

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- This command automatically overwrites any duration, rate, and packet size parameter values previously configured for the specified CPE test.
- The status of the CPE test will change to “ended” when the test duration time expires.
- This command automatically overwrites the duration, rate, or packet size values previously configured for the specified CPE test.

### Examples

```
-> test-oam Test1 duration 10 rate 8k packet-size 64
-> test-oam Test1 rate 8m
-> test-oam Test1 duration 10
-> test-oam Test1 packet-size 64
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

[test-oam frame](#)

Configures the test frame parameter values for the CPE test.

[show test-oam](#)

Displays the CPE test configuration and status.

## MIB Objects

alaTestOamConfigTable

alaTestOamConfigTestName

alaTestOamConfigDuration

alaTestOamConfigGeneratorBandwidth

alaTestOamConfigGeneratorPacketSize

---

## test-oam frame

Configures the test frame parameter values for the specified CPE test. Use this command on the switch that will generate the test frame traffic.

### test-oam *string* frame

```
[vlan-tag vlan-id priority priority drop-eligible {true | false}]
ether-type {hex-num / ipv4 {src-ip src-ipv4 dst-ip dst-ipv4 [ttl ttl] [tos tos] [protocol {udp | tcp}
{src-port src-port dst-port dst-port}]}}] [data-pattern pattern]
```

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>vlan-id</i>	The VLAN ID of the frame.
<i>priority</i>	The priority value. The valid range is 0–7.
<b>true</b>	Sets the drop-eligible bit to true.
<b>false</b>	Sets the drop-eligible bit to false.
<i>hex-num</i>	The hexadecimal ethertype value. The valid range is 0x600–0xffff.
<i>src-ipv4</i>	The source IP address for an IPv4 test frame.
<i>dst-ipv4</i>	The destination IP address for an IPv4 test frame.
<i>ttl</i>	The time-to-live value. The valid range is 0–255.
<i>tos</i>	The type-of-service value for QoS features. The valid range is 0x0–0xff.
<b>udp</b>	Specifies the UDP protocol.
<b>tcp</b>	Specifies the TCP protocol.
<i>src-port</i>	The source port of the generated test frame.
<i>dst-port</i>	The destination port of the generated test frame.
<i>pattern</i>	The data pattern present in the generated test frame. The valid range is 0x0000–0xffff.

### Defaults

Parameter	Default
<i>priority</i>	7
<b>drop-eligible</b>	false
<i>ttl</i>	64
<i>tos</i>	0x0
<i>pattern</i>	0x0000

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

## Usage Guidelines

- Specify the Ether type in hexadecimal format to configure a Layer 2 test frame.
- Specify **ipv4** as the Ether type to configure a Layer 3 test frame. When this option is selected, entering a source and destination IP address is required.
- Do not specify reserved Ether type values.
- This command automatically overwrites the test packet parameter values previously configured for the specified CPE test.

## Examples

If the ether-type is a hexadecimal number (Layer 2 test frame):

```
-> test-oam Test1 frame vlan-tag 1 priority 2 drop-eligible false ether-type 0x0100
data-pattern 0x0010
```

If the ether-type is IPV4 (Layer 3 test frame):

```
-> test-oam Test1 frame vlan-tag 1 priority 2 drop-eligible false ether-type ipv4
src-ip 1.1.1.1 dst-ip 2.2.2.2 ttl 4 tos 0x01 protocol udp src-port 2000 dst-port
3000 data-pattern 0x0010
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

- |                                 |   |
|---------------------------------|---|
| <a href="#">test-oam l2-saa</a> | Start or stop the CPE test.                     |
| <a href="#">show test-oam</a>   | Displays the CPE test configuration and status. |

## MIB Objects

```
alaTestOamConfigTable
  alaTestOamConfigTestName
alaTestOamEtherConfigTable
alaTestOamIpv4ConfigTable
```

## test-oam l2-saa

Configures to run SAA tests in parallel with test streams.

**test-oam** *string* **l2-saa** [**priority** *vlan-priority*] [**count** *num-pkts*] [**interval** *inter-pkt-delay*] [**continuous**] [**size** *size*] [**drop-eligible** {**true** | **false**}]

**no test-oam** *string* **l2-saa**

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>vlan-priority</i>	Specify the internal priority of MAC ping and 802.1p value on the VLAN tag header.
<i>num-pkts</i>	The number of packets sent in one ping iteration. Valid range is 1 to 10.
<i>inter-pkt-delay</i>	The delay between packets sent during a ping iteration (milliseconds). Valid range is 100 to 1000, in multiples of 100.
<b>continuous</b>	Allows the SAA session to run continuously until the test-oam session ends.
<i>size</i>	The payload size to be used for MAC ping iteration. Must be within 1500 bytes.
<b>drop-eligible</b>	Specify the drop precedence of the MAC ping and the Canonical Format Indicator (CFI) bit on the VLAN tag header.

### Defaults

Parameter	Default
<i>vlan-priority</i>	0
<i>num-pkts</i>	5
<i>inter-pkt-delay</i>	1000 ms
<i>size</i>	36 bytes
<b>drop-eligible</b>	false

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- The L2-SAA test derives the source MAC, destination MAC, and the VLAN ID from the test OAM configuration of the individual test frames.
- The default L2-SAA configuration values will be applied if no optional parameters are configured.

- To run the L2-SAA session until the test-oam session ends, use the **continuous** parameter.
- Different SAA profiles can be configured for each individual test stream.
- Use the **no** form of this command to remove the L2-SAA configuration for the test.

### Examples

```
-> test-oam test1 l2-saa priority 5 count 5 interval 1000 size 100 drop-eligible
false
-> test-oam test1 l2-saa continuous
-> no test-oam test1 l2-saa
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

<a href="#">test-oam</a>	Configures the CPE test name and an optional description. The test name is used to identify and configure a CPE test profile.
<a href="#">show test-oam</a>	Displays the CPE test configuration and status.

### MIB Objects

```
alaTestOamConfigTable
  alaTestOamSaaConfigDropEligible
  alaTestOamSaaConfigPayloadSize
  alaTestOamSaaConfigNumPkts
  alaTestOamSaaConfigInterPktDelay
  alaTestOamSaaContinuous
```

---

## test-oam start stop

Starts or stops the CPE test operation.

**test-oam** *string* {[**vlan** *vlan-id*] [**port** *chassis/slot/port*] [**packet-size** *bytes*] **start** | **stop**} [**fetch-remote-stats**]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test.
<i>vlan-id</i>	The service VLAN ID. This value is required only for traffic analysis and test frame accounting and is not related to the VLAN tag specified for the actual test frame.
<i>chassis/slot/port</i>	The switch port on which the test is run.
<i>bytes</i>	The size of the test packet, in bytes. The valid packet size range is 64–9212 bytes.
<b>start</b>	Starts the CPE test operation.
<b>stop</b>	Stops the CPE test operation.
<b>fetch-remote-stats</b>	Triggers the test at the remote device from the generator. The statistics are collected from the remote device and the test is stopped after receiving the test results.

### Defaults

Parameter	Default
<i>bytes</i>	64

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Ensure that routing is disabled on the specified service VLAN.
- The optional **vlan**, **port**, and **packet-size** parameters specify “active” parameter values that are applied when the specified CPE test is started. If these same parameters are defined within a CPE test profile, they are considered “configured” parameter values. Active parameter values override configured parameter values when the test is started.
- If no active parameter values are specified with this command, the test is started using the configured values defined in the CPE test profile. However, if active parameter values are not specified and the CPE test does not contain any configured values for these parameters, the test will not run.

- Specifying any of the optional parameter values does not change the configured values associated with the CPE test.
- If the specified port resides on a switch that will transmit test traffic, the port will generate the test frames. However, if the switch is an analyzer switch, specifying a port is not required.
- Start the specified test on the analyzer switch first and then on the generator switch.
- The test will stop when the test duration time expires or when the test is manually stopped using the **test-oam stop** command.
- Manually restart the test if the test is interrupted by a takeover, restart, or hot swap.
- The previous statistics related to the test will be cleared automatically once the test is started.
- Use the **fetch-remote-stats** parameter to collect the test statistics from the remote device. This parameter must be used to start the bidirectional test.

## Examples

```
-> test-oam Test1 start
-> test-oam Test1 vlan 100 start
-> test-oam Test1 port 1/1/1 start
-> test-oam Test1 packet-size 100 start
-> test-oam Test1 vlan 100 port 1/1/1 packet-size 100 start
-> test-oam Test1 stop
-> test-oam Test1 start fetch-remote-stats
-> test-oam "test2" port 1/1/2 start fetch-remote-stats
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

### [show test-oam statistics](#)

Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

### [show test-oam](#)

Displays the CPE test configuration and status.

## MIB Objects

```
alaTestOamConfigTable
  alaTestOamConfigTestName
  alaTestOamConfigVlan
  alaTestOamConfigPort
  alaTestOamConfigGeneratorPacketSize
  alaTestOamConfigTestIdState
  alaTestOamConfigRemoteStatsFetch
```

---

## test-oam remote-sys-mac

Configures the system MAC address of the remote device to receive test OAM messages.

**test-oam** *string* **remote-sys-mac** *string*

---

### Syntax Definitions

*string* The name of an existing CPE test.  
**remote-sys-mac** The system MAC address of the remote device.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use this command on the generator switch to set the system MAC address of the remote device to receive the test OAM messages.
- remote-sys-mac must be the primary CMM MAC address of the remote device. Use the **show cmm** command on the remote device to know the chassis MAC address of the device.
- remote-sys-mac is not applicable for analyzer or loopback.
- Configuring the Remote Sys MAC is mandatory for bidirectional test and optional for unidirectional test.

### Examples

```
-> test-oam Test1 remote-sys-mac 00:e0:b1:7c:7a:fa
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

[show test-oam](#)

Displays the CPE test configuration and status.

## MIB Objects

alaTestOamConfigTable

alaTestOamConfigRemoteSysMacAddress

---

## test-oam statistics flash-logging

Enable or disable the option to save the statistics of the test on the file in the flash directory of the switch. The test information is appended at the end of the default text file (testoamActiveStats.txt) in the flash.

**test-oam statistics flash-logging {enable | disable}**

---

### Syntax Definitions

N/A

### Defaults

Parameter	Default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

Use the **more** command to read the test results stored on the switch.

### Examples

```
-> test-oam statistics flash-logging enable
-> test-oam statistics flash-logging disable
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

**show test-oam statistics** Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

**show test-oam saa statistics** Clears the statistics for all CPE tests or for a specific test name.

### MIB Objects

```
alaTestOamConfigTable
  alaTestOamConfigStatsSave
```

---

## show test-oam

Displays the CPE test configuration and status.

**show test-oam** [tests | *string*]

---

### Syntax Definitions

**tests** Displays information for all the CPE tests.  
*string* The name of an existing CPE test.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the **tests** parameter to display information for all CPE tests configured on the switch.
- Use the *string* parameter to display detailed information for a specific CPE test.

### Examples

```
-> show test-oam tests
```

```
Total Test-Ids: 1
```

```
Test-Id Port      Src-Mac          Dst-Mac          Vlan  Direction  Status      Remote-Sys-Mac
-----+-----+-----+-----+-----+-----+-----+-----+-----+
Test1  none  00:00:00:00:00:00  00:00:00:00:00:00  none  unidirectional  not-started  00:00:00:00:00:00
```

#### *output definitions*

---

<b>Test-Id</b>	The CPE test name (ID). Configured through the <b>test-oam</b> command.
<b>Port</b>	The port on which the test is run. Configured through the <b>test-oam port</b> command.
<b>Src-Mac</b>	The source MAC address of the test frame. Configured through the <b>test-oam vlan test-frame</b> command.
<b>Dst-Mac</b>	The destination MAC address of the test frame. Configured through the <b>test-oam vlan test-frame</b> command.
<b>Vlan</b>	The service VLAN (SVLAN) associated with the test. Configured through the <b>test-oam vlan test-frame</b> command.
<b>Direction</b>	The direction of the test traffic. Note that only unidirectional traffic tests are supported.

*output definitions*

---

<b>Status</b>	The operational status of the test.
<b>Remote-Sys-Mac</b>	The MAC address of the remote device configured through the <b>test-oam remote-sys-mac</b> command.

## show test-oam statistics

Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

**show test-oam** [*string*] **statistics**

---

### Syntax Definitions

*string* The name of an existing CPE test.

### Defaults

By default, statistics are displayed for all CPE tests.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the *string* parameter with this command to display statistics for a specific CPE test.
- The statistics displayed depend on the role the switch is performing for the test (generator or analyzer). For example, the analyzer switch may not show any packet count in the **TX** fields because it is the receiving switch.

### Examples

```
-> show test-oam Test1 statistics
```

```
Test-Id    TX-Ingress    TX-Egress    RX-Ingress    Remote-Stats    Throughput (Mbps)
-----+-----+-----+-----+-----+-----
Test1      19017         19017         19017         19017           9.98
```

```
-> show test-oam statistics
```

```
Test-Id    TX-Ingress    TX-Egress    RX-Ingress    Remote-Stats    Throughput (Mbps)
-----+-----+-----+-----+-----+-----
Test1      1200366       1200366       0             1200366         8
Test2      0             0             1200366       1200366         8
```

#### output definitions

---

<b>Test-Id</b>	The CPE test name (ID).
<b>TX-Ingress</b>	The number of ingress test packets generated on the ingress UNI.
<b>TX-Egress</b>	The number of egress test packets transmitted on the egress NNI.
<b>RX-Ingress</b>	The number of test packets received on the ingress NNI. This value is relevant on the receiving (analyzer) switch for the specific test.

*output definitions*

---

<b>Remote-Stats</b>	The number of test frames received by the analyzer and fetched by the generator device.
<b>Throughput (Mbps)</b>	Displays the traffic throughput of the test.

---

**Release History**

```

---

## show test-oam saa statistics

Displays the SAA test statistics for all CPE tests or for a specific test name.

**show test-oam** [*string*] **saa statistics**

---

### Syntax Definitions

*string*                                      The name of an existing CPE test.

### Defaults

By default, statistics are displayed for all CPE tests.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

Use the *string* parameter with this command to display SAA statistics for a specific CPE test.

### Examples

```
-> show test-oam Test1 saa statistics
```

```

## clear test-oam statistics

Clears the statistics for all CPE tests or for a specific test name.

**clear test-oam** [*string*] **statistics**

---

### Syntax Definitions

*string*                                      The name of an existing CPE test.

### Defaults

By default, statistics are cleared for all CPE tests.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

Use the *string* parameter with this command to clear the statistics for a specific CPE test.

### Examples

```
-> clear test-oam Test1 statistics
-> clear test-oam statistics
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

#### [show test-oam statistics](#)

Displays the statistics for all CPE tests or for a specific test name. Use this command on both the generator and analyzer switch to determine test results.

#### [show test-oam saa statistics](#)

Displays the SAA test statistics for all CPE tests or for a specific test name.

### MIB Objects

```
alaTestOamStatsTable
  alaTestOamConfigTestId
  alaTestOamStatsClearStats
```

---

## test-oam group

Configures the CPE test group name and an optional description. The group name is used to identify and configure a CPE test group.

**test-oam group** *string* [**descr** *description*]

**no test-oam group** *string*

---

### Syntax Definitions

<i>string</i>	The name of the CPE test group, an alphanumeric string between 1 and 32 characters. This name is used to identify a specific CPE test-oam group.
<i>description</i>	The description to assign to the CPE test group, an alphanumeric string between 1 and 32 characters.

### Defaults

parameter	default
<i>description</i>	DEFAULT

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove the specified CPE test group.
- This command creates a CPE test group that is identified by the test-oam name. Make sure the name specified does not exist in the switch configuration.
- To configure a CPE test group, the individual test must be configured.
- A maximum of four tests can be configured to run concurrently.
- Only one CPE test group can be active on the switch at any given time.

### Examples

```
-> test-oam group Testgroup1
-> test-oam group Testgroup2 descr second-testgroup
-> no test-oam group Testgroup1
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

**show test-oam group statistics** Displays the statistics for all CPE test groups or for a specific CPE test group. Use this command on both the generator and analyzer switch to determine test results.

**show test-oam group** Displays the statistics for all CPE test groups or for a specific CPE test group.

## MIB Objects

---

## test-oam group tests

This defines the list of CPE test group tests that need to be added in the test-oam group.

**test-oam group** *string* [**tests** *string1.....string8*]

**test-oam group** *string* [**no tests** *string1.....string8*]

---

### Syntax Definitions

*string* The name of the CPE test group, an alphanumeric string between 1 and 32 characters. This name is used to identify a specific CPE test group.

*string1.....string8* The name of the configured test-oam tests.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- This command defines the list of test-oam tests that need to run concurrently.
- The test must exist, while configuring the test-oam list.
- A maximum of four tests can be configured to run concurrently.
- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of test-oam group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.
- use the **no** form of the command to remove the test-oam tests from the CPE test group.

### Examples

```
-> test-oam test1
-> test-oam test2
-> test-oam test3
-> test-oam test4
-> test-oam test5
-> test-oam test6
-> test-oam test7
-> test-oam test8
-> test-oam group Testgroup1 descr first-testgroup
```

```
-> test-oam group Testgroup1 tests test1 test2 test3 test4 test5 test6 test7 test8
-> test-oam group Testgroup1 no tests test1 test2 test3
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

### [show test-oam group](#)

Displays the configuration and status of the CPE test groups.

### [show test-oam group](#)

Displays the SAA statistics for all CPE test groups or for a specific CPE test group if mentioned.

---

## test-oam feeder

This configures the feeder port globally in the system for CPE test group to feed the test traffic to generator port.

**test-oam feeder-port** *chassis/slot/port*

**no test-oam feeder-port**

---

### Syntax Definitions

*chassis/slot/port*                      The port to be used to feed the test traffic only to generator port.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- This command configures the feeder port globally in the system.
- The feeder port cannot be the generator port and the generator port cannot be the feeder port.
- When a CPE test group is running, the modification to the feeder port shall not be allowed.
- Use the **no** form of the command to remove the feeder port from the system for CPE test group.

### Examples

```
-> test-oam feeder-port 1/1/4
-> no test-oam feeder-port
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

[test-oam group port](#)

Configures the port on which the CPE test group will run.

[show test-oam group](#)

Displays the configuration and status of the CPE test groups.

### MIB Objects

alaTestOamGlobalFeederPort

---

## test-oam group src-endpoint dst-endpoint

Configures the source and destination endpoints for the CPE test group.

**test-oam group** *string* [**src-endpoint** *src\_string* **dst-endpoint** *dst\_string*] [**src-endpoint** *src\_string*] [**dst-endpoint** *dst\_string*]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test group.
<i>src_string</i>	The management IP address or DNS host name of the switch that will transmit test traffic.
<i>dst_string</i>	The management IP address or DNS host name of the switch that will receive test traffic. This is the switch on which traffic analysis is done.

### Defaults

parameter	default
src-endpoint	DEFAULT
dst-endpoint	DEFAULT

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Using the DNS host name of the switch is highly recommended, as this name is unique and is mapped to an IP address configured for the switch.
- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of test-oam group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> test-oam group Testgroup1 src-endpoint SW1 dst-endpoint SW2
-> test-oam group Testgroup1 src-endpoint SW1
-> test-oam group Testgroup1 dst-endpoint SW2
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

- test-oam group duration rate** Configures the duration and rate for the specified CPE test group.
- show test-oam group** Displays the configuration and status of the CPE test groups.

## MIB Objects

```
alaTestOamGroupConfigTable  
  alaTestOamConfigGroupId  
  alaTestOamGroupConfigSourceEndpoint  
  alaTestOamGroupConfigDestinationEndpoint
```

---

## test-oam group role

Configures the role the switch will perform for the specified CPE test group. The type of role assigned determines whether the switch transmits (generator) or receives (analyzer) test frames.

**test-oam group** *name* **role** {**generator** | **analyzer** | **loopback**}

---

### Syntax Definitions

<i>name</i>	The name of an existing CPE test group.
<b>generator</b>	Configures the switch as the test generator.
<b>analyzer</b>	Configures the switch as the test analyzer.
<b>loopback</b>	Configures the switch as loopback.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> test-oam group Testgroup1 role generator
-> test-oam group Testgroup2 role analyzer
-> test-oam group Testgroup2 role loopback
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

- test-oam group duration rate** Configures the duration and rate for the specified CPE test group.
- show test-oam group** Displays the configuration and status of the CPE test groups.

## MIB Objects

alaTestOamGroupConfigTable  
    alaTestOamConfigGroupId  
    alaTestOamGroupConfigRole

---

## test-oam group port

Configures the port on which the CPE test group will run. Use this command on the switch that will generate the test traffic.

**test-oam group** *string* **port** *chassis/slot/port*

---

### Syntax Definitions

*string* The name of an existing CPE test group.

*chassis/slot/port* The port on which the CPE test will generate traffic.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Configuring a port that is not in use is recommended. In addition, if the test port is a UNI port associated with an SAP profile, only that UNI port is used for the test. Traffic on other UNI ports associated with the same profile is *not* disrupted by the CPE test.
- This command automatically overwrites the port value previously configured for the specified CPE test group.
- The feeder port cannot be the generator port and the generator port cannot be the feeder port.
- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> test-oam group Testgroup1 port 1/1/2
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

- test-oam group start stop** Starts the traffic test for the CPE test group on the configured port or the given port.
- test-oam group remote-sys-mac** Stops the traffic test for the CPE test group on the configured port or the given port.
- show test-oam group** Displays the configuration and status of the CPE test groups.

## MIB Objects

alaTestOamGroupConfigTable  
    alaTestOamConfigGroupId  
    alaTestOamGroupConfigPort

---

## test-oam group direction

Configures the test direction of the test-oam group.

**test-oam group** *string* [direction {**unidirectional** | **bidirectional**}]

---

### Syntax Definitions

*string* The name of an existing CPE test group.  
**direction** The direction of the CPE test group.

### Defaults

parameter	default
<b>direction</b>	unidirectional

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> test-oam group Testgroup1 direction unidirectional
-> test-oam group Testgroup2 direction bidirectional
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

- test-oam group duration rate** Configures the duration and rate for the specified CPE test group.
- show test-oam group** Displays the configuration and status of the CPE test groups.

## MIB Objects

alaTestOamGroupConfigTable  
    alaTestOamConfigGroupId  
    alaTestOamGroupConfigDirection

---

## test-oam group duration rate

Configures the duration and rate for the specified test-oam group. Use this command to configure these test parameters on the generator switch.

**test-oam group** *string* [**duration** *secs*] [**rate** *rate*]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test group.
<i>secs</i>	The duration of the test, in seconds. This is the amount of time the generator will actively transmit test packets to the remote (analyzer) switch. The valid time range is 5–3600 seconds.
<i>rate</i>	The rate, in Kbps or Mbps, at which test traffic is generated. The minimum value allowed is 8 Kbps to line rate. The granularity of the transmit rate is 8 Kbps for 100 Mbps port and 2 Mbps for 1Gig ports.

### Defaults

Parameter	Default
<i>secs</i>	5 secs
<i>rate</i>	8 k

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- This command automatically overwrites any duration and rate parameter values previously configured for the specified CPE test group.
- The status of the CPE test group will change to “ended” when the test duration time expires.
- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> test-oam group Testgroup1 duration 10
-> test-oam group Testgroup1 rate 8m
-> test-oam group Testgroup1 duration 10 rate 8m
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

[show test-oam group](#) Displays the configuration and status of the CPE test groups.

## MIB Objects

```
alaTestOamGroupConfigTable  
  alaTestOamConfigGroupId  
  alaTestOamGroupConfigDuration  
  alaTestOamGroupConfigGeneratorBandwidth
```

---

## test-oam group start stop

Starts or stops the traffic test for the test-oam group on the configured port or the given port.

**test-oam group** *string* {[**port chassis/slot/port**] **start** | **stop**} [**fetch-remote-stats**]

---

### Syntax Definitions

<i>string</i>	The name of an existing CPE test group.
<i>chassis/slot/port</i>	The port on which the CPE test group will generate traffic.
<b>start</b>	Enables the test.
<b>stop</b>	Disables the test.
<b>fetch-remote-stats</b>	Triggers the group test at the remote device from the generator. The statistics are collected during the test and the test is stopped after receiving the test results.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.
- Use the fetch-remote-stats parameter to collect the test statistics from the remote device.

### Examples

```
-> test-oam group Testgroup1 port 1/1/2 start
-> test-oam group Testgroup2 start
-> test-oam group Testgroup1 start fetch-remote-stats
-> test-oam group testgroup2 port 1/1/2 start fetch-remote-stats
-> test-oam group Testgroup1 stop
-> test-oam group Testgroup2 stop
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

    alaTestOamGroupConfigRemoteStatsFetchState

---

## test-oam group remote-sys-mac

Configures the system MAC address of the remote device to receive test OAM messages.

**test-oam group** *string* **remote-sys-mac** *string*

---

### Syntax Definitions

*string* The name of an existing CPE test group.  
**remote-sys-mac** The system MAC address of the remote device.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use this command on the switch to set the system MAC address of the remote device to receive the test OAM messages.
- The remote-sys-mac must be the primary CMM MAC address of the remote device.
- The remote-sys-mac is not applicable for analyzer or loopback.

### Examples

```
-> test-oam group Testgroup1 remote-sys-mac 00:e0:b1:7c:7a:fa
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

[show test-oam group](#) Displays the configuration and status of the CPE test groups.

### MIB Objects

---

## clear test-oam group statistics

This clears the statistics of the CPE test group.

**clear test-oam group *string* statistics**

---

### Syntax Definitions

*string*                                      The name of an existing CPE test group.  
**statistics**                                      Clears the statistics for the give CPE test group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- When a CPE test group is running, the modification of a test which is part of the group shall not be allowed.
- When a CPE test group is running, the modification of CPE test group parameters shall not be allowed.
- When a CPE test group is running, the modification of a feeder port shall not be allowed.

### Examples

```
-> clear test-oam group Testgroup1 statistics (Clears the statistics for the
specified test-oam group)
-> clear test-oam group statistics (Clears the statistics for all the test-oam
groups)
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

**show test-oam group statistics** Displays the statistics for all test-oam groups or for a specific CPE test group.

**show test-oam group** Displays the configuration and status of the CPE test groups.

## MIB Objects

alaTestOamConfigGroupId

alaTestOamGroupConfigStatsClear

alaTestOamGlobalGroupClearStats

---

## show test-oam group

Displays the configuration and status of the CPE test groups.

**show test-oam group** [tests | *string*]

---

### Syntax Definitions

**tests** Displays information for all the CPE test groups.  
*string* The name of an existing CPE test group.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the **tests** parameter to display information for all CPE test groups configured on the switch.
- Use the *string* parameter to display detailed information for a specific CPE test group.

### Examples

```
-> show test-oam group tests
```

```
Total Test-Groups: 2
Feeder Port       : none
Test-Group Port   Duration      Rate    Nb of   Direction      Status      Remote-Sys-Mac
                  (secs)
-----+-----+-----+-----+-----+-----+-----+-----+
Testgroup1 none    5        -        2    unidirectional not-started  00:00:00:00:00:00
Testgroup2 none    5        -        3    unidirectional not-started  00:00:00:00:00:00
```

### output definitions

---

<b>Test-Groups</b>	The CPE test group. Configured through the <b>test-oam group</b> command.
<b>Port</b>	The port on which the test is run.
<b>Duration</b>	The amount of time the test will run.
<b>Rate</b>	The rate at which packets are transmitted on the test port. Configured through the <b>test-oam group duration rate</b> command.
<b>Nb of Flows</b>	Number of test flows configured for the respective CPE test group.
<b>Direction</b>	The direction of the test traffic. Note that only unidirectional traffic tests are supported.

*output definitions*

---

<b>Status</b>	The operational status of the test.
<b>Remote-Sys-Mac</b>	The MAC address of the remote device configured through the <b>test-oam group remote-sys-mac</b> command.

---

-> show test-oam group Testgroup1

<b>Test-Groups</b>	The CPE test group. Configured through the <a href="#">test-oam group</a> command.
<b>Port</b>	The port on which the test is run.
<b>Source Endpoint</b>	The host name for the source (generator) switch. Configured through the <a href="#">test-oam group src-endpoint dst-endpoint</a> command.
<b>Destination Endpoint</b>	The host name for the destination (analyzer) switch. Configured through the <a href="#">test-oam group src-endpoint dst-endpoint</a> command.
<b>Source Mac</b>	The source MAC address of the test frame. Configured through the <a href="#">test-oam vlan test-frame</a> command.
<b>Destination Mac</b>	The destination MAC address of the test frame. Configured through the <a href="#">test-oam vlan test-frame</a> command.
<b>Remote Sys Mac</b>	The MAC address of the remote device configured through the <a href="#">test-oam group remote-sys-mac</a> command.
<b>Duration</b>	The amount of time the test will run.
<b>Role</b>	The role of the switch for this test ( <b>generator</b> or <b>analyzer</b> ). Configured through the <a href="#">test-oam role</a> command.
<b>Rate</b>	The rate at which packets are transmitted on the test port. Configured through the <a href="#">test-oam group duration rate</a> command.
<b>Frame Size</b>	The size of the test frame. Configured through the <a href="#">test-oam group duration rate</a> command.
<b>Direction</b>	The direction of the test traffic. Note that only unidirectional traffic tests are supported.
<b>Status</b>	The operational status of the test.
<b>L2-SAA Count</b>	Specifies the number of packets sent in one MAC ping iteration.
<b>L2-SAA Interval</b>	Specifies the delay between two consecutive packets transmitted during a MAC ping iteration.
<b>L2-SAA DE</b>	Specifies if the drop enable bit value is used.

*output definitions*

---

<b>L2-SAA Payload Size</b>	Specifies the size of the MAC ping payload used for the MAC ping operation.
<b>L2-SAA Priority</b>	Specifies the priority value set for the L2 SAA frames.
<b>L2-SAA Continuous</b>	Specifies the SAA session will run continuously until the test-oam session ends.

## show test-oam group saa statistics

Displays the SAA test statistics for all CPE test groups or for a specific test name.

**show test-oam group** [*string*] saa statistics

---

### Syntax Definitions

*string* The name of an existing CPE test group.

### Defaults

By default, statistics are displayed for all CPE test group.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

Use the *string* parameter with this command to display SAA statistics for a specific CPE test group.

### Examples

```
-> show test-oam group Test1 saa statistics
```

```
Test-group Flow Time of Last-Run      RTT   RTT   RTT   Jitter Jitter Jitter  Packets  Description
      Min   Avg   Max   Min   Avg   Max   Sent Rcvd
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
Test1   flow1 2009-09-05,20:18:34.0  970   1067  1432   1    99    455    7    7    DEFAULT
```

```
-> show test-oam group saa statistics
```

### output definitions

---

<b>Test-group</b>	The CPE test group name (ID).
<b>Flow</b>	Displays the flow identifier for the test.
<b>Time of Last-Run</b>	Displays the date and time on which the test was last run.
<b>RTT Min</b>	Displays the minimum round trip time.
<b>RTT Avg</b>	Displays the average round trip time.

*output definitions*

---

<b>RTT Max</b>	Displays the maximum round trip time.
<b>Jitter Min</b>	Displays the minimum jitter value.
<b>Jitter Avg</b>	Displays the average jitter value.
<b>Jitter Max</b>	Displays the maximum jitter value.
<b>Packets Sent</b>	Displays the number of packets sent during a single MAC ping.
<b>Packets Rcvd</b>	Displays the number of packets received during a single MAC ping.
<b>Description</b>	Displays the description for each provided by the user during the test creation. By default it is displayed as "DEFAULT".

## show test-oam group statistics

Displays the statistics for all CPE test groups or for a specific CPE test group. Use this command on both the generator and analyzer switch to determine test results.

**show test-oam group** [*string*] **statistics**

---

### Syntax Definitions

*string* The name of an existing CPE test group.

### Defaults

By default, statistics are displayed for all CPE test groups.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Use the *string* parameter with this command to display statistics for a specific CPE test group.
- The statistics displayed depend on the role the switch is performing for the test (generator or analyzer). For example, the analyzer switch may not show any packet count in the **TX** fields because it is the receiving switch.

### Examples

```
-> show test-oam group TestGroup4 statistics
Test-Group  Flow      TX-Ingress  TX-Egress   RX-Ingress  Remote-Stats
-----+-----+-----+-----+-----+-----
TestGroup4  flow1      19017       19017       0            19017
TestGroup4  flow2      19017       19017       0            19017

-> show test-oam group statistics
Test-Group  Flow      TX-Ingress  TX-Egress   RX-Ingress  Remote-Stats  Throughput (Mbps)
-----+-----+-----+-----+-----+-----+-----
Testgroup1  test1     20163463    17205475    0            17205475       172.05
Testgroup1  test2     20720137    17680541    0            17680541       176.81
Testgroup1  test3     20709603    17668483    0            17668483       176.68
Testgroup1  test4     20698156    17656987    0            17656987       176.57
Testgroup2  test1     20163463    17205475    0            17205475       172.05
Testgroup2  test2     20720137    17680541    0            17680541       176.81
Testgroup2  test3     20709603    17668483    0            17668483       176.68
Testgroup2  test4     20698156    17656987    0            17656987       176.57
```

*output definitions*

---

<b>Test-Group</b>	The CPE test group.
<b>TX-Ingress</b>	The number of ingress test packets generated on the ingress UNI.
<b>TX-Egress</b>	The number of egress test packets transmitted on the egress NNI.
<b>RX-Ingress</b>	The number of test packets received on the ingress NNI. This value is relevant on the receiving (analyzer) switch for the specific test.
<b>Remote-Stats</b>	The number of test frames received by the analyzer and fetched by the generator device.
<b>Throughput(Mbps)</b>	Displays the traffic throughput of the test.

---

# 55 PPPoE Intermediate Agent

Point-to-Point Protocol over Ethernet (PPPoE) provides the ability to connect a network of hosts to a Remote Access Concentrator. For example, Broadband Network Gateway over a simple bridging access device. In PPPoE model, each host utilizes its own Point-to-Point Protocol (PPP) stack and the user is presented with a familiar user interface. By using PPPoE, Access control, billing, and type of service can be configured on a per-user, rather than a per-site, basis.

PPPoE Intermediate Agent (PPPoE-IA) solution is designed for the PPPoE access method and is based on the Access Node implementing a PPPoE-IA function to insert access loop identification in PPPoE discovery packets (PADI/PADR/PADT) received from the user side.

MIB information for the PPPoE-IA commands is as follows:

*Filename:* alcatel-ind1-pppoe-ia-mib.mib  
*Module:* ALCATEL-IND1-PPPOEIA-MIB

A summary of the available commands is listed here.

---

**pppoe-ia**  
**pppoe-ia {port | linkagg}**  
**pppoe-ia {trust | client}**  
**pppoe-ia access-node-id**  
**pppoe-ia circuit-id**  
**pppoe-ia remote-id**  
**clear pppoe-ia statistics**  
**show pppoe-ia configuration**  
**show pppoe-ia {port | linkagg}**  
**show pppoe-ia statistics**

---

Configuration procedures for PPPoE-IA are explained in the “Configuring PPPoE Intermediate Agent” chapter of the *OmniSwitch AOS Release 8 Network Configuration Guide*.

## pppoe-ia

Enable or disable PPPoE-IA globally on the switch.

**pppoe-ia {enable | disable}**

---

### Syntax Definitions

**enable** Enable PPPoE-IA.  
**disable** Disable PPPoE-IA.

### Defaults

By default, PPPoE-IA is disabled globally on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

All PPPoE-IA parameters are configurable irrespective of the global status of PPPoE-IA.

### Examples

```
-> pppoe-ia enable
-> pppoe-ia disable
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

<b>pppoe-ia {port   linkagg}</b>	Enable or disable PPPoE-IA on a port or a link aggregate port.
<b>pppoe-ia {trust   client}</b>	Configures a port or a link aggregate port as trust or client port for PPPoE-IA.
<b>pppoe-ia access-node-id</b>	Globally configures a format to form an identifier that uniquely identifies an access node.
<b>pppoe-ia circuit-id</b>	Globally configures a Circuit-ID format that forms an identifier that uniquely identifies an access node and an access loop on which the PADI/PADR/PADT is received from the user side.
<b>pppoe-ia remote-id</b>	Globally configures a format to form an identifier that uniquely identifies the user attached to the access loop.
<b>clear pppoe-ia statistics</b>	Clears the statistics for all the physical or link-aggregate ports, a single port or a link aggregate port, or a range of physical ports for PPPoE-IA.
<b>show pppoe-ia configuration</b>	Displays the global configuration for PPPoE-IA.
<b>show pppoe-ia {port   linkagg}</b>	Displays the PPPoE-IA configuration for a physical port, physical port range, link aggregate port, or all the physical or link-aggregate ports.
<b>show pppoe-ia statistics</b>	Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

## MIB Objects

alaPPPoE-IA-GlobalStatus

---

## pppoe-ia {port | linkagg}

Enable or disable PPPoE-IA on a port or a link aggregate port. Link aggregate can be either static or dynamic.

**pppoe-ia {port chassis/slot/port[-port2] | linkagg agg\_num} {enable | disable}**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot</i>	The slot number for the module.
<i>port</i>	Port number of the interface to be configured.
<i>port2</i>	Last port number in a range of ports to be configured.
<b>linkagg agg_num</b>	The link aggregate identification number.
<b>enable</b>	Enable PPPoE-IA on a port.
<b>disable</b>	Disable PPPoE-IA on a port.

### Defaults

By default, PPPoE-IA is disabled on all ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- All PPPoE-IA parameters are configurable irrespective of the per-port PPPoE-IA status (enabled or disabled).
- PPPoE-IA must be enabled globally as well as on a port.
- PPPoE-IA is not supported on port mirroring destination ports. However, the configurations are accepted.
- PPPoE-IA is not supported on aggregable ports.

### Examples

```
-> pppoe-ia port 1/1/1 enable
-> pppoe-ia port 1/1/4 disable
-> pppoe-ia linkagg 1 enable
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

**pppoe-ia**

Enable or disable PPPoE-IA globally on the switch.

**show pppoe-ia configuration**

Displays the global configuration for PPPoE-IA.

**show pppoe-ia {port | linkagg}**

Displays the PPPoE-IA configuration for a physical port, physical port range, link aggregate port, or all the physical or link-aggregate ports.

**show pppoe-ia statistics**

Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

## MIB Objects

alaPPPoEIAPortConfigTable

alaPPPoEIAPortConfigStatus

---

## pppoe-ia {trust | client}

Configures a port or a link aggregate port as trusted or client port for PPPoE-IA.

A trust port is a port that is connected to the Broadband Network Gateway whereas a client port is connected to the host.

**pppoe-ia {port *chassis/slot/port[-port2]* | linkagg *agg\_num*} {trust | client}**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot</i>	The slot number for the module.
<i>port</i>	Port number of the interface to be configured.
<i>port2</i>	Last port number in a range of ports to be configured.
<b>linkagg</b> <i>agg_num</i>	Specifies the link aggregate identification number.
<b>trust</b>	Specifies the mode of the port as trust.
<b>client</b>	Specifies the mode of the port as client.

### Defaults

By default, all ports are client ports.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- All PPPoE-IA parameters are configurable irrespective of per-port PPPoE-IA status (enabled or disabled).
- PPPoE-IA must be enabled globally as well as on a port.
- For PPPoE-IA to work, it must be enabled on a client port as well as a trusted port.
- PPPoE-IA is not supported on aggregable ports.
- PPPoE-IA is not supported on port mirroring destination ports; however, the configurations are accepted.

### Examples

```
-> pppoe-ia port 1/1 /1
-> pppoe-ia port 1/1/2-4 client
-> pppoe-ia linkagg 7 trust
-> pppoe-ia linkagg 0 client
```

## Release History

Release 8.6R1; command introduced.

## Related Commands

**pppoe-ia**

Enable or disable PPPoE-IA globally on the switch.

**pppoe-ia {port | linkagg}**

Enable or disable PPPoE-IA on a port or a link aggregate port.

**pppoe-ia {trust | client}**

Configures a port or a link aggregate port as trust or client port for PPPoE-IA.

**show pppoe-ia configuration**

Displays the global configuration for PPPoE-IA.

**show pppoe-ia {port | linkagg}**

Displays the PPPoE-IA configuration for a physical port, physical port range, link aggregate port, or all the physical or link-aggregate ports.

**show pppoe-ia statistics**

Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

## MIB Objects

alaPPPoEIAPortConfigTable

alaPPPoEIAPortConfigTrustMode

---

## pppoe-ia access-node-id

Globally configures a format to form an identifier that uniquely identifies an access node.

**pppoe-ia access-node-id** {**base-mac** | **system-name** | **mgnt-address** | **user-string** *string*}

---

### Syntax Definitions

<b>base-mac</b>	The base MAC address of the switch.
<b>system-name</b>	The configured name of the switch.
<b>mgnt-address</b>	The IP address of the management interface of the switch.
<i>string</i>	The value of user configured string.

### Defaults

By default, PPPoE-IA uses the base MAC address of the switch as the Access-Node-Identifier.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- The access-node-identifier can have a maximum of 32 characters. The access-node-identifier longer than 32 characters is truncated to 32 characters.
- The access-node-identifier when configured as user-string must not contain spaces.
- The value of user string must not be NULL.
- In case of management address format, IP address of the Loopback0 interface (if configured and active) or the first active IP interface address is used as the management address. If none of them are available, IP address '0.0.0.0' is used as management address.
- If the access-node-identifier is configured as any other format other than user-string format, then the string value configuration is not allowed through SNMP or Web View application.
- It is mandatory to provide the string value through SNMP using Multi-varbind for the user-string format.

### Examples

```
-> pppoe-ia access-node-id base-mac
-> pppoe-ia access-node-id user-string accessnode1
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

<b>pppoe-ia {trust   client}</b>	Configures a port or a link aggregate port as trust or client port for PPPoE-IA.
<b>clear pppoe-ia statistics</b>	Clears the statistics for all the physical or link-aggregate ports, a single port or a link aggregate port, or a range of physical ports for PPPoE-IA.
<b>show pppoe-ia configuration</b>	Displays the global configuration for PPPoE-IA.
<b>show pppoe-ia {port   linkagg}</b>	Displays the PPPoE-IA configuration for a physical port, physical port range, link aggregate port, or all the physical or link-aggregate ports.
<b>show pppoe-ia statistics</b>	Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

## MIB Objects

alaPPPoEIAGlobalAccessNodeIDFormatType  
alaPPPoEIAGlobalAccessNodeIDStringValue

---

## pppoe-ia circuit-id

Globally configures a Circuit-ID format that forms an identifier that uniquely identifies an access node and an access loop that receives the PPPoE Active Discovery Initiation (PADI) or PPPoE Active Discovery Request (PADR) or PPPoE Active Discovery Terminate (PADT) from the user end.

**pppoe-ia circuit-id** {**default** [**atm**] **ascii** [**base-mac** | **system-name** | **interface** | **vlan** | **cvlan** | **interface-alias** | **user-string** *string* | **delimiter** *char*}}

---

### Syntax Definitions

<b>default</b>	The default value of the Circuit-ID used for the Ethernet parameter.
<b>atm</b>	When the PPPoE-IA Circuit-ID format is configured as “default atm” the Circuit-ID encoding happens for “ATM” (Asynchronous Transfer Mode) parameter.
<b>ascii</b>	Circuit-ID format used to configure Circuit-ID string using the five parameters and delimiter. Maximum five parameters can be selected from the given seven options: base-mac, system-name, interface, vlan, cvlan, interface-alias, and user-string.
<b>base-mac</b>	The base MAC address of the switch.
<b>system-name</b>	Name configured for the switch.
<b>interface</b>	The interface on which the PPPoE message is received.
<b>vlan</b>	VLAN interface on which the PPPoE message is received.
<b>cvlan</b>	Inner-VLAN or customer VLAN of the PPPoE message.
<b>interface-alias</b>	Configured alias of the interface on which the PPPoE message is received.
<i>string</i>	The value of user configured string.
<b>delimiter</b>	A user configurable delimiter used to separate the fields of an ASCII string forming the Circuit-ID.
<i>char</i>	The value (a character) of the user configurable delimiter.

### Defaults

parameter	default
<i>char</i>	:

By default, “:” (colon) is used as the delimiter.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

## Usage Guidelines

- Circuit-ID identification is configurable only globally and cannot be configured on a per-port or per-VLAN basis.
- To configure ethernet default parameter, use “default” in the CLI command.
- To configure default parameter as “atm”, use “default ATM” in the CLI command.
- When the PPPoE-IA Circuit-ID format is configured as “default atm” the Circuit-ID encoding happens for “ATM” (Asynchronous Transfer Mode) parameter.
- By default, the value of the Circuit-ID is "access-node-id eth slot/port[:vlan-id]". For example, if the value of access-node-id is "vxTarget", the default value of Circuit-ID is "vxTarget eth 1/1:10", if the packet is received on the interface 1/1 in vlan 10.
- By default, the delimiter used is “:”. The available delimiters are: “:” (colon), “|” (pipe), “/” (forward slash), “\” (backward slash), “-” (hyphen), “\_” (underscore), “ ” (space), “#” (hash), “.” (full stop), “,” (comma), “;” (semicolon).
- The Circuit-ID can have a maximum of 63 characters. The Circuit-ID longer than 63 characters is truncated to 63 characters.
- At most, five fields out of the available seven is encoded for the Circuit-ID in the order specified by the user.
- If the access-node-identifier is configured as any other format other than user-string format, then the string value configuration is not allowed through SNMP or Web View application.
- It is mandatory to provide the string value through SNMP using Multi-varbind for the user-string format.
- The value of user string must not be NULL.
- You can configure the same Circuit-ID format multiple times (for example, base MAC address of the switch can be configured multiple times in ASCII format of Circuit-ID).
- If the Circuit-ID format is default, irrespective of the ASCII fields (if configured), the Circuit-ID configuration is not visible in **show pppoe-ia configuration** output.

## Examples

```
-> pppoe-ia circuit-id default
-> pppoe-ia circuit-id default atm
-> pppoe-ia circuit-id ascii base-mac vlan
-> pppoe-ia circuit-id ascii system-name interface user-string cid1
-> pppoe-ia circuit-id ascii system-name delimiter #
```

## Release History

Release 8.6R1; command introduced.

## Related Commands

<b>pppoe-ia</b>	Enable or disable PPPoE-IA globally on the switch.
<b>pppoe-ia {trust   client}</b>	Configures a port or a link aggregate port as trust or client port for PPPoE-IA.
<b>show pppoe-ia configuration</b>	Displays the global configuration for PPPoE-IA.
<b>show pppoe-ia {port   linkagg}</b>	Displays the PPPoE-IA configuration for a physical port, physical port range, link aggregate port, or all the physical or link-aggregate ports.
<b>show pppoe-ia statistics</b>	Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

---

## pppoe-ia remote-id

Globally configures a format to form an identifier that uniquely identifies the user attached to the access loop.

```
pppoe-ia remote-id {base-mac | system-name | mgnt-address | user-string string}
```

---

### Syntax Definitions

<b>base-mac</b>	The base MAC address of the switch.
<b>system-name</b>	The name configured for the switch.
<b>mgnt-address</b>	The management IP address of the switch.
<i>string</i>	The value configured for user string.

### Defaults

By default, the base MAC address of the switch is used as the format for Remote-ID.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- Remote-ID is configurable only globally and cannot be configured on a per-port or per-VLAN basis.
- Remote-ID can have a maximum of 63 characters. The Remote-ID longer than 63 characters is truncated to 63 characters.
- In case of management address format, IP address of the Loopback0 interface (if configured and active) or the first active IP interface address is used as the management address. If none of them are available, IP address '0.0.0.0' is used as management address.
- If the Remote-ID is configured as any other format other than user-string format, then the string value configuration is not allowed through SNMP or Web View application.
- It is mandatory to provide the string value through SNMP using Multi-varbind for the user-string format.
- The value of user string must not be NULL.

### Examples

```
-> pppoe-ia remote-id base-mac
-> pppoe-ia remote-id user-string remoteuser1
```

## Release History

Release 8.6R1; command introduced.

## Related Commands

**pppoe-ia**

Enable or disable PPPoE-IA globally on the switch.

---

## clear pppoe-ia statistics

Clears the statistics for all the physical or link-aggregate ports, a single port or a link aggregate port, or a range of physical ports for PPPoE-IA.

**clear pppoe-ia statistics** [**port** {*chassis/slot/port*[-*port2*] | **linkagg** *agg\_num*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot</i>	The slot number for the module.
<i>port</i>	Port number of the interface to be configured.
<i>port2</i>	Last port number in a range of ports to be configured.
<b>linkagg</b> <i>agg_num</i>	Specifies the link aggregate identification number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> clear pppoe-ia statistics
-> clear pppoe-ia statistics linkagg 13
```

### Release History

Release 8.6R1; command introduced.

## Related Commands

### [pppoe-ia access-node-id](#)

Globally configures a format to form an identifier that uniquely identifies an access node.

### [pppoe-ia circuit-id](#)

Globally configures a Circuit-ID format that forms an identifier that uniquely identifies an access node and an access loop on which the PADI/PADR/PADT is received from the user side.

### [show pppoe-ia statistics](#)

Displays the PPPoE-IA statistics for a physical port, link aggregate port, physical port range, or all the physical or link-aggregate ports.

## MIB Objects

```
alaPPPoEIAGlobalClearStats  
alaPPPoEIAStatsTable  
    alaPPPoEIAStatsClearStats
```

---

## show pppoe-ia configuration

Displays the global configuration for PPPoE-IA.

**show pppoe-ia configuration**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	Yes	No	No	No	No

### Usage Guidelines

- If the Circuit-ID is configured with “default” parameter, then the Circuit-ID format will display as “ethernet”.
- If the Circuit-ID is configured with “default atm” parameter, then the Circuit-ID format will display as “atm”.

### Examples

```

### *output definitions*

---

<b>Status</b>	Displays the global PPPoE-IA status: Enabled or Disabled.
<b>Access-node-id Format</b>	The format used to form an identifier that uniquely identifies an access node.
<b>Access-node-id String</b>	The value of user configured string for the access node.
<b>Circuit-Id Format</b>	The format used to form an identifier that uniquely identifies an access node and an access loop.
<b>Circuit-id Field1</b>	The Circuit-ID format.
<b>Circuit-id Field1 String</b>	The value of Circuit-ID depending on the format configured for the Circuit-ID.
<b>Circuit-id Delimiter</b>	A user configurable delimiter (a character) used to separate the fields of an ASCII string forming the Circuit-ID.
<b>Remote-id Format</b>	The format used to form an identifier that uniquely identifies the user attached to the access loop.
<b>Remote-id String</b>	The value of user configured string for the Remote-ID.

# 56 Service Assurance Agent Commands

Service Assurance Agent (SAA) enables customers to assure new business-critical applications, as well as services that utilize data, voice, and video. Use SAAs to verify service guarantees, increase network reliability by validating network performance, proactively identify network issues, and increase return on investment (ROI) by easing the deployment of new services. The SAA feature uses active monitoring to generate traffic in a continuous, reliable, and predictable manner, thus enabling the measurement of network performance and health.

IP SAAs enhance the service level monitoring to become IP application-aware by measuring both end-to-end and at the IP layer. IP SAA would allow performance measurement against any IP addresses in the network (switch, server, pc). Use ETH-LB/DMM to measure delay and jitter by sending out frames with DM information to the peer MEP and receiving frames with DM information from the peer MEP.

MIB information for the SAA commands is as follows:

*Filename:* Alcatel-IND1-ETHERNET-OAM-MIB.mib  
*Module:* alcatelIND1EoamMIB

*Filename:* IEEE8021-CFM-MIB.mib  
*Module:* ieee8021CfmMib

*Filename:* ALCATEL-IND1-SAA-MIB.mib  
*Module:* alcatelIND1SaaMIB

A summary of the available commands is listed here:

<b>SAA Commands</b>	<b>saa</b> <b>saa start</b> <b>saa stop</b>
<b>EthOAM SAA Commands</b>	<b>saa type ethoam-loopback</b> <b>saa type ethoam-two-way-delay</b>
<b>IP SAA Command</b>	<b>saa type ip-ping</b>
<b>Layer 2 SAA Command</b>	<b>saa type mac-ping</b>
<b>SPB SAA Commands</b>	<b>saa spb</b> <b>saa spb reset</b> <b>saa spb flush</b> <b>show saa spb</b>
<b>XML SAA Commands</b>	<b>saa xml</b> <b>show saa xml</b>
<b>SAA Show Commands</b>	<b>show saa</b> <b>show saa type config</b> <b>show saa statistics</b> <b>show saa vrf</b>

## saa

Configures a Service Assurance Agent (SAA).

```
[vrf vrf_name] saa string [descr description] [interval interval] [jitter-threshold jitter_thresh] [rtt-threshold rtt_thresh]
```

```
[vrf vrf_name] no saa string
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	SAA ID string up to 32 characters. Use quotes around string if SAA ID contains multiple words with spaces between them (for example “SAA 10”).
<i>description</i>	Text string up to 32 characters. Use quotes around string if description contains multiple words with spaces between them (for example, “ALE Marketing SAA”).
<i>interval</i>	The amount of time, in minutes, between two iterations of the SAA test. Valid range is from 1, 2, 5, 10 to 1500.
<i>jitter_thresh</i>	The jitter threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.
<i>rtt_thresh</i>	The round-trip time threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.

### Defaults

parameter	default
<i>description</i>	DEFAULT
<i>interval</i>	150 minutes
<i>jitter_thresh</i>	0 (disabled)
<i>rtt_thresh</i>	0 (disabled)

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the **no** form of this command to remove an SAA from the switch configuration. Note that the SAA must be stopped before it can be deleted.
- The **descr** and **interval** parameters are optional. If these values are specified, the SAA is created with those values. If these values are not specified, the SAA is created with the default values.

- If the **desc** and/or **interval** parameters are specified for an existing SAA, then the values of the existing parameters are updated with those specified.
- If the session time interval is changed for an SAA that is already running and active, the interval value is immediately updated in the database but is not applied to the SAA until after the next iteration.
- If none of the optional parameters are specified and the given SAA exists, the CLI will return an error message, as duplicate entries are not allowed.
- Any number of SAAs can be configured (MAX 127). It is recommended not to start many aggressive SAAs (having session interval  $\leq 10$ ). To achieve proper scheduling of all the started SAA (aggressive and relaxed) it is recommended not to start more than 50 SAAs.
- Ensure the interval value is greater than the execution time (number of packets \* inter packet delay).
- When SAA processes an iteration of a session, it will compare the results against the following criteria to see if an SNMP trap should be sent. A trap with the session name is sent if:
  - At least one packet is lost.
  - Warning: Average RTT/Jitter crosses 90% of threshold.
  - Critical: Average RTT/Jitter at or above threshold.

## Examples

```
-> saa saa1 descr "saa for ip-ping"  
-> saa saa1 jitter-threshold 100 rtt-threshold 500  
-> saa saa2 descr "Monitoring Default VRF-interface" interval 160  
-> saa saa2 interval 120  
-> no saa saa1
```

## Release History

Release 7.3.1; command was introduced.

Release 7.3.2; **jitter-threshold** and **rtt-threshold** parameters added.

  alaSaaCtrlRTTThreshold
```

---

## saa type ip-ping

Configure SAA for IP including the number of packets and inter-packet delay parameters.

```
[vrf vrf_name] saa string type ip-ping destination-ip ip_address source-ip ip_address type-of-service
tos [num-pkts count] [inter-pkt-delay delay] [payload-size size]
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	SAA ID string up to 32 characters. Use quotes around string if the SAA ID contains multiple words with spaces between them (for example, "SAA 10").
<b>destination-ip</b> <i>ip_address</i>	The IPv4 address of the destination to ping.
<b>source-ip</b> <i>ip_address</i>	The IPv4 address of the source.
<i>tos</i>	The type of service. Valid range is 0 – 255.
<i>count</i>	The number of packets to send in one ping iteration. The valid range is 1–100.
<i>delay</i>	The delay between packets sent during a ping iteration, in milliseconds. Valid range is from 100 ms to 1000 ms in multiples of 100 ms.
<i>size</i>	The size of the ICMP payload to be used for the ping iteration. Valid range is 24–1472 bytes.

### Defaults

parameter	default
<i>count</i>	5
<i>delay</i>	1000 ms
<i>size</i>	24 bytes

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- The **num-pkts**, **inter-pkt-delay**, and **payload-size** are optional parameters. If these values are specified, the SAA is created with the values entered. If none of them are specified, the SAA is created with the default values. The **num-pkts** and **inter-pkt-delay** can be modified, but **payload-size** cannot be modified later.
- Total execution time, that is, the product of **num-pkts** and **inter-pkt-delay** (number of packets \* inter-packet delay) for a SAA iteration must be less than the sum of interval and inter-packet delay.

- The SAA must not be in a 'started' state at the time the **num-pkts** or **inter-pkt-delay** parameters are modified. Make sure the SAA is stopped before attempting to modify these parameters.
- The SAA must exist before issuing the CLI. If the SAA does not exist, the CLI will return an error.
- Do not specify a broadcast or multicast address for the source or destination IP. In addition, do not use 0.0.0.0 as the destination IP address.
- The timeout for each ping request packet is 1 sec. This value is not configurable.
- If a VRF is specified, the SAA for IP is configured in the specified VRF. By default, the SAA is configured in the 'default' VRF.

## Examples

```
-> saa saa1 type ip-ping destination-ip 123.32.45.76 source-ip 123.35.42.124 type-of-service 4
-> saa saa2 type ip-ping destination-ip 123.32.45.77 source-ip 123.35.42.124 type-of-service 5
-> saa saa3 type ip-ping destination-ip 123.32.55.27 source-ip 123.35.42.125 type-of-service 8 inter-pkt-delay 1000
-> saa saa4 type ip-ping destination-ip 123.46.45.77 source-ip 123.35.42.125 type-of-service 2 num-pkts 5
-> saa saa5 type ip-ping destination-ip 12.53.45.77 source-ip 123.35.42.125 type-of-service 35 payload-size 1000
-> saa saa6 type ip-ping destination-ip 123.22.45.66 source-ip 123.35.42.125 type-of-service 5 inter-pkt-delay 1000 num-pkts 8 pkt-size 1000
-> vrf vrf3 saa saa7 type ip-ping destination-ip 123.22.45.66 source-ip 123.35.42.125 type-of-service 5 inter-pkt-delay 1000 num-pkts 8 pkt-size 1000
```

  alaSaaIpCtrlNumPkts
```

---

## saa type mac-ping

Configure SAA for a MAC address including the VLAN, VLAN ID, number of packets and inter-packet delay parameters.

```
saa string type mac-ping destination-mac mac_address vlan vlan_id [vlan-priority vlan_priority]
[drop-eligible {true | false}] [data data] [num-pkts count] [inter-pkt-delay delay] [payload-size size]
[isid-check isid]
```

---

### Syntax Definitions

<i>string</i>	SAA ID string up to 32 characters. Use quotes around string if the SAA ID contains multiple words with spaces between them (for example, "SAA 10").
<i>mac_address</i>	The destination MAC address to ping.
<i>vlan_id</i>	The VLAN on which the L2 SAA Packets will be sent out. Valid range is 1-4094.
<i>vlan_priority</i>	Specifies both the internal priority of the MAC ping and the 802.1p value on the VLAN tag header. Valid range is 0-7.
<b>true</b>	Sets both the internal drop precedence of the MAC ping and the CFI bit on the VLAN tag header to true.
<b>false</b>	Sets both the internal drop precedence of the MAC ping and the CFI bit on the VLAN tag header to false.
<i>data</i>	User specified string to be included in the packet (Data TLV).
<i>count</i>	The number of packets to send in one ping iteration. The valid range is 1–100.
<i>delay</i>	The delay between packets sent during a ping iteration, in milliseconds. Valid range is from 100 ms to 1000 ms in multiples of 100 ms.
<i>size</i>	The size of the ICMP payload to be used for the ping iteration. Valid range is 36–1500 bytes.
<i>isid</i>	A service instance identifier (I-SID) that is used to identify the SPB service in a provider backbone bridge (PBB) network.

### Defaults

parameter	default
<i>vlan_priority</i>	0
<b>true   false</b>	false
<i>count</i>	5
<i>delay</i>	1000 ms
<i>size</i>	36 bytes

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

## Usage Guidelines

- The **num-pkts**, **inter-pkt-delay**, and **payload-size** are optional parameters. If these values are specified, the SAA is created with the values entered. If none of them are specified, the SAA is created with the default values. The **num-pkts** and **inter-pkt-delay** can be modified, but **payload-size** cannot be modified later.
- Total execution time, that is, the product of **num-pkts** and **inter-pkt-delay** (number of packets \* inter-packet delay) for a SAA iteration must be less than the sum of interval and inter-packet delay.
- The SAA must not be in a 'started' state at the time the **num-pkts** or **inter-pkt-delay** parameters are modified. Make sure the SAA is stopped before attempting to modify these parameters.
- The SAA must exist before issuing the CLI. If the SAA does not exist, the CLI will return an error.
- The timeout for each ping request packet is 1 sec. This value is not configurable.
- If data-TLV is specified and payload size is not specified, then payload size will be increased internally to accommodate the data TLV.
- If data TLV and payload size both are specified and payload size is less than [dataTLV + 36] bytes (for time-stamping and other packet info), then the CLI will be rejected.
- Destination-MAC cannot be broadcast/multicast address.
- Timeout for each ping request packet is 1 sec. This value is non-configurable.

## Examples

```
-> saa saa1 type mac-ping destination-mac 00:11:11:11:11:11 vlan 10
-> saa saa4 type mac-ping destination-mac 00:11:11:11:11:11 vlan 10 inter-pkt-delay
100
-> saa saa5 type mac-ping destination-mac 00:11:11:11:11:11 vlan 10 num-pkts 10
-> saa saa6 type mac-ping destination-mac 00:11:11:11:11:11 vlan 10 payload-size
400
-> saa saa8 type mac-ping destination-mac 00:11:11:11:11:11 vlan 1001 isid-check
1002
```

## Release History

Release 7.3.1; command was introduced.

Release 8.6R1; **vlan-priority** and **drop-eligible** parameters deprecated.

```

---

## saa spb

Configures session parameters for the Shortest Path Bridging (SPB) SAA. The SPB feature dynamically discovers SPB-enabled switches. Each discovered switch is identified by the pairing of a SPB VLAN (BVLAN) and the backbone MAC address (BMAC) for the switch. SPB advertises these BVLAN-BMAC pairs to the SAA feature, which in turn creates and starts MAC ping sessions based on the parameters configured with this command.

**saa spb** [**auto-create**] [**auto-start**] [**interval** *interval*] [**vlan-priority** *vlan\_priority*] [**drop-eligible** {**true** | **false**}] [**data** *data*] [**num-pkts** *count*] [**inter-pkt-delay** *delay*] [**payload-size** *size*] [**jitter-threshold** *jitter\_thresh*] [**rtt-thresh** *rtt\_thresh*] [**keep**]

---

### Syntax Definitions

<b>auto-create</b>	Automatically creates an SPB SAA session for each discovered BVLAN-BMAC pair.
<b>auto-start</b>	Automatically starts each SPB SAA session.
<i>interval</i>	The amount of time, in minutes, between two iterations of the SAA test. Valid range is from 1, 2, 5, 10–1500.
<i>vlan_priority</i>	Specifies both the internal priority of the MAC ping and the 802.1p value on the VLAN tag header. Valid range is 0-7.
<b>true</b>	Sets both the internal drop precedence of the MAC ping and the CFI bit on the VLAN tag header to true.
<b>false</b>	Sets both the internal drop precedence of the MAC ping and the CFI bit on the VLAN tag header to false.
<i>data</i>	User specified string to be included in the packet (Data TLV).
<i>count</i>	The number of packets to send in one ping iteration of the test. Valid range is 1–100.
<i>delay</i>	The delay between packets sent during a ping iteration, in milliseconds. Valid range is 100–1000 ms in multiples of 100 ms.
<i>size</i>	The size of the ICMP payload to be used for the ping iteration. Valid range is 32–1500 bytes.
<i>jitter_thresh</i>	The jitter threshold value, in microseconds. A trap is generated when this value is crossed. The valid range is 0–1000000.
<i>rtt_thresh</i>	The round-trip time threshold value, in microseconds. A trap is generate when this value is crossed. The valid range is 0–1000000.
<b>keep</b>	Retains SPB SAA session information even when SPB signals that a BMAC or BVLAN no longer exists.

## Defaults

parameter	default
<b>auto-create</b>	off
<b>auto-start</b>	off
<i>interval</i>	150 minutes
<i>vlan-priority</i>	0
<b>drop-eligible {true   false}</b>	false
<i>data</i>	null
<i>count</i>	5
<i>delay</i>	1000 ms
<i>size</i>	32 bytes
<i>jitter_thresh</i>	0 (disabled)
<i>rtt-thresh</i>	0 (disabled)
<b>keep</b>	off

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- The **auto-create** and **auto-start** parameters enable the SPB SAA functionality required to automatically create and start this type of SAA session.
- Ensure the interval value is greater than the execution time (number of packets \* inter-packet delay).
- Total execution time, that is, the product of **num-pkts** and **inter-pkt-delay** (number of packets \* inter-packet delay) for an SAA iteration must be less than the sum of interval and inter-packet delay.
- SPB SAA sessions cannot be modified but are automatically configured with “SPB” as the owner of the session so they can be easily identified within the applicable SAA **show** command displays.
- The SAA ID for an SPB SAA is the prefix SPB- combined with the BVLAN and BMAC pairing used to generate the session. For example, SPB-*bvlan-bmac* (SPB-4000-e8-e7-32-07-98-cd).

## Examples

```
-> saa spb auto-create auto-start interval 160 num-pkts 50 inter-pkt-delay 100 keep
-> saa spb auto-create auto-start jitter-threshold 100 rtt-threshold 500
-> saa spb keep
```

## Release History

Release 7.3.2; command was introduced.

Release 8.6R1; **vlan-priority** and **drop-eligible** parameters deprecated.

## Related Commands

**show saa spb**

Displays the SAA configuration for the SPB SAA.

---

## saa type ethoam-loopback

Configures the SAA for ETH-LB, including the number of packets and inter-packet delay parameters.

```
saa string type ethoam-loopback {target-endpoint t_mepid | target-mac address mac_address} source-
endpoint s_mepid domain md_name association ma_name vlan-priority vlan_priority [drop-eligible
{true | false}] [data data] [num-pkts num] [inter-pkt-delay delay]
```

---

### Syntax Definitions

<i>string</i>	SAA ID string up to 32 characters. Use quotes around string if the SAA ID contains multiple words with spaces between them (for example, "SAA 10").
<i>t_mepid</i>	The ID of the destination MEP.
<i>mac_address</i>	The MAC address of the destination.
<i>s_mepid</i>	The ID of the source MEP.
<i>md_name</i>	The domain to which the source MEP belongs.
<i>ma_name</i>	The association to which the source MEP belongs.
<i>vlan_priority</i>	The VLAN priority to be used for the outgoing packet. The valid range is 0-7.
<b>true</b>	Sets the drop eligibility bit in the VLAN tag to true.
<b>false</b>	Sets the drop eligibility bit in the VLAN tag to false.
<i>data</i>	User specified string that is included in the packet.
<i>num</i>	The number of packets to send during loopback. Valid range is 1– 100.
<i>delay</i>	The delay between packets sent during a ping iteration, in milliseconds. Valid range is 100–1000 ms in multiples of 100 ms.

### Defaults

parameter	default
<b>drop-eligible {true   false}</b>	false
<b>num-pkts <i>num</i></b>	5
<i>delay</i>	1000

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

## Usage Guidelines

- The SAA must exist before issuing the CLI. If the SAA does not exist, the CLI will return error.
- Source MEP-ID, MD and MA must be created before initiating loopback.
- If the source MEP-Id/MA/MD does not exist, the configuration will be accepted and no error will be returned.
- When **target-endpoint** is specified then it must be learned before initiating loopback.
- When **target-endpoint** is specified and learned, Ethernet Loopback will be transmitted irrespective of whether the RMEP state is OK or failed.
- The **data**, **num-pkts**, and **inter-pkt-delay** are optional parameters. If these values are specified, the entry will be created with these values. If none of them are specified, the SAA will be created with default values. The **num-pkts** and **inter-pkt-delay** can be modified later.
- Total execution time, that is, the product of **num-pkts** and **inter-pkt-delay** (number of packets \* inter-packet delay) for a SAA iteration must be less than the sum of interval and inter-packet delay.
- The SAA must not be in a 'started' state at the time the **num-pkts** or **inter-pkt-delay** parameters are modified. Make sure the SAA is stopped before attempting to modify these parameters.
- The Target MEP/MAC, source MEP, domain, and association parameters are mandatory. If they are not specified, the CLI will return an error.
- The **data** parameter is optional. If this parameter is not specified, then it is not sent in the loopback message.
- The timeout value for each LB packet is one second. This value is not configurable.

## Examples

```
-> saa saa1 type ethoam-loopback target-endpoint 10 source endpoint 1 domain md1
association mal
-> saa saa2 type ethoam-loopback target-endpoint 10 source endpoint 2 domain md1
association mal data « monitor association mal » num-pkts 6 inter-pkt-delay 500
-> saa saa3 type ethoam-loopback target-endpoint 15 source endpoint 1 domain md1
association mal data « monitor association mal » num-pkts 6
-> saa saa4 type ethoam-loopback target-endpoint 10 source endpoint 2 domain md1
association mal inter-pkt-delay 500
```

## Release History

  alaSaaEthoamCtrlPktData  
  alaSaaEthoamCtrlVlanPriority
```

---

## saa type ethoam-two-way-delay

Configures SAA for ETH-DMM, including the number of packets and inter-packet delay parameters.

```
saa string type {ethoam-two-way-delay} {target-endpoint t_mepid | target-mac address mac_address}
source-endpoint s_mepid domain md_name association ma_name vlan-priority vlan_priority [num-
pkts num] [inter-pkt-delay delay]
```

---

### Syntax Definitions

<i>string</i>	SAA ID string up to 32 characters. Use quotes around string if the SAA ID contains multiple words with spaces between them (for example, "SAA 10").
<i>t_mepid</i>	The ID of the destination MEP.
<i>mac_address</i>	The MAC address of the destination.
<i>s_mepid</i>	The ID of the source MEP.
<i>md_name</i>	The domain to which the source MEP belongs.
<i>ma_name</i>	The association to which the source MEP belongs.
<i>vlan_priority</i>	The VLAN priority to be used for the outgoing packet. The valid range is 0-7.
<i>num</i>	The number of packets to send during loopback. Valid range is 1– 100.
<i>delay</i>	The delay between packets sent during a ping iteration, in milliseconds. Valid range is 100–1000 ms in multiples of 100 ms.

### Defaults

parameter	default
<i>num</i>	5
<i>delay</i>	1000

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- The SAA should exist before issuing the CLI. If the SAA does not exist, the CLI will return error.
- The source MEP-ID, MD, and MA must be created before initiating DMM.
- If the source MEP-Id/MA/MD does not exist, the configuration will be accepted and no error will be returned.
- When the **target-endpoint** parameter is specified, then it must be learned before initiating DMM.

- When the **target-endpoint** parameter is specified and learned, ETH-DMM will be transmitted irrespective of whether the RMEP state is OK or failed.
- The **num-pkts** and **inter-pkt-delay** parameters are optional. If these values are specified, the entry will be created with those values. If none of them are specified, the SAA will be created with default values. The **num-pkts** and **inter-pkt-delay** values can be modified, but the **pkt-size** value cannot be modified later.
- Total execution time, that is, the product of **num-pkts** and **inter-pkt-delay** (number of packets \* inter-packet delay) for a SAA iteration must be less than the sum of interval and inter-packet delay.
- The SAA must not be in a 'started' state at the time the **num-pkts** or **inter-pkt-delay** parameters are modified. Make sure the SAA is stopped before attempting to modify these parameters.
- Target MEP/MAC, source MEP, domain, and association parameters are mandatory. If they are not specified, the CLI will return an error.
- The timeout for each DMM packet is 1 sec. This value is not configurable.

## Examples

```
-> saa saa1 type ethoam-two-way-delay target-endpoint 10 source endpoint 1 domain
mdl association ma1
-> saa saa2 type ethoam-two-way-delay target-endpoint 10 source endpoint 2 domain
mdl association ma1 num-pkts 6 inter-pkt-delay 500
-> saa saa3 type ethoam-two-way-delay target-endpoint 15 source endpoint 1 domain
mdl association ma1 num-pkts 6
-> saa saa4 type ethoam-two-way-delay target-endpoint 10 source endpoint 2 domain
mdl association ma1 inter-pkt-delay 500
```

## Release History

Release 7.3.1; command was introduced.

Release 8.6R1; **vlan-priority** parameter deprecated.

## Related Commands

  alaSaaEthoamCtrlInterPktDelay
  alaSaaEthoamCtrlVlanPriority
```

---

## saa start

Starts the SAA test.

```
[vrf vrf_name] saa string start [at yyyy-mm-dd,hh:mm:ss]
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	An existing SAA ID string.
<i>yyyy-mm-dd,hh:mm:ss</i>	The date and time to start the SAA.

### Defaults

By default, the SAA test is started immediately.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- An existing SAA with the SAA type configured must be specified with this command.
- Use the **saa stop** command to stop an SAA test that is already running.
- Use the **at** option to specify a date and time for the test to start.
- If an SAA is scheduled to start at a specified time and another **saa start** command with a different value is given before the specified time, the subsequent command will over-ride the previous command.
- If the **saa start** command is given after an SAA is started, then the CLI will return error.
- If the SAA type is configured with a source IP that does not exist or is not active, then the packet will not be transmitted and no error will be returned. Swlogs will be updated.
- ICMP must be enabled on the switch. If ICMP is disabled and an SAA of type 'ip-ping' is started, then the iteration will timeout and will be treated as failed iteration.
- Immediately after a CMM restart (reboot or takeover), the command to start SAA will be accepted, but the actual execution of the iteration will start 5 minutes after the CMM restart.
- If the SAA type is configured with a source MEP that does not exist or is not active (admin down), then the packet will not be transmitted and no error will be returned on the CLI console. Swlogs will be updated.
- It is recommended that all the SAAs be rescheduled if the system time is being changed.

## Examples

```
-> saa saa2 start at 2009-09-12,09:00:00  
-> saa saa4 start
```

## Release History

Release 7.3.1; command was introduced.

## Related Commands

<a href="#">show saa</a>	Displays SAA configuration information.
<a href="#">show saa statistics</a>	Displays SAA statistics.

## MIB Objects

```
alaSaaCtrlTable  
  alaSaaCtrlTestIndex  
  alaSaaCtrlStartAt
```

---

## saa stop

Stops the SAA test.

```
[vrf vrf_name] saa string stop [never | at yyyy-mm-dd, hh:mm:ss]
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	An existing SAA ID string.
<b>never</b>	Specifies that the SAA test will not be stopped unless the <b>saa stop</b> command is used with the <b>at</b> option.
<i>yyyy-mm-dd, hh:mm:ss</i>	The date and time to start the SAA.

### Defaults

By default, the test is stopped immediately.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- An existing SAA with the SAA type configured must be specified with this command.
- The SAA must be in a 'started' state before giving the command unless the start and stop times are scheduled. If the SAA is not in a 'started' state, the CLI will return an error.
- Use the **at** option to specify a date and time for the test to stop.
- If the **never** option is specified, the SAA test will keep on running until the **saa stop** command is entered again with the **at** option.
- If SAA test is stopped while it is running an iteration, the current iteration is pre-empted. The statistics and history are updated for the partial iteration run.
- If an SAA is scheduled to stop at a specified time and another **saa stop** command with a different value is given before the specified time, the subsequent command will over-ride the previous command.

### Examples

```
-> saa saa1 stop
-> saa saa2 stop never
```

### Release History

Release 7.3.1; command was introduced.

## Related Commands

## saa xml

Configures SAA XML parameters that determine when and where an SAA XML history file is created.

**saa xml** [**file-name** *xml\_filename* [**interval** *interval*] [**admin-state** {**enable** | **disable**}]

---

### Syntax Definitions

<i>xml_filename</i>	The name of the file where SAA history entries are stored. This file must reside in the <b>/flash/network</b> directory on the local switch.
<i>interval</i>	The amount of time, in minutes, between each generation of the XML history file. Valid range is from 1–15000.
<b>enable</b>	Enables XML history file generation.
<b>disable</b>	Disables XML history file generation.

### Defaults

parameter	default
<i>xml_filename</i>	saa.xml
<i>interval</i>	20 minutes
<b>admin-state</b> { <b>enable</b>   <b>disable</b> }	Disabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- When this function is enabled, SAA will periodically generate an XML file containing the following entries:
  - SAA name and ID
  - Iteration number
  - Last run time
  - Reason
  - Packets sent/Received
  - RTT min/avg/max
  - Jitter min/avg/max
  - Subports

## Examples

```
-> saa xml interval 60 admin-state enable
-> saa xml file-name switch1_saa.xml interval 120 admin-status enable
```

## Release History

Release 7.3.2; command was introduced.

## Related Commands

[show saa xml](#) Displays the SAA XML file generation parameters.

## MIB Objects

```
alaSaaXmlFeature
  alaSaaXmlStatus
  alaSaaXmlFilename
  alaSaaXmlInterval
```

---

## show saa

Displays SAA session information.

```
[vrf vrf_name] show saa [string / {descr description}] [owner saa_owner]
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	An existing SAA ID.
<i>description</i>	An existing SAA description string.
<i>saa_owner</i>	The owner name associated with the SAA session.

### Defaults

By default, information is displayed for all SAA sessions.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	No	Yes	No	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the *string* or **descr description** parameter to display information for a specific SAA.
- Use the **owner saa\_owner** parameter to display only those sessions initiated by a specific owner. The owner of an SAA session is not user configurable, but identifies the entity that created the session.
- When an SAA is created, an owner name is assigned to the agent. This name is based on the Alcatel-Lucent Enterprise application that generated the SAA and is not configurable. For example:
  - CLI SAA owner name = “USER”
  - OmniVista owner name = “OV”
  - Shortest Path Bridging owner name = “SPB” (SAA ID is SPB-*bvlan-bmac*)

### Examples

```
-> show saa
Legend: eth-lb = ethoam-loopback
        eth-dmm = ethoam-two-way-delay
SAA          Owner  Type  Status Interval Time of Last Run Last Run Description

```

### output definitions

<b>SAA</b>	SAA name.
<b>Owner Type</b>	The owner name assigned to the agent.
<b>Type</b>	The SAA type.
<b>Status</b>	The status of the SAA test: started or stopped.
<b>Interval (min)</b>	The amount of time between two iterations of the SAA test.
<b>Time of Last Run</b>	The time the SAA was last run.
<b>Last Run Result</b>	Result of last iteration.
<b>Description</b>	Configured description for the SAA.

### Release History

Release 7.3.1; command was introduced.  
 Release 7.3.2; **owner** parameter and field added.

### Related Commands

**saa** Configures an SAA.

### MIB Objects

```

alaSaaCtrlTable
  alaSaaCtrlOwnerIndex
  alaSaaCtrlTestIndex
  alaSaaCtrlDescr
  alaSaaCtrlInterval
  alaSaaCtrlTestMode
  alaSaaCtrlLastRunTime

  alaSaaCtrlAdminStatus

```

## show saa type config

Displays the SAA configuration for the specified SAA type.

**[vrf vrf\_name] show saa [string] type {mac-ping | ip-ping | ethoam-loopback | ethoam-two-way-delay} config**

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	An existing SAA ID.
<b>mac-ping</b>	Displays MAC Ping SAAs.
<b>ip-ping</b>	Displays IP Ping SAAs.
<b>ethoam-loopback</b>	Displays ETH-LB SAAs.
<b>ethoam-two-way-delay</b>	Displays ETH-DMM SAAs.

### Defaults

By default, all SAAs with the specified type are displayed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Use the *string* parameter to display information for a specific SAA
- If the SAA ID string specified does not match the specified SAA type, the CLI will return an error.
- If a specific VRF is specified, the IP ping sessions for that VRF is displayed.

### Examples

```
-> show saa type ip-ping config

*output definitions*

---

<b>SAA-type</b>	Type of SAA entry.
<b>Status</b>	The status of the SAA test.
<b>Start At</b>	Start time of the SAA test.
<b>Stop At</b>	Stop time of the SAA test.
<b>Description</b>	Configured description for the SAA.
<b>Jitter Threshold (ms)</b>	The configured jitter threshold value, in microseconds.
<b>RTT Threshold (ms)</b>	The configured round-trip time threshold value, in microseconds.
<b>Source-IP</b>	The IPv4 address of the source.
<b>Destination-IP</b>	The IPv4 address of the destination.
<b>Payload-Size (bytes)</b>	Size of ICMP payload for the packet.
<b>Type-of-Service</b>	Type of service.
<b>Target-MAC</b>	The target MAC address of the destination.
<b>Target-Endpoint</b>	The ID of the destination MEP.
<b>Source-Endpoint</b>	The ID of the source MEP.
<b>Domain</b>	The domain to which the source MEP belongs.
<b>Association</b>	The association to which the source MEP belongs.
<b>Num-pkts</b>	Number of packets per iteration.
<b>Inter-pkt-delay</b>	Delay between two consecutive packets.

## show saa spb

Displays the SAA configuration for the Shortest Path Bridging (SPB) SAA.

**show saa spb**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays the SAA parameters that are applied to SPB SAA sessions. Use the **show saa** command to get specific session status and information.

### Examples

```
-> show saa spb
```

```
SPB creation parameters:
```

```
Auto-create           : Disabled,
Auto-start            : Disabled,
Interval(minutes)    : 150,
Jitter Threshold (ms) : 0,
RTT Threshold (ms)   : 0,
Payload-Size (bytes) : 32,
Num-pkts              : 5,
Inter-pkt-delay      : 1000,
Keep                  : Disabled,
Data                  : " " "
```

#### *output definitions*

---

<b>Auto-create</b>	Displays if SPB SAA functionality required to automatically create the SAA session is enabled or disabled.
<b>Auto-start</b>	Displays if SPB SAA functionality required to automatically start the SAA session is enabled or disabled.
<b>Interval (minutes)</b>	The amount of time between two iterations of the SAA test.
<b>Jitter Threshold (ms)</b>	The configured jitter threshold value, in microseconds.

*output definitions*

---

<b>RTT Threshold (ms)</b>	The configured round-trip time threshold value, in microseconds.
<b>Payload-Size (bytes)</b>	Size of ICMP payload.
<b>Num-pkts</b>	Number of packets per iteration
<b>Inter-pkt-delay</b>	Delay between two consecutive packets.
<b>Keep</b>	Displays if SPB SAA session information must be retained or not even when SPB signals that a BMAC or BVLAN no longer exists.
<b>Data</b>	DataUser specified string that is included in the packet.

---

**Release History**

Release 7.3.2; command was introduced.

Release 8.6R1; **Drop Eligible** and **Vlan-priority** fields removed.

**Related Commands**

<b>saa spb</b>	Configures an SPB SAA.
<b>saa spb reset</b>	Resets SPB SAA parameters to their default values.
<b>saa spb flush</b>	Clears SPB SAA sessions and rebuilds the sessions based on learned SPB information.

**MIB Objects**

## show saa xml

Displays the SAA XML file generation parameter configuration.

**show saa xml**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show saa xml
```

XML file creation parameters:

```
Admin status : Disabled,
File         : saa.xml,
Interval     : 20
```

#### *output definitions*

---

<b>Admin status</b>	The status (Enabled or Disabled) of SAA XML history file generation.
<b>File</b>	The name of the XML file to which SAA writes session history entries.
<b>Interval</b>	The amount of time, in minutes, between each generation of the XML history file.

---

### Release History

Release 7.3.2; command was introduced.

## Related Commands

[saa xml](#)

Configures SAA XML file generation parameters.

## MIB Objects

alaSaaXmlFeature

  alaSaaXmlStatus

  alaSaaXmlFilename

  alaSaaXmlInterval

---

## show saa statistics

Display SAA statistics.

```
[vrf vrf_name] show saa [string] statistics [aggregate | history]
```

---

### Syntax Definitions

<i>vrf_name</i>	The name of an existing VRF instance.
<i>string</i>	An existing SAA ID string.
<b>aggregate</b>	Displays aggregate results for the specified SAA.
<b>history</b>	Displays a results history for the specified SAA.

### Defaults

By default, statistics are displayed for all SAAs and only for the most recent SAA test run.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	No	Yes	No	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the **aggregate** parameter is specified, then only the aggregate results are displayed.
- If the **history** parameter is specified, then only the history results are displayed.
- Since results are only kept for the last five iterations, using the **history** option displays only the last five iterations of each SAA test.
- Specify the SAA ID to display statistics for a specific SAA.
- Statistics and history do not persist across a switch reboot or takeover.

### Examples

```
-> show saa statistics
Legend: eth-lb = ethoam-loopback
        eth-dmm = ethoam-two-way-delay
        - = Delay or jitter value not available
```

### output definitions

<b>SAA</b>	SAA name
<b>Owner</b>	The owner name assigned to the agent.
<b>Type</b>	The SAA type.
<b>Time of Last Run</b>	The time the SAA was last run.
<b>RTT Min</b>	The round trip minimum value.
<b>RTT Avg</b>	The round trip average value.
<b>RTT Max</b>	The round trip maximum value.
<b>RTT Thr</b>	The round-trip time threshold value, in microseconds.
<b>Jitter Min</b>	The jitter minimum value.
<b>Jitter Avg</b>	The jitter average value.
<b>Jitter Max</b>	The jitter maximum value.
<b>Jitter Thr</b>	The jitter threshold value, in microseconds.
<b>Packets Sent</b>	Number of packets sent during all the ping iterations.
<b>Packets Rcvd</b>	Number of packets received during all the ping iterations.
<b>Description</b>	Configured description for the SAA.

### Release History

Release 7.3.1; command was introduced.  
 Release 7.3.2: **Owner**, **RTT Thr**, and **Jitter Thr** fields added.

## Related Commands

**saa** Configures a SAA.

---

## show saa vrf

Display SAA statistics for the IP ping sessions.

**show saa** {*vrf vrf\_name* | **all**} [**statistics** [**aggregate** | **history**]]

---

### Syntax Definitions

<i>vrf_name</i>	Displays the results for the specified SAA IP pings from a specific VRF.
<b>all</b>	Displays the results for the SAA IP pings from all VRF across the system.
<b>statistics</b>	Displays the statistics for the most recent SAA IP ping test run.
<b>aggregate</b>	Displays aggregate results for the specified SAA IP ping.
<b>history</b>	Displays a results history for the specified SAA IP ping.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	Yes	No	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- If the **aggregate** parameter is specified, then only the aggregate results are displayed.
- If the **history** parameter is specified, then only the history results are displayed.
- Since results are only kept for the last five iterations, using the **history** option displays only the last five iterations of each SAA test and in each SAA history, iteration information of first 20 received packets are stored.
- Statistics and history do not persist across a switch reboot or takeover.
- The show output will be filtered based on the corresponding VRF. Any VRF name that auto-completes to “all” will be taken as the keyword “all”, and all the IP ping sessions across the VRFs is displayed.

### Examples

```
-> show saa vrf all
SAA Owner Type Status Interval Time of Last Run Last Run Result Description VRF Name
      (min)
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
ip100 USER ip-ping started 2 2020-01-26,22:45:46.0 success DEFAULT VRF1
ip200 USER ip-ping started 2 2020-01-26,22:45:35.0 success DEFAULT VRF2
ip300 USER ip-ping started 2 2020-01-26,22:45:40.0 success DEFAULT VRF3
```

```

-> show saa vrf BLUE
SAA Owner Type Status Interval Time of Last Run Last Run Result Description VRF Name
      (min)
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
ip100 USER ip-ping started 2 2020-01-26,22:45:46.0 success DEFAULT VRF1

-> show saa vrf all statistics
Legend: - = Delay or jitter value not available
Aggregate Record:
SAA Owner Type Time of Last-Run RTT RTT RTT RTT Jitter Jitter Jitter Jitter Packets Description VRFName
      Min Avg Max Thr Min Avg Max Thr Sent Rcvd
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----
ip100 USER ip-ping 2020-01-26,22:45:46.0 1102 1431 2091 0 31 204 478 0 5 5 DEFAULT VRF1

```

### **output definitions**

<b>SAA</b>	SAA name.
<b>Owner</b>	The owner name assigned to the agent.
<b>Type</b>	The SAA type.
<b>Status</b>	The status of the SAA test: started or stopped.
<b>Interval (min)</b>	Interval of the SAA.
<b>Time of Last Run</b>	The time the SAA was last run.
<b>Last Run Result</b>	Result of last iteration.
<b>Description</b>	Configured description for the SAA.
<b>VRF Name</b>	Name of the VRF.
<b>RTT Min</b>	The round trip minimum value.
<b>RTT Avg</b>	The round trip average value.
<b>RTT Max</b>	The round trip maximum value.
<b>RTT Thr</b>	The round-trip time threshold value, in microseconds.
<b>Jitter Min</b>	The jitter minimum value.
<b>Jitter Avg</b>	The jitter average value.
<b>Jitter Max</b>	The jitter maximum value.
<b>Jitter Thr</b>	The jitter threshold value, in microseconds.
<b>Packets Sent</b>	Number of packets sent during all the ping iterations.
<b>Packets Rcvd</b>	Number of packets received during all the ping iterations.
<b>Description</b>	Configured description for the SAA.

# 57 CMM Commands

The Chassis Management Module (CMM) CLI commands permit you to manage switch software files on the CMM.

MIB information for the CMM commands is as follows:

*Filename:* ALCATEL-IND1-CHASSIS-MIB.mib  
*Module:* alcatelIND1ChassisMIB

*Filename:* ALCATEL-IND1-CONFIG-MGR-MIB DEFINITIONS.mib  
*Module:* alcatelIND1ConfigMgrMIB

A summary of available commands is listed here:

---

**reload secondary**  
**reload slot**  
**reload all**  
**reload from**  
**issu from**  
**issu slot**  
**write memory**  
**reload chassis-id**  
**copy certified**  
**copy running certified**  
**modify running-directory**  
**copy flash-synchro**  
**takeover**  
**show running-directory**  
**show reload**  
**show microcode**  
**show issu status**  
**usb**  
**usb backup admin-state**  
**usb auto-copy**  
**mount**  
**umount**  
**show usb statistics**  
**auto-config-abort**  
**image integrity check**  
**image integrity get-key**

---

## reload secondary

Reloads the secondary CMM from the *certified* directory.

**reload** [*chassis-id chassis*] **secondary** [*in* [*hours:*] *minutes* | *at* *hour:minute* [*month day* / *day month*]]

**reload secondary cancel**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>in</i> [ <i>hours:</i> ] <i>minutes</i>	Optional syntax. Schedules a reload of the software to take effect in the time. The time can be specified in minutes or hours and minutes within the next 24 hours.
<i>at</i> <i>hour:minute</i>	Optional syntax. Schedules a reload of the software to take place at the specified time using a 24-hour clock. If you do not specify the month and day, the reload takes place at the specified time on the current day provided the specified time is later than the time when the CLI command is issued. If the specified time is earlier than the current time, the reload takes place on the following day.
<i>month day</i> / <i>day month</i>	The name of the month and the number of the day for the scheduled reload. Specify a month name and the day number. See examples below for further explanation.
<b>cancel</b>	Cancels a pending time delayed reboot.

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- Can be issued from both primary or secondary CMM.
- Reloads the secondary CMM only, the Primary CMM remains operational.

### Examples

```
-> reload secondary
-> reload secondary in 15:25
-> reload secondary at 15:25 august 10
-> reload secondary at 15:25 10 august
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

### [reload from](#)

Reloads both CMMs from the specified directory.

## MIB Objects

chasEntPhysicalTable

    csEntPhysicalIndex

    chasEntPhysAdminStatus

chasControlRedundantTable

    chasControlDelayedRebootTimer

---

## reload all

Reloads both Chassis Management Modules (CMMs) from the *certified* directory.

**reload** [**chassis-id** *chassis*] **all** [**in** [*hours:*] *minutes* | **at** *hour:minute* [*month day* | *day month*]]

**reload all cancel**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<b>in</b> [ <i>hours:</i> ] <i>minutes</i>	Optional syntax. Schedules a reload of all modules to take effect in the specified minutes or hours and minutes within the next 24 hours.
<b>at</b> <i>hour:minute</i>	Optional syntax. Schedules a reload of all modules to take place at the specified time using a 24-hour clock. If you do not specify the month and day, the reload takes place at the specified time on the current day provided the specified time is later than the time when the CLI command is issued. If the specified time is earlier than the current time, the reload takes place on the following day.
<i>month day</i>   <i>day month</i>	The name of the month and the number of the day for the scheduled reload. Specify a month name and the day number. It is unimportant if the month or day is first. See examples below for further explanation.
<b>cancel</b>	Cancels a pending time delayed reload.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Can be issued from the Primary CMM only.

### Examples

```
-> reload all
-> reload all in 1:30
-> reload all at 12:00 july 25
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

**reload slot** Reloads a specific NI module.

## MIB Objects

```
chasEntPhysicalTable
  chasEntPhysAdminStatus
chasGlobalControl
  chasGlobalControlDelayedResetAll
```

---

## reload from

Reloads both CMMs from the specified directory. There is no CMM failover during this reboot, causing a loss of switch functionality during the reboot. All the NIs and the secondary CMM will reload.

**reload** [**chassis-id** *chassis*] **from** *image\_dir* {**rollback-timeout** *minutes* | **no rollback-timeout** [**in** [*hours:*] *minutes* | **at** *hour:minute*] [**redundancy-time** *minutes*]}

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier when running in virtual chassis mode.
<i>image_dir</i>	The directory that contains the image files to be loaded onto the switch.
<b>rollback-timeout</b> <i>minutes</i>	Sets a timeout period, in minutes. The switch immediately reboots from the specified directory. At the end of this time period, the switch automatically reboots again from the <i>certified</i> directory. The valid range of rollback timeout minutes is 1–15.
<b>no rollback-timeout</b>	Specifies no timeout to rollback. If the command is issued with this keyword, then the switch continues to run from the specified directory until manually rebooted.
<b>in</b> [ <i>hours:</i> ] <i>minutes</i>	Optional syntax. Schedules a reload of the to take effect in the specified minutes or hours and minutes within the next 24 hours.
<b>at</b> <i>hour:minute</i>	Optional syntax. Schedules a reload to take place at the specified time using a 24-hour clock. If you do not specify the month and day, the reload takes place at the specified time on the current day provided the specified time is later than the time when the CLI command is issued. If the specified time is earlier than the current time, the reload takes place on the following day.
<b>redundancy-time</b> <i>minutes</i>	Specifies the time period in minutes that the switch must run without failure. If a failure occurs within this time period, the switch will reboot from the <i>certified</i> directory.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Can be issued from Primary CMM only.
- This command is used to reload the switch from the specified directory.

- A file verification will be performed before rebooting to ensure all necessary files are present and valid. An error message will be displayed describing any issues found.
- The image directory reload takes place immediately unless a time frame is set using the **in** or **at** keywords.
- If a rollback-timeout is set, the switch reboots again after the set number of minutes, from the **certified** directory. The reboot can be halted by issuing a cancel order as described in the **reload all** command.
- If the **redundancy-time** parameter is entered, any reboot of the Primary CMM prior to the redundancy timer expiring will cause the switch to reboot. If the Primary CMM reboots after the redundancy timer expires, the secondary CMM will take over without a reboot.

## Examples

```
-> reload working rollback-timeout 5
-> reload working no rollback-timeout
-> reload working no rollback-timeout in 50
-> reload working rollback-timeout 10 at 12:50
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

**reload all** Reboots both CMMs from the *certified* directory.

## MIB Objects

```
chasControlModuleTable
  chasControl
  chasControlVersionMngt
  chasControlActivateTimeout
  chasControlRedundancyTime
  chasControlDelayedActivateTimer
  chasControlWorkingVersion
  chasControlNextRunningVersion
```

---

## reload slot

Reloads the NI in the specified slot using the current running image.

**reload slot** *chassis/slot*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot</i>	The slot number to be reloaded.

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

Can be issued from Primary CMM only.

### Examples

```
-> reload slot 1/2
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[reload from](#) Reloads both CMMs from the specified directory.

### MIB Objects

chasEntPhysicalTable  
  chasEntPhysAdminStatus

---

## reload chassis-id

Reloads the specified chassis id when running in virtual chassis mode.

**reload chassis-id** *chassis* [**all**] [**in** [*hours:*] *minutes* | **at** *hour:minute* [*month day* / *day month*]]

**reload chassis-id cancel**

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<b>in</b> [ <i>hours:</i> ] <i>minutes</i>	Optional syntax. Schedules a reload of the software to take effect in the time. The time can be specified in minutes or hours and minutes within the next 24 hours.
<b>at</b> <i>hour:minute</i>	Optional syntax. Schedules a reload of the software to take place at the specified time using a 24-hour clock. If you do not specify the month and day, the reload takes place at the specified time on the current day provided the specified time is later than the time when the CLI command is issued. If the specified time is earlier than the current time, the reload takes place on the following day.
<i>month day</i> / <i>day month</i>	The name of the month and the number of the day for the scheduled reload. Specify a month name and the day number. See examples below for further explanation.
<b>cancel</b>	Cancels a pending time delayed reboot.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Can be issued from both primary or secondary CMM.
- Reloads the secondary CMM only, the Primary CMM remains operational.

### Examples

```
-> reload chassis-id 1
-> reload chassis-id 1 in 15:25
-> reload chassis-id 1 at 15:25 august 10
-> reload chassis-id 1 at 15:25 10 august
-> reload chassis-id 1 cancel
```

## Release History

Release 7.3.1; command introduced.

## Related Commands

[reload from](#) Reloads both CMMs from the specified directory.

## MIB Objects

```
chasEntPhysicalTable
  csEntPhysicalIndex
  chasEntPhysAdminStatus
chasControlRedundantTable
  chasControlDelayedRebootTimer
```

---

## copy certified

Copies the contents of the *certified* directory to the specified directory.

**copy certified** *image\_dir* [**make-running-directory**]

---

### Syntax Definitions

*image\_dir*

The directory that the contents of the *certified* directory will be copied to.

**make-running-directory**

Makes the destination directory the new RUNNING DIRECTORY after the configuration is copied.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Using the **make-running-directory** parameter changes the RUNNING DIRECTORY allowing changes to be saved using the **write memory** command.
- This command does not delete any extra files in the target directory.
- This command does not affect the synchronization status of the running configuration.
- To synchronize the running and saved configuration, use the **write memory** command.

### Examples

```
-> copy certified mydir
-> copy certified mydir make-running-directory
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

### [copy flash-synchro](#)

Copies the startup primary flash version of the CMM software to the startup secondary flash version of the CMM software.

## MIB Objects

```
chasControlModuleTable
  chasControlVersionMngt
  chasControlWorkingVersion
```

---

## issu from

Upgrades the system with the images stored in the specified directory with minimal disruption to traffic.

**issu from** *image\_dir* [**redundancy-time** *minutes*]

---

### Syntax Definitions

*image\_dir* Specifies the pathname for the directory that contains the image files.  
**redundancy-time** *minutes* This parameter is not supported with the **issu** command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The new code must support ISSU with the current running version of code.
- A text file named '*issu\_version*' is used to determine ISSU compatibility between code versions. It can be downloaded from the Service and Support website and must be included in the directory along with the new image files.

### Examples

```
-> issu from myissu
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[issu slot](#) Causes a power-cycle of the NI in the specified slot after an ISSU upgrade.

### MIB Objects

```
chasEntModuleTable
  chasControlWorkingVersion
  chasControlRedundancyTime
```

---

## issu slot

Causes a reset of the NI in the specified slot after an ISSU upgrade.

**issu slot** *num*

---

### Syntax Definitions

*num* Specifies the slot number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	No	No	No	Yes

### Usage Guidelines

Will return an error if ISSU is not in progress or if the slot has already been reset after the ISSU.

### Examples

```
-> issu slot 2
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[issu from](#) Upgrades the system with the images stored in the specified directory without disruption to traffic.

### MIB Objects

```
chasEntPhysicalTable
  entPhysicalIndex
```

---

## write memory

Copies the current configuration (RAM) to the RUNNING DIRECTORY on the primary CMM.

**write memory [flash-synchro]**

---

### Syntax Definitions

**flash-synchro** Synchronizes the primary and secondary CMM.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is used to copy the changes performed using the CLI commands from the running configuration (RAM) to the RUNNING DIRECTORY.
- The **flash-synchro** keyword synchronizes the files between the primary and secondary CMMs by overwriting the contents of the secondary CMM *certified* directory with the contents of the primary CMM certified directory.
- This command is only valid if the switch isn't running from the *certified* directory. Use the [show running-directory](#) command to check where the switch is running from.
- During flash synchronization configuration changes may time out causing error messages to be displayed. Once the synchronization is complete configuration changes can resume.

### Examples

```
-> write memory
-> write memory flash-synchro
```

### Release History

Release 7.1.1; command introduced.

**Related Commands****[copy flash-synchro](#)**

Copies the startup primary flash version of the CMM software to the startup secondary flash version of the CMM software.

**MIB Objects**

configManager

configWriteMemory

---

## copy running certified

Copies the current RUNNING DIRECTORY configuration to the *certified* directory on both CMMs.

**copy running certified [flash-synchro]**

---

### Syntax Definitions

**flash-synchro** Synchronizes the primary and secondary CMM.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command is used to overwrite the contents of the *certified* directory with the configuration from the RUNNING DIRECTORY. This should only be done if the running configuration has been verified.
- This command only synchronizes the image and configuration files in the RUNNING DIRECTORY, no other directories, such as the **switch** or **network** directories, are synchronized.
- The **flash-synchro** keyword synchronizes the files between the primary and secondary CMMs by overwriting the contents of the secondary CMM *certified* directory with the contents of the primary CMM *certified* directory. Beginning in 7.3.1 the flash-synchro functionality is done automatically; entering the **flash-synchro** parameter is no longer required.
- In 7.3.3 the flash-synchro parameter will display an error on the OS6900 if there is no secondary CMM.
- If there is not enough free space, the copy attempt fails and an error message is generated.
- This command does not work if the switch is running from the *certified* directory. To view where the switch is running from, see the **show running-directory** command.
- This command may take up to two minutes to complete.

### Examples

```
-> copy running certified
```

### Release History

Release 7.1.1; command introduced.

Release 7.3.1; **flash-synchro** parameter no affect; the functionality is performed automatically.

## Related Commands

### [copy flash-synchro](#)

Copies the startup primary flash version of the CMM software to the startup secondary flash version of the CMM software.

## MIB Objects

```
chasControlModuleTable  
  chasControlVersionMngt  
  chasControlWorkingVersion
```

---

## modify running-directory

Changes the RUNNING DIRECTORY to the specified directory.

**modify running-directory** *image\_dir*

---

### Syntax Definitions

*image\_dir*

The directory name to become the new RUNNING DIRECTORY.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to change the RUNNING DIRECTORY and allow configuration changes to be saved to the new RUNNING DIRECTORY.

### Examples

```
-> modify running-directory user-config1
-> write memory
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[write memory](#)

Copies the running primary RAM version of the CMM software to the RUNNING DIRECTORY.

### MIB Objects

```
chasControlModuleTable
  CurrentRunningVersion
```

---

## copy flash-synchro

Copies the *certified* directory version of the primary CMM software to the *certified* directory of the secondary CMM.

**copy flash-synchro**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- This command is used to synchronize the *certified* directories of the primary and secondary CMMs. The two CMMs must be synchronized if a fail over occurs, otherwise switch performance is affected.
- This command is a shorter version of the ‘**copy running certified flash-synchro**’ command. Beginning in 7.3.1 the flash-synchro functionality is done automatically; this command is no longer required.

### Examples

```
-> copy flash-synchro
-> configure copy flash-synchro
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[copy running certified](#)

Copies the RUNNING DIRECTORY configuration to the *certified* directory on the primary CMM.

### MIB Objects

```
chasControlModuleTable
  chasControlVersionMngt
```

---

## takeover

Forces the current secondary CMM to assume the role of the primary CMM.

**takeover** [*chassis*]

---

### Syntax Definitions

*chassis*                                      The chassis identifier.

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- This command causes the secondary CMM to take over the functions of the primary CMM. After this command, the old primary CMM is the new secondary CMM.
- Be sure that the secondary CMM has all software (i.e., image and configuration files) required to continue CMM operations, before issuing the **takeover** command.
- For information on synchronizing the primary and secondary CMM software before issuing the **takeover** command, see the [copy flash-synchro](#) command.

### Examples

-> takeover

### Release History

Release 7.1.1; command introduced.

### Related Command

[reload all](#)                                      Reboots the switch.

### MIB Objects

chasEntPhysicalTable  
  chasEntPhysAdminStatus

---

## show running-directory

Shows the current state of version and configuration management for a CMM.

**show running-directory**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Once a switch boots up and is running, it runs either from the *working*, *certified*, or a *user-defined* directory. If the switch is running from the *certified* directory, changes made to the RUNNING CONFIGURATION using CLI commands, cannot be saved.
- Depending on the switch configuration there may be a small delay before the information is displayed.

### Examples

```
-> show running-directory
```

```
CONFIGURATION STATUS
  Running CMM           : PRIMARY,
  CMM Mode              : MONO CMM,
  Current CMM Slot     : A,
  Running configuration : CERTIFIED,
  Certify/Restore Status : CERTIFIED,
SYNCHRONIZATION STATUS
  Flash Between CMMs   : SYNCHRONIZED
  Running Configuration : SYNCHRONIZED
BOOT STATUS
  Machine State        : SHUTDOWN
```

#### *output definitions*

---

<b>Running CMM</b>	The CMM currently controlling the switch, either PRIMARY or SECONDARY.
<b>CMM Mode</b>	Whether there are one or two CMMs installed or Virtual Chassis mode.
<b>Current CMM Slot</b>	The slot of the primary CMM, A or B.
<b>Running Configuration</b>	The current RUNNING DIRECTORY.

*output definitions (continued)*

---

<b>Certify/Restore Status</b>	Indicates if the CMM has been certified.
<b>Flash Between CMMs</b>	<b>SYNCHRONIZED:</b> Flash between CMMs is identical. <b>NOT SYNCHRONIZED:</b> Flash between CMMs is not identical.
<b>Running Configuration</b>	<b>SYNCHRONIZED:</b> RUNNING CONFIGURATION has been saved to the RUNNING DIRECTORY. <b>NOT SYNCHRONIZED:</b> RUNNING CONFIGURATION has not been saved to the RUNNING DIRECTORY.
<b>Machine State</b>	<b>SHUTDOWN</b> - When in VC mode, this indicates the chassis has shutdown due to the 'virtual-chassis shutdown' command or when the chassis has shutdown due to a VC error. It is only displayed if the chassis is in the shutdown state.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<b>reload all</b>	Reboots the switch.
<b>copy flash-synchro</b>	Copies the <i>certified</i> directory version of the primary CMM software to the <i>certified</i> directory of the secondary CMM.

**MIB Objects**

```

chasControlModuleTable
  chasControlSynchronizationStatus
  chasControlCertifyStatus
  chasControlRunningVersion
chasEntPhysicalTable
  chasEntPhysOperStatus
  entPhysicalIndex
chasControlReloadTable
  chasControlReloadStatus

```

---

## show reload

Shows the status of any time delayed reboot(s) that are pending on the switch.

**show reload** [[*chassis-id chassis*] [*status | all status*]

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<b>status</b>	Displays whether or not either of the CMMs are scheduled for a reload.
<b>all status</b>	Displays whether or all the modules are scheduled for a reload.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- It is possible to preset a reboot on a CMM by using the **reload** command. If this is done, use the **show reload** command to see when the next scheduled reboot is going to occur.
- If the **reload from** command is used, and a rollback timeout is set, the rollback occurs and is shown using the **show reload** command.

### Examples

```
-> show reload status
Primary Control Module Reload Status: No Reboot Scheduled,
Secondary Control Module Reload Status: No Reboot Scheduled
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

### [reload secondary](#)

Reboots the primary or secondary CMM to its startup software configuration.

### [reload from](#)

Immediate primary CMM reboot to the specified software configuration without secondary CMM takeover.

## MIB Objects

    chasControlDelayedActivateTimer

chasGlobalControl

    chasGlobalControlDelayedResetAll

---

## show microcode

Displays microcode versions installed on the switch.

**show microcode** [**working** | **certified** | **loaded** | **issu** | *image\_dir*]

---

### Syntax Definitions

<b>working</b>	Specifies the <i>working</i> directory.
<b>certified</b>	The chassis identifier when running in virtual chassis mode.
<b>loaded</b>	Specifies the loaded (i.e., currently-active) microcode versions.
<b>issu</b>	Specifies the <i>issu</i> directory.
<i>image_dir</i>	Specifies the <i>user-defined</i> directory.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If no additional parameters are entered microcode information for the RUNNING CONFIGURATION is displayed.

### Examples

```
-> show microcode
Package           Release           Size           Description
-----+-----+-----+-----
Ros.img           7.1.1.403.R01    1828255        Alcatel-Lucent OS
Reni.img          7.1.1.403.R01    1359435        Alcatel-Lucent NI
```

#### output definitions

---

<b>Package</b>	File name.
<b>Release</b>	Version number.
<b>Size</b>	File size.
<b>Description</b>	File description.

---

### Release History

Release 7.1.1; command introduced.

## Related Commands

**usb**

Displays the archive history for microcode versions installed on the switch.

## MIB Objects

N/A

---

## usb

Enables access to the device connected to the USB port.

**usb {enable | disable}**

---

### Syntax Definitions

N/A

### Defaults

parameter	default
enable / disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- If an Alcatel-Lucent Enterprise certified USB device is connected after enabling the USB interface, the device will be automatically mounted as **/uflash**.
- Once mounted, common file and directory commands can be used for file management.

### Examples

```
-> usb enable
-> cp /flash/working/boot.cfg /uflash/boot.cfg
-> ls /uflash
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

#### [usb auto-copy](#)

Allows backup image files from the USB device to be automatically copied to the /flash/working directory on the switch immediately after the USB device is connected

#### [usb backup admin-state](#)

Enables or disables USB backup on the switch.

### MIB Objects

```
systemServices
  systemServicesUsbEnable
```

---

## usb backup admin-state

Enables or disables USB backup on the switch.

**usb backup admin-state** {enable | disable} [key string | hash-key string]

---

### Syntax Definitions

<b>enable</b>	Enables Administrative control to USB backup on the switch
<b>disable</b>	Disables Administrative control to USB backup on the switch
<b>key</b>	Keyword which will be used for encryption. <i>This parameter is only supported on the OmniSwitch 6465.</i>
<b>hash-key</b>	Keyword which will be decrypted and then used for encryption. <i>This parameter is only supported on the OmniSwitch 6465.</i>

### Defaults

parameter	default
enable / disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- When this command is enabled, the images and configuration from certified and running directories are copied into `/uflash/6860/certified` and `/uflash/6860/running` directories.
- When **write memory** is executed and backup is enabled, the configuration files and images from `/flash/running-directory` are copied to `/uflash/6860/running-directory name`
- When **usb backup admin-state** is enabled and **copy running certified** and **write memory flash-synchro** commands are executed, the configuration and images from `/flash/certified` will be copied to `/uflash/6860/certified`.
- Encryption is supported only on the OmniSwitch 6465.
  - When a key or hash key is specified, all of the configuration files and images will be encrypted and copied to the USB device.
  - If a key or hash key is not specified, all of the configuration files and images will be copied as is to the USB device.
  - Maximum length of key should be 32 characters. Minimum key length should be 8 characters.
  - If the user has gone through one back up cycle of encryption and wants to disable encryption, then the user must disable the USB back up and enable it again with no password.

- On the OmniSwitch 6465, when power supply configurations are added by the **powersupply enable** command, the power supply configurations are backed up in `/uflash/6465/system` folder when backup is enabled.
- Back-up cannot be enabled if auto-copy is enabled and auto-copy cannot be enabled if back-up is enabled. So only one of these features can be enabled at any given time.

### Examples

```
-> usb backup admin-state enable
-> usb backup admin-state disable
-> usb backup admin-state enable key "abc12345"
-> usb backup admin-state enable hash-key "a05234d"
```

### Release History

Release 8.5R1; command was introduced.

Release 8.5R2; **key** and **hash-key** parameter added.

### Related Commands

#### **usb auto-copy**

Allows backup image files from the USB device to be automatically copied to the `/flash/working` directory on the switch immediately after the USB device is connected

#### **usb**

Enables access to the device connected to the USB interface.

### MIB Objects

```
systemServices
  systemServicesUsbBackupAdminState
  systemServicesUsbBackupKey
  systemServicesUsbBackupHashkey
```

---

## usb auto-copy

Allows the image files from the USB device to be automatically copied to the switch immediately after the USB device is connected.

**usb auto-copy** {enable | disable} copy-config {enable| disable} [key *string* | hash-key *string* ]

---

### Syntax Definitions

<b>enable</b>	Enables Administrative control to USB auto copy on the switch
<b>disable</b>	Disables Administrative control to USB auto copy on the switch
<b>key</b>	Keyword which will be used for encryption. <i>This parameter is only supported on the OmniSwitch 6465.</i>
<b>hash-key</b>	Keyword which will be decrypted and then used for encryption. <i>This parameter is only supported on the OmniSwitch 6465.</i>

### Defaults

parameter	default
enable / disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- If the automatic copy is successful the switch will automatically reboot.
- The USB device must contain the proper file structure and image files mentioned below and the USB root directory must contain a signature file named *aossignature*. The *aossignature* file can be a blank text file transferred to the switch.
- This operation will enable all of the image files from the */uflash/6465/working* or */uflash/6860/working* directory to be copied to the */flash/working* directory.
- If the auto-copy is successful, the auto-copy feature will be disabled before rebooting the switch and must be re-enabled by the administrator for the next auto-copy process to execute. This will prevent running the same auto-copy multiple times.
- If **copy-config** is enabled, configuration files will also be copied in addition to image files to the */flash/working* directory from */uflash/6860/working* directory.

- Encryption is supported only on the OmniSwitch 6465.
  - When a key or hash key is specified, all of the configuration files and images will be decrypted and copied to the AOS flash.
  - If a key or hash key is not specified, all of the configuration files and images will be copied as is to the AOS flash.
  - Maximum length of key should be 32 characters. Minimum key length should be 8 characters.
- On the OmniSwitch 6465, when power supply configurations are added by the **powersupply enable** command, the power supply configurations are backed up in `/uflash/6465/system` folder when backup is enabled.
- Back-up cannot be enabled if auto-copy is enabled and auto-copy cannot be enabled if back-up is enabled. So only one of these features can be enabled at any given time.

## Examples

```
-> usb auto-copy enable copy-config enable
-> usb auto-copy enable copy-config disable
-> usb auto-copy enable copy-config enable key "abc12345"
-> usb auto-copy enable copy-config enable hash-key "a05234d"
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; **copy-config** parameter added.

Release 8.5R2; **key** and **hash-key** parameter added.

## Related Commands

<b>usb</b>	Enables access to the device connected to the USB interface.
<b>usb backup admin-state</b>	Enables or disables USB backup on the switch.

## MIB Objects

```
systemServices
  systemServicesUsbCopyConfig
  systemServicesUsbBackupKey
  systemServicesUsbBackupHashkey
```

---

## mount

Mounts a USB device on /uflash.

**mount** [/uflash]

---

### Syntax Definitions

**/uflash**                                The name of the file-system to mount.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

Once the USB device is mounted most file and directory commands associated with the **/flash** file system can be used with **/uflash** such as: mkdir, rmdir, cd, rm, cp, ls.

### Examples

```
-> mount /uflash
-> ls /uflash
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**umount**                                Unmounts the /uflash file system from AOS.

### MIB Objects

```
systemServicesAction
  systemServicesArg1
```

---

## umount

Unmounts the /uflash file system from AOS.

**umount /uflash**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

This command unmounts the USB drive and should be used prior to unplugging the USB drive to prevent possible data corruption.

### Examples

```
-> umount /uflash
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**mount** Mounts the /uflash file system from AOS.

### MIB Objects

```

```

---

## show usb statistics

Displays the status USB setting and features.

**show usb statistics**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show usb statistics
Filesystem          1K-blocks      Used Available Use% Mounted on
/dev/sdb1           500732         261216    239516   52% /vroot/uflash
  Host scsi6: usb-storage
    Vendor: Alcatel-Lucent
    Product: USB
  Serial Number: AA04012700031693
    Protocol: Transparent SCSI
    Transport: Bulk
      usb: enabled
usb auto-copy: disable
auto-copy in progress: No
```

### output definitions

---

<b>usb</b>	Status of USB device interface.
<b>usb auto-copy</b>	Status of USB auto-copy feature.
<b>auto-copy in progress</b>	Is the switch currently in the process of performing an auto-upgrade.

---

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<b>usb</b>	Enables access to the device connected to the USB interface.
<b>usb auto-copy</b>	Allows backup files from the USB device to be automatically copied to the switch immediately after the USB device is connected.
<b>mount</b>	Mounts the /uflash file system.

## show issu status

Displays the status of ISSU.

**show issu status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show issu status
Slot      ISSU-Status
-----+-----+
 1         ISSU Pending
 2         ISSU Pending
 3         ISSU Pending
```

```
-> show issu status
Slot      ISSU-Status
-----+-----+
 1         ISSU Complete
 2         ISSU Complete
 3         ISSU Complete
```

#### *output definitions*

---

<b>Slot</b>	Specifies the slot number.
<b>ISSU-Status</b>	Indicates the ISSU status for a slot: <b>Pending</b> - Slot has not been reset; upgrade is not complete. <b>Complete</b> - Slot has been reset; upgrade is complete.

---

### Release History

Release 7.1.1; command was introduced.

**Related Commands****issu from**

Upgrades the system with the images stored in the specified directory without disruption to traffic.

**MIB Objects**

N/A

---

## auto-config-abort

Aborts the Automatic Remote Configuration download process.

**auto-config-abort**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to stop the Automatic Remote Configuration download process.

### Examples

```
-> auto-config-abort
```

### Release History

Release 7.3.4; command was introduced.

### Related Commands

N/A

### MIB Objects

N/A

---

## image integrity check

Verifies whether the SHA256 hash key of an image file located in the specified directory matches the SHA256 hash key in the specified key file.

**image integrity check** *image\_dir* **key-file** *filename*

---

### Syntax Definitions

*image\_dir* The directory on the switch that contains the image file to verify. Enter the name of the directory in “/flash” or include the full path (for example, “working” or “/flash/working”).

*filename* The name of the file that contains the key for the image file in the specified directory. Enter the name of the key file or include the full path (for example, “hash.txt” or “/flash/hash.txt”).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the name of the key file is specified without the directory path, the switch will look for the key file in the same directory specified for the image file.
- The following format is used to store the hash key values in the key file:  
Uos.img:f0ff173eff38e43e0598663da2185a363fcba5bd407201d7537d0a6b9f58670e

### Example

```
-> image integrity check /flash/working key-file /flash/hash.txt
This operation may take several minutes...
```

```
Success: Key matched.
```

### Release History

Release 8.3.1; command introduced.

**Related Commands****[image integrity get-key](#)**

Calculates and displays the SHA256 key for image files.

**MIB Objects**

```
systemServicesAction  
systemServicesArg1  
systemServicesArg2
```

---

## image integrity get-key

Displays the SHA256 hash key of the image present in the specified location.

**image integrity get-key** *image\_dir*

---

### Syntax Definitions

*image\_dir*                      The directory on the switch that contains the image file. Enter the name of the directory in “/flash” or include the full path (for example, “working” or “/flash/working”).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When this command is entered, the SHA256 hash of the image files in the specified directory is calculated and displayed. It can be manually verified against the hash provided in the file.
- To store the hash key value in a text file that can be used with the **image file integrity check** command, use the following format:  
Uos.img:f0ff173eff38e43e0598663da2185a363fcba5bd407201d7537d0a6b9f58670e

### Example

```
-> image integrity get-key /working
This operation may take several minutes...
```

```
Image Name                      SHA256 Key
-----+-----
Uos.img                         c64d6b23312a6f9c4b99642b31ed0e87e600bce58d6fdd089d09e1f8077bd208
```

```
-> image integrity get-key /flash/certified
This operation may take several minutes...
```

```
Image Name                      SHA256 Key
-----+-----
Uos.img                         3d4d488a73eb798325bacb5793ef0d67bdf377527278a6732270d3a4801bb44b
```

### Release History

Release 8.3.1; command introduced.

**Related Commands****[image integrity check](#)**

# 58 Chassis Management and Monitoring Commands

Chassis Management and Monitoring commands allow you to configure and view hardware-related operations on the switch. Topics include basic system information, as well as Network Interface (NI) module and chassis management.

---

**Additional Information.** Refer to your separate *Hardware Users Guide* for detailed information on chassis components, as well as managing and monitoring hardware-related functions.

---

MIB information for the Chassis Management and Monitoring commands is as follows:

*Filename:* ALCATEL-IND1-CHASSIS-MIB.mib  
*Module:* alcatelIND1ChassisMIB

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

*Filename:* ALCATEL-IND1-CAPMAN-MIB.mib  
*Module:* alcatelIND1CapManMIB

A summary of available commands is listed here:

---

<b>Management Commands</b>	<code>system contact</code> <code>system name</code> <code>system location</code> <code>system date</code> <code>system time</code> <code>system timezone</code> <code>system daylight-savings-time</code> <code>update uboot</code> <code>update fpga-cpld</code> <code>reload slot</code> <code>power slot</code> <code>powersupply enable</code> <code>powersupply powersave</code> <code>powersupply type</code> <code>hash-control</code> <code>bluetooth</code> <code>capability profile</code> <code>capability profile tcam mode</code> <code>capability trap-threshold</code>

---

## system contact

Specifies the administrative contact for the switch. An administrative contact is the person or department in charge of the switch. If a contact is specified, users can easily find the appropriate network administrator if they have questions or comments about the switch.

**system contact** *text\_string*

---

### Syntax Definitions

*text\_string*

The administrative contact being specified for the switch. The system contact can range from 1 to 254 characters in length. Text strings that include spaces must be enclosed in quotation marks. For example, “**Jean Smith Ext. 477 jsmith@company.com**”.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> system contact "Jean Smith Ext. 477 jsmith@company.com"
-> system contact engineering-test@company.com
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

**system name**

Modifies the current system name of the switch.

**system location**

Specifies the current physical location of the switch.

**capability trap-threshold**

Displays the basic system information for the switch.

### MIB Objects

system

systemContact

---

## system name

Modifies the current system name of the switch. The system name can be any simple, user-defined text description for the switch.

**system name** *text\_string*

---

### Syntax Definitions

*text\_string*

The new system name. The system name can range from 1 to 32 characters in length. No spaces are allowed in the system name.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Spaces are not allowed in the system name.

### Examples

```
-> system name OmniSwitch6900
-> system name OS6900
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

#### **system contact**

Specifies the administrative contact of the switch (for example, an individual or a department).

#### **system location**

Specifies the current physical location of the switch.

#### **capability trap-threshold**

Displays the basic system information for the switch.

### MIB Objects

system

systemName

---

## system location

Specifies the current physical location of the switch. If you need to determine the location of the switch from a remote site, entering a system location can be very useful.

**system location** *text\_string*

---

### Syntax Definitions

*text\_string*

The physical location of the switch. For example, **TestLab**. The system location can range from 1 to 254 characters in length. Text strings that include spaces must be enclosed in quotation marks. For example, “NMS Test Lab”.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> system location "NMS Test Lab"
-> system location TestLab
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[system contact](#)

Specifies the administrative contact of the switch (for example, an individual or a department).

[system name](#)

Modifies the current system name of the switch.

[capability trap-threshold](#)

Displays the basic system information for the switch.

### MIB Objects

```
system
  systemLocation
```

---

## system date

Displays or modifies the current system date on the switch.

**system date** [*mm/dd/yyyy*]

---

### Syntax Definitions

*mm/dd/yyyy*

The new date being specified for the system. Enter the date in the following format: *mm/dd/yyyy*, where *mm* is the month, *dd* is the day, and *yyyy* is the year. For example, **08/08/2005**.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If you do not specify a new system date in the command line, the current system date is displayed.
- For more information on setting time zone parameters (for example, Daylight Savings Time), refer to the [system timezone command on page 58-9](#).

### Examples

```
-> system date 08/08/2010
-> system date
08/08/2010
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[system time](#)

Displays or modifies the current system time on the switch.

[system timezone](#)

Displays or modifies the time zone for the switch.

### MIB Objects

```
systemServices
  systemServicesDate
```

---

## system time

Displays or modifies the switch current system time.

**system time** [*hh:mm:ss*]

---

### Syntax Definitions

*hh:mm:ss*

The new time being specified for the system. To set this value, enter the current time in 24-hour format, where *hh* is the hour, *mm* is the minutes, and *ss* is the seconds. For example, **14:30:00**.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If you do not specify a new system time in the command line, the current system time is displayed.
- Setting the year to 1970 is not supported. The system interprets 1970 as meaning the internal clock has never been set and will reset to the year 2014.

### Examples

```
-> system time 14:30:00
-> system time
14:30:08
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[system date](#)

Displays or modifies the current system date on the switch.

[system timezone](#)

Displays or modifies the time zone for the switch.

### MIB Objects

```
systemServices
  systemServicesTime
```

---

## system timezone

Displays or modifies the time zone for the switch.

**system timezone** [*timezone\_abbrev*]

---

### Syntax Definitions

*timezone\_abbrev*

Specifies a time zone for the switch and sets the system clock to run on UTC. If you specify a time zone abbreviation, the hours offset from UTC is automatically calculated by the switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The configuration must be saved after changing the timezone.
- To display the current time zone for the switch, enter the syntax **system timezone**.
- If the configured timezone supports DST it is automatically enabled and cannot be disabled.
- If the configured timezone does not support DST it is automatically disabled and cannot be enabled.
- Refer to the *OmniSwitch AOS Release 8 Switch Management Guide* for a list of time zone abbreviations.

### Examples

```
-> system timezone mst
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

[system date](#)

Displays or modifies the current system date on the switch.

[system time](#)

Displays or modifies the current system time on the switch.

## MIB Objects

systemServices

```
systemServicesTimezone
systemServicesTimezoneStartWeek
systemServicesTimezoneStartDay
systemServicesTimezoneStartMonth
systemServicesTimezoneStartTime
systemServicesTimezoneOffset
systemServicesTimezoneEndWeek
systemServicesTimezoneEndDay
systemServicesTimezoneEndMonth
systemServicesTimezoneEndTime
systemServicesEnableDST
```

---

## system daylight-savings-time

Displays the Daylight Savings Time (DST) setting for the configured timezone.

`system daylight-savings-time [enable | disable]`

---

### Syntax Definitions

`enable | disable`                      `enable`

### Defaults

parameter	default
Timezone supports DST	enabled
Timezone does not support DST	disabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the configured timezone supports DST it is automatically enabled.
- If the configured timezone does not support DST it is automatically disabled.

### Examples

```
-> system daylight-savings-time
Daylight Savings Time (DST) is ENABLED.
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

<code>system time</code>	Displays or modifies the current system time on the switch.
<code>system timezone</code>	Displays or modifies the timezone for the switch.
<code>system date</code>	Displays or modifies the current system date on the switch.

## MIB Objects

```
systemServices
  systemServicesTimezone
  systemServicesEnableDST
```

---

## update uboot

Updates the uboot versions of the CMM or NIs. Refer to the Release Notes and/or any available Upgrade Instructions for the new release before performing this type of update on the switch.

```
update uboot {cmm slot | ni {all | slot} file filename}
```

---

### Syntax Definitions

<b>cmm</b>	Specifies that the update is performed for the Chassis Management Module (CMM).
<b>all</b>	Specifies that the update is performed for all slots within a chassis.
<i>slot</i>	Specifies the slot number of the module within a chassis.
<i>filename</i>	Specifies the path and name of the upgrade file.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Note that when performing an update, it is important that the correct update file is used. Specifying the wrong file may impact the operation of the switch.

### Examples

```
-> update uboot ni all file 9999.tar.gz
-> update uboot cmm 1 file /flash/temp/9999.tar.gz
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[reload slot](#) Reloads the specified NI module.

### MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## update fpga-cpld

Updates the FPGA/CPLD versions of the CMM or NIs. Refer to the Release Notes and/or any available Upgrade Instructions for the new release before performing this type of update on the switch.

**update fpga-cpld** {**cmm** {*chassis/cmm* |*all*} | **ni** {*chassis/ni* | **daughter** *num*} **file** *filename*}

---

### Syntax Definitions

<b>cmm</b>	Specifies that the update is performed for the Chassis Management Module (CMM).
<b>daughter</b>	Specifies the number of the daughter board on the NI module.
<i>ni</i>	Specifies the slot number of the module within a chassis.
<i>filename</i>	Specifies the path and name of the upgrade file.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Note that when performing an update, it is important that the correct update file is used. Specifying the wrong file may impact the operation of the switch.
- When updating CMMs with the **all** option an “fpga\_kit” file must be used. If upgrading a CMM using the *chassis/cmm* option, a “vme” file must be used.

### Examples

```
-> update fpga-cpld ni 4 file 9999.vme
-> update fpga-cpld cmm 1/1 file /flash/OS6865_U28X_CPLD_V11.vme
-> update fpga-cpld cmm all file fpga_kit_4960
```

### Release History

Release 7.1.1; command introduced.  
Release 7.3.4; **fpga** parameter changed to **fpga-cpld**.

**Related Commands**

**reload slot** Reloads the specified NI module.

**MIB Objects**

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## reload slot

Reloads or reboots a specified Network Interface (NI) module.

**reload slot** *slot*

---

### Syntax Definitions

*slot* Specifies the slot number.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The **reload slot** command reboots only the specified NI. Other modules installed on the chassis, including primary and secondary CMMs, are not affected

### Examples

```
-> reload slot 2
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

<a href="#">reload slot</a>	Reloads the specified NI module.
<a href="#">power slot</a>	Turns the power on or off for a specified Network Interface (NI) module.
<a href="#">show slot</a>	Shows the hardware information and the current status for Network Interface (NI) modules currently running in the chassis.

### MIB Objects

```
chasEntPhysicalTable
  chasEntPhysAdminStatus
  reset
```

---

## power slot

Turns the power on or off for a specified Network Interface (NI) module.

**power slot** *chassis/slot*

**no power slot** *chassis/slot*

---

### Syntax Definitions

<i>chassis</i>	The chassis identifier.
<i>slot</i>	The chassis slot number containing the NI module being powered on or off.

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

Use the **no** form of this command to power off an NI module.

### Examples

```
-> power slot 1  
-> power slot 7
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

<a href="#">reload slot</a>	Reloads the specified NI module.
<a href="#">show slot</a>	Shows the hardware information and current status for Network Interface (NI) modules currently running in the chassis.

### MIB Objects

```
chasEntPhysicalTable  
  chasEntPhysAdminStatus  
  powerOn  
  powerOff
```

---

## **powersupply enable**

Enables the power supply unit identified by the PSU-ID.

**powersupply enable** [*slot*]

**no powersupply enable** [*slot*]

---

### **Syntax Definitions**

*slot* Slot number of power supply.

### **Defaults**

N/A

### **Platforms Supported**

Not supported in this release.

### **Usage Guidelines**

N/A

### **Release History**

Release 7.1.1; command introduced.

### **Related Commands**

**power slot** Turns the power on or off for a specified Network Interface (NI) module.

### **MIB Objects**

N/A

---

## powersupply powersave

Enables the power saving functionality on the switch.

**powersupply powersave {enable | disable}**

---

### Syntax Definitions

**enable | disable** Enables or disables the power saving functionality.

### Defaults

parameter	default
enable   disable	enable

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- When enabled unneeded power-supplies are shut down to conserve energy, only the power supplies required to provide N+1 redundancy remain on.
- If enabled and power is lost to all active power supplies simultaneously the switch will lose power since N+1 redundancy applies only to the active power supplies.
- If the power-save mode is disabled, all available power supplies are switched on at all times.

### Examples

```
-> powersupply powersave disable  
-> powersupply powersave enable
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

**show powersupply** Displays the hardware information and current status for chassis power supplies.

### MIB Objects

```
chasEntPhysicalTable  
  chasEntPhysAdminStatus
```

---

## powersupply type

Configures the type of power supply that is connected to the chassis.

**powersupply** *num* **name** *string* **type** {**ALE** {**lo-ac** | **hi-ac**} | **phoenix-contact** {**48VDC** | **24VDC**} | **third-party** **wattage** *num*} [**chassis-id** *chassis-id*]

---

### Syntax Definitions

<i>num</i>	Power supply connector ID.
<i>string</i>	The descriptive name of the power supply.
<b>lo-ac</b>   <b>hi-ac</b>	The type of ALE power supply.
<b>phoenix-contact</b> <b>48VDC</b>   <b>24VDC</b>	The type of Phoenix Contact power supply.
<b>third-party</b> <b>wattage</b> <i>num</i>	The wattage value of the attached third-party power supply

### Defaults

parameter	default
N/A	

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- The OmniSwitch 6465 cannot auto-detect the type of power supply connected. This command is used to configure the type of power supply that is connected.
- Refer to the OmniSwitch 6465 Hardware User Guide for chassis power requirements when using third-party power supplies.
- Refer to the OmniSwitch 6465 Hardware Users Guide for power supply specifications using the power supply part number mapping below. A power supply may be associated with multiple part numbers depending on ALE branding, ordering part number or manufacturer part number.
  - > **lo-ac** (OS6465-BPN, PS-I75AC, SDR-75-48)
  - > **hi-ac** (O6465-BPN-H, PS-I185AC-P, SDR-240-55)

### Examples

```
-> powersupply 1 name ALE-75W-ps1 type ale lo-ac
-> powersupply 2 name ALE-75W-ps2 type ale lo-ac
-> powersupply 1 name third-party-ps type third-party wattage 75
```

**Release History**

Release 8.5 R1; command introduced.

**Related Commands**

[show powersupply](#)

Displays the hardware information and current status for chassis power supplies.

**MIB Objects**

N/A

---

## hash-control

Configures the hash control method on the switch. Depending upon this configuration, hashing algorithm used by various applications for packet forwarding is affected.

**hash-control {brief | extended [udp-tcp-port] | load-balance non-ucast {enable | disable}}**

**hash-control extended no udp-tcp-port**

---

### Syntax Definitions

<b>brief</b>	Sets hashing to brief mode.
<b>extended</b>	Sets hashing to extended mode.
<b>udp-tcp-port</b>	Sets extending hashing to use UDP/TCP ports.
<b>enable   disable</b>	Enables or disables the load balancing of non-unicast traffic on a link aggregate.

### Defaults

parameter	default
<b>hash-control</b>	brief (OS6465, OS6900) extended (OS6560, OS6860, OS6865, OS9900)
<b>udp-tcp-port</b>	disabled
<b>non-ucast</b>	disabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Disabling TCP-UDP port hashing is recommended when Server Load Balancing (SLB) is configured, because SLB dynamically assigns ports.
- The hash control setting also impacts the fabric load balancing for Chassis based products. It is recommended not to set brief hashing mode on Chassis based products.
- Changing the hash control mode affects the hashing algorithm for Link Aggregation, Server Load Balancing and ECMP.
- The hashing mode must be set to extended to enable UDP/TCP port hashing.
- Enabling or disabling the **load-balance non-ucast** option applies to all link aggregates. When this option is disabled (the default), link aggregation load balances only unicast packets; all non-unicast packets are sent through the primary port of the link aggregate.

- When the **load-balance non-ucast** option is enabled, all non-unicast traffic (broadcast, L2 multicast, L3 multicast, and unknown unicast) is load balanced over the link aggregate.

## Examples

```
-> hash-control brief
-> hash-control extended
-> hash-control extended udp-tcp-port
-> hash-control extended no udp-tcp-port
-> hash-control load-balance non-ucast enable
-> hash-control load-balance non-ucast disable
```

## Release History

Release 7.2.1; command introduced.

## Related Commands

[show hash-control](#) Displays the current hash control setting for the switch.

## MIB Objects

```
alaChasHashMode
alaChasUdpTcpPortMode
alachasNonUHashControl
```

---

## bluetooth

Enables or disables USB adapter with Bluetooth technology connectivity and configures the power level.

**bluetooth {admin-state [enable | disable] | transmit-power [low | high]}**

---

### Syntax Definitions

**enable | disable** Enables or disables USB adapter with Bluetooth technology connectivity.

**low | high** Configures the power level to low or high.

### Defaults

parameter	default
enable / disable	enable
low   high	low

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

This command will configure all USB adapters with Bluetooth technology in a virtual chassis.

### Examples

```
-> bluetooth admin-state enable
-> bluetooth transmit-power high
```

### Release History

Release 8.1.1; command was introduced.

### Related Commands

**show bluetooth status** Displays the current USB adapter with Bluetooth technology settings.

**show me** Executes an LED blink pattern for 10 seconds that is used by the USB adapter with Bluetooth technology to identify the connected switch.

### MIB Objects

```
systemServices
  systemServicesUsbEnable
  systemServicesBluetoothTxPower
```

---

## capability profile

Configures the mode of the switch to be either *switch* or *router*.

**capability profile** {switch | router}

---

### Syntax Definitions

**switch | router** Configures the *switch* or *router* profile.

### Defaults

parameter	default
switch / router	switch

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	X72	Yes	Yes	No

### Usage Guidelines

- Use this command to change the mode of a switch between *switch* and a *router*. This will adjust the L2 and L3 table entries based on the network requirements.
- The *switch* profile provides more L2 entries. The *router* profile provides more LPM entries. Refer to the Specifications Guide for details on the L2 and L3 entries.
- The switch must be rebooted for the configured profile to take effect.

### Examples

```
-> capability profile router
```

### Release History

Release 8.5R2; command was introduced.

### Related Commands

[show capability profile](#) Displays the active and configured profile settings.

### MIB Objects

```
alaCapManProfile
  alaCapManProfileMode
```

---

## capability profile tcam mode

Configures the TCAM (Ternary Content Addressable Memory) mode of the switch to support source IPv6 filtering.

**capability profile tcam mode {source-ipv6 | dest-ipv6}**

---

### Syntax Definitions

**source-ipv6** Selects the source IPv6 (enhanced) mode.  
**dest-ipv6** Selects the destination IPv6 mode.

### Defaults

By default, the TCAM mode supports destination IPv6 filtering only; source IPv6 filtering is not allowed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	No	No	No	No	No	No	No

### Usage Guidelines

- Setting the TCAM mode to source IPv6 filtering is required to support DHCPv6 Snooping IPv6 source filtering on an OmniSwitch 6560.
- When the TCAM mode is changed, a warning message is displayed (see command examples below).
- After the TCAM mode is changed and the configuration is saved with the **write memory** command, reboot the switch to activate the specified mode.
- When the TCAM mode is set to source IPv6 filtering, the TCAM will operate in an enhanced mode to support the use of source IPv6 conditions in QoS policy rules.
- The following functionality is *not* supported when the source IPv6 filtering mode is active:
  - Destination IPv6 source filtering.
  - ISSU
  - QoS anti-spoofing
  - Fewer QoS policy rules supported.

### Examples

```
-> capability profile tcam mode source-ipv6
WARNING: Source ipv6 tcam mode would not support : QoS policy with destination ipv6
address / destination network group / ipv6 Tcpflags.
Reboot is needed for the capability profile tcam mode to use source-ipv6
```

```
-> capability profile tcam mode dest-ipv6
WARNING: Destination ipv6 tcam mode would not support : QoS policy with source ipv6
address / source network group.
Reboot is needed for the capability profile tcam mode to use dest-ipv6
```

## Release History

Release 8.6R1; command was introduced.

## Related Commands

```

---

## capability trap-threshold

Configures the MAC and ARP table utilization high and low values for generating the associated traps.

**capability trap-threshold** {**MAC** | **ARP**} {**HIGH num** | **LOW num**}

---

### Syntax Definitions

**MAC** Configures the MAC table threshold.  
**ARP** Configures the ARP table threshold.

### Defaults

parameter	default
<b>HIGH num</b>	95
<b>LOW num</b>	90

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the table utilization reaches the configured HIGH value a trap will be sent indicating the usage has reached the HIGH value. The trap will continue to be periodically sent until the usage drops below the configured HIGH value.
- Once the usage drops to the configured LOW value a trap will be sent indicating the usage has dropped below the configured LOW value.
- The minimum LOW value is 5% and the maximum HIGH value is 95%. It is recommended to have a difference of at least 5% between LOW and HIGH values.

### Examples

```
-> capability trap-threshold ARP HIGH 90 LOW 80
-> capability trap-threshold MAC HIGH 88 LOW 80
```

### Release History

Release 8.6R1; command was introduced.

## Related Commands

**show capability trap-threshold** Displays the capability trap-threshold configured values.

---

## license apply file

Activates the license for licensed protocols on the switch.

**license apply** {file *file\_name* / key *license\_key*} [**order-id** *order\_id*]

---

### Syntax Definitions

<i>file_name</i>	The name of the license file containing the license keys.
<i>license_key</i>	Enter the individual license key. The license key can contain special characters, the key must encase using single quote character (").
<i>order_id</i>	The order ID for the MACsec license.

### Defaults

By default, licensed protocols are not activated on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The license file can have any name.
- The license file is only used to activate the licensed features and does not need to remain on the switch.
- Using **key** option, the license key can be directly entered in the command. The license key can contain special characters; it is required to encase the key using single quote character ("). The **key** input is needed only for applying MACsec license.
- The switch must be rebooted to reflect the licensed feature set. For MACsSec and 10G license, a reboot is not required.
- A 10G license can be installed on the OmniSwitch 6560-24X4/P24X4/48X4/P48X4 models to upgrade ports 25/26 (24-port models) or ports 49/50 (48-port models) from 1G to 10G. There is no reboot required after applying this license, but the ports should be administratively disabled and re-enabled.
- The module type will continue to display as 'U16L' even after upgrading a 'U16' to a 'U16E'.
- Order-id parameter is mandatory for MACsec license but it is not applicable for other licenses.
- The MACsec license is a site license and does not use the serial number and the MAC address of the switch. However, **order-id** is required for the license generator to generate MACsec license. The order ID value entered in this command is validated against the order ID in the license file. If this value does not match with the value stored in license file, MACsec license will not be installed.

- The order ID is a seven digit number and the license generation process appends the digit 0 at the beginning implicitly. Hence, it is required to provide eight digits (0 + 7 digits of the order ID) to install the license successfully.

## Examples

```
-> license apply file /flash/swlicense.txt
The switch will reboot after the license is applied.
Are you sure you want to proceed(Y/N)?Y

-> license apply file \flash\swlicense.dat order-id "07766551"

-> license apply key 'hasJ-i{v!-[qVW-YPrt-t@YK' order-id "01234567"
```

## Release History

Release 7.2.1; command was introduced.  
Release 7.3.1; **key** and **deactivate** parameters deprecated.  
Release 8.6R1; MACsec site-wide license and OmniSwitch 6560 10-Gigabit port license support added.  
Release 8.6R2; **key** parameter added.

## Related Commands

[show license-info](#) Displays all the licensed applications installed on the switch.

#### *output definitions*

---

<b>System Description</b>	The description for the current system. This description shows the current software version and the system date.
<b>System Object ID</b>	The SNMP object identifier for the switch.
<b>System Up Time</b>	The amount of time the switch has been running since the last system reboot.

*output definitions (continued)*

---

<b>System Contact</b>	An user-defined administrative contact for the switch. This field is modified using the <b>system contact</b> command.
<b>System Name</b>	A user-defined text description for the switch. This field is modified using the <b>system name</b> command.
<b>System Location</b>	The user-defined physical location of the switch. This field is modified using the <b>system location</b> command.
<b>System Services</b>	The number of current system services.
<b>System Date &amp; Time</b>	The current system date and time. This field is modified using the <b>system date</b> and <b>system time</b> commands.
<b>Flash Space: Primary CMM: Available (bytes)</b>	The available flash memory space available on the <i>primary</i> management module of the switch.
<b>Flash Space: Primary CMM: Comments</b>	Comments regarding the available flash memory space available on the primary management module of the switch, if applicable.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<b>system contact</b>	Specifies the administrative contact for the switch(for example, an individual or a department).
<b>system name</b>	Modifies the current system name of the switch.
<b>system location</b>	Specifies the current physical location of the switch.

  chasPowerLeft

---

## show cmm

Displays basic hardware and status information for the CMM modules in a standalone switch.

**show cmm** [*slot*]

---

### Syntax Definitions

*slot* Specifies the CMM by slot number or letter.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

On chassis-based switches, a CMM installed in the left CMM slot position is defined as CMM-A. A CMM installed in the right position is CMM-B.

### Examples

```
-> show cmm
Chassis ID 1 Module in slot CMM-A
  Model Name:          OS99-CMM,
  Module Type:        0x7100101,
  Description:        MGMT MODULE,
  Part Number:        903754-90,
  Hardware Revision:  C06,
  Serial Number:      U1820028,
  Manufacture Date:   May 10 2016,
  FPGA - Control:     2.0.0,
  FPGA - Power:       0.8,
  Admin Status:       POWER ON,
  Operational Status: UP,
  Max Power:          64,
  CPU Model Type:     Intel Atom C2518,
  MAC Address:        2c:fa:a2:13:e4:02,
  Coreboot Version:   8.3.1.103.R01
```

#### *output definitions*

---

<b>Model Name</b>	The model name of the switch.
<b>Model Type</b>	A unique module ID specific to the type of module.
<b>Description</b>	A factory-defined description of the associated board.
<b>Part Number</b>	The part number for the board.

*output definitions (continued)*

---

<b>Hardware Revision</b>	The hardware revision level for the board.
<b>Serial Number</b>	The serial number for the board.
<b>Manufacture Date</b>	The date the board was manufactured.
<b>FPGA - Control</b>	FPGA version.
<b>FPGA - Power</b>	FPGA version
<b>Admin Status</b>	The current power status of the CMM. Information is obtained from a running CMM. Hence the value is always POWER ON.
<b>Operational Status</b>	The current operational status of the CMM.
<b>Max Power</b>	The maximum power for the CMM.
<b>CPU Model Type</b>	The CPU Model type.
<b>MAC Address</b>	The MAC address assigned to the chassis.
<b>Coreboot Version</b>	The boot version number for the CMM.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<b>show chassis</b>	Displays the basic configuration and status information for the switch chassis.
<b>show slot</b>	Displays the basic hardware and status information for Network Interface (NI) modules currently installed in the switch.

**MIB Objects**

N/A

---

## show slot

Displays the basic hardware and status information for Network Interface (NI) modules currently installed in the chassis.

**show slot** [*slot*]

---

### Syntax Definitions

*slot* The slot number for a specific NI module installed in the chassis. If no slot number is specified, information for all the NI modules is displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

When this command is entered from the secondary CMM, the Operational and Admin Status for NIs will display as 'UNKNOWN'.

### Examples

```
-> show slot 1
Module in slot 1
  Model Name:                OS10-GNI-C48,
  Description:               10-1000 RJ45,
  Part Number:               902434-90,
  Hardware Revision:         A07,
  Serial Number:             H03Q0008,
  Manufacture Date:          JAN 31 2007,
  FPGA - Physical 1:         007,
  Daughter FPGA - Physical 1: 002,
  Daughter FPGA - Physical 2: 002,
  Admin Status:              POWER ON,
  Operational Status:        UP,
  Power Consumption:         200,
  CPU Model Type   :         Motorola MPC854
  MAC Address:              00:d0:95:01:04:
  ASIC - Physical 1:         BCM56620_A1,
  ASIC - Physical 2:         BCM56620_A1,
  ASIC - Physical 3:         BCM56620_A1,
  ASIC - Physical 4:         BCM56620_A1,
  ASIC - Physical 5:         BCM56620_A1,
  ASIC - Physical 6:         BCM56620_A1,
  UBOOT Version:            7.1.1.412.R01,
```

*output definitions*

```

#### output definitions

---

<b>Slot</b>	The chassis slot position of the module. For detailed slot numbering information, refer to the “Chassis and Power Supplies” chapter of the <i>Hardware User Guide</i> . Refer to <a href="#">page 58-38</a> for additional information on CMM callouts.
<b>Operational Status</b>	The operational status of the module. Options include UP or DOWN. For NI and secondary CMM modules, the operational status can be DOWN while the power status is on, indicating a possible software issue.
<b>Admin-Status</b>	The current power status of the module. Options include POWER ON or POWER OFF.

*output definitions (continued)*

---

<b>Firmware Rev</b>	The firmware version for module ASICs.
<b>MAC</b>	For the CMM, the base chassis MAC address is displayed. For NI modules, the MAC address for the corresponding NI is displayed.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

<a href="#">show module</a>	Displays the basic information for either a specified module or all the modules installed in the chassis.
<a href="#">show module long</a>	Displays the detailed information for either a specified module or all the modules installed in the chassis.

## show powersupply

Displays the hardware information and current status for chassis power supplies.

**show powersupply** [*slot*]

---

### Syntax Definitions

*slot* The slot number for a specific power supply installed in the chassis. If no power supply number is specified, information for all power supplies is displayed.

**powersave status** Displays the status of the power saving functionality.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900

Description:         OS-PS-450W-D
Hardware Revision:   B0,
Serial Number:       1020000417,
Manufacture Date:    May 14 2010,
Operational Status: UP,
Power Provision:     450W
```

### *output definitions*

---

<b>Model Name</b>	The power supply model number.
<b>Description</b>	A description of the associated power supply. This field reflects the model name in most cases.
<b>Part Number</b>	The part number for the power supply.
<b>Hardware Revision</b>	The hardware revision level for the power supply.
<b>Serial Number</b>	The serial number for the power supply.
<b>Manufacture Date</b>	The date the power supply was manufactured.
<b>Operational Status</b>	The operational status of the power supply. Options include UP or DOWN.
<b>Power Provision</b>	The number of watts provided by this power supply.
<b>PS</b>	The slot number of the power supply.
<b>Total Power</b>	The number of watts provided by this power supply.
<b>Power Used</b>	The number of watts being used by this power supply.
<b>Input Voltage</b>	The input line voltage of this power supply.
<b>PS type</b>	The type of power supply. AC or DC.
<b>Operational Status</b>	The operational status of the power supply. Options include UP, DOWN, or UNPLUG.
<b>Location</b>	The location of the power supply. Options include Internal or External. Slots 5-8 are for the optional power shelf.
<b>Airflow</b>	Direction of airflow.

## show fan

Displays the current operating status of chassis fans.

**show fan** [*slot*]

---

### Syntax Definitions

*slot* Specifies the slot number of the fantray.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guideline

N/A

### Examples

```
-> show fan
Chassis Fan  Status
-----+-----+-----
   1         1  Running
   1         2  Running
   1         3  Running
   1         4  Not Running
```

### output definitions

---

<b>Chassis/Tray</b>	The chassis/tray ID.
<b>Fan</b>	The fan number describing the fan position.
<b>Status/Functional</b>	The current operational status of the corresponding fan.
<b>Speed</b>	The speed of the fan.
<b>Airflow</b>	-

---

### Release History

Release 7.1.1; command introduced.

**Related Commands****show fantray**

Displays the current operating status of chassis fantrays.

**MIB Objects**N/A

---

## show fantray

Displays the current operating status of chassis fantrays.

**show fantray** [*slot*]

---

### Syntax Definitions

*slot* Specifies the slot number of the fantray.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guideline

N/A

### Examples

```
-> show fantray
      | Working | Fan
Tray | Status | Fans | Load %
-----+-----+-----+-----
  1   ON   4    50
```

### output definitions

---

<b>Chassis/Tray</b>	The chassis/Tray ID.
<b>Status</b>	The current operational status of the fantray.
<b>Working Fans</b>	The number of working fans.
<b>Fan Load %</b>	The load of the fantray.

---

### Release History

Release 7.1.1; command introduced.

**Related Commands****show fantray**

Displays the current operating status of chassis fantrays.

**MIB Objects**N/A

---

## show temperature

Displays the internal operating temperature of the chassis, as well as current temperature threshold settings.

**show temperature** [**fabric** [*index*] | **slot** [*index*] | **fantray** [*index*] | **cmm** [*index* | *cmm\_letter*] | **chassis-id** *chassis*]

---

### Syntax Definitions

<i>index</i>	Specifies the index number.
<i>cmm_letter</i>	Specifies the CMM letter.
<i>chassis</i>	The ID number of the chassis.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command displays the internal operating temperature, not the ambient temperature, of the current operating chassis as well as current temperature threshold settings.
- Refer to the appropriate *Hardware Users Guide* for detailed information about temperature thresholds for a specific OmniSwitch model.

### Examples

```
-> show temperature
Chassis/Device | Current | Range | Danger | Thresh | Status
-----+-----+-----+-----+-----+-----
1/CMMA          | 48      | -45 to 93 | 98     | 93     | UNDER THRESHOLD
```

#### output definitions

---

<b>Chassis/Device</b>	The device being measured (CMM, Fabric, or NI)
<b>Current</b>	The current CPU temperature in Celsius.
<b>Range</b>	The supported threshold range.
<b>Danger</b>	The danger threshold value. This value is based on the switch model and is not configurable.

*output definitions (continued)*

---

<b>Thresh</b>	The warning temperature threshold, in degrees Celsius. If the switch reaches or exceeds this temperature, the primary switch or CMM TEMP LED displays amber and a warning is sent to the user.
<b>Status</b>	Whether the current temperature has reached the threshold.

---

**Release History**

Release 7.1.1; command introduced.

**Related Commands**

[show fan](#) Displays the hardware information and current status for the chassis fans.

## show hash-control

Displays the current hash control settings for the switch.

**show hash-control [non-ucast]**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show hash-control
Hash Mode      = brief,
Udp-Tcp-Port  = disabled
```

```
-> show hash-control non-ucast
Hash Status = Enabled,
Hash Mode  : Normal
```

#### *output definitions*

---

<b>Hash Mode</b>	The current Hash Mode.
<b>Udp-Tcp-Port</b>	Status of UDP/TCP hashing.
<b>Non-ucast Hash Status</b>	Status of Non-ucast Hash status.

---

### Release History

Release 7.2.1; command introduced.

**Related Commands**

**powersupply type** Configures the hash mode of the switch.

**MIB Objects**

alaChasHashMode  
alaChasUdpTcpPortMode  
alachasNonUHashControl

---

## show license-info

Displays all the licensed applications installed on the switch.

**show license-info**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to verify which licenses are installed on the switch.
- The number of days remaining is only applicable for demo licenses.
- The module type will continue to display as 'U16L' even after upgrading a 'U16' to a 'U16E'.

### Examples

```
-> show license-info
```

VC	device	License	Type	Time (Days) Remaining	Upgrade Status	Expiration Date
3	0	Advanced	PERM	NA	NA	NA
3	0	10G	PERM	NA	NA	NA
4	0	Advanced	PERM	NA	NA	NA
4	0	10G	PERM	NA	NA	NA
5	0	Advanced	PERM	NA	NA	NA
5	0	10G	PERM	NA	NA	NA
6	0	Advanced	PERM	NA	NA	NA
6	0	10G	PERM	NA	NA	NA

#### output definitions

---

<b>VC</b>	Virtual chassis identifier.
<b>Device</b>	Slot number of NI.
<b>License</b>	Displays the feature license installed on the switch. Advanced, Data Center, U16L
<b>Type</b>	The type of license: Demo or Permanent.
<b>Time (Days) Remaining</b>	Time of days remaining for a demo license. Display as 'NA' for permanent licenses.

*output definitions*

---

<b>VC</b>	Virtual chassis identifier.
<b>Device</b>	Slot number of NI.
<b>License</b>	Displays the feature license installed on the switch. Advanced, Data Center, U16L
<b>Upgrade Status</b>	Status of the upgrade.
<b>Expiration Date</b>	Date of license expiry.

---

**Release History**

Release 7.2.1; command was introduced.

Release 8.6R1; **Upgrade Status** and **Expiration Date** fields added.

**Related Commands**

[license apply file](#) Activates the license for licensed protocols on the switch.

**MIB Objects**

```
alaVcCapManSwLicensingInfoTable  
  alaVcLicensedvcSlot  
  alaVcLicensedMask  
  alaVcLicenseType

```

---

## show bluetooth status

Displays the current USB adapter with Bluetooth technology configuration.

**show bluetooth status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guideline

N/A

### Examples

```
-> show bluetooth status
Admin Status      : disabled,
Transmit Power    : low,
```

```
Chassis      Operational Status
-----+-----
1            Not Present
```

### output definitions

---

<b>Admin Status</b>	Whether the USB adapter with Bluetooth technology is enabled or disabled.
<b>Transmit Power</b>	Whether transmit power is high or low.
<b>Chassis</b>	The chassis identifier.
<b>Operational Status</b>	<p><b>notPresent</b>—No USB adapter with Bluetooth technology present.</p> <p><b>connectionInactive</b>—USB adapter with Bluetooth technology present but inactive.</p> <p><b>connectionActive</b>—USB adapter with Bluetooth technology present and active.</p>

---

### Release History

Release 8.1.1; command introduced.

**Related Commands****bluetooth**

Enables or disables a USB adapter with Bluetooth technology and configures the power level.

**MIB Objects**

N/A

---

## show me

Executes an LED blink pattern for 10 seconds that is used by the USB adapter with Bluetooth technology to identify the connected switch.

**show me**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guideline

Use this command in a virtual chassis to identify which switch currently has USB adapter with Bluetooth technology connectivity.

### Examples

```
-> show me
The Chassis ID LED will blink for 10 seconds.
```

### Release History

Release 8.1.1; command introduced.

### Related Commands

#### [bluetooth](#)

Enables or disables a USB adapter with Bluetooth technology and configures the power level.

### MIB Objects

N/A

---

## show tcam utilization

Displays runtime information about the Ternary Content Addressable Memory (TCAM) utilization for each stage of each TCAM on each slot of the switch.

**show tcam utilization** [*chassis/slot*] [*chassis/slot/tcam*]

---

### Syntax Definitions

*chassis/slot* A chassis ID and slot number. Use this parameter to display TCAM utilization for a specific slot.

*chassis/slot/tcam* A chassis ID, slot, and TCAM number. Use this parameter to display utilization for a specific TCAM.

### Defaults

By default, TCAM utilization is displayed for the entire switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	No	No	No	Yes	Yes	Yes	Yes

### Usage Guidelines

- The utilization is represented in terms of the minimum-sized entry supported by the TCAM.
- This command replaces the **show qos slice** command on the supported OmniSwitch platforms listed above; the **show qos slice** command, however, is still available on the other OmniSwitch platforms.

### Examples

```
-> show tcam utilization
```

Legend:

  alaTcamDTableSlot  
  alaTcamDTableTCAMIndex  
  alaTcamDTableAppGroupName  
  alaTcamDTableAppName
```

---

## show capability profile

Displays the active and configured profile settings.

**show capability profile**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	Yes	No	No	No	X72	Yes	Yes	No

### Usage Guidelines

- The switch must be rebooted for the configured profile to take effect.
- On the OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X72, this command displays the configured and active mode to indicate if the switch is operating in the router or switch mode. The configured mode is changed using the **capability profile** command.
- On the OmniSwitch 6560, this command displays the configured and active TCAM mode (source or destination IPv6 filtering). The configured TCAM mode is changed using the **capability profile tcam mode** command.

### Examples

Sample output on the OmniSwitch 6900-V72/C32, and OmniSwitch 6900-X72:

```
-> show capability profile
Configured Profile : Router
Active Profile    : Switch
```

Sample output on the OmniSwitch 6560:

```
-> show capability profile
Configured TCAM Mode : dest-ipv6
Active TCAM mode    : dest-ipv6
```

### Release History

Release 8.5R2; command introduced.

Release 8.6R1; TCAM mode display added.

## Related Commands

- capability profile** Configures the mode of the switch to be either switch or router.
- capability profile tcam mode** Configures the source IPv6 filtering or destination IPv6 filtering TCAM mode for the switch.

## MIB Objects

```
alaCapManProfile  
  alaCapManProfileMode  
alaCapManProfile  
  alaCapManProfileTcamMode
```

---

## show pmd-files

Displays a list of PMD files generated on the switch.

**show pmd-files**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show pmd-files
```

```
##### PMD files(Chassis 1 /flash/pmd) #####
```

```
pmd-capmanc-06.10.2014-15.24.49
pmd-agCmm-01.21.2016-15.07.32
pmd-agCmm-01.21.2016-15.08.09
pmd-capmanc-07.23.2016-14.28.25
pmd-07.23.2016-14.39.24
pmd-capmanc-2016.07.23-14.42.42p
pmd-bcd2-07.13.2017-11.22.28
pmd-bcd2-2017.07.26-15.02.12p
```

```
8 PMD files found
```

### Release History

Release 8.4.1.R03; command introduced.

**Related Commands****show chassis**

Displays the basic configuration and status information for the switch chassis.

**MIB Objects**

N/A

---

## show capability trap-threshold

Displays the capability trap-threshold configured values.

**show capability trap-threshold**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays the configured High and Low trap-threshold table utilization values.

### Examples

```
-> show capability trap-threshold
  Name           High      Low
-----+-----+-----
MAC              95       90
ARP              95       90
```

### Release History

Release 8.6R1; command introduced.

### Related Commands

[capability trap-threshold](#) Configures the MAC and ARP table utilization high and low values for generating the associated traps.

### MIB Objects

```
alaCapManTrapThreshold
  alaCapManTrapThresholdMacLow
  alaCapManTrapThresholdMacHigh
  alaCapManTrapThresholdArpLow
  alaCapManTrapThresholdArpHigh
```

---

## show tech-support

Creates a log or tar file gathering important switch information that can be used by technical support.

```
show tech-support [layer2 | layer3 | eng [complete]]
```

---

### Syntax Definitions

<b>layer2</b>	Gathers layer 2 switch configuration information.
<b>layer3</b>	Gathers layer 3 switch configuration information.
<b>eng [complete]</b>	Gathers all relevant switch information from flash such as log files, configuration files, directories and creates an archive file with all the information.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Running the command with no parameters creates a **tech\_support.log** file.
- The **layer2** parameter creates a **tech\_support\_layer2.log** file.
- The **layer3** parameter creates a **tech\_support\_layer3.log** file.
- The **eng** parameter creates a **tech\_support\_eng.tar** file. The **complete** parameter creates a **tech\_support\_complete.tar** file with information from all switches in a VC along with the log files.

### Examples

```
-> show tech-support
-> show tech-support layer2
-> show tech-support layer3
-> show tech-support eng
-> show tech-support eng complete
```

### Release History

Release 7.3.4.R02; command introduced.

**Related Commands****show chassis**

Displays the basic configuration and status information for the switch chassis.

**MIB Objects**

---

## security key-chain gen-random-key

Generates a 32-byte or 64-byte random key.

**security key-chain {gen-random-key | gen-random-key-256}**

---

### Syntax Definitions

**gen-random-key** Generates a 32-byte random key.

**gen-random-key-256** Generates a 64-byte random key.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The generated key can be used as an input value for hex-key or encrypt-key while creating a security key.

### Examples

```
-> security key-chain gen-random-key
0x0102030405060708090A0B0C0D0E0F
```

```
-> security key-chain gen-random-key-256
0x0102030405060708090A0B0C0D0E0F0102030405060708090A0B0C0D0E0F
```

### Release History

Release 8.4.1 R03; command introduced.

Release 8.7R1; **gen-random-key-256** keyword added.

### Related Commands

[security key](#) This command creates an authentication key into the system.

### MIB Objects

N/A

---

## security key

Creates an authentication key into the system.

```
security key key_id algorithm {{simple | sha512 | sha384 | sha256 | sha224 | sha1 | md5} {encrypt-key
encrypt_key | key simple_key} start-time mm/dd/yyyy [hh:mm] [lifetime days [hh:mm]]| {aes-gcm-256 |
aes-gcm-128} {hex-key hex_key | encrypt-key {hex | num}} | {aes-cmac-256 | aes-cmac-128} {hex-key
hex_key | encrypt-key {hex | num}} keyed-name hex-kn}}
```

```
no security key key_id [-key_id2]
```

---

### Syntax Definitions

<i>key_id</i>	The key ID. This can be in the range 1-256.
<b>simple</b>	Specifies that the simple authentication algorithm is used as authentication key.
<b>sha512</b>	Specifies that the SHA512 authentication algorithm is used as the authentication key.
<b>sha384</b>	Specifies that the SHA384 authentication algorithm is used as the authentication key.
<b>sha256</b>	Specifies that the SHA256 authentication algorithm is used as the authentication key.
<b>sha224</b>	Specifies that the SHA224 authentication algorithm is used as the authentication key.
<b>sha1</b>	Specifies that the SHA1 authentication algorithm is used as the authentication key.
<b>md5</b>	Specifies that the MD5 authentication algorithm is used as the authentication key.
<i>encrypt_key</i>	The key in hexadecimal format to provide security consideration on the authentication key. Configuration snapshot always displays authentication key in the encrypted form. The key can range from 16 to 512 characters in length.
<i>simple_key</i>	Key will be plain text ASCII up to 118 characters. Use quotes (") around the string if the key contains multiple words with spaces between them. Plain text key can range from 16 to 118 characters in length.
<i>mm/dd/yyyy</i>	Key activation time. Granularity is up to minutes. Enter the start time in the format mm/dd/yyyy hh:mm where mm is the month, dd is the day, yyyy is the year, hh is the hour, mm is the minutes. For example, 08/08/2005 14:30
<i>days</i>	Validity duration of the key in terms of days and time. Lifetime can be in the range 1 - 9125 days.
<b>aes-gcm-256</b>	Specifies that the AES-GCM-256 authentication algorithm is used as authentication key. <i>This parameter is currently not supported.</i>
<b>aes-gcm-128</b>	Specifies that the AES-GCM-128 authentication algorithm is used as authentication key.

<b>aes-cmac-256</b>	Specifies that the AES-CMAC-256 authentication algorithm is used as authentication key. <i>This parameter is only supported on the OmniSwitch 6860N.</i>
<b>aes-cmac-128</b>	Specifies that the AES-CMAC-128 authentication algorithm is used as authentication key.
<b>hex-key</b> <i>hex_key</i>	The key value in hexadecimal format (0xhex). Configuration snapshot displays the authentication key in the encrypted form. The key can range from 1 to 32 characters in length (16 byte) for AES-GCM-128 or AES-CMAC-128 algorithm, and 1 to 64 characters in length (32 byte) for AES-GCM-256 or AES-CMAC-256 algorithm.
<b>encrpt-key</b> <i>hex</i>	The key in hexadecimal format. The key can range from 1 to 32 characters in length (16 byte) for AES-GCM-128 or AES-CMAC-128 algorithm, and 1 to 64 characters in length (32 byte) for AES-GCM-256 or AES-CMAC-256 algorithm.
<b>encrpt-key</b> <i>num</i>	The key in numerical format. The key can range from 1 to 32 characters in length (16 byte) for AES-GCM-128 or AES-CMAC-128 algorithm, and 1 to 64 characters in length (32 byte) for AES-GCM-256 or AES-CMAC-256 algorithm.
<i>hex-kn</i>	The Connectivity Association Key Name (CKN) value in hexadecimal format (0xhex). The key can range from 1 to 64 characters in length (32 byte) for AES-CMAC-128 algorithm, and 1 to 128 characters in length (64 byte) for AES-CMAC-256 algorithm.

## Defaults

parameter	default
<b>lifetime</b> <i>days</i>	180 days

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- The switch can have a maximum of 256 keys.
- Current active key is determined based on the lowest numerical key ID. When the current active key expires, if the keychain has multiple active keys, the switch will switchover to active key having lowest key ID.
- When the current active key expires, if the keychain does not have any other active key, the switch will bring down all the adjacencies formed using that keychain.
- Parameters of a key can be modified if the key is not in use. Once the key is attached to any of the keychains, no more modification is allowed.
- Use the **no** form of this command to delete a key.

- To delete a key, first disassociate the keychain from a user application, and detach the key from the keychain.
- The show commands will always display the key-string in an encrypted format.
- Use the command **security key-chain gen-random-key** to generate a the hex-key to be configured for the AES-GCM-128 and AES-GCM-256 or AES-CMAC-128 and AES-CMAC-256 algorithm.
- A keychain must have all keys of either 128-bit type or 256-bit type.
- A keychain using the AES-GCM-128 authentication algorithm must be attached only to MACsec interface for its static-SAK configured under MACsec mode 'static'. A keychain using the AES-CMAC-128 or AES-CMAC-256 authentication algorithm can be attached only to MACsec interface for its Static Connectivity Association Key (static-CAK) using Pre-Shared key configured under MACsec mode 'dynamic'.

For more information on MACsec configuration, refer to the "Ethernet Port Commands" chapter in the *OmniSwitch AOS Release 8 CLI Reference Guide*.

## Examples

```
-> security key 5 algorithm sha256 key "passwordstring123" start-time 1/31/2017
00:00 life-time 180 10:30
-> security key 5 algorithm sha256 key "passwordstring123" start-time 5/2/2017
life-time 150
-> security key 1 algorithm aes-gcm-128 hex-key 0x0102030405060708090A0B0C0D0E0F
-> security key 1 algorithm aes-cmac-128 hex-key 0x0102030405060708090A0B0C0D0E0F
keyed-name 0x0102030405060708090A0B0C0D0FFF
-> no security key 5
```

## Release History

Release 8.4.1; command introduced.  
Release 8.4.1 R03; **aes-gcm-128** keyword added.  
Release 8.5R2; **aes-cmac-128** keyword added.  
Release 8.7R1; **aes-gcm-256** and **aes-cmac-256** keyword added.

## Related Commands

**show security key** This command displays the configured keys in the system.

## MIB Objects

```
alaSecKeyIdalaSecKeyAlgorithm
alaSecKeyType
alaSecKeyAuthKey
alaSecKeyStartTime
alaSecKeyLifeTime
alaSecKeyRowStatus
```

---

## security key-chain

This command creates a system level security keychain.

**security key-chain** *key\_chain\_id* [**name** *key\_chain\_name*]

**no security key-chain** *key\_chain\_id1* [-*key\_chain\_id2*]

---

### Syntax Definitions

*key\_chain\_id*

The keychain ID. This can be in the range 1-32.

*key\_chain\_name*

The keychain name. The keychain name can range from 1 to 16 characters in length.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- There can be a maximum of 32 keychains in the device, and each of them can hold multiple keys of the same algorithm type.
- Use the **no** form of this command to delete a keychain.
- To delete a keychain, first disassociate the keychain from the user application.
- Deleting a keychain will not delete the keys associated with the keychain. Keys will subsequently remain configured, but will not be associated to any keychain, until reassociation.
- The keychain ID is associated to user applications such as ISIS, OSPF. The authentication information is carried in the Hello packet. If the authentication succeeds, then adjacency is formed. The two remote machines should have same current key ID and same authentication type.
- Changing the switch system clock impacts the status of the keys.

### Examples

```
-> security key-chain 1 globalKeyChain
-> no security key-chain 1-3
-> no security key-chain 4
```

### Release History

Release 8.4.1; command introduced.

**Related Commands**

**show security key-chain** This command displays the configured keychains in the system.

**MIB Objects**

alaSecKeyChainId  
alasecKeyChainName

---

## security key-chain key

This command associates a key into the specified keychain.

```
security key-chain key_chain_id key key_id [-key_id2]
```

```
no security key-chain key_chain_id1 [-key_chain_id2]
```

---

### Syntax Definitions

*key\_chain\_id*                      The keychain ID.

*key\_id*                              The key ID.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- A keychain can be configured with multiple keys of the same algorithm type.
- Use the **no** form of this command to disassociate a key from a security keychain.
- To disassociate a key from the keychain, first disassociate the keychain from the user application, and detach the key from the keychain.

### Examples

```
-> security key-chain 1 key 5
-> no security key-chain 1
```

### Release History

Release 8.4.1; command introduced.

**Related Commands**

- security key-chain** This command creates a system level security keychain.

<b>ID</b>	The keychain ID.
<b>Name</b>	The keychain name.
<b>Current Key</b>	The current active key.
<b>Associated Keys</b>	The keys associated with the keychain.
<b>User Applications</b>	The keychain associated with the user application.

---

### Release History

Release 8.4.1; command introduced.

**Related Commands**[security key-chain](#)

This command creates a system level security keychain.

[security key-chain key](#)

This command associates a key into the specified keychain.

**MIB Objects**`alaSecKeyChainId``alasecKeychainName`

---

## alarm in

Configures an alarm input. For an alarm input, action can be configured to either send an SNMP trap, log a SWLog message locally, or set alarm output.

```
alarm in alr_in_name [chassis-in chassis_id_in] action {swlog | trap | alarm-out} [admin-state {enable | disable}]
```

```
no alarm alr_in_name
```

---

### Syntax Definitions

<i>alr_in_name</i>	Name of the alarm input (1 to 32 characters).
<i>chassis_id_in</i>	Chassis identifier where alarm input is connected.
<b>swlog   trap   alarm-out</b>	Specify the action to be sent on the alarm output.
<b>enable</b>	Enable the alarm input.
<b>disable</b>	Disable the alarm input.

### Defaults

parameter	default
<b>enabled   disabled</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- By default, alarm is disabled for all actions.
- If the chassis ID is not configured, by default, local chassis is considered for the alarm input.
- Use the **no** form of this command to remove the alarm input.
- OmniSwitch 6465 switch has a single alarm input.

### Examples

```
-> alarm in "temperature-sensor" action alarm-out
-> alarm in "door-sensor" chassis-in 1 action alarm-out admin-state enable
-> alarm in "smoke-sensor" chassis-in 2 action trap swlog alarm-out admin-state
enable

-> no alarm temperature-sensor
```

## Release History

Release 8.5 R1; command introduced.

## Related Commands

<a href="#">alarm clear status</a>	Clears the status of the specified alarm.
<a href="#">show alarm input config</a>	Displays the alarm input configuration.
<a href="#">show alarm status</a>	Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

```
alaAlarmInpmutConfigTable  
  alaAlarmInputConfigName  
  alaAlarmInputConfigChassis  
  alaAlarmConfigInputTrapActionEnable  
  alaAlarmConfigInputSwlogActionEnable  
  alaAlarmConfigInputAlarmOutputActionEnable  
  alaAlarmConfigAdminStatus  
  alaAlarmInputConfigRowStatus
```

---

## alarm event

Configures the listed system events or any trap for alarm output.

```
alarm event alr_event_name {event {vc-status-change | temperature | system-health | power-supply |
port-violation network-port userport [-userport2] | port-health | link-down network-port userport
[-userport2] | authentication-failure} | trapid id}} [chassis-in chassis_id_in] [admin-state {enable |
disable}]
```

```
no alarm alr_event_name
```

---

### Syntax Definitions

<i>alr_event_name</i>	Name of the alarm event or trap (1 to 32 characters).
<i>userport</i>	Network port of the switch.
<i>id</i>	Trap ID.
<i>chassis_id_in</i>	Chassis identifier where alarm input is connected.
<b>enable</b>	Enable the alarm event.
<b>disable</b>	Disable the alarm event.

### Defaults

parameter	default
<b>enable   disable</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- By default, alarm output action is disabled for all the alarm events.
- System events corresponds to critical failures of the switch. Alarm event can be configured for any of these supported system events.
- Trap ID corresponds to the SNMP traps supported in the switch. Use **show snmp-trap config** command to view the supported traps. Alarm event can be configured for any of these supported traps.
- Both event as well as trap cannot be configured for the same alarm event. If configured, the later is ignored with an error message.
- Alarm event of the single chassis can be mapped to multiple alarm outputs on different chassis for redundancy.
- Alarm events from multiple chassis can be mapped to alarm output on the single chassis.

- Same network port can be configured for both link down as well as port violation event but with a different event name.
- A network port that falls in the network port range, which is already configured to an event cannot be configured to another event.
- If the chassis ID is not configured, by default, local chassis is considered for the alarm event.
- Use the **no** form of this command to remove the alarm event.

## Examples

```
-> alarm event system-fail event system-health
-> alarm event link-failure-critical event link-Down network-port 10-15 chassis-in
1 admin-state enable

-> no alarm system-fail
```

## Release History

Release 8.5 R1; command introduced.

## Related Commands

  alaAlarmEventConfigRowStatus
```

---

## alarm out

Configures the alarm output relay of a chassis.

**alarm out** *alr\_out\_name* [**chassis-out** *chassis\_id\_out*] [**admin-state** {**enable** | **disable**}]

**no alarm out** *alr\_out\_name*

---

### Syntax Definitions

<i>alr_out_name</i>	Name of the alarm output (1 to 32 characters).
<i>chassis_id_out</i>	Chassis identifier where alarm output is connected.
<b>enable</b>	Enable the alarm output.
<b>disable</b>	Disable the alarm output.

### Defaults

parameter	default
<b>enable</b>   <b>disable</b>	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- If the chassis ID is not configured, by default, local chassis is considered for the alarm output.
- Use the **no** form of this command to remove the alarm output.
- OmniSwitch 6465 switch has single alarm output.

### Examples

```
-> alarm out "critical-fault-detector"
-> alarm out "minor-fault-detector" chassis-out 2 action admin-state enable
-> alarm out "critical-fault-detector"
```

### Release History

Release 8.5 R1; command introduced.

## Related Commands

### [show alarm status](#)

Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

```
alaAlarmOutputConfigTable  
  alaAlarmOutputConfigName  
  alaAlarmOutputConfigChassis  
  alaAlarmOutputConfigRowStatus
```

---

## alarm map

Maps an alarm input or event with an alarm output within a chassis or any other chassis in the VC.

**alarm map** *alarm\_name* **out** *alr\_out\_name*

**no alarm map** *alarm\_name*

---

### Syntax Definitions

*alarm\_name* Name of the alarm input or system event (1 to 32 characters).

*alr\_out\_name* Name of the alarm output (1 to 32 characters)

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Alarm input or event of the single chassis can be mapped to multiple alarm outputs on different chassis for redundancy.
- Alarm input or event from multiple chassis can be mapped to alarm output on the single chassis.
- Use the **no** form to unmap the alarm input from alarm output.

### Examples

```
-> alarm map "temperature-sensor" out "critical-fault-detector"
-> no alarm map "temperature-sensor"
```

### Release History

Release 8.5 R1; command introduced.

## Related Commands

<a href="#">alarm in</a>	Configures an alarm input.
<a href="#">alarm event</a>	Configures the listed system events or any trap for alarm output.
<a href="#">alarm out</a>	Configures the alarm output relay of a chassis.
<a href="#">show alarm status</a>	Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

```
alaAlarmMappingConfigTable  
  alaAlarmInputConfigName  
  alaAlarmOutputConfigName  
  alaAlarmMappingConfigRowStatus
```

---

## alarm duration

Configure the duration of an alarm.

**alarm duration** *[[hour] [min] / [default]]*

---

### Syntax Definitions

<i>hour</i>	Duration of the alarm in hours.
<i>min</i>	Duration of the alarm in minutes.
<b>default</b>	Sets the alarm duration to 24 hours 0 minutes.

### Defaults

By default, the alarm duration is set to 24 hours 0 minutes.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- In a virtual chassis (VC) setup, alarm duration configuration applies to all the chassis of the VC.
- A minimum alarm duration of five minutes and a maximum alarm duration of 48 hours can be configured.
- An alarm is switched off for an input or event after the configured duration. If there are multiple events or input, alarm is switched off after the elapsed duration of all the events and input.
- Use **alarm clear status** command to force stop the alarm before the set alarm duration for any alarm event or input.
- Modification or updated duration is applied only to those alarms raised after the configuration change. Alarms which are in progress are not impacted.
- Use **default** option to reset the alarm duration to 24 hours 0 minutes.

### Examples

```
-> alarm duration 2
-> alarm duration default
```

### Release History

Release 8.5 R1; command introduced.

## Related Commands

### [alarm clear status](#)

Clears the status of the specified alarm.

### [show alarm status](#)

Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

alarmDurationConfigHour  
alarmDurationConfigMin

---

## alarm clear status

Clears the status of the specified alarm.

**alarm clear status** [*alarm\_name*]

---

### Syntax Definitions

*alarm\_name*                      Name of the alarm input or alarm event.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- The command does not disable or remove the alarm.
- The command can be used to forcibly stop the alarm and clear the status.
- If the output alarm is ON for multiple events or input, all the alarms have to be cleared to switch off the alarm output.
- If the alarm name is not specified, all the configured alarms are cleared.

### Examples

```
-> alarm clear status temperature-sensor
-> alarm clear status
```

### Release History

Release 8.5 R1; command introduced.

## Related Commands

### [show alarm status](#)

Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

```
alarmStatusTable  
  alarmStatusInputName  
  alarmStatusOutputName  
  alarmStatusInputChassis  
  alarmStatusOutputChassis  
  alarmStatusTimeStamp  
  alarmStatusTrapId
```

---

## show alarm input config

Displays the alarm input configuration.

**show alarm input config chassis** *chassis\_id*

---

### Syntax Definitions

*chassis\_id* Chassis identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

The command displays configuration of all the chassis if chassis ID is not specified.

### Examples

```
-> show alarm input config
Alarm Duration 5 hrs 30 Mins
```

Alarm-Name	Chassis-in	Action	Alarm-Output-Name	Chassis-out	Admin-State
Temperature Sensor	1	Alarm-Output	critical-fault-detector	1	enable
fire Sensor	1	trap	N/A	N/A	enable
Temperature Sensor	1	Alarm-Output	minor-fault-detector	2	enable
door Sensor	1	Alarm-Output	minor-fault-detector	2	enable

#### *output definitions*

---

<b>Alarm-Name</b>	Name of the alarm.
<b>Chassis-in</b>	Chassis identifier where alarm input is connected.
<b>Action</b>	The action sent on the alarm output.
<b>Alarm-Output-Name</b>	Name of the alarm output.
<b>Chassis-out</b>	Chassis identifier where alarm output is connected.
<b>Admin-State</b>	Status of the alarm.

---

### Release History

Release 8.5 R1; command introduced.

## Related Commands

```

---

## show alarm event config

Displays the alarm system event configuration.

**show alarm event config chassis** *chassis-id*

---

### Syntax Definitions

*chassis\_id* Chassis identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- The command displays configuration of all the chassis if chassis ID is not specified.
- Network port is only applicable for link-down and port violation event.

### Examples

```
-> show alarm event config
Alarm Duration 5 hrs 30 Mins
```

Alarm-Name	Chassis-In	Network-Port	Trap-Id	Event-Name	Alarm-Output-Name	Chassis_out	Admin-State
system-fail	1	N/A	N/A	system-health	minor-fault-detector	2	enable
power-fail	1	N/A	N/A	power-supply	minor-fault-detector	2	enable
login-failure	2	N/A	5	N/A	minor-fault-detector	2	enable

#### *output definitions*

---

<b>Alarm-Name</b>	Name of the alarm.
<b>Chassis-in</b>	Chassis identifier where alarm input is connected.
<b>Network-Port</b>	Network port of the chassis.
<b>Trap-ID</b>	Trap ID.
<b>Event-Name</b>	Name of the system event.
<b>Alarm-Output-Name</b>	Name of the alarm output.
<b>Chassis-out</b>	Chassis identifier where alarm output is connected.
<b>Admin-State</b>	Status of the alarm.

---

## Release History

Release 8.5 R1; command introduced.

## Related Commands

<a href="#">alarm event</a>	Configures the listed system events or any trap for alarm output.
<a href="#">show alarm status</a>	Displays all the traps, system events, or alarm input for which the alarm output is raised.

## MIB Objects

```
alarmEventConfigTable
  alarmEventConfigName
  alarmEventConfigEvent
  alarmEventConfigTrapId

  alaAlarmOutputConfigName
  alaAlarmOutputConfigChassis
  alaAlarmOutputConfigRowStatus

alaAlarmMappingConfigTable
  alaAlarmInputConfigName
  alaAlarmOutputConfigName
  alaAlarmMappingConfigRowStatus
```

---

## show alarm status

Displays all the traps, system events, or alarm input for which the alarm output is raised. For a VC, the alarm status for each chassis is displayed.

**show alarm status chassis** *chassis-id*

---

### Syntax Definitions

*chassis\_id* Chassis identifier.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	No	No	No	No	No	No	No	No

### Usage Guidelines

- Network port displays the status on the port range or a specific port.
- If the same failure (input or event or trap) is repeated, the data structure is updated with the latest failure.

### Examples

```
-> show alarm status chassis-id 2
```

```
Alarm-Name   Chassis-In   Time-Stamp           Network-Port   Trap-Id   Event-Name   Alarm-Output   Chassis-Out
-----+-----+-----+-----+-----+-----+-----+-----
login-failure 2           09/31/2017 : 14:30:00  N/A           5         N/A         minor-fault-detector 2
```

#### *output definitions*

---

<b>Alarm-Name</b>	Name of the alarm.
<b>Chassis-in</b>	Chassis identifier where alarm input is connected.
<b>Time-Stamp</b>	The system time of the switch where the alarm occurred.
<b>Network-Port</b>	Network port of the chassis.
<b>Trap-ID</b>	Trap ID.
<b>Event-Name</b>	Name of the system event.
<b>Alarm-Output</b>	Name of the alarm output.
<b>Chassis-out</b>	Chassis identifier where alarm output is connected.

---

## Release History

  alarmStatusClear
```

---

## appmgr

Use this command to start the tasks for AOS Micro Services (AMS).

**appmgr** {start | stop | restart} [*ams broker* | **config-sync** | **config-dbase**] [*ams-apps iot-profiler*]

---

### Syntax Definitions

<b>start</b>	Starts the specified application from package.
<b>stop</b>	Stops the specified application from package.
<b>restart</b>	Starts and stops the specified application from package.
<i>broker</i>	Broker instance of AMS
<b>config-sync</b>	An AMS component application which is used to synchronize the configuration in the network.
<b>config-dbase</b>	Another AMS component application that helps to store and replay the configuration to new nodes in the network.
<b>iot-profiler</b>	An AMS-app application, responsible for sharing the IoT profiled data with OmniVista for the integrated IoT OV-Switch solution.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter **appmgr** without any parameters to see the command syntax.

### Examples

```
-> appmgr start ams broker
-> appmgr start ams config-sync
-> appmgr start ams config-dbase
-> appmgr commit
-> appmgr list
Legend: (+) indicates application is not saved across reboot
```

Application	Status	Package Name	User/Group	Status Time Stamp
broker	started	ams	admin/user	Tue Nov 26 13:28:27 2019
config-sync	started	ams	admin/user	Tue Nov 26 13:28:27 2019
config-dbase	started	ams	admin/user	Tue Nov 26 13:28:27 2019
iot-profiler	started	ams	admin/user	Tue Nov 26 13:28:27 2019

```
-> appmgr start ams-apps iot-profiler -args -h 10.10.10.1 -p 1883
Success to start iot-profiler
```

## Release History

---

## pkgmgr

Use this command to install Debian packages for non-AOS software applications.

```
pkgmgr {[install | verify] package_file_name | remove package_name}
```

---

### Syntax Definitions

<b>install</b>	Extracts and installs the contents of the package to system memory.
<b>remove</b>	Removes all the files of this package from system memory.
<b>verify</b>	Verifies the ALE signature and the checksums for the Debian package.
<i>package_file_name</i>	Name of the Debian package file
<i>package_name</i>	Name of the package displayed in output of <b>pkgmgr list</b> command.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Enter **pkgmgr** without any parameters to see the command syntax.
- The Debian package must be downloaded from the service and support website ([businessportal2.alcatel-lucent.com](http://businessportal2.alcatel-lucent.com)).
- The Debian package file must be copied to the *pkg* in the running directory. For example, if working is the running directory, then copy to */flash/working/pkg* directory of the switch.
- Use the **pkgmgr verify** command to verify the contents of the package.
- Use the **pkgmgr install** command to install the package.
- After the package is installed successfully, use the **pkgmgr commit** command to save the installation permanently.
- If the switch restricts installation of the package due to memory threshold, use the **health threshold memory** command to increase the RAM memory of the switch.
- Use the **pkgmgr remove** command to remove the package.

---

**Note.** In a Virtual Chassis environment, if this **pkgmgr** command is successful on Master unit, it will be automatically executed on all units of the Virtual Chassis.

---

## Examples

```
-> pkgmgr verify ams-8.6.R02-6235.deb
CLI output:
Verifying MD5 checksum.. OK

-> pkgmgr install ams-8.6.R02-6235.deb

Verifying MD5 checksum.. OK
System Memory check.. PASS
Preparing to replace ams-8.6.R02-6235 (using /flash/working/pkg/ams-8.6.R02-6235.deb)...
Setting up ams (8.6.R02-6235.deb)...

# 59 Chassis MAC Server (CMS) Commands

The Chassis MAC Server (CMS) manages MAC addresses on the switch. The MAC addresses managed via the CMS are used as identifiers for the following functions:

- Base chassis MAC address
- Ethernet Management Port (EMP)
- VLAN router ports

Similar to IP addresses, MAC addresses are assigned by the Internet Assigned Numbers Authority (IANA) and distributed to users in sequential blocks. A sequential block of MAC addresses is referred to as a MAC address *range*.

The MAC address range is stored on the switch's EEPROM. The switch supports one MAC address range only. By default, this MAC address range contains thirty-two (32) factory-installed, contiguous MAC addresses.

MIB information for the Chassis MAC Server commands is as follows:

*Filename:* ALCATEL-IND1-MAC-SERVER-MIB.mib  
*Module:* alcatelIND1MacServerMIB

A summary of the available commands is listed here:

---

**mac-range eeprom**  
**show mac-range**  
**show mac-range alloc**

---

## mac-range eeprom

Modifies the default MAC range on the switch's EEPROM.

**Note.** Use caution when modifying the default MAC range. Improper use of this command can disable your system and adversely affect your network. Contact Alcatel-Lucent Enterprise Customer Support for further assistance.

**mac-range eeprom** *start\_mac\_address count*

### Syntax Definitions

*start\_mac\_address*                      The first MAC address in the modified range. Enter the MAC address in the following format: **xx:xx:xx:xx:xx:xx**, where **x** is a hex value (0–f).

*count*                                      Specifies the number of MAC addresses in the range (1–256).

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	No	No	No	No

### Usage Guidelines

- Because the factory-installed 32 MAC addresses are sufficient for most network configurations, this command should only be used by qualified network administrators for special network requirements.
- After modifying a MAC address range by using the **mac-range eeprom** command, you must reboot the switch. Otherwise, MAC addresses for existing VLAN router ports will not be allocated properly.
- All MAC addresses in a range must be contiguous (i.e., there cannot be any gaps in the sequence of MAC addresses).

### Examples

```
-> mac-range eeprom 00:20:da:23:45:35 32
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

[show mac-range](#)

Displays the MAC range table.

## MIB Objects

```
chasMacAddressRangeTable
  chasMacRangeIndex
  chasGlobalLocal
  chasMacAddressStart
  chasMacAddressCount
```

---

## show mac-range

Displays the MAC range table.

**show mac-range** [*index*]

---

### Syntax Definitions

*index* Identifies the MAC range by referring to its position in the MAC range table.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Because the switch currently supports one MAC address range only, index position 1 displays.

### Examples

```
-> show mac range
```

```

Mac
Range  Row Status      Local/
Global  Start Mac Addr      End Mac Addr
-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
01      ACTIVE              GLOBAL  00:d0:95:6a:79:6e  00:d0:95:6a:79:8d

```

#### output definitions

---

<b>Mac Range</b>	The MAC range index number (1). Because the switch currently supports one MAC address range only, index position 1 displays.
<b>Row Status</b>	The current status of the MAC range. The status <b>ACTIVE</b> refers to MAC addresses that are available for allocation to VLAN router ports and other applications.
<b>Local/Global</b>	The Local/Global status for MAC addresses in the range. Local MAC addresses have the local bit set in the first byte of the address. Global MAC addresses (also referred to as <i>EEPROM</i> MAC addresses) have the global bit set in the first byte of the address and are stored on the switch's EEPROM. Because the switch's default MAC range is stored on EEPROM, the status GLOBAL displays.
<b>Start Mac Addr</b>	The first MAC address in the MAC address range.
<b>End Mac Addr</b>	The last MAC address in the MAC address range.

---

## Release History

Release 7.1.1; command introduced.

## Related Commands

**mac-range eeprom**                      Modifies the default MAC range on the switch's EEPROM.

## MIB Objects

chasMacAddressRangeTable

    chasMacRangeIndex

    chasGlobalLocal

    chasMacAddressStart

    chasMacAddressCount

    chasMacRowStatus

---

## show mac-range alloc

Displays all allocated addresses from the MAC range table.

**show mac-range** [*index*] **alloc**

---

### Syntax Definitions

*index* Identifies the MAC range by referring to its position in the MAC range table. Currently, index position 1 only is supported.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	No	No	No	No	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show mac-range alloc
Range      Mac Address      Application      Id
-----+-----+-----+-----
01         00:d0:95:6b:09:40 CHASSIS          0
01         00:d0:95:6b:09:41 802.1X           0
01         00:d0:95:6b:09:5f CHASSIS          1
```

### output definitions

---

<b>Range</b>	The MAC range's index number. The index number refers to the position of the range in the MAC range table. Values may range from 1–20. MAC ranges are divided by index number into four distinct categories. Refer to <a href="#">page 59-4</a> for more information.
<b>Mac Address</b>	Current MAC address allocated for a specific application.
<b>Application</b>	The application for which the allocated MAC address is being used. Current options include <b>VLAN</b> , <b>802.1X</b> , and <b>CHASSIS</b> . <b>VLAN</b> refers to MAC addresses allocated to VLAN router ports in multiple MAC router mode. <b>CHASSIS</b> refers to MAC addresses used for the base chassis MAC address and the Ethernet Management Port (EMP).

*output definitions (continued)*

---

<b>Id</b>	An ID number used to identify an allocated MAC address. ID numbers are used for the base chassis MAC address and Ethernet Management Port (EMP), as well as VLAN router ports. The ID value 0 is reserved for the switch's base chassis MAC address. The ID value 1 is reserved for the EMP MAC address. Router ports assigned to VLANs 2 through 4094 are given corresponding MAC IDs. For example, a router port configured on VLAN 44 receives an allocated MAC ID of 44. Because default VLAN 1 router ports use the base chassis MAC address by default, any router port configured on VLAN 1 is assigned the ID value 0.

# 60 Network Time Protocol Commands

The Network Time Protocol (NTP) is used to synchronize the time of a computer client or server to another server or reference time source, such as a radio or satellite receiver. It provides client time accuracies within a millisecond on LANs, and up to a few tens of millisecond on WANs. Typical NTP configurations utilize multiple redundant servers and diverse network paths in order to achieve high accuracy and reliability.

It is important for networks to maintain accurate time synchronization between network nodes. The standard timescale used by most nations of the world is based on a combination of Universal Coordinated Time (UTC) (representing the Earth's rotation about its axis) and the Gregorian Calendar (representing the Earth's rotation about the Sun). UTC time is disseminated by various means, including radio and satellite navigation systems, telephone modems, and portable clocks.

The MIB information for NTP is as follows:

*Filename:* ALCATEL-IND1-NTP-MIB.mib  
*Module:* alcatelIND1NTPMIB

A summary of available commands is listed here:

---

**ntp server**  
**ntp server synchronized**  
**ntp server unsynchronized**  
**ntp client**  
**ntp src-ip preferred**  
**ntp broadcast**  
**ntp broadcast-client**  
**ntp broadcast-delay**  
**ntp key**  
**ntp key load**  
**ntp authenticate**  
**ntp master**  
**ntp interface**  
**ntp max-associations**  
**ntp broadcast**  
**ntp peer**  
**ntp vrf-name**  
**show ntp status**  
**show ntp client**  
**show ntp client server-list**  
**show ntp server client-list**  
**show ntp server status**  
**show ntp keys**  
**show ntp peers**  
**show ntp server disabled-interfaces**

---

## ntp server

Specifies an NTP server from which the switch will receive updates.

**ntp server** {*ip\_address* / *server\_name*} [**key** *key\_id* | | **minpoll** *poll* / **maxpoll** *poll* / **version** *version* / **prefer** | **burst** | **iburst** | **preempt**]

**no ntp server** *ip\_address*

---

### Syntax Definitions

<i>ip_address</i>	The IP address of the NTP server to be added or deleted to the client's server list.
<i>server_name</i>	Fully qualified NTP server domain name.
<i>key_id</i>	The key identification number that corresponds to the specified NTP server. The value ranges from 0 to 65534. 0 can be used to unconfigure the key ID.
<b>minpoll</b> <i>poll</i>	It specifies the minimum polling interval for NTP messages, in seconds. This number is determined by raising 2 to the power of the number entered. Therefore, if 4 were entered, the minimum poll time would be 16 seconds ( $2^4 = 16$ ). The minimum poll interval defaults to 6 (64 s), but can be decreased by the minpoll option to a lower limit of 3 (8 s) and an upper limit of 17 (36.4h).
<b>maxpoll</b> <i>poll</i>	It specifies the maximum polling interval for NTP messages, in seconds. This number is determined by raising 2 to the power of the number entered. Therefore, if 4 were entered, the maximum poll time would be 16 seconds ( $2^4 = 16$ ). The maximum poll interval defaults to 10 (1,024 s), but can be increased by the maxpoll option to an upper limit of 17 (36.4 h) and a lower limit of 3 (8 s). The maxpoll must not be less than the minpoll value.
<i>version</i>	The version of NTP being used. This will be 1, 2, 3, or 4.
<b>prefer</b>	Marks this server as the preferred server. A preferred server's timestamp will be used before another server.
<b>burst</b>	Enables burst mode. The burst mode allows the exchange of eight NTP messages (instead of one) when the server is reachable and at each poll interval to achieve faster synchronization. The spacing between the first and the second packet is 16 seconds to allow a modem call to complete, while the spacing between the remaining packets is 2 seconds.
<b>iburst</b>	Enables initial burst (iburst) mode. The iburst mode allows immediate exchange of eight NTP messages (instead of one) when the server is unreachable and at each poll interval, to achieve faster initial synchronization acquisition. The spacing between the packets is 16 seconds to allow a modem call to complete. Once the server is reachable, the spacing between the packets is 2 seconds.
<b>preempt</b>	Enables the preemption mode for the server rather than the default persistent.

## Defaults

Parameter	Default
<i>version</i>	4
<b>minpoll</b> <i>poll</i>	6
<b>maxpoll</b> <i>poll</i>	10
<b>prefer</b>	not preferred
<b>burst</b>	no burst
<b>iburst</b>	no iburst

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of this command to clear an NTP server from the list of configured servers.
- To configure NTP in the client mode you must first define the NTP servers. Up to 12 NTP servers may be defined.
- Either an IP address or domain name for the specified server can be entered.
- The NTP key identification is an integer. It corresponds to an MD5 authentication key contained in an authentication file (.txt) located on the server. This file must be on both the server and the local switch, and match, for authentication to work. Enter the key identification using the **key** keyword if the server is set to MD5 authentication.
- An authentication key is composed of a 32-bit integer and 32-byte string of characters. The integer format is hexadecimal. For an NTP message to be authenticated the NTP client authentication key must match the key configured at the NTP server. This means the authentication keys must be distributed in advance of configuring the NTP client. If authentication is disabled but authentication key is present, the association will still be unauthenticated.
- Use the **version** keyword to set the correct version of NTP.
- Use the **minpoll** keyword to set the minimum poll time for the server. This number is determined by raising 2 to the power of the number entered. Therefore, if 4 were entered, the minimum poll time would be 16 seconds ( $2^4 = 16$ ). The client will poll the server for a time update when the **minpoll** time is exceeded.
- Use the **maxpoll** keyword to specifies the maximum polling interval for NTP messages. This number is determined by raising 2 to the power of the number entered. The maximum poll interval defaults to 10 (1,024 s), but can be increased by the maxpoll option to an upper limit of 17 (36.4 h) and a lower limit of 3 (8 s). The maxpoll must not be less than the minpoll value.
- NTP authentication must be disabled before adding or removing an NTP server.

- Burst mode of operation improves timekeeping quality with the server command and iburst mode of operation is designed to speed the initial synchronization acquisition with the server command.
- When preempt is enabled, the specified server is marked unavailable for selection if any error (authentication failure) is detected on a connection between the local device and reference clock. The server is marked available for selection if no other connections are available and no error is detected on the connection between the local device and reference clock.

## Examples

```
-> ntp server 1.1.1.1
-> ntp server 0.pool.ntp.org
-> ntp server 1.1.1.1 key 1
-> ntp server 1.1.1.1 version 4
-> ntp server 0.pool.ntp.org minpoll 5
-> ntp server 0.pool.ntp.org maxpoll 6
-> ntp server 1.1.1.1 burst
-> ntp server 1.1.1.1 iburst
-> ntp server 1.1.1.1 preempt
-> no ntp server 1.1.1.1
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R4: **server name**, **maxpoll**, **burst**, **iburst**, **preempt** keywords added.

## Related Commands

<a href="#">ntp client</a>	Enables or disables NTP operation on the switch.
<a href="#">show ntp client server-list</a>	Displays a list of the servers with which the NTP client synchronizes.
<a href="#">show ntp server status</a>	Displays the basic server information for a specific NTP server or a list of NTP servers.

  alaNtpPeerIBurst
  alaNtpPeerPreempt
  alaNtpPeerMaxpoll
```

---

## ntp server synchronized

Enables an NTP client to invoke tests for NTP server synchronization as specified by the NTP protocol.

**ntp server synchronized**

---

### Syntax Definitions

N/A

### Defaults

By default, NTP synchronization is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The NTP protocol discards the NTP servers that are unsynchronized. However, the unsynchronized NTP servers are used as network time sources.

### Examples

```
-> ntp server synchronized
```

### Release History

Release 7.1.1; command was introduced.

Release 8.5R4; command deprecated.

### Related Commands

#### [ntp server unsynchronized](#)

Disables an NTP client from invoking tests for NTP server synchronization. This allows the NTP client to synchronize with unsynchronized NTP servers in the network.

### MIB Objects

alaNtpConfig

alaNtpPeerTests

---

## ntp server unsynchronized

Disables an NTP client from invoking tests for NTP server synchronization. This allows the NTP client to synchronize with unsynchronized NTP servers in the network.

### ntp server unsynchronized

---

#### Syntax Definitions

N/A

#### Defaults

N/A

#### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

#### Usage Guidelines

When NTP peer synchronization tests are disabled, the NTP client is able to synchronize with either an NTP peer that is not synchronized with an atomic clock or a network of NTP servers that will finally synchronize with an atomic clock.

#### Examples

```
-> ntp server unsynchronized
```

#### Release History

Release 7.1.1; command was introduced.

Release 8.5R4; command deprecated.

#### Related Commands

##### [ntp server synchronized](#)

Enables an NTP client to invoke tests for NTP server synchronization as specified by the NTP protocol.

#### MIB Objects

alaNtpConfig

alaNtpPeerTests

---

## ntp client

Enables or disables NTP time synchronization discipline.

**ntp client admin-state {enable | disable}**

---

### Syntax Definitions

**enable**                      Enables NTP.  
**disable**                      Disables NTP.

### Defaults

NTP protocol is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to enable or disable NTP. Before NTP can be enabled, an NTP server must be specified using the [ntp server](#) command. Up to 12 NTP servers may be defined.
- It is not necessary to specify an NTP server if the NTP client will only receive time updates from NTP broadcast servers.
- NTP client will not synchronize with an unsynchronized NTP server (Stratum 16).

### Examples

```
-> ntp client enable
-> ntp client disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[ntp server](#)                      Specifies an NTP server from which the switch will receive updates.

### MIB Objects

alaNtpEnable

---

## ntp src-ip preferred

Configures a source IP address to use as the source for NTP packets.

**ntp src-ip preferred** {**default** | **no-loopback0** | *ip\_address*}

**no ntp src-ip preferred**

---

### Syntax Definitions

#### default

The Loopback0 address, if configured, will be used for the source IP address field. If no Loopback0 is configured, the EMP-VC IP address will be used. If no EMP-VC IP address is configured, the preferred IP address will be used. If no preferred IP address is configured the first available IP address on the switch will be used.

#### no-loopback0

The Loopback0 address will not be used for the source IP address field and either the preferred IP address (if configured) or the first available IP address on the switch will be used.

#### *ip\_address*

The IP address to be used in the source IP field.

### Defaults

By default, the NTP source IP preferred setting is set to the **default** parameter.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- By default The Loopback0 address, if configured, will be used for the source IP address.
- If no Loopback0 is configured, the VC-EMP IP address will be used for the source IP address.
- If no VC-EMP IP address is configured, the preferred IP address will be used for the source IP address.
- If no preferred IP address is configured the first available IP address on the switch will be used as the source IP address.
- When configuring a preferred IP address, that address must already exist on the switch.
- If the configured preferred IP address is the same as the IP address that would have been automatically chosen by the switch, then the 'ntp src-ip preferred' command will not be included in the output of the 'configuration snapshot' command since only non-default settings are included in the output.
- Use the **no** form of this command to clear a specific IP address and change the behavior back to default.

## Examples

```
-> ntp src-ip preferred 192.168.10.1  
-> ntp src-ip preferred no-loopback0  
-> ntp src-ip preferred default
```

## Release History

Release 7.1.1; command was introduced.

Release 7.3.4; command deprecated.

## Related Commands

[show ntp status](#)

Displays the NTP configuration and status.

## MIB Objects

N/A

---

## ntp broadcast-client

Enables or disables the NTP client to receive time updates from NTP broadcast servers.

**ntp broadcast-client** {enable | disable}

---

### Syntax Definitions

**enable** Enables the client broadcast mode.  
**disable** Disables the client broadcast mode.

### Defaults

Broadcast mode is disabled by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Broadcast mode is intended for operation on networks with numerous workstations and where the highest accuracy is not required. In a typical scenario, one or more time servers on the network broadcast NTP messages that are received by NTP hosts. Correct time is determined from this NTP message based on a pre-configured latency or broadcast delay in the order of a few milliseconds.
- In order to configure NTP in broadcast client mode, it is required to define the network server to client broadcast delay.

### Examples

```
-> ntp broadcast-client enable
-> ntp broadcast-client disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**ntp broadcast-delay** Sets the broadcast delay time in microseconds.

### MIB Objects

alaNtpBroadcastEnable

---

## ntp broadcast-delay

Sets the broadcast delay time in microseconds of received NTP broadcast messages.

**ntp broadcast-delay** *microseconds*

---

### Syntax Definitions

*microseconds*                      The number of microseconds for the broadcast delay.

### Defaults

parameter	default
<i>microseconds</i>	4000

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

When running in the NTP client broadcast mode, a broadcast delay must be set. The broadcast delay is the number of microseconds added to the timestamp received from a broadcast NTP server.

### Examples

```
-> ntp broadcast-delay 1000
-> ntp broadcast-delay 10000
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[ntp broadcast](#)                      Enables or disables the client's broadcast mode.

### MIB Objects

alaNtpBroadcastDelay

---

## ntp key

Labels the specified authentication key identification as trusted or untrusted.

**ntp key** *key* [**trusted** | **untrusted**]

---

### Syntax Definitions

<i>key</i>	The key number matching an NTP server.
<b>trusted</b>	Signifies that the specified key is trusted and can be used for authentication.
<b>untrusted</b>	Signifies that the specified key is not trusted and cannot be used for authentication. Synchronization will not occur with an untrusted authentication key.

### Defaults

By default, all authentication key are untrusted.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Authentication keys are stored in a key file and loaded into memory when the switch boots. The keys loaded into memory are not trusted until this command is used. The location of the file containing set of generated authentication keys is /flash/network/ntp.keys.
- Once the keys are loaded into software (on boot up of the switch), they must be activated by being labeled as trusted. A trusted key will authenticate with a server that requires authentication as long as the key matches the server key.
- New keys must be added manually to the key file. A newly added key will not be loaded into the switch software until the **ntp key load** command is issued, or the switch is rebooted.
- An authentication key is composed of a 32-bit integer and 32-byte string of characters. The integer format is hexadecimal. For an NTP message to be authenticated the NTP client authentication key must match the key configured at the NTP server. This means the authentication keys must be distributed in advance of configuring the NTP client. If authentication is disabled but authentication key is present, the association will still be unauthenticated.
- By default all keys read from the ntp.conf key file are untrusted therefore keys must be set to 'trusted' status to allow NTP to use the key for authentication.

## Examples

```
-> ntp key 5 trusted
-> ntp key 2 untrusted
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

**ntp key** Sets the public key the switch uses when authenticating with the specified NTP server.

**ntp client** Enables or disables NTP operation on the switch.

## MIB Objects

```
alaNtpAccessKeyIdTable
  alaNtpAccessKeyIdKeyId
  alaNtpAccessKeyIdTrust
```

---

## ntp key load

Loads the current key file into memory.

**ntp key load**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command reloads the key file into the switch memory. This allows for new keys in the key file to be added to the list of keys the switch can use for authentication.
- Newly added keys must be labeled as **trusted** with the **ntp key** command before being used for authentication.
- By default, all authentication keys are untrusted therefore reloading a key file will change any current trusted keys to untrusted status.
- The file ntp.keys is used during the establishment of a set of authentication keys that are used by the NTP protocol. The location of this file is fixed in directory /flash/network.

### Examples

```
-> ntp key load
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

- ntp key** Labels the specified authentication key identification as trusted or untrusted.
- ntp server** Specifies an NTP server from which this switch will receive updates.

### MIB Objects

alaNtpAccessRereadkeyFile

---

## ntp authenticate

Enables or disables the authentication on a configured NTP server.

**ntp authenticate {enable | disable}**

---

### Syntax Definitions

**enable** Enables authentication for NTP server.  
**disable** Disables authentication for NTP server.

### Defaults

By default, NTP authentication is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to enable or disable authentication for NTP server.
- Before NTP authentication is enabled, NTP operation should be enabled by using [ntp client](#) command.
- Before enabling the NTP operation, NTP server must be specified using the [ntp server](#) command.
- NTP authentication must be disabled before adding or removing an NTP server.

### Examples

```
-> ntp authenticate enable  
-> ntp authenticate disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show ntp status](#) Displays the information about the current NTP status.

### MIB Objects

alaNtpAuthenticate

---

## ntp master

Specifies the stratum value for unsynchronized switch to act as an authoritative NTP source.

**ntp master** *stratum\_number*

---

### Syntax Definitions

*stratum\_number* Integer value ranging from 2 to 16.

### Defaults

Parameter	Default
<i>stratum_number</i>	16

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to synchronize improved clocks with lower strata value if any of the trustworthy NTP sources comes up.
- Use default value of 16 if switch is not synchronized with itself.
- When the switch is synchronized, the stratum number should correspond to peer/server.

### Examples

```
-> ntp master 4
```

### Release History

Release 7.1.1; command was introduced.

Release 8.5R4; command deprecated.

### Related Commands

[show ntp status](#) Displays current NTP status.

### MIB Objects

alaNtpConfig  
alaNtpSysStratum

---

## ntp interface

Enables or Disables NTP server functionality for an interface.

**ntp interface** {*interface\_ip*} {**enable** | **disable**}

---

### Syntax Definitions

*interface\_ip* IP address of an interface on which NTP server functionality is to be disabled.

**enable** Enables NTP server functionality on an interface.

**disable** Disables NTP sever functionality on an interface.

### Defaults

By default, NTP server functionality is enabled on all the interfaces.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to enable or disable the incoming NTP request.
- Disabling the NTP server functionality drops the NTP request on an interface and synchronization information is not sent out.

### Examples

```
-> ntp interface 10.10.10.1 disable
-> ntp interface 10.10.10.1 enable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show ntp status](#) Displays current NTP status.

### MIB Objects

alaNtpAccessRestrictedTable  
alaNtpAccessRestrictedIpAddress

---

## ntp max-associations

Configures the maximum number of associations on the switch.

**ntp max-associations** *number*

---

### Syntax Definitions

*number* Maximum no of client/server and peer associations. Integer value ranging from 0 to 512.

### Defaults

By default, 32 associations are allowed on the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to restrict the number of client/server and peer association.
- The command can be used to change the default value of 32 to any value between 0 to 512.
- The command protects the switch from overwhelming with the NTP requests. When the limit is reached, trap is sent to indicate the switch.

### Examples

```
-> ntp max-associations 20
```

### Release History

Release 7.1.1; command was introduced.

Release 8.6R2; max value increased to 512.

### Related Commands

[show ntp status](#) Displays current NTP status.

### MIB Objects

alaNtpConfig  
alaNtpMaxAssociation

---

## ntp broadcast

Enables NTP to broadcast synchronized information to all the clients in the subnet in the configured interval.

**ntp broadcast** {*broadcast\_addr*} [**version** *version*] [**minpoll** *poll\_interval*]

**no ntp broadcast** {*broadcast\_addr*}

---

### Syntax Definitions

<i>broadcast_addr</i>	Subnet for which broadcast updates are regularly sent.
<i>version</i>	NTP version on which the broadcast updates are sent out on the subnet for the clients. Value is 3 or 4.
<i>poll_interval</i>	Polling interval for NTP broadcast message. This value is measured in seconds.

### Defaults

Parameter	Default
<i>version</i>	4
<i>poll_interval</i>	6

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to configure NTP to act in broadcast server mode.
- Use the **no** form of this command to remove the configured broadcast servers. This also disables NTP synchronization information being sent for that broadcast subset.
- The NTP broadcast address needs to be defined to enable NTP broadcast mode. A maximum of 3 broadcast addresses can be configured.
- Use the **version** keyword to set the correct version of NTP.
- Use the **minpoll** keyword to set the minimum poll time for the server. This number is determined by raising 2 to the power of the number entered.

### Examples

```
-> ntp broadcast 10.145.59.255 version 4 minpoll 5
-> no ntp broadcast 10.145.59.255
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

[ntp broadcast](#)

Enables or disables the client's broadcast mode.

[ntp broadcast-delay](#)

Sets the broadcast delay time in microseconds

## MIB Objects

alaNtpPeerTable

  alaNtpPeerType

  alaNtpPeerVersion

  alaNtpPeerMinpoll

---

## ntp peer

Configures NTP to operate in the symmetric active peering mode. This also enables the establishment of an active symmetric association with the specified remote peer.

**ntp peer** {*ip\_address*} [**key** *key\_id*] [**version** *version*] [**minpoll** *poll\_interval*]

**no ntp peer** {*ip\_address*}

---

### Syntax Definitions

<i>ip_address</i>	IP address of the remote peer.
<i>key_id</i>	Authentication key for the remote peer.
<i>version</i>	NTP packet version to be used for the peer association.
<i>poll_interval</i>	Polling interval for NTP broadcast message. Poll interval which when expires, packets will be sent to the peer.

### Defaults

Parameter	Default
<i>version</i>	4
<i>poll_interval</i>	6

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use **no** form of this command to remove the peers that are configured to act in symmetric active mode. This command deletes the symmetric active association with the remote peer.
- Use the **version** keyword to set the correct version of NTP.
- Use the **minpoll** keyword to set the minimum poll time for the server. This number is determined by raising 2 to the power of the number entered.
- The command should not be used for b(Broadcast), m(Multicast) or r(Reference clock address 127.127.x.x).
- *ip-address* is the mandatory parameter to be entered in the command while *key id* is the optional parameter. If *key id* is not specified, then peering will not be authenticated.

### Examples

```
-> ntp peer 172.18.16.112
-> no ntp peer 172.18.16.112
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

```

---

## ntp vrf-name

Sets the VRF to be used for all NTP operations (both client and server).

**ntp vrf-name** *name*

---

### Syntax Definitions

*name* The name of the VRF to be used for all NTP operations.

### Defaults

Parameter	Default
<i>name</i>	default

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> ntp vrf-name vrf1
```

### Release History

Release 7.3.1; command introduced.

### Related Commands

- [show ntp status](#) Displays the information about the current NTP status.
- [show ntp client](#) Displays information about the current client NTP configuration.

### MIB Objects

alaIpNtpVrfName

---

## show ntp status

Displays the information about the current NTP status.

**show ntp status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command displays the information about the status of NTP, which is configured along with other global configuration. See the Examples section for more information.
- If the source IP Configuration is done in default or no-loopback0 then the source ip-address will not be displayed in the output of the **show ntp status** command.

### Example

```
-> show ntp status
Current time:                Mon, Jan 21 2019  7:31:04.685 (UTC),
Last NTP update:            Mon, Jan 21 2019  7:30:10.160 (UTC),
Server reference:           10.10.10.10,
Client mode:                 enabled,
Broadcast client mode:      disabled,
Broadcast delay (microseconds): 4000,
Stratum:                     4,
Maximum Associations Allowed: 32,
Authentication:             enabled,
VRF Name:                   default
```

---

<b>Current time</b>	The current time for the NTP client.
<b>Last NTP update</b>	The time of the last synchronization with an NTP server.
<b>Server reference</b>	The source of the time signal, which is the address of the NTP server that provided the currently-used time update.
<b>Client mode</b>	Whether the NTP client software is enabled or disabled.
<b>Broadcast client mode</b>	What NTP mode the client is running in, either client or broadcast.

---

<b>Broadcast delay</b>	The number of microseconds in the advertised broadcast delay time. This field is absent if the client broadcast mode is disabled.
<b>Stratum</b>	The stratum of the server. The stratum number is the number of hops from a UTC time source.
<b>Max-Association</b>	Maximum association on the switch that restricts the number of client/server and peer association
<b>Authentication</b>	Whether Authentication is enabled or disabled
<b>VRF Name</b>	Name of the VRF.

---

## Release History

Release 7.1.1; command introduced.

Release 7.3.1; **vrf** parameter added.

## Related Command

<b>ntp client</b>	Enables or disables NTP operation on the switch.
<b>ntp server</b>	Specifies an NTP server from which the switch will receive updates
<b>ntp server synchronized</b>	Enables an NTP client to invoke tests for NTP server synchronization as specified by the NTP protocol.
<b>ntp max-associations</b>	Configures the maximum number of associations on the switch.
<b>ntp master</b>	Specifies the stratum value for unsynchronized switch
<b>ntp broadcast</b>	Enables or disables the client's broadcast mode.
<b>show ntp client</b>	Displays information about the current client NTP configuration.
<b>show ntp client server-list</b>	Displays a list of the servers with which the NTP client synchronizes
<b>show ntp server client-list</b>	Displays the basic server information for a specific NTP server or a list of NTP servers

## show ntp client

Displays information about the current client NTP configuration.

**show ntp client**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays the current configuration parameters for the NTP client. The display is slightly different depending on what has been configured on the client. See the Examples section for more information.

### Examples

```
-> show ntp client
Current time:                Mon, Jan 21 2019  7:31:12.505 (UTC),
Last NTP update:            Mon, Jan 21 2019  7:30:10.160 (UTC),
Server reference:           10.10.10.10,
Client mode:                 enabled,
Broadcast client mode:      disabled,
Broadcast delay (microseconds): 4000,
VRF Name:                   default
```

#### *output definitions*

---

<b>Current time</b>	The current time for the NTP client.
<b>Last NTP update</b>	The time of the last synchronization with an NTP server.
<b>Server reference</b>	The source of the time signal, which is the address of the NTP server that provided the currently-used time update.
<b>Client mode</b>	Whether the NTP client software is enabled or disabled.
<b>Broadcast client mode</b>	What NTP mode the client is running in, either client or broadcast.
<b>Broadcast delay</b>	The number of microseconds in the advertised broadcast delay time. This field is absent if the client broadcast mode is disabled.
<b>VRF Name</b>	Name of the VRF.

Enables or disables NTP operation on the switch.

**MIB Objects**

alaNtpLocalInfo  
alaIpNtpVrfName

---

## show ntp client server-list

Displays a list of the servers with which the NTP client synchronizes.

**show ntp client server-list**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to display tabular information on the current NTP client to server association status.

### Examples

```
-> show ntp client server-list
```

Legends: + active peer, - passive peer, = client, \* current system peer,  
^ broadcast server, ' broadcast client

Mode	IP Address	Ver	Key	St	when	poll	reach	Delay	Offset	Disp
*	198.206.181.70	4	0	2	895	1024	377	0.167	0.323	0.016
=	198.206.181.123	4	0	16	591	1024	377	0.000	0.000	0.000

#### output definitions

---

<b>Mode</b>	"+" indicates an active peer "-" indicates a pasive peer "=" indicates a client "*" indicates current system peer "^" indicates a broadcast server "\'" indicates a broadcast client
<b>IP Address</b>	The server IP address.
<b>Ver</b>	The version of NTP the server is using. Versions 3 and 4 are valid.
<b>Key</b>	The NTP server's public key. This must be accurate and the same as the NTP server, or the client switch will not be able to synchronize with the NTP server. A zero (0) means there is no key entered.
<b>St</b>	The stratum of the server.
<b>When</b>	Number of seconds passed since last response from remote host.

*output definitions*

---

<b>Poll</b>	Polling interval to the remote host in seconds.
<b>Reach</b>	This is a shift register used to determine the reachability status of this peer. This register is displayed to the user in octal values instead of binary, decimal or even hex. The maximum value of an eight-bit binary number is 11111111, which is 377 in octal.
<b>Delay</b>	The delay received from the server in its timestamp.
<b>Offset</b>	The offset received from the server in its timestamp.
<b>Disp</b>	The dispersion value received from the server in its timestamp.

---

**Release History**

Release 7.1.1; command was introduced.

Release 8.5R4; “When”, “Poll”, “Reach” fields added.

    alaNtpPeerAuth

---

## show ntp server status

Displays the basic server information for a specific NTP server or a list of NTP servers.

**show ntp server status** [*ip\_address*]

---

### Syntax Definitions

*ip\_address*                      The IP address of the NTP server to be displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command displays information on the status of any or all configured NTP servers/peers.
- To display a specific server, enter the command with the server's IP address. To display all servers, enter the command with no server IP address.

### Examples

```
-> show ntp server status
IP address      = clock3.ovccirrus.com [123.108.200.124],
Host mode      = client,
Peer mode      = server,
Prefer         = no,
Version        = 4,
Key            = 0,
Stratum        = 2,
Minpoll        = 6 (64 seconds),
Maxpoll        = 10 (1024 seconds),
Poll           = 1024 seconds,
when           = 283 seconds,
Delay          = 0.016 seconds,
Offset         = -180.232 seconds,
Dispersion     = 7.945 seconds
Root distance  = 0.026,
Precision      = -14,
Reference IP   = 209.81.9.7,
Status         = configured : reachable : rejected,
Uptime count   = 1742 seconds,
Reachability   = 1,
Unreachable count = 0,
Stats reset count = 1680 seconds,
```

```

Packets sent      = 1,
Packets received = 1,
Duplicate packets = 0,
Bogus origin     = 0,
Bad authentication = 0,
Bad dispersion   = 0,

-> show ntp server status 198.206.181.139
IP address       = 198.206.181.139,
Host mode       = client,
Peer mode       = server,
Prefer          = no,

**output definitions**

---

<b>IP address</b>	The server IP address.
<b>Host mode</b>	The host mode of this remote association.
<b>Peer mode</b>	The peer mode of this remote association.
<b>Prefer</b>	Whether this server is a preferred server or not. A preferred server is used to synchronize the client before a non-preferred server.
<b>Version</b>	The version of NTP the server is using. Versions 3 and 4 are valid.
<b>Key</b>	The NTP server's public key. This must be accurate and the same as the NTP server, or the client switch will not be able to synchronize with the NTP server. A zero (0) means there is no key entered.
<b>Stratum</b>	The stratum of the server. The stratum number is the number of hops from a UTC time source.
<b>Minpoll</b>	The minimum poll time. The client will poll the server for a time update every time this limit has been exceeded.

*output definitions (continued)*

---

<b>Maxpoll</b>	The maximum poll time.
<b>When</b>	Number of seconds passed since last response from remote host.
<b>Poll</b>	Polling interval to the remote host in seconds.
<b>Delay</b>	The delay received from the server in its timestamp.
<b>Offset</b>	The offset received from the server in its timestamp.
<b>Dispersion</b>	The dispersion value received from the server in its timestamp.
<b>Root distance</b>	The total round trip delay (in seconds) to the primary reference source.
<b>Precision</b>	The advertised precision of this association.
<b>Reference IP</b>	The IP address identifying the peer's primary reference source.
<b>Status</b>	The peer selection and association status.
<b>Uptime count</b>	The time period (in seconds) during which the local NTP server was associated with the switch.
<b>Reachability</b>	The reachability status of the peer.
<b>Unreachable count</b>	Number of times the NTP entity was unreachable.
<b>Stats reset count</b>	The time delay (in seconds) since the last time the local NTP server was restarted.
<b>Packets sent</b>	Number of packets sent.
<b>Packets received</b>	Number of packets received.
<b>Duplicate packets</b>	Number of duplicated packets received.
<b>Bogus origin</b>	Number of bogus packets.
<b>Bad authentication</b>	Number of NTP packets rejected for not meeting the authentication standards.
<b>Bad dispersion</b>	Number of bad dispersions.
<b>Last Event</b>	The last event.

---

**Release History**

Release 7.1.1; command was introduced.  
 Release 8.5R4; when and poll fields added.

**Related Command**

**ntp client** Enables or disables NTP operation on the switch.

**MIB Objects**

alaNtpPeerListTable  
 alaNtpPeerShowStatus

---

## show ntp keys

Displays information about all authentication keys.

**show ntp keys**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays the information on the current set of trusted authentication keys.

### Examples

```
-> show ntp keys
Key      Status
-----+-----
1        untrusted
2        untrusted
3        trusted
4        trusted
5        untrusted
6        untrusted
7        trusted
8        trusted
```

#### *output definitions*

---

<b>Key</b>	The key number corresponding to a key in the key file.
<b>Status</b>	Whether the key is trusted or untrusted.

---

### Release History

Release 7.1.1; command was introduced.

**Related Command**

**ntp key** Labels the specified authentication key identification as trusted or untrusted.

**ntp key load** Loads the current key file into memory.

**MIB Objects**

alaNtpAccessKeyIdTable

---

## show ntp peers

Displays the information about the current status on the NTP peer association.

**show ntp peers**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use this command to display the tabular information on the current NTP peer association status.

### Examples

```
-> show ntp peers
```

IP Address	Ver	Key	St	When	Poll	Reach	Delay	Offset	Disp
172.23.0.202	4	0	3	895	1024	377	0.300	0.404	0.0024
10.255.24.120	4	0	3	591	1024	377	0.016	0.250	0.0017

### output definitions

---

<b>IP Address</b>	Peer IP Address
<b>Ver</b>	The version of NTP the server is using. Versions 3 and 4 are valid.
<b>Key</b>	The NTP server's public key. This must be accurate and the same as the NTP server or the client switch will not be able to synchronize with the NTP server. A zero (0) means there is no key entered.
<b>St</b>	The stratum of the server.
<b>When</b>	Number of seconds passed since last response from remote host.
<b>Poll</b>	Polling interval to the remote host in seconds.
<b>Reach</b>	This is a shift register used to determine the reachability status of this peer. This register is displayed to the user in octal values instead of binary, decimal or even hex. The maximum value of an eight-bit binary number is 11111111, which is 377 in octal.
<b>Delay</b>	The delay received from the server in its timestamp.

*output definitions*

---

<b>Offset</b>	The offset received from the server in its timestamp.
<b>Disp</b>	The dispersion value received from the server in its timestamp.

---

**Release History**

Release 7.1.1; command was introduced.  
Release 8.5R4; When, Poll, Reach fields added.

**Related Command**

<a href="#">ntp client</a>	Enables or disables NTP operation on the switch.
<a href="#">show ntp status</a>	Displays the information about the current NTP status.
<a href="#">show ntp server status</a>	Displays the basic server information for a specific NTP server or a list of NTP servers.

  alaNtpPeerStratum
  alaNtpPeerListDelay
  alaNtpPeerShowOffset
  alaNtpPeerListDispersion
```

---

## show ntp server disabled-interfaces

Displays the IP addresses of the interfaces on which NTP server is not enabled.

**show ntp server disabled-interfaces**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command displays ip interfaces on which currently NTP server functionality is disabled.

### Examples

```
-> show ntp server disabled-interfaces
```

```
IP Address
```

```
-----
```

```
172.23.0.202
```

```
10.255.24.120
```

# 61 Session Management Commands

Session Management commands are used to monitor and configure operator sessions including FTP, Telnet, HTTP (WebView), console, Secure Shell, and Secure Shell FTP on the switch. (See the SNMP Commands chapter for SNMP session commands.) Maximum number of concurrent sessions allowed:

	OmniSwitch
<b>Telnet(v4)</b>	6
<b>FTP(v4)</b>	4
<b>SSH + SFTP(v4)</b>	8
<b>HTTP</b>	4

MIB information for commands in this chapter are as follows:

*Filename:* ALCATEL-IND1-SESSION-MGR-MIB.mib  
*Module:* alcatelIND1SessionMgrMIB

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

*Filename:* ALCATEL-IND1-IP-MIB.mib  
*Module:* alcatelIND1IPMIB

A summary of the available commands is listed here:

---

**session login-attempt**  
**session login-timeout**  
**session banner**  
**session timeout**  
**session prompt**  
**session xon-xoff**  
**show prefix**  
**user profile save**  
**user profile reset**  
**history**  
**command-log**  
**kill**  
**exit**  
**who**  
**whoami**  
**show session config**  
**show session xon-xoff**  
**more**  
**telnet**  
**ssh**  
**ssh login-grace-time**  
**ssh enforce-pubkey-auth**  
**ssh strong-ciphers**  
**ssh strong-hmacs**  
**installsshkey**  
**revokesshkey**  
**show command-log status**  
**show telnet**  
**show ssh**

---

## session login-attempt

Sets or resets the number of times a user can attempt unsuccessfully to log into the switch before the TCP connection is closed.

**session login-attempt** *integer*

---

### Syntax Definitions

*integer* The number of times the user can attempt to log in to the switch before the TCP connection is closed. Valid range is 1 to 10.

### Defaults

Default is 3 login attempts.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> session login-attempt 5
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

- [show session config](#) Displays Session Manager information such as banner file name, session timeout value, and default prompt value.
- [session login-timeout](#) Sets or resets the amount of time the user can take to accomplish a successful login to the switch.
- [session timeout](#) Configures the inactivity timer for a CLI, HTTP (including WebView), or FTP interface. When the switch detects no user activity for this period of time, the user is logged off the switch.

### MIB Objects

```
sessionMgr
  sessionLoginAttempt
```

---

## session login-timeout

Sets or resets the amount of time the user can take to accomplish a successful login to the switch. If the timeout period is exceeded, the TCP connection is closed by the switch.

**session login-timeout** *seconds*

---

### Syntax Definitions

*seconds* The number of seconds the switch allows for the user to accomplish a successful login. Valid range is from 5 to 600 seconds.

### Defaults

Login timeout default is 55 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> session login-timeout 30
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

- [show session config](#) Displays Session Manager information such as banner file name, session timeout value, default prompt value, login timer, and login attempt number.
- [session login-attempt](#) Sets or resets the number of times a user can attempt unsuccessfully to log into the switch before the TCP connection is closed.
- [session timeout](#) Configures the inactivity timer for a CLI, HTTP (including WebView), or FTP interface. When the switch detects no user activity for this period of time, the user is logged off the switch.

### MIB Objects

```
sessionMgr
    sessionLoginTimeout
```

---

## session banner

Sets or resets the file name of the user-defined banner. The banner is a welcome banner that appears after the user successfully logs onto the switch.

**session** {cli | ftp | http} banner *file\_name*

**no session** {cli | ftp | http} banner

---

### Syntax Definitions

<b>cli</b>	Creates/modifies the CLI banner file name.
<b>ftp</b>	Creates/modifies the FTP banner file name.
<b>http</b>	Creates/modifies the HTTP banner file name.
<i>file_name</i>	Banner file name including the path from the switch's /flash directory. The maximum length of the filename and path is 255 characters.

### Defaults

- A default banner is included in one of the switch's image files. It is automatically displayed at login so no configuration is needed.
- The user has the option of defining a custom supplementary banner or of using the default banner.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The **no session banner** command is used to disable a user defined session banner file from displaying when you log onto the switch.
- The **session banner** command is used to configure or modify the banner file *name*. You must use a text editor to edit the file containing the banner text.
- The banner file must be manually copied to each unit in a VC.

### Examples

```
-> session cli banner /switch/banner.txt
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [show session config](#)

Displays Session Manager information such as banner file name, session timeout value, and default prompt value.

## MIB Objects

SessionConfigTable

  SessionType

  SessionBannerFileName

---

## session timeout

Configures the inactivity timer for a CLI, HTTP (including WebView), or FTP interface. When the switch detects no user activity for this period of time, the user is logged off the switch.

```
session {cli | http | ftp} timeout minutes
```

---

### Syntax Definitions

<b>cli</b>	Sets the inactivity timeout for CLI sessions.
<b>http</b>	Sets the inactivity timeout for HTTP sessions.
<b>ftp</b>	Sets the inactivity timeout for FTP sessions.
<i>minutes</i>	Inactivity timeout value (in minutes). Valid range 1 to 596523.

### Defaults

parameter	default
<i>minutes</i>	4

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The inactivity timer value may be different for each type of interface, such as CLI (Console, Telnet), HTTP (including WebView), and FTP.
- If you change the timer, the new value does not affect current sessions; the new timer is applied to new sessions only.

### Examples

```
-> session cli timeout 5
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [show session config](#)

Displays Session Manager information, such as banner file name, session timeout value, and default prompt value.

## MIB Objects

SessionConfigTable

  SessionType

  SessionInactivityTimerValue

---

## session prompt

Configures the default CLI prompt for console and Telnet sessions. The prompt is the symbol and/or text that appears on the screen in front of the cursor.

**session prompt default** [*string*]

---

### Syntax Definitions

*string* Prompt string. Maximum length 31 characters.

### Defaults

parameter	default
<i>string</i>	->

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The new prompt will not take effect until you log off and back onto the switch.

### Examples

```
-> session prompt default -->
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show session config](#) Displays Session Manager information such as banner file name, session timeout value, and default prompt value.

### MIB Objects

SessionConfigTable  
 SessionType  
 sessionDefaultPromptString

---

## session xon-xoff

Enables/disables the XON-XOFF protocol on the console port.

```
session xon-xoff {enable | disable}
```

---

### Syntax Definitions

**enable** Enables XON-XOFF on the console port.  
**disable** Disables XON-XOFF on the console port.

### Defaults

parameter	default
enable / disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The switch may interpret noise from an RS232 line as Control-S (XOFF). If the **session console xon-xoff** command is enabled, traffic to the console port may be stopped.

### Examples

```
-> session xon-xoff enable
-> session xon-xoff disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**show session xon-xoff** Displays whether the console port is enabled or disabled for XON-XOFF.

### MIB Objects

```
sessionXonXoffEnable
```

---

## show prefix

Shows the command prefix (if any) currently stored by the CLI. Prefixes are stored for command families that support the prefix recognition feature.

`show prefix`

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Prefixes are stored for command families that support the prefix recognition feature. These command families include AAA, Interface, Link Aggregation, QoS, Spanning Tree, and VLAN Management. Other command families do not store a prefix.

### Examples

```
-> show prefix
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show prefix](#)

This command defines the format of the CLI prompt. The prompt can be defined to include the command prefix.

### MIB Objects

N/A

---

## user profile save

Saves the user account settings for prompts and the more mode screen setting. These settings will be automatically loaded when the user account logs on.

user profile save

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to save prompt definitions and more mode screen settings for use in future login sessions for the current user account.
- Use the **user profile reset** command to set values to their factory defaults.

### Examples

```
-> user profile save
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

#### [show prefix](#)

Defines substitute command text for the switch's CLI command keywords.

#### [user profile reset](#)

Resets the alias, prompt and more values to their factory defaults.

### MIB Objects

N/A

---

## user profile reset

Resets the alias, prompt, and more values to their factory defaults.

**user profile reset**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> user profile reset
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

#### [show prefix](#)

Defines substitute command text for the switch's CLI command keywords.

#### [user profile save](#)

Saves the user account settings for aliases, prompts and the more screen.

### MIB Objects

N/A

---

## history

Displays commands that you have recently issued to the switch. The commands are displayed in a numbered list.

**history** *number*

---

### Syntax Definitions

*number*                           The number of commands to display.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> history
1 show cmm
2 show fan
3 show sensor
```

#### *output definitions*

---

<b>Index</b>	The index of the commands for this CLI session and the associated command.
--------------	--

---

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**!**                               Recalls commands listed in the history buffer and displays them at the CLI prompt.

### MIB Objects

N/A

---

## !

Recalls commands listed in the history buffer and displays them at the CLI prompt.

!{! | *n*}

---

## Syntax Definitions

- !** Recalls the last command listed in the history buffer and displays that command at the CLI prompt.
- n*** Identifies a single command in the history buffer by number and displays that command at the CLI prompt.

## Defaults

N/A

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- You can use the **history** command to list all commands in the history buffer, then use the **!*n*** syntax to issue a single command from the list.
- When you use **!*n*** or **!!** to recall a command in the history buffer list, you must press the Enter key to execute the command.

## Examples

```
-> history
1* show ip interface
2 show vlan
3 show arp
4 clear arp
->!2
show vlan
vlan  type  admin  oper  ip    mtu   name
-----+-----+-----+-----+-----+-----+-----
   1   std    Ena    Ena   Dis   1500  VLAN 1
  10   std    Ena    Ena   Ena   1500  VLAN 10
  12   std    Ena    Ena   Ena   1500  VLAN 12
  14   std    Ena    Ena   Ena   1500  VLAN 14
  30   vip    Ena    Ena   Ena   1500  VIP VLAN 30
  40   vip    Ena    Ena   Ena   1500  VIP VLAN 40
4094  mcm    Ena    Ena   Dis   9198  MCM IPC
```

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

### [history](#)

Sets the number of commands that will be stored in the CLI history buffer.

## MIB Objects

N/A

---

## command-log

Enables or disables command logging on the switch. When command logging is enabled, a **command.log** is automatically created; this file stores a comprehensive CLI command history for all active sessions since the function was *first* enabled.

**command-log {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Creates a file called <b>command.log</b> in the switch's <b>/flash</b> directory. Any configuration commands entered on the command line will be recorded to this file until command logging is disabled.
<b>disable</b>	Disables logging of current session commands to the <b>command.log</b> file.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The maximum log file size is 66,402 bytes; the file may hold up to 100 commands.

### Examples

```
-> command-log enable
-> command-log disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<a href="#">show command-log</a>	Displays the contents of the <b>command.log</b> file.
<a href="#">show command-log status</a>	Shows the current status of the command logging function (i.e., enabled or disabled).

### MIB Objects

sessionCliCommandLogEnable

---

## kill

Kills an active session. The command takes effect immediately.

**kill** *session\_number*

---

### Syntax Definitions

*session\_number*                      Number of the session you want to kill.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **who** command to obtain the session number variable.
- You cannot kill your own session.
- You cannot kill a connected session where the user has not yet completed the login process. These sessions appear with username “(at login)” when displayed with the **who** command.

### Examples

```
-> kill 3
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**who**                                      Displays all active login sessions (e.g., Console, Telnet, FTP, HTTP)

### MIB Objects

```
SessionMgr
  sessionIndex
  sessionRowStatus
```

---

## exit

Ends the current CLI session. If the CLI session to the switch was via Telnet, the connection is closed.

exit

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> exit
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

#### kill

Kills an active session. The command takes effect immediately.

### MIB Objects

SessionMgr

sessionIndex

sessionRowStatus

---

## whoami

Displays the current user session.

**whoami**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the **who** command to display all sessions on the switch.

### Examples

```
-> whoami
Session number = 5
  User name     = admin,
  Access type   = telnet,
  Access port   = NI,
  IP address    = 121.251.17.76,
  Read-only domains = None,
  Read-only families = ,
  Read-Write domains = All ,
  Read-Write families = ,
```

#### *output definitions*

---

<b>Session Number</b>	The session number assigned to the user.
<b>User name</b>	User name.
<b>Access type</b>	Type of access protocol used to connect to the switch.
<b>Access port</b>	Switch port used for access during this session.
<b>Ip Address</b>	User IP address.
<b>Read-only domains</b>	The command domains available with the user's read-only access.
<b>Read-only families</b>	The command families available with the user's read-only access.
<b>Read-Write domains</b>	The command domains available with the user's read-write access.
<b>Read-Write families</b>	The command families available with the user's read-write access.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

### **who**

Displays all active login sessions (e.g., Console, Telnet, FTP, HTTP).

### **kill**

Kills another user's session.

## MIB Objects

SessionActive

```
sessionIndex  
sessionAccessType  
sessionPhysicalPort  
sessionUserName  
sessionUserReadPrivileges  
sessionUserWritePrivileges  
sessionUserProfileNumber  
sessionUserIpAddress  
sessionRowStatus
```

---

## who

Displays all active login sessions.

**who**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- You can identify your current login session by using the IP address.
- This command applies to the following session types: Console, Telnet, SSH, FTP, SFTP, HTTP, HTTPS, SNMP.

### Examples

```
-> who
Session number = 0
  User name   = (at login),
  Access type = console,
  Access port = Local,
  IP address  = 0.0.0.0,
  Read-only domains = None,
  Read-only families = ,
  Read-Write domains = None,
  Read-Write families = ,

Session number = 5
  User name   = admin,
  Access type = telnet,
  Access port = NI,
  IP address  = 128.251.17.176,
  Read-only domains = None,
  Read-only families = ,
  Read-Write domains = All ,
  Read-Write families = ,
```

*output definitions*

---

<b>Session Number</b>	The session number assigned to the user.
<b>User name</b>	User name.
<b>Access type</b>	Type of access protocol used to connect to the switch.
<b>Access port</b>	Switch port used for access during this session.
<b>Ip Address</b>	User IP address.
<b>Read-only domains</b>	The command domains available with the user's read-only access.
<b>Read-only families</b>	The command families available with the user's read-only access.
<b>Read-Write domains</b>	The command domains available with the user's read-write access.
<b>Read-Write families</b>	The command families available with the user's read-write access.

---

Possible values for command domains and families are listed here:

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">whoami</a>	Displays current user session.
<a href="#">kill</a>	Kills another user's session.

**MIB Objects**

```

SessionActive
  sessionIndex
  sessionAccessType
  sessionPhysicalPort
  sessionUserName
  sessionUserReadPrivileges
  sessionUserWritePrivileges
  sessionUserProfileNumber
  sessionUserIpAddress
  sessionRowStatus

```

---

## show session config

Displays session manager configuration information (e.g., default prompt, banner file name, inactivity timer, login timer, and login attempts).

**show session config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Use the configuration commands detailed in this section to modify any of the values displayed.

### Examples

```
-> show session config
```

```

Cli Default Prompt           = ->
Cli Banner File Name        = ,
Cli Inactivity Timer in minutes = 60
Ftp Banner File Name        = ,
Ftp Inactivity Timer in minutes = 60
Http Inactivity Timer in minutes = 60
Login Timer in seconds       = 60
Maximum number of Login Attempts = 2

```

#### *output definitions*

---

<b>Cli Default Prompt</b>	Default prompt displayed for CLI sessions.
<b>Cli Banner File Name</b>	Name of the file that contains the banner information that will appear during a CLI session.
<b>Cli Inactivity Timer in minutes</b>	Inactivity timer value (in minutes) for CLI sessions. The user is logged off when this value is exceeded.
<b>Ftp Banner File Name</b>	Name of the file that contains the banner information that will appear during an FTP session.
<b>Ftp Inactivity Timer in minutes</b>	Inactivity timer value (in minutes) for FTP sessions. The user is logged off when this value is exceeded.

*output definitions (continued)*

---

<b>Http Inactivity Timer in minutes</b>	Inactivity timer value (in minutes) for HTTP (including WebView) sessions. The user is logged off when this value is exceeded.
<b>Login Timer in seconds</b>	The amount of time the user can take to accomplish a successful login to the switch. If the timeout period is exceeded, the TCP connection is closed by the switch.
<b>Maximum number of Login Attempts</b>	The number of times a user can attempt unsuccessfully to log into the switch before the TCP connection is closed.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">session prompt</a>	Configures the default CLI prompt for console and Telnet sessions.
<a href="#">session banner</a>	Sets the file name of the user-defined banner.
<a href="#">session timeout</a>	Configures the inactivity timer for a CLI, HTTP (including WebView), or FTP interface.
<a href="#">session login-attempt</a>	Sets the number of times a user can attempt to log into the switch unsuccessfully before the TCP connection is closed.
<a href="#">session login-timeout</a>	Sets the amount of time the user can take to accomplish a successful login to the switch.

**MIB Objects**

```

SessionConfigTable
  sessionType
  sessionBannerFileName
  sessionInactivityTimerValue
  sessionDefaultPromptString

```

---

## show session xon-xoff

Displays whether the console port is enabled or disabled for XON-XOFF.

**show session xon-xoff**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The switch may interpret noise from an RS232 line as Control-S (XOFF). If the console port is enabled for XON-XOFF (through the [session xon-xoff](#) command), traffic to the console port may be stopped.

### Examples

```
-> show session xon-xoff
XON-XOFF Enabled
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[session xon-xoff](#) Enables/disables the XON-XOFF protocol on the console port.

### MIB Objects

```
sessionXonXoffEnable
```

---

## more

Enables the more mode for your console screen display.

**more** *filename*

---

### Syntax Definitions

*filename*                      The file to display.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This parameter can also be used to pipe output from the CLI.
- This command is case sensitive.

### Examples

```
-> more textfile.txt
-> write terminal | more
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

### MIB Objects

```
SystemServices
  systemServicesArg1
  systemServicesAction
```

---

## telnet

Invokes a Telnet session. A Telnet session is used to connect to a remote system or device.

```
[vrf name] telnet {port [default | service_port] | admin-state [enable | disable] | ip_address}
```

---

### Syntax Definitions

<i>name</i>	Name of the VRF.
<b>default</b>	Sets the port back to the default of 23.
<i>service_port</i>	The TCP service port number. Must be 23 or between 20000-20999.
<b>enable   disable</b>	Enables or disables telnet access.
<i>ip_address</i>	Specifies the IPv4 or IPv6 address for the Telnet session.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The default directory for Telnet is **/flash**.

### Examples

```
-> telnet port 20999
-> telnet admin-state disable
-> telnet 172.17.6.228
-> vrf vrfl telnet admin-state enable
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

### [ssh](#)

Invokes the Secure Shell on the switch. A Secure Shell is used to make a secured connection to a remote system or device.

### [show telnet](#)

Displays the current configuration specifying the ports the telnet daemons are listening on.

## MIB Objects

SystemServices

```
systemServicesArg1  
systemServicesAction  
alaIpTelnetAdminStatus
```

---

## ssh

Invokes Secure Shell on the switch. Secure Shell is used to make a secured connection to a remote system or device.

```
[vrf name] ssh {port [default | service_port] | admin-state [enable | disable] | ip_address}
```

---

### Syntax Definitions

<i>name</i>	Name of the VRF.
<b>default</b>	Sets the port back to the default of 22.
<i>service_port</i>	The TCP service port number. Must be 23 or between 20000-20999.
<b>enable   disable</b>	Enables or disables Secure Shell.
<i>ip_address</i>	Specifies the IPv4 or IPv6 address for the Secure Shell.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

You must have a valid username and password for the specified host.

### Examples

```
-> ssh port 20000
-> ssh admin-state disable
-> ssh 172.155.11.211
login as:

-> vrf vrf1 ssh admin-state enable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [telnet](#)

Invokes a Telnet session. A Telnet session is used to connect to a remote system or device.

### [ssh enforce-pubkey-auth](#)

Invokes Secure Shellv6 on the switch. Secure Shellv6 is used to make a secured connection to an SSHv6 server.

### [show command-log](#)

Displays the status of Secure Shell, SCP/SFTP on the switch.

### [show ssh](#)

Displays the current configuration specifying the ports SSH daemons are listening on.

## MIB Objects

alaIpSshConfig

    alaIpSshAdminStatus

    alaIpSshPort

---

## ssh login-grace-time

Configures the duration in which the user has to enter a login password and authenticate for an SSH session.

**ssh login-grace-time** *seconds*

---

### Syntax Definitions

*seconds*                      The number of seconds for the grace time period. The range is 30–600.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900</b> V72/C32	<b>6900</b> X48C6/T48C6	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

By default, the login grace time period is set to 120 seconds.

### Examples

```
-> ssh login-grace-time 300
-> ssh login-grace-time 600
```

### Release History

Release 8.3.1.R02; command was introduced.

### Related Commands

[show ssh](#)                      Displays the current SSH configuration for the switch.

### MIB Objects

```
alaIpSshConfig
  alaIpSshLoginGraceTime
```

---

## ssh enforce-pubkey-auth

Enables or disables Secure Shell public key and password authentication. When enabled, password authentication is not allowed.

`ssh enforce-pubkey-auth {enable | disable}`

---

### Syntax Definitions

**enable** Enforces only SSH public key authentication.

**disable** Enforces both SSH public key and password authentication.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> ssh enforce-pubkey-auth enable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**telnet** Invokes a Telnet session. A Telnet session is used to connect to a remote system or device.

### MIB Objects

alaIpSshConfig  
alaIpSshPubKeyEnforceAdminStatus

---

## ssh strong-ciphers

Enables or disables the enforcement of a Secure Shell (SSH) cipher configuration across a switch reboot.

`ssh strong-ciphers {enable | disable}`

---

### Syntax Definitions

**enable** Enables the enforcement of an SSH cipher configuration.  
**disable** Disables the enforcement of an SSH cipher configuration.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> ssh strong-ciphers enable
-> ssh strong-ciphers disable
```

### Release History

Release 8.3.1; command was introduced.

### Related Commands

[show ssh](#) Displays the current SSH configuration for the switch.

### MIB Objects

```
alaIpSshConfig
  alaIpSshStrongCiphersAdminStatus
```

---

## ssh strong-hmacs

Enables or disables the enforcement of a Secure Shell (SSH) HMAC configuration across a switch reboot.

`ssh strong-hmacs {enable | disable}`

---

### Syntax Definitions

**enable** Enables the enforcement of an HMAC configuration.  
**disable** Disables the enforcement of an HMAC configuration.

### Defaults

parameter	default
enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- SSH HMAC refers to message authentication codes that use cryptographic hash functions.
- Enable strong-hmacs will enforce the use of “*hmac-sha1* , *hmac-sha2-256*, *hmac-sha2-512*” in ssh server.
- Disable will select default hmacs in the configuration.

### Examples

```
-> ssh strong-hmacs enable
-> ssh strong-hmacs disable
```

### Release History

Release 8.3.1; command was introduced.

### Related Commands

[show ssh](#) Displays the current SSH configuration for the switch.

### MIB Objects

```
alaIpSshConfig
  alaIpSshStrongHmacsAdminStatus
```

---

## installsshkey

Used to install the public key used for SSH onto the switch.

**installsshkey** *user path*

---

### Syntax Definitions

*user*                                   The user that the key will be associated with.  
*path*                                    The location of the key file.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Be sure the associated private key is stored on the client device.
- Verify that the user that will use SSH is a valid user name on the OmniSwitch.
- Refer to the Switch Management Guide for information on generating the public/private keys.

### Examples

```
-> installsshkey new_ssh_user /flash/system/new_ssh_user_rsa.pub
```

### Release History

Release 8.3.1; command was introduced.

### Related Commands

[revokesshkey](#)                           Used to revoke a key from an SSH user.  
[show ssh](#)                                 Displays the current SSH configuration for the switch.

### MIB Objects

N/A

---

## revokesshkey

Used to revoke a key from an SSH user.

```
revokesshkey user remote-user
```

---

### Syntax Definitions

*user* The local user name.  
*remote-user* The user on the remote client device.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> revokesshkey new_ssh_user remote_ssh_user@192.168.10.1
```

### Release History

Release 8.3.1; command was introduced.

### Related Commands

[installsshkey](#) Used to install the public key used for SSH onto the switch.  
[show ssh](#) Displays the current SSH configuration for the switch.

### MIB Objects

N/A

---

## show command-log

Displays the contents of the **command.log** file. This file contains a record of all CLI commands executed on the switch since the command logging function was enabled. For more information on enabling and disabling command logging, refer to [page 61-17](#).

**show command-log**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The most recent commands are listed first.
- The command history is archived to the **command.log** file. If this file is removed, the command history will no longer be available. In addition, the **command.log** file has a 66,402 byte capacity. This capacity allows up to 100 commands; if the maximum capacity is reached, only the 100 most recent commands display.

### Examples

```
-> show command-log
```

```
Command : ip interface Marketing address 17.11.5.2 vlan 255
```

```
  UserName : admin
  Date      : FRI JAN 09 00:20:01
  Ip Addr   : 128.251.19.240
  Result    : SUCCESS
```

```
Command : ip interface "Distribution" 11.255.14.102 vlan 500 local-proxy-arp
```

```
  UserName : admin
  Date      : FRI JAN 09 00:19:44
  Ip Addr   : 128.251.19.240
  Result    : ERROR: Ip Address must not belong to IP VLAN 44 subnet
```

```
Command : command-log enable
```

```
  UserName : admin
  Date      : FRI JAN 09 00:18:49
  Ip Addr   : 128.251.19.240
  Result    : SUCCESS
```

*output definitions*

---

<b>Command</b>	The exact syntax of the command, as entered by the user.
<b>UserName</b>	The name of the user session that entered the command. For more information on different user session names, refer to the <a href="#">user command on page 38-58</a> , or the “Managing Switch User Accounts” chapter in the <i>OmniSwitch AOS Release 8 Switch Management Guide</i> .
<b>Date</b>	The date and time, down to the second, when the command was entered.
<b>IpAddr</b>	The IP address of the terminal from which the command was entered.
<b>Result</b>	The outcome of the command entry. Options include <b>SUCCESS</b> and <b>ERROR</b> . For erroneous command entries, the same error details presented by the switch at the time the command was entered are also displayed in the log file.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">command-log</a>	Enables or disables command logging on the switch.
<a href="#">show command-log status</a>	Shows the current status of the command logging function (i.e., enabled or disabled).

**MIB Objects**

sessionCliCommandLogEnable

---

## show command-log status

Shows the current status of the command logging function (for example, enabled or disabled).

**show command-log status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show command-log status
CLI command logging : Enable
```

#### *output definitions*

---

<b>CLI command logging</b>	The current status of command logging on the switch. Options include <b>Disable</b> and <b>Enable</b> .
----------------------------	---

---

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[command-log](#) Enables or disables command logging on the switch.

### MIB Objects

sessionCliCommandLogStatus

---

## show telnet

Displays the current configuration specifying the ports the telnet daemons are listening on.

`[vrf name] show telnet`

---

### Syntax Definitions

*name* Name of the VRF.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If VRF is specified, the current status of the telnet daemon for the specified VRF is displayed.

### Examples

```
vrfl::-> show telnet
Telnet Admin-State = Enabled
Telnet Port = 23
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[command-log](#) Enables or disables command logging on the switch.

### MIB Objects

```

alaIpTelnetPort
```

---

## show ssh

Displays the current configuration specifying the ports on which the SSH daemons are listening.

`[vrf name] show ssh`

---

### Syntax Definitions

*name* Name of the VRF.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If VRF is specified, the current status of the SSH daemon for the specified VRF is displayed.

### Examples

```
vrfl::-> show ssh
Ssh Admin-State = Enabled
Ssh Port = 22
Ssh Enforce-Pubkey-Auth = Disabled
Ssh Strong-Ciphers = Disabled
Ssh Strong-Hmacs = Disabled
Ssh login-grace-time = 600 seconds
```

### Release History

Release 7.1.1; command was introduced.

Release 8.3.1; **Ssh Strong-Ciphers** and **Ssh Strong-Hmacs** fields added.

Release 8.3.1.R02; **Ssh login-grace-time** field added.

## Related Commands

### **command-log**

Enables or disables command logging on the switch.

## MIB Objects

# 62 File Management Commands

This chapter includes descriptions for CLI commands used to manage files on the switch. Several of these commands are used to create, move, and delete both files and directories in the OmniSwitch flash directory. Other commands allow you to change command privileges and to monitor the memory usage on the switch.

MIB information for the system commands is listed here:

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

*Filename:* ALCATEL-IND1-CHASSIS-MIB.mib  
*Module:* alcatelIND1ChassisMIB

A summary of the available commands is listed here:

---

<b>File System</b>	<b>cd</b> <b>pwd</b> <b>mkdir</b> <b>rmdir</b> <b>ls</b> <b>rm</b> <b>cp</b> <b>sep</b> <b>mv</b> <b>chmod</b> <b>freespace</b> <b>fck</b> <b>newfs</b>
<b>System Services</b>	<b>vi</b> <b>tty</b> <b>show tty</b> <b>tftp</b> <b>sftp</b> <b>ftp</b> <b>show ftp</b>

---

## cd

Changes the current working directory of the switch.

**cd** [*path*]

---

### Syntax Definitions

*path* Specifies the path to the working directory. If no path is specified, the current directory of the switch is changed to the higher directory level.

### Defaults

The default working directory of the switch is **/flash**.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Separate the multiple directory names that are part of the path with a slash (/).

### Examples

```
-> cd
-> cd /flash/certified
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

<b>pwd</b>	Displays the current working directory of the switch.
<b>mkdir</b>	Creates a new directory.
<b>rmdir</b>	Deletes an existing directory.
<b>ls</b>	Displays the contents of a specified directory or the current working directory.
<b>rm</b>	Deletes the contents of a specified directory or the current working directory.

### MIB Objects

```
systemServices
  systemServicesWorkingDirectory
```

---

## pwd

Displays the current working directory of the switch.

**pwd**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The **pwd** command can also be used on the secondary CMM.

### Examples

```
-> pwd
/flash
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

<b>cd</b>	Changes the current working directory of the switch.
<b>mkdir</b>	Creates a new directory.
<b>rmdir</b>	Deletes an existing directory.
<b>ls</b>	Displays the contents of a specified directory or the current working directory.
<b>rm</b>	Deletes the contents of a specified directory or the current working directory.

### MIB Objects

```
systemServices
systemServicesWorkingDirectory
```

---

## mkdir

Creates a new directory.

**mkdir** [*options*] [*path*] /*dirname*

---

### Syntax Definitions

<i>options</i>	Use the '?' on the command line for a list of options.
<i>path</i>	The path or location in which the new directory is to be created. If no path name is specified, the new directory is created in the current directory.
<i>dirname</i>	A user-defined name for the new directory.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Separate the directory names that are part of the path with a slash (/). Refer to the examples below.
- The **mkdir** command can also be used on the secondary CMM.

### Examples

```
-> mkdir test_directory
-> mkdir flash/test_directory
-> mkdir
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

```
Usage: mkdir [OPTIONS] DIRECTORY...
```

```
Create DIRECTORY
```

```
Options:
```

```
  -m      Mode
  -p      No error if exists; make parent directories as needed
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

<b>cd</b>	Changes the current working directory of the switch.
<b>pwd</b>	Displays the current working directory of the switch.
<b>rmdir</b>	Deletes an existing directory.
<b>ls</b>	Displays the contents of a specified directory or the current working directory.
<b>rm</b>	Deletes the contents of a specified directory or the current working directory.

## MIB Objects

```
systemServices  
  systemServicesArg1  
  systemServicesAction
```

---

## rmdir

Deletes an existing directory.

**rmdir** [*options*] *dirname*

---

### Syntax Definitions

*options*                                    Use the '?' on the command line for a list of options.  
*dirname*                                    The name of the existing directory to be removed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Separate the directory names that are part of the path with a slash (/). Refer to the examples below.
- This command can also be used on the secondary CMM.

### Examples

```
-> rmdir ./working
-> rmdir flash/working
-> rmdir ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

```
Usage: rmdir [OPTIONS] DIRECTORY...
```

Remove DIRECTORY if it is empty

Options:

```
-p|--parents      Include parents
--ignore-fail-on-non-empty
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

<code>cd</code>	Changes the current working directory of the switch.
<code>pwd</code>	Displays the current working directory of the switch.
<code>mkdir</code>	Creates a new directory.
<code>ls</code>	Displays the contents of a specified directory or the current working directory.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## ls

Displays the contents of a specified directory or the current working directory.

**ls** [*options*] [*path/filename*]

---

### Syntax Definitions

*options*                      Use the '?' on the command line for a list of options.  
*filename*                    Specifies the file or directory path.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Separate the multiple directory names that are part of the path with a slash (/).

### Examples

```
-> ls
-> ls -l /flash/certified
-> ls ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

Usage: ls [-lAaCcdeF-iL] [-lAaCcdeF-iL] [FILE]...

List directory contents

Options:

```
-l      List in a single column
-A      Don't list . and ..
-a      Don't hide entries starting with .
-C      List by columns
-c      With -l: sort by ctime
--color[={always,never,auto}] Control coloring
-d      List directory entries instead of contents
-e      List full date and time
-F      Append indicator (one of */=@|) to entries
-i      List inode numbers
-l      Long listing format
-n      List numeric UIDs and GIDs instead of names
-p      Append indicator (one of */=@|) to entries
-L      List entries pointed to by symlinks
```

```
-R      Recurse
-r      Sort in reverse order
-S      Sort by file size
-s      List the size of each file, in blocks
-T N    Assume tabstop every N columns
-t      With -l: sort by modification time
-u      With -l: sort by access time
-v      Sort by version
-w N    Assume the terminal is N columns wide
-x      List by lines
-X      Sort by extension
-h      List sizes in human readable format (1K 243M 2G)
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

<a href="#">cd</a>	Changes the current working directory of the switch.
<a href="#">pwd</a>	Displays the current working directory of the switch.
<a href="#">mkdir</a>	Creates a new directory.
<a href="#">rmdir</a>	Deletes an existing directory.
<a href="#">rm</a>	Displays the contents of a specified directory or the current working directory.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## rm

Permanently deletes an existing file.

**rm** [*options*] [*path/filename*]

---

### Syntax Definitions

*options* Use the '?' on the command line for a list of options.  
*filename* Specifies the file or directory path.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Separate the multiple directory names that are part of the path with a slash (/). Refer to the examples below.
- Use care when deleting files. Depending on your switch and network configurations, specific configuration and image files must be present for your system to work properly.
- This command can also be used on the secondary CMM.

### Examples

```
-> rm test_config_file
-> rm flash/test_config_file
-> rm ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

Usage: rm [OPTIONS] FILE...

Remove (unlink) FILEs

Options:

```
-i      Always prompt before removing
-f      Never prompt
-R, -r  Recurse
```

### Release History

Release 7.1.1; command introduced.

**Related Commands****cp**

Copies an existing file or directory.

**MIB Objects**

systemServices

systemServicesArg1

    systemServicesAction

---

## cp

Copies an existing file. This command can also copy a directory if the `-r` keyword is used.

`cp [options] source destination`

### Syntax Definitions

<i>options</i>	Use the '?' on the command line for a list of options.
<i>source</i>	The name of the existing file to be copied.
<i>destination</i>	The new user-defined file name for the resulting file copy. If you are copying a file to the same directory as the original, the file name for the copy must be different from the original.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- You should verify that the `/flash` directory of your switch has enough available memory to hold the copies of the files and directories created.
- A file can be copied to a new directory location. Copy of a file can also be created in the same directory that contains the original file.
- Separate the multiple directory names that are part of the path with a slash (/). Refer to the examples below.
- This command can also be used on the secondary CMM.

### Examples

```
-> cp flash/snapshots/asc.1.snap flash/snapshot/snapshot_copy
-> cp flash/snapshots/asc.1.snap snapshot_copy
-> cp asc.1.snap flash/snapshot/snapshot_copy
-> cp asc.1.snap snapshot_copy
-> cp ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

Usage: `cp [OPTIONS] SOURCE DEST`

Copy SOURCE to DEST, or multiple SOURCE(s) to DIRECTORY

Options:

```
-a      Same as -dpR
-R,-r   Recurse
-d,-P   Preserve symlinks (default if -R)
-L      Follow all symlinks
-H      Follow symlinks on command line
-p      Preserve file attributes if possible
-f      Force overwrite
-i      Prompt before overwrite
-l,-s   Create (sym)links
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

[mv](#) Moves an existing file or directory to a new location.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesArg2
  systemServicesAction
```

---

## scp

Copies an existing file in a secure manner.

```
scp [options] user_name@remote_ip_addr:[path/]source [path/]target
```

```
scp [options] [path/]source user_name@remote_ip_addr:[path/]target
```

---

### Syntax Definitions

<i>options</i>	Use the '?' on the command line for a list of options.
<i>user_name@remote_ip_addr:</i>	The username along with the IPv4 or IPv6 address of the remote switch.
<i>path/</i>	Specifies the path containing the file to be copied and the path where the file will be copied.
<i>source</i>	The name of the file(s) to be copied.
<i>target</i>	The new user-defined file name for the resulting file copy.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- This command will prompt you to enter the admin password, and the names and the path of the files being copied will be displayed.
- A file may be copied to a new location; you are not required to copy a file to the same directory that contains the original.
- Separate the multiple directory names that are part of the path with a slash (/). Refer to the examples below.

### Examples

```
-> scp admin@172.17.11.13:/flash/working/Kos.img /flash/working/Kos.img
admin's password for keyboard-interactive method:
```

```
Fetching /flash/working/Kos.img to /flash/working/Kos.img
Connection to 172.17.11.13 closed.
```

```
-> scp /flash/working/Kos.img admin@172.17.11.13:/flash/working/Kos.img
admin's password for keyboard-interactive method:
```

```
Uploading /flash/working/Kos.img to /flash/working/Kos.img
Connection to 172.17.11.13 closed.
```

```
-> scp admin@172.17.11.13:/flash/working/*.img /flash/working
admin's password for keyboard-interactive method:

Fetching /flash/working/K2os.img to /flash/working/K2os.img
Fetching /flash/working/Kadvrout.img to /flash/working/Kadvrout.img
Fetching /flash/working/Kbase.img to /flash/working/Kbase.img
Fetching /flash/working/Keni.img to /flash/working/Keni.img
Fetching /flash/working/Kos.img to /flash/working/Kos.img
Fetching /flash/working/Krelease.img to /flash/working/Krelease.img
Fetching /flash/working/Ksecu.img to /flash/working/Ksecu.img
Connection to 172.17.11.13 closed.
-> scp ?
usage: scp [-l246BCpqrw] [-c cipher] [-F ssh_config] [-i identity_file]
          [-l limit] [-o ssh_option] [-P port] [-S program]
          [[user@]host1:]file1 ... [[user@]host2:]file2
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

**mv** Moves an existing file or directory to a new location.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesArg2
  systemServicesAction
```

---

## mv

Moves an existing file or directory to a new location.

**mv** [*options*] *source destination*

---

### Syntax Definitions

<i>options</i>	Use the '?' on the command line for a list of options.
<i>source</i>	The name of the existing file to be copied.
<i>destination</i>	The new user-defined file name for the resulting file copy. If you are copying a file to the same directory as the original, the file name for the copy must be different from the original.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The **mv** command does not make a copy of the file or directory being moved. To copy a file or directory to the current path or to a new location, use the **cp** command.
- Separate the directory names and file names that are part of the path with a slash (/). Refer to the examples below.
- This command can also be used on the secondary CMM.

### Examples

```
-> mv flash/asc.1.snap flash/backup_files/asc.1.snap
-> mv ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

```
Usage: mv [OPTIONS] SOURCE DEST
or: mv [OPTIONS] SOURCE... DIRECTORY
```

Rename SOURCE to DEST, or move SOURCE(s) to DIRECTORY

```
Options:
  -f      Don't prompt before overwriting
  -i      Interactive, prompt before overwrite
```

## Release History

Release 7.1.1; command introduced.

## Related Commands

**rm** Renames an existing file or directory.  
**cp** Copies an existing file or directory.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesArg2
  systemServicesAction
```

---

## chmod

Changes the write privileges for a specified file.

```
chmod {+w | -w} [path/]file
```

---

### Syntax Definitions

<code>+w</code>	Enables read-write privileges for the file.
<code>-w</code>	Disables write privileges for the file—i.e., the file becomes read-only.
<code>path/</code>	The path containing the file for which privileges are being changed.
<code>file</code>	The name of the file for which read-write privileges are being changed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command can also be used on the secondary CMM.

### Examples

```
-> chmod +w vlan.config
-> chmod -w flash/backup_configs/vlan.config
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

[freespace](#) Changes the write privileges for a specified file.

### MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## freespace

Displays the amount of free space available in the **/flash** directory.

**freespace** [/flash | /uflash]

---

### Syntax Definitions

**/flash** The amount of free space is shown for the **/flash** directory.

**/uflash** The amount of free space is shown for the **/uflash** directory.

### Defaults

N/A

### Usage Guidelines

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Examples

```
-> freespace /flash
/flash 3143680 bytes free
```

```
-> freespace
/flash 3143680 bytes free
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

#### [fsck](#)

Performs a file system check, including diagnostic information in the event of file corruption. If the **fsck** command detects a problem with the **/flash** file system, a message is displayed indicating the problem, along with any steps needed to resolve it.

### MIB Objects

```
SystemFileSystemTable
    systemFileSystemFreespace
```

---

## fsck

Performs a file system check, including diagnostic information in the event of file corruption.

**fsck /uflash {repair | no-repair}**

---

### Syntax Definitions

<b>/uflash</b>	Indicates that the file system check will be performed on the <b>/uflash</b> directory.
<b>repair</b>	Attempt to repair any problems found.
<b>no-repair</b>	Do not attempt to repair any problems found.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

This command provides the option to automatically repair errors.

### Examples

```
-> fsck /uflash repair
```

```
/uflash/ - disk check in progress ..
/uflash/ - Volume is OK
```

```

total # of clusters: 14,773
  # of free clusters: 4,132
  # of bad clusters: 0
  total free space: 8,264 Kb
max contiguous free space: 5,163,008 bytes
  # of files: 46
  # of folders: 3
total bytes in files: 21,229 Kb
  # of lost chains: 0
total bytes in lost chains: 0
```

### Release History

Release 7.1.1; command introduced.

## Related Commands

### **freespace**

Displays the amount of free space available in the **/flash** directory.

## MIB Objects

systemServices

    systemServicesArg1

    systemServicesAction

---

## newfs

Deletes the complete **/uflash** file system and all files within it, replacing it with a new, empty **/uflash** file system. Use this command when you want to reload all files in the file system or in the unlikely event that the **/uflash** file system becomes corrupt.

**newfs /uflash**

---

### Syntax Definitions

**/uflash** This indicates that the complete file system will be replaced.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- It is recommended that you preserve all required image and configuration files by saving them to a remote host before executing the **newfs** command.
- Do not power-down the switch after running the **newfs** command until you reload all required image and configuration files.

### Examples

```
-> newfs /uflash
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

N/A

### MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
```

---

## vi

Launches the switch's Vi text editor. The Vi file editor allows you to view or edit the contents of a specified text file.

**vi** [*options*] [*path/*]*filename*

### Syntax Definitions

<i>options</i>	Use the '?' on the command line for a list of options.
<i>path/</i>	The path (i.e., location) containing the file being viewed or edited. If no path is specified, the command assumes the current directory.
<i>filename</i>	The name of the existing file being viewed or edited.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Until you exit the switch's file editor, all keystrokes will be passed to the text editor rather than the switch's command line.
- This command can also be used on the secondary CMM.

### Examples

```
-> vi test_config_file
-> vi ?
BusyBox v1.16.1 (2010-12-06 23:23:38 PST) multi-call binary.
```

```
Usage: vi [OPTIONS] [FILE]...
```

```
Edit FILE
```

```
Options:
```

- c Initial command to run (\$EXINIT also available)
- R Read-only
- H Short help regarding available features

### Release History

Release 7.1.1; command introduced.

## Related Commands

`tty` Displays current TTY settings.

## MIB Objects

```
systemServices
  systemServicesTtyLines
  systemServicesTtyColumns
```

---

## tty

Specifies the number of lines and columns to be displayed on the terminal screen while the switch is in the edit file mode.

**tty** *lines columns*

### Syntax Definitions

*lines* The number of lines to be displayed on the terminal emulation screen for the current session. Values may range from 10 to 150.

*columns* The number of columns to be displayed for each line. One column is the same width as a single text character. Values may range from 20 to 150.

### Defaults

parameter	default
<i>lines</i>	24
<i>columns</i>	80

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The number of lines and columns set with this command controls the screen size when the switch is editing or viewing a text file with the **vi** or **tftp** commands.
- The values set with this command do not control the CLI screen when the switch is operating in normal mode.
- This command can also be used on the secondary CMM.

### Examples

```
-> tty 10 60
```

### Release History

Release 7.1.1; command was introduced.

**Related Commands****show tty**

Displays current TTY settings.

**MIB Objects**

systemServices

systemServicesTtyLines

    systemServicesTtyColumns

---

## show tty

Displays current TTY settings.

```
show tty
```

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Shows the settings made with the `tty` command.
- This command can also be used on the secondary CMM.

### Examples

```
-> show tty  
lines = 24, columns = 80
```

### Release History

Release 7.1.1; command introduced.

### Related Commands

`tty` Specifies the number of TTY lines and columns to be displayed.

### MIB Objects

```
systemServices  
  systemServicesTtyLines  
  systemServicesTtyColumns
```

---

## tftp

Starts a TFTP client session that enables a file transfer to an TFTP server.

**tftp** [*options*] *host* [*port*]

---

### Syntax Definitions

<i>options</i>	Enter a question mark (?) to get a list of options.
<i>host</i>	Specifies the IP address of the TFTP server.
<i>port</i>	Specifies the port for the TFTP transfer.

### Defaults

- If a path is not specified with the filename, the current path is used by default (for example, /flash).
- If a local filename is not specified, the remote filename is used by default.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The OmniSwitch supports TFTP client functionality only.
- A TFTP server has no provisions for user authentication.
- When downloading a file to the switch, the file size must not exceed the available flash space.

### Examples

```
-> tftp -g -l local_file -r remote_file 198.51.100.100
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<b>cd</b>	Changes the current working directory of the switch.
<b>pwd</b>	Displays the current working directory of the switch.
<b>ls</b>	Displays the contents of a specified directory or the current working directory.

### MIB Objects

N/A

---

## sftp

Starts an SFTP session. An SFTP session provides a secure file transfer method.

**sftp** [*options*] {*ip\_address*}

---

### Syntax Definitions

*options* Enter a question mark (?) to get a list of options.  
*ip\_address* Specifies the IPv4 or IPv6 address for the SFTP session.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- You must have a valid username and a password for the specified host.
- After logging in, SFTP commands are supported. Some of these commands are defined in the following table:

<b>cd path</b>	Change remote path to 'path'.
<b>lcd path</b>	Change local directory to 'path'.
<b>chmod mode path</b>	Change permissions of file 'path' to 'mode'.
<b>help</b>	Display command help information.
<b>get remote-path [local path]</b>	Download a file from the remote path to the local path.
<b>lls [path]</b>	Display local directory listing.
<b>ln oldpath newpath</b>	Creates a symbolic link (symlink) to the remote file.
<b>symlink oldpath newpath</b>	Creates a symbolic link (symlink) to the remote file.
<b>mkdir path</b>	Create local directory.
<b>lpwd</b>	Print local working directory.
<b>ls [path]</b>	Display remote directory listing.
<b>mkdir path</b>	Create remote directory.
<b>put local-path [remote-path]</b>	Upload file.
<b>pwd</b>	Display remote working directory.

---

<b>exit</b>	Quit the sftp mode.
<b>quit</b>	Exit the sftp mode.
<b>rename oldpath newpath</b>	Rename a remote file.
<b>rmdir path</b>	Remove remote directory.
<b>rm path</b>	Delete remote file.
<b>version</b>	Show the current SFTP version.
<b>?</b>	Synonym for help. Displays command help information.

---

## Examples

```
-> sftp 12.251.11.122
login as:
-> sftp
usage: sftp [-lCv] [-B buffer_size] [-b batchfile] [-F ssh_config]
          [-o ssh_option] [-P sftp_server_path] [-R num_requests]
          [-S program] [-s subsystem | sftp_server] host
sftp [[user@]host[:file [file]]]
sftp [[user@]host[:dir[/]]]
sftp -b batchfile [user@]host
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

**ftp** Starts an FTP session.

**ssh** Invokes Secure Shell on the switch. Secure Shell is used to make a secured connection to a remote system or device.

## MIB Objects

```
SystemServices
  systemServicesArg1
  systemServicesAction
```

---

## ftp

Starts an FTP session.

**ftp** {port [default | *service\_port*] | admin-state [enable | disable] | *ip\_address*}

[vrf *name*] ftp admin-state [enable | disable]

---

### Syntax Definitions

<i>name</i>	The name of the VRF.
<b>default</b>	Sets the port back to the default of 21.
<i>service_port</i>	The TCP service port number. Must be 21 or between between 20000-20999.
<b>enable   disable</b>	Enables or disables FTP access.
<i>ip_address</i>	Specifies the IPv4 address for the FTP session.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- You must have a valid username and password for the specified host.
- The default FTP directory is **/flash**.

### Examples

```
-> ftp port 20000
-> ftp admin-state disable
-> ftp 172.17.6.228
-> vrf vrf1 ftp admin-state enable
```

### Release History

Release 7.1.1; command introduced.

Release 7.3.1; **vrf** parameter added.

## Related Commands

<code>cd</code>	Changes the current working directory of the switch.
<code>pwd</code>	Displays the current working directory of the switch.
<code>ls</code>	Displays the contents of a specified directory or the current working directory.

## MIB Objects

```
systemServices
  systemServicesArg1
  systemServicesAction
  alaIpFtpAdminStatus
```

---

## show ftp

Displays the current FTP server settings like the port used for FTP, the FTP server's status in the given VRF.

**[vrf name] show ftp**

---

### Syntax Definitions

*name*                                      The name of the VRF.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show ftp
Ftp Admin-State = Enabled
Ftp Port = 21
```

### Release History

Release 7.1.1; command introduced.  
Release 7.3.1; **vrf** parameter added.

### Related Commands

**ftp**    Starts an FTP session.

### MIB Objects

```
alaIpFtpAdminStatus
alaIpFtpPort
```

---

# 63 Web Management Commands

The switch can be configured and monitored using WebView, which is a web-based device management tool. Web Management CLI commands allow you to enable/disable web-based management and configure certain WebView parameters, such as Secure Socket Layer (SSL).

MIB information for the Web Management commands is as follows:

*Filename:* ALCATEL-IND1-WEBMGT-MIB.mib  
*Module:* alcatelIND1WebMgtMIB

A summary of the available commands is listed here:

---

**webview server**  
**webview access**  
**webview force-ssl**  
**webview http-port**  
**webview https-port**  
**webview ssl-strong-ciphers**  
**webview wlan cluster-virtual-ip precedence**  
**webview wlan cluster-virtual-ip**  
**show webview**  
**show webview wlan config**

---

## webview server

Enables or disables the web management server on the switch.

[*vrf name*] webview server {enable | disable}

---

### Syntax Definitions

<i>name</i>	The name of the VRF.
<b>enable</b>	Enables the web management server on the switch.
<b>disable</b>	Disables the web management server on the switch.

### Defaults

parameter	default
WebView Server	Enabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If the WebView Server is disabled, WebView Access is automatically disabled.
- VRF name must either be 'default' or pre-defined VRF (user-defined).

### Examples

```
-> webview server enable
-> webview server disable
-> vrf vrf1 webview server enable
```

### Release History

Release 7.1.1; command was introduced.

Release 7.3.1; **vrf** parameter added.

**Related Commands**[webview access](#)

Enables/disables WebView access on the switch.

[show webview](#)

Displays web management configuration information.

**MIB Objects**

alaIND1WebMgtConfigMIBGroup

alaInd1WebMgtServerStatus

---

## webview access

Enables or disables web management access on the switch.

[*vrf name*] webview access {enable | disable}

---

### Syntax Definitions

<i>name</i>	The name of the VRF.
<b>enable</b>	Enables the web management access on the switch.
<b>disable</b>	Disables the web management access on the switch.

### Defaults

parameter	default
WebView Access	Enabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If Web Access is enabled, the WebView Server is automatically enabled.
- VRF name must either be 'default' or pre-defined VRF (user-defined).

### Examples

```
-> webview access enable
-> webview access disable
-> vrf vrf1 webview access enable
```

### Release History

Release 7.1.1; command was introduced.

Release 7.3.1; **vrf** parameter added.

**Related Commands**[webview server](#)

Enables/disables the web server on the switch.

[show webview](#)

Displays web management configuration information.

**MIB Objects**

alaIND1WebMgtConfigMIBGroup

alaInd1WebMgtAdminStatus

---

## webview force-ssl

Enables or Disables Force SSL on the switch. SSL is a protocol that establishes and maintains secure communication between SSL-enabled servers and clients.

**webview force-ssl {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables the requirement to use SSL to access the switch when using WebView.
<b>disable</b>	Disables the requirement to use SSL to access the switch when using WebView.

### Defaults

parameter	default
Force SSL	Enabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

The switch contains a self-signed certificate that may prompt a certificate warning.

### Examples

```
-> webview force-ssl enable
-> webview force-ssl disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<a href="#">webview access</a>	Enables/disables WebView access on the switch.
<a href="#">show webview</a>	Displays web management configuration information.

### MIB Objects

```
alaIND1WebMgtConfigMIBGroup
  alaInd1WebMgtSsl
```

---

## webview http-port

Changes the port number for the embedded web management server.

```
webview http-port {default | port port}
```

---

### Syntax Definitions

<b>default</b>	Restores the port to its default (80) value.
<i>port</i>	The desired port number for the embedded Web server. The number must be in the range 0 to 65535; well-known port numbers cannot be configured.

### Defaults

parameter	default
<i>port</i>	80

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

All WebView sessions must be terminated before entering this command.

### Examples

```
-> webview http-port port 1025
-> webview http-port default
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

<a href="#">webview access</a>	Enables/disables WebView access on the switch.
<a href="#">show webview</a>	Displays web management configuration information.

### MIB Objects

```
alaIND1WebMgtConfigMIBGroup
  alaIND1WebMgtHttpPort
```

---

## webview https-port

Changes the default secure (HTTPS) port for the embedded web management server.

```
webview https-port {default | port port}
```

---

### Syntax Definitions

**default** Restores the port to its default (443) value.

*port* The desired HTTPS port number. The number must be in the range 0 to 65535; well-known port numbers cannot be configured.

### Defaults

parameter	default
<i>port</i>	443

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

All WebView sessions must be terminated before entering this command.

### Examples

```
-> webview https-port port 1026
-> webview https https-port default
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[webview access](#) Enables/disables WebView access on the switch.

[show webview](#) Displays web management configuration information.

### MIB Objects

```
alaIND1WebMgtConfigMIBGroup
  alaIND1WebMgtHttpsPort
```

---

## webview ssl-strong-ciphers

Enables or disables support of only SSL strong cipher algorithms in order to prevent client opening connections to the switch using weak algorithms.

**webview ssl-strong-ciphers {enable | disable}**

---

### Syntax Definitions

**enable** Enables the strong cipher requirement.  
**disable** Disables the strong cipher requirement.

### Defaults

parameter	default
enable   disable	enable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

When enabled the following algorithms will not be supported: RC4-SHA, RC4-MD5, ECDHE-RSA-RC4-SHA, IDEA-CBC-SHA, DES-CBC3-SHA, EDH-RSA-DES-CBC3-SHA, ECDHE-RSA-DES-CBC3-SHA, aNULL, eNULL, EXPORT, DES, MD5, PSK, RC4.

### Examples

```
-> webview ssl-strong-ciphers enable
-> webview ssl-strong-ciphers disable
```

### Release History

Release 8.4.1.R02; command was introduced.

### Related Commands

[webview access](#) Enables/disables WebView access on the switch.  
[show webview](#) Displays web management configuration information.

### MIB Objects

```
alaIND1WebMgtConfigMIBGroup
  alaIND1WebMgtSSLStrongCiphers
```

---

## webview wlan cluster-virtual-ip precedence

Sets the preference for obtaining the cluster virtual IP address for WebView re-direct. The WLAN cluster virtual IP address can be obtained from LLDP or configured manually. The precedence allows to set the preference between the LLDP and manual configuration in case when both are available.

**webview wlan cluster-virtual-ip precedence {lldp | configured}**

---

### Syntax Definitions

<b>lldp</b>	The preference to obtain the WLAN cluster virtual IP address is set to LLDP.
<b>configured</b>	The preference to obtain the WLAN cluster virtual IP address is set to the manually configured WLAN cluster virtual IP address.

### Defaults

parameter	default
lldp   configured	lldp

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	No	No	No	Yes

### Usage Guidelines

- Use this command to set the preference for obtaining the cluster virtual IP address for WebView re-direct.
- If more than one cluster virtual IP address is obtained through LLDP on the same port, the recently obtained IP is considered.
- If more than one cluster virtual IP is obtained through LLDP on different ports, the recently obtained IP is considered.
- If the precedence is set for LLDP obtained IP address, but there is no LLDP obtained cluster virtual IP address, then the manually configured cluster virtual IP address will be considered if configured.
- If the precedence is set for manually configured cluster virtual IP address, but there is no configured IP address present, then the LLDP obtained cluster virtual IP address will be considered if received.

### Examples

```
-> webview wlan cluster-virtual-ip precedence lldp
-> webview wlan cluster-virtual-ip precedence configured
```

## Release History

Release 8.4.1 R02; command was introduced.

## Related Commands

[show webview wlan config](#) Displays the AP cluster virtual IP configured on the switch.

## MIB Objects

alaIND1WebMgtWlanIpPrecedence

---

## webview wlan cluster-virtual-ip

Configures the cluster virtual IP address of the Access Point (AP) in the switch. The WebView server on the switch redirects the URL to the AP (Virtual IP Address) URL when the WLAN Management is accessed from WebView.

**webview wlan cluster-virtual-ip** *virtual-ip-address-of-wlan-cluster*

---

### Syntax Definitions

*virtual-ip-address-of-wlan-cluster*      Virtual IP address (IPV4) of the AP cluster.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	No	No	No	Yes

### Usage Guidelines

Use this command to configure the AP cluster virtual IP address to access the OAW-AP web interface from the WebView.

### Examples

```
-> webview wlan cluster-virtual-ip 10.25.6.8
```

### Release History

Release 8.4.1 R02; command was introduced.

### Related Commands

[show webview wlan config](#)      Displays the AP cluster virtual IP configured on the switch.

### MIB Objects

alaIND1WebMgtWlanConfiguredIpAddress

---

## show webview wlan config

Displays the cluster virtual IP precedence configuration, WLAN AP cluster virtual IP configured on the switch, and WLAN AP cluster virtual IP obtained through LLDP.

**show webview wlan config**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	Yes	Yes	No	No	No	Yes

### Usage Guidelines

N/A

### Examples

```
-> show webview wlan config
WebView WLAN Cluster-Virtual-IP Precedence = LLDP
WebView WLAN Cluster-Virtual-IP configured address = 0.0.0.0
WebView WLAN Cluster-Virtual-IP LLDP address = 1.1.1.1
```

### *output definitions*

---

**WebView WLAN Cluster-Virtual-IP Precedence** The precedence set for obtaining the cluster virtual IP address of the AP.

**WebView WLAN Cluster-Virtual-IP configured address** The manually configured cluster virtual IP address.

**WebView WLAN Cluster-Virtual-IP LLDP address** The cluster virtual IP address obtained from the LLDP packets.

---

### Release History

Release 8.4.1R02; command was introduced.

## Related Commands

- webview wlan cluster-virtual-ip precedence** Allows to set the preference for the choice of cluster virtual IP address for WebView re-direct.
- webview wlan cluster-virtual-ip** Configures the virtual IP address of the Access Point (AP) clusters in the switch.

## MIB Objects

```
alaIND1WebMgtWlanIpPrecedence
  alaIND1WebMgtWlanConfiguredIpAddressType
  alaIND1WebMgtWlanConfiguredIpAddress
  alaIND1WebMgtWlanLldpIpAddressType
  alaIND1WebMgtWlanLldpIpAddress
```

---

## show webview

Displays web management configuration information.

`[vrf name] show webview`

---

### Syntax Definitions

*name* The name of the VRF.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

If a VRF name is specified, the enabled/disabled state for WebView Server and WebView Access for the specified VRF is displayed.

### Examples

```
-> show webview
```

```
WebView Server = Enabled
WebView Access = Enabled
WebView Force-SSL = Enabled
WebView HTTPS-Port = 443
WebView SSL-Strong-Ciphers = Enabled
```

```
vrf1::-> show webview
WebView Server = Enabled,
WebView Access = Enabled,
WebView Force-SSL = Enabled,
WebView HTTPS-Port = 443
WebView SSL-Strong-Ciphers = Enabled
```

### output definitions

---

<b>WebView Server</b>	Indicates whether web management server is enabled or disabled.
<b>WebView Access</b>	Indicates whether web management access is enabled or disabled.
<b>Force SSL</b>	Indicates whether Force SSL is enabled or disabled. If this is enabled it means that SSL is forced on an HTTP session and hence HTTPS protocol is negotiated between the client and server.

*output definitions (continued)*

---

<b>Web Management Https Port</b>	The port configured for a secure HTTP connection (SSL enabled).
<b>Web SSL-Strong-Ciphers</b>	Indicates whether SSL strong cipher requirement is enabled or disabled.

---

**Release History**

Release 7.1.1; command was introduced.

Release 7.3.1; **vrf** parameter added.

```

---

# 64 Configuration File Manager Commands

The Configuration Manager feature allows you to configure your switch using an ASCII-based text file. CLI commands may be typed into a text document—referred to as a *configuration file*—and then uploaded and applied to the switch.

MIB information for the Configuration Manager commands is as follows:

*Filename:* ALCATEL-IND1-CONFIG-MGR-MIB.mib  
*Module:* alcatelIND1ConfigMgrMIB

A summary of the available commands is listed here:

---

**configuration apply**  
**configuration error-file-limit**  
**show configuration status**  
**configuration cancel**  
**configuration syntax-check**  
**configuration snapshot**  
**show configuration snapshot**  
**write terminal**  
**configuration apply network-sync**

---

## configuration apply

Applies a configuration file to the switch. Files may be applied immediately or after a designated timer session. With the timer session option, files are applied either at a scheduled date and time or after a specified period of time (i.e., a countdown) has passed.

**configuration apply** *filename* [**at** *hh:mm month dd* [*year*]] | [**in** *hh[:mm]*] [**verbose**]

---

### Syntax Definitions

<i>filename</i>	The name of the configuration text file to be applied to the switch (e.g., <b>newfile1</b> ).
<b>at</b> <i>hh:mm</i> { <i>dd month   month dd</i> } [ <i>year</i> ]	Designates a timer session in which a configuration file is applied at a specified date and time in the future. Values for <i>hh</i> range from 00 through 23. Values for <i>mm</i> range from 00 through 59. Values for <i>dd</i> range from 01 through 31. Values for month range from january through december. The switch assumes either the current year or the next calendar year for month and day pairs that precede the current date.
<b>in</b> <i>hh[:mm]</i>	Designates a timer session in which the configuration file is applied after a specific amount of time (i.e., a countdown) has passed. Values for <i>hh</i> range from 00 through 23. Values for <i>mm</i> range from 00–59.
<b>verbose</b>	When verbose is entered, information is displayed on your workstation's console as each command in the configuration file is applied.

### Defaults

By default, **verbose** error checking is not performed.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The **configuration apply** command only applies settings to the running configuration. The **boot.cfg** file does not get overwritten.
- It is recommended that you check all configuration files for syntax errors before applying them to your switch.
- To schedule a timer session in which a file is applied at a specific date and time, enter **at** followed by the hour, minute, month, day, and year. The switch assumes either the current calendar year or the next calendar year for dates beginning January 1.
- To schedule a timer session in which a file is applied after a specific amount of time (i.e., a countdown) has passed, enter **in** followed by the number of hours and minutes.
- Verbose mode is not supported for timer sessions.

- The keyword, **authkey**, along with a related alpha-numeric text string, are automatically included in many snapshot files (e.g., **configuration snapshot all**). The text string following the **authkey** keyword represents a login password that has been encrypted *twice*. (The first encryption occurs when a password is first created by a user; the second encryption occurs when a configuration snapshot is taken.) This dual encryption further enhances switch security. However, it is important to note that any configuration file (including a generated snapshot) that includes this dual-encrypted password information will result in an error whenever it is applied to the switch via the **configuration apply** command. This is a valid switch function and does not represent a significant problem. If an **authkey**-related error is the *only* error detected, simply remove all **authkey**-related syntax using a text editor. If a new password is required for the switch, include valid password syntax in the configuration file or immediately issue a new password by using the **password** command at the command prompt. For more information on passwords, refer to [page 38-62](#).

## Examples

```
-> configuration apply new_configuration at 12:00 15 november
-> configuration apply new_configuration at 12:00 november 15
-> configuration apply newfile1 in 01:30
-> configuration apply my_switch_config in 00:05
-> configuration apply asc.1.snap in 23:00
-> configuration apply aaa_config in 12
-> configuration apply vlan_config verbose
-> configuration apply vlan_config
...
```

---

**Note.** When the **configuration apply** command is entered *without at or in* syntax information, one or more dots “.” is displayed in the next line, immediately following the command line. This indicates command progress; each dot represents 256 text lines in the configuration file processed by the configuration apply mechanism.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

**configuration syntax-check** Performs a syntax and authorization check of all CLI commands contained in a configuration file.

## MIB Objects

```
alcatelIND1ConfigMgrMIBObjects
  configFileName
  configFileMode
  configFileAction
  configTimerFileName
  configTimerFileTime
```

---

## configuration error-file-limit

Specifies the maximum number of configuration error files allowed in the switch's **/flash** directory. Error files are normally generated when a configuration file is applied to the switch. Error files are identified by their **.err** extension. When the maximum number of **.err** files is exceeded, any new error file will overwrite the **.err** file with the oldest timestamp.

**configuration error-file-limit** *number*

---

### Syntax Definitions

*number*                                      Indicate the number of error files allowed in the **/flash** directory. The valid range is from 1 to 25 files.

### Defaults

parameter	default
<i>number</i>	1

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When the error file limit is set to 1 (the default value), the next error file generated by the switch will replace the existing one.
- When the error file limit is set to a value greater than 1, when a new error file that exceeds the maximum limit is created, the switch will automatically remove the error file with the smallest timestamp.
- The error files generated by the switch have the **.err** extension.
- If you want to save an error file, you may change the file name so that it does not have the **.err** extension, or you can move it from the **/flash** directory.

### Examples

```
-> configuration error-file-limit 2
-> configuration error-file-limit 1
```

### Release History

Release 7.1.1; command was introduced.

**Related Commands**

**configuration apply** Applies a configuration file to the switch. Also used for scheduling a timer session for a configuration file.

**configuration cancel** Cancels a pending timer session for a configuration file.

**MIB Objects**

alcatelIND1ConfigMgrMIBObjects  
configErrorFileMaximum

---

## show configuration status

Displays whether there is a pending timer session scheduled for a configuration file and indicates whether the running configuration and the saved configuration files are *identical* or *different*. This command also displays the number of error files that will be held in the flash directory.

**show configuration status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- A timer session can be scheduled using the **configuration apply** command. For more information, refer to [page 64-2](#).
- The screen output **File configuration </path/filename>: scheduled at dd/mm hh:mm** indicates that a timer session has been scheduled for a later time.
- The output **No file configuration has been scheduled** indicates an idle timer session (i.e., no timer session has been scheduled for a configuration file).
- The output **File configuration is in progress** indicates that a file is currently being applied to the switch.
- The output **File configuration </path/filename>: completed with 2 errors** indicates that the named file was applied to the switch with two recorded errors.
- When the running and saved configurations are the same, the output **Running configuration and saved configuration are identical** will be displayed.
- When the running and saved configurations are the different, the output **Running configuration and saved configuration are different** will be displayed.
- To synchronize the running and saved configuration, use the **write memory** command.

### Examples

```
-> show configuration status
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

- configuration apply** Applies a configuration file to the switch. Also used for scheduling a timer session for a configuration file.
- configuration cancel** Cancels a pending timer session for a configuration file.
- configuration error-file-limit** Specifies the maximum number of configuration error files allowed in the switch's **/flash** directory.
- write memory** Copies the running configuration (RAM) to the working directory.

## MIB Objects

configTimerFileGroup  
configTimerFileStatus

---

## configuration cancel

Cancels a pending timer session for a configuration file.

**configuration cancel**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> configuration cancel
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

#### [configuration apply](#)

Applies a configuration file to the switch. Also used for scheduling a timer session for a configuration file.

#### [show configuration status](#)

Displays whether there is a pending timer session scheduled for a configuration file.

### MIB Objects

```
configTimerFileGroup  
configTimerClear
```

---

## configuration syntax-check

Performs a syntax and authorization check of all CLI commands contained in a configuration file.

**configuration syntax-check** *path/filename* [**verbose**]

---

### Syntax Definitions

*path/filename*

The configuration file being checked for syntax and authorization errors. If a configuration file is located in another directory, be sure to specify the full path. For example, **/flash/working/asc.1.snap**.

**verbose**

When **verbose** is specified in the command line, all syntax contained in the configuration file is printed to the console, even if no error is detected. When **verbose** is *not* specified in the command line, cursory information (number of errors and error log file name) will be printed to the console *only if a syntax or configuration error is detected*.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- When an error is detected, an error file (**.err**) is automatically generated by the switch. By default, this file is placed in the root **/flash** directory. To view the contents of a generated error file, use the **view** command. For example, **view asc.1.snap.1.err**.
- The syntax, **mac alloc**, is automatically included in many snapshot files (e.g., **configuration snapshot all**). All **mac alloc**-related syntax is valid *during switch boot up only* (i.e., it cannot be applied while the switch is in run-time operation). Because snapshot files are commonly used as configuration files, syntax checks may detect **mac alloc** syntax and issue an error (along with a generated **.err** file). This is a valid switch function and does not represent a significant problem. If a **mac alloc**-related error is the *only* error detected, simply remove the syntax using a text editor, then re-check the file using the **configuration syntax-check** command.
- It is recommended that you check all configuration files for syntax errors before applying them to your switch.

## Examples

```
-> configuration syntax-check vlan_file1  
..
```

---

**Note.** When the **configuration syntax-check** command is entered, one or more dots “.” is displayed in the command output. This indicates command progress; each dot represents 256 text lines in the configuration file processed by the syntax check mechanism.

---

## Release History

Release 7.1.1; command was introduced.

## Related Commands

- |   |  |
|---|--|
| <a href="#">configuration apply</a>       | Applies a configuration file to the switch. Also used for scheduling a timer session for a configuration file. |
| <a href="#">show configuration status</a> | Displays whether there is a pending timer session scheduled for a configuration file.                          |

## MIB Objects

```
configFileGroup  
  configErrorFileName  
  configErrorFileMaximum  
  configFileMode  
  configFileStatus
```

---

## configuration snapshot

Generates a snapshot file of the switch's non-default current running configuration. A snapshot can be generated for all current network features or for one or more specific network features. A snapshot is a single text file that can be viewed, edited, and reused as a configuration file.

**configuration snapshot** [*feature\_list* | **all**] [*path/filename*]

---

### Syntax Definitions

<i>feature_list</i>	The description for the network feature(s) to be included in the snapshot. You may enter more than one network feature in the command line. Enter a question mark (?) on the command line to get a list of features ( <b>configuration snapshot ?</b> ).
<b>all</b>	Includes all network features in the snapshot.
<i>path/filename</i>	A user-defined name for the resulting snapshot file. For example, <b>test_snmp_snap</b> . You may also enter a specific path for the resulting file. For example, the syntax <b>/flash/working/test_snmp_snap</b> places the <b>test_snmp_snap</b> file in the switch's <b>/flash/working</b> directory.

### Defaults

If a file name is not specified, the default file name **asc.#.snap** is used. Here, # indicates the order in which the default file is generated. For example, the first default file name to be generated is **asc.1.snap**, the second default file name to be generated is named **asc.2.snap**, etc. By default, all snapshot files are placed in the root **/flash** directory.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Only current, non-default configuration settings are written to the snapshot file.
- You may enter more than one network feature in the command line. Separate each network feature with a space and no comma. Network features may be entered in any order.
- The snapshot file is automatically placed in the root **/flash** directory unless otherwise specified.

### Examples

```
-> configuration snapshot all
-> configuration snapshot qos health aggregation new_file1
-> configuration snapshot snmp_snapshot snmp
-> configuration snapshot 802.1q
```

-> configuration snapshot ?

---

## show configuration snapshot

Displays the switch's current running configuration for all features or for the specified feature(s).

**show configuration snapshot** [*feature\_list*]

---

### Syntax Definitions

*feature\_list* Specify the feature(s) for which you want to display the running configuration. List the features separated by a space with no comma. Enter a question mark (?) on the command line to get a list of features (**show configuration snapshot ?**).

### Defaults

By default, this command shows configuration information for *all* features.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use this command to view the current configuration for any feature shown in the table.
- Configurations are listed below the name of each feature.
- Features with no current configuration show only the name of the feature.

### Examples

```
-> show configuration snapshot
-> show configuration snapshot aaa bridge
! Bridging :

! AAA :
aaa authentication default "local"
aaa authentication console "local"
user "public" read All write All no auth authkey 391b0e74dbd13973d703ccea4a8e30

  mib_configSnapshotAllSelect
```

---

## configuration apply network-sync

Performs pre-provisioning or runtime network level synchronization for AOS Micro Services (AMS) using the publisher/subscriber model.

**configuration apply network-sync** *filename* [**community** *community-name* | **local-apply**]

---

### Syntax Definitions

<i>filename</i>	The name of the file with the AOS configuration to be synchronized.
<i>community-name</i>	Performs synchronization only on switches with the corresponding community name.
local-apply	Apply the configuration to the local switch.

### Defaults

N/A

### Platforms Supported

Not supported in this release.

### Usage Guidelines

- Use the [configuration syntax-check](#) command to validate the configuration file syntax before network synchronization.
- It is recommended to have only global, and not local, level switch configuration information propagated for network level configurations.
- The file name “preprovision.txt” is a pre-defined name used for pre-provisioning purposes. Pre-provisioning applies only to new nodes that join the network, the configuration will not be applied to existing nodes. Refer to the AMS section of the Switch Management Guide for additional information.

### Examples

```
-> configuration apply network-sync preprovision.txt  
-> configuration apply network-sync adaptive-test
```

### Release History

Release 8.6R1; command not supported.

### Related Commands

[configuration syntax-check](#) Performs a syntax and authorization check of all CLI commands contained in a configuration file.

### MIB Objects

N/A

---

# 65 SNMP Commands

This chapter includes descriptions for Trap Manager and SNMP Agent commands. The commands are used for configuring SNMP settings on the switch.

- SNMP station commands can create, modify, or delete an SNMP station. Also included is a show command for monitoring current SNMP station status.
- SNMP trap commands configure SNMP trap settings. Traps can be replayed and filtered. Also, test traps can be generated to verify that individual traps are being correctly handled by the Network Management Station (NMS). The SNMP trap commands set includes show commands for monitoring SNMP trap information.
- SNMP agent commands configure SNMP security levels on the switch. Also includes show commands for monitoring the current SNMP security status.

MIB information for SNMP Community commands is as follows:

*Filename:* SNMP-COMMUNITY-MIB.mib  
*Module:* snmpCommunityMIB

MIB information for Trap Manager commands is as follows:

*Filename* ALCATEL-IND1-TRAP-MGR-MIB.mib  
*Module:* alcatelIND1TrapMgrMIB

MIB information for SNMP Agent commands is as follows:

*Filename:* ALCATEL-IND1-SNMP-AGENT-MIB.mib  
*Module:* alcatelIND1SNMPAgentMIB

A summary of the available commands is listed here:

---

<b>SNMP station commands</b>	<b>snmp station</b> <b>show snmp station</b>
<b>SNMP engine ID commands</b>	<b>snmp snmp-engineid-type</b> <b>show snmp snmp-engineid</b>
<b>SNMP community map commands</b>	<b>snmp community-map</b> <b>snmp community-map mode</b> <b>show snmp community-map</b>
<b>SNMP security commands</b>	<b>snmp security</b> <b>snmp security tsm</b> <b>snmp tsm-map</b> <b>show snmp tsm-map</b> <b>show snmp security</b> <b>show snmp statistics</b> <b>show snmp mib-family</b>
<b>SNMP trap commands</b>	<b>snmp-trap absorption</b> <b>snmp-trap to-webview</b> <b>snmp-trap replay-ip</b> <b>snmp-trap filter-ip</b> <b>snmp authentication-trap</b> <b>show snmp-trap replay-ip</b> <b>show snmp-trap filter-ip</b> <b>show snmp authentication-trap</b> <b>show snmp-trap config</b>
<b>Event commands</b>	<b>event-action</b> <b>show event-action</b>

---

## snmp station

Adds a new SNMP station; modifies or deletes an existing SNMP station.

**snmp station** {*ip\_address* | *ipv6\_address* | *domain\_name*} {[*port*] [*username*] [**v1** | **v2** | **v3** | **v3 tsm local-identity** *local\_string* **remote-identity** *remote\_string*] [**enable** | **disable**]}

**no snmp station** {*ip\_address* | *ipv6\_address* | *domain\_name*}

---

### Syntax Definitions

<i>ip_address</i>	The IP address to which SNMP unicast traps will be sent.
<i>ipv6_address</i>	The IPv6 address to which SNMP unicast traps will be sent.
<i>domain_name</i>	A Fully Qualified Domain Name (FQDN) to which SNMP unicast traps will be sent. Specify a domain name up to 255 characters in length.
<i>port</i>	A UDP or TLSTCP destination port.
<i>username</i>	The user name on the switch or external server used to send traps to the SNMP station(s). The username specified here must match an existing user account name.
<b>v1</b>	Specifies that traps are sent using SNMP version 1.
<b>v2</b>	Specifies that traps are sent using SNMP version 2.
<b>v3</b>	Specifies that traps are sent using SNMP version 3.
<b>tsm</b>	The TSM security model for SNMP. The security model can be selected only for SNMP version 3.
<i>local_string</i>	The file name of the local certificate. To be configured when TSM mode is selected.
<i>remote_string</i>	The file name of the remote certificate. To be configured when TSM mode is selected.
<b>enable</b>	Enables the specified SNMP station.
<b>disable</b>	Disables the specified SNMP station.

### Defaults

parameter	default
<i>port</i>	162 (for UDP) 10162 (for TLSTCP)
<b>v1</b>   <b>v2</b>   <b>v3</b>	<b>v3</b>
<b>enable</b>   <b>disable</b>	<b>enable</b>

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

- Use the **no** form of the command to remove an existing SNMP station.
- When adding an SNMP station, specify an IP address or FQDN *plus username parameters*. For example, the syntax **snmp station 1.2.3.4** is not a valid command entry; however, **snmp station 1.2.3.4 username1** is a valid command entry.
- A maximum of 50 SNMP sessions can be established in the switch.
- When modifying an SNMP station, specify an IP address or FQDN *plus at least one additional parameter*. For example, the syntax **snmp station 1.2.3.4** is not a valid command entry; however, **snmp station 1.2.3.4 v2** is a valid command entry.
- When an FQDN is specified with this command, the switch will resolve the domain name to an IP address. Make sure the domain name maps to a valid and reachable IP address.
- When the SNMP station is enabled, the switch transmits traps to the specified IP or IPv6 address.
- For UDP the default port 162 is commonly used for traps; however, the destination port can be redefined to accommodate an SNMP station using a nonstandard port. The destination port specified must correspond with the UDP destination port configured at the receiving SNMP station(s).
- For TLSTCP the default port 10162 is commonly used for traps; however, the destination port can be redefined to accommodate an SNMP station using a nonstandard port. The destination port specified must correspond with the TLSTCP destination port configured at the receiving SNMP station(s).
- To send SNMP traps over TLS connection, the SNMP station needs to be configured with TSM user along with certificate identities.
- The `local_identity` and `remote_identity` are the names of certificate file. If the contents of local or remote certificates are changed, the updated certificates must be manually copied from master or primary to all secondaries and slaves. A reboot is required for the changes to be applied.
- When TSM security model is enabled, all the v1/v2/v3 USM requests and traps are discarded.
- When TSM security model is disabled, all v1/v2/v3 (USM and TSM) requests and traps are allowed.
- In TSM security model SNMP requests are supported over IPv4 transport only.

## Examples

```
-> snmp station 168.22.2.2 111 username2 v1 disable
-> snmp station 168.151.2.101 "test lab"
-> snmp station 170.1.2.3 username1 enable
-> snmp station 1.1.2.2 v2
-> no snmp station 2.2.2.2
-> snmp station 300::1 enable
-> no snmp station 300::1
```

```
-> snmp station upam.omnivista.com username2 v1 disable
-> snmp station upam.omnivista.com v2
-> no snmp station upam.omnivista.com
-> snmp station opendaylight.com enable v2 public
ERROR: DNS lookup failed, unknown host opendaylight.com
-> snmp station 168.22.1.1 joe v3 tsm local-identity aluSubagent.crt
remote-identity manager.crt enable
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; *domain\_name* parameter option added.

Release 8.6R1; **tsm**, **local-identity**, and **remote-identity** parameters added.

## Related Commands

[show snmp station](#) Displays the current SNMP station information.

```

### *output definitions*

---

<b>IpAddress</b>	IP Address of the SNMP management station.
<b>Port</b>	Trap station port number (UDP, TLSTCP).
<b>status</b>	The Enabled/Disabled status of the SNMP management station.
<b>protocol</b>	The version of SNMP set for this management station.
<b>security model</b>	Displays the security model selected.
<b>user</b>	The user account name.
<b>local identity</b>	File name of local certificate used, TSM only. This is displayed only for SNMP version 3.
<b>remote identity</b>	File name of remote certificate used, TSM only. This is displayed only for SNMP version 3.

---

## Release History

Release 7.1.1; command was introduced.

Release 8.6R1; **details** parameter and **local identity**, **remote identity**, and **security model** output fields added.

## Related Commands

**snmp station** Adds a new SNMP station; modifies or deletes an existing SNMP station.

  trapStationIP
  trapStationPort
  trapStationUser
  trapStationProtocol
  trapStationRowStatus
alaTrapInetStationTable
  alaTrapInetStationIPType
  alaTrapInetStationIP
  alaTrapInetStationPort
  alaTrapInetStationRowStatus
  alaTrapInetStationProtocol
  alaTrapInetStationUser
  alaTrapInetStationLocalIdentity
  alaTrapInetStationRemoteIdentity

```

---

## snmp snmp-engineid-type

Configures a unique engine ID for the OmniSwitch SNMP agent.

```
snmp snmp-engineid-type {text | mac-address | ipv4-address | ipv6-address} snmp-engineid
{text_string | mac_address | ipv4_address | ipv6_address}
```

```
snmp snmp-engineid-type mac-address snmp-engineid default
```

---

### Syntax Definitions

<i>text_string</i>	A text string that will be converted to a hexadecimal value. The valid range is 1–27 characters.
<i>mac_address</i>	A specific MAC Address (for example, 00:00:39:59:f1:0c).
<i>ipv4_address</i>	An IPv4 address that will be converted to a hexadecimal value.
<i>ipv6_address</i>	An IPv6 address that will be converted to a hexadecimal value.

### Defaults

By default, the SNMP engine ID is set to the base MAC address for the switch appended to the enterprise value for OmniSwitch platforms (for example, if the enterprise value is “8000195603” and the switch base MAC address is “2c:fa:a2:13:e4:02”, then the default engine ID is set to “80001956032cfaa213e402”).

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To set the engine ID back to the default value, specify the **mac-address** parameter and the **default** parameter with this command. For example, **snmp snmp-engineid-type mac-address snmp-engineid default**.
- Note that the **snmp-engineid** keyword is entered after the parameter that specifies the type of engine ID format to use and before the actual value that matches the specified parameter type. For example, if the **ipv4-address** parameter is specified, enter the IPv4 address value after the **snmp-engineid** keyword (**snmp snmp-engineid-type ipv4-address snmp-engineid 10.2.2.1**).
- When a text string, an IPv4 address, or an IPv6 address is specified, the value is automatically converted to a hexadecimal value that is then appended to the OmniSwitch enterprise value to form the SNMP engine ID for the switch.

### Examples

```
-> snmp snmp-engineid-type text snmp-engineid "test lab"
-> snmp snmp-engineid-type mac-address snmp-engineid 00:2a:95:01:02:03
-> snmp snmp-engineid-type ipv4-address snmp-engineid 168.22.2.2 111
-> snmp snmp-engineid-type mac-address snmp-engineid default
```

## Release History

Release 8.3.1.R02; command was introduced.

## Related Commands

**show snmp snmp-engineid**      Displays the current SNMP engine ID information.

## MIB Objects

snmpAgtEngineIdType  
snmpAgtEngineId

---

## show snmp snmp-engineid

Displays the current SNMP engine ID value for the switch.

**show snmp snmp-engineid**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guideline

N/A

### Examples

```
-> show snmp snmp-engineid
snmp engineId type          snmp engineId
-----+-----
    default Mac              80001956032cfaa213e402
```

#### *output definitions*

---

<b>snmp engineId type</b>	The type of engine ID ( <b>default Mac, Text, Ipv4, or Ipv6</b> ).
<b>snmp engineId</b>	The SNMP engine ID value that uniquely identifies the OmniSwitch SNMP agent. This value is comprised of the OmniSwitch enterprise ID plus the configured SNMP engine ID value, in hexadecimal format.

---

### Release History

Release 8.3.1.R02; command was introduced.

### Related Commands

[snmp snmp-engineid-type](#) Configures the type and value of the SNMP engine ID for the switch.

### MIB Objects

```
snmpAgtEngineIdType
snmpAgtEngineId
```

---

## snmp community-map

Configures and enables a community string on the switch and maps it to an existing user account name.

```
snmp community-map {[hash-key string | community_string] user useraccount_name} [enable | disable]
```

```
no snmp community-map community_string
```

---

### Syntax Definitions

<b>hash-key string</b>	The hashed format of a community string.
<b>community_string</b>	A community string in the form of a text string. This string must be between 1 and 32 characters.
<b>useraccount_name</b>	A user name in the form of a text string. This name must match a user login account name already configured on the switch or configured remotely on an external AAA server. This user name must be between 1 and 32 characters.
<b>enable</b>	Enables SNMP community string mapping.
<b>disable</b>	Disables SNMP community string mapping.

### Defaults

By default, SNMP community map authentication is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Community strings are stored in a hashed format in the **show configuration snapshot snmp** output. To view community string mappings in plain-text use the **show snmp community-map** command.
- Community strings configured on the switch are used for v1 and v2c SNMP managers only.
- The user account name must be a current user account recognized by the switch. For a list of current user names use the **show user** command. To create a new user account, use the **user** command.
- There is one to one mapping between each community string and a user account name.
- Privileges attached to the community string are the ones inherited from the user account name that created it.
- The community-map mode must be enabled and the community string carried over each incoming v1 or v2c SNMP request must be mapped to a user account name in order to be processed by the SNMP agent.

## Examples

```
-> snmp community-map community1 user testname1  
-> snmp community-map community1 enable
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

[snmp community-map mode](#) Enables the local community strings database.

## MIB Objects

```
SNMPCommunityTable  
  snmpCommunityIndex  
  snmpCommunitySecurityName  
  snmpCommunityStatus
```

---

## snmp community-map mode

Enables the local community strings database.

`snmp community-map mode {enable | disable}`

---

### Syntax Definitions

**enable** Enables SNMP community map database.  
**disable** Disables SNMP community map database.

### Defaults

parameter	default
Community mode	disabled

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The community-map mode must be enabled and the community string carried over each incoming v1 or v2c SNMP request must be mapped to a user account name with SNMP privileges in order to be processed by the SNMP agent.
- When enabled, mapping is contained in the local community strings database populated by using the [snmp community-map](#) command.

### Examples

```
-> snmp community-map mode enable
-> snmp community-map mode disable
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

### [snmp community-map](#)

Configures and enables a community string on the switch and maps it to an existing user account name.

## MIB Objects

```
SNMPCommunityTable  
  snmpCommunityIndex  
  snmpCommunitySecurityName  
  snmpCommunityStatus
```

---

## show snmp community-map

Shows the local community strings database.

**show snmp community-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guideline

N/A

### Examples

```
-> show snmp community-map
Community mode : enabled
```

```
status  community string                user name
-----+-----+-----+-----+-----+-----+-----+-----+-----+
enabled test_string1                    bb_username
enabled test_string2                    rr_username
disabled test_string3                   cc_username
disabled test_string4                   jj_username
```

#### *output definitions*

---

<b>Status</b>	The Enabled/Disabled status of the community string.
<b>Community String</b>	The text that defines the community string.
<b>User Name</b>	The user account name.

---

### Release History

Release 7.1.1; command was introduced.

**Related Commands****snmp community-map**

Configures and enables a community string on the switch and maps it to an existing user account name.

**MIB Objects**

N/A

---

## snmp security

Configures SNMP security settings.

**snmp security** {no-security | authentication set | authentication all | privacy set | privacy all | trap-only | tls {enable | disable}}

---

### Syntax Definitions

<b>no-security</b>	The switch will accept all SNMP v1, v2, and v3 requests.
<b>authentication set</b>	The switch will accept all requests <i>except</i> v1, v2, and non-authenticated v3 set requests. SNMP v1, v2, and non-authenticated v3 set requests will be rejected.
<b>authentication all</b>	The switch will accept all requests <i>except</i> v1, v2, and non-authenticated v3 get, get-next, and set requests. SNMP v1, v2, and non-authenticated v3 get, get-next, and set requests will be rejected.
<b>privacy set</b>	The switch will accept <i>only</i> authenticated SNMP v3 get, get-next and encrypted v3 set requests. All other requests will be rejected.
<b>privacy all</b>	The switch will accept only encrypted v3 get, get-next, and set requests. All other requests will be rejected.
<b>trap-only</b>	All SNMP get, get-next, and set requests will be rejected.
<b>tls enable   disable</b>	Unblocks (enable) or blocks (disable) the SNMP TLS port 10161.

### Defaults

parameter	default
security	privacy all
tls enable   disable	disable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## Usage Guidelines

Refer to the table below for a quick-reference list of security parameter and the SNMP request allowances for each parameter.

	v1 set v2 set v3 non-auth set	v1 get v2 get v3 non-auth get/ get-next	v3 auth set	v3 auth get/ get-next	v3 encryp set	v3 encryp get/ get-next
<b>no-security</b>	accepted	accepted	accepted	accepted	accepted	accepted
<b>authentication set</b>	rejected	accepted	accepted	accepted	accepted	accepted
<b>authentication all</b>	rejected	rejected	accepted	accepted	accepted	accepted
<b>privacy set</b>	rejected	rejected	rejected	accepted	accepted	accepted
<b>privacy all</b>	rejected	rejected	rejected	rejected	accepted	accepted
<b>trap-only</b>	rejected	rejected	rejected	rejected	rejected	rejected

## Examples

```
-> snmp security no-security
-> snmp security authentication set
-> snmp security authentication all
-> snmp security privacy set
-> snmp security trap-only
```

## Release History

Release 7.1.1; command was introduced.

## Related Commands

[show snmp security](#) Displays the current SNMP security status.

## MIB Objects

```
SNMPAgtConfig
  SnpAgtSecurityLevel
```

## snmp security tsm

Enables or disables TLS encryption for SNMP access.

**snmp security tsm [enable | disable]**

---

### Syntax Definitions

**enable** Enables TLS encryption for SNMP access.  
**disable** Disables TLS encryption for SNMP access.

### Defaults

By default, the TLS encryption for SNMP access is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The TLS encryption can be enabled only for SNMP version 3.
- In Common Criteria mode (CC mode) TLS encryption for SNMP is enabled by default and cannot be disabled.

### Examples

```
-> snmp security tsm enable
-> snmp security tsm disable
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

[snmp tsm-map](#) Displays the current SNMP security status.

### MIB Objects

SNMPAgtConfig  
 snmpAgtTsmAdminState

---

## snmp tsm-map

Allows to map a remote identity or certificate to a user in TSM mode.

**snmp tsm-map remote-identity** *remote\_string* **user** *user\_string*

---

### Syntax Definitions

*remote\_string* File name of remote certificate to be mapped with the user. This string must be between 1 and 128 characters.

*user\_string* The user name. This string must be between 1 and 32 characters.

### Defaults

N/A.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- The remote identity mapping for user can be done only in TSM mode.
- The remote identity mapping can be done for only one user at a time. It cannot be mapped to multiple users. Mapping it to a different user will replace the existing user.
- If the content of remote certificate is changed, the updated certificate must be manually copied from master or primary to all secondaries and slaves. A reboot is required for the changes to be applied.

### Examples

```
-> snmp tsm-map remote-identity manager.crt user joe
-> snmp security tsm disable
```

### Release History

Release 8.6R1; command was introduced.

### Related Commands

**show snmp tsm-map** Displays the current SNMP TSM remote identity mapping for a user.

### MIB Objects

```
alaSnmpTsmUserTable
  alaSnmpTsmUserRemoteIdentity
  alaSnmpTsmUserName
```

---

## show snmp tsm-map

Displays the current SNMP TSM remote identity mapping for a user.

**show snmp tsm-map**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

Enter the specific file name of the remote certificate to view the mapping related to it.

### Examples

```
-> show snmp tsm-map
Remote Identity          User
-----+-----
manager.crt             adam

-> show snmp tsm-map manager.pem
Remote Identity          User
-----+-----
manager.pem             joecool
```

### *output definitions*

---

<b>Remote Identity</b>	Displays the file name of the remote certificate mapped to the user.
<b>User</b>	Displays the user name mapped to the remote identity.

---

### Release History

Release 8.6R1; command was introduced.

**Related Commands****snmp tsm-map**

Allows to map a remote identity or certificate to a user in TSM mode.

**MIB Objects**

N/A

---

## show snmp security

Displays the current SNMP security status.

```
show snmp security [tsm]
```

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Refer to the command on page [65-17](#) for descriptions of the five SNMP security states: no security, authentication set, authentication all, privacy set, privacy all, and trap only.
- Use the optional parameter **tsm** along with the command to display the configured SNMP TSM status.

### Examples

```
-> show snmp security
snmp security = no security
```

```
-> show snmp security
snmp security = authentication set
```

```
-> show snmp security
snmp security = authentication all
```

```
-> show snmp security
snmp security = privacy set
```

```
-> show snmp security
snmp security = privacy all
```

```
-> show snmp security
snmp security = trap only
```

```
-> show snmp security tsm
snmp security tsm = disable
```

*output definitions*

---

<b>snmp security</b>	Displays the configured SNMP security level.
<b>snmp security tsm</b>	Displays the configured SNMP TLS encryption status.

---

**Release History**

Release 7.1.1; command was introduced.

Release 8.6R1; **tsm** parameter added.

### **Release History**

Release 7.1.1; command was introduced.

### **Related Commands**

[snmp security](#) Configures the SNMP security settings.

### **MIB Objects**

N/A

---

## show snmp mib-family

Displays SNMP MIB information. Information includes MIP ID number, MIB table name, and command family.

**show snmp mib-family** [*table\_name*]

---

### Syntax Definitions

*table\_name*                      The name of the MIB table to be displayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- If a table name is not specified in the command syntax, all MIB table names will be displayed.
- If the command family is not valid for the entire MIB table, the command family will be displayed on a per-object basis.
- Table names are case-sensitive. Therefore, use the exact table names from the MIB database.

### Examples

```
-> show snmp mib-family trapStationTable
MIP ID   MIB TABLE NAME                               FAMILY
-----+-----+-----
73733   trapStationTable                             snmp
```

### output definitions

---

<b>MIP ID</b>	Identification number for the MIP associated with this MIB Table.
<b>MIB Table Name</b>	Name of the MIB table.
<b>Family</b>	Command family to which this MIB table belongs.

---

### Release History

Release 7.1.1; command was introduced.

**Related Commands**

[show snmp-trap filter-ip](#) Displays the SNMP trap filter information.

**MIB Objects**

N/A

---

## snmp-trap absorption

Enables or disables the trap absorption function.

**snmp-trap absorption {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables SNMP trap absorption. When trap absorption is enabled, identical, repetitive traps sent by applications during a pre-configured time period will be absorbed, and therefore not sent to SNMP Manager stations configured on the switch.
<b>disable</b>	Disables SNMP trap absorption.

### Defaults

By default, trap absorption is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

To view the current trap absorption status, use the **show snmp-trap config** command.

### Examples

```
-> snmp-trap absorption enable
-> snmp-trap absorption disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

**show snmp-trap config** Displays the SNMP trap information. Information includes trap ID numbers and corresponding trap names and families.

### MIB Objects

```
trapFilterTable
trapAbsorption
```

---

## snmp-trap to-webview

Enables the forwarding of traps to WebView.

`snmp-trap to-webview {enable | disable}`

---

### Syntax Definitions

<b>enable</b>	Enables WebView forwarding. When WebView forwarding is enabled, all traps sent by switch applications are also forwarded to WebView. This allows a WebView session to retrieve the trap history log.
<b>disable</b>	Disables WebView forwarding.

### Defaults

By default, WebView forwarding is enabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

To view the current WebView forwarding status, use the `show snmp-trap config` command.

### Examples

```
-> snmp-trap to-webview enable
-> snmp-trap to-webview disable
```

### Release History

Release 7.1.1; command was introduced.

### Related Commands

[show snmp-trap config](#) Displays the SNMP trap information, including the current status for trap absorption and WebView forwarding.

### MIB Objects

```
trapFilterTable
trapToWebView
```

---

## snmp-trap replay-ip

Replays stored traps from the switch to a specified SNMP station. This command is used to replay (to resend) traps on demand. This is useful in the event when traps are lost in the network.

**snmp-trap replay-ip** {*ip\_address* | *ipv6\_address* | *domain\_name*} [*seq\_id*]

---

### Syntax Definitions

<i>ip_address</i>	The IP address for the SNMP station to which traps will be replayed from the switch.
<i>ipv6_address</i>	The IPv6 address for the SNMP station to which traps will be replayed from the switch.
<i>domain_name</i>	A Fully Qualified Domain Name (FQDN) for the SNMP station to which traps will be replayed. Specify a domain name up to 255 characters in length.
<i>seq_id</i>	The sequence number from which trap replay will begin. Each trap sent by the switch to an SNMP station has a sequence number. The sequence number reflects the order in which the trap was sent to the SNMP station. For example, the first trap sent to an SNMP station has a sequence number of 1; the second trap has a sequence number of 2, etc. If no sequence number is entered, all stored traps are replayed.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **show snmp station** command on page [page 65-6](#) to display the latest stored sequence number for each SNMP station.
- The switch replays traps in the same order that they were previously sent, beginning from the specified sequence number.
- When traps are replayed, the original dates on which the trap was issued, rather than the current dates are used.
- When an FQDN is specified with this command, the switch will resolve the domain name to an IP address. Make sure the domain name maps to a valid and reachable IP address.
- If the specified sequence number is lower than the oldest trap sequence number stored in the switch, the switch replays all stored traps.

- If the specified sequence number is equal to or greater than the oldest trap sequence number stored, the switch replays all stored traps from the specified sequence number up to the latest sequence number.
- If the specified sequence number is greater than the latest sequence number, no traps are replayed.

## Examples

```
-> snmp-trap replay-ip 172.12.2.100
-> snmp-trap replay-ip 300::1
-> snmp-trap replay-ip upam.omnivista.com
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; *domain\_name* parameter option added.

## Related Commands

<a href="#">show snmp station</a>	Displays the current SNMP station status.
<a href="#">show snmp-trap replay-ip</a>	Displays the SNMP trap replay information.

## MIB Objects

```
trapStationTable
  trapStationReplay
  trapStationNextSeq
alaTrapInetStationTable
  alaTrapInetStationReplay
  alaTrapInetStationNextSeq
```

---

## snmp-trap filter-ip

Enables or disables SNMP trap filtering. Trap filtering is used to determine whether a trap or group of traps will be sent from the switch to a specified SNMP station.

**snmp-trap filter-ip** {*ip\_address* | *ipv6\_address* | *domain\_name*} *trap\_id\_list*

**no snmp-trap filter-ip** {*ip\_address* | *ipv6\_address* | *domain\_name*} *trap\_id\_list*

---

### Syntax Definitions

<i>ip_address</i>	The IP address for the SNMP station for which trap filtering is enabled or disabled.
<i>ipv6_address</i>	The IPv6 address for the SNMP station for which trap filtering is enabled or disabled.
<i>domain_name</i>	A Fully Qualified Domain Name (FQDN) for the SNMP station for which trap filtering is enabled or disabled. Specify a domain name up to 255 characters in length.
<i>trap_id_list</i>	Specifies the trap(s) for which filtering is being enabled or disabled. Traps must be specified using the numeric trap ID. You can specify more than one trap in the command line; separate each trap ID with a space and no comma.

### Defaults

By default, SNMP trap filtering is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- To *enable* trap filtering, use the syntax **snmp-trap filter-ip** *ip\_address* *trap\_id\_list*.
- To *disable* trap filtering, use the syntax **no snmp-trap filter-ip** *ip\_address* *trap\_id\_list*.
- When an FQDN is specified with this command, the switch will resolve the domain name to an IP address. Make sure the domain name maps to a valid and reachable IP address.
- When filtering is enabled, the specified trap(s) *will not* be sent to the SNMP station. When filtering is disabled, the specified traps *will* be sent to the SNMP station.
- To display a list of traps and their ID numbers, use the **show snmp-trap config** command.

## Examples

```
-> snmp-trap filter-ip 172.1.2.3 1
-> snmp-trap filter-ip 172.1.2.3 0 1 3 5
-> snmp-trap filter-ip 300::1 1 3 4
-> snmp-trap filter-ip upam.omnivista.com 1 3 5
-> no snmp-trap filter-ip 172.1.2.3 1
-> no snmp-trap filter-ip 172.1.2.3 0 1 3 5
-> no snmp-trap filter-ip 300::1 1 3
-> no snmp-trap filter-ip upam.omnivista.com 1 3 5
```

## Release History

Release 7.1.1; command was introduced.

Release 8.5R1; *domain\_name* parameter option added.

## Related Commands

[show snmp-trap filter-ip](#)

Displays the current SNMP trap filter status.

[show snmp-trap config](#)

alaTrapInetFilterTable
  alaTrapInetFilterStatus
```

---

## snmp authentication-trap

Enables or disables SNMP authentication failure trap forwarding.

**snmp authentication-trap {enable | disable}**

---

### Syntax Definitions

<b>enable</b>	Enables authentication failure trap forwarding. When enabled, the standard authentication failure trap is sent each time an SNMP authentication failure is detected.
<b>disable</b>	Disables authentication failure trap forwarding.

### Defaults

By default, authentication failure trap forwarding is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> snmp authentication-trap enable

## show snmp-trap replay-ip

Displays SNMP trap replay information.

**show snmp-trap replay-ip**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

N/A

### Examples

```
-> show snmp-trap replay-ip
ipAddress      : oldest replay number
-----
199.199.101.200 :      1234
199.199.105.202 :       578
199.199.101.203 :     1638
199.199.101.204 :     2560
upam.omnivista.com:    1849
```

#### *output definitions*

---

<b>IPAddress</b>	IP address or Fully Qualified Domain Name (FQDN) of the SNMP station manager that replayed the trap.
<b>Oldest Replay Number</b>	Number of the oldest replayed trap.

---

### Release History

Release 7.1.1; command was introduced.

## Related Commands

-----+-----+-----
```

*output definitions*

---

<b>Id</b>	Identification number for the trap.
<b>Trap Name</b>	Name of the trap.
<b>Family</b>	Family to which the trap belongs.
<b>Absorption</b>	Time needed for the trap to process.

---

**Release History**

Release 7.1.1; command was introduced.

**Related Commands**

<a href="#">show snmp mib-family</a>	Displays SNMP MIB information.
<a href="#">snmp-trap absorption</a>	Enables or disables the trap absorption function.
<a href="#">snmp-trap to-webview</a>	Enables or disables the forwarding of SNMP traps to WebView.

**MIB Objects**

trapConfigTable  
  trapConfigEntry

---

## event-action

Triggers the specified script to run when the specified event occurs.

```
event-action {trap trigger_string script script_string / script-time-limit num}
```

```
no event-action trap name
```

---

### Syntax Definitions

<i>trigger_string</i>	The name of the trigger. In the case of a trap, this is the trap name.
<i>script_string</i>	The path and the name of the script to run.
<i>num</i>	The maximum amount of time a script can run (30-600).
<i>name</i>	The name of the trap to remove the event from.

### Defaults

parameter	default
script-time-limit	60 seconds.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

- If the prefix for the script is not **/flash/python**, the path will be assumed to be under that directory.
- Each event can only be assigned a single script but a script can be assigned to multiple events.
- Only users that have write privileges for the AAA partition management family can create scripts in the **/flash/python** directory.
- The **show snmp-trap config** command can be used to view the list of traps available on the switch.

### Examples

```
-> event-action trap linkDown script /flash/python/link_event.py
-> event-action trap stpNewRoot script stp_event.py
```

### Release History

Release 7.3.4; command was introduced.

## Related Commands

### [show event-action](#)

Shows the scripts and statistics associated with the events.

## MIB Objects

```
alaEventActionTable  
  alaEventActionType  
  alaEventActionName  
  alaEventActionScriptName  
  alaEventActionRowStatus
```

---

## show event-action

Displays the scripts and statistics associated with the events.

**show event-action** [**statistics** | **trap** *name* [**statistics**]]

---

### Syntax Definitions

*name* The name of the trap to display statistics for.  
**statistics** Displays the statistics for all configured events or a specific trap.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	No	No	No

### Usage Guidelines

In the case of a virtual-chassis, the event-script can be run independently on the Master or Slave chassis. The Master and slave chassis have separate launch counters and the script launch counter will not be synchronized across chassis.

### Examples

```
-> show event-action
```

```

type          name          script (/flash/python/...)
-----+-----+-----
trap    linkDown          link_event.py
trap    stpNewRoot        stp_event.py
trap    sessionAuthenticationTrap  catchAll.py

```

```
-> show event-action statistics
```

```

Type          Name          Script Last Launched      Launch
-----+-----+-----+-----
trap    linkDown          2014-10-23 13:45:34      2

```

#### output definitions

---

<b>Type</b>	The type of event trigger.
<b>Name</b>	The name of the event. In the case of a trap, this is the trap name.
<b>Script</b>	The name and location of the script associated with the event.
<b>Script Last Launched</b>	The date and time the script was last run.
<b>Launch Count</b>	The number of times the script has been launched by the event.

---

## Release History

Release 7.3.4; command was introduced.

## Related Commands

### [event-action](#)

This command will cause the specified script to be run when the specified event occurs.

## MIB Objects

alaEventActionTable  
  alaEventActionType  
  alaEventActionName  
  alaEventActionScriptName
```

---

# 66 OmniVista Cirrus Commands

OmniVista Cirrus is a network management solution to deliver zero touch provisioning using cloud.

OmniVista Cirrus solution provides reduced costs, ease of devices provisioning and a unified wired/wireless management from the cloud. The solution also provides an ability to identify each device uniquely and provide a freemium/premium solution based on the user policy.

Deployment of OmniVista Cirrus provides easy to use management and monitoring tools in a network and the ability to manage the network using devices ranging from workstations to smart phones.

MIB information for the OmniVista Cirrus commands is as follows:

*Filename:* ALCATEL-IND1-SYSTEM-MIB.mib  
*Module:* alcatelIND1SystemMIB

A summary of the available commands is listed here.

---

**cloud-agent admin-state**  
**cloud-agent discovery-interval**  
**cloud-agent remove-inconsistent-certificate**  
**show cloud-agent status**  
**show cloud-agent vpn status**

---

## cloud-agent admin-state

Enables or disables OmniVista Cirrus functionality globally for the switch.

**cloud-agent admin-state** {enable | disable | disable force | restart}

---

### Syntax Definitions

<b>enable</b>	Enables OmniVista Cirrus for the switch.
<b>disable</b>	Disables OmniVista Cirrus for the switch.
<b>disable force</b>	Disables OmniVista Cirrus for the switch and disconnects from the VPN.
<b>restart</b>	Restart option implicitly triggers “ <b>disable force</b> ” followed by “ <b>enabled</b> ”.

### Defaults

By default, OmniVista Cirrus is globally enabled for the switch.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

<b>6465</b>	<b>6560</b>	<b>6860</b>	<b>6860N</b>	<b>6865</b>	<b>6900</b>	<b>6900 V72/C32</b>	<b>6900 X48C6/T48C6</b>	<b>9900</b>
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- OmniVista Cirrus is globally enabled for the switch only when the switch boots up without a configuration file [(vc)boot.cfg] or the configuration file size is zero bytes.
- If the switch boots up with a configuration file, the feature is enabled only if the administrative state of OmniVista Cirrus is explicitly enabled using the **cloud-agent admin-state** command. Hence, the default value is disabled in this case.
- The switch must have access to the DHCP server in the customer network with zero configurations on the devices.
- If the OmniVista Cirrus administrative state is disabled at run-time, it will take effect only after a reboot.
- If the OmniVista Cirrus administrative state is enabled at run-time, it will immediately trigger call-home with the activation server, if a connection was not established prior to that.
- When the OmniVista Cirrus administrative state is disabled at run-time while the connection is in progress or established, it will not have any consequences on the switch. If **write memory** is issued, the switch will not call-home even if the switch reboots or has a takeover. However, if the discovery interval timer is running, the next call-home will be terminated.
- The restart option implicitly triggers the administrative states of **disable force** followed by **enabled**. This will enable a user to restart call-home from OmniVista Cirrus.

- If the switch is in an intermediate state (downloading an image from image server, pre-provisioning, write memory, flash syncro, call-home, etc.), the **cloud agent admin state disable force** will display an error message: *“OV Cloud agent is in progress. Please retry after some time.”*

## Examples

```
-> cloud-agent admin-state enable  
-> cloud-agent admin-state disable
```

## Release History

Release 8.4.1 R03; command introduced.  
Release 8.5R1; **restart** parameter added.

## Related Commands

**cloud-agent discovery-interval** Configures the time interval after which the switch will call-home the activation server, in case of any fatal error.

**show cloud-agent status** Displays the OmniVista Cirrus status and parameters received from the DHCP and activation server.

## MIB Objects

```
ovCloudAgent  
  ovCloudAgentAdminState
```

---

## cloud-agent discovery-interval

Configures the time interval after which the switch will call-home to the activation server, in case of any error.

**cloud-agent discovery-interval** *minutes*

---

### Syntax Definitions

*minutes* The time interval to call-home after an error. The valid range is 2-3600 minutes.

### Defaults

By default, the discovery interval is set to 30 minutes.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- Call-home with the activation server will be immediately triggered when OmniVista Cirrus administrative state is enabled at run-time, if a connection was not established prior to that.
- When the OmniVista Cirrus administrative state is disabled at run-time while the connection is in progress or in an established connection, it will not have any consequences on the switch. If **write memory** is issued, the switch will not call-home even if the switch reboots or has a takeover. However, if the discovery interval timer is running, the next call home will be terminated.
- When trying to connect to the openVPN server, if the connection is not established in 90 seconds, the switch will move to an error state and will call home after the expiry of the discovery interval.

### Examples

```
-> cloud-agent discovery-interval 60
-> cloud-agent discovery-interval 90
```

### Release History

Release 8.4.1 R03; command introduced.

## Related Commands

### [cloud-agent admin-state](#)

Enables or disables OmniVista Cirrus functionality globally for the switch.

### [show cloud-agent status](#)

Displays the OmniVista Cirrus status and parameters received from the DHCP and activation server.

## MIB Objects

ovCloudAgent

ovCloudAgentDiscoveryInterval

---

## cloud-agent remove-inconsistent-certificate

Removes the certificate received from the OmniVista Activation server on all units in the VC, if the certificate status is inconsistent.

**cloud-agent remove-inconsistent-certificate**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- When this command is issued, a warning is generated: *"This command may render the switch incapable of connecting with OV-Cloud if not used with caution. Confirm (Y/N):"*
- If accepted by pressing (Y) and the certificate status is not inconsistent, an error message is displayed: *"Certificate status is Consistent. Cannot delete certificate."* The existing OmniVista Cirrus agent state machine will not be interrupted.

### Examples

```
-> cloud-agent remove-inconsistent-certificate
```

### Release History

Release 8.5R1; command introduced.

### Related Commands

#### [cloud-agent admin-state](#)

Enables or disables OmniVista Cirrus functionality globally for the switch.

#### [show cloud-agent status](#)

Displays the OmniVista Cirrus status and parameters received from the DHCP and activation server.

### MIB Objects

ovCloudAgent

ovCloudAgentRemoveInconsistentCertificate

---

## show cloud-agent status

Displays the OmniVista Cirrus status and parameters received from the DHCP and activation server.

### show cloud-agent status

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

- The command **show cloud-agent status** will be valid only if call-home is enabled. Else, only the default values, if present, will be displayed.
- DHCP address, DHCP IP address mask, Gateway, Activation URL, Proxy URL, Proxy IP will be displayed based on the DHCP response parameters received.
- DNS server, DNS domain will be displayed with the current DNS configuration in the switch, if call-home is enabled.

### Examples

```
-> show cloud-agent status
Admin State                : Enabled,
Activation Server State    : completeOK,
Device State               : DeviceManaged,
Error State                : None,
Cloud Group                : pmrb98earnoc10,
DHCP Address               : 135.254.171.88,

## Release History

Release 8.4.1 R03; command introduced.

Release 8.5R1; "Certificate Status" added in command display.

## Related Commands

- cloud-agent admin-state** Enables or disables OmniVista Cirrus functionality globally for the switch.
- show cloud-agent vpn status** Displays the OmniVista Cirrus VPN status.

## MIB Objects

```
ovCloudAgent
  ovCloudAgentAdminState
  ovCloudAgentDiscoveryInterval
  ovCloudAgentDeviceState
  ovCloudAgentTimeToNextCallhome
```

---

## show cloud-agent vpn status

Displays the OmniVista Cirrus VPN status.

**show cloud-agent vpn status**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No

### Usage Guidelines

N/A

### Examples

```
-> show cloud-agent vpn status
VPN status                : Connected,
VPN Assigned IP           : 10.8.0.4,
VPN DPD time (sec)       : 600
```

### output definitions

---

<b>VPN Status</b>	Refers to OmniVista Cirrus VPN status. The various VPN states are: <ul style="list-style-type: none"> <li>• <b>Connecting</b>—OpenVPN's initial state</li> <li>• <b>Wait</b>—Waiting for initial response from server</li> <li>• <b>Auth</b>—Authenticating with server</li> <li>• <b>Get_Config</b>—Downloading configuration options from server</li> <li>• <b>Assign_IP</b>—Assigning IP address to virtual network interface</li> <li>• <b>Add_Routes</b>—Adding routes to system</li> <li>• <b>Connected</b>—Initialization sequence completed</li> <li>• <b>Reconnecting</b>—A restart has occurred</li> <li>• <b>Exiting</b>—A graceful exit is in progress</li> </ul>
<b>VPN Assigned IP</b>	Displays the VPN server assigned IP for the VPN connection towards the OmniVista Cirrus.
<b>VPN DPD time (sec)</b>	Displays the VPN Dead Peer Detection (DPD) time value in seconds.

---

### Release History

Release 8.4.1 R03; command introduced.

# 67 OpenFlow Commands

OpenFlow is a communications interface defined between the control and forwarding layers that is used in a Software Defined Network (SDN). OpenFlow separates the control plane and the data plane in the switch. Traditionally, switches and routers have made decisions on where packets should travel based on rules local to the device. With OpenFlow, only the data plane exists on the switch itself, and all control decisions are communicated to the switch from a central Controller. The OmniSwitch can operate in AOS or OpenFlow mode, including a modified OpenFlow mode known as Hybrid mode.

MIB information for the Web Management commands is as follows:

*Filename:* ALCATEL-IND1-OPENFLOW-MIB.mib  
*Module:* alcatelIND1OpenflowMIB

A summary of the available commands is listed here:

---

<b>OpenFlow Commands</b>	<a href="#">openflow back-off-max</a> <a href="#">openflow idle-probe-timeout</a> <a href="#">openflow logical-switch</a> <a href="#">openflow logical-switch controller</a> <a href="#">openflow logical-switch interfaces</a> <a href="#">show openflow</a> <a href="#">show openflow logical-switch</a>
--------------------------	--

---

## openflow back-off-max

Configures the maximum amount of time to wait between Controller connection attempts.

**openflow back-off-max** *seconds*

---

### Syntax Definitions

*seconds* The back-off-max value, in seconds. The valid range is from 0 - 60.

### Defaults

parameter	default
<i>seconds</i>	60

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

If set to 0, setting is disabled.

### Examples

```
-> openflow back-off-max 0
-> openflow back-off-max 32
-> openflow back-off-max 60
```

### Release History

Release 7.3.4; command introduced

### Related Commands

[show openflow](#) Displays global OpenFlow configuration parameters.

### MIB Objects

```
alaOpenflowGlobalMIBConfigObjects
  alaOpenflowGlobalBackoffMax
```

---

## openflow idle-probe-timeout

Configures the idle probe timeout value.

**openflow idle-probe-timeout** *seconds*

---

### Syntax Definitions

*seconds* The idle probe timeout value, in seconds. The valid range is 1 - 60.

### Defaults

parameter	default
<i>seconds</i>	15

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

If set to 0, idle probing is disabled.

### Examples

```
-> openflow idle-probe-timeout 0
-> openflow idle-probe-timeout 15
-> openflow idle-probe-timeout 60
```

### Release History

Release 7.3.4; command introduced

### Related Commands

[show openflow](#) Displays global OpenFlow configuration parameters.

### MIB Objects

```
alaOpenflowGlobalMIBConfigObjects
  alaOpenflowGlobalIdleProbeTimeout
```

---

## openflow logical-switch

Configures an OpenFlow Logical Switch. An OpenFlow Logical Switch consists of a portion of the switch's resources that are managed by an OpenFlow Controller (or set of Controllers) via the OpenFlow Agent.

**openflow logical-switch** *name* [**probe-time** *num* / **failure-detect-time** *num* | **tcp-buffer-size** *num* | **dpid** *string*] [**admin-state** {**enable** | **disable**}] [**mode** {**normal** | **api** | **pfc-channel**}] [**version** {**1.0** | **1.3.1**}+] [**learned-mac-update** {**enable** | **disable**}] [**vlan** *vlan\_id*] [**table-miss-action** {**drop** | **controller**}

**no openflow logical-switch** <*name*>

---

### Syntax Definitions

<i>name</i>	The Logical Switch name (up to 32 characters).
<b>probe-time</b> <i>num</i>	Configures probe-time for a logical switch in the pfc-channel mode which will override the existing global idle-probe-time for sending echo-requests to the OpenFlow Controller. (1-60)
<b>failure-detect-time</b> <i>num</i>	Configures the failure-detect-time for a logical switch in the pfc-channel mode for detecting a disconnection to the OpenFlow Controller if there was no echo reply or message from the controller. (1-60)
<b>tcp-buffer-size</b> <i>num</i>	Configures the TCP buffer size for socket connection to OpenFlow controllers configured for the logical-switch in the pfc-channel mode (2–32).
<b>dpid</b> <i>string</i>	Configures a unique 8-byte Datapath Identifier (DPID) for a logical switch in pfc-channel mode. Value must be entered in hex format only (starting with 0x) and must be less than 8-bytes.
<b>admin-state enable</b>	Enables the Logical Switch.
<b>admin-state disable</b>	Disables the Logical Switch.
<b>normal</b>	Configures the Logical Switch to run in Normal Mode.
<b>api</b>	Configures the Logical Switch to run in Hybrid (API) Mode. Only one (1) Logical Switch can be configured in Hybrid Mode.
<b>pfc-channel</b>	Configures the Logical Switch for NEC pfc-channel mode.
<b>1.0</b>	Configures the Logical Switch to run OpenFlow Version 1.0.
<b>1.3.1</b>	Configures the Logical Switch to run OpenFlow Version 1.3.1.
<b>learned-mac-update enable</b>	Enables the forwarding of new source learned MAC addresses to a WLAN controller.
<b>learned-mac-update disable</b>	Disables the forwarding of new source learned MAC address to a WLAN controller.
<i>vlan_id</i>	The Default VLAN for all ports assigned to the Logical Switch. Traffic on this VLAN on these ports will not carry an 802.1q tag. Traffic on all other VLANs on these ports will carry an 802.1q tag. The valid range is 2 - 4093.
<b>drop   controller</b>	Configures whether packets are dropped or sent to the Controller when an OpenFlow Table Miss occurs.

## Defaults

parameter	default
<b>probe-time</b> <i>num</i>	5 seconds
<b>failure-detect-time</b> <i>num</i>	4 seconds
<b>tcp-buffer-size</b> <i>num</i>	2 KB
<b>dpid</b> <i>string</i>	Top 16-bit unique index of logical switch and bottom 48 bits of router MAC
<b>admin-state</b> <b>enable</b>   <b>disable</b>	enable
<b>normal</b>   <b>api</b>	normal
<b>1.0</b>   <b>1.3.1</b>	1.0, 1.3.1
<b>learned-mac-update</b> <b>enable</b>   <b>disable</b>	disable
<b>drop</b>   <b>controller</b>	drop

## Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

## Usage Guidelines

- Up to three (3) OpenFlow Logical Switches can be configured on an OmniSwitch.
- Use the **no** form of the command to delete an OpenFlow Logical Switch and all Controller/port configurations for that Logical Switch.
- When a Logical Switch is disabled, all Controllers for that Logical Switch are operationally disabled, and flows added by those Controllers are removed.
- In Normal Mode, the switch operates as per the OpenFlow standards. In Hybrid mode, OpenFlow operates as an interface through which the Controller may add over-ride policies to the switch much like QoS. In Hybrid mode, no traffic is forwarded to the Controller(s) and AOS operates normally.
- OpenFlow versions 1.0 and 1.3.1 are both enabled by default. At least one version must be enabled.
- “vlan” is not valid if the configured mode for the Logical Switch is API. An API Logical Switch implicitly operates on all ports, link aggregates, and VLANs not assigned to other OpenFlow Logical Switches.
- OpenFlow version 1.0 and 1.3.1 use TCP port 6633.
- Enabling learned MAC update only applies if the configured mode for the Logical Switch is API.

## Examples

```
-> openflow logical-switch vswitch1
-> openflow logical-switch vswitch1 admin-state enable
-> openflow logical-switch vswitch1 mode normal version 1.0 vlan 5
-> openflow logical-switch vswitchnec mode pfc-channel
-> no openflow logical-switch vswitch1
```

## Release History

Release 7.3.4; command introduced

## Related Commands

**show openflow logical-switch** Displays information about all of the configured OpenFlow Logical Switches.

## MIB Objects

```
alaOpenflowLogicalSwitchTable
  alaOpenflowLogicalSwitch
  alaOpenflowLogicalSwitchAdminState
  alaOpenflowLogicalSwitchMode
  alaOpenflowLogicalSwitchVersions
  alaOpenflowLogicalSwitchVlan
  alaOpenflowLogicalSwitchLearnedMacUpdate
  alaOpenflowLogicalSwitchProbeTime
  alaOpenflowLogicalSwitchFailureDetectTime
  alaOpenflowLogicalSwitchDPID
  alaOpenflowLogicalSwitchTableMissAction
  alaOpenflowLogicalSwitchTCPBufferSizeTx
  alaOpenflowLogicalSwitchTCPBufferSizeRx
```

---

## openflow logical-switch controller

Configures a Controller for an OpenFlow Logical Switch. You can configure up to three (3) Controllers per Logical Switch.

**openflow logical-switch** *name* **controller** {*ip\_address* | *domain\_name*} [:*port*] [**priority** *num*] **admin-state** {**enable** | **disable**}

**no openflow logical-switch** *name* **controller** {*ip\_address* | *domain\_name*} [:*port*]

---

### Syntax Definitions

<i>name</i>	The Logical Switch name (up to 32 characters).
<i>ip_address</i>	The IP address of Controller.
<i>domain_name</i>	The Fully Qualified Domain Name (FQDN) of the Controller. Specify a domain name up to 255 characters in length.
<i>port</i>	The Controller IP Port (1 - 65535).
<b>priority</b> <i>num</i>	Configures the priority value for the specified Controller in pfc-channel mode (0-2). 0 = highest, 2 = lowest.
<b>enable</b>	Enables the connection to the Controller.
<b>disable</b>	Disables the connection to the Controller.

### Defaults

parameter	default
<i>port</i>	6633
<b>priority</b> <i>num</i>	2
<b>enable</b>   <b>disable</b>	enable

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

- Use the **no** form of this command to remove a Controller for a Logical Switch.
- Specify either the IPv4 address or the FQDN for the Controller. When an FQDN is specified, the switch will resolve the IP address for that domain.
- If a Logical Switch cannot connect to any of its Controllers, it runs in “Fail Secure Mode”. All flow aging, etc., continues unaffected while the Controllers are disconnected.
- Use the priority parameter to configure the priority for the specified Controller. If Controllers have the same priority, the one configured first will have priority.

## Examples

```
-> openflow logical-switch vswitch1 controller 1.2.3.4
-> openflow logical-switch vswitch1 controller 1.2.3.4:6634
-> openflow logical-switch vswitch1 controller 1.2.3.4:6634 admin-state disable
-> openflow logical-switch vswitch1 controller 1.2.3.4:6634 priority 1
-> openflow logical-switch vswitchnec controller opendaylight.abc.com
-> openflow logical-switch vswitchnec controller opendaylight.abc.com:6635
-> openflow logical-switch vswitchnec controller opendaylight.abc.com:6635 disable
-> openflow logical-switch vswitchnec controller opendaylight.abc.com priority 1
-> no openflow logical-switch vswitch1 controller 1.2.3.4
-> no openflow logical-switch vswitchnec controller opendaylight.abc.com
```

## Release History

Release 7.3.4; command introduced.

Release 8.5R1; *domain\_name* parameter option added.

## Related Commands

**show openflow logical-switch** Displays information about all of the configured OpenFlow Logical Switches.

## MIB Objects

```
alaOpenflowControllerTable
  alaOpenflowControllerLogicalSwitch
  alaOpenflowControllerIpType
  alaOpenflowControllerIp
  alaOpenflowControllerPort
  alaOpenflowControllerAdminState
  alaOpenflowControllerPriority
```

---

## openflow logical-switch interfaces

Configures a range of interfaces to/from a Logical Switch.

**openflow logical-switch** *name* **interfaces** {**port** *chassis/slot/port1*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*] | **type** {**trunk** | **access**}} | [**native-vlan** *vlan*] | [**vlan-tag** *vlan*[-*vlan2*]]}

**no openflow logical-switch** *name* **interfaces** {**port** *chassis/slot/port1*[-*port2*] | **linkagg** *agg\_id*[-*agg\_id2*]}

---

### Syntax Definitions

<i>name</i>	The Logical Switch name (up to 32 characters).
<i>chassis/slot/port</i> [- <i>port2</i> ]	The chassis ID, slot, and port number.
<i>agg_id</i> [- <i>agg_id2</i> ]	The link aggregate ID number.
<b>trunk</b>	Configures the interface type as trunk.
<b>access</b>	Configures the interface type as access.
<b>native-vlan</b> <i>vlan</i>	The default VLAN for an interface in the logical switch. Traffic on this port will be untagged for the native VLAN. Traffic on all other VLANs on this port will be tagged. (2-4093)
<b>vlan-tag</b> <i>vlan</i> [- <i>vlan2</i> ]	The list of allowed tagged VLANs for an interface. Traffic on these allowed VLAN(s) of the ports and Untagged traffic will not carry an 802.1q tag. Traffic on all other VLANs on the port will be dropped. (2-4093)

### Defaults

parameter	default
<b>type</b>	<b>access</b>

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

The **native-vlan** and **vlan-tag** parameters are valid only if the logical switch mode is pfc-channel.

### Examples

```
-> openflow logical-switch vswitch1 interfaces port 1/1/1
-> no openflow logical-switch vswitch1 interfaces port 1/1/1
-> openflow logical-switch vswitch2 interfaces linkagg 5
-> no openflow logical-switch vswitch2 interfaces linkagg 5
-> openflow logical-switch vswitch1 interfaces port 1/1/1-8
-> no openflow logical-switch vswitch1 interfaces port 1/1/1-8
```

```
-> openflow logical-switch vswitchnec interfaces port 1/1/20 type trunk
-> openflow logical-switch vswitchnec interfaces port 1/1/20 native-vlan 3
-> openflow logical-switch vswitchnec interfaces port 1/1/20 vlan-tag 4-5
```

## Release History

Release 7.3.4; command introduced

## Related Commands

  alaOpenflowInterface
```

---

## show openflow

Displays global OpenFlow configuration parameters.

**show openflow**

---

### Syntax Definitions

N/A

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

N/A

### Examples

```
-> show openflow
Back-off Max      : 60,
Idle Probe Timeout : 15
```

#### *output definitions*

---

<b>Back-off Max</b>	The configured maximum back off time, in seconds, for Controller connection attempts (Range = 1 - 60, Default = 60).
<b>Idle Probe Timeout</b>	The configured idle probe timeout value, in seconds (Range = 1– 60, Default = 15).

---

### Release History

Release 7.3.4; command introduced

### Related Commands

- [openflow back-off-max](#) Configures the maximum amount of time allowed for Controller connection attempts.
- [openflow idle-probe-timeout](#) Configures the idle probe timeout value.

### MIB Objects

```
alaOpenflowGlobalBackoffMax
alaOpenflowGlobalIdleProbeTimeout
```

---

## show openflow logical-switch

Displays information about configured OpenFlow Logical Switches.

**show openflow logical-switch** [*name* | **controllers** | **interfaces** [**vlan**s | **port** | **linkagg**] | **details**]

---

### Syntax Definitions

<b>name</b>	The Logical Switch name (up to 32 characters).
<b>controllers</b>	The controllers assigned to this logical switch.
<b>interfaces</b>	The interfaces assigned to this logical switch.
<b>details</b>	The details of the logical switch.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
No	No	Yes	No	No	Yes	No	No	No

### Usage Guidelines

- Enter a Logical Switch name to display only information about a specific Logical Switch.
- The DPID, TCP-Buffer-Size, Probe-Time, and Failure-Detect-Time are only applicable for a logical switch in PFC mode.

### Examples

```
-> show openflow logical-switch
```

Logical Switch	Admin State	Mode	Versions	VLAN	Learn MAC	Ctrlrs	Intf	Flows
vswitch1	Ena	Norm	1.0	1	Dis	1	4	0
vswitch2	Dis	Norm	1.0, 1.3.1	5	Dis	3	4	2
vswitchnec	Ena	PFC	1.0, 1.3.1	N/A	Dis	1	0	0

### output definitions

---

<b>Logical Switch</b>	The Logical Switch name
<b>Admin State</b>	The Logical Switch administrative state (Enabled or Disabled).
<b>Mode</b>	The Logical Switch operational Mode (Normal/API/PFC).
<b>Versions</b>	The OpenFlow versions enabled on the Logical Switch (1.0/1.3.1).
<b>VLAN</b>	The default VLAN for all ports assigned to the Logical Switch. Zero (0) indicates no VLAN configured.

*output definitions*

---

<b>Learn MAC</b>	Whether new source learned MAC addresses are forwarded to a WLAN controller (Enabled or Disabled).
<b>Ctrlrs</b>	The number of Controllers configured for the Logical Switch (up to three (3) Controllers can be configured per Logical Switch).
<b>Intf</b>	The number of interfaces (ports and link aggregations) configured for the Logical Switch.
<b>Flows</b>	The number of flows pushed to the Logical Switch by its Controllers.

---

```
-> show openflow logical-switch controllers
```

Logical Switch	Controller	Role	Admin State	Oper State
vswitch1	192.168.2.9:6633	Master	Ena	Disconn
vswitch2	192.168.2.9:6633	Master	Ena	Disabled
vswitch2	192.168.2.10:6633	Equal	Dis	Disabled
vswitch2	192.168.2.10:6634	Equal	Ena	Active
vswitch2	192.168.2.9:6634	Slave	Ena	Idle
vswitchnec	opendaylight.abc.com:66	Master	Ena	Active

*output definitions*

---

<b>Logical Switch</b>	The Logical Switch name
<b>Controller</b>	The Controller IP address or Fully Qualified Domain Name (FQDN) and port. If the FQDN is longer than 22 characters, the name may appear truncated in this field.
<b>Role</b>	Current role of the Controller (Equal, Master, or Slave).
<b>Admin State</b>	The Logical Switch administrative state (Enabled or Disabled).
<b>Oper State</b>	Current connection state of the Controller (invalid, operDisabled, sendError, init, connecting, backoff, exchangingHello, active, idle, disconnected).

---

```
-> show openflow logical-switch interfaces
```

Logical Switch	Interface	Mode	Type
vswitch1	1/1/1	Norm	
vswitch2	1/1/2	Norm	
vswitch2	1/1/3	Norm	
vswitch2	1/1/5	Norm	
vswitch2	1/1/10	Norm	
vswitchnec	1/1/5	PFC	Access
vswitchnec	0/5	PFC	Access

*output definitions*

---

<b>Logical Switch</b>	The Logical Switch name
<b>Interface</b>	The interface slot/port or link aggregate ID configured for the Logical Switch.
<b>Mode</b>	The Logical Switch operational Mode (Normal/API/PFC).
<b>Type</b>	The type of interface assigned to the logical switch (Access or Trunk). <ul style="list-style-type: none"> <li>• Access interfaces support only untagged ports in the native VLAN.</li> <li>• Trunk interfaces support untagged ports in the native VLAN and tagged ports in other VLANs.</li> </ul>

---

```
-> show openflow logical-switch vswitchnec details
Logical-Switch:      vswitchnec
  DPID                = 0x1234567890123456
  TCP-Buffer-Size    = 2 Kilobytes
  Probe-Time         = 5 Sec
  Failure-Detect-Time = 4 Sec
  Table-Miss-Action  = DROP
```

### *output definitions*

---

<b>Logical Switch</b>	The Logical Switch name
<b>DPID</b>	The DPID configured for the logical switch.
<b>TCP-Buffer-Size</b>	TCP Send Buffer size for socket towards Controller for the logical switch.
<b>Probe-Time</b>	The probe-time configured for the logical switch name.
<b>Failure-Detect-Time</b>	The failure-detect-time configured for the logical switch.
<b>Table-Miss-Action</b>	The action taken when an OpenFlow Table Miss occurs (DROP or CONTROLLER).

---

# 68 DNS Commands

A Domain Name System resolver is an internet service that translates host names into IP addresses. Every time you use a host name, a DNS service must resolve the name to an IP address. You can configure up to three domain name servers. If the primary DNS server does not know how to translate a particular host name, it asks the secondary DNS server (if specified). If this fails, it asks the third DNS server (if specified), until the correct IP address is returned (resolved). If all DNS servers have been queried and the name is still not resolved to an IP address, the DNS resolver will fail and issue an error message.

MIB information for the DNS commands is as follows:

*Filename:* ALCATEL-IND1-SYSTEM.mib  
*Module:* alcatelIND1SystemMIB

A summary of the available commands is listed here.

---

[ip domain-lookup](#)  
[ip name-server](#)  
[ipv6 name-server](#)  
[ip domain-name](#)  
[show dns](#)

---

## ip domain-lookup

Enables or disables the DNS resolver.

**ip domain-lookup**

**no ip domain-lookup**

---

### Syntax Definitions

N/A

### Defaults

By default, the DNS resolver is disabled.

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Use the **no** form of this command to disable the DNS resolver.
- You must use the **ip domain-name** command to set a default domain name for your DNS resolver(s) and the **ip name-server** command to specify up to three DNS servers to query on host lookups.
- The **ip domain-lookup** command enables the DNS resolver.

### Examples

```
-> ip domain-lookup  
-> no ip domain-lookup
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

<b>ip name-server</b>	Specifies the IP addresses of up to three servers to query on a host lookup.
<b>ipv6 name-server</b>	Specifies the IPv6 addresses of up to three IPv6 DNS servers to query on a host lookup.
<b>ip domain-name</b>	Sets or deletes the default domain name for DNS lookups.
<b>show dns</b>	Displays the current DNS resolver configuration and status.

## MIB Objects

systemDNS  
systemDNSEnableDnsResolver

---

## ip name-server

Specify the IP addresses of up to three servers to query on a host lookup.

```
ip name-server server_address1 [server_address2 [server_address3]]
```

---

### Syntax Definitions

<i>server_address1</i>	The IP address of the primary DNS server to query for host lookup. This is the only address that is required.
<i>server_address2</i>	The IP address of the secondary DNS server to query for host lookup. This server will be queried only if the desired host name or host IP address is not located by the primary DNS server. A second IP address is optional.
<i>server_address3</i>	The IP address of the DNS server with the lower priority. This server will be queried only if the desired host name or IP address is not located by the primary and secondary DNS servers. A third IP address is optional.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Configuration of the DNS resolver to resolve any host query requires that you first set the default domain name with the **ip domain-name** command and enable the DNS resolver function with the **ip domain-lookup** command before you specify the IP addresses of the DNS servers by using the **ip name-server** command.
- You can configure up to three IPv4 DNS servers and three IPv6 DNS servers in a switch.

### Examples

```
-> ip name-server 189.202.191.14 189.202.191.15 188.255.19.1
-> ip name-server 10.255.11.66
```

### Release History

Release 7.1.1; command was introduced.

## Related Commands

[ip domain-lookup](#)

Enables or disables the DNS resolver.

[ip domain-name](#)

Sets or deletes the default domain name for DNS lookups.

[show dns](#)

systemDNSNsAddr2

systemDNSNsAddr3

---

## ipv6 name-server

Specifies the IPv6 addresses of up to three IPv6 DNS servers to query on a host lookup.

```
ipv6 name-server server_ipv6_address1 [server_ipv6_address2 [server_ipv6_address3]]
```

---

### Syntax Definitions

<i>server_ipv6_address1</i>	The IPv6 address of the primary IPv6 DNS server to query for host lookup. Specifying the primary IPv6 DNS address is mandatory.
<i>server_ipv6_address2</i>	The IPv6 address of the secondary IPv6 DNS server to query for host lookup. This server will be queried only if the desired host name is not able to be resolved by the primary IPv6 DNS server. A second IPv6 address is optional.
<i>server_ipv6_address3</i>	The IPv6 address of the IPv6 DNS server with the lower priority. This server will be queried only if the desired host name is not able to be resolved by both the primary and secondary IPv6 DNS servers. A third IPv6 address is optional.

### Defaults

N/A

### Platforms Supported

This command is supported on the following OmniSwitch platforms:

6465	6560	6860	6860N	6865	6900	6900 V72/C32	6900 X48C6/T48C6	9900
Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

### Usage Guidelines

- Configuration of the DNS resolver to resolve any host query requires that you first set the default domain name with the **ip domain-name** command and enable the DNS resolver function with the **ip domain-lookup** command before you specify the IPv6 addresses of the IPv6 DNS servers by using the **ipv6 name-server** command.
- You cannot use multicast, loopback, link-local and unspecified IPv6 addresses for specifying IPv6 DNS servers.
- You can configure up to three IPv6 DNS servers and three IPv4 DNS servers in a switch.

### Examples

```
-> ipv6 name-server fec0::2d0:d3:f3fc
-> ipv6 name-server fe2d::2c f302::3de1:1 f1bc::202:fd40:f3
```

```

#### *output definitions*

---

<b>Resolver is</b>	Indicates whether the DNS resolver is enabled or disabled.
<b>domainName</b>	Indicates the default domain name assigned to the DNS lookups. This value is set using the <b>ip domain-name</b> command.
<b>IPv4 nameServer(s)</b>	Indicates the IP address(es) of the IPv4 DNS server(s). These addresses are set using the <b>ip name-server</b> command.
<b>IPv6 nameServer(s)</b>	Indicates the IPv6 address(es) of the IPv6 DNS server(s). These addresses are set using the <b>ipv6 name-server</b> command.

# A Software License and Copyright Statements

This appendix contains ALE USA, Inc. and third-party software vendor license and copyright statements.

## ALE USA, Inc. License Agreement

### ALE USA, INC. SOFTWARE LICENSE AGREEMENT

---

**IMPORTANT.** Please read the terms and conditions of this license agreement carefully before opening this package.

---

**By opening this package, you accept and agree to the terms of this license agreement. If you are not willing to be bound by the terms of this license agreement, do not open this package. Please promptly return the product and any materials in unopened form to the place where you obtained it for a full refund.**

1. **License Grant.** This is a license, not a sales agreement, between you (the “Licensee”) and ALE USA, Inc. ALE USA, Inc. hereby grants to Licensee, and Licensee accepts, a non-exclusive license to use program media and computer software contained therein (the “Licensed Files”) and the accompanying user documentation (collectively the “Licensed Materials”), only as authorized in this License Agreement. Licensee, subject to the terms of this License Agreement, may use one copy of the Licensed Files on the Licensee’s system. Licensee agrees not to assign, sublicense, transfer, pledge, lease, rent, or share their rights under this License Agreement. Licensee may retain the program media for backup purposes with retention of the copyright and other proprietary notices. Except as authorized under this paragraph, no copies of the Licensed Materials or any portions thereof may be made by Licensee and Licensee shall not modify, decompile, disassemble, reverse engineer, or otherwise attempt to derive the Source Code. Licensee is also advised that ALE USA, Inc. products contain embedded software known as firmware which resides in silicon. Licensee may not copy the firmware or transfer the firmware to another medium.

2. **ALE USA, Inc.’s Rights.** Licensee acknowledges and agrees that the Licensed Materials are the sole property of ALE USA, Inc. and its licensors (herein “its licensors”), protected by U.S. copyright law, trademark law, and are licensed on a right to use basis. Licensee further acknowledges and agrees that all rights, title, and interest in and to the Licensed Materials are and shall remain with ALE USA, Inc. and its licensors and that no such right, license, or interest shall be asserted with respect to such copyrights and trademarks. This License Agreement does not convey to Licensee an interest in or to the Licensed Materials, but only a limited right to use revocable in accordance with the terms of this License Agreement.

3. **Confidentiality.** ALE USA, Inc. considers the Licensed Files to contain valuable trade secrets of ALE USA, Inc., the unauthorized disclosure of which could cause irreparable harm to ALE USA, Inc.. Except as expressly set forth herein, Licensee agrees to use reasonable efforts not to disclose the Licensed Files to any third party and not to use the Licensed Files other than for the purpose authorized by this License Agreement. This confidentiality obligation shall continue after any termination of this License Agreement.

4. **Indemnity.** Licensee agrees to indemnify, defend and hold ALE USA, Inc. harmless from any claim, lawsuit, legal proceeding, settlement or judgment (including without limitation ALE USA, Inc.'s reasonable United States and local attorneys' and expert witnesses' fees and costs) arising out of or in connection with the unauthorized copying, marketing, performance or distribution of the Licensed Files.

5. **Limited Warranty.** ALE USA, Inc. warrants, for Licensee's benefit alone, that the program media shall, for a period of ninety (90) days from the date of commencement of this License Agreement (referred to as the Warranty Period), be free from defects in material and workmanship. ALE USA, Inc. further warrants, for Licensee benefit alone, that during the Warranty Period the Licensed Files shall operate substantially in accordance with the functional specifications in the User Guide. If during the Warranty Period, a defect in the Licensed Files appears, Licensee may return the Licensed Files to ALE USA, Inc. for either replacement or, if so elected by ALE USA, Inc., refund of amounts paid by Licensee under this License Agreement. EXCEPT FOR THE WARRANTIES SET FORTH ABOVE, THE LICENSED MATERIALS ARE LICENSED "AS IS" AND ALE USA, INC. AND ITS LICENSORS DISCLAIM ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING (WITHOUT LIMITATION) ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SOME STATES DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES SO THE ABOVE EXCLUSIONS MAY NOT APPLY TO LICENSEE. THIS WARRANTY GIVES THE LICENSEE SPECIFIC LEGAL RIGHTS. LICENSEE MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

6. **Limitation of Liability.** ALE USA, Inc.'s cumulative liability to Licensee or any other party for any loss or damages resulting from any claims, demands, or actions arising out of or relating to this License Agreement shall not exceed the license fee paid to ALE USA, Inc. for the Licensed Materials. IN NO EVENT SHALL ALE USA, INC. BE LIABLE FOR ANY INDIRECT, INCIDENTAL, CONSEQUENTIAL, SPECIAL, OR EXEMPLARY DAMAGES OR LOST PROFITS, EVEN IF ALE USA, INC. HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SOME STATES DO NOT ALLOW THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION TO INCIDENTAL OR CONSEQUENTIAL DAMAGES MAY NOT APPLY TO LICENSEE.

7. **Export Control.** This product is subject to the jurisdiction of the United States. Licensee may not export or reexport the Licensed Files, without complying with all United States export laws and regulations, including but not limited to (i) obtaining prior authorization from the U.S. Department of Commerce if a validated export license is required, and (ii) obtaining "written assurances" from licensees, if required.

8. **Support and Maintenance.** Except as may be provided in a separate agreement between ALE USA, Inc. and Licensee, if any, ALE USA, Inc. is under no obligation to maintain or support the copies of the Licensed Files made and distributed hereunder and ALE USA, Inc. has no obligation to furnish Licensee with any further assistance, documentation or information of any nature or kind.

9. **Term.** This License Agreement is effective upon Licensee opening this package and shall continue until terminated. Licensee may terminate this License Agreement at any time by returning the Licensed Materials and all copies thereof and extracts therefrom to ALE USA, Inc. and certifying to ALE USA, Inc. in writing that all Licensed Materials and all copies thereof and extracts therefrom have been returned or erased by the memory of Licensee's computer or made non-readable. ALE USA, Inc. may terminate this License Agreement upon the breach by Licensee of any term hereof. Upon such termination by

ALE USA, Inc., Licensee agrees to return to ALE USA, Inc. or destroy the Licensed Materials and all copies and portions thereof.

**10. Governing Law.** This License Agreement shall be construed and governed in accordance with the laws of the State of California.

**11. Severability.** Should any term of this License Agreement be declared void or unenforceable by any court of competent jurisdiction, such declaration shall have no effect on the remaining terms herein.

**12. No Waiver.** The failure of either party to enforce any rights granted hereunder or to take action against the other party in the event of any breach hereunder shall not be deemed a waiver by that party as to subsequent enforcement of rights or subsequent actions in the event of future breaches.

**13. Notes to United States Government Users.** Software and documentation are provided with restricted rights. Use, duplication or disclosure by the government is subject to (i) restrictions set forth in GSA ADP Schedule Contract with ALE USA, Inc.'s reseller(s), or (ii) restrictions set forth in subparagraph (c) (1) and (2) of 48 CFR 52.227-19, as applicable.

**14. Third Party Materials.** Licensee is notified that the Licensed Files contain third party software and materials licensed to ALE USA, Inc. by certain third party licensors. Some third party licensors are third part beneficiaries to this License Agreement with full rights of enforcement. Please refer to the section entitled "[Third Party Licenses and Notices](#)" on page -4 for the third party license and notice terms.

## Third Party Licenses and Notices

Legal Notices applicable to any software distributed alone or in connection with the product to which this document pertains, are contained in files within the software itself located at: **/flash/foss**.

Also, if needed, we provide all FOSS (Free and Open Source Software) source code used in this release at the following URL: <https://github.com/Alcatel-LucentEnterpriseData>.
