

Release Notes

OmniAccess Stellar AP

AWOS Release 4.0.7 - MR3 Release

These release notes accompany the OmniAccess Stellar Operating System (AWOS) Release 4.0.7 software for the Stellar APs. This document provides important information on individual software and hardware features. Since much of the information in the release notes is not included in the hardware and software user manuals, it is important to read all sections of this document before installing new hardware or loading new software.

Related Documentation

The release notes should be used in conjunction with the associated manuals as listed below. User manuals can be downloaded at: https://myportal.al-enterprise.com/.

Stellar AP Quick Start Guide

The Quick Start Guide assists you in quickly connecting to and configuring the Stellar AP.

Stellar AP Installation Guide

Provides technical specifications and installation procedures for the Stellar AP.

Stellar AP Configuration Guide

Includes procedures for managing and configuring all aspects of the Stellar AP using the built-in web interface.

Technical Tips, Field Notices, Upgrade Instructions

Contracted customers can visit our customer service website at: https://myportal.al-enterprise.com/.

Page 3 of 15 AWOS Release 4.0.7 MR3

Hardware Supported

AP1101, AP1201, AP1220 series, AP1230 series, AP1251, AP1251-RW-B, AP1261-RW-B, AP1201H, AP1201L, AP1201HL, AP1320 series, AP1360 series, AP1201BG, AP1301, AP1301H, AP1311, AP1331, AP1351, AP1451, AP1431, AP1411.

New Software Features and Enhancements

The following software features are new with this release, subject to the feature exceptions and problem reports described later in these release notes:

Feature	Platform Support
Mesh Enhancement(OVE&OVC)	All
BLE 3 rd party integration requires send raw data of unknown advType (OVE&OVC)	AP1201, AP1230 Series, AP1320 Series, AP1360 Series, AP1351, AP1311, AP1301H, AP1411, AP1431, AP1451
Support disable LACP (Express)	AP1230 Series, AP1320 Series, AP1351, AP1301, AP1311, AP1411, AP1431, AP1451

Fixed Problem Reports Between Build 4.0.7.2032 and 4.0.7.3043

PR	Description
ALEISSUE-1732 Case number: 00717064	Summary: BYOD users unable to logout, getting error "Your device got offline".
337.7331	Explanation: During roaming, the new AP failed to send the accounting start message, resulting in the STA being offline on the server side.
	Click for additional information
ALEISSUE-1747 Case number: 00725152	Summary: Default channel Width is on 80 in 4.0.5 MR5 but in 4.0.7 its 40 why this change.
	Explanation: Fix the issue where the AP does not use an 80MHz bandwidth as the initial bandwidth when the automatic bandwidth is set to "auto".
	Click for additional information
ALEISSUE-1748 Case number: 00723391	Summary: Force 5G not happening. Explanation: Fix the issue where clients are not being marked as "Force 5G" in certain scenarios.
	Click for additional information
ALEISSUE-1762 Case number: 00723131	Summary: Stellar 1301: VLAN management problem via Access Role Profile.
	Explanation: Update WiFi FW.
	Click for additional information

Page 4 of 15 AWOS Release 4.0.7 MR3

Fixed Problem Reports Between Build 4.0.7.1019 and 4.0.7.2032

PR	Description	
ALEISSUE-1523 Case number: 00668283,	Summary: Stellar AP's crashing Randomly with Kernel Panic.	
00691949	Explanation: Update in new Driver to fix the crash.	
	Click for additional information	
ALEISSUE-1617 Case number: 00689188	Summary: Frist HTTP packet from the client is not getting redirected during CP authentication.	
	Explanation: Adjust the HTTP interception logic to ensure that the first HTTP message sent by the client can be intercepted correctly.	
	Click for additional information	
ALEISSUE-1627 Case number: 00707547	Summary: AP1311 crashing randomly with reason as "Unknown Reason" in reset record.	
	Explanation: Crash due to abnormal GRE packet.	
	Click for additional information	
ALEISSUE-1685 Case number: 00707019	Summary: AP1321's need randomly rebooted to allow users on network.	
	Explanation: Update in new Driver to fix the problem.	
	Click for additional information	
ALEISSIE-1704 Case number: 00713127	Summary: OAW AP-1201H (RAP) while upgrading to the code 4.0.7.14 notice kernel panic reboot client keep on disconnecting.	
	Explanation: Fixed the bug in the kernel where some malformed packages were causing kernel panic.	
	Click for additional information	
ALEISSUE-1709 Case number: 00715681	Summary: Why Stellar current EIRP is 12 dBm when the rfProfile tx Power range is 17 min 20 max?	
	Explanation: Fixed the bug the AP using the error gain value, it caused AP EIRP only 12 dBm.	
	Click for additional information	
ALEISSUE-1715 Case number: 00710818,	Summary: AP kick-off client by disconnect reason 15 Mostly for 2.4 users.	
00717646, 00725619	Explanation: AP stops in between the WPA key exchange. Update in new Driver to fix the problem.	

Page 5 of 15 AWOS Release 4.0.7 MR3

	<u>Click for additional information</u>
ALEISSUE-1716 Case number: 00715539	Summary: Logs coming in loop: resource temporally unavailable
	Explanation: Adjust the unnecessary log level to debug.
	Click for additional information
ALEISSUE-1722 Case number: 00718008	Summary: All 5G ATH interface go to Not-Associated
007.1000	Explanation: Added Optimization to recover 5G interface when it stuck in abnormal status.
	Click for additional information
ALEISSUE-1724/ ALEISSUE-1736 Case number:	Summary: OVC: Clients are not authenticating from the ucopia.
00717597, 00712584	Explanation: Fixed the http server config lost.
	Click for additional information
ALEISSUE-1729 Case number: 00716377	Summary: Anet Communications: OAW-AP1221-AWOS 4.0.7.14: Default gateway on non-wan interface is not working.
	Explanation: Fixed the issue where the default route configuration option was not work.
	Click for additional information

Fixed Problem Reports Between Build 4.0.7.14 and 4.0.7.1019

PR	Description
ALEISSUE-1590 Case number:	Summary: No ability to configure channels 149 - 165 on 5Ghz in UK with OVE or OVC.
	Explanation: Support channels 149-165 in WiFi driver and hanlet. Click for additional information
ALEISSUE-1638 Case number:	Summary: Roaming with GTTS tunnelling is not working.
	Explanation: Fixed the AP apply the error Access Role Profile to user when roaming in GTTS tunnel scenario.
	Click for additional information

Page 6 of 15 AWOS Release 4.0.7 MR3

ALEISSUE-1653	Summary:	
Case number:	AP drop back to 40 MHz after reboot.	
	Explanation:	
	In the automatic channel selection scenario, the AP does not save the bandwidth information,	
	causing inconsistency bandwidth after the AP restarts.	
	causing inconsistency bandwidth after the Ar restarts.	
	Click for additional information	
	Click for additional information	
ALEISSUE-1664	Summary:	
Case number:	Unable to remove domain in Walled Garden.	
	Explanation:	
	The judgment condition of the URL is problematic, causing the page to be unable to be	
	deleted.	
	Click for additional information	
	<u>ettek for addictoriat information</u>	
ALEISSUE-1666	Summary:	
Case number:	When there are more than 2 AP 1301 connected to switch, the AP communication is lost.	
	Explanation:	
	The dumb switch forwards LACP packets, causing the aggregation of the wired interfaces of	
	two APs together, resulting in network failure, we can disable LACP by ECC in OV mode.	
	Click for additional information	
L		

Fixed Problem Reports Between Build 4.0.5MR5 and 4.0.7.14

PR	Description	
ALEISSUE-1605 Case number: 00690518	Summary: AP 1101 is reaching 100% CPU and getting struck.	
	Explanation:	
	High CPU usage is caused by 'DRM' module.	
	Click for additional information	
ALEISSUE-1536	Summary:	
Case number: 00682998	Generated a log when WLAN Client Signal to Noise Ratio is less than 25 dB.	
	Explanation:	
	Added log for lower SNR client.	
	Click for additional information	
ALEISSUE-1586 Case number:	Summary: IPhone not able to connect to Stellar AP in 4.0.5.	
00686188	Explanation:	
	Incorrect PMF parameter cause the issue.	
	Click for additional information	

Page 7 of 15 AWOS Release 4.0.7 MR3

ALEISSUE-1590 Case number: 00684901	Summary: No ability to configure channels 149 - 165 on 5Ghz in UK with OVE or OVC.
	Explanation: Added 149-165 channels in UI for country code UK in CLUSTER mode.
	Click for additional information
ALEISSUE-1544 Case number: 00661046	Summary: Stellar AP running with NaaS Licensing shall generate logs when device is entering into grace period and into degraded mode.
	Explanation: Added log when AP is entering into grace period and into degraded mode.
	<u>Click for additional information</u>
ALEISSUE-1648	Summary: Disable & re-enabled the wired port OV Discovery Profiles will lead to the trust tag function not work.
	Explanation: Fix the wire configuration lost in some situation.
	Click for additional information
ALEISSUE-1657	Summary: Unable to change WAN VLAN interface of AP to tagged vlan with static ip address.
	Explanation: Fix the VLAN configuration was lost in certain scenarios.
ALEISSUE-1635	Summary: Kernel Panic crash-AP1361.
	Explanation: Added Null-pointer checking in kernel.
ALEISSUE-1578	Summary: Mesh-Link stability Issue.
	Explanation: Optimized RF configuration loading logic to avoid impacting mesh links.
ALEISSUE-1502	Summary: Gratitious ARP packet is looped on the stellar mesh AP.
	Explanation: Added a mechanism to prevent broadcast storms on mesh links.

Page 8 of 15 AWOS Release 4.0.7 MR3

Open/Known Problems

The problems listed here include problems known at the time of the product's release. Any problems not discussed in this section should be brought to the attention of the Service and Support organization as soon as possible. Please contact customer support for updates on problem reports (PRs) where no known workaround was available at the time of release.

PR	Description	Workaround	
WCF	WCF Feature is not supported when WLAN Client is running behind an HTTP Proxy	No workaround	
WCF	WCF Feature is not supported when WLAN Client is using mobile applications, there is no restrictions (packets are not dropped by AP, no redirection to Restricted Web page)	No workaround	
Management VLAN	When the management VLAN is enabled, setting the static IP may fail	The static IP must be set first, and then enable the management VLAN.	
DPI	[reflexive] configure link tracking. DPI_DROP does not take effect.	After modifying the reflexive, the client needs to go online and offline again, which can return to normal.	
AP stateful ipv6 address	The ipv6 address of the dual-stack AP, AP is a stateful address. After configuring the open type of WLAN, to associate the WLAN, with the wireless network card of win 7 11n set to single-stack V6, check the network on-off condition of the V6 address.	When you manually configure a V6 address of the same network segment on the client as the gateway address, you can communicate with the same network address.	
DPI FTP policy	Create one policy list binding and two policies, results that the user cannot access the ftp	There is no known workaround at this time.	
WCF	WCF does not support L3 roaming scenarios.	No workaround	
Option82	After enabling option82 feature, in some scenarios, user roaming and reacquiring IP addresses can cause a brief broadcast storm.	Will be fixed on AWOS 4.0.8	
AP1411 Radio configration	After switching the radio, the previously unused band is set to a disabled state (Express).	Manually enable the band in AP RF	
SNMPv3	Some special characters can cause SNMP communication issues. The special characters include the following: \$,",()	Don't using these special characters	
6G wIPS	6G radio not support wIPS feature	Will be supported on later release	
6G Dedicated scanning	6G radio not support Dedicated scanning feature	Will be supported on AWOS 4.0.8	
6G WCF	6G radio not support WCF feature	Will be supported on AWOS 4.0.8	
mDNS	AP1411/AP1431 not support mDNS feature	Will be supported on AWOS 4.0.8	
ALEISSUE-1529	AP1101 rebooted due to kernel panic	No workaround at this time	
DPI	DPI memory leak issue	Will be fixed on AWOS 4.0.8	
RSSI Threshold	The RSSI threshold not working on 6G interface	Will be fixed on AWOS 4.0.8	
ALEISSUE-1750	AP1201-BG the ESSID in the wizard cannot contain space characters.	Will be fixed on AWOS 4.0.7MR4	

Page 9 of 15 AWOS Release 4.0.7 MR3

Mesh	If AP working on DFS channel, the client/mesh client can't connect to AP	Workaround: Change the channel to non-DFS channel.
Policy	When the client isolation whitelist feature is enabled, there is a chance that the Policy process will repeatedly restart if the WLAN where the client is located then turned off the WLAN.	

Limitations and/or Dependencies

Feature	AP Model	Limitations and/or Dependencies
Dynamic VLAN	All	1. In Express mode the support of Dynamic VLAN Attribute returned by the Radius Server is not supported since AWOS 4.0.x
WCF	All	 WCF does not support http over proxy scenario. WCF does not support blocking mobile applications access. Client's packets are not restricted (packet not dropped by AP, no redirection to Restricted Web Page) WCF does not support RAP scenario. When using Iphone roaming between Aps, reject page can't be redirected when using Safari, but it works ok for other browser such as Chrome If the mobile device has already cached the DNS for the corresponding URL, the WCF functionality will not take effect. WCF Feature is not supported when WLAN Client enabled secure DNS (DoT or DoH)
HTTPs CP over proxy	All	For iOS does not support to configure URL to bypass the proxy, this function does not work on iOS devices.
AP 802.1x client	All	Wireless clients can't connect to internet on untag VLAN with AOS switch due to AOS switch treat all untag devices as 802.1x client.
Wired Port	AP1201HL	 AP1201HL switches to a Group with downlink configuration, wired client cannot access it. AP1201HL enables trust tag and option 82, wired client may not obtain IP address
DRM	All	In some cases, when the channel utilization reaches more than 90%, the channel does not switch automatically, which seriously affects the user experience.
IGMP Snooping	All Stellar Wi-Fi 6 AP Models	For 11AX devices, if there is no multicast querier in the environment, the conversion from multicast to unicast may fail. We recommend that the switch of IGMP Snooping feature be turned on by default.
Mesh	All	Multicast to unicast is not supported in Mesh mode.
DPI	AP1201/ AP1220 series/ AP1251	When DPI function is enabled, it is recommended to have an initial free memory size of about 30MB after AP booting up for system stable running. If the booting up free memory size is far less than 30MB, suggest removing unnecessary WLAN/VLAN/Policy/DPI rule on AP1201/AP1220/AP1251.
Bypass VLAN	AP1201H/ AP1201HL	If the bypass VLAN function is enabled, setting VLAN id A, and setting the management VLAN to tag VLAN id is also A, which will cause the AP itself to be inaccessible and affect the operation of AP. Therefore, there is a restriction here that the tag for managing VLAN cannot be the same as bypass.
mDNS	AP1201H/ AP1201HL /AP1261- RW-B	AP1201H/1201HL/AP1261-RW-B Downlink Terminal does not support mDNS message forwarding.
Show device name	All	When some clients connect to wlan, there is no option 12 field in the dhcp message, so its hostname cannot be displayed.
Management VLAN Static IP LACP	AP1351/A P1451	When configure LACP + Management VLAN + Static IP for AP1351, the network will not be reachable after AP reboot if LACP aggregated link is formed, the workaround of this issue should be disable LACP on switch side.
Link aggregation	All	Link aggregation with management VLANs has a certain probability of failure

Page 10 of 15 AWOS Release 4.0.7 MR3

		·
Link	AP1351	There is very low probability on AP1351 that ethernet PHY fail to receive messages in
aggregation		the scenario of link aggregation.
ALEISSUE-1294	All	This improvement might cause some lower version of SSH clients cannot connect to
		Stellar AP running this new build, upgrade SSH client version will avoid this problem.
ALEISSUE-1343	AP1201H(VLAN 4090-4094 is not allowed configured.
	L) `	
11K	Aps	To make sure 11k function work as expected · we should configure the AP background
	without	
	scan radio	scanning on "Working Channel and Non-working Channel".
Enhanced	All	Mobile devices with Apple iOS do not support OWE, Mobile devices with Android 10 or
Open WLAN		later support OWE, Computers with Windows 10 version 2004 or later and a wireless
•		adapter that supports OWE.
Client	All	Client A connect to WLAN1 with ARP1, and Client B connect to WLAN2 with ARP2, in
Isolation		this case, If Client A and B needs to communicate to each other, both of the two clients
Whitelist		need to be added into whitelist, either one of Clients add into whitelist can't ensure
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,		communication between these two clients.
Express mode	All	Starting with AWOS 4.0.5 in Express mode, we can create 15 user SSIDs on clusters
WLAN number		with following models.
,, = 1, , , , , , , , , , , , , , , , ,		• AP1301H, AP132x, AP1331, AP136x, AP1351 & AP1451
		If a cluster has any of the following models, limit remains at 7 user SSIDs.
		• AP1311, AP1301, AP12xx and AP1101
ALEISSUE-1367	All	OV IP was not supposed to be included in the local breakout IP range.
RAP wired	All Staller	
downlink port	AP with	2. After enabled trust tag, should not use VLANO.
ao mana por c	downlink	3. Don't support authentication and policy rules.
	wired	5. Don't support additionation and policy fales.
	port.	
Certificate	All	In express mode, the password of the certificate does not support special characters.
management	Διι	in express mode, the password of the certificate does not support special characters.
management		

Page 11 of 15 AWOS Release 4.0.7 MR3

New Software Feature Descriptions

Mesh Enhancement(OVE&OVC)

Currently, Mesh/Bridge AP connections use WPA2 encryption. We need to provide an option "Encryption Type" with a dropdown menu. the default selected option varies with different products (or radio), and users can choose WPA3. WPA3 will operate using WPA3_PSK_SAE_AES (Both(wpa2&wpa3)). This means that if both endpoints are configured with WPA3, they will operate with WPA3 security; otherwise, they will use WPA2 encryption. This will provide flexibility for the Mesh setup, but once all Mesh nodes are configured and available, they will operate with higher security.

The configurable range for different products is as follows:

Products	Radio	Key Management
11AC	2.4G/5G	Both(wpa&wpa2)
		wpa2-personal
11AX	2.4G/5G	Both(wpa&wpa2)
		wpa2-personal ,
		Both(wpa2&wpa3)
		wpa3-personal
11AX	6G	wpa3-personal

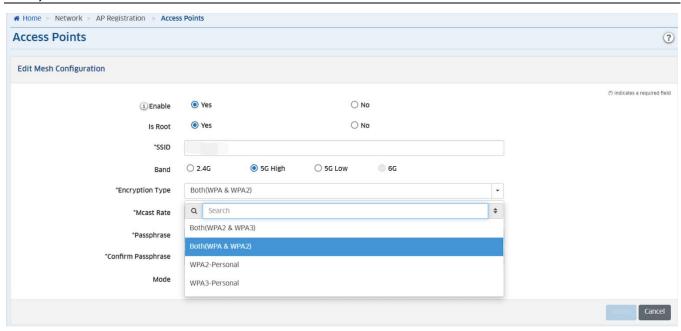

The default configuration for 4.0.7MR3 is as follows:

Products	Radio	Key Management
11AC	2.4G/5G	wpa2-personal
11AX	2.4G/5G	Both(wpa2&wpa3)
11AX	6G	wpa3-personal

11AC devices: ★ Home > Network > AP Registration > Access Points **Access Points** ? Edit Mesh Configuration Yes O No (i) Enable Yes O No Is Root *SSID 5G 66 0 2 46 Band *Encryption Type Both(WPA & WPA2) **Q** Bearch *Mcast Rate 0 *Passphrase WPA2-Personal *Confirm Passphrase Mesh O Bridge Apply Cancel

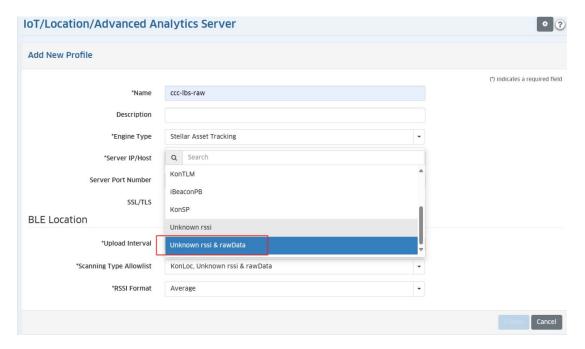

11AX devices:

Page 12 of 15 AWOS Release 4.0.7 MR3

BLE 3rd party integration requires send raw data of unknown advType (OVE&OVC)

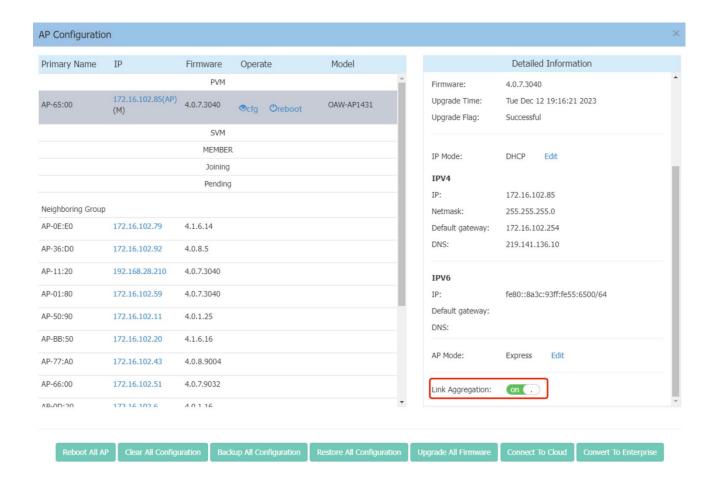

According to the sent BLE report data, if "advtype" is selected as "Unknown", the reported device data does not include rawData. To support sending rawData to a third-party server, we need to add the following configuration: In "Network -> AP Registration -> IOT/Location/Advanced Analytics Server", when EngineType is set to "Stellar Asset Tracking", in the "Allowed Scan Types List", we will change "Unknown" to "Unknown rssi" and add an option "Unknown rssi & rawData" to the selection list.

Support enable/disable LACP (Express)

Customer is having a non-intelligent PoE switch, due to which the LACP is formed between 2 APs. Hence need an option to disable LACP of the AP in express mode.

Page 13 of 15 AWOS Release 4.0.7 MR3

Technical Support

Alcatel-Lucent Enterprise technical support is committed to resolving our customer's technical issues in a timely manner. Customers with inquiries should contact us at:

Region	Phone Number
North America	1-800-995-2696
Latin America	1-877-919-9526
Europe Union	+800 00200100 (Toll Free) or
·	+1(650)385-2193
Asia Pacific	+65 6240 8484

Email: ale.welcomecenter@al-enterprise.com

Internet: Customers with Alcatel-Lucent service agreements may open cases 24 hours a day via Alcatel-Lucent's support web page at: https://myportal.al-enterprise.com/.

Upon opening a case, customers will receive a case number and may review, update, or escalate support cases on-line. Please specify the severity level of the issue per the definitions below. For fastest resolution, please have telnet or dial-in access, hardware configuration—module type and revision by slot, software revision, and configuration file available for each switch.

Severity 1 - Production network is down resulting in critical impact on business—no workaround available.

Severity 2 - Segment or Ring is down or intermittent loss of connectivity across network.

Page 14 of 15 AWOS Release 4.0.7 MR3

- Severity 3 Network performance is slow or impaired—no loss of connectivity or data.
- Severity 4 Information or assistance on product feature, functionality, configuration, or installation.
