Position and throughput	
Conclusion	

Purpose of the test.

The M36 and M2000 were tested on performance, configuration and MESH functions.

During the test we looked specifically at the throughput from a normal connection to the AP. As well as repeating with hops

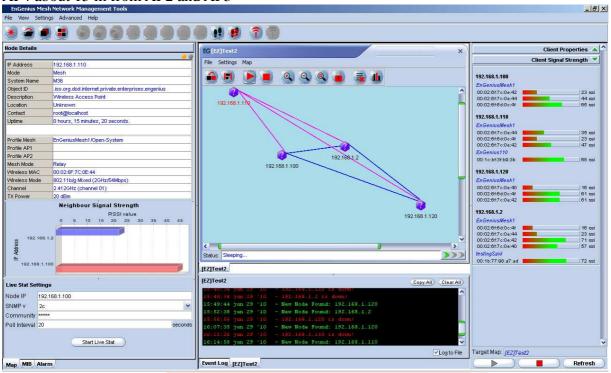

Test position

Position of the units:

AP1 about 20 m from AP2 and AP3.

AP2 and AP3 about 5 m from each other

AP4 about 15 m from AP2 and AP3

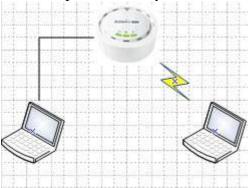

ABN-AMRO 436058316 SWIFT code ABNANL2A IBAN nr NL82ABNA0436058316 BTW nr NL.8132.61.685.B.01 KvK nr 32094060 Aanbiedingen en overeenkomsten conform de voorwaarden gedeponeerd bij de Kamer van Koophandel onder nummer 32094060

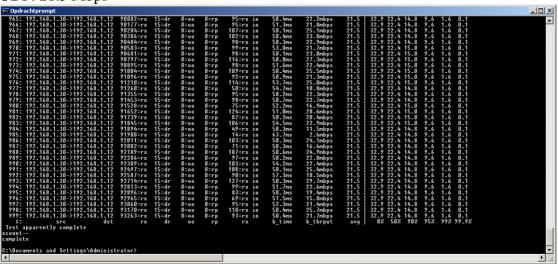

Position and throughput

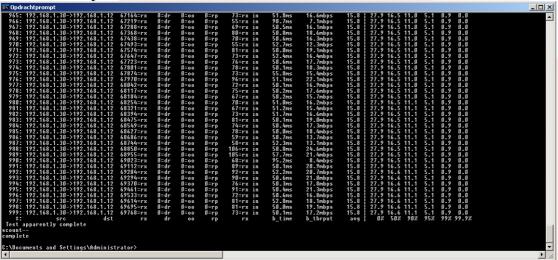

First position, Notebook 1 connected wired to the AP. Notebook to connected wireless to the AP. The AP is setup as a Gateway.

UDP: 21.5 Mbps

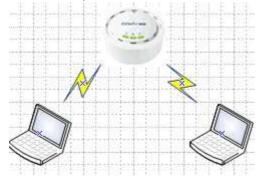

TCP: 15.8 Mbps

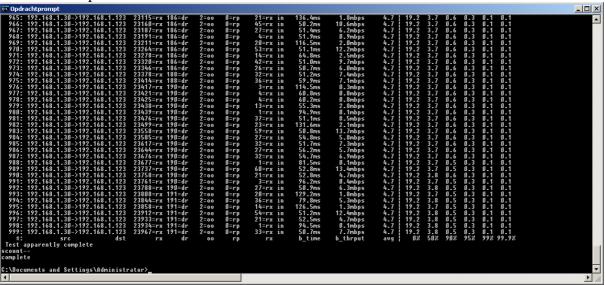

ABN-AMRO 436058316 SWIFT code ABNANL2A IBAN nr NL82ABNA0436058316 BTW nr NL.8132.61.685.B.01 KvK nr 32094060 Aanbiedingen en overeenkomsten conform de voorwaarden gedeponeerd bij de Kamer van Koophandel onder nummer 32094060

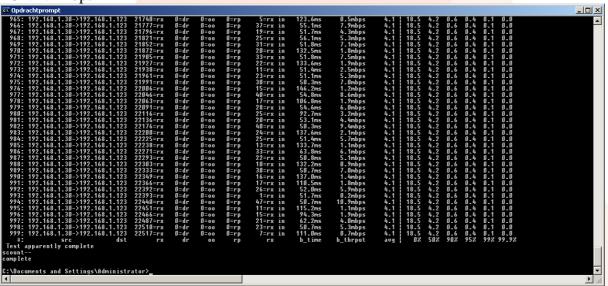

Second test, both notebooks are wireless connected to the AP.

UDP: 4.7 Mbps

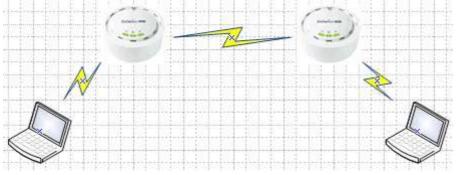

TCP: 4.1Mbps

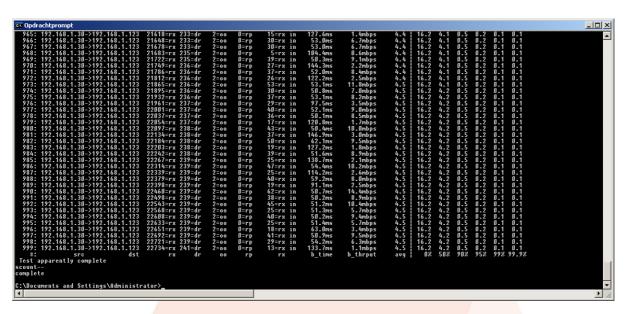

ABN-AMRO 436058316 SWIFT code ABNANL2A IBAN nr NL82ABNA0436058316 BTW nr NL8132.61.685.B.01 KvK nr 32094060 Aanbiedingen en overeenkomsten conform de voorwaarden gedeponeerd bij de Kamer van Koophandel onder nummer 32094060

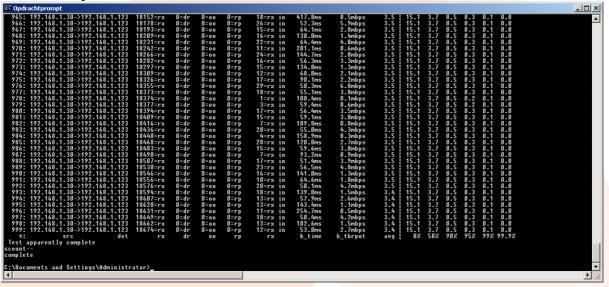

Third test, Both notebooks wireless connected with one hop in the network.

UDP: 4.5 Mbps

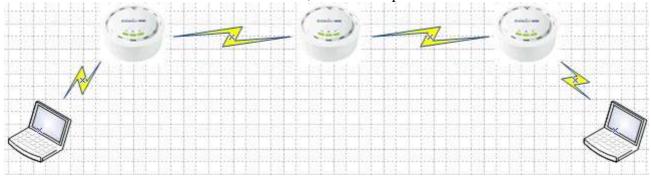

TCP: 3.4Mbps

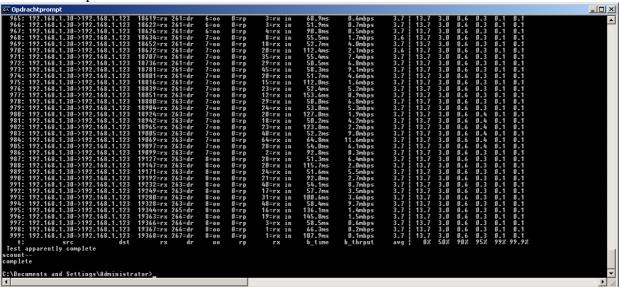

ABN-AMRO 436058316 SWIFT code ABNANL2A IBAN nr NL82ABNA0436058316 BTW nr NL8132.61.685.B.01 KvK nr 32094060 Aanbiedingen en overeenkomsten conform de voorwaarden gedeponeerd bij de Kamer van Koophandel onder nummer 32094060

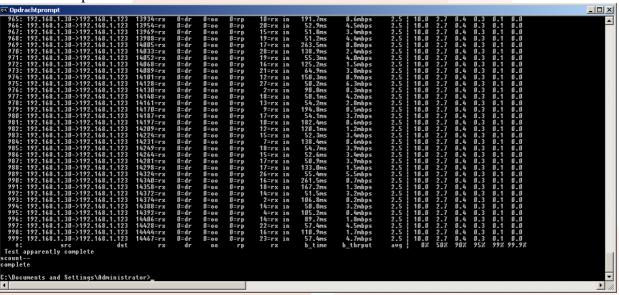

Fourth test. Both notebooks wireless connected, with two hops in the network.

UDP: 3.7 Mbps

TCP: 2.5 Mbps

ABN-AMRO 436058316 SWIFT code ABNANL2A IBAN nr NL82ABNA0436058316 BTW nr NL.8132.61.685.B.01 KvK nr 32094060 Aanbiedingen en overeenkomsten conform de voorwaarden gedeponeerd bij de Kamer van Koophandel onder nummer 32094060

Conclusion

The MESH network looks like a WDS network. When a link is down there will be a reconnection for the data stream with a short downtime. It's a single radio MESH network and we see that every hop will downgrade the network with 50% of the throughput.

The MESH management software will monitor the network with a delay. The web GUI of the device devices are very simple. It's the default look and feel of the EnGenius web GUI as we already know it from other models.
