About This Release

This document provides release information for Ruckus LTE AP Release SC 02.04.01.0013, including information on new feature, resolved issues, and unresolved issues.

Supported Access Points

Ruckus LTE AP Release SC 2.4.1 supports the following Access Point models:

P01-Q910-US02
P01-Q710-US02
P01-Q410-US01

NOTE

Legacy AP SKUs, P01-Q910-US00/P01-Q710-US00 (only non-CA mode), are also supported.

New Feature

This release supports dedicated radio bearers with a guaranteed bit rate (GBR).

Resolved Issues

Resolved Issues	Description
AZ-3954	Crashes related to monitorOfTenx is resolved.
AZ-3989	Resolved an issue with the Grant response handling on the CBSD (AP).
AZ-3994	Included the iNSTA WInnForum root certificate.
AZ-3998	Addressed an issue where CBSD (AP) requests only 10 MHz grants when 20 MHz grant is relinquished and SI response is for 100 MHz.
AZ-4001	Fixed an issue with 10 MHz grants with Federated Wireless SAS.
AZ-4011	Fixed the issues that prevented iPhone 11 and couple of other handsets to attach and browse data successfully.
AZ-4013	CBSD now waits in the suspended state for SAS to complete IAP/SPAS cycle, rather than trying other frequencies.

Unresolved Issues

Unresolved Issues	Description
AZ-3127	In certain cases, a software failure is observed on the CA setup while no external activity is ongoing.
AZ-3655	In some cases, an LTE AP may initiate an S1 handover instead of X2, despite X2 connected neighbors.
AZ-3951	In certain cases, the channel switch does not occur successfully after the CTT expiry on a Q410.
AZ-3957	In certain cases, a non-CA capable AP (US00 SKU/ Q410) may not be operational if the Spectrum Inquiry response from SAS contains discontinuous 10 MHz channels.
