Document Conventions

The following table lists the text conventions that are used throughout this guide.

TABLE 1 Text Conventions

Convention	Description	Example
monospace	Identifies command syntax examples	<code>device(config)# interface ethernet 1/1/6</code>
bold	User interface (UI) components such as screen or page names, keyboard keys, software buttons, and field names	On the Start menu, click All Programs .
<i>italics</i>	Publication titles	Refer to the <i>Ruckus Small Cell Release Notes</i> for more information.

Notes, Cautions, and Warnings

Notes, cautions, and warning statements may be used in this document. They are listed in the order of increasing severity of potential hazards.

NOTE

A NOTE provides a tip, guidance, or advice, emphasizes important information, or provides a reference to related information.

ATTENTION

An ATTENTION statement indicates some information that you must read before continuing with the current action or task.

CAUTION

A CAUTION statement alerts you to situations that can be potentially hazardous to you or cause damage to hardware, firmware, software, or data.

DANGER

A DANGER statement indicates conditions or situations that can be potentially lethal or extremely hazardous to you. Safety labels are also attached directly to products to warn of these conditions or situations.

Command Syntax Conventions

Bold and italic text identify command syntax components. Delimiters and operators define groupings of parameters and their logical relationships.

Convention	Description
bold text	Identifies command names, keywords, and command options.
<i>italic text</i>	Identifies a variable.
[]	Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets.
{ x y z }	A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options.
x y	A vertical bar separates mutually exclusive elements.
< >	Nonprinting characters, for example, passwords, are enclosed in angle brackets.
...	Repeat the previous element, for example, <i>member[member...]</i> .
\	Indicates a “soft” line break in command examples. If a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

Document Feedback

Ruckus is interested in improving its documentation and welcomes your comments and suggestions.

You can email your comments to Ruckus at #Ruckus-Docs@commscope.com.

When contacting us, include the following information:

- Document title and release number
- Document part number (on the cover page)
- Page number (if appropriate)

For example:

- Ruckus SmartZone Upgrade Guide, Release 5.0
- Part number: 800-71850-001 Rev A

Ruckus Product Documentation Resources

Visit the Ruckus website to locate related documentation for your product and additional Ruckus resources.

Release Notes and other user documentation are available at <https://support.ruckuswireless.com/documents>. You can locate the documentation by product or perform a text search. Access to Release Notes requires an active support contract and a Ruckus Support Portal user account. Other technical documentation content is available without logging in to the Ruckus Support Portal.

White papers, data sheets, and other product documentation are available at <https://www.ruckuswireless.com>.

Online Training Resources

To access a variety of online Ruckus training modules, including free introductory courses to wireless networking essentials, site surveys, and Ruckus products, visit the Ruckus Training Portal at <https://training.ruckuswireless.com>.

Contacting Ruckus Customer Services and Support

The Customer Services and Support (CSS) organization is available to provide assistance to customers with active warranties on their Ruckus products, and customers and partners with active support contracts.

For product support information and details on contacting the Support Team, go directly to the Ruckus Support Portal using <https://support.ruckuswireless.com>, or go to <https://www.ruckuswireless.com> and select **Support**.

What Support Do I Need?

Technical issues are usually described in terms of priority (or severity). To determine if you need to call and open a case or access the self-service resources, use the following criteria:

- Priority 1 (P1)—Critical. Network or service is down and business is impacted. No known workaround. Go to the **Open a Case** section.
- Priority 2 (P2)—High. Network or service is impacted, but not down. Business impact may be high. Workaround may be available. Go to the **Open a Case** section.
- Priority 3 (P3)—Medium. Network or service is moderately impacted, but most business remains functional. Go to the **Self-Service Resources** section.
- Priority 4 (P4)—Low. Requests for information, product documentation, or product enhancements. Go to the **Self-Service Resources** section.

Open a Case

When your entire network is down (P1), or severely impacted (P2), call the appropriate telephone number listed below to get help:

- Continental United States: 1-855-782-5871
- Canada: 1-855-782-5871
- Europe, Middle East, Africa, Central and South America, and Asia Pacific, toll-free numbers are available at <https://support.ruckuswireless.com/contact-us> and Live Chat is also available.
- Worldwide toll number for our support organization. Phone charges will apply: +1-650-265-0903

We suggest that you keep a physical note of the appropriate support number in case you have an entire network outage.

Self-Service Resources

The Ruckus Support Portal at <https://support.ruckuswireless.com> offers a number of tools to help you to research and resolve problems with your Ruckus products, including:

- Technical Documentation—<https://support.ruckuswireless.com/documents>

About This Guide

This *SmartZone 300 (SZ300) and Virtual SmartZone High-Scale (vSZ-H) Command Reference Guide* contains the syntaxes and commands for configuring and managing the SZ300/ vSZ-H (collectively referred to as “the controller” throughout this guide) from the command line interface.

This guide is written for service operators and system administrators who are responsible for managing, configuring, and troubleshooting Ruckus devices. Consequently, it assumes a basic working knowledge of local area networks, wireless networking, and wireless devices.

NOTE

If release notes are shipped with your product and the information there differs from the information in this guide, follow the instructions in the release notes.

Most user guides and release notes are available in Adobe Acrobat Reader Portable Document Format (PDF) or HTML on the support site at <https://support.ruckuswireless.com/contact-us>

Overview of the Controller Command Line Interface

The Controller command line interface (CLI) is a software tool that enables you to configure and manage SmartCell Gateway 200 and Virtual SmartZone High-Scale. Using the command line interface, you can issue commands from an operating system prompt, such as the Microsoft Windows command prompt or a Linux operating system terminal. Each command performs a specific action for configuring device settings or returning information about the status of a specific device feature.

Accessing the Command Line Interface

The controller has a built-in command line interface (CLI) that you can use to configure controller settings and manage access points. This section describes the requirements and the procedure for accessing the controller CLI.

What You Will Need

To access the controller CLI, you will need the following:

- A computer that you want to designate as administrative computer
- A network connection to the controller (if you want to use an SSH connection) or an RS-232 serial to RJ45 cable (if you want to use a serial connection)
- An SSH (secure shell) client

Connect the Administrative Computer to the Controller

Connect the administrative computer to controller either through the network or directly using an RS-232 serial to RJ45 cable.

1. If you want to use an SSH connection, connect the administrative computer to the same subnet or broadcast domain as the Management (Web) interface of the controller.

2. If you want to use a serial connection, make sure that both the administrative computer and the controller are both powered on. And then, do the following:
 - Connect the RJ45 end of the cable to the port labeled |O|O| (console port) on the controller. See Figure 1 for the location of the console port.
 - Connect the RS-232 end of the cable to a COM port on the administrative computer.

FIGURE 1 SCG200 Location of console port

FIGURE 2 SZ300 Location of console port

Start and Configure the SSH Client

Before starting this procedure, make sure that the SSH client is already installed on the administrative computer.

NOTE

The following procedure describes how to use PuTTY, a free and open source telnet/SSH client, to access the controller CLI. If you are using a different SSH client, the procedure may be slightly different (although the connection settings should be the same). For more information on PuTTY, visit www.putty.org.

See the following sections depending on your connection method:

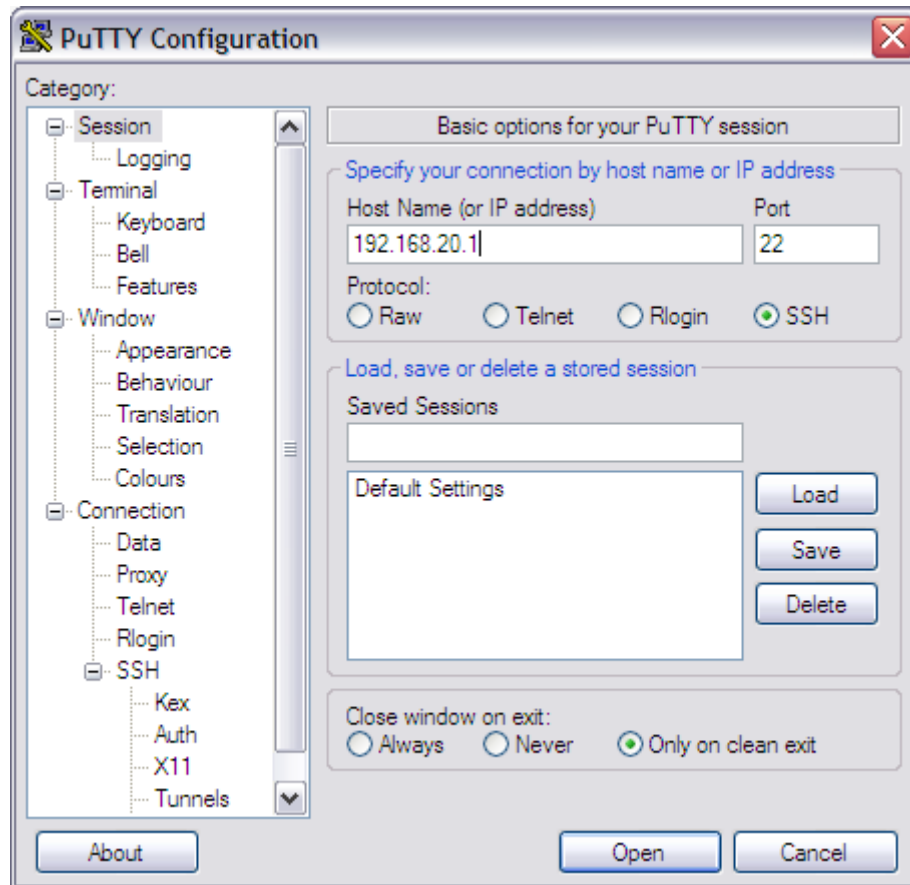

- [Using SSH Connection](#) on page 19
- [Using Serial Connection](#) on page 20

Using SSH Connection

If you have connected the administrative computer to the same subnet or broadcast domain as the Management (Web) interface of the controller, follow these steps to start and configure the SSH client.

1. Start **PuTTY**. The **PuTTY configuration** dialog box appears, showing the **Session** screen as seen in [Figure 3](#).
2. In **Connection type**, select **SSH**.

FIGURE 3 Selecting SSH as a connection type

3. Enter the IP address of the Management (Web) interface of the controller in the **Host Name** (or IP address) field as seen in [Figure 3](#).
4. Click **Open**. The **PuTTY console** appears and displays the login prompt. See [Figure 7](#) on page 23.

Using Serial Connection

If you have connected the administrative computer to the console port on the controller using an RS-232 serial to RJ45 cable, follow these steps to start and configure the SSH client.

1. Start **PuTTY**. The **PuTTY Configuration** dialog box appears, showing the **Session** screen as seen in [Figure 4](#).
2. In **Connection** type, select **Serial** if you are connecting via serial cable.

FIGURE 4 Selecting serial as a connection type

3. Under Category, click **Connection > Serial**. The serial connection options appear on the right side of the dialog box, displaying PuTTY's default serial connection settings. See [Figure 5](#).

FIGURE 5 PuTTY's default serial connection setting

4. Configure the serial connection settings as follows. See [Figure 6](#).
 - Serial line to connect to: Type the COM port name to which you connected the RS-232 cable.
 - Bits per second: 115200
 - Data bits: 8
 - Stop bits: 1
 - Parity: None
 - Flow control: None

FIGURE 6 PuTTY's serial connection settings for connecting to controller

5. Click **Open**. The PuTTY console appears and displays the login prompt as seen in [Figure 7](#).

FIGURE 7 PuTTY console displaying the login prompt

You have completed configuring the SSH client to connect to the controller CLI.

Log On to CLI

The following describes the process for logging on to the CLI.

- Log on to the controller using putty/Xssh (any other application) using the user credentials of login name and password as given.

NOTE

You cannot use 'admin' as a password, which is used during the controller installation procedure.

- The controller CLI welcome message appears with the CLI prompt as seen below.

- You are now logged into the controller CLI as a user with limited privileges by looking at the CLI prompt. If you are in limited mode, the prompt appears as ruckus> (with a greater than sign). To view a list of commands that are available at the root level or user mode, enter **help** or **?**.

NOTE

To change the CLI prompt to a privileged mode, see step 5.

The screenshot shows a terminal session where the user enters 'en' at the 'INDUS4>' prompt. A red box highlights the 'en' command. A blue arrow points from the 'en' command to the text 'User mode'. Below this, the prompt changes to 'INDUS4#'. Another red box highlights the '#' character in the prompt. A blue arrow points from this '#' character to the text 'Privileged mode'. Finally, the user enters 'config' at the 'INDUS4#' prompt, and the prompt changes to 'INDUS4 (config) #', with a blue box highlighting the '#' character.

Introduction

This chapter describes the commands that you can use to configure, enable, and disable various controller components. The following table lists the commands.

NOTE

For easy access and reading, the configuration chapter has been split into three chapters based on the alphabetical order of commands.

config

To execute commands in configuration mode, you need to change the mode to:

ruckus(config)#

Example

```
ruckus# config  
ruckus(config)#
```

acct-profile

To create or update the accounting service profile configuration, use the following command:

ruckus(config)# acct-profile *name*

Syntax Description

This command uses the following syntax:

name

Accounting service profile name

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# acct-profile rad-profile
```

Related Commands

- [Table 2](#) lists the related **acct-profile** configuration commands.
- [Table 3](#) lists the related **acct-profile-realm** configuration commands.
-

[Table 2](#) lists the related **acct-profile** configuration commands.

TABLE 2 Commands related to ruckus(config-acct-profile).

Syntax and Type	Parameters (if any)	Description
ruckus(config-acct-profile)# default Type: Privileged	no-match-realm acct <i>name</i> no-realm acct <i>name</i>	Set the default service. No matching or no realm found based on the default accounting service and accounting service name.
ruckus(config-acct-profile)# description Type: Privileged	<i>text</i>	Set the description.
ruckus(config-acct-profile)# do Type: Privileged		Executes the do command.
ruckus(config-acct-profile)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-acct-profile)# exit Type: Privileged		Exits from the EXEC.

TABLE 2 Commands related to ruckus(config-acct-profile). (continued)

Syntax and Type	Parameters (if any)	Description
ruckus(config-acct-profile)# help Type: Privileged		Displays the help.
ruckus(config-acct-profile)# name Type: Privileged	<i>name</i>	Sets the accounting service profile name.
ruckus(config-acct-profile)# no Type: Privileged	realm name	Disables the realm based on the realm name.
ruckus(config-acct-profile)# realm Type: Privileged	<i>realm</i>	Set the accounting service realm.

Table 3 lists the related **acct-profile-realm** configuration commands.

TABLE 3 Commands related to ruckus(config-acct-profile-realm)

Syntax and Type	Parameters (if any)	Description
ruckus(config-acct-profile-realm)# acct-service Type: Privileged	<i>name</i>	Sets the accounting service.
ruckus(config-acct-profile-realm)# do Type: Privileged		Executes the do command.
ruckus(config-acct-profile-realm)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-acct-profile-realm)# exit Type: Privileged		Exits from the EXEC.
ruckus(config-acct-profile-realm)# help Type: Privileged		Displays the help.
ruckus(config-acct-profile-realm)# name Type: Privileged	<i>name</i>	Sets the realm name.

ad-service

To create or update the active directory service configuration, use the following command:

```
ruckus(config)# ad-service name
```

Syntax Description

This command uses the following syntax:

name

Active service directory name

Default

This command has no default settings.

Command Mode

Config

Usage Guidelines

Once you enter the **config-admin** context, you can configure the rest of the administrator's profile (see example below).

Example

```
ruckus(config)# ad-service ads
ruckus(config-ad-service)#
```

Related Commands

Table 5 on page 33 lists the related **ad-service** configuration commands.

TABLE 4 Commands related to ruckus(config-ad-service)

Syntax and Type	Parameters (if any)	Description
ruckus(config-ad-service)# admin-domain-name Type: Privileged	<i>domain-name</i>	Sets the administrator domain name. This field is applicable on executing the group attribute command.
ruckus(config-ad-service)# admin-password Type: Privileged	<i>password</i>	Sets the administrator domain password. This field is applicable on executing the group attribute command.
ruckus(config-ad-service)# description Type: Privileged	<i>text</i>	Sets the description
ruckus(config-ad-service)# do Type: Privileged		Executes the do command.
ruckus(config-ad-service)# email	<i>email</i>	Sets the user's email details.

TABLE 4 Commands related to ruckus(config-ad-service) (continued)

Syntax and Type	Parameters (if any)	Description
Type: Privileged		
ruckus(config-ad-service)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-ad-service)# exit Type: Privileged		Exits from the EXEC.
ruckus(config-ad-service)# friendly-name Type: Privileged	<i>friendly-name</i>	Sets friendly name for the active service directory.
ruckus(config-ad-service)# global-catalog Type: Privileged	<i>friendly-name</i>	Enables the global catalog support
ruckus(config-ad-service)# group-attrs Type: Privileged	<i>attr-value</i> : Group attribute value <i>user-role</i> : User Role	Sets the user traffic profile mapping.
ruckus(config-ad-service)# help Type: Privileged		Displays the help.
ruckus(config-ad-service)# ip-address Type: Privileged	<i>ip</i> : Sets the primary server IP address	Sets the primary service IP address.
ruckus(config-ad-service)# name Type: Privileged	<i>name</i>	Sets the active directory service name.
ruckus(config-ad-service)# no Type: Privileged	<i>global-catalog</i> <i>group-attrs attr-value</i>	Disables the commands.
ruckus(config-ad-service)# port Type: Privileged	<i>port</i>	Sets the primary server port.
ruckus(config-ad-service)# windows-domain-name Type: Privileged	<i>domain-name</i> : Example: dc=domain, dc=ruckuswireless, dc=com	Sets the windows domain name
ruckus(config-ad-service)# test Type: Privileged	<i>username</i> <i>password</i>	Tests the AAA Server
ruckus(config-ad-service)# title Type: Privileged	<i>text</i>	Sets the user's job title.

admin

To create or update the administrator’s profile (including the email address, login ID and password), use the following command:

```
ruckus(config)# admin name
```

Syntax Description

This command uses the following syntax:

```
name  
Administrator user name
```

Default

This command has no default settings.

Command Mode

Config

Usage Guidelines

Once you enter the **config-admin** context, you can configure the rest of the administrator’s profile (see example below).

Example

```
ruckus(config)# admin joe
ruckus(config-admin)# email joe@company.com
ruckus(config-admin)# password admin!234
ruckus(config-admin)# phone 22870001
ruckus(config-admin)# real-name "Joe Admin"
ruckus(config-admin)# title CTO
ruckus(config-admin)# radius radius-1
ruckus(config-admin-radius)# ip 1.1.1.1
ruckus(config-admin-radius)# port 1813
ruckus(config-admin-radius)# realm tw1
ruckus(config-admin-radius)# shared-secret 11
Retype: **
ruckus(config-admin-radius)# exit
ruckus(config-admin)# exit
ruckus(config)#
```

Related Commands

Table 5 lists the related **admin** configuration commands.

TABLE 5 Commands related to ruckus(config-admin)

Syntax and Type	Parameters (if any)	Description
ruckus(config-admin)# do Type: Privileged		Executes the do command.

TABLE 5 Commands related to ruckus(config-admin) (continued)

Syntax and Type	Parameters (if any)	Description
ruckus(config-admin)# email Type: Privileged	<i>email</i>	Set the user's email details.
ruckus(config-admin)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-admin)# exit Type: Privileged		Exits from the EXEC.
ruckus(config-admin)# help Type: Privileged		Displays the help.
ruckus(config-admin)# password Type: Privileged	<i>password</i>	Set the password for user.
ruckus(config-admin)# phone Type: Privileged	<i>phone</i>	Set the phone number of the user.
ruckus(config-admin)# real-name Type: Privileged	<i>name</i>	Set the real name of the user.
ruckus(config-admin)# title Type: Privileged	<i>text</i>	Set the user's job title.

admin-radius

To configure the RADIUS server for administrators use the following command:

ruckus(config)# admin-radius

Syntax Description

This command uses the following syntax:

name

RADIUS server name

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# admin-radius aaa-auth
```

Related Commands

Table 6 lists the related **config-admin-radius** configuration commands.

TABLE 6 Commands related to ruckus(config-admin-radius)

Syntax and Type	Parameters (if any)	Description
ruckus(config-admin-radius)# backup Type: Privileged	<p>ip ip: Sets the IP address of secondary RADIUS server</p> <p>port port: Sets the port of secondary RADIUS server</p> <p>shared-secret: Sets the shared secret of secondary RADIUS server</p> <p>request-timeout seconds: - Sets the request timeout in seconds for failover policy</p> <p>max-retry number : Sets the maximum number of retries for failover policy</p> <p>retry-prilnvl minutes : Sets the reconnect to primary server in minutes for failover policy</p>	Enables RADIUS backup.
ruckus(config-admin-radius)# do Type: Privileged		Executes the do command.

TABLE 6 Commands related to ruckus(config-admin-radius) (continued)

Syntax and Type	Parameters (if any)	Description
ruckus(config-admin-radius)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-admin-radius)# exit Type: Privileged		Exits from the EXEC.
ruckus(config-admin-radius)# help Type: Privileged		Displays the help.
ruckus(config-admin-radius)# ip Type: Privileged	<i>ip</i>	Sets the IP addresses of the primary RADIUS server.
ruckus(config-admin-radius)# name Type: Privileged	<i>name</i>	Sets the RADIUS server name.
ruckus(config-admin-radius)# no Type: Privileged	backup	Disables the command.
ruckus(config-admin-radius)# port Type: Privileged	<i>port</i>	Sets the port addresses of the primary RADIUS server.
ruckus(config-admin-radius)# realm Type: Privileged	<i>realms</i> : Multiple realms supported. Use a comma (,) to separate realms (example:home1,home2)	Sets the realms.
ruckus(config-admin-radius)# service Type: Privileged	<i>services</i> : Multiple services supported. Use a comma (,) to separate services (example:home1,home2)	Sets the services.
ruckus(config-admin-radius)# shared-secret Type: Privileged	<i>shared-secret</i> : Shared secret between 1 and 255.	Sets the shared secret of the primary RADIUS server.
ruckus(config-admin-radius)# test Type: Privileged	<i>username password</i> [PAP CHAP]	Tests the RADIUS server based on the user credentials and protocol settings.
ruckus(config-admin-radius)# type Type: Privileged	[radius tacacs]	Sets the admin authentication type,

adv-forwarding-profile

To enter the advanced (mixed mode) profile configuration, use the following command:

ruckus(config)# adv-forwarding-profile <name>

Syntax Description

This command uses the following syntax:

name

Profile server name

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# adv-forwarding-profile ttg-pdg
```

Related Commands

The [Table 7](#) lists related adv-forwarding-profile configuration commands.

The [Table 8](#) lists the related adv-forwarding-profile-apn configuration commands.

TABLE 7 Commands related to ruckus(config-adv-forwarding-profile)

Syntax and Type	Parameters (if any)	Description
ruckus(config-adv-forwarding-profile)# apn Type: Privileged	<i>nioi</i> <apn> <i>ni</i> <apn>	Creates or updates the forwarding policy for APN configuration commands.
ruckus(config-adv-forwarding-profile)# default Type: Privileged		Sets the APN default settings.
ruckus(config-adv-forwarding-profile)# description Type: Privileged	<text>	Sets the description. Length is between 1 and 128.
ruckus(config-adv-forwarding-profile)# do Type: Privileged		Executes the do command.
ruckus(config-adv-forwarding-profile)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(config-adv-forwarding-profile)# exit Type: Privileged		Exits from the EXEC.
ruckus(config-adv-forwarding-profile)# help		Displays the help.

Syntax and Type	Parameters (if any)	Description
Type: Privileged		
ruckus(config-adv-forwarding-profile)# name Type: Privileged	<name>	Enter the advanced (mixed mode) profile name
ruckus(config-adv-forwarding-profile)# no Type: Privileged	apn <apn> realm <realm>	Delete forwarding policies for APN or default APNs for realm.
ruckus(config-adv-forwarding-profile)# realm Type: Privileged	<realm> : Multiple realms supported. Use a comma (,) to separate realms (example:home1,home2)	Creates or updates the default APN for realm.

TABLE 8 Commands related to ruckus(adv-forwarding-profile-apn)

Syntax and Type	Parameters (if any)	Description
ruckus(adv-forwarding-profile-apn)# do Type: Privileged		Executes the do command.
ruckus(adv-forwarding-profile-apn)# end Type: Privileged		Ends the current configuration session and returns to privileged EXEC mode.
ruckus(adv-forwarding-profile-apn)# exit Type: Privileged		Exits from the EXEC.
ruckus(adv-forwarding-profile-apn)# help Type: Privileged		Displays the help.
ruckus(adv-forwarding-profile-apn)# profile Type: Privileged		Sets the forwarding service profile. To view this command run the route-type command.
ruckus(adv-forwarding-profile-apn)# route-type Type: Privileged	Bridge L2oGRE	Sets the route type to either Bridge or L2oGRE.

ap

To update the AP configuration, use the following commands:

```
ruckus(config)# ap mac
```

```
ruckus(config)# ap apMac pre-prov
```

```
ruckus(config)# ap pre-prov [ import ftp-url ] [ export ftp-url ]
```

```
ruckus(config)# ap swap [ import ftp-url ] [ export ftp-url ]
```

Syntax Description

This command uses the following syntax:

***mac* lock**

mac
AP MAC address

lock
Lock AP

***apMac* pre-prov**

mac
AP MAC address

pre-prov
Updates pre-provision configuration

***mac* swap**

mac
AP MAC address

swap
Updates swap configuration

***mac* trigger-swap**

mac
AP MAC address

trigger-swap
Trigger swap action

mac* move zone *name

mac
AP MAC address

move
Move AP

zone
Target AP zone

name
AP zone name

mac trigger-prefer-node

mac

AP MAC address

trigger-prefer-node

Trigger preferred node

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap mac
ruckus(config)# ap A1:87:45:34:56:FE
ruckus(config)# ap pre-prov <export <ftp-url>>
ruckus(config)# ap pre-prov import ftp://ruckus:ruckus1!@172.19.7.100/backup/AP_ad8745345

ruckus(config-ap-pre-prov)# ip6 Type: Privileged		Sets IPV6 network settings.
ruckus(config-ap-pre-prov)# ip6 address Type: Privileged	<i>ip</i> : IP address <i>gateway</i> : Gateway	Sets the IPV6 address and gateway.
ruckus(config-ap-pre-prov)# ip6 name-server Type: Privileged	<i>primary-dns</i> : Primary DNS. <i>secondary-dns</i> : Secondary DNS	Sets the primary or secondary DNS.

ap-auto-tagging

To setup critical access point auto tagging rules or to enable auto tagging critical access points, use the following command:

```
ruckus(config)# ap-auto-tagging enable
ruckus(config)# ap-auto-tagging rule daily-threshold threshold [ g | m ]
```

Syntax Description

This command uses the following syntax:

- enable**
Enable the auto tagging critical APs
- rule**
Select the auto tagging rule
- daily-threshold*
Daily traffic bytes that exceeds the threshold rule
- g**
Threshold value in gigabytes
- m**
Threshold value in megabytes

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-auto-tagging enable
ruckus(config)# ap-auto-tagging rule daily-threshold 90 g
```

ap-cert-check

To enable the access point certificate check, use the following command:

```
ruckus(config)# ap-cert-check
```

Syntax Description

This command has no arguments or keywords.

Default

This command has the default settings of enable.

Command Mode

Config

Example

```
ruckus(config)# ap-cert-check Successful operation
```

ap-certificate-reset

To reset the access point certificate request that failed to update the certificate, use the following command:

```
ruckus(config)# ap-certificate-reset
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-certificate-reset
```

ap-cert-expired-check

To enable checking of AP expired certificate use the following command:

Syntax

```
ruckus(config)# ap-cert-expired-check
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-cert-expired-check
```

Related Command

```
ruckus(config)#no ap-cert-expired-check
```

Disables the checking of AP expired certificates.

ap-control-mgmt-tos

To enable the access control and management traffic type of service and values, use the following command:

```
ruckus(config)# ap-control-mgmt-tos value
```

Syntax Description

This command uses the following syntax:

value

TOS value

Default

This command has no default settings

Command Mode

Config

Example

```
ruckus(config)# ap-control-mgmt-tos 10
```

ap-heartbeat

To setup the access point heartbeat, use the following command:

```
ruckus(config)# ap-heartbeat seconds
```

Syntax Description

This command uses the following syntax:

seconds

Interval in seconds, which the AP sends the heartbeat to the controller such as: 30, 60, 150 and 300

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-heartbeat 30
```

ap-internal-subnet

To set the tunnel internal subnet use the following command:

Syntax

```
ruckus(config)# ap-internal-subnet < ip >
```

Syntax Description

This command has the below arguments or keywords:

ip : IP address of the subnet in the format 10.X.0.0

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-internal-subnet 10.0.0.0
```

ap-zone-aggregate

To enable AP zone aggregation, use the following command:

```
ruckus(config)# ap-zone-aggregate enable
```

Syntax Description

This command uses the following syntax:

enable

Enables AP zone aggregation.

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# ap-zone-aggregate enable
```

auth-profile

To enter authentication service profile configuration, use the following command:

```
ruckus(config)# auth-profile name
```

Syntax Description

This command uses the following syntax:

name

Authentication service profile name

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# auth-profile aaa-auth
```

clock

To update the system clock or the timezone configuration, use the following command:

```
ruckus(config)# clock timezone timezone
```

Syntax Description

This command uses the following syntax:

timezone

Sets the system clock timezone

timezone

Timezone name of the domain

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# clock timezone Africa/Nairobi
```

cluster-ip-list

To update the node IP address mapping list of the cluster configuration, use the following command:

```
ruckus(config)# cluster-ip-list ip-mappings
```

Syntax Description

This command uses the following syntax:

ip-mappings

Node IP mapping list, which is space separated.

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# cluster-ip-list <old-ip>:<new-ip> <old-ip2>:<new-ip2>

dns-server-service

To create or update DNS server services, use the following command.

```
ruckus(config)# dns-server-service
```

Syntax Description

This command has the following keywords:

name

DNS server service name

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# dns-server-service xyz
```

Configuration Commands (a - d)
do

do

To setup the do command, use the following command.

```
ruckus(config)# do
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# do
```

domain

To create or update the domain configuration, use the following command:

```
ruckus(config)# domain name
```

Syntax Description

This command uses the following syntax:

name

Name of the domain

Default

This command has no default settings.

Command Mode

Config

Example

```
ruckus(config)# domain indusap1
```

ruckus(config-lwapp2scg)# pasv-port Type: Privileged	<i>min port max port</i> : Sets the minimum and maximum port.	Sets the minimum and maximum port for the dynamic data transmission port range. For PASV-mode FTP to work, the user has to set up a firewall that restricts the range of ports opened by the FTP server, thereby remaining secure, and enabling the download of AP firmware.
ruckus(config-lwapp2scg)# policy Type: Privileged	accept Accept by ACL AP list accept-all Accept all deny Deny by ACL AP list deny-all Deny all	Sets the ACL policy. Use the accept option to upgrade individual APs as required by MAC address or serial number. Use the accept-all option to upgrade all APs together. Ensure that there is no existing ZD deployment around in the same sub-net and still in use. All the ZD APs will be affected and upgraded to SCG. Use the deny option to exclude specific APs from being upgraded to SCG by MAC address or serial number. Use the deny-all option to exclude all APs from being upgraded to SCG.

debug

To execute commands in debug mode, you need to change the mode to:

```
ruckus(debug)#
```

Example

```
ruckus# debug
```

ap-cli

To run AP CLI debug script management, use the following command:

```
ruckus(debug)# ap-cli
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # ap-cli

ap-routine-config-interval

To set the AP routine configuration interval, use the following command.

```
ruckus(debug)# ap-routine-config-interval seconds
```

Syntax Description

This command uses the following syntax:

seconds

Sets all APs to fetch configuration in the specified seconds

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # ap-routine-config-interval  
ruckus(debug) # ap-routine-config-interval 100
```

ap-routine-status-interval

To set the AP routine status interval, use the following command.

ruckus(debug)# ap-routine-status-interval *slowdownspeedup*

Syntax Description

This command uses the following syntax:

slowdown

Sets all the APs to report status in 900 seconds interval

speedup

Sets all the APs to report status in 180 seconds interval

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug)# ap-routine-status-interval  
ruckus(debug)# ap-routine-status-interval slowdown

show

To enable the screen pagination, use the following command:

```
ruckus(debug)# screen-pagination ap-subnet-discovery-status | diagnostic-script name | schedule | sslv3-state | strict-wfa-compliance-state
```

Syntax Description

This command uses the following syntax:

ap-subnet-discovery-status

Shows the AP subnet discovery service status

diagnostic-script *name*

Shows the diagnostic scripts

schedule

Show the scheduled scripts

sslv3-state

Shows the SSLv3 support state

strict-wfa-compliance-state

Shows the WFA compliance state

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # show ap-subnet-discovery-status  
enabled 1  
ruckus(debug) # show sslv3-state

show dp-customized-config

To display customized data plane configuration commands.

```
ruckus(debug)# show dp-customized-config
```

Syntax Description

This command has the following arguments or keywords:

all

All data planes

name

Data plane name

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug)# show dp-customized-config all

show es-cat-aliases

Shows Elastic Search (ES) concatenated (cat) aliases information about currently configured aliases to indices including filter and routing information.

ruckus(debug)# show es-cat-aliases

Syntax Description

This command has no arguments or keywords

Default

This command has no default settings.

Command Mode

Debug

Example

```

```

show es-cat-health

Shows Elastic Search (ES) concatenated (cat) lists a simple status on the health of the node.

ruckus(debug)# show es-cat-health

Syntax Description

This command has no arguments or keywords

Default

This command has no default settings.

Command Mode

Debug

Example

```
SZ100-Node1(debug)# show es-cat-health

```

show es-cat-indices

Shows Elastic Search (ES) concatenated (cat) provides a cross-section of each index. This information spans nodes with how many shards make up an index, the number of docs, deleted docs, primary store size, and total store size (all shards including replicas)

ruckus(debug)# show es-cat-indices

Syntax Description

This command has no arguments or keywords

Default

This command has no default settings.

Command Mode

Debug

Example

show es-cat-master

Shows Elastic Search (ES) concatenated (cat) master's node identify, bound IP address, and node name.

ruckus(debug)# show es-cat-master

Syntax Description

This command has no arguments or keywords

Default

This command has no default settings.

Command Mode

Debug

Example

```

show es-cat-shards

Shows Elastic Search (ES) concatenated (cat) shards information. The shards command is the detailed view of which node contains which shards. It lists the primary or replica node along with the number of docs, the bytes it takes on disk, and the node where it's located.

ruckus(debug)# show es-cat-shards

Syntax Description

This command has no arguments or keywords

Default

This command has no default settings.

Command Mode

Debug

Example

show sha1-state

To show the Secure Hash Algorithm 1 (SHA1) support state, use the following command.

```
ruckus(debug)# show sha1-state
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # show sha1-state
```

show strict-wfa-compliance-state

To view the WFA compliance state, use the following command.

ruckus(debug)# show strict-wfa-compliance-state

NOTE

It is highly recommended that the user contacts Ruckus customer support before enabling / disabling this CLI command.

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # show strict-wfa-compliance-state
```

show tlsv1-state

To view tlsv1 support state, use the following command.

```
ruckus(debug)# show tlsv1-state
```

Syntax Description

This command has no arguments or keywords.

Default

This command has no default settings.

Command Mode

Debug

Example

```
ruckus(debug) # show tlsv1-state
```

sslv3

- [setup..... 425](#)

rbd

To setup the board data of the controller, use the following command:

```
ruckus# rbd board model serial mac mac-count customer
```

Syntax Description

This command has the following syntax:

<i>board</i>	Board name
<i>model</i>	Model name
<i>serial</i>	Serial number
<i>mac</i>	MAC Address
<i>mac-count</i>	MAC Count
<i>customer</i>	Customer name

Default

This command has no default settings.

Command Mode

Privileged

Example

```
ruckus# rbd name
```

rbdump

To display the board data of the controller, use the following command:

```

To display details about a particular access point, use the following command:

```
ruckus# show ap mac mesh [ neighbors | topology ]
```

Syntax Description

This command uses the following syntax:

mac

Displays the specified MAC address

neighbors

Displays the AP mesh neighbors

topology

Displays the AP mesh topology

Default

This command has no default settings.

Command Mode

```

show ap-certificate-status

To show the status of AP certificates, use the following command:

```
ruckus# show ap-certificate-status [ request | update ]
```

Syntax Description

This command uses the following syntax:

request

Shows AP certificate request status

update
