No part of this content may be reproduced in any form or by any means or used to make any derivative work (such as translation, transformation, or adaptation) without written permission from ARRIS International plc and/or its affiliates ("ARRIS"). ARRIS reserves the right to revise or change this content from time to time without obligation on the part of ARRIS to provide notification of such revision or change.

### **Export Restrictions**

These products and associated technical data (in print or electronic form) may be subject to export control laws of the United States of America. It is your responsibility to determine the applicable regulations and to comply with them. The following notice is applicable for all products or technology subject to export control:

These items are controlled by the U.S. Government and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. government or as otherwise authorized by U.S. law and regulations.

### Disclaimer

THIS CONTENT AND ASSOCIATED PRODUCTS OR SERVICES ("MATERIALS"), ARE PROVIDED "AS IS" AND WITHOUT WARRANTIES OF ANY KIND, WHETHER EXPRESS OR IMPLIED. TO THE FULLEST EXTENT PERMISSIBLE PURSUANT TO APPLICABLE LAW, ARRIS DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, FREEDOM FROM COMPUTER VIRUS, AND WARRANTIES ARISING FROM COURSE OF DEALING OR COURSE OF PERFORMANCE. ARRIS does not represent or warrant that the functions described or contained in the Materials will be uninterrupted or error-free, that defects will be corrected, or are free of viruses or other harmful components. ARRIS does not make any warranties or representations regarding the use of the Materials in terms of their completeness, correctness, accuracy, adequacy, usefulness, timeliness, reliability or otherwise. As a condition of your use of the Materials, you warrant to ARRIS that you will not make use thereof for any purpose that is unlawful or prohibited by their associated terms of use.

### Limitation of Liability

IN NO EVENT SHALL ARRIS, ARRIS AFFILIATES, OR THEIR OFFICERS, DIRECTORS, EMPLOYEES, AGENTS, SUPPLIERS, LICENSORS AND THIRD PARTY PARTNERS, BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, EXEMPLARY OR CONSEQUENTIAL DAMAGES, OR ANY DAMAGES WHATSOEVER, EVEN IF ARRIS HAS BEEN PREVIOUSLY ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN AN ACTION UNDER CONTRACT, TORT, OR ANY OTHER THEORY ARISING FROM YOUR ACCESS TO, OR USE OF, THE MATERIALS. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, some of the above limitations may not apply to you.

### Trademarks

ARRIS, the ARRIS logo, Ruckus, Ruckus Wireless, Ruckus Networks, Ruckus logo, the Big Dog design, BeamFlex, ChannelFly, EdgeIron, FastIron, HyperEdge, ICX, IronPoint, OPENG, SmartCell, Unleashed, Xclaim, ZoneFlex are trademarks of ARRIS International plc and/or its affiliates. # **About This Guide**

This guide is written for service operators and system administrators who are responsible for managing, configuring, and troubleshooting Wi-Fi networks. It assumes basic working knowledge of local area networks, wireless networking, and wireless devices.

#### NOTE

Refer to the release notes shipped with your product to be aware of certain challenges when upgrading to this release.

Most user guides and release notes are available in Adobe Acrobat Reader Portable Document Format (PDF) or HTML on the Ruckus Wireless Support Web site at https://support.ruckuswireless.com/contact-us.

### **Document Conventions**

Document Conventions and Document Conventions list the text and notice conventions that are used throughout this guide.

#### **TABLE 1** Text conventions

Convention	Description	Example
message phrase	Represents messages displayed in response to a command or a status	[Device Name] >
user input	Represents information that you enter	[Device Name] > set ipaddr 10.0.0.12
user interface controls	Keyboard keys, software buttons, and field names	Click <b>Create New</b>
Start > All Programs	Represents a series of commands, or menus and submenus	Select Start > All Programs
ctrl+V	Represents keyboard keys pressed in combination	Press <b>ctrl+V</b> to paste the text from the clipboard.
screen or page names		Click Advanced Settings. The Advanced Settings page appears.
command name	Represents CLI commands	
parameter name	Represents a parameter in a CLI command or UI feature	
variable name	Represents variable data	{ZoneDirectorID}
filepath	Represents file names or URI strings	http://ruckuswireless.com

#### **TABLE 2** Notice conventions

Notice type	Description	
NOTE	Information that describes important features or instructions	
	Information that alerts you to potential loss of data or potential damage to an application, system, or device	
WARNING	Information that alerts you to potential personal injury	

# **Related Documentation**

For a complete list of documents that accompany this release, refer to the Release Notes.

# **Documentation Feedback**

Ruckus Wireless is interested in improving its documentation and welcomes your comments and suggestions.

You can email your comments to Ruckus Wireless at: docs@ruckuswireless.com

When contacting us, please include the following information:

- Document title
- Document part number (on the cover page)
- Page number (if appropriate)

# **Overview**

SmartCell Insight (SCI) is designed to collect data from Ruckus network equipment, analyze that data, and then present it using a wide variety of standard and custom reports. SCI provides visibility, analytics and reports about network transmission statistics, equipment status and user traffic. It also provides details about the devices and applications that are used on the network, so that decision-makers can make better informed decisions about what types of devices and content their customers are using and will be using more of in the future.

SCI provides a rich set of APIs to access the various functionality provided by the core SCI engine.

Ths manual includes the following information:

- Report Types on page 5
- Common Tasks on page 6
- Using the API Dialog Box on page 7
- Using SCI API Explorer on page 8:
  - Generating the Access Token on page 10
  - Querying to Obtain Report IDs on page 12
  - Querying to Obtain Section IDs of a Specific Report on page 15
  - Querying the Data Endpoint on page 17
  - Logging in to API Explorer Programmatically on page 20

#### NOTE

Refer to the "Ruckus Smart Analytics" section of this manual for information about how to use each of the APIs.

### **Report Types**

This section lists and describes the report types available in SCI.

When you first enter the SCI API Explorer by entering https://<your SCI IP address>/explorer in your web browser. the following screen is displayed:

#### FIGURE 1 Ruckus Smart Analytics Screen when Entering API Explorer

RUCKUS <sup>™</sup> API Explorer	Token Set. accessToken	6	et Access Token
Ruckus Smart Analytics			
Retrieve data for a particular section with the followin	g steps:		
<ol> <li>Find the ID of the report you are interested in.</li> <li>Using the report ID, find the ID of the section you are interested in. Take parameters for the section.</li> <li>Query the data endpoint with the report and section IDs and other require For each of the steps, click Try it out! to query the API server.</li> </ol>		tribute, it specifie:	s the required
report	Show/Hide	List Operations	Expand Operations
schedule	Show/Hide	List Operations	Expand Operations
setting	Show/Hide	List Operations	Expand Operations
system	Show/Hide	List Operations	Expand Operations
user	Show/Hide	List Operations	Expand Operations
[BASE URL: /api , API VERSION: 1.0.0 ]			

Report types available in SCI are described in the following table:

Report Type	Description
Report	Report type is for various reports available in the application such as Network, WLAN, and Clients.
Schedule	This is to schedule automatic report generation and delivery. You can also specify occurrences for a particular schedule. (Refer to the SCI user guide for details).
Setting	This report type is for system level settings including SMTP settings.
System	This report type is based on all the controllers that report to the SCI as data sources.
User	The user usage report returns activities pertaining to SCI across the user's accounts.

### **Common Tasks**

SCI's API allows you to build your custom specified reports, based on the available parameters. Each of these parameters has the following common tasks.

• Show / Hide: This toggle command shows or hides the rows dynamically in a table.

- List Operations: This command displays the list of HTTP verbs such as GET, PUT, POST, HEAD or DELETE row dynamically in a table.
- Expand Operations: This command expands the API dialog box for each listed operation. Use List Operations to contract the view.

#### FIGURE 2 Common tasks

report	Show/Hide List Operations Expand Operations
schedule	Show/Hide List Operations Expand Operations
setting	Show/Hide List Operations Expand Operations
system	Show/Hide List Operations Expand Operations
user	Show/Hide List Operations Expand Operations

## **Using the API Dialog Box**

Use the API dialog box to view and modify the messages to generate your API reports.

On clicking each of the parameters and the resource URL the API dialog box is displayed.

#### FIGURE 3 API Dialog Box

occurrence		Show/Hide	List Operations   Expand Operations
GET /occurrences	Find all insta	nces of the model r	matched by filter from the data source.
Response Class (Status 200) Model Model Schema			
<pre>[ {     "timestamp": "2016-07-26",     "status": 0,     "id": 0,     "scheduleId": 0 } ]</pre>			
Response Content Type application/json			
Parameters			
Parameter Value	Description	Parameter Type	Data Type
filter	Filter defining fields, where, include, order, offset, and limit	query	string
Try it out!			

#### TABLE 3 API Dialog Box

Name	Description
Response Class	The Response interface of the API represents the response to a request.
Response Content Type	Content-type: application/json; designates the content to be in JSON format. This is the default type.
Parameters	
Parameter	Use the filter parameter to supply a dimension you want to filter on, followed by the filter expression.
Value	The Parameter Value contains the value to be included in the request.
Description	Auto displays the parameter description
Parameter Type	Lists the API parameter types that you can use in the path or query parameters for your backend API methods, and the types you can use as method return types or request body types.
Data Type	Lists the data types used in API parameters and notification message fields.
Try it out	Click on this icon to view the response body based on the parameters set.
Curl	Curl is a command line tool and library for transferring data with URL syntax. Use the curl command to simulate HTTP verbs such as HEAD, GET, POST, PUT and DELETE request calls to the API.
Request URL	Contains the URL of the response.
Response Body	The response interface represents the response to a request.
Response Code	Contains the status code of the response. For example, 200 for a success.
Response Header	Contains the headers object associated with the response.

# **Using SCI API Explorer**

This section provides steps on how to enter the SCI API Explorer to log in, after which the following tasks are shown:

- Generating the Access Token on page 10
- Querying to Obtain Report IDs on page 12
- Querying to Obtain Section IDs of a Specific Report on page 15
- Querying the Data Endpoint on page 17
- Logging in to API Explorer Programmatically on page 20
- 1. Enter https://<your SCI IP address>/explorer in your web browser.

2. Log in using the following default credentials:

#### Username: admin

#### Password: password

#### NOTE

If you have changed the default password, please use the new password accordingly.

The following screen appears:

FIGURE 4 Ruckus Smart Analytics Screen when Entering API Explorer

RUCKUS <sup>™</sup> API Explorer ™	oken Set. accessToken		Set Access Token
Ruckus Smart Analytics			
Retrieve data for a particular section with the following step	s:		
<ol> <li>Find the ID of the report you are interested in.</li> <li>Using the report ID, <u>find the ID of the section</u> you are interested in. Take note of the parameters for the section.</li> </ol>	ne defaultParameters a	ttribute, it specifie	s the required
<ol><li><u>Query the data endpoint</u> with the report and section IDs and other required parar</li></ol>	neters.		
For each of the steps, click Try it out! to query the API server.			
For each of the steps, click <b>Try it out!</b> to query the API server.	Show/Hide	List Operations	Expand Operations
			Expand Operations
report	Show/Hide	List Operations	
report schedule	Show/Hide Show/Hide	List Operations	Expand Operations

This screen exposes all the APIs from the SCI core engine.

# **Generating the Access Token**

Before you can access all the APIs, you need to generate an access token.

Follow the steps below to generate the API access token:

1. Click **User** on the screen shown above.

The screen expands as follows:

#### FIGURE 5 Clicking User

user		Show/Hide List Operations Expand Operations
GET	/users	Find all instances of the model matched by filter from the data source.
PUT	/users	Update an existing model instance or insert a new one into the data source.
POST	/users	Create a new instance of the model and persist it into the data source.
GET	/users/{id}	Find a model instance by id from the data source.
HEAD	/users/{id}	Check whether a model instance exists in the data source.
PUT	/users/{id}	Update attributes for a model instance and persist it into the data source.
DELETE	/users/{id}	Delete a model instance by id from the data source.
GET	/users/{id}/accessTokens	Queries accessTokens of user.
POST	/users/{id}/accessTokens	Creates a new instance in accessTokens of this model.
DELETE	/users/{id}/accessTokens	Deletes all accessTokens of this model.
GET	/users/{id}/accessTokens/{fk}	Find a related item by id for accessTokens.
PUT	/users/{id}/accessTokens/{fk}	Update a related item by id for accessTokens.
DELETE	/users/{id}/accessTokens/{fk}	Delete a related item by id for accessTokens.
GET	/users/{id}/accessTokens/count	Counts accessTokens of user.
GET	/users/{id}/exists	Check whether a model instance exists in the data source.
GET	/users/change-stream	Create a change stream.
POST	/users/change-stream	Create a change stream.
GET	/users/confirm	Confirm a user registration with email verification token
GET	/users/count	Count instances of the model matched by where from the data source.
GET	/users/findOne	Find first instance of the model matched by filter from the data source.
POST	/users/login	Login a user with username/email and password.

2. Click on POST /users/login on the screen shown above.

3. In the **credentials** section, enter the user credentials you used to log into the user interface, which, by default, are: Username: admin

Password: password

Input the string in the format **{"username":"admin", "password":"password"}** as shown below:

#### FIGURE 6 Credentials

FIGURE 7 Access Token

Response Conte	nt Type application/json			
Parameters				
Parameter	Value	Description	Parameter Type	Data Type
credentials	{"username":"admin", "password":"admin"}		body	Model Model Schema
				0
				Click to set as parameter value
	Parameter content type:			
	application/json			
include		Related objects to include in the response. See the description of return value for more details.	query	string
Try it out! Hide F	lesponse			

4. Click the **Try it out!** tab in the Credentials section.

The access code you need is generated in the Response body of the curl script, as displayed below:

Curl
curl -X POSTheader "Content-Type: application/json"header "Accept: application/json" -d "{\"username\":\"rsa\",
Request URL
https://rsa-staging.ruckuslbs.com/api/users/login?access_token=Jn4mgkNl8dIEFAAR4nvtwGFJ6KuCedGTxZ5uZFnSS0ZdLFJ3gApGbWg
Response Body
<pre>{     "id": "tn33XDf40CsAiWmPOhXUu3I1KNUTWtUVlf8MJ9aUwmqoIZTzimahD9GNvLDORbTb"     "ttl": 1209600,     "created": "2016-07-21T02:39:03.265Z",     "userId": 1 }</pre>

5. Copy this access token *(without the quotation marks)* and paste it in the **Set Access Token** field displayed at the top of the SCI user interface.

#### 6. Click Set Access Token.

If successful, the "Token Set" string displays to the left of the space where you pasted in the token:

#### FIGURE 8 Token Set

🐲 StrongLoop API Explorer	Token Set.	tn33XDf40CsAiWmPOhXI	Set Access Token

#### NOTE

Now you can access all the API reports in the system. You might not get the whole report in the Response Body if it is a large amount of data. You can access the reports by using:

- A Request URL. Paste this URL in a web browser to access the reports.
- A curl script to SSH on to your machine and direct those reports to a desired location.

## **Querying to Obtain Report IDs**

Each report in the SCI user interface is associated with a unique Report ID in the API. Each report consequently contains unique section IDs for each section within a report. This will also be shown in the following examples.

Follow the steps below to determine the list of IDs for each report.

1. Click **Report** on the Ruckus Smart Analytics screen.

You should then get a display that includes the following:

#### FIGURE 9 Display after clicking on Report

report		Show/Hide List Operations Expand Operations				
GET	/reports	Find all instances of the model matched by filter from the data source				
PUT	/reports	Update an existing model instance or insert a new one into the data source				
POST	/reports	Create a new instance of the model and persist it into the data source.				
GET	/reports/{id}	Find a model instance by id from the data source				
HEAD	/reports/{id}	Check whether a model instance exists in the data source				
PUT	/reports/{id}	Update attributes for a model instance and persist it into the data source				
DELETE	/reports/{id}	Delete a model instance by id from the data source				
POST	/reports/{id}/download/{format}					
GET	/reports/{id}/exists	Check whether a model instance exists in the data source				
GET	/reports/{id}/facet	Fetches belongsTo relation facet				
GET	/reports/{id}/facet/data					
POST	/reports/{id}/facets/apmac					

#### 2. Click **GET/reports**.

You should then get a display such as the following:

#### FIGURE 10 GET/reports Response

GET	/reports			Find all instances of the model n	natched by filter fro
	nse Class Model Sc	s (Status 200) <u>hema</u>			
  ]	filterData excludedFi {}	Name": "string", Source": "string", llters": [			
Respor Param	eters	nt Type application/json •	Description	Parameter Type	Data Type
filter	•		Filter defining fil include, order, c	elds, where, query	string

#### 3. Click Try it out!

[

Check the output in the Response Body. The following is a portion of that output:

```
{
 "title": "Clients Report",
 "urlSegmentName": "clients",
  "filterDataSource": "binnedSessions",
  "excludedFilters": null,
  "layout": [
    {
      "desiredWidth": "full",
      "layout": [
        {
          "section": 12,
          "desiredWidth": "half"
        },
        {
          "section": 13,
          "desiredWidth": "half"
        1
      ]
    },
    {
      "desiredWidth": "full",
      "section": 14
    },
    {
      "desiredWidth": "full",
      "section": 15
    },
    {
      "desiredWidth": "full",
      "section": 16
   }
  ],
  "headers": [
    "reportFilter",
    "periodButton",
    "savedFilters",
    "downloadButton"
 ],
  "routeParameters": null,
  "id": 1,
  "facetId": null
},
```

The code block shown above is for the "Clients Report," as you can see by the title in the first line of the code block. The Report ID is 1, which you can see near the end of the code block. The ID is always shown at the *end* of the corresponding report. Similarly, you can scroll through the output in the Response Body to obtain all the report IDs. For example, you will find that "Network Report" is ID 2.

# **Querying to Obtain Section IDs of a Specific Report**

Each report in SCI contains multiple sections. Once you know the report IDs, you can obtain the names of each section within a report and their corresponding, unique section IDs.

Follow these steps to obtain the section titles and corresponding section IDs for all sections in a given report.

- 1. Once you know the ID of the report you want, click GET/reports/{id}/sections.
  - The following is displayed.

#### FIGURE 11 Display from clicking GET/reports/{id}/sections

вет /герог	ts/{Id}/sections			Queries sections of report.
Response Cla Model Model	ass (Status 200) Schema			
"queryNam "componer				•
Response Con Parameters Parameter	tent Type application/json	▼ Description	Parameter Type	Data Type
filter			query	string
id Try it out!	(required)	PersistedModel id	path	string

2. Enter the Report ID in the "id" field. For example, for the Clients Report, enter an ID of 1.

Querying to Obtain Section IDs of a Specific Report

#### 3. Click Try it out!

A portion of the Response Body output is shown below:

```
[
  {
    "title": "Overview",
    "queryName": "overview",
"component": "ReportOverview",
     "defaultParameters": {
       "granularity": "all"
    "width": "half",
       "widgetTheme": "blue"
    "url": null,
    "id": 12
  },
  {
    "title": "Top 10 Unique Clients by Traffic",
"queryName": "topChart",
"component": "BarChart",
    "defaultParameters": {
       "granularity": "all",
       "metric": "traffic"
    },
"layout": {
    "...".
       "width": "half",
       "headers": [
          {
            "component": "SelectFilter",
            "name": "metric",
            "options": {
              "traffic": "User Traffic",
"rxBytes": "Rx User",
"txBytes": "Tx User"
           }
         }
       ],
"format": "bytesFormat",
       "colors": [
          "#5BA1E0",
         "#5BA1E0",
         "#5BA1E0",
         "#76CEF5",
         "#76CEF5",
         "#76CEF5",
         "#D9E6F5",
         "#D9E6F5",
         "#D9E6F5"
         "#D9E6F5"
       ],
       "drillDownRoute": "/report/client/${x}"
    },
    "url": null,
    "id": 13
  },
```

The code block shown above is for the sections of the "Clients Report." The first segment of the Response Body above shows the title of "Overview." If you scroll down to the end of that segment, you see that the ID for that section is 12. The ID of a section is always shown at the *end* of the corresponding segment for the section. The ID for the next section shown above, "Top 10 Unique Clients by Traffic", is 13. You can scroll through the output in the Response Body to obtain all the section IDs for the report you have identified.

# **Querying the Data Endpoint**

Once you know the Report ID and the Section ID you are interested in, you can query for specific data.

Follow these steps to query for specific data based on the Report ID and Section IDs.

#### 1. Click POST/reports/{id}/sections/{sectionId}/data.

The following parameters are displayed.

#### FIGURE 12 Display from clicking POST/reports/{id}/sections/{sectionId}/data

Response Content Ty	/pe application/json ▼			
Parameters				
Parameter	Value	Description	Parameter Type	Data Type
id	(required)	Report Id	path	string
sectionId	(required)	Section Id	path	string
start	(required)	2016-04-06T16:04:46+00:00	formData	string
end	(required)	2016-04-07T16:04:46+00:00	formData	string
granularity		fifteen_minute, thirty_minute, hour, day	formData	string
metric		Specifying the metric to sort	formData	string
filter		Body object for aggregation, see implementation notes for an example	formData	string
limit		limit number of records, etc, 10	formData	double
pagingIdentifiers		Query results will return a pagingIdentifiers JSON object that can be reused in the next query for pagination.	formData	string
Try it out!				

2. Fill out the required fields, using the Report ID and Section ID that you have already determined from the previous queries described above.

To determine if the metric parameter is required, look at the Response Body from for the section you are interested in, and check if "metric" is found under "defaultParameters". If it is, enter one of the values listed under "options." The figure below illustrates this scenario.

FIGURE 13 Response Body that indicates a Metric is required

Resp	ponse Body
	"title": "Top 10 Unique Clients by Traffic", "queryName": "clients/topChart", "component": "BarChart",
	"defaultParameters": { "granularity": "all", "metric": "traffic"
	<pre>}, "layout": {     "width": "half",     "headers": [     {     </pre>
	<pre>"component": "SelectFilter", "name": "metric". "options": {</pre>
	"traffic": "Rx + Tx", "rxBytes": "Rx", "txBytes": "Tx" }
	], "formatMetadata": {

 You can also use the optional parameters. An example would be filtering on an AP MAC address of: 00:AA:BB:CC:44:D0. To do this, you would enter this exact string shown below into the filter field in the screen above: {"type":"or", "fields": [{"type":"selector", "dimension":"apMac", "value":"00:AA:BB:CC:44:D0"}]

If you want to generate a report using this filter, the Report ID of 1 (Clients Report), Section ID 12 (Overview section of Clients Report), and a time interval of your choice, the parameters once you have entered the information would appear as follows:

#### FIGURE 14 Parameter Example for Querying Data on a Specific Section ID

Parameters					
Parameter	Value	Description	Parameter Type	Data Type	
id	1	Report Id	path	string	
sectionId	12	Section Id	path	string	
start	2017-09-18T16:04:46+00:00	2016-04-06T16:04:46+00:00	formData	string	
end	2017-09-19T16:04:46+00:00	2016-04-07T16:04:46+00:00	formData	string

Other values you can use for dimensions in the "filter" string are shown below:

TABLE 4 Dimensions to use in filter string parameter

Dimension portion of filter string	Value to use for Dimension
System Name	"system"
Controller MAC	"ctrlMac"
Controller Name	"ctrlName"
Controller Serial	"ctrlSerial"
Zone	"zoneName"
AP Group	"apGroup"
AP MAC	"арМАС"
AP Name	"apName"
AP Serial	"apSerial"
SSID	"ssid"
Radio	"radio"

#### TABLE 4 Dimensions to use in filter string parameter (continued)

Dimension portion of filter string	Value to use for Dimension	
Session Type	"sessionType"	

#### 4. Click Try it out!.

The data output is displayed in the Response Body.

## Logging in to API Explorer Programmatically

You can log in using the curl command for POST /users/login. Ensure you use the -k option in the curl command.

The response to the call will contain a token that you can use in subsequent calls.

In subsequent calls, you can pass this token as a header "Authorization:<token>".

The following example shows how to query section 28 for report ID 7 programmatically using the curl command.

```
curl -k -X POST --header "Content-Type: application/x-www-form-urlencoded" --header "Authorization: <your-
auth-token>" --header "Accept:
application/json" -d "start=2016-12-13T20%3A30%3A46%2B00%3A00&end=2016-12-13T20%3A45%3A46%2B00%3A00"
"https://<your-SCI-I
P>/api/reports/7/sections/28/data"
```

# **Ruckus Smart Analytics**

### Retrieve data for a particular section with the following steps:

- 1. Find the ID of the report you are interested in.
- 2. Using the report ID, <u>find the ID of the section</u> you are interested in. Take note of the defaultParameters attribute, it specifies the required parameters for the section.
- 3. <u>Query the data endpoint</u> with the report and section IDs and other required parameters.

For each of the steps, click Try it out! to query the API server.

### report

```
