CommScope reserves the right to revise or change this content from time to time without obligation on the part of CommScope to provide notification of such revision or change.

Export Restrictions

These products and associated technical data (in print or electronic form) may be subject to export control laws of the United States of America. It is your responsibility to determine the applicable regulations and to comply with them. The following notice is applicable for all products or technology subject to export control:

These items are controlled by the U.S. Government and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. government or as otherwise authorized by U.S. law and regulations.

Disclaimer

THIS CONTENT AND ASSOCIATED PRODUCTS OR SERVICES ("MATERIALS"), ARE PROVIDED "AS IS" AND WITHOUT WARRANTIES OF ANY KIND, WHETHER EXPRESS OR IMPLIED. TO THE FULLEST EXTENT PERMISSIBLE PURSUANT TO APPLICABLE LAW, COMMSCOPE DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, FREEDOM FROM COMPUTER VIRUS, AND WARRANTIES ARISING FROM COURSE OF DEALING OR COURSE OF PERFORMANCE. CommScope does not represent or warrant that the functions described or contained in the Materials will be uninterrupted or error-free, that defects will be corrected, or are free of viruses or other harmful components. CommScope does not make any warranties or representations regarding the use of the Materials in terms of their completeness, correctness, accuracy, adequacy, usefulness, timeliness, reliability or otherwise. As a condition of your use of the Materials, you warrant to CommScope that you will not make use thereof for any purpose that is unlawful or prohibited by their associated terms of use.

Limitation of Liability

IN NO EVENT SHALL COMMSCOPE, COMMSCOPE AFFILIATES, OR THEIR OFFICERS, DIRECTORS, EMPLOYEES, AGENTS, SUPPLIERS, LICENSORS AND THIRD PARTY PARTNERS, BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, EXEMPLARY OR CONSEQUENTIAL DAMAGES, OR ANY DAMAGES WHATSOEVER, EVEN IF COMMSCOPE HAS BEEN PREVIOUSLY ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN AN ACTION UNDER CONTRACT, TORT, OR ANY OTHER THEORY ARISING FROM YOUR ACCESS TO, OR USE OF, THE MATERIALS. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, some of the above limitations may not apply to you.

Document Conventions

The following table lists the text conventions that are used throughout this guide.

TABLE 1 Text Conventions

Convention	Description	Example
monospace	Identifies command syntax examples	<code>device(config)# interface ethernet 1/1/6</code>
bold	User interface (UI) components such as screen or page names, keyboard keys, software buttons, and field names	On the Start menu, click All Programs .
<i>italics</i>	Publication titles	Refer to the <i>Ruckus Small Cell Release Notes</i> for more information.

Notes, Cautions, and Warnings

Notes, cautions, and warning statements may be used in this document. They are listed in the order of increasing severity of potential hazards.

NOTE

A NOTE provides a tip, guidance, or advice, emphasizes important information, or provides a reference to related information.

ATTENTION

An ATTENTION statement indicates some information that you must read before continuing with the current action or task.

CAUTION

A CAUTION statement alerts you to situations that can be potentially hazardous to you or cause damage to hardware, firmware, software, or data.

DANGER

A DANGER statement indicates conditions or situations that can be potentially lethal or extremely hazardous to you. Safety labels are also attached directly to products to warn of these conditions or situations.

Command Syntax Conventions

Bold and italic text identify command syntax components. Delimiters and operators define groupings of parameters and their logical relationships.

Convention	Description
bold text	Identifies command names, keywords, and command options.
<i>italic text</i>	Identifies a variable.
[]	Syntax components displayed within square brackets are optional. Default responses to system prompts are enclosed in square brackets.
{ x y z }	A choice of required parameters is enclosed in curly brackets separated by vertical bars. You must select one of the options.
x y	A vertical bar separates mutually exclusive elements.
< >	Nonprinting characters, for example, passwords, are enclosed in angle brackets.
...	Repeat the previous element, for example, <i>member[member...]</i> .
\	Indicates a “soft” line break in command examples. If a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.

Document Feedback

Ruckus is interested in improving its documentation and welcomes your comments and suggestions.

You can email your comments to Ruckus at: docs@ruckuswireless.com

When contacting us, please include the following information:

- Document title and release number
- Document part number (on the cover page)
- Page number (if appropriate)
- For example:
 - Ruckus Small Cell Alarms Guide SC Release 1.3
 - Part number: 800-71306-001
 - Page 88

Ruckus Product Documentation Resources

Visit the Ruckus website to locate related documentation for your product and additional Ruckus resources.

Release Notes and other user documentation are available at <https://support.ruckuswireless.com/documents>. You can locate documentation by product or perform a text search. Access to Release Notes requires an active support contract and Ruckus Support Portal user account. Other technical documentation content is available without logging into the Ruckus Support Portal.

White papers, data sheets, and other product documentation are available at <https://www.ruckuswireless.com>.

Online Training Resources

To access a variety of online Ruckus training modules, including free introductory courses to wireless networking essentials, site surveys, and Ruckus products, visit the Ruckus Training Portal at <https://training.ruckuswireless.com>.

Contacting Ruckus Customer Services and Support

The Customer Services and Support (CSS) organization is available to provide assistance to customers with active warranties on their Ruckus Networks products, and customers and partners with active support contracts.

For product support information and details on contacting the Support Team, go directly to the Support Portal using <https://support.ruckuswireless.com>, or go to <https://www.ruckuswireless.com> and select **Support**.

What Support Do I Need?

Technical issues are usually described in terms of priority (or severity). To determine if you need to call and open a case or access the self-service resources use the following criteria:

- Priority 1 (P1)—Critical. Network or service is down and business is impacted. No known workaround. Go to the **Open a Case** section.
- Priority 2 (P2)—High. Network or service is impacted, but not down. Business impact may be high. Workaround may be available. Go to the **Open a Case** section.
- Priority 3 (P3)—Medium. Network or service is moderately impacted, but most business remains functional. Go to the **Self-Service Resources** section.
- Priority 4 (P4)—Low. Request for information, product documentation, or product enhancements. Go to the **Self-Service Resources** section.

Open a Case

When your entire network is down (P1), or severely impacted (P2), call the appropriate telephone number listed below to get help:

- Continental United States: 1-855-782-5871
- Canada: 1-855-782-5871
- Europe, Middle East, Africa, and Asia Pacific, toll-free numbers are available at <https://support.ruckuswireless.com/contact-us> and Live Chat is also available.

Self-Service Resources

The Support Portal at <https://support.ruckuswireless.com/contact-us> offers a number of tools to help you to research and resolve problems with your Ruckus products, including:

- **Technical Documentation**—<https://support.ruckuswireless.com/documents>
- **Community Forums**—<https://forums.ruckuswireless.com/ruckuswireless/categories>
- **Knowledge Base Articles**—<https://support.ruckuswireless.com/answers>

Preface

Contacting Ruckus Customer Services and Support

- [Software Downloads and Release Notes](https://support.ruckuswireless.com/software)—<https://support.ruckuswireless.com/software>
- [Security Bulletins](https://support.ruckuswireless.com/security)—<https://support.ruckuswireless.com/security>

Using these resources will help you to resolve some issues, and will provide TAC with additional data from your troubleshooting analysis if you still require assistance through a support case or RMA. If you still require help, open and manage your case at https://support.ruckuswireless.com/case_management

About This Guide

- [Introduction to Unleashed Multi-Site Manager](#)..... 11
- [Related Documentation](#).....11

Introduction to Unleashed Multi-Site Manager

This *Unleashed Multi-Site Manager User Guide* describes how to install, configure, and manage the Unleashed Multi-Site Manager application or software.

This guide is written for those responsible for installing and managing network equipment. Consequently, it assumes that the reader has a basic working knowledge of local area networking, wireless networking, and wireless devices.

NOTE

If release notes are shipped with your product and the information there differs from the information in this guide, follow the instructions in the release notes.

Most user guides and release notes are available in Adobe Acrobat Reader Portable Document Format (PDF) or HTML on the Ruckus Support website at <https://support.ruckuswireless.com/documents> .

Related Documentation

In addition to this User Guide, each Unleashed Multi-Site Manager documentation set includes the following:

- **Online Help:** Provides instructions for performing tasks using the Unleashed Multi-Site Manager interface. The online help is accessible from the interface and is searchable.
- **Release Notes:** Provides information about the current software release, including new features, enhancements, and known issues.

Introducing Ruckus Unleashed Multi-Site Manager

- [Unleashed Multi-Site Manager Overview](#)..... 13
- [Management Software and Server](#)..... 13
- [Where Should You Place Unleashed Multi-Site Manager?](#)..... 14
- [Key Terms](#)..... 14

Unleashed Multi-Site Manager Overview

Ruckus Unleashed Multi-Site Manager software is an intelligent, scalable network management system designed to facilitate administration of your dispersed ZoneDirector devices, Unleashed networks and ICX switches.

The software offers a dashboard displaying device views, alarms and events: Processes notifications received from managed Ruckus devices and displays them in an easy-to-understand and easy-to-use graphical user interface accessible via a Web browser.

NOTE

Unleashed Multi-Site Manager 2.3 does not support solo APs, except for Ruckus P300.

ATTENTION

By downloading Unleashed Multi-Site Manager and subsequently upgrading ZoneDirector, be advised that:

- The ZoneDirector periodically connects to Ruckus, and Ruckus collects the ZoneDirector serial number, software version, and build number. Ruckus transmits a file back to ZoneDirector and this is used to display the current status of the ZoneDirector Support Contract.
- This information may be transferred and stored outside of your country of residence where data protection standards may be different.

Management Software and Server

The software is installed on a Linux-based server. The installation includes Web server, MariaDB, and Elasticsearch database components for communicating with and tracking your dispersed Ruckus devices.

For the specific installation steps, refer to [Installing the Software](#) on page 19.

Event Times

Unleashed Multi-Site Manager stores all event times in Coordinated Universal Time (UTC) (and appropriate offsets). Event times that appear on the Web interface are automatically adjusted to the client's local time settings.

NOTE

If the server time is changed (for example, when corrected from a wrong time zone), then Unleashed Multi-Site Manager must be restarted to apply this change.

NOTE

When the server time is not synchronized with the local time, scheduled tasks may not run when expected, and reports may contain incorrect results. To ensure that scheduled tasks run when scheduled, synchronize the time on the server with the local time. You can do this by installing an NTP client on the server.

Management Protocol

Unleashed Multi-Site Manager supports the Technical Report 069 (TR-069) CPE WAN Management Protocol (CWMP) as defined by the DSL Forum (<http://www.dslforum.org>).

Internet Accessibility

Unleashed Multi-Site Manager requires an Internet-accessible interface to enable:

- Enable Remote management: If the computer that you are using to access the web interface is not on the same local network as Unleashed Multi-Site Manager, then logging in to the web interface remotely requires the host Linux server to be remotely accessible via HTTPS.
- The Map View feature: Map View data is provided by Google Maps or Bing Maps, and therefore Unleashed Multi-Site Manager must be able to connect to Google Maps or Bing Maps via the Internet to display the maps. When the software is unable to access Google Maps or Bing Maps, gray boxes appear on the web interface, instead of the map that Google Maps or Bing Maps provides.

Where Should You Place Unleashed Multi-Site Manager?

Because you want Unleashed Multi-Site Manager to be as available as possible to the remote devices being managed, you should place it in your network accordingly.

NOTE

Make sure that the IP address of the Unleashed Multi-Site Manager is reachable via HTTPS from outside of your internal network.

Key Terms

Before using the Unleashed Multi-Site Manager, Ruckus recommends that you become familiar with the key terms that are used in this Guide and on the web interface. The following table lists terms that are key to full understanding and proper use of Unleashed Multi-Site Manager.

TABLE 2 Key Terms

Term	Description
Device Registration	Enable software management on the Unleashed and ZoneDirector devices and then they will register to Unleashed Multi-Site Manager automatically.
Periodic Inform Interval	The frequency at which managed Ruckus devices must synchronize with the application. When Ruckus devices call home periodically, the software can verify proper operation of managed devices.
Group	Grouping devices physically and assigning them various permissions, controls, and reporting.

TABLE 2 Key Terms (continued)

Term	Description
Default Mail to	Refers to the email address to which messages are sent from the system based on various events. You enter this email address either during the installation procedure or in the To field on the Administer > System Settings > SMTP Settings page. You must specify an SMTP server to send email notifications to this email address. Refer to SMTP Settings on page 102.

Installing and Upgrading Unleashed Multi-Site Manager

- Firewall Ports that Must Be Open for Communications..... 17
- Administering a Linux Server..... 18
- After Installation..... 25

Firewall Ports that Must Be Open for Communications

CAUTION

The tasks described in this chapter should be undertaken only by an experienced network administrator or under the guidance of your service provider or technical support professional.

Depending on how your network is designed, you may need to edit the iptables file and open communication ports on any firewalls located between Unleashed Multi-Site Manager and Ruckus devices. Refer to the following URLs which include information about how to edit the iptables file:

- <http://en.wikipedia.org/wiki/Iptables>
- <http://www.thegeekstuff.com/2010/07/list-and-flush-iptables-rules>
- https://access.redhat.com/documentation/en-US/Red_Hat_Enterprise_Linux/6/html/Security_Guide/index.html (and read all the IPTables information under the "Firewalls" section).

The following table lists the ports that need to be open for different types of communications.

TABLE 3 Firewall Ports That Must Be Open for Unleashed Multi-Site Manager Communications

Communication	Ports
ZoneDirector and Unleashed (Device)	
HTTPS	TCP destination port 443
HTTP	TCP destination port 80
SSH	TCP destination port 22
SSH Tunnel (nginx)	TCP destination port 9443

NOTE

If Unleashed Multi-Site Manager is behind the NAT server, you must map the TCP 22, 80, 443, and 9443 ports to the Unleashed Multi-Site Manager server

NOTE

For ZoneDirector and Unleashed 200.5 devices, port 80 is used to download the configuration file from Unleashed Multi-Site Manager. Therefore, ensure port 80 is open in the firewall; otherwise, the restore task will continue to display the status as Applying.

NOTE

Ensure port 443 is open in the firewall when Unleashed Multi-Site Manager manages ICX switches, because switches register to the application through port 443 and this port is not configurable on the switch.

Administering a Linux Server

Ruckus recommends that you use the following OS:

- CentOS release 6.5 (64 bit)
- CentOS release 7.2 (64 bit)
- Red Hat Enterprise Linux Server release 6.5 (64 bit)
- Red Hat Enterprise Linux Server release 7.2 (64 bit)

Continue with the following sections to install the software on a Linux server.

Preparing the Server for Software Installation

Before installing the software, make sure your environment, including the target Linux server, meets all the requirements. You must prepare the host server for Unleashed Multi-Site Manager installation and operation.

What You Will Be Doing

- Prepare a clean Linux server according to the minimum system requirements.
- Place the server on a subnet that is reachable by the Ruckus devices to be managed.
- Customize your DHCP server.
- Before you install Unleashed Multi-Site Manager, ensure that you upgrade Openssl and its library according to their Linux version:
 - RedHat/CentOS 6.x: Openssl 1.0.1 +
 - RedHat/CentOS 7.x: Openssl 1.0.2 +

A sample to upgrade OpenSSL version with Linux yum:

```
yum upgrade openssl 1.0.2
```

Server System Requirements

When deciding on the Linux server on which to install the software, you must consider the number of devices that your software installation must manage. The target server must meet the following minimum requirements:

- CPU and RAM: Depends on the number of managed ZoneDirector devices, Unleashed APs, and ICX switches on the purge policy, and whether the software is installed in a Linux or a VMware virtual machine.
- Ruckus recommends that you use the following OS:
 - CentOS release 6.5 (64 bit)
 - CentOS Linux release 7.2 (64 bit)
 - Red Hat Enterprise Linux Server release 6.5 (64 bit)
 - Red Hat Enterprise Linux Server release 7.2 (64 bit)
- HDD: 30 GB dedicated to Unleashed Multi-Site Manager, minimum
- RAM: 8 GB dedicated to Unleashed Multi-Site Manager, minimum
- CD-ROM device if you choose to use this method of installation
- Mouse
- Network adapter

Refer to the most recent *Unleashed Multi-Site Manager Release Notes* for detailed information.

CAUTION

To ensure that normal software operations run smoothly, make sure that the target Linux server has at least 160 GB of free disk space dedicated to it.

The software disk space requirement is doubled when it is being updated.

Database backups also consume extra disk space. The required extra disk space is determined by the number of database backups.

If the software does not have sufficient disk space, then the Unleashed Multi-Site Manager services may encounter errors.

NOTE

When you are backing up the software database, make sure that the Linux server has at least 10 GB of available disk space to ensure a successful database backup.

Web Browser Requirements

The web interface works with the latest version of Firefox and Chrome web browsers. It is optimized for a 1280 x 1024 (and higher) screen resolution.

Editing the Server Hosts File

Unleashed Multi-Site Manager stores some of its configuration settings on a MariaDB server database that is installed when the software is installed. To ensure that software can connect to this MariaDB database after installation, you must edit your Linux server hosts file to include its DNS-related information.

NOTE

If you are planning to enable SMTP notification on the software, then you must add another line in the hosts file for your SMTP server's DNS information. For more details, refer to [SMTP Settings](#) on page 102.

NOTE

If you use a period (.) in the host name to separate the host name from the domain name, then you are not allowed to use a digit-only domain name. For instance, UMM.ruckus and UMM.98ABC are allowed, and UMM.98 and Localhost.12345 are not allowed.

1. Go to the /etc directory, and then open the hosts file.
2. Add the following line to the hosts file:

```
127.0.0.1 fully.qualified.domain.name localhost
```

3. Save the hosts file.

Installing the Software

You can install the software via CD-ROM or via FTP on a Linux workstation that meets the system requirements listed in [Server System Requirements](#) on page 18.

NOTE

The install script, `install.sh`, must be launched from a terminal window and not from the file browser.

CAUTION

If your Linux server contains an instance of MariaDB before the software installation, then that MariaDB instance and all dependent packages must be uninstalled before initializing the software installation.

Installing from a CD-ROM

1. Log in to the host server as `root`.
2. Insert the software CD into the CD-ROM drive.
If the software server does not automatically mount the CD-ROM, then continue with Step 3. If the server automatically mounts the CD-ROM, then continue with Step 5.
3. Enter the following command to create a mount point (or directory where you want to mount the CD-ROM):

```
# mkdir -p /mnt/cdrom
```

4. Enter the following command to mount the CD-ROM manually to the created mount point:

```
# mount /dev/cdrom /mnt/cdrom
```

5. Change directory (`cd`) to the mount point for the CD-ROM.
6. Execute the install script `install.sh`.

```
# ./install.sh
```

Continue with the figure in Step 7 and then Step 8 in the next task, Installing from an FTP Download.

Installing from an FTP Download

Before performing this task, learn about roles at [User Roles and Privileges](#) on page 79.

1. Log in to the host server as `root`.
2. Upload the *.ISO file (or patch file) to somewhere on the hard drive, such as `/tmp`.
3. Make sure that the *.ISO file owner is `root:root`:

```
# chown root:root *.ISO
```

4. Make a directory for the mount:

```
# mkdir ISO
```

5. Mount the *.ISO file:

```
# mount -o loop *.ISO ISO
```

6. Change to the ISO directory:

```
# cd ISO
```

- Execute the install script `install.sh`.

```
# ./install.sh
```

Result: Ok
The hostname of this machine is 'localhost.localdomain'
Testing network connection for localhost.localdomain
Result: Ok
Testing network connection for '127.0.0.1'
Result: Ok
```

8. Enter the location where you want to install the software. A default location is provided. Press **Enter** to accept the default location.

```
Location[/home/UMM]:
```

9. Enter your organization's domain name. By default, the domain name is appended to the word "admin", creating the default Unleashed Multi-Site Manager user account: `admin@domain.com`. The `admin@domain.com` user account is a Super User in the software system and cannot be deleted.

```
domain name (e.g., <your_domain>.com): domain.com
```

10. Enter a password for the software `admin@domain.com` user account.

```
Password: password  
Please confirm your password: password
```

11. Enter a password for the MariaDB root account.

```
Password: password  
Please confirm your password: password
```

12. Enter the HTTPS port number for the Tomcat Web server. The default port is 443; press **Enter** to accept the default.

```
Https port[443]:
```

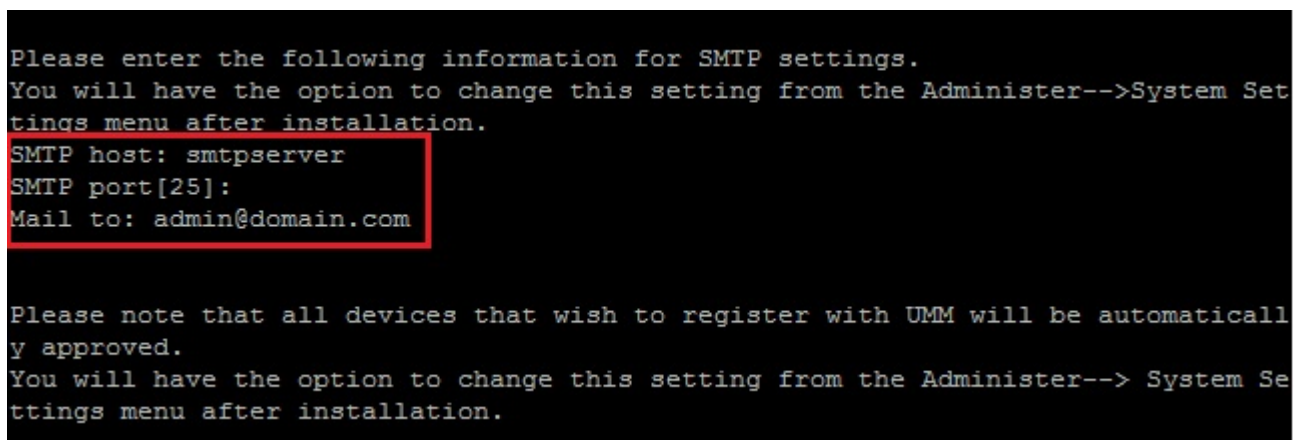

13. Enter your SMTP server host name and port number, as well as a default email address to which alerts for software system events are sent.

The SMTP server is the email server that Unleashed Multi-Site Manager uses to send alert notifications or system logs. You can change these settings on the **Administer > System Settings** page after installation.

The default SMTP port is 25. Press **Enter** if your SMTP server is already using port 25.

```
SMTP host: hostname  
SMTP port[25]:  
Mail to: username@domain.com
```

FIGURE 2 Configuring the SMTP Settings

When the installation completes, a success message appears.

You have completed installing the Unleashed Multi-Site Manager software. You can now log in to the Web interface and configure the software settings. For more information, refer to [Logging In to Unleashed Multi-Site Manager](#) on page 27.

NOTE

If errors occur during installation, then details of these errors are written to the `install.log` file. Ruckus may ask you to provide the `install.log` file if you request support in troubleshooting your software installation.

Notable Files in the Software Root Directory

After you complete the installation, the following files are installed in the software directory (`/home/UMM/`):

- `shutdown.sh`: Shuts down software services.
- `startup.sh`: Restarts software services after they have been shut down.
- `restart.sh`: Shuts down then restarts software services.
- `upgrade.sh`: Upgrades the existing software.
- `backup.sh`: Backs up the software database.
- `restore.sh`: Restores a backup of the software database.
- `README`: Application notes.
- `install.log`: Complete record of installation, including your settings.
- `uninstall.sh`: Uninstalls the software.

Upgrading the Software

Ruckus releases Unleashed Multi-Site Manager software updates that contain feature enhancements or fixes for known issues. These software updates are made available on the Ruckus Support website or released through authorized channels. Update files typically use `{version number}.patch.tar` for their file naming convention (for example, `9.12.0.0.11.patch.tar`).

Refer to the latest *Unleashed Multi-Site Manager Release Notes* for detailed upgrade information.

CAUTION

Although the software update process has been designed to preserve all software configuration settings, Ruckus strongly recommends that you back up the software database, in case the update process fails for any reason. For information on how to back up the database, refer to [Backing Up the Database from the Command Line Interface](#) on page 24 and [Backing Up and Restoring the Database from the Web Interface](#) on page 90.

NOTE

After completing the software update, Ruckus recommends backing up the software database so that you have a backup of the updated database schema. For instructions on how to back up the database, refer to [Backing Up the Database from the Command Line Interface](#) on page 24 and [Backing Up and Restoring the Database from the Web Interface](#) on page 90.

Uninstalling the Software

Execute the software uninstall script.

```
# [root@umm UMM]# ./uninstall.sh
```

After you execute the uninstall script, it performs the following steps:

- a. It shuts down the Tomcat server.

- b. It shuts down the MariaDB and Elasticsearch server.
- c. It deletes the configuration files, and uninstalls the software services.
- d. It restores the original `/etc/my.cnf` file.
- e. It finds `/etc/my.cnf.ruckus`, and then renames it to `/etc/my.cnf`.
- f. Finally, it deletes the `/home/UMM` directory.

When the uninstall script completes deleting the `/home/UMM` directory, the uninstallation process is complete.

Backing Up the Database from the Command Line Interface

It is good practice to back up your software database before installing a new version of any software. Although Ruckus has done its best to ensure a seamless experience when using Unleashed Multi-Site Manager, you should protect your data by creating a backup of all critical data stored on your host software server. Ruckus recommends that you back up and reload your software database tables from any previous version when upgrading to the next major version or patch release.

Unleashed Multi-Site Manager includes `backup.sh`, a script for backing up the software database, which is located in its root directory.

Follow these steps to back up the software database.

1. On the Linux server, go to the software root directory (`/home/UMM`).
2. Execute the database backup script.
 - To back up the software database to a specific file path and file name, enter the following command:

```
./backup.sh
```

Press Enter. You can enter the file name and then Unleashed Multi-Site Manager starts database backup.

Type a name for the database that you are saving. If you want Unleashed Multi-Site Manager to assign a file name automatically (in the format `DB_[YYYY-mm-dd-hh]`), leave this blank.

Input the file name.

When the backup process is completed, a message appears in the command line interface, informing you that the software database has been backed up successfully.

For more information about backing up and restoring the database via the Web interface, see [Backing Up the Database from the Web Interface](#) on page 91

Restoring the Database from the Command Line Interface

Unleashed Multi-Site Manager provides `restore.sh`, a script for restoring a backup copy of the software database located in the software root directory.

CAUTION

Before starting this procedure, take note of the file path and file name of the software database backup file. You need to enter this information when you execute the restore script.

Follow these steps to restore a backup copy of the software database.

1. On the Linux server, go to the software root directory (`/home/UMM`).

2. Execute the database restore script by entering the following command:

```
# ./restore.sh
```

Press Enter and provide the filename. Unleashed Multi-Site Manager will restore the database.

For example,

```
[root@localhost UMM]# ./restore.sh
```

Enter the path of your backup file.

When the restore process is completed, a message appears in the command line interface, informing you that the Unleashed Multi-Site Manager database that you specified has been restored successfully.

After Installation

With Unleashed Multi-Site Manager now installed, you can log in and configure the software to manage your Ruckus devices. The chapters that follow guide you through all of these configuration tasks.

Getting Started with Unleashed Multi-Site Manager

- [Logging In to Unleashed Multi-Site Manager](#)..... 27
- [Features of the Web Interface](#)..... 29
- [Getting to Know the Dashboard](#)..... 30
- [Getting Started Tasks](#)..... 33

Logging In to Unleashed Multi-Site Manager

Use one of the Web browsers described in [Web Browser Requirements](#) on page 19 to access the software Web interface:

NOTE

When accessing the Web interface, Ruckus recommends using a monitor with at least 1280 x 1024 screen resolution. If you use a monitor with lower resolution, then you may not be able to see all Web interface elements at the same time and you may have to scroll through the page to see hidden elements.

1. On your computer, open a Web browser window.
2. In the browser window, type the IP address or host name (if you have set up DNS for the server) of the software server as follows:

`https://<ipaddress>`

--OR--

`https://umm`

3. Press **Enter** to initiate the connection.

If you are using HTTPS, then a security alert dialog box appears. **Click OK/Yes/Proceed anyway** to continue.

NOTE

By default, Unleashed Multi-Site Manager uses a Ruckus signed security certificate that Web browsers do not recognize, causing them to display the security alert. If you want to prevent the security alerts from appearing every time you connect to the software using HTTPS, then you can install a certificate issued by a recognized certificate authority such as VeriSign. For information, refer to [Managing SSL Certificates](#) on page 83.

The **Ruckus Admin** login page appears.

FIGURE 3 Ruckus Admin Login Page

4. If you are not using remote authentication, then type the administrator account user name and password that you configured during installation.

The full user name includes the company domain name that you specified during the software installation (refer to [Installing the Software](#) on page 19). For example:

User Name: **admin@domain.com**

Password: **admin**

5. If you are using remote authentication, then log in using the TACACS+ server configured in [TACACS+](#) on page 106.

NOTE

If you log in using the TACACS+ server, then your user name appears in the top right of the Unleashed Multi-Site Manager page followed by *(Tacacs+)*.

- Click **Log In**. The Web interface appears in the browser window. The **Dashboard** workspace appears by default. For more on the Dashboard, refer to [Getting to Know the Dashboard](#) on page 30.

NOTE

The Web interface has a session timeout mechanism that logs you out of the system automatically after 30 minutes of inactivity. This helps secure the Web interface and prevent unauthorized users from changing your software configuration.

NOTE

If you recently upgraded the software, then Ruckus strongly recommends that you clear your Web browser's cache before logging in to the Web interface. This helps ensure that the Web interface shows all the changes and enhancements that were implemented in the new software version.

Features of the Web Interface

FIGURE 4 The Web Interface

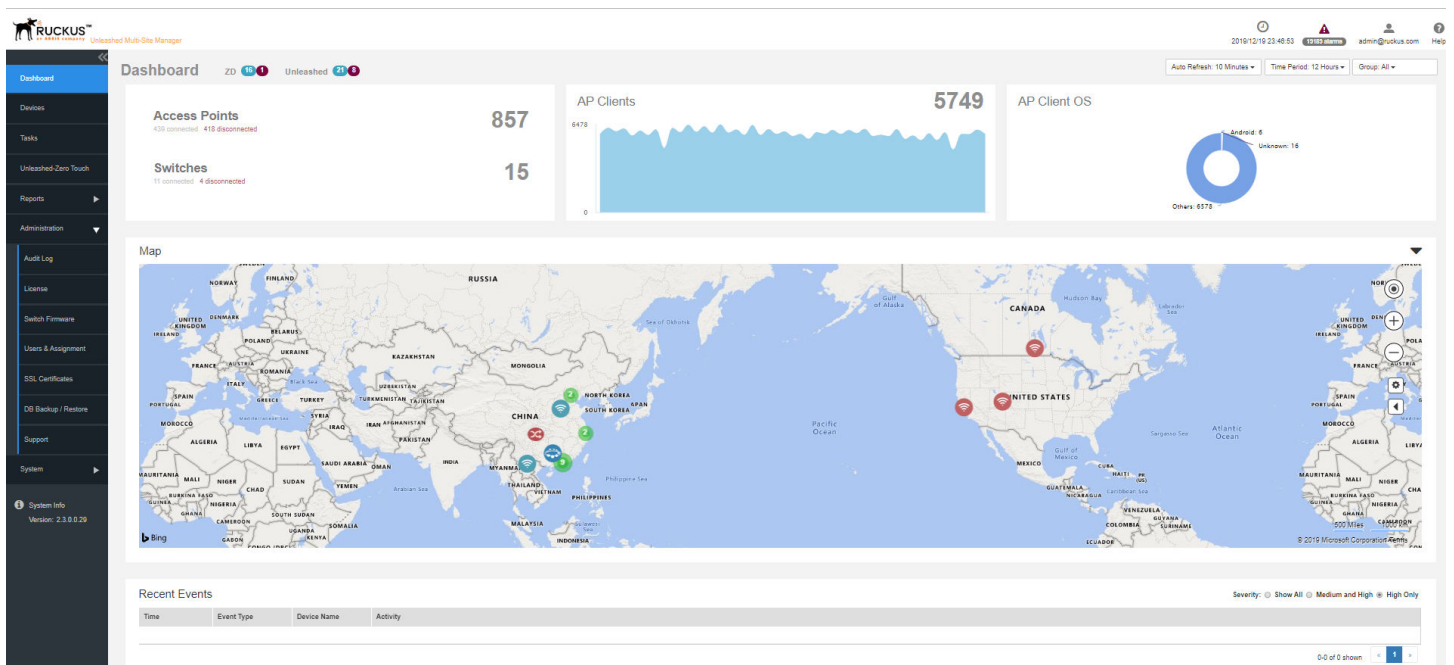

TABLE 4 Web Interface Elements

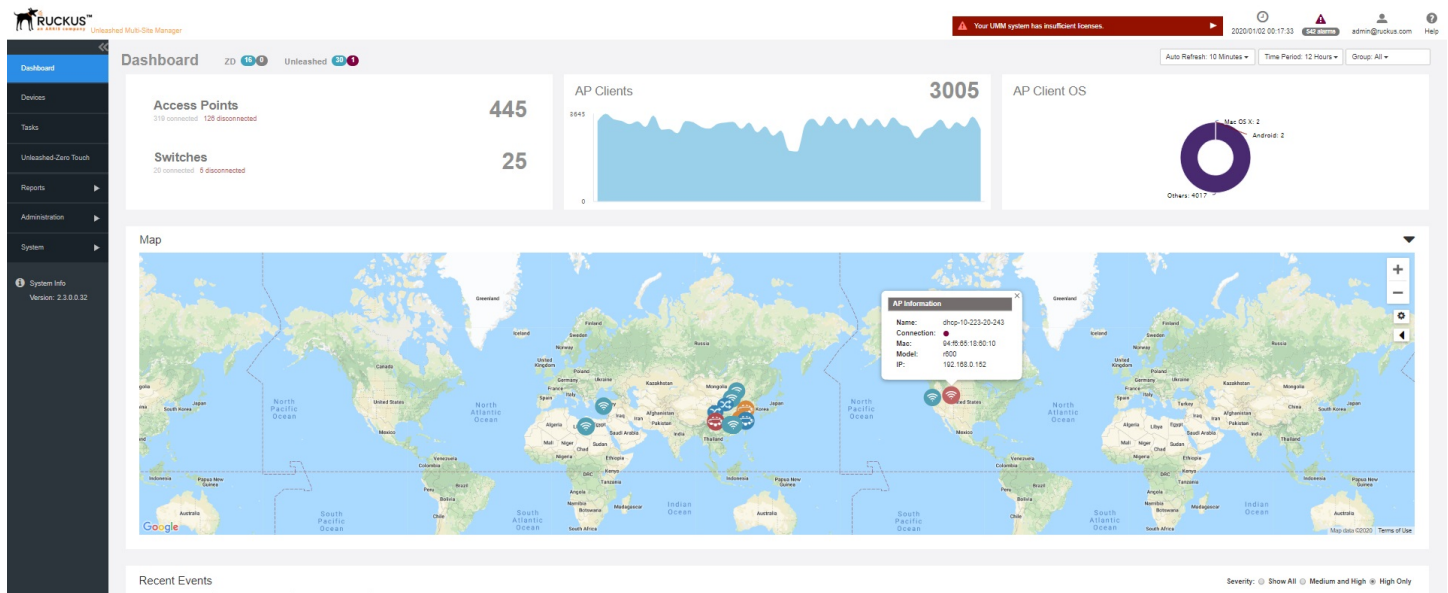

No.	Interface Element	Interface Element Description
1	Main Menu	Seven tabs group related tasks that you can perform in Unleashed Multi-Site Manager . These tabs include: <ul style="list-style-type: none"> • Dashboard • Devices • Tasks • Unleashed-Zero Touch • Reports • Administration • System
2	Submenu	On each tab are second level menu items that, when clicked, display related options in the content area to the right.
3	Alarms, Help and Log Out	<ul style="list-style-type: none"> • Alarm severity is classified into the order of Critical, Major, Minor and Warning. It shows the number of alarms triggered based on the severity. For example, if Critical alarms are generated, it will show the number of critical alarms. If there aren't any critical alarms, then it will show the number of alarms in the next severity type - the number of Major alarms. • Shows the major alarms (if enabled in Monitor > Alarm Settings). • Shows the current software date and time. • Click the Help link to open the online help. • Click the Log Out link to log out of the software. The user name identifies the user who is logged in. • If Unleashed Multi-Site Manager has an active <i>trial</i> license file, then a notice appears that the software is using the trial license file and when the trial license file expires. Unleashed Multi-Site Manager will not delete the device when license expires. It just changes the status of the device which does not have enough licenses to <i>license exceed</i> and stops to monitor and manage them.
4	APs and Switch panel	Displays the number of APs and switches that are connected and disconnected for a period of time.
5	Clients panel	Displays the number of clients that are connected for a period of time.
6	Clients OS panel	Displays the OS utilization by the clients. You can modify the dashboard view by selecting the following options present above this panel: <ul style="list-style-type: none"> • Auto Refresh • Time Period • Group All
7	Map	Displays information about the APs deployed in the Goggle map.
8	Recent Events	Displays the events that were recently triggered for the device (ZoneDirector, Unleashed APs or ICX switches). You can also sort the events to view them by severity type.

Getting to Know the Dashboard

After you log in to Unleashed Multi-Site Manager, the Dashboard is the first page that is displayed. The Dashboard provides a quick summary of what is happening on Unleashed Multi-Site Manager and its managed devices.

The **Auto Refresh** menu allows you to select the time interval for the page to refresh automatically and display the latest information. The **Time Period** menu allows you to select the period of time for which data must be displayed in the Dashboard. You have the option to select 12 hours, 24 hours, 7 days, or 3 months. The **Group All** menu allows you to select the data you want to display on the Dashboard. You can select **All** or select another group based on the user.

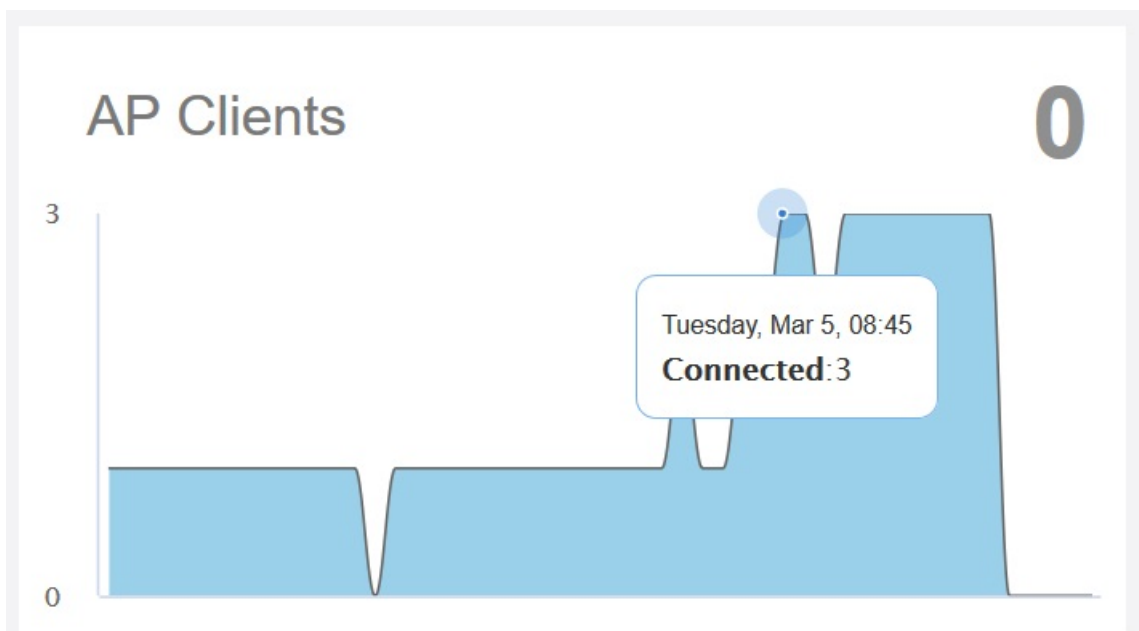

FIGURE 5 The Dashboard

The Dashboard displays at-a-glance information about the following managed devices:

- The number of connected and disconnected ZoneDirector and Unleashed devices.
- The number of connected and disconnected switches.
- The number of APs that are registered with ZoneDirector and Unleashed devices (which, in turn, are being managed by Unleashed Multi-Site Manager).

FIGURE 6 AP Clients Graph

The number of AP clients that are associated with the currently connected APs are displayed. Pause the pointer along the graph to display the connected clients at any time within the selected time range. The graph displays the number of connected AP clients depending on the time period option selected. For example, if you select 12 hours, then the graph displays trends for devices connected for the last 12 hours.

- The AP Client OS panel displays a donut chart of wireless clients based on the operating systems (Windows, Vista, Android, iOS, and others) that they are running.

FIGURE 7 AP Client OS Chart

Pause the pointer on the chart to see the percentage share of OS used by client devices. For example, 56% for Windows means, out of the total client devices accessing the server, 56 percent of those devices are using the Windows operating system. The percentage of various versions of each OS accessing the server is displayed also.

- A map which displays the AP and device information across the globe. Pause the pointer on the AP, switch, or device to see the respective statistics.

FIGURE 8 AP and Device Information Map

- The **Recent Events** panel displays information about events that have occurred on Unleashed Multi-Site Manager, on managed ZoneDirector, Unleashed devices, ICX switches and on clients.

The following table describes the information that you can find on the **Recent Events** panel.

TABLE 5 Columns on the Recent Events Panel

Column Name	Description
Time	Displays the event time stamp.
Event Type	Displays the name of the event (as assigned by Ruckus).
Device Name	Name of device reporting the event. Click this link to go to the devices reporting the specific event.
Activity	Events description.

The information in the **Recent Events** can be displayed based on the severity (**Show All, Medium and High**, and **High Only**), which you can select from the top-right corner of the panel.

Getting Started Tasks

Before configuring the software to manage your APs and ZoneDirector devices, Ruckus recommends performing the following tasks:

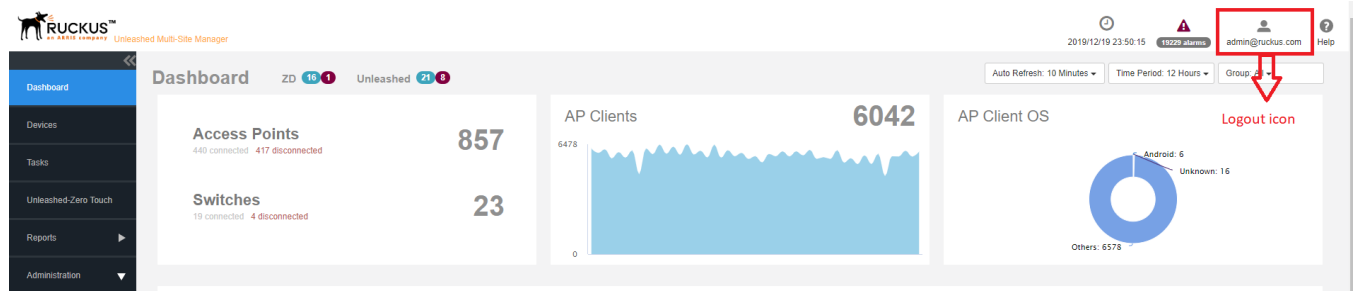

- Changing the default administrative password
- Pointing ZoneDirector, Unleashed devices, and ICX switches to Unleashed Multi-Site Manager
- Checking your software license

Changing the Default Administrative Password

Ruckus recommends that you change the default administrative password as soon as possible to prevent unauthorized users from accessing the web interface and modifying the settings you have configured.

1. After logging in to the web interface, click the **Logout** icon and then select **Change Password**.

FIGURE 9 Editing the User Password

2. In the **Update Password** dialog box, enter the current password in the **Current Password** field
3. Enter a new password in the **Password** field.
 - Passwords must be from 6 through 32 characters long, and must be comprised of letters and numbers only.
 - Passwords are case-sensitive.
 - Spaces cannot be used in passwords.

NOTE

Make sure you remember your new password. You will use this new password the next time you want to log in to the web interface.

4. Enter the new password in the **Confirm Password** field.
5. Click **OK**.

Pointing ZoneDirector, an Unleashed Network, and ICX Switches to Unleashed Multi-Site Manager

If you want to use Unleashed Multi-Site Manager to monitor and administer ZoneDirector, an Unleashed network, or ICX switches, follow the procedures listed in the Enabling Management via UMM section in the *ZoneDirector User Guide*. For more information, see [Appendix](#) on page 119

NOTE

Make sure that the required communication ports are open between the ZoneDirector, the Unleashed network, the ICX switches, and Unleashed Multi-Site Manager as described in [Firewall Ports that Must Be Open for Communications](#) on page 17.

Checking Your Software License

A new Unleashed Multi-Site Manager installation provides only one Unleashed license by default. When you upgrade from a FlexMaster version to Unleashed Multi-Site Manager, it provides 100 ZoneDirector licenses and 1 Unleashed license, by default. For additional Unleashed AP management, you must buy additional licenses and upload them.. Unleashed networks consume license numbers by the "active AP number" under it.

Beginning with UMM 2.3, Unleashed Multi-Site Manager supports monitoring and managing ICX switches. The number of licenses required by the switch depends on the unit number of the switch..

When you are managing ZoneDirector using Unleashed Multi-Site Manager, the number of license seats that ZoneDirector requires depends on the maximum number of APs that it can support. ZoneDirector 3250 (which supports up to 250 APs), for example, consumes 250 license seats.

When the seat limit is reached, no additional devices are able to register with Unleashed Multi-Site Manager until a license file that provides additional license seats is uploaded.

Though the Unleashed license is updated when Unleashed Multi-Site Manager receives a message from Unleashed, the Unleashed AP connection status is updated every 15 minutes. Therefore, there is a delay between when Unleashed Multi-Site Manager updates the Unleashed license (every 1~60 minutes), and its AP connection status (every 15 minutes). This delay may cause inconsistencies between a connected AP and the license on the user interface.

Unleashed Multi-Site Manager does not delete a device when the license expires. The status of the device changes to *license exceed* if it is not having enough license and Unleashed Multi-Site Manager stops monitoring and managing the device.

Before using Unleashed Multi-Site Manager to manage Ruckus devices, Ruckus recommends that you check how many ZoneDirector devices, Unleashed APs and ICX switches can be supported by your current license. Select **Administer > License** and review the total number of devices supported by your license and the number of seats used by ZoneDirector devices, Unleashed APs, and ICX switches.

FIGURE 10 License Details

The screenshot shows the 'License' page in the Unleashed Multi-Site Manager interface. At the top, there are three summary statistics:

- Total ZoneDirector AP Licenses purchased: 1000
- Licenses Consumed by ZoneDirector AP: 3
- Remaining ZoneDirector AP Licenses: 997
- Total Unleashed License Purchased: 1000
- Licenses Consumed by Unleashed AP: 1
- Remaining Unleashed License: 999
- Total Switch License Purchased: 100
- Licenses Consumed by Switch: 1
- Remaining Switch License: 99

Below the summary is a table titled 'Upload License' with the following columns: License Key, Part Number, AP Count, Create Time, License Type, and Expiry Date.

License Key	Part Number	AP Count	Create Time	License Type	Expiry Date
1516701484000	AP0-1	1	Mar 26 2017 09:48:04	Unleashed-Office	N/A
150322229000	Switch	100	Aug 23 2016 09:45:20	Switch-Office	N/A
1516701484000	zone	1000	Jan 07 2016 23:47:41	Unleashed-Office	N/A
1516701484000	ZD	1000	Jan 08 2016 04:58:57	ZD-Office	N/A

If the number of devices that you plan to manage exceeds the number of devices supported by the license file, then you need to contact Ruckus Sales representative, obtain a license file for additional devices, and upload it to Unleashed Multi-Site Manager.

Viewing Devices Managed by UMM

The **Devices** page of the Web interface displays information about devices managed by Unleashed Multi-Site Manager software. These devices include ZoneDirector controllers, ICX switches, Unleashed APs and Clients.

After you log in to the web interface, select **Devices** from in the navigation bar.

You can use the **View Mode** to select how you want the device information to be presented:

- **List:** Displays the list of all devices irrespective of the group to which they belong.

Group: Displays the list of devices in a hierarchical format.

FIGURE 11 Devices Managed by Unleashed Multi-Site Manager: List View

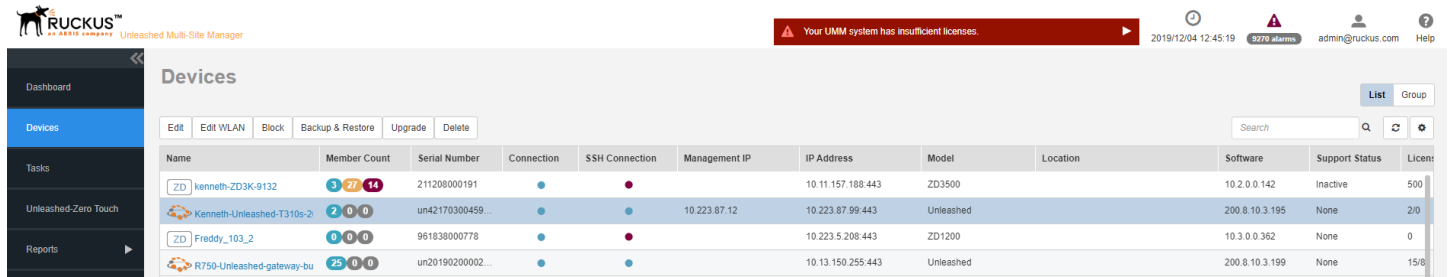

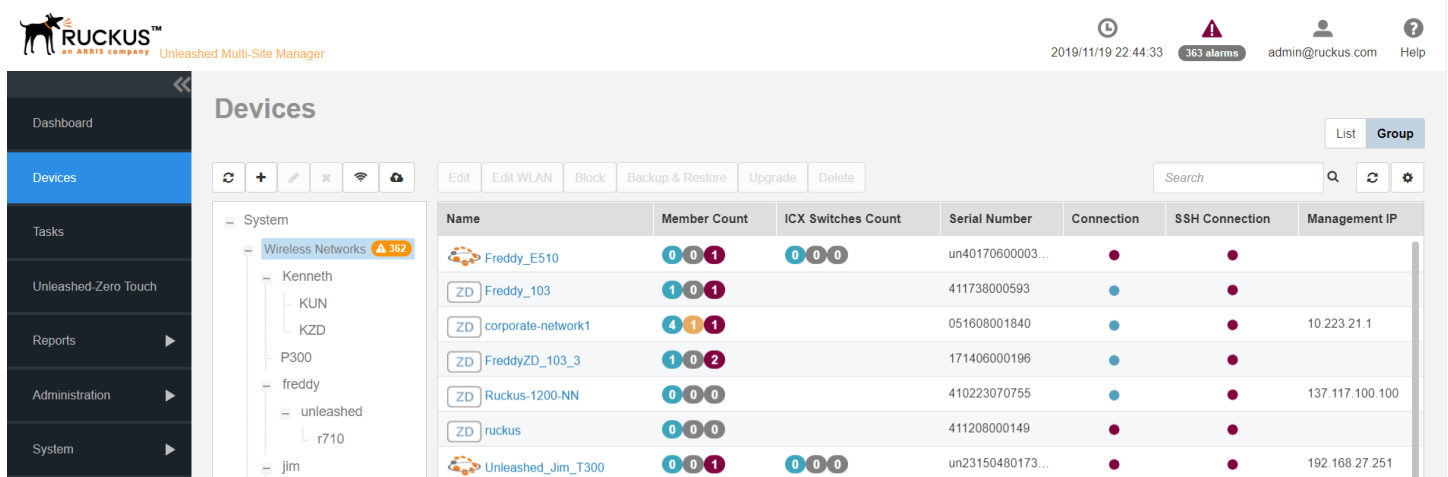

FIGURE 12 Devices Managed by Unleashed Multi-Site Manager: Group View

Click the Refresh icon () to refresh the contents of the table.

Click the Edit WLAN icon () to edit the selected WLAN to the Unleashed which belong to this group.

Click the Upgrade icon () to upgrade all the Unleashed which belong to this group.

The following table lists some of the fields and table columns that appear by default.

TABLE 6 Configuring Device Management

Field/Column	Description
Name	Displays the name of the device (may be a ZoneDirector controller or an Unleashed network that UMM manages). Clicking the device name hyperlink opens the dashboard of the controller in a new page.
Member Count	Displays the number of connected, disconnected or pending APs that are managed by the ZoneDirector controller or the Unleashed network.
ICX Switches Count	Displays the number of connected, disconnected or pending ICX switches.
Port Status	Displays the port status of the switch
Serial Number	Displays the serial number of the device.

TABLE 6 Configuring Device Management (continued)

Field/Column	Description
Connection	Indicates whether the device is currently online (blue) or offline (red).
SSH Connection	Indicates the status of the SSH tunnel between Unleashed Multi-Site Manager and ZoneDirector or Unleashed devices.
Management IP	Displays the Management IP address of ZoneDirector and Unleashed devices.
External IP	Displays the IP address of the device when it is behind the NAT server. Unleashed Multi-Site Manager uses this IP address to manage the device. For ZoneDirector or 200.5 Unleashed devices that are behind NAT, include port 443 for port forwarding.
Tag	When configured, this column shows a generic attribute (Device Tag) that can be used to identify the device. For example, when this AP device is located in a main office, you can assign the tag "Main" to it.
IP Address	<p>Displays the IP address assigned to the device.</p> <p>NOTE The port number after the IP address indicates the protocol that you can use to gain access to web interface of the device. If :443 is displayed after the port number, you can access the device Web interface using:</p> <p style="text-align: center;"><code>https://{device-IP-address}.</code></p>
IPv6 Address	Displays the IPv6 address of the device.
Model	Displays the model number of the managed Ruckus device.
Last Seen	Displays the time stamp of the device when it was last online.
Uptime	Displays how long since the device was last rebooted.
Redundancy State	Indicates the status of the ZoneDirector smart redundancy.
Latitude	Displays the latitude (North-South position) of the device.
Longitude	Displays the longitude (East-West position) of the device.
Location	Displays the location of the device (if provided).
Software	Displays the software version that is installed on the device.
Support Status	Displays the support status for the device.
Licenses Consumed	Displays the number of licenses consumed by the device.
Inventory Status	Displays the permission that is assigned to the device, such as Permitted, License Exceeded, and Lost Device.

By clicking Configure table icon (⚙️), you can customize the table settings that are displayed. You must select the check boxes to display the columns in the table and enter the number of rows you want to display in the table, in addition to specifying the search criteria.

To search for information in the table, enter word or phrase in the Search field. The page refreshes and displays devices with attributes that matched your search keyword or keyphrase. The matching attributes are highlighted and Unleashed Multi-Site Manager displays up to ten search results on each page by default. The number of rows is customizable. When your search generates more results than the number of rows set, use the left arrow and right arrow buttons after the **Search** box to display the previous page or next page, respectively.

Viewing the Device Configuration

You can view the configuration details of the devices managed by Unleashed Multi-Site Manager.

After you log in to the web interface, select **Devices** from the navigation bar.

The **Devices** page of the Web interface displays information about devices that the Unleashed Multi-Site Manager software.

FIGURE 14 Viewing Device Configuration Details for Wireless Devices

TABLE 7 Device Configuration Details

Tab	Description
General	<p>Displays the following information:</p> <ul style="list-style-type: none"> • Info: Provides basic device information including the number of data bytes and packets transmitted and received by the device. Click Save Unleashed System Log to save the unleashed system log. • Device View: Provides detailed information about the clients and APs associated with the device. • LAN Ports: Provides detailed information about the ports open to the device, the speed of data transfer and reception, and the number of data packets and bytes transmitted and received.
Access Points	<p>Displays a table with detailed information about the APs associated with the device, such as the number of authorized clients associated with the AP, software version, model number, uptime, IP address, and current status of the AP. The APs are displayed in a tree structure. In addition, the following information is displayed:</p> <ul style="list-style-type: none"> • General: displays general properties of the AP • Trend: displays a graphical representation of the associated clients, traffic trends and AP status. • Mesh: displays the mesh type, uplink and downlink APs • WLANs: displays the BSSID and ESSID of associated WLANs • Radio: displays the current radio channel properties that the AP is using
ICX Switches	<p>Displays a table detailing information about the ICX switch such as Name, Controller Name, MAC Address, Port Status, Serial Number, Connection, Management IP, Model, Last Seen, Uptime, and Software.</p>
Mesh View	<p>Displays a table that lists the mesh details of the device, such as the mesh topology, signal strength, MAC address, IP address, channel used, and number of authorized clients.</p>
Clients	<p>Displays a table detailing information about the client, such as the MAC address of the wireless client, IP address assigned to the client, radio channel the client uses, signal strength, VLAN ID assigned to the client, uplink and downlink traffic, and client connection status.</p>
WLANs	<p>Displays a table that lists the WLANs configured on the device, including the WLAN names, ESSIDs, authentication and encryption methods, and the number of clients associated with each WLAN, and the Tx/Rx of bytes and packets.</p>
Alarms	<p>Displays a table that lists information about the type of alarm that was triggered, the time and date when the alarm was generated, the severity and activity associated with the alarm.</p>
Events	<p>Displays a table that lists information about the type of event that was triggered, the time, event type, severity and activity associate with the event.</p>
Rogues	<p>Displays rogue (or unauthorized) APs that pose problems for a wireless network in terms of airtime contention, as well as security. Information such as the rogue AP SSID, type, channel, and so on is displayed. This tab is only applicable for ZoneDirector devices and Unleashed networks..</p>

TABLE 7 Device Configuration Details (continued)

Tab	Description
Traffic Analysis	<p>Displays traffic trends as graphs. The following trends are available:</p> <ul style="list-style-type: none"> • Top 10 APs Traffic • Top 10 APs Client • Top 10 Clients Traffic • Client OS Traffic • Model Traffic • Client Count versus AP Counts by Model • AP Status • Vendor versus AP

FIGURE 15 Viewing Device Configuration Details for Switches

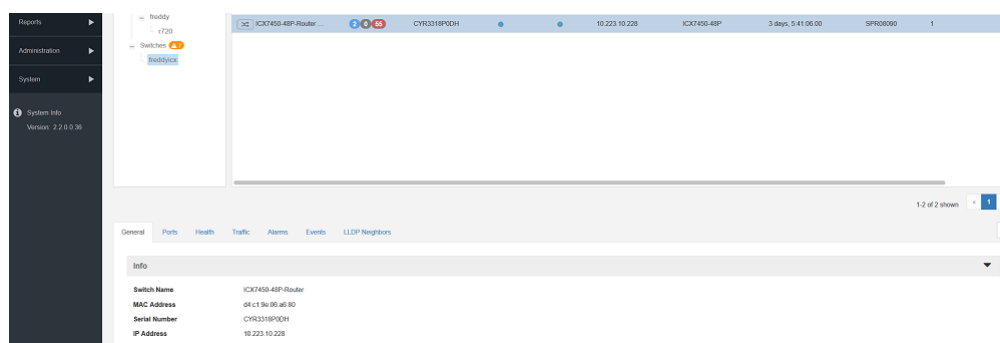

TABLE 8 Switch Configuration Details

Tab	Description
General	<p>Displays the following information:</p> <ul style="list-style-type: none"> • Info: Provides basic device information about the switch, such as the switch name, IP address, model, stack information, and firmware version. • Stack Members: Provides detailed information about the switches in the stack. • Status Summary: Provides information about the switch status, registration state, and uptime.
Ports	Displays the port details, such as a brief summary of the ports, a view of ports that are engaged with the switch, and details such as speed, PoE usage, VLANs, bandwidth, and so on.
Health	Displays a CPU and memory utilization, and also displays the status of the slots based on the power supply, temperature, and fan.
Traffic	Displays a traffic trends of the switch including the top ports by traffic.
Alarms	Displays a table that lists information about the type of alarm that was triggered, the time and date when the alarm was generated, the severity and activity associated with the alarm. The alarm history is displayed also.
Events	Displays a table that lists information about the type of event that was triggered, the time, event type, the severity and activity associated with the event.
LLDP Neighbors	Displays neighbor information, such as the device name, IP address, remote port information, and so on.

NOTE

For a switch stack, the health of the master unit is displayed.

Click the Refresh icon  to refresh the contents of the tables within the tabs. You can also customize the tables by clicking the Configure table icon . You can also use the **Search** field to look for specific information within the tables.

Creating and Managing Groups

Unleashed Multi-Site Manager allows you to create and edit device groups, and to assign devices to existing device groups. You can also create an empty group. Each device can be assigned to a single device group at a time, and can be moved to a different device group at any time.

There are two types of groups—one is for ZoneDirector and Unleashed, and the other for ICX switches. Devices can not be moved between these groups. The default group *Wireless Network* lists all the ZoneDirector and Unleashed devices, and the default group *Switches* lists all the ICX switches.

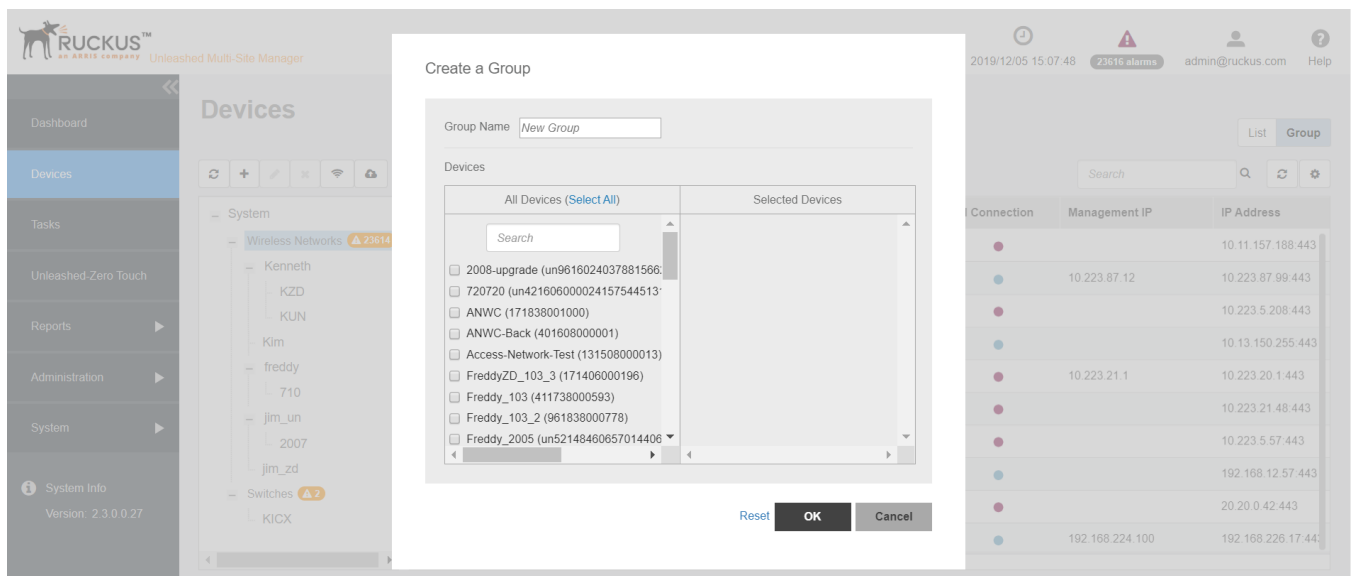

1. After you log in to the Web interface, select **Devices** from the menu in the left. The **Devices** page appears listing all the devices managed by the software.
2. From the device group hierarchy, select device under which you want to create the group and click the  icon. The **Create a Group** page appears.

FIGURE 16 Creating a Group

3. In **Group Name**, type the name of the group you want to create.
4. In **Devices**, under the *Unselected Devices* section, select the devices that you want to group by checking the box against the device. Those selected are populated under the *Selected Devices* section.
5. Click **Save** to confirm the grouping.
A success message is displayed after the group is created.
6. Click **OK**.
The newly created group is listed under the device hierarchy.

7. Select the group and click the  icon.
The **Edit a Group** page appears.

FIGURE 17 Editing a Group

8. Make the necessary changes and click **Save**. You have successfully edited the group.
To delete a group, select it and click the  icon above the device hierarchy tree.

Viewing Group Details

When you select a group, you can view details about the APs associated with the group, alarms and events. You can also view the switches in a switch group and their associated ports, alarms, events, traffic trends and LLDP neighbors.

1. After you log in to the Web interface, select **Devices** from the menu in the left.
The **Devices** page appears listing all the devices managed by the software.
2. From **View Mode**, select **Group** to view the groups of devices.

- From the tree hierarchy, select a group that you created.

The following information is displayed for APs:

- Access Points: displays information about the APs in the group such as the device name, model, IP address, state, software version etc. Additionally, you can also view the following:
 - General: displays general information about the AP such as controller name, IP address, location and so on.
 - Trend: displays graphical trends pertaining to the associated clients, traffic and state of the AP.
 - Mesh: displays details about the AP mesh type, up link and down link.
 - WLANs: displays information about the WLANs associated with the AP such as ESSID, BSSID and radio.
 - Radio: display details about the radio information of the AP.
- ICX Switches: displays the details of the switches.
- Alarms: displays alarms that are **Active** and those that were generated earlier (under the **History** tab). You can select an alarm from this list and click **Acknowledge** to accept the alarm. A success message is displayed when it is accepted.
- Events: displays the events generated.

FIGURE 18 Group Details

The screenshot displays the 'Group Details' view in the Ruckus Multi-Site Manager. The left sidebar shows a tree hierarchy with 'System' expanded to 'Wireless Networks' and 'Kenneth' selected. The main area shows a table of APs with columns for Name, Member Count, Serial Number, Connection, SSH Connection, Management IP, and IP Address. Below this, there are tabs for 'Access Points', 'ICX Switches', 'Alarms', and 'Events'. The 'ICX Switches' tab is active, showing a table with columns for Name, Controller Name, MAC Address, Port Status, Serial Number, Connection, Management IP, and Mode.

Name	Member Count	Serial Number	Connection	SSH Connection	Management IP	IP Address
Kenneth-M510	1 0 2	un94180200124...	●	●		10.223.5.201.443

ZD ruckus-K-1200	0 3 6	201601210008	●	●		10.223.4.238.443

Name	Controller Name	MAC Address	Port Status	Serial Number	Connection	Management IP	Mode
ICX7150-24P	Kenneth-M510	d4 c1 9e 40 f5 80	0 0 0		Approval pending	10.223.4.32	

The following information is displayed for switch groups and individual switches:

- Switches & Ports: displays information about the switches such as the top switches by model, firmware, ports summary details, and ports details such as the following:
 - Switch Name: displays the name of the switch
 - Serial Number: displays the serial number of the switch
 - Port Name: displays the port name
 - Port Number: displays the port number
 - Status: displays whether the port is operationally Up or Down
 - Admin Status: displays whether the port has been set to Up or Down by the network administrator
 - Speed: displays the speed of the port

- PoE Usage (used/total watts): displays the PoE power usage compared to the allocated power
 - VLANs: displays the VLAN(s) to which the port is connected
 - Bandwidth IN (%): displays the bandwidth utilization for incoming traffic
 - Bandwidth OUT (%): displays the bandwidth utilization of the port for outgoing traffic
 - LAG Name: displays the name of the Link Aggregation Group (LAG)
 - Optics: displays the type of optic
 - Neighbor Name: When LLDP is enabled, the name of the neighboring device, such as an AP or another switch or router
- Ports (tab appears only for individual switches): displays the **Ports Summary** page provides information on the ports for the selected switch, including the total number of ports connected to the switch or stack, the number of ports active at various speeds, operational status of the ports (Up or Down), warnings associated with ports when alarms or events are triggered, and the number of ports managed by an administrator.

The **Ports View** page provides information on the state of all ports in each switch module, for example port Up, Down, or Administratively Down.
 - Health (tab appears only for individual switches): displays the switch health for the duration selected from the drop-down menu.

NOTE

For switch stack, the health of the master unit is displayed.

The following information is displayed based on the duration selected:

- CPU (%): The CPU usage of the switch, including the minimum, maximum, average, and current CPU usage trends of the switch.
 - Memory (%): The memory usage of the switch, including the minimum, maximum, average, and current memory usage trends of the switch.
 - Status: The health status of the power supply, temperature, and the fans for up to four switch modules are displayed. OK indicates the parameter and components are in good health.
- Traffic: provides a graphical representation of the total traffic trend at the switch-level and also shows the top switches based on the traffic handled by the device.
 - Alarms: displays alarms that are **Active** and those that were generated earlier (under the **History** tab). You can select an alarm from this list and click **Acknowledge** to accept the alarm. A success message is displayed when it is accepted.
 - Events: displays the events generated.
 - LLDP Neighbors: Link layer discovery protocol or LLDP is used to discover and identify the clients. You can view information about the LLDP neighbors such as printers, VOIP devices, or other user equipment connected to the switch.

Editing the Device Properties

You can edit a device's tag name, location, GPS coordinates and Web port mapping.

- After you log in to the Web interface, select **Devices** from the menu in the left. The **Devices** page appears listing all the devices managed by the software.
- From the list of devices, select the device for which you want to edit the properties, then click **Edit**. The **Edit** dialog box appears.

FIGURE 20 Edit Dialog Box

Edit

Tag:

Location:

GPS Coordinates: Latitude: Longitude:

Web Port Mapping: 172.18.110.234 : 443 <--> 172.18.110.234 :

Save **Cancel**

3. Modify the following configuration settings:
 - **Tag:** Type the device tag name.
 - **Location:** Type the location of the device.
 - **GPS Coordinates (Latitude and Longitude):** the software uses these to position the device icon on the map.
 - **Web Port Mapping:** The port number after the IP address indicates the protocol that you can use to gain access to the device's Web interface. Default port number is 433 for HTTPS protocol.

NOTE

200.6 and later Unleashed networks versions setup SSH tunnels between Unleashed Multi-Site Manager and it self, so you do not have to configure the Web Port Mapping.

4. Click **Save**.
A success message is displayed after the device properties are saved.
5. Click **OK**.
The new configuration changes for the device are saved and refreshed in the table.

Editing WLAN SSID

You can configure the SSID of the WLAN associated with an Unleashed network to synchronize configuration between network devices.

NOTE

This is only support on 200.6 or later unleashed network. ZoneDirector devices and 200.5 Unleashed networks are not supported.

NOTE

You can apply the new SSID and passphrase to all WLANs, but the new passphrase will only take effect when the WLAN's Encryption Method is WPA2 or WPA3.

1. After you to log in to the Web interface, select **Devices** from the menu in the left.
The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the Unleashed network for which you want to edit the WLAN SSID, then click **Edit WLAN**.
The **Edit WLAN** dialog box appears.
3. Select the ESSID from the drop-down list. The name, IP address and Serial number of the unleashed network is displayed.
4. In **Enable/Disable WLAN**, select the desired radio button.
5. In **New WLAN Name**, enter the name of the WLAN
6. Click the **New WPA2 Passphrase**, provide the password of the WLAN.
7. Click **OK**.

Blocking Devices from the Software

If devices within the network seem unauthorized or are a threat to security, you can use the software Web interface to block the device. You can block one devices at a time.

1. After you to log in to the Web interface, select **Devices** from the menu in the left.
The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the device you want to block and then click **Block**.
A confirmation message appears asking if you want to block the devices from the software.

FIGURE 21 Block Screen

3. Click **Yes, block it!**.
The device is blocked, and Unleashed Multi-Site Manager no longer manages the device.

Backing Up Device Configuration Files

You can create configuration backup files for all the devices managed by the software, to recover configuration settings in the event of a device failure. The backup files can be created for single or multiple devices.

Ruckus strongly recommends that you periodically back up the settings of your ZoneDirector, Unleashed devices and ICX switches, to make sure that you can easily recover the configuration settings if they ever become corrupted.

NOTE

The number of ZoneDirector (ZD), Unleashed and switch configuration backups to retain in the software database for each device is limited to 10.

You can modify this number from **System > System Setting > Device Backup**.

1. After you log in to the Web interface, select **Devices** from the menu in the left. The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the device for which you want to back up the configuration values and then click **Backup & Restore**.

The **Configuration Backup & Restore** form for the device appears.

You can select multiple devices by pressing CTRL + click the device.

FIGURE 22 Backing Up the Configuration

Config Backup & Restore for fm_zd_1200

Choose an Operation

Backup Restore

Configuration File Settings

Task Name:

Upload FTP&Folder / (Default folder is "/>

3. In **Choose and Operation**, select **Backup**.

4. In **Configuration File Settings**, enter the following:
 - **Task Name:** type the name of the backup file. Use a descriptive name that helps you identify this backup configuration
 - **Upload FTP & Folder:** select the check box and type the workstation folder and the software will upload the backup file to the FTP server.
 - **Schedule Backup:** select the check box to schedule when you want to back up of the configuration.
After you select the check box, the **Frequency** and **Time of Day** options are displayed. Select the options from the drop-down menu as appropriate. In **Frequency**, if you select Weekly or Monthly, the corresponding **Day of the Week** or **Day of the Month** options are displayed, respectively.
5. Click **OK**.
A success message is displayed after the task is created.
You can view the created task from **Monitor > Task**.
6. Click **OK**.
The schedule to back up the device configuration is created.

Restoring the Device Configuration

Unleashed Multi-Site Manager enables you to restore device settings easily from a backup file. You have the option to perform full restore, failover restore or a policy-level restore to another device.

Before performing a restore procedure for the device, make sure that you have at least one backup file that you can use to restore the device settings.

Restoring device settings from a backup file overwrites the current settings with those contained in the backup file. When performing the restore procedure, make sure that you are restoring the correct backup file.

Also ensure that you are selecting the appropriate restore type. For example, when you only want to restore the wireless, access control, and user settings, make sure you select *Policy Restore*. Selecting *Full Restore* overwrites all existing device settings, including the IP address, system name, user name, and password.

An 'Unleashed ID' is automatically generated by the system for each unleashed network. This ID is reset when the device is set to factory default, and may be overwritten when device configuration is restored (depend on which restore option are selected).

NOTE

The ICX backup file can only be restored to itself and can not be restored to another ICX switch.

NOTE

The restore type (full restore, failover restore, policy restore) is only valid for ZoneDirector and Unleashed devices. You cannot select the restore type for switches.

NOTE

The number of ZoneDirector (ZD), Unleashed and switch configuration backups to retain in the software database for each ZD and Unleashed is limited to 10.

You can modify this number from **System > System Setting > Device Backup**.

NOTE

For ZD and 200.5 Unleashed devices, port 80 is used to download the configuration file from Unleashed Multi-Site Manager. Therefore, ensure port 80 is open in the firewall, otherwise, the restore task will continue to displays the status as Applying.

1. After you to log in to the Web interface, select **Devices** from the menu in the left. The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the device for which you want to restore the configuration values and then click **Backup & Restore**. The **Configuration Backup & Restore** form appears.

FIGURE 23 Restoring the Configuration

Specify a time to perform this task

Restore now

Schedule restore later:

OK Cancel

3. In **Choose and Operation**, select **Restore**.

4. In **Configuration File Settings**, enter the following:
 - Task Name: type the name of the restore task the you want to create. Use a descriptive name that helps you identify this task.
 - Restore Type: choose one of the following
 - *Full Restore*: Restores all settings from the backup file, including the IP address, system name, user name, and password. Use this restore type to overwrite all current settings of a device with those from the backup file. For example, if the configuration file of a device becomes corrupted, then you can use full restore to recover the device.

The unleashed ID will be overwritten during Full Restore.
 - *Failover Restore*: Restores all settings from the backup file, except the system name, IP address, user name, and password. Use this restore type when you want to configure a secondary device as a failover unit. After configuring the secondary device, deploy it to the same network as the primary device. If the primary device fails for any reason, then all APs managed by the primary device are able to report to the secondary device automatically. If you choose this restore type, then you need to manually configure the IP address, system name, user name and password of the secondary device.
 - *Policy Restore*: Restores only the wireless, access control, role, and user settings from the backup file. Use this restore type when you want to apply the same set of common settings to multiple devices. You need to first configure one device with your preferred wireless, access control, role, and user settings, back up these settings, and then restore them onto the target devices.
 - Device Selection: from the drop-down menu, choose the target configuration file to restore.
 - In **Specify time for this task**, specify when you want the task to run. To run the task immediately, click **Restore now**. To schedule the task, click **Schedule restore later** and then select the date and time.
5. Click **OK**.
A success message is displayed after the task is created.
You can view the created task from **Monitor > Task**.
6. Click **OK**.
The configuration restore task is created.

Upgrading Device Firmware

You can initiate the upgrade of unleashed networks and switches from the Unleashed Multi-Site Manager web interface.

1. After you to log in to the Web interface, select **Devices** from the menu in the left.
The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the device for which you want to upgrade the firmware and then click **Upgrade**.
A confirmation message appears.

NOTE

To upgrade the switch, go to **Administration > Switch Firmware** and upload the ICX image to Unleashed Multi-Site Manager first. You can then select the uploaded ICX image.
For Unleashed networks, only online upgrade is supported.

3. Click **Yes** to upgrade the device firmware.

Deleting Devices Managed by the Software

If you do not want Unleashed Multi-Site Manager to manage a device(s), you can delete it. You can delete one or more devices at a time.

1. After you log in to the Web interface, select **Devices** from the menu in the left. The **Devices** page appears listing all the devices managed by the software.
2. From the list of devices, select the device or set of devices you want to delete, and then click **Delete**. A confirmation message appears asking if you want to delete the device(s) from Unleashed Multi-Site Manager.

FIGURE 24 Delete Screen

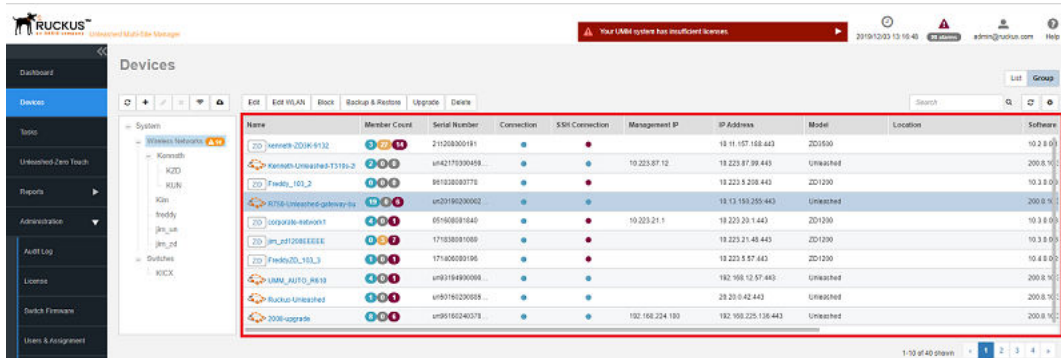

3. Click **Yes, delete it!**. The device is deleted, and the software no longer manages it.

Downloading AP log

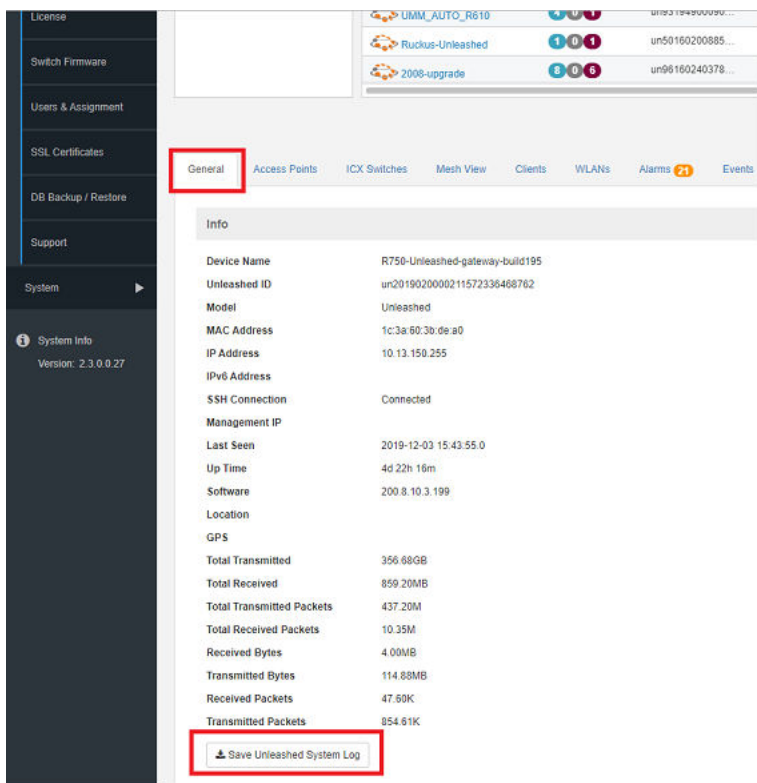

For debugging purpose, you can download Unleashed System Log through UMM directly. It is not local in UMM but a request to Unleashed. Both Unleashed connection and SSH connection should be online.

1. In the left pane, click **Devices**.

- In the **Devices** table, click Unleashed network.

- In the **General** tab, click **Save Unleashed System Log** to download the unleashed system log.

Managing Tasks

You can view, create and manage tasks assigned to a user.

After you log in to the Web interface, select **Tasks** from the menu in the left.

The **Tasks** page appears listing all the tasks created so far.

FIGURE 25 Viewing Tasks

The following information about the task is displayed.

- Task Name: displays the name of the task.
- Task Type: displays the type of task created for the user such as Backup, Restore and so on.
- Schedule: displays the time and date for when the task is scheduled.
- Configuration File: displays the name of the configuration file used.
- Created: Displays the time and date when the task was created.
- Created By: display the User ID of the person who created the task.

Clicking the task displays more information about the device name, backup file, model name, version, backup time and status of the task.

To delete a task, select it and click **Delete**. You can also select a task in progress and click **Edit** to modify the settings, however you can only edit scheduled tasks.

Zero Touch Deployment

Unleashed Zero Touch Deployment feature simplifies the deployment for Unleashed. The deployment is ready with some simple configurations on Unleashed Multi-Site Manager and Unleashed side as the power is on.

The main purpose of this feature:

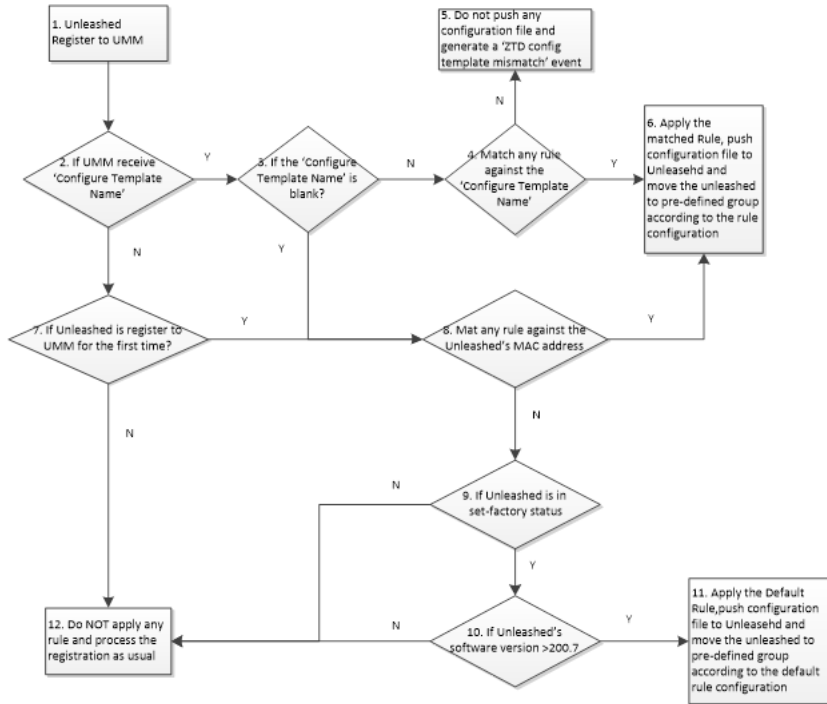

- Unleashed can be configured to designated version and configuration automatically after power on.
- Unleashed can be assigned to designated groups in joining Unleashed Multi-Site Manager automatically.
- It allows to pre-configure the 'Configure Template Name' and 'UMM IP' on the Unleashed by Unleashed Setup Wizard manually or by DHCP server.
- It also pre-configure a rule with the same 'Configure Template Name' on the UMM server and attach one Unleashed backup file to it.
- Whenever a set factory Unleashed boots up, it sends a message with 'Configure Template Name' to the UMM server according the IP inside the parameter 'UMM IP'. Once UMM server receives the message, it matches the rule with 'Configure Template Name' against its data base and push the configure file to the Unleashed.
- For the Unleashed 200.7 or previous release Unleashed which does not support the new parameter 'Configure Template Name' and 'UMM IP', can pre-configure a rule with Unleashed master AP's MAC address to UMM. When the Unleashed

register to UMM for the first time, UMM matches the rule against the MAC address and push the configuration file to Unleashed.

Zero Touch Deployment Workflow

1. Unleashed register to UMM: For 200.8 Unleashed, you can provision the UMM IP to Unleashed during the setup wizard manually or you can provision by DHCP server option 43 automatically.
2. When UMM receive the registration message from Unleashed, it checks whether the parameter 'Configure Template Name' is inside the message. For 200.8 Unleashed, you can provision the 'Configure Template Name' during the setup of the wizard manually or provision by DHCP server option 43 automatically.
3. The 'Configure Template Name' is optional, Unleashed sends a blank 'Configure Template Name' to UMM if you do not provision this parameter.
4. UMM matches the Zero Touch Deployment rule against the 'Configure Template Name'.
5. If UMM cannot match any Zero Touch Deployment rule, it stops the deployment and generate a 'ZTD config template mismatch' event to remind you. The Unleashed retry the registration after timeout.
6. If UMM find any rule which contain the same 'Configure Template Name' , it pushes configuration file to Unleashed and move the unleashed to pre-defined group according to the configuration of the Zero Touch Deployment rule.
7. UMM checks if the Unleashed is register to UMM for the first time.
8. UMM matches the Zero Touch Deployment rule against the Unleashed AP's MAC address. This only apply to the Unleashed which is register to UMM for the first time. For example, Unleashed already register to UMM, and then customer restart the Unleashed AP, after start up, the Unleashed will register to UMM again but UMM won't apply the Zero Touch Deployment to the Unleashed since it's not the first time registration.
9. UMM check if Unleashed is in set-factory status.
10. UMM check if Unleashed's software version is later than 200.7
11. UMM apply the Default Rule only to the 200.8 or later Unleashed which is NOT in set-factory status. This is to avoid unintentional deployment. For example, if Unleashed is not in set-factory status which means the Unleashed has the setup already, then in this case we do not deploy the default configuration file to the Unleashed to avoid any mistake.

12. UMM do not apply any Zero Touch Deployment rule and process the registration as usual.

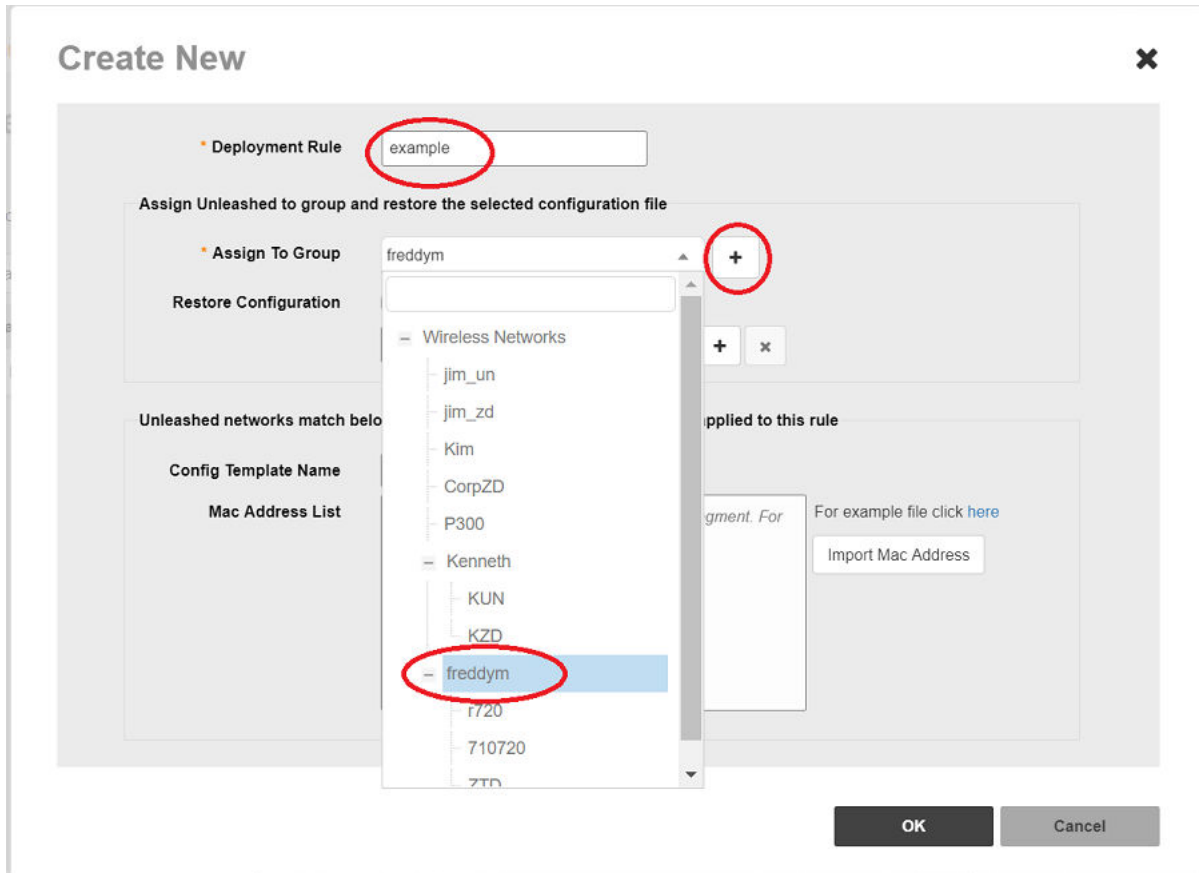

Creating a New Rule

The Unleashed–Zero Touch Deployment page in the user interface allows the user to create, edit, import, and download an example rule.

1. After you log in to the Web interface, select **Zero Touch Deployment** from the menu in the left.

2. Click **Create** button, the **Create New** page appears.

3. In **Deployment Rule**, enter the rule name.
4. In **Assign To Group**, select the group name from the drop-down, when the device registers to UMM for the first time. UMM assigns the device to the predefined group automatically.
5. In **Restore Configuration**, if you click the **Select backup file to restore** checkbox then do the following:
 - a) Select the backup file from the drop-down.
 - b) Click () and **Create New** window pops-up. In the pop-up, click **Choose file** to select the backup file, enter the comment, and click **OK**.
6. In **Mac Address List**, enter the mac address or click **Import Mac Address**.

In **Unleashed-Zero Touch Deployment**, click **Import Rule** button to import a rule.

NOTE

The file formats are only in CSV or TXT format.

In **Unleashed-Zero Touch Deployment**, select the required rule and click **Edit** or **Delete** button to edit or delete the rule respectively.

Registering Unleashed to UMM

It is for the first time registration of Unleashed to the Unleashed Multi-Site Manager. After Unleashed passes the condition check, Unleashed Multi-Site Manager will apply the rule.

Use case for Unleashed registering to UMM at the first time

Serial number	Unleashed Status	TAG	Unleashed Version	MAC	UMM Actions
1	Factory reset	Configured by DHCP Option or Unleashed Wizard.	200.8 and above	not apply	<ul style="list-style-type: none"> • TAG match: trigger rule for TAG • TAG mismatch: Generate a fail event <ul style="list-style-type: none"> - ZTD config template mismatch or ZTD backup file not found
2	Factory reset	TAG is not set in DHCP Option, Wizard, or TAG is an empty string.	200.8 and above	apply	<ul style="list-style-type: none"> • MAC match: trigger rule for MAC. • MAC mismatch: trigger default rule
3	None factory status	Not apply even if the TAG is set in the DHCP Option.	All	apply	<ul style="list-style-type: none"> • MAC match: trigger rule for MAC. • MAC mismatch: do nothing

Working with Reports

- Available Report Types..... 61
- Generating an AP Report..... 64
- Generating a WLAN Report..... 65
- Generating a Client Report..... 66
- Generating Reports for Rogue Devices..... 68
- Viewing Saved Reports..... 70

Available Report Types

The following table lists the different report types that you can generate in Unleashed Multi-Site Manager. For instructions on how to generate each type of report, refer to the succeeding sections.

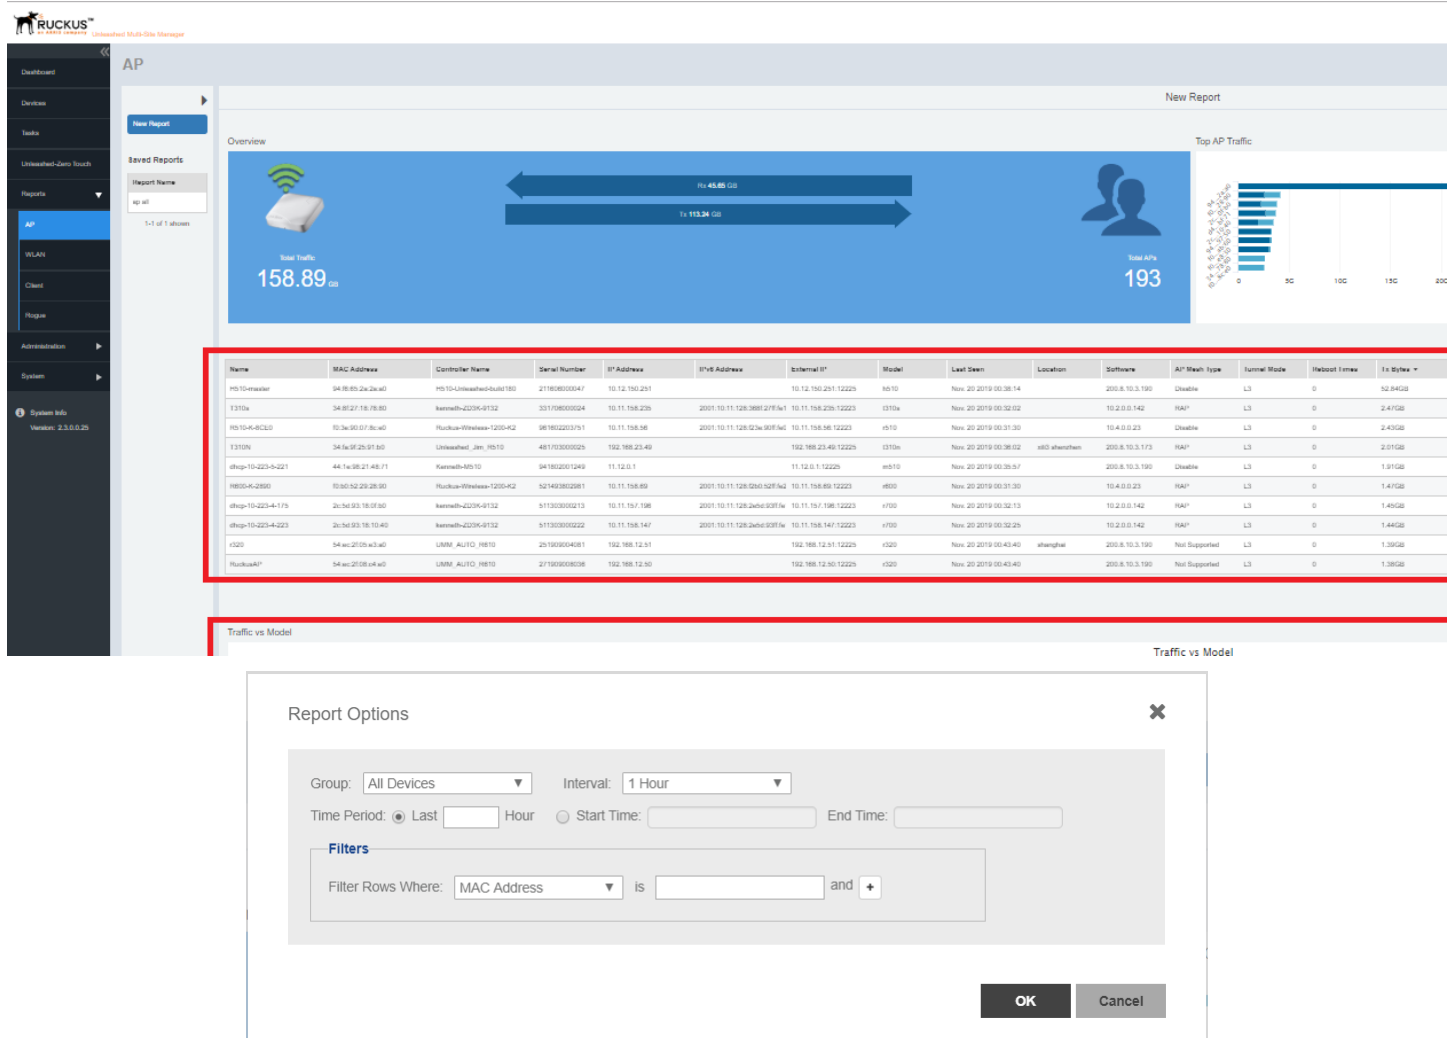

Typically, every report page contains a **Set Report Options** () area where you can set the configuration values for the report by clicking **Save** to generate report, a **Table area** where the details are listed and a **Graph area** where the report can be interpreted as a graph.

FIGURE 26 Report Page

You can click **Export** and select CSV or PDF to generate reports as CSV files or PDF files respectively.

TABLE 9 Reports in Software

Report Name	Description
AP	View current status and detailed information about APs.
WLAN	View the detail information about WLANs.
Client	View the detail information about Clients.
Rogue	View the detail information about Rogue APs.

Configuring Report Options

You can customize a report based on the device you want to group based on the time interval and also provide the time-range between when you want the report to be generated for a device.

1. After you to login to the Web interface, select **Reports** from the menu in the left.

The following sub-menu items appear:

- AP
- WLAN
- Client
- Rogue

2. Click on any of the sub-menu options.

The corresponding reports page is displayed with a Report Option area, Table area and a Graph area.

The Reports Option area displays the Group, Interval and Period.

3. Click one of the options (Group, Interval or Period).

The **Reports Option** page appears.

FIGURE 27 Report Options

Report Options

Group: All Devices Interval: 1 Hour

Time Period: Last 24 Hours Start Time: End Time:

Filters

Filter Rows Where: AP MAC Address is and +

Query

4. In Group, select the list of devices or groups for which you want to generate the report.
5. In Interval, select the time interval within which the report must be generated periodically. Options include 15 minutes, 1 hour, 1 day, and 1 week.
6. In Time Period, select the time duration for which you want to generate the report. For example, you can set the report to be generate for APs in the last 24 hours.
7. In Start Time and End Time, provide the time-range within which you want to generate a report for the device.
8. In Filters, you can use this setting to filter reports based on one or more criteria. For example, you can generate reports where the AP firmware version is lesser than 2.0 and AP Model is R700.
9. Click **OK**. A report is generate based on the options configured.

You can also save the report periodically. For more information see, [Saving Reports and Generating Reports](#) on page 64

Saving Reports and Generating Reports

You can periodically save the reports that you generate.

1. From the Reports Option area, click **Save**.
The **Generate Report** page appears.

FIGURE 28 Saving and Generating a Report

2. In Name, provide the name of the report.
3. In Generate File, select the format in which you want to generate the report. Options include PDF and CSV.
4. In Frequency, select how often you want the report to be generated. Options include Hourly, Daily, Weekly and Monthly.
5. Enable the **FTP** and **Email Address** check boxes based on where you want to save the generated report.
6. Click **OK**.

A message is displayed confirming the report is saved. The report is listed in the **Saved Report** area now.

Generating an AP Report

You can generate reports for APs to analyze their health and performance.

1. After you to login to the Web interface, select **Reports** from the menu in the left.
The following sub-menu items appear:
 - AP
 - WLAN
 - Client
 - Rogue

- Click **AP** in the sub-menu.

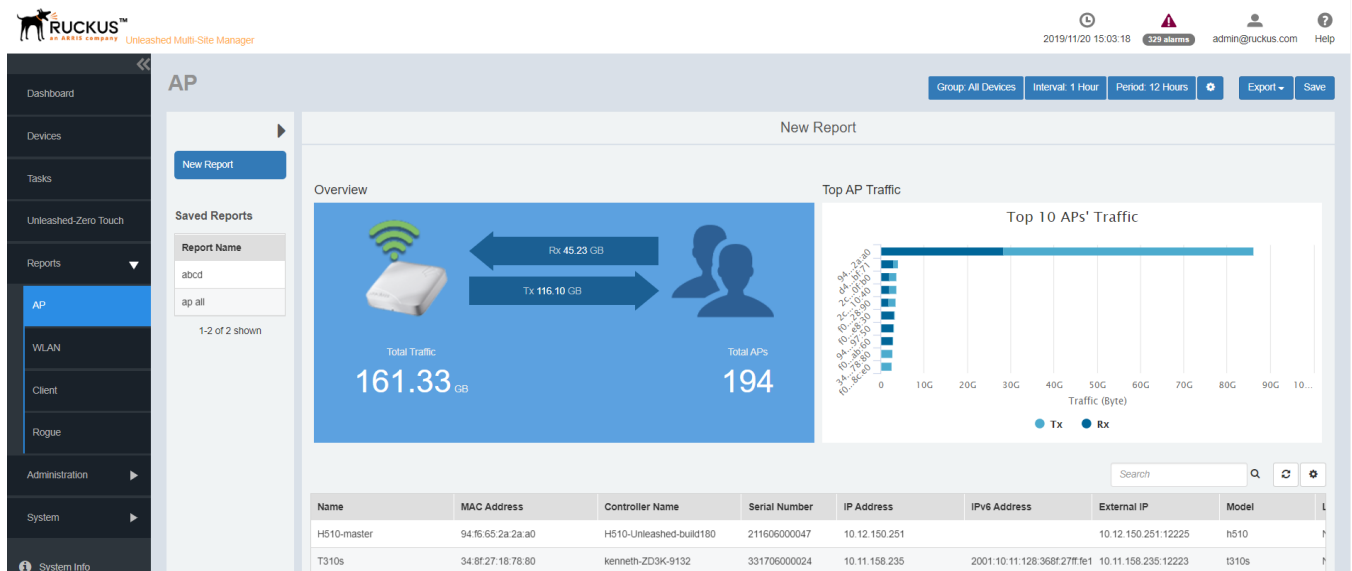

The **AP** reports page is displayed with a Set Report Option () area, Table area and a Graph area.

The Reports Option area displays the Group, Interval and Period.

The Table area displays additional information about the APs such as their name, IP address, controller name, serial ID, mesh type, tunnel mode and so on.

You can also click on **Export** and select CSV or PDF to have the reports saved as a CSV or PDF file respectively.

FIGURE 29 AP Report Page

- Configure the report settings as described in [Configuring Report Options](#) on page 63. The table area displays information about the APs such as the name, IP address, Model, Mesh type, Controller and so on. The Graph area displays trends pertaining to the APs performance such as top 10 APs by traffic, traffic analysis of APs based on their model, clients, firmware, AP count and so on.
- Generate the report as described in [Saving Reports and Generating Reports](#) on page 64.

Generating a WLAN Report

An WLAN report displays the number of ZoneDirector devices and APs on which a particular SSID is configured. You can also view graphs of associated clients, received traffic, and transmitted traffic per SSID.

- After you to login to the Web interface, select **Reports** from the menu in the left. The following sub-menu items appear:
 - AP
 - WLAN
 - Client
 - Rogue

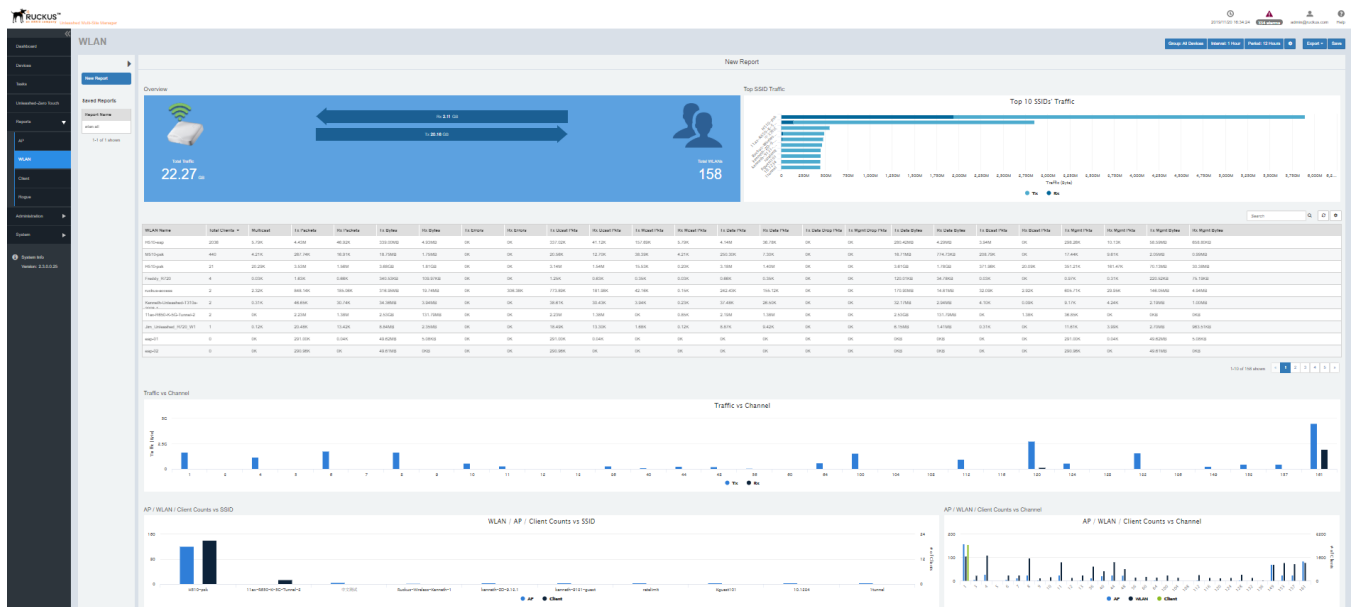

2. Click **WLAN** in the sub-menu.

The **WLAN** reports page is displayed with a Set Report Option () area, Table area and a Graph area.
The Reports Option area displays the Group, Interval and Period.

The Table area displays additional information about the WLANs such as their name, IP address, total clients, multicast information, Tx/Rx packet information and so on.

You can also click on **Export** and select CSV or PDF to have the reports saved as a CSV or PDF file respectively.

FIGURE 30 WLAN Report Page

3. Configure the report settings as described in [Configuring Report Options](#) on page 63.
The table area displays information about the WLANs such as the name, TX/Rx packets, clients, Tx/Rx unicast packets, Tx/Rx errors, Tx/Rx data packets and so on. The Graph area displays trends such as top 10 SSID by traffic, traffic analysis of WLAN based on their client count, channel, 15 min intervals and so on.
4. Generate the report as described in [Saving Reports and Generating Reports](#) on page 64.

Generating a Client Report

You can generate reports for clients to analyze their health and performance.

1. After you to login to the Web interface, select **Reports** from the menu in the left.
The following sub-menu items appear:
 - AP
 - WLAN
 - Client
 - Rogue

2. Click **Client** in the sub-menu.

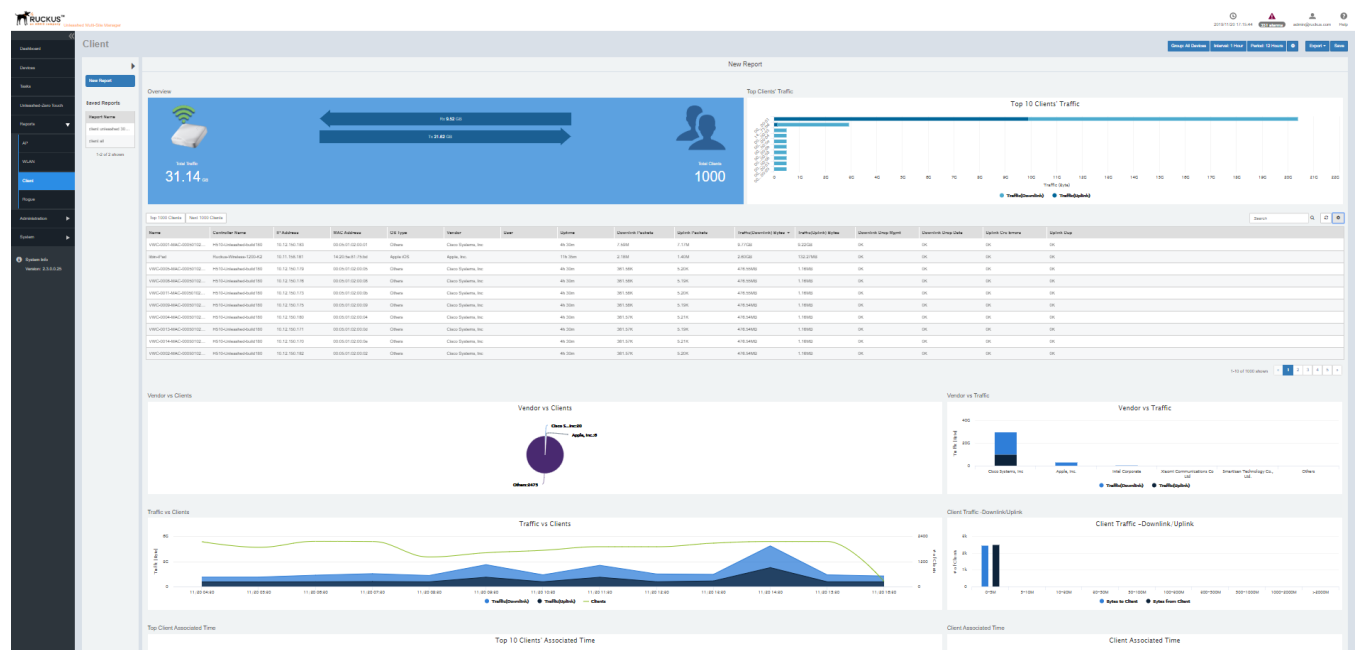

The **Client** reports page is displayed with a Report Option area, Table area and a Graph area.

The Reports Option area displays the Group, Interval and Period.

The Table area displays additional information about the clients such as their name, IP address, OS type, Controller Name and so on. You can also view the list of clients by the top 1000 clients and next thousand client. You can click on **Top 1000 Clients** and **Next 1000 Clients** to view the same.

You can also click on **Export** and select CSV or PDF to have the reports saved as a CSV or PDF file, respectively.

FIGURE 31 Client Report Page

3. Configure the report settings as described in [Configuring Report Options](#) on page 63.
The table area displays information about the client such as the name, IP address, OS type, vendor, Controller Name and so on. The Graph area displays trends pertaining to the clients performance such as top 10 clients by traffic, traffic analysis of clients based on their vendor, associated time, potential throughput, OS, and so on.
4. Generate the report as described in [Saving Reports and Generating Reports](#) on page 64.

Generating Reports for Rogue Devices

You can generate a Rogue report showing all current and past detected Rogue devices over the report period.

1. After you login to the Web interface, select **Reports** from the menu in the left.

The following sub-menu items appear:

- AP
- WLAN
- Client
- Rogue

2. Click **Rogue** in the sub-menu.

The **Rogue** reports page is displayed with a Report Option area, Table area and a Graph area.

The Reports Option area displays the Group and Filters. Refer the illustration below.

FIGURE 32 Rogue Report Options

Report Options

Group: All Devices

Filters

Filter Rows Where: Rogue AP BSSID is [] and +

OK Cancel

The Table area displays additional information about the rogue devices such as their BSSID, SSID, type, channel, radio, encryption and so on.

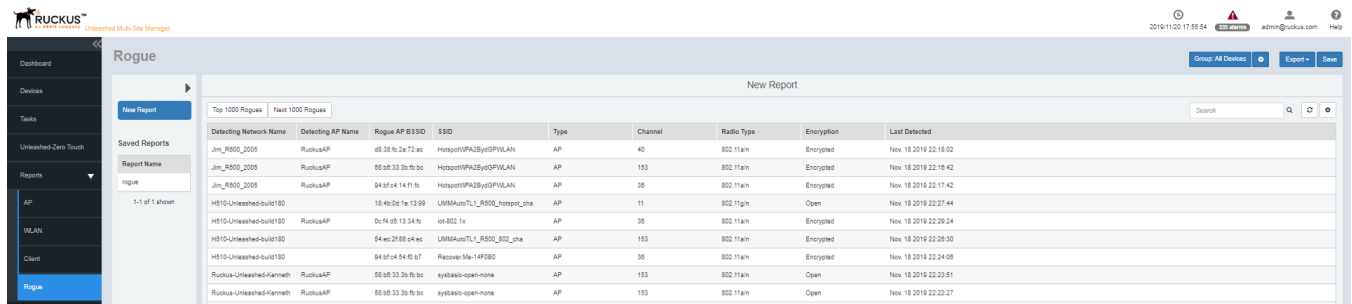

You can also click on **Export** and select CSV or PDF to have the reports saved as a CSV or PDF file respectively.

The options **Top 1000 Rogues** and **Next 1000 Rogues** displays the list of top 1000 and next 1000 rouges devices detected thus far respectively.

The page typically displays following information about the rouge device that's detected:

- Detecting Network Name
- Detecting AP Name
- Rouge AP BSSID
- SSID
- Type
- Channel
- Radio Type
- Encryption
- Last Detected

FIGURE 33 Rogue Report Page

3. Configure the report settings as described in [Configuring Report Options](#) on page 63.
The table area displays information about the rogue devices such as the BSSID, type, channel, radio, encryption and so on.

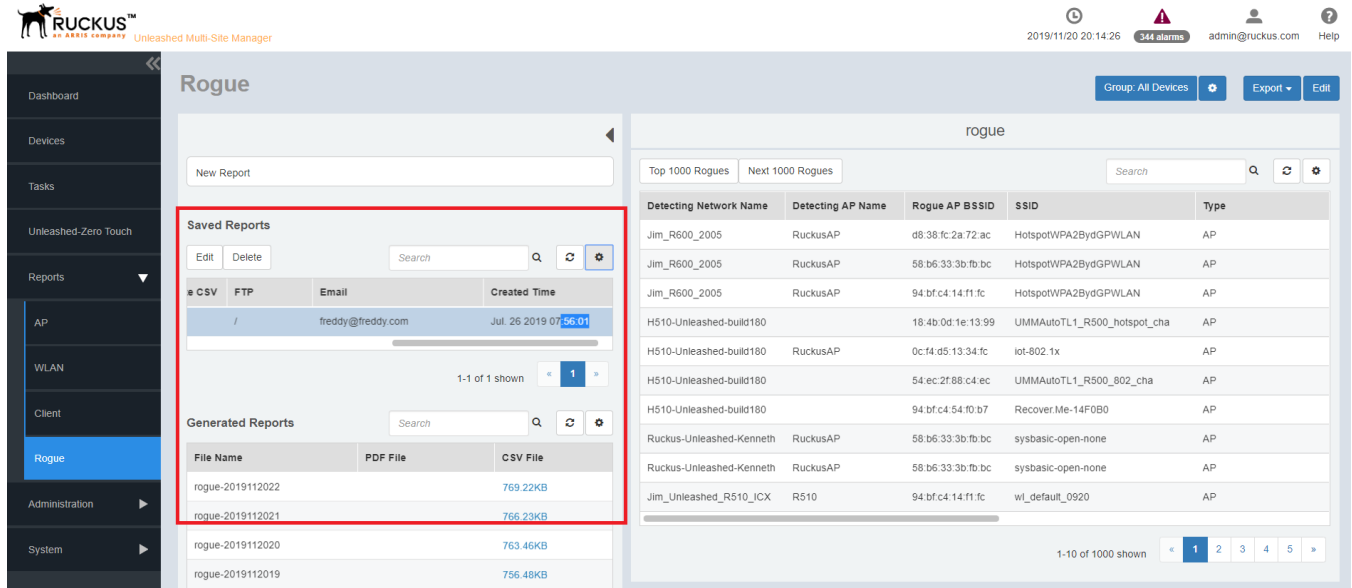

Viewing Saved Reports

The Saved Reports page displays reports that you have previously configured and saved.

1. After you to login to the Web interface, select **Reports** from the menu in the left.
The following sub-menu items appear:
 - AP
 - WLAN
 - Client
 - Rogue

- Click any of the sub menu.
The **Saved Reports** reports is appeared in the middle pane.

FIGURE 34 Saved Report Page

The first table lists all the reports generated and saved. Its displays the following information about the saved reports.

- Report Name: displays the name of the report.
- Frequency: displays how periodically the report was configured to generate.
- Generate PDF: displays Yes if the report was saved as a PDF.
- Generate CSV: displays Yes if the report was saved as a CSV.
- Email: displays the email address provided while saving the report.
- FTP: displays the FTP location where the report is saved.
- Created Time: displays the time when the report was saved.

The second table display the following:

- File Name: displays the name of the report file name
- PDF File: displays the size of the generated PDF. You can download the PDF by clicking the file.
- CSV File: displays the size of the generated CSV. You can download the CSV by clicking the file.
- Created Time: displays the time when the report was generated.

- Configure the report settings as described in [Configuring Report Options](#) on page 63.

Performing Administrative Tasks

- The Administer Tab..... 73
- Viewing Audit Logs..... 73
- Managing Software Licenses.....77
- Managing User Accounts.....79
- Managing SSL Certificates..... 83
- Upgrading the Software.....88
- Backing Up and Restoring the Database from the Web Interface..... 90
- Generating Support Information.....94
- Manually Transferring Files..... 96

The Administer Tab

The **Administer** tab provides options for viewing audit logs, updating the software license file, performing user management, and other administration functions.

Viewing Audit Logs

Audit logs describe configuration actions that were performed on the software and identify the users who initiated each action. Auditing is an important function that can help you determine when a configuration change was made and by whom in order to troubleshoot possible issues. The log is shown as per time sequence.

The Audit Log page displays the following:

- **Audit Type:** describes the user action that was performed such as a user logging off and so on.
- **Severity:** describes the severity of the event as High, Low and Normal.
- **Time:** displays the time when the event took place.
- **User:** displays the email ID or name of the user who initiated the event.
- **Message:** displays user notes included while initiating the event.

The following table lists the entries that can appear in the audit logs.

TABLE 10 Audit Log Entries

Audit Type	Description
Task creation error occurred	User created a provisioning task but it failed.
Configuration upgraded	User created a configuration upgrade task.
Firmware upgraded	User created a firmware upgrade task.
Device rebooted	User created a reboot task.
Device reset to factory default	User created a factory reset task.
Configuration settings updated	User updated a device's configuration from the Device View.
User logged in	User logged into the software Web interface.
User failed to log in	User failed to logged into the software Web interface.
User logged out	User log out of the software Web interface.
User account created	Administrator created a new user account.

TABLE 10 Audit Log Entries (continued)

Audit Type	Description
User account updated	Administrator updated a user account.
User account deleted	Administrator deleted a user account.
Device log file retrieved	User retrieved an AP's log file from the Device View.
Device log file emailed	User sent out an AP's log file via email.
Device ping test performed	User performed a PING test from the Device View.
VLAN settings updated	User updated the AP's VLAN settings from the Device View.
Audit log emailed	User sent out software's audit log via email.
License file verification	The maximum number of devices supported by your software license has been reached. To manage additional devices, contact your Ruckus Sales representative and obtain a license for additional devices.
License file uploaded	User uploaded a new license file into the software.
Device registered	A device registered with the software.
Inventory file imported	User imported an inventory file (XLS) into the software.
Firmware file imported	User uploaded new firmware image files.
Configuration template created or updated	User edited the configuration template.
Device group created or updated	User created or updated the device group.
Device tag created or updated	User created or updated a tag name.
Task cancelled	A user-created task has been cancelled.
Approval mode updated	User updated the AP approval mode on the Inventory page
New event occurred	User created a new event.
Auto configuration rule created	User created a new auto-configuration rule.
Controller configuration obtained	User performed "obtain Controller configuration" from a controller device.
SSL certificate uploaded	User uploaded an SSL certificate to the software.
Inventory status created	User created an inventory status.
Inventory status modified	User updated an inventory status.
Inventory status assigned	User changed a n AP's inventory status.
Inventory comment assigned	User edited an AP's comment on the Inventory page.
Inventory status deleted	User deleted an inventory status.
Controller configuration cloned	User created a "Clone Controller" task.
Device authenticated	UMM authenticates the device successfully.
Managed group created	User created a group for delegated management.
Managed group updated	User updated a group for delegated management.
Managed group deleted	User deleted a group for delegated management.
Managed group device(s) added	User assigned devices to a managed group.
Managed group device(s) removed	User removed devices from a managed group.
User group mapping updated	User changed the "user account" and "managed group" mapping.
User logged in via the Northbound interface	A 3rd party system logged into the software via the Northbound interface.
User logged out via the Northbound interface	A 3rd party system logged out of the software via the Northbound interface.
Northbound interface operation invoked	A 3rd party system invoked the Northbound interface.
Upgrade script started	User installed a patch on the software server.
Upgrade successful	User patched the software successfully.
Upgrade failed	User patch for the software failed.

TABLE 10 Audit Log Entries (continued)

Audit Type	Description
ZoneDirector could not be reached	The software could not reach a managed ZoneDirector.
Task deleted	User deleted a task.
Task restarted	User restarted a failed task.
Automatic report created or updated	User created an automatic report.
Automatic report emailed success	Automatic report is emailed successfully.
Automatic report emailed failed	Automatic report email is failed.
System log emailed	System log is emailed.
Connectivity of devices emailed	Connectivity of devices is emailed.
Connect to Controller fail	The software not able to connect to controller.
A new Controller template created	User creates a new controller template.
A Controller template updated	User updates a controller template.
A Controller template deleted	User deletes a controller template.
Automatic report ftp uploaded success	Saved report is successfully uploaded to FTP server.
Automatic report ftp uploaded failed	Saved report fails to upload to the FTP server.
Automatic report local file saved	User saves Automatic report local file.
Alarm notification emailed	UMM has send out the alarm via email.
Backup database	Backup the database by the User.
Restore database	Restore the database by the User.
Purge job failed	Purge job is failed.
License delete	User can delete a license.
Group create	User can create a group.
Group modify	User can modify a group.
Group delete	User can delete a group.
Device settings modify	User can modify the device settings.
Device delete	User can delete a device.
Device edit wlan	User can edit the controller's WLAN.
Device block	User can block the device.
Device unblock	User can unblock the device.
Device backup	User can backup the device.
Device restore	User can restore the device.
Device upgrade	User can upgrade the device.
Rule create	User can create a rule.
Rule update	User can update a rule.
Rule delete	User can delete a rule.
Rule import	User can import a rule.
Zero touch backup file upload	Zero Touch Deployment Unleashed configuration file is uploaded to UMM.
Zero touch backup file delete	Zero Touch Deployment Unleashed configuration file is deleted from UMM.
Report create	User can create a report.
Report update	User can update a report.
Report delete	User can delete a report.
Report generate	User can generate a report.

TABLE 10 Audit Log Entries (continued)

Audit Type	Description
Cert update	User can update a certificate.
Cert import	User can import a report.
Cert Restore	User can restore a report.
Device Registration	User can register a device.
Maps Settings	Map setting is changed.
Device Backup	User can backup a device.
Memory Optimization Settings	Memory Optimization Settings is changed.
UE Session Settings	UE Session Settings is changed.
Security Code	Security code is reset.
Logo Settings	Logo Settings is changed.
SMTP Settings	SMTP Settings is changed.
Purge policy	Purge policy is changed.
Tacacs+ Settings	Tacacs+ Settings is changed.
FTP Settings	FTP Settings is changed.
SNMP V2 Settings	SNMP V2 Settings is changed.
SNMP V3 Settings	SNMP V3 Settings is changed.
SNMP Trap Enable Settings	SNMP Trap Enable Settings is changed.
SNMP Trap Settings	SNMP Trap Settings is changed.
Events & Alarms selection	Alarm Event selection settings is changed.
Flexera server setting	UMM licenses is changed via Flexera server.
Download system full logs	System full logs are downloaded.
Alarm Light Setting	Alarm Light Setting is changed.
Alarm Email Notification	Alarm Email Notification is changed.
User Customized Alarm	User Customized Alarm is changed.
Alarm Event Selection	Alarm Event Selection is changed.
Alarm Acknowledge	User acknowledges the alarm.
Event configuration create	User can create an event configuration.
Event configuration update	User can update an event configuration.
Event configuration delete	User can delete an event configuration.
Event configuration assign controllers	ZD is assigned to an Event configuration group.
Task create	User can create a task.
Task update	User can update a task.
Task delete	User can delete a task.
Download backup file	User can download a backup file.
Saved backup file	User can save a backup file.
Backup file ftp uploaded success	User successfully uploaded a backup file ftp into the software.
Backup file ftp uploaded failed	User failed to upload a backup file ftp into the software.
User create	User can be created.
User update	User can be updated.
User delete	User can be deleted.
Device redirect	User is redirected from UMM to devices.

TABLE 10 Audit Log Entries (continued)

Audit Type	Description
Add indoor map	Indoor map is added.
Update indoor map	Indoor map is updated.
Delete indoor map	Indoor map is deleted.
Switch firmware upload	User can upload a switch firmware.
Switch firmware delete	User can delete a switch firmware.
Database backup file delete	User can delete a database backup file.
User failed to log in.	User used an incorrect password to log in to the software three times.
Automatic report emailed	Automatic report has been sent out.

Managing Software Licenses

The number of Ruckus AP devices and ICX switches that the software can manage is limited by one or more license files. The AP devices can be ZD or Unleashed. Once the limit is reached, the additional devices will be set to 'license exceed status' and Unleashed Multi-Site Manager will stop monitoring or managing them. Refer to the **Administer > License** page to see how many APs and switches are currently licensed.

A fresh Unleashed Multi-Site Manager installation provides only 1 Unleashed license by default. When you upgrade the software from a FlexMaster version to Unleashed Multi-Site Manager, it provides 100 ZoneDirector licenses and 1 Unleashed license, by default.

There are three types of software licenses file- one for ZD and P300, one for Unleashed, and one for ICX. ZoneDirector license consumes Unleashed Multi-Site Manager license according to its AP license. For example, ZD3500 will consume 500 licenses even when the 500 APs are not managed by Zone Director.

Unleashed license consumes software license according to its connected AP number. The unleashed license is updated whenever the software receives the information message from unleashed but the unleashed AP connect status is updated every 15 mins. So, there is a gap between the software update the Unleashed license (every 1 to 60 mins) and its AP connected status (15 mins). This may cause an inconsistency between connected AP and license on the web user interface.

Unleashed Multi-Site Manager will not delete the device when license expires. It just changes the status of the device which does not have enough license to *license exceed* and stops monitoring and managing them.

ICX licenses consume software license according to the number of switch units.

To enable Unleashed Multi-Site Manager to manage additional APs or switches, you need to upload at least one more license file. Use the **License** page in **Administer > License** to upload a license file.

NOTE

When managed devices consume all the available license seats that the current license file supports, an alert message appears on the License page.

FIGURE 35 License Page

The screenshot shows the 'License' page in the Ruckus Unleashed Multi-Site Manager interface. At the top, there is a navigation menu on the left and a header area with a warning message: 'Your UMM system has insufficient licenses.' The main content area displays license statistics and a table of installed licenses.

License Summary:

- UMM ID: [Redacted]
- Total ZD/Bridge AP Licenses purchased: 100000000
- Licenses Consumed by ZD/Bridge AP: 1720
- Remaining ZD/Bridge AP Licenses: 9998280
- Total Unleashed Licenses Purchased: 100001
- Licenses Consumed by Unleashed: 58
- Remaining Unleashed Licenses: 99943
- Total Switch Licenses Purchased: 2033
- Licenses Consumed by Switch: 15
- Remaining Switch Licenses: 2018

License Table:

License Key	Part Number	AP/ICX Count	Create Time	License Type	Expire Date
1495761484000	FME-1	1	May 26 2017 06:48:04	Unleashed-Official	N/A
1270080959000	ruckuswireless	100000000	Apr 01 2010 05:45:59	ZD-Official	N/A
1560994102000	unleashed10kofficial	100000	Jun 19 2019 05:58:22	Unleashed-Official	N/A
1536278079000	ICX2kofficial	2000	Sep 07 2018 05:24:39	Switch-Official	N/A
1575312492000	3ICX30days	30	Dec 03 2019 00:18:12	Switch-Trial	2020-01-02 10:50:21
1575312619000	UMM_3ICX30days	3	Dec 03 2019 00:20:19	Switch-Trial	2020-01-02 10:52:11

The page displays the total ZD, Unleashed and switch licences available and the unused ZD, Unleashed and switch licences.

NOTE

Licenses Consumed by ZoneDirectors indicates the total number of AP devices that your ZoneDirector licenses can support, not the number of APs that your ZoneDirector devices are currently managing.

When your total inventory nears the total licences purchased, you can buy a new license to add on to the maximum number; that is, a new license adds on to the previous license, and it does not overwrite the previous license. Thus, the total licenses purchased is the sum of AP counts within each license file.

Click **Delete** to remove the expired temporary licenses.

Uploading a License File

You can update your current software license by uploading additional license files using the Web interface.

1. Once you obtain a new license file from Ruckus, log in to the Unleashed Multi-Site Manager Web interface.
2. Go to **Administration > License**.
3. Click **Upload License**. The **Upload a license file** appears.
4. Click the **Drop file here or click to upload file** link.
5. Select the license file, and then click **Open**.
6. Click **OK** to upload the license file to Unleashed Multi-Site Manager.

Deleting the Expired Temporary License

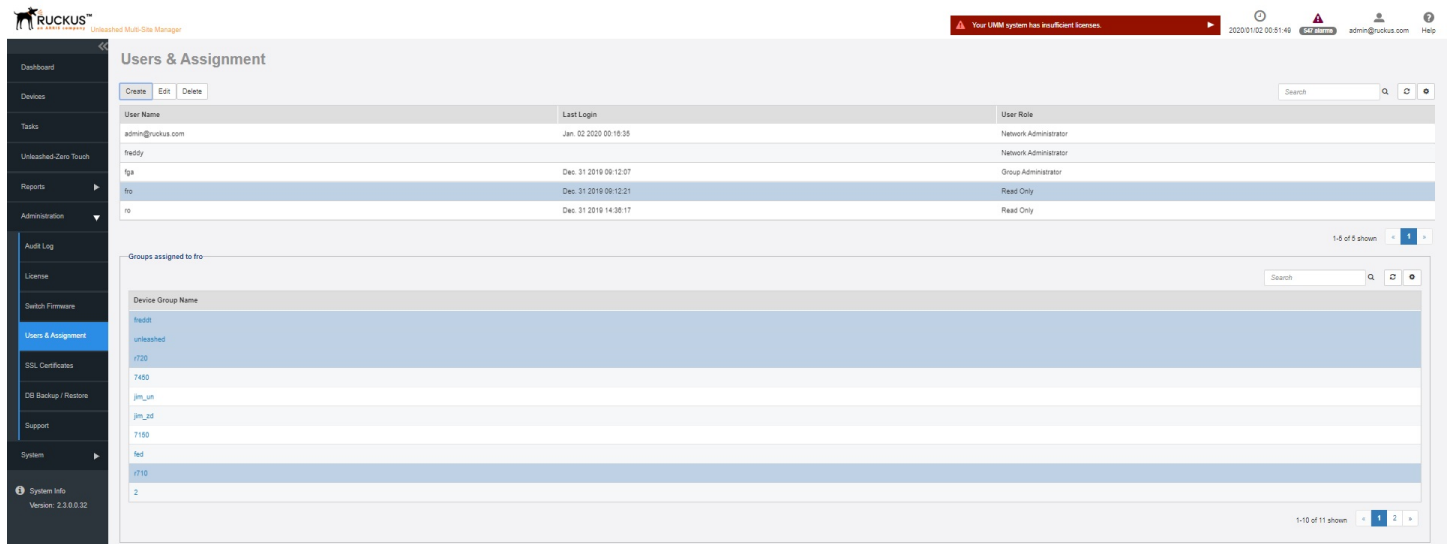

You can delete your expired temporary software license.

1. Once you obtain a new license file from Ruckus, log in to the Unleashed Multi-Site Manager Web interface.
2. Go to **Administration > License**.
3. Select the license file, and then click **Delete**.

Managing User Accounts

When you want to share or delegate device management and monitoring tasks with other users in your organization, the software allows you to create additional user accounts. You should create a new user account and assign an appropriate role for each person who uses the software. Ruckus recommends against using one login account for multiple users as doing this may not produce useful audit log results.

FIGURE 36 Users & Assignment Page

User Roles and Privileges

By default, the built-in admin account is listed; this account cannot be deleted or the User Name or User Role changed, but the password can be changed. User roles determine privileges and views available to a user within the Unleashed Multi-Site Manager system.

NOTE

There is no limit to the number of accounts that you can create for each user role.

User roles determine privileges and views available to a user within the Unleashed Multi-Site Manager system. The following are the roles that you can assign in Unleashed Multi-Site Manager:

- Network Administrator
- Group Administrator
- Read Only

Network Administrator

The Network Administrator role grants full read and write privileges to the entire Unleashed Multi-Site Manager system. The installation process creates one default Network Administrator (admin) account; this default admin account cannot be deleted or renamed.

NOTE

The default Network Administrator (also called Super User) has the highest account privilege and can auto-provisioning rules, and other user accounts (including other Network Administrator accounts).

A Network Administrator can perform the following tasks:

- Manage all devices in the Inventory.
- Create user accounts for a Group Administrators and Read Only.
- Assign devices to device management groups. These device groups can be assigned to create user accounts for a Group Administrators and Read Only.

Group Administrator

The Group Administrator role grants full read and write privileges to the assigned devices. A Group Administrator can perform the following tasks:

- Manage devices that belong to assigned groups
- Assign devices to device management groups
- View Dashboard and Inventory information related to the assigned devices
- Provision configuration upgrade tasks for assigned devices

Read Only Role

The Read Only role only grants the privilege to view assigned devices.

Users with the Read Only privilege will have a limited view of the web interface features. In this release of the software, only the Dashboard, Device and Report menus are visible. Also, only device groups assigned to the user are visible under the **Devices** menu. There are no write privileges given in this role. Read Only users can use the hyperlinks to ZD and 200.7 MR Unleashed networks. For versions of Unleashed prior to 200.7, the hyperlinks are disable for Read Only users.

Creating a New User Account

When you want to delegate the responsibility of managing the software and its managed devices to other authorized users in your organization, you can create a user account for each of them. There is no limit to the number of user accounts that you can create.

1. Go to **Administration > Users & Assignment**.

2. Click **Create**.

The **Create User** page appears.

FIGURE 37 Creating a User Account

3. In **User Name**, type a name that you want to assign to this user account. For example, you can type **john** or **john doe**. The user name is not case-sensitive and can contain up to 50 alphanumeric characters and spaces.
4. In **Password**, type a password for the account. The password is case-sensitive and can contain up to 50 alphanumeric characters.
5. Repeat the password in **Confirm Password**.
6. In **User Role**, select the role that you want to assign to this user.

The options that appear on the User Role menu depends on your own user role. If you are a Network Administrator, then the following user role appear on the menu: **Group Administrator and Read Only**.

For more information on user roles, refer to [User Roles and Privileges](#) on page 79.

7. In **Device Groups**, select the desired device group to the user.

NOTE

The select device group is only available for **Group Administrator** and **Read Only** user roles.

8. Click **OK** to create the account.

The page refreshes, and then the user account you have created appears in the **Users** list.

Editing a User Account

Edit a user account if you need to make account changes, such as the user password or the user role.

1. Go to **Administration > Users & Assignment**.

2. Find the row in the **Users** table for the desired user account to edit, and then click **Edit**.

FIGURE 38 Editing a User Account

3. Edit the following options as required:
 - **User Name**
 - **Password**
 - **Confirm Password**
 - **Assign Groups**
4. Click **OK** to save your changes.

Deleting a User Account

Delete user accounts that you no longer need to save space on the software database and prevent unauthorized users from gaining access to the the software Web interface.

1. Go to **Administration > Users & Assignment**.
2. Find the row in the **Users** table for the desired user account to delete, and then click **Delete**.

The page refreshes, and then the user account you deleted is removed from the **Users** list.

Upgrading Switch Firmware

You can upload the switch configuration file to upgrade a switch version.

Go to **Administration > Switch Firmware**

The **Switch Firmware** page appears. You can drop the file within the grey box provided. After the upgrade is completed the details of the upgrade are displayed below such as the firmware version and models supported.

FIGURE 39 Upgrading the switch firmware version

Managing SSL Certificates

When you use HTTPS to connect to the the software Web interface, a security warning appears every time you connect to the Web interface. This is because the default SSL certificate (or security certificate) that the software is using for HTTPS communication is signed by Ruckus and is not recognized by most Web browsers.

If you want to prevent these security warnings from appearing, then you need to import an SSL certificate that was issued by a recognized certificate authority such as VeriSign.

NOTE

When you upload a new certificate to Unleashed Multi-Site Manager, ensure that the root certificate is trusted by the ZD and Unleashed, else, it will break the connection between Unleashed Multi-Site Manager and ZD/Unleashed

This section describes how to generate a certificate request file to obtain an SSL certificate and how to import a SSL certificate into the software.

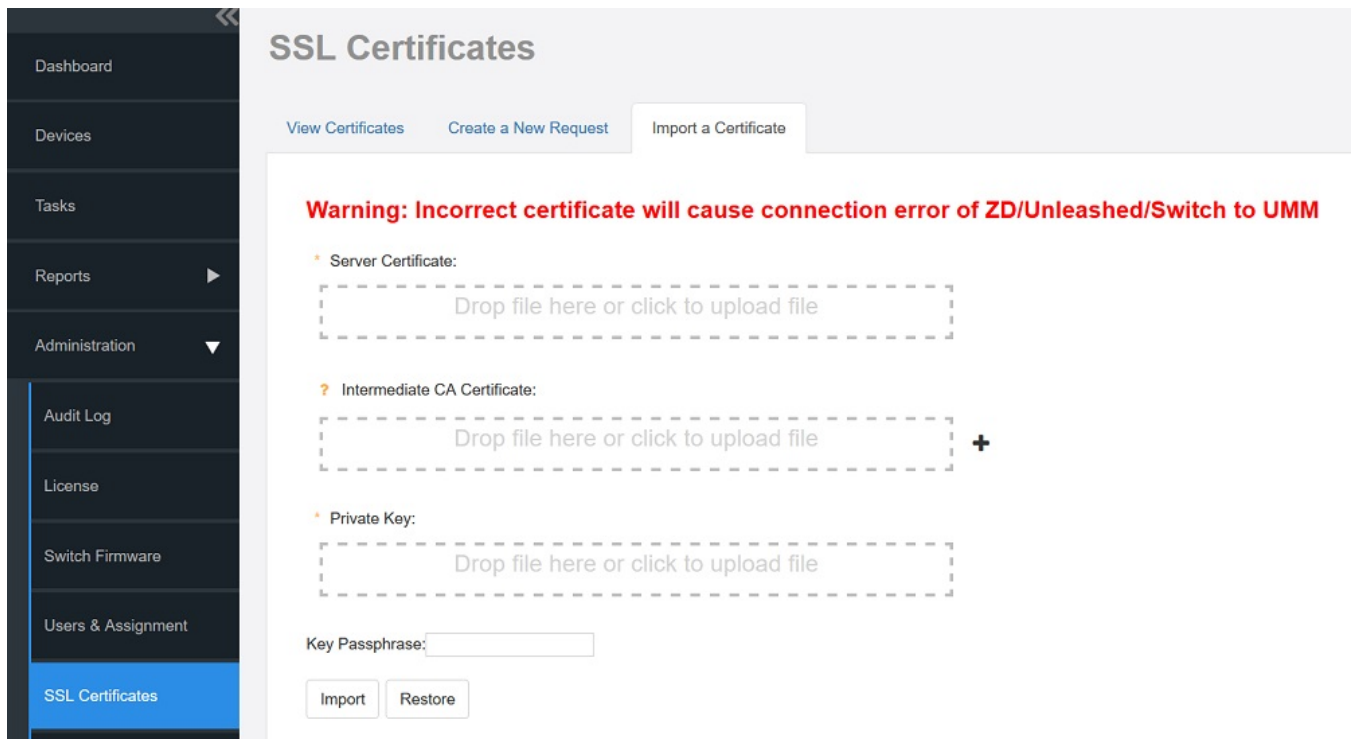

Importing an SSL Certificate

When you already have an SSL certificate, you can import it into Unleashed Multi-Site Manager and use it for HTTPS communication. To complete this procedure, you need the SSL certificate file and the key pair password that you set when you created the certificate signing request (CSR) file.

1. Go to **Administration > SSL Certificates**.

2. On the SSL Certificates page, click the **Import a Certificate** tab.

FIGURE 40 Importing an SSL Certificate

3. In **Server Certificate**, drop the file to the box provided or click the box to upload the certificate file.
4. In **Intermediate CA Certificate**, drop the file to the box provided or click the box to upload the Intermediate CA certificate file.
5. In **Private Key**, drop the file to the box provided or click the box to upload the private key.
6. Click **Import**.

A message appears, informing you that the certificate has been imported successfully. If you want to restore to the default certificate and private key, click **Restore**.

7. Click the **View Certificates** tab.

For more information, refer to [Viewing Current Certificates](#) on page 88.

Try connecting to the software Web interface using HTTPS.

Creating a Certificate Signing Request File

When you do not have a certificate, you need to create a certificate signing request (CSR) file and send it to a SSL Certificate provider to purchase an SSL certificate. The software Web interface provides a form that you can use to create the CSR file.

1. On the **SSL Certificates** page, click the **Create a New Request** tab.

FIGURE 41 Creating the Certificate Signing Request

The screenshot displays the 'SSL Certificates' management page. On the left is a dark sidebar menu with options: Dashboard, Devices, Tasks, Reports, Administration, Audit Log, License, Switch Firmware, Users & Assignment, and SSL Certificates (highlighted in blue). The main content area has a header 'SSL Certificates' and three tabs: 'View Certificates', 'Create a New Request' (selected), and 'Import a Certificate'. Below the tabs is a form with the following fields and instructions:

- Common Name:** [Text input] **The Common Name.**
- Organization:** [Text input] **The complete legal name of your organization (for example, Ruckus Wireless, Inc.). Do not abbreviate.**
- Organization Unit:** [Text input] **The department in your organization that manages network security (for example, Network Management).**
- Locality or City:** [Text input] **The city where your organization is legally located (for example, Sunnyvale).**
- State/Province:** [Text input] **The state or province where your organization is legally located (for example, California). Do not abbreviate.**
- Country:** [Text input, value: admin@ruckus.com] **The two-letter ISO abbreviation for your country (for example, if your organization is located in the United States, type US).**
- Key pair password:** [Text input, value: ●●●●●●] **The password must be at least six characters long.**
- Confirm password:** [Text input]
- Key Size:** 1024 2048 **SSL key length**

A 'Create' button is located at the bottom left of the form area.

2. In the text boxes provided, fill in the following information:
 - a) **Common Name:** Type the fully qualified domain name of your Web server.
This must be an exact match (for example, `www.ruckuswireless.com`).
 - b) **Organization:** Type the complete legal name of your organization (for example, `Ruckus Wireless, Inc.`).
Do not abbreviate your organization name.
 - c) **Organization Unit:** Type the name of the division, department, or section in your organization that manages network security (for example, `Network Management`).
 - d) **Locality or City:** Type the city where your organization is legally located (for example, `).`
 - e) **State/Province:** Type the state or province where your organization is legally located (for example, `California`). Do not abbreviate the state or province name.
 - f) **Country:** Type the two-letter ISO abbreviation for your country (for example, if your organization is located in the United States, type `us`).
 - g) **Key pair password:** Type the password that you want to use for the SSL certificate.
The key pair password must consist of at least six characters.
 - h) **Confirm password:** Retype the key pair password to confirm.
 - i) **Key Size:** Select the required key size--1024 or 2048.

ATTENTION

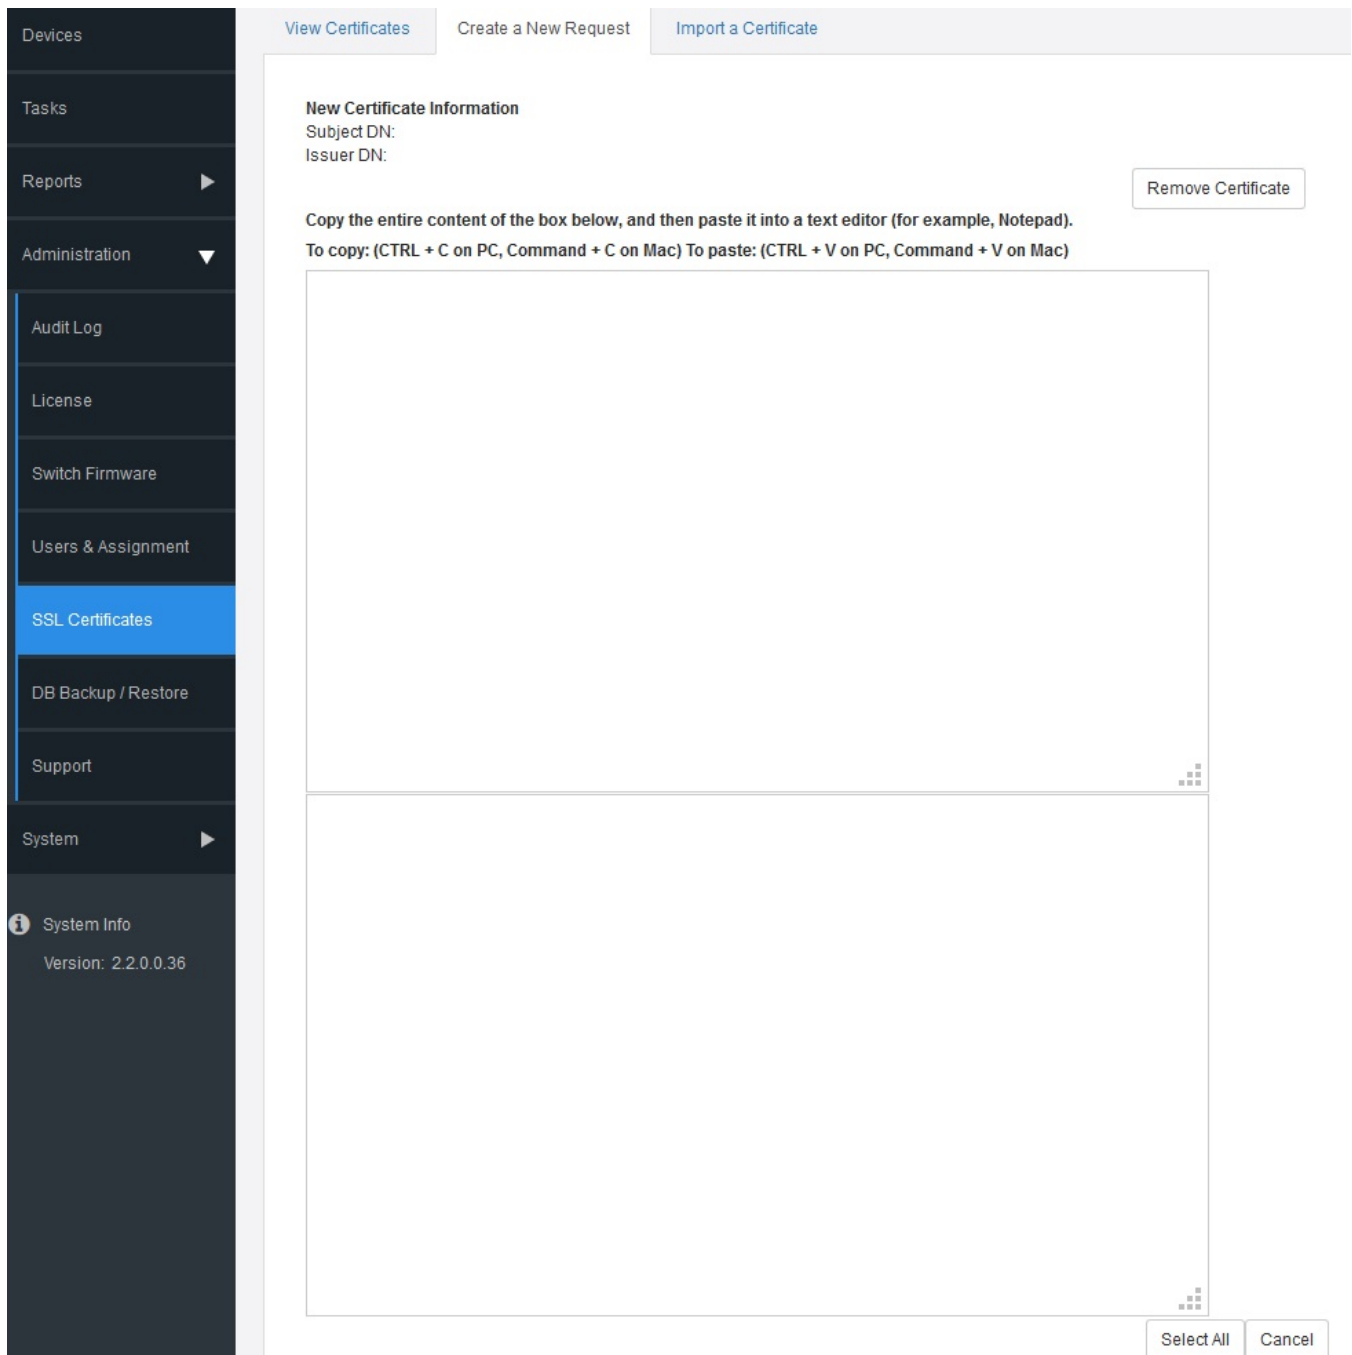

Remember the key pair password that you set in this procedure. You need to enter this password when you import the SSL certificate into Unleashed Multi-Site Manager.

3. Click **Create**.

The **New Certificate Information** page appears, displaying a summary of the certificate information that you entered. If you find any incorrect information or if you want to edit the certificate information, then click **Remove Certificate**, and then start over with Step 1. If the certificate information is correct, then continue to Step 4.

4. Click **Generate CSR**. The page refreshes, and then displays the content of the CSR.

FIGURE 42 The Default SSL Certificate on the Software

5. Copy the complete content of the CSR request, and then paste it into a text editor (for example, Notepad). Save the file.
6. Go to the SSL Certificate provider website and follow the instructions for purchasing an SSL certificate.

Viewing Current Certificates

To view the details of the certificate file that the software is currently using, click the **View Certificates** tab on the **SSL Certificates** page.

FIGURE 43 Viewing Current Certificates

Upgrading the Software

Ruckus may periodically release the software updates that contain feature enhancements or fixes for known issues. These software updates are made available on the Ruckus Support website or released through authorized channels.

Update files typically use {version number}.patch for their file naming convention (for example, 9.12.0.0.11.patch).

ATTENTION

Although the software update process has been designed to preserve all software configuration settings, Ruckus strongly recommends that you back up the software database, in case the update process fails for any reason.

1. Log in to the host server as root.
2. Insert the Unleashed Multi-Site Manager upgrade CD into the CD-ROM drive.
If the software server does not automatically mount the software CD-ROM, then continue with Step 3. If the server automatically mounts the CD-ROM, then continue with Step 5.
3. Type the following command to create a mount point (or directory where you want to mount the CD-ROM):

```
# mkdir -p /mnt/cdrom
```
4. Type the following command to mount the CD-ROM manually to the created mount point:

```
# mount /dev/cdrom /mnt/cdrom
```
5. Upload the patch file (for example, `9.12.0.0.11.patch.tar`) to the software server.
6. Copy the patch file to the Unleashed Multi-Site Manager folder `/home/UMM/`:

```
# cp 9.12.0.0.11.patch.tar /home/UMM/
```
7. Untar the patch file with following command:

```
# tar -vxf 9.12.0.0.11.patch.tar
```
8. Make sure that the `{version number}.patch` file, such as `9.12.0.0.11.patch`, has been extracted from the tar file.
9. Upgrade Unleashed Multi-Site Manager with the following command:

```
# ./upgrade.sh 9.12.0.0.11
```
10. If the software upgrade fails for any reason, then send the upgrade log file, `/home/UMM/9.12.0.0.11.patch`, and the screen dump to Ruckus Support.

ATTENTION

After installing a software update, Ruckus recommends backing up the software database so you have a backup of the updated database schema. Refer to [Backing Up and Restoring the Database from the Web Interface](#) on page 90 or [Backing Up the Database from the Command Line Interface](#) on page 24 for more information.

Recovering Unleashed Multi-Site Manager from an Unsuccessful Software Update

If the software update fails for any reason, then the software update script is designed to automatically recover and restore your previous software installation. If the auto restore process also fails, then you can still restore your previous software installation manually from the database that you backed up.

To recover your software installation manually, do the following:

1. Remove the Unsuccessful Unleashed Multi-Site Manager Installation.
2. Reinstall the Previous Unleashed Multi-Site Manager Software Version.
3. Restore the Backup Unleashed Multi-Site Manager Database.

Step 1: Remove the Unsuccessful Software Installation

1. Log in to the Unleashed Multi-Site Manager server.
2. Execute the Unleashed Multi-Site Manager uninstall script.

```
# ./uninstall.sh
```

After you execute the uninstall script, it performs the following steps:

- a) It shuts down the Tomcat server.
- b) It shuts down the MySQL server.
- c) It deletes the configuration files, and uninstalls the software services.
- d) It restores the original `/etc/my.cnf` file.
- e) It finds `/etc/my.cnf.ruckus`, and then renames it to `/etc/my.cnf`.
- f) Finally, it deletes the `/home/UMM` directory.

When the uninstall script completes deleting the `/home/UMM` directory, the uninstallation process is complete.

Step 2: Reinstall the Previous Software Version

Follow the Unleashed Multi-Site Manager installation instructions described in [Installing the Software](#) on page 19.

Step 3: Restore the Backup Software Database

Before starting this procedure, take note of the file path to the software database backup file. You need to enter this file path when you execute the restore script

Follow these steps to restore a backup copy of the software database.

1. On the Linux server, go to the software root directory (`/home/UMM`), where the database restore script is located.
2. Execute the database restore script by entering the following command:

```
# ./restore.sh
```

Press **Enter** and submit the file name. and them application begins restoring the database .

```
# [root@localhost UMM]# ./restore.sh
```

When the restore process is completed, a message appears in the command line interface, informing you that the software database that you specified has been restored successfully.

Backing Up and Restoring the Database from the Web Interface

You can also perform database backup from the Web interface. This section describes how to use the Web interface to perform manual and scheduled database backup. It also describes how to restore the software database from a backup file.

Backing Up the Database from the Web Interface

ATTENTION

This procedure halts the software operation. Do not perform this procedure when you need the software to be operating properly.

NOTE

There are two databases running on the Unleashed Multi-Site Manager server; MariaDB and ElasticSearch. By default, Unleashed Multi-Site Manager backs up the MariaDB. You must check the **Include ES** option to backup both MariaDB and ElasticSearch.

1. Go to **Administer > Support** and record the software version number (such as 9.12.0.0.11).
2. Go to **Administer > DB Backup/Restore**.
3. Look for the **Database Backup** section.
4. In **File Name**, type a name that you want to assign to the backup file, using the format `DB_[Unleashed Multi-Site Manager version number]_[YYYY-mm-dd-hh]`. For example, the backup file name might be `DB_9.12.0.0.11 2015-06-21-02`. (Including the software version number can make it easier to upgrade and downgrade the software database files.)

Do not allow software to automatically assign a file name (in the format `DB_[YYYY-mm-dd-hh]`), because the automatically assigned file name does not include the software version number.

ATTENTION

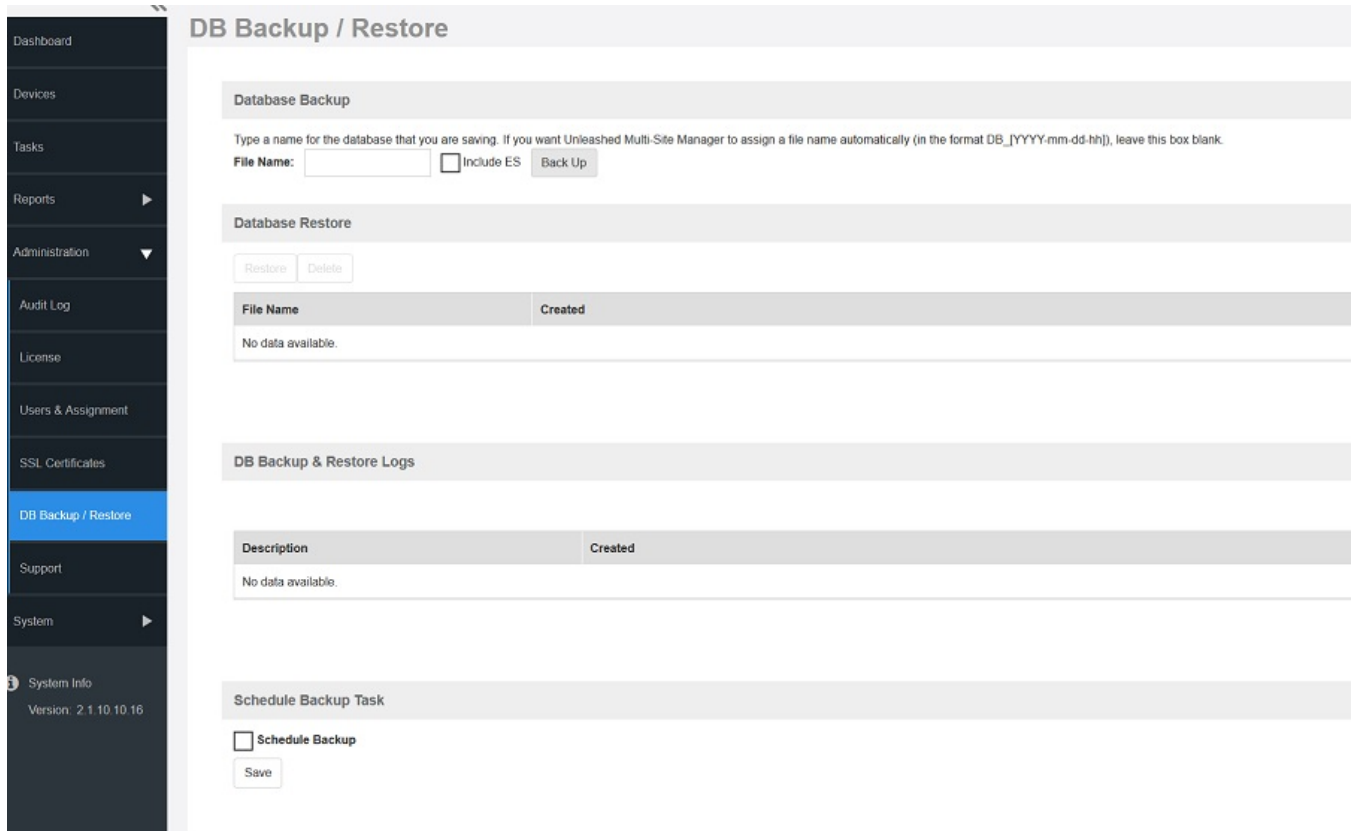

This procedure halts software operation. Do not perform this procedure when you need the software to be operating properly.

NOTE

There are two databases running on the Unleashed Multi-Site Manager server; MariaDB and ElasticSearch. By default, the software backs up MariaDB only. Ensure you select the **Include ES** option to backup both MariaDB and ElasticSearch.

5. Click **Back Up**. The **Backup Status Area** window appears and displays the progress of the backup process.

FIGURE 44 Backup Status Area Window

Unleashed Multi-Site Manager backs up its database and reboots its server. Wait for this reboot to complete, and then log back into the software web interface.

ATTENTION

Do not navigate away from the **DB Backup/Restore** page while the backup process is in progress. Doing so cancels the backup process.

You have backed up the software database.

Scheduling Database Backup

You can also configure the software to back up its database automatically based on a schedule that you set.

1. Go to **Administration > DB Backup/Restore**.
2. Look for the **Schedule Backup Task** section.
3. Select the **Schedule Backup** checkbox.
4. In **Frequency**, specify how often you want the software to automatically back up the database. Options include **Daily**, **Weekly**, and **Monthly**.

- Configure additional options for the **Frequency** option that you clicked.
 - If you clicked **Daily**, then set the **Time of Day** when you want the software to back up the database.
 - If you clicked **Weekly**, then set the **Day of the Week** and **Time of Day** when you want the software to back up the database.
 - If you clicked **Monthly**, then set the **Day of the Month** and **Time of Day** when you want the software to back up the database.
- Click **Save**.

You have completed configuring the software to back up its database automatically.

Viewing and Deleting Database Backup Files

- Go to **Administration > DB Backup/Restore**.
- Look for the **DB Backup and Restore Logs** section.

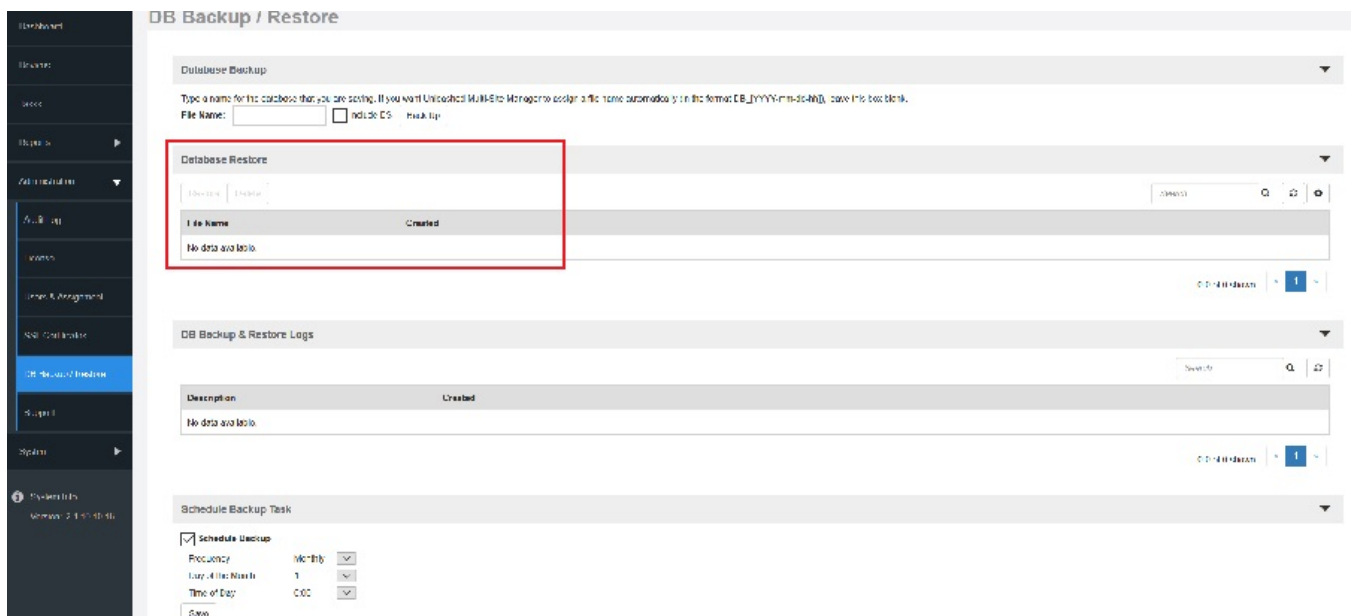

A table appears, displaying the file names of the database backup files and the dates when they were created.

- To delete a database backup file, click the option button next to the database file name, and then click **Delete**.

Restoring a Backup Copy of the Database

- Go to **Administration > DB Backup/Restore**.
- In the **Database Restore** section, A table appears and displays the file names of the database backup files and the dates when they were created.
- Select the database file name that you want to restore and click **Restore**.

FIGURE 45 Database Restore Screen

The **Restore Status Area** window appears and displays the progress of the restore process.

4. Check the **Restore Status Area** window for the following message:

```
restore db completed...success. Please wait for system restart automatically.  
Unleashed Multi-Site Manager DB has been restored with {UMM-database-file-name}.tgz
```

5. Wait for the software login page to appear.

When the login page appears, you have completed restoring the backup database.

Generating Support Information

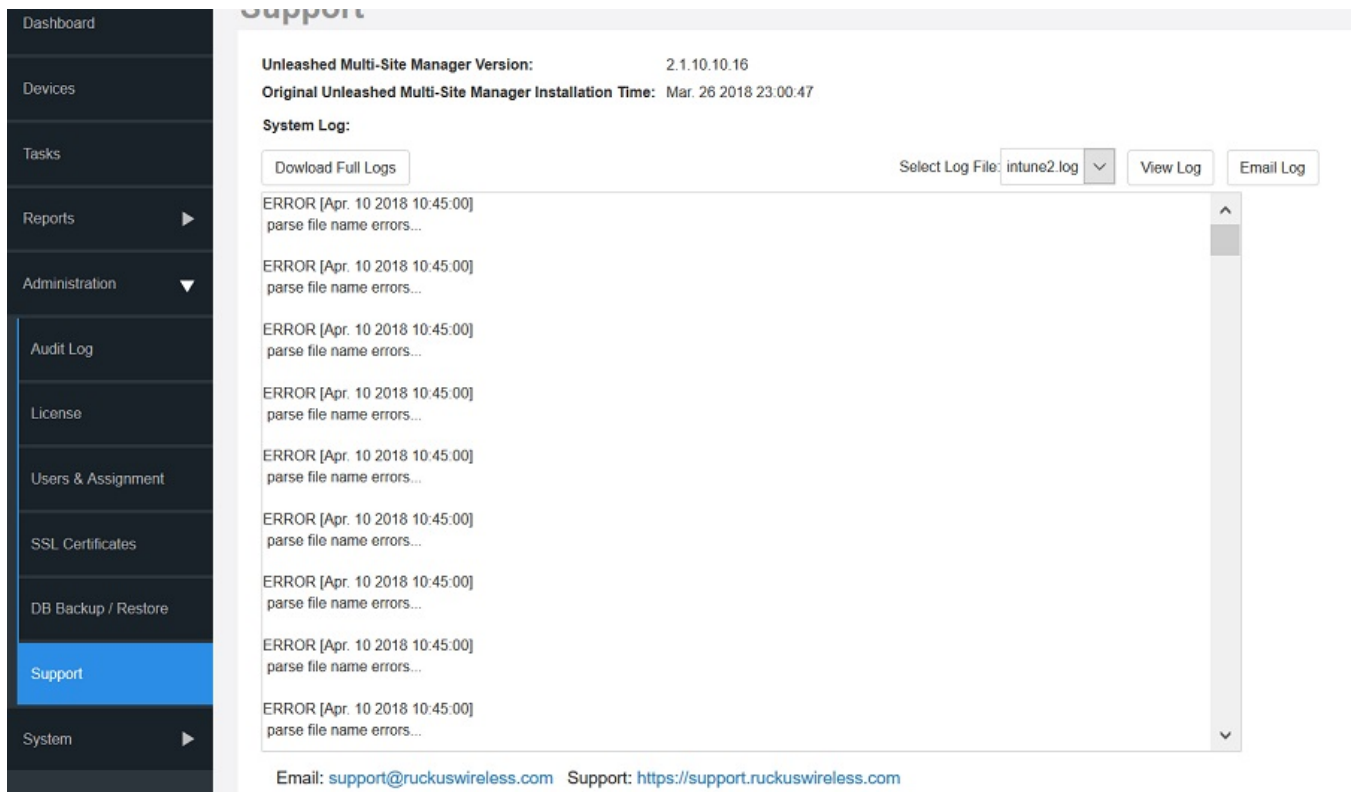

When you request technical support from Ruckus, you may be asked to collect information about Unleashed Multi-Site Manager that may help Ruckus troubleshoot the issue. You need to generate system logs.

Viewing System Logs

The system log captures information according to the file size. Unleashed Multi-Site Manager generates a new log file when the original log file size is bigger than the threshold.

1. Go to **Administer > Support**.
2. In **Select Log File**, select the required log file.
3. Click **View Log**. The log displays information from either midnight to the current time or midday to current time.

FIGURE 46 Viewing a System Log File

Downloading System Logs

1. Go to **Administer > Support**.
2. Click **Download Full Logs**.

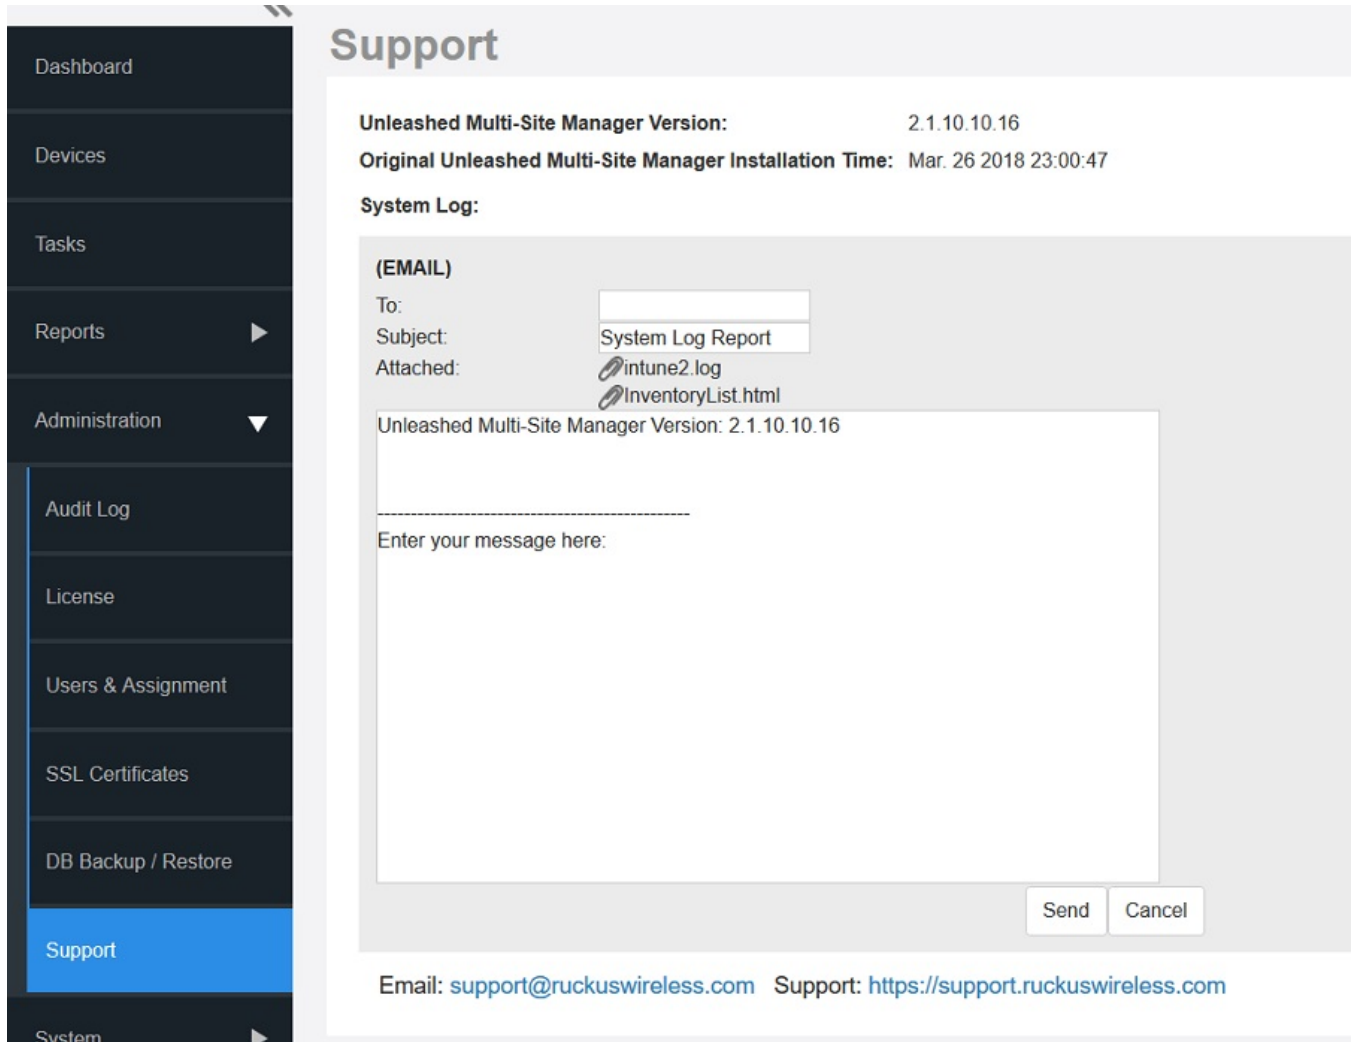

Unleashed Multi-Site Manager zips all the existing log files and downloads the `umm_logs.zip` file to your client workstation.

Emailing a Copy of the System Log File

1. Go to **Administer > Support**.
2. Click the **Email Log** button. The **System Log** form appears.
The **To** and **Subject** fields are filled out, and the system log has been added as attachment.
The **To** address must be previously configured in the System Settings. Refer to [Configuring System Settings](#) on page 99.
3. Type any information you want to highlight in the message box.

4. Click **Send** to send the email message.

FIGURE 47 Sending the System Log in Email

Manually Transferring Files

There may be times when you would like to manually transfer log and other files between a Windows workstation and a software server. Ruckus recommends that you use a free Windows file transfer tool, **WinSCP**, or equivalent, to simplify the file transfers. WinSCP can be downloaded from <https://winscp.net/eng/download.php> and installed on your Windows workstation.

To transfer files to the Windows workstation:

1. Launch WinSCP and log in with the following selections:
 - *File Protocol*: **SFTP, SCP** or **FTP**
 - *Encryption*: **None, SSL/TLS Implicit, SSL Explicit** or **TLS Explicit**
 - *Host Name*
 - *Port number*
 - *User name*
 - *Password*
 - *Account*
 - *Anonymous login*
2. In the WinSCP window, find the required files and transfer them to the Windows workstation.

The most common software log files are:

- `/home/UMM/<version number>.patch.log`
- the log files in folder `/home/UMM/logs`

After you have transferred the files, you can use them as directed by Ruckus Support.

System

- [Configuring System Settings.....](#) 99
- [Alarm Settings.....](#) 111
- [Monitoring Events.....](#) 114

Configuring System Settings

The System Settings option allows you to specify an SMTP server.

It also enables configuration of a purge policy. A purge policy establishes a length of time the software-generated files (such as logs, events, and graph data) should be maintained on the software. Once the configured length of time has been reached, files/items older than the date are purged from the software to save disk space. This prevents those files from growing interminably.

FIGURE 48 System Settings Page (part 1 of 4)

System Settings

General | SMTP | Purge Policy | Tacacs+ | FTP | SNMP

Device Registration

Automatically approve all devices Save

Maps Settings

Google Maps

Bing Maps

Enter Bing Maps API key: [Apply a Bing Maps API Key](#)

Do Not Need Maps Save

Device Backup

Max number of backup files for each device: Tips: Set reasonable number according to total Device number for disk consumption reason. Save

UE Session Settings

Enable UE Session Service: Yes No

Warning: Enabling User Equipment session can provide increased accuracy of client traffic reports, but may overload the Unleashed Multi-Site Manager database in cases where Unleashed Multi-Site Manager is managing a very large number of Devices. Save

Security Code

User's security code for public API:

Click here to show the public API document

Warning: If changed the security code, the old security code will be lose efficacy. Reset

Logo Settings

Upload Logo:

FIGURE 49 System Settings Page (part 2 of 4)

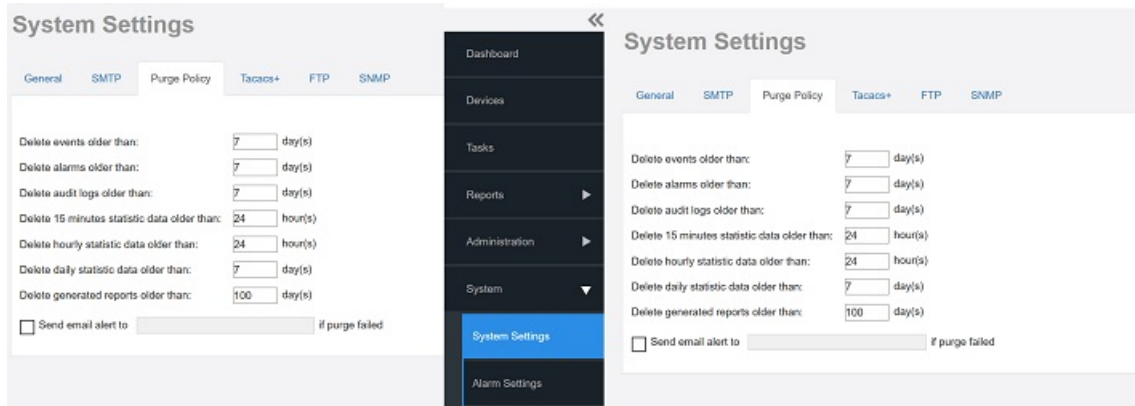

FIGURE 50 System Settings Page (part 3 of 4)

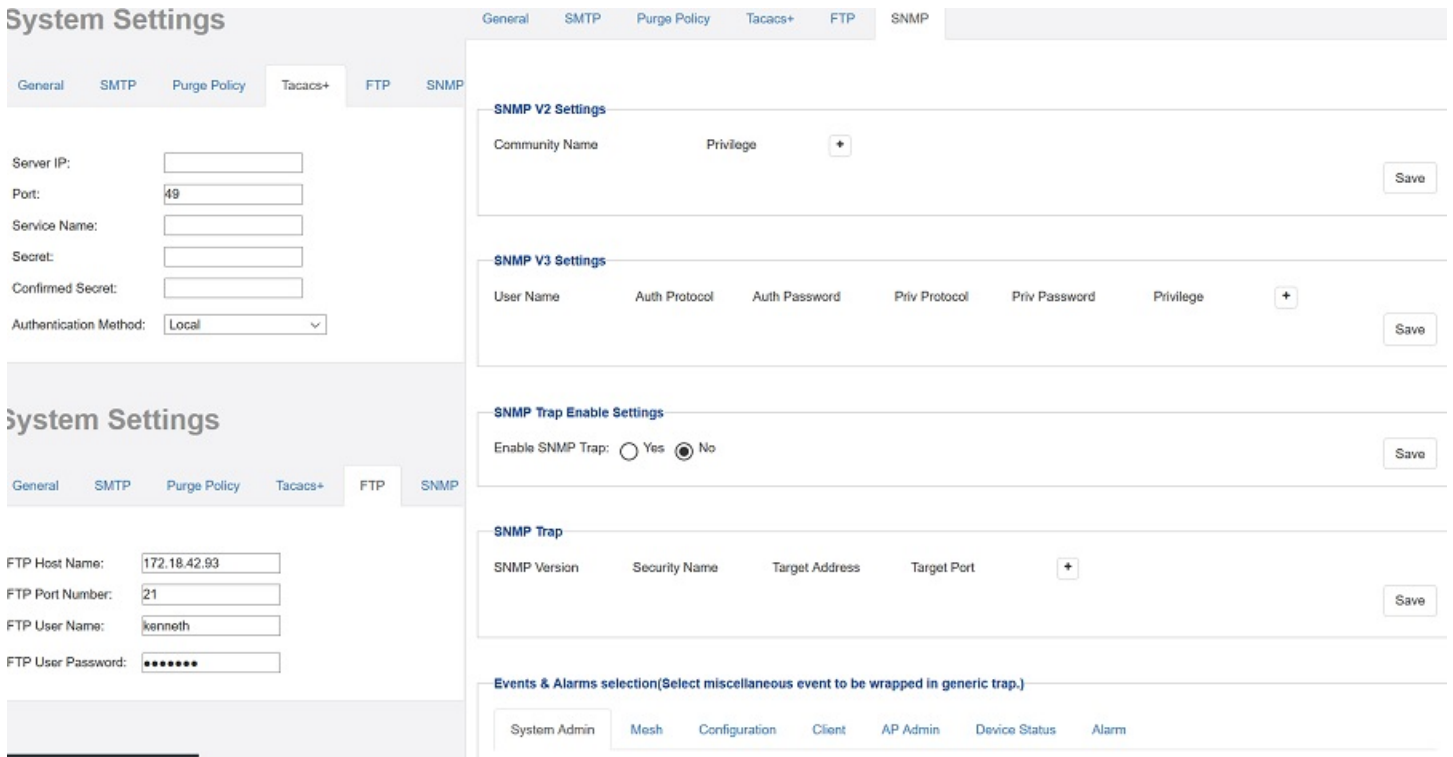

FIGURE 51 System Settings Page (part 4 of 4)

General Settings

You can configure some general settings such as device registration, map settings, ZD backup, memory optimization and so on.

Device Registration

This setting allows you to automatically approve all the newly added devices. Check the **Automatically approve all devices** check box and click **Save** to save the configuration.

Map Settings

To use the Google Maps API, you must register the software on the Google API Console and get a Google API key which you can add to the software. If you already have a Google API Map Key, type the key to establish a connection with Google Maps. You can click the **Apply a Google Maps API Key** to generate a key.

To use the Bing Maps API, you must register the software on the Bing Maps Dev Center and get a Bing API key which you can add to the software. If you already have a Bing API Map Key, type the key to establish a connection with Bing Maps. You can click the **Apply a Bing Maps API Key** to generate a key.

UE Session Settings

User Equipment (UE) session services provide better accuracy of client traffic reports. However, if the Unleashed Multi-Site Manager is managing many ZD and Unleashed controllers, then the software database can become overloaded with inputs.

Follow these steps to enable User Equipment sessions.

1. Go to **Administer > System Settings**.
2. Scroll down to the **UE Session Settings** section.
3. In **Enable UE Session Services**, select **Yes** or **No** to enable or disable User Equipment sessions, respectively.
4. Click the **Save** button that is in the same section.

Security Code

Through Public APIs, third-party software can integrate with Unleashed Multi-Site Manager managed devices, and access all the data from these devices.

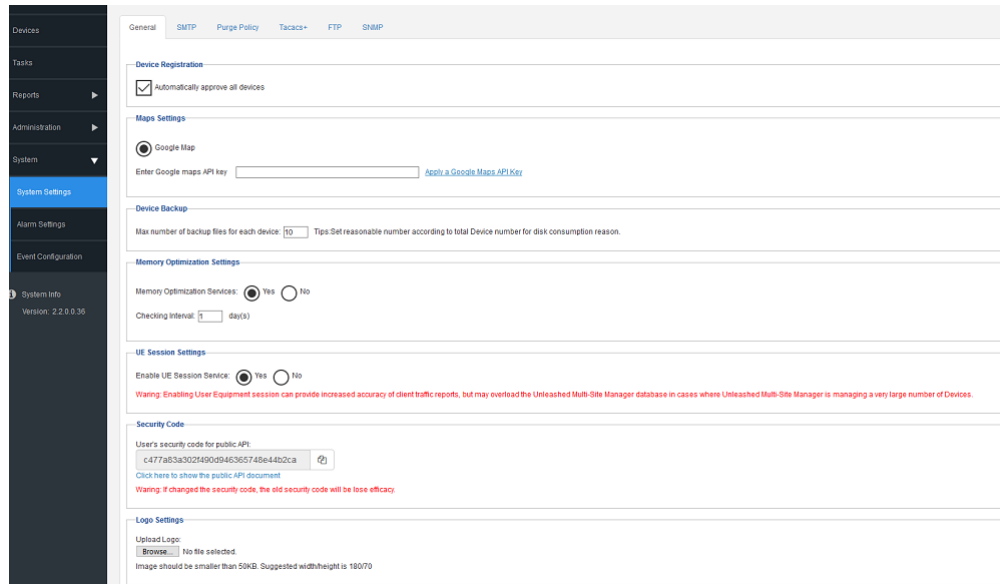

The security code is a token that you can use to communicate with the software application. This feature allows for enhanced security while attempting to access the software. The code is system generated and can be reset only by a super administrator as the Security Code is only visible to the super user (admin@domiannname).

Unleashed Multi-Site Manager provides APIs to:

- List customer created groups
- List Unleashed/ZD/P300 devices
- List detail of one device for Unleashed/ZD/P300
- List APs/clients/WLANs
- List events/alarms
- List ICX data
- Edit SSID/PSK for selected WLAN
- Enable/Disable for selected WLAN

To view the security code or edit the code if you are a super admin, go to **System > System Settings > General tab**

FIGURE 52 Security Code

Logo Settings

You can change the Ruckus logo that appears up on the upper-left corner of the Unleashed Multi-Site Manager Web interface to a different image (for example, your company logo). To do this, you need to upload an image file to replace the Ruckus logo. The image file must be smaller than 50 KB, with a recommended size of 138 by 40 pixels.

1. Prepare a 138 by 40 pixels version of your logo.
2. Go to **Administer > System Settings**.
3. Scroll down to the **Logo Settings** section.
4. Click the **Choose File** button.
5. When the **Open/Browse** dialog box appears, browse to the location where you saved the custom logo that you want to upload, and then select it.
6. Click **Open** to save your selection.
7. Click **OK** to finish uploading the custom logo file.

The Web interface refreshes, and the custom logo that you uploaded appears in place of the default Ruckus logo.

SMTP Settings

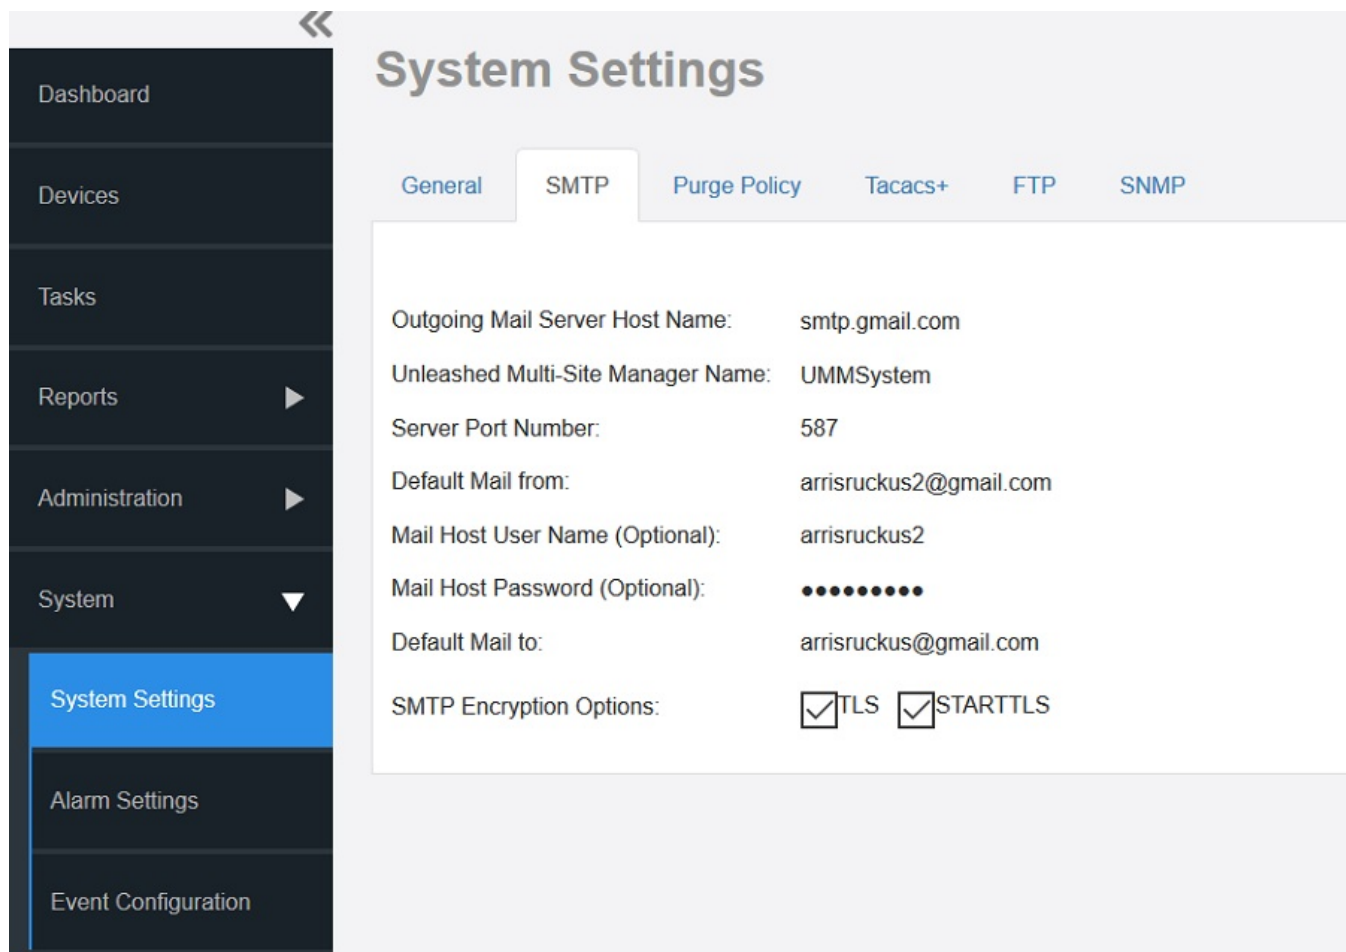

You must configure the software's host server to enable it to send email notifications. For example, the Audit Log and System Log menu items offer email options. When sending logs via email, the entire contents of these log files are sent to the preconfigured recipient (**Default Mail To**) specified on the **SMTP Settings** page.

NOTE

You may have already configured the SMTP settings during the software installation.

1. Go to **Administration > System Settings**.
2. Click **SMTP**.

FIGURE 53 SMTP Settings

3. In **Outgoing Mail Server Host Name**, type the host name of the outgoing SMTP server.
4. (Optional) In **UMM Name**, enter a new name for the software server.

5. In **Server Port Number**, type the SMTP server's listening port number.

The default SMTP port number is 25.

NOTE

. If you select TLS or STARTTLS SMTP Encryption Options, You must check the SMTP host name and port number with the SMTP service provider, and configure Unleashed Multi-Site Manager accordingly. For example, the Gmail server uses 587 as its STARTTLS port and 465 as the TLS port, and the QQ server uses 25 as its non-SSL port and 465 as its TLS port.

If your port number setting and protocol setting do not match, emails cannot be sent successfully. For example, if you select port 25 and select STARTTLS for a QQ server, testing will fail. Emails do not automatically revert to the non-TLS protocol.

6. In **Default Mail from**, type the email address that appears as the sender of the email.
7. In **Mail Host User Name (Optional)**, type the SMTP user name for the email account that you are using to send email notifications.
8. In **Mail Host Password (Optional)**, type the SMTP password for the email account.
9. In **Default Mail to**, type the email address of the user to whom you want to send email notifications.
10. In **SMTP Encryption Options**:
 - Check the **TLS** box if you want the software to use Transport Layer Security cryptographic protocol.
 - Also check the **STARTTLS** box if you want the software to use the STARTTLS extension to upgrade plain email connections to encrypted TLS connections instead of using a separate port for encrypted communication.
11. Click **Test** to verify that the software is able to use the SMTP settings that you configured to send email notifications. If an error appears, then check your settings and update them with the correct settings.
12. Click the **Save** button that is in the same section.

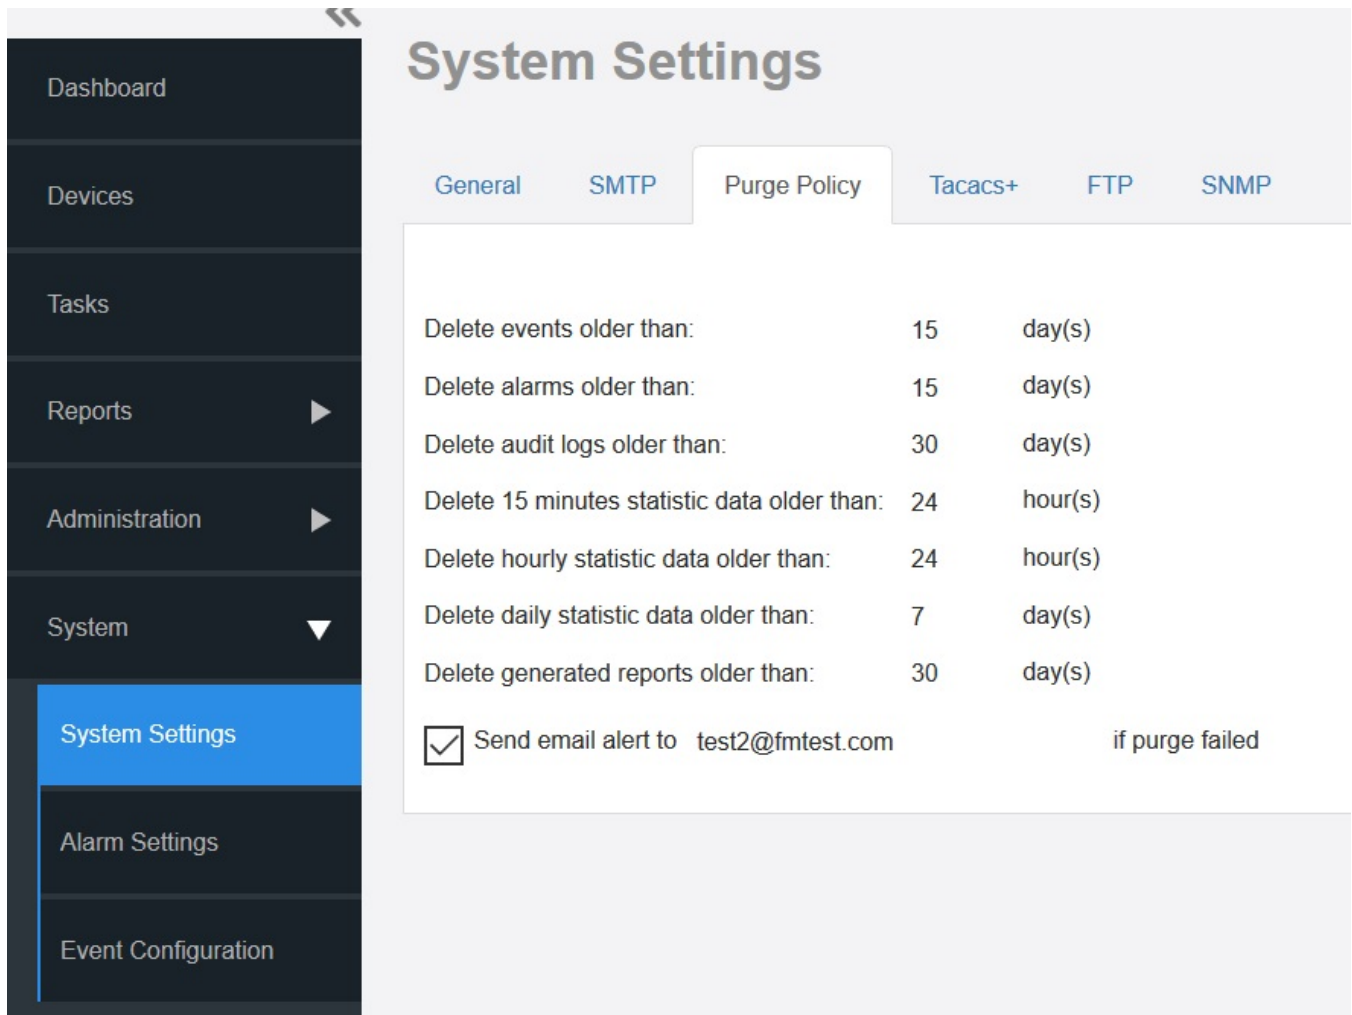

Purge Policy

Use Purge Policy to automatically delete the software event logs, audit logs, and graph data after they age past a certain number of days. This helps ensure that the software has sufficient disk space to perform tasks.

1. Go to **Administration > System Settings**.

2. Click **Purge Policy**.

FIGURE 54 Purge Policy Settings

3. Type a numerical value (all values are number of days) for one or more of the following:
 - Delete events older than
 - Delete alarms older than
 - Delete audit logs older than
 - Delete 15 minutes statistic data older than
 - Delete hourly statistic data older than
 - Delete daily statistic data older than
 - Delete generated reports older than
4. Click **Save**.
If purge fails, an email notification is sent to the email address provided.

TACACS+

TACACS+ is an access control network protocol that provides separate authentication, authorization and accounting services.

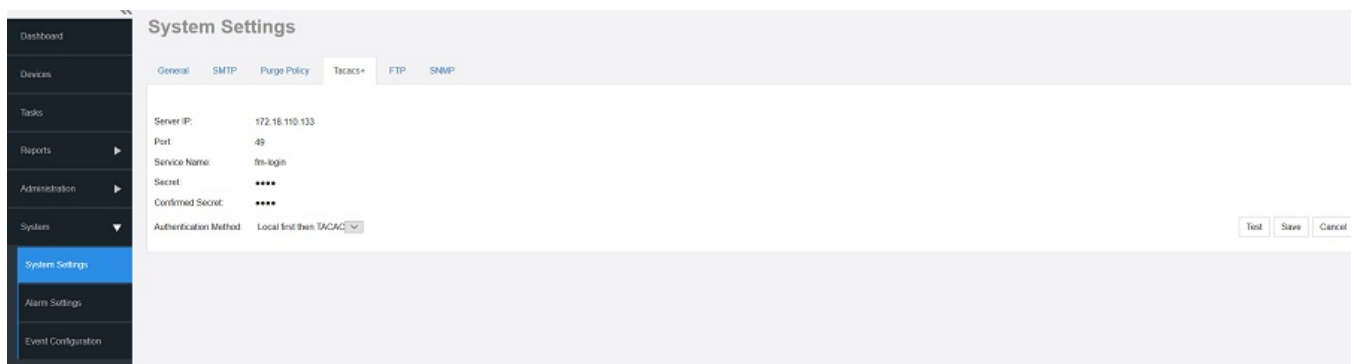

NOTE

Authentication has four modes:

- Only local (TACACS user cannot log in.)
- Only TACACS (Except the Admin user who was created when the software was installed.)
- First local then TACACS (Unleashed Multi-Site Manager will authenticate the user against the local database first and then against the TACACS server.)
- First TACACS then local (Unleashed Multi-Site Manager will authenticate the user against the TACACS server first and then against the local database.) The **Authentication Mode** affects the user login process.

1. Go to **Administration > System Settings**.
2. Click **Tacacs+** section.

FIGURE 55 TACACS+ Settings

3. Enter the TACACS+ parameters:
 - *Server* - IP or the host name of the TACACS server.
 - *Port* - The port number of the TACACS service, the default value is 49.
 - *Service Name*.
 - *Secret*.
 - *Confirmed Secret*.
4. Click **Test** to verify that the software is able to use the TACACS+ settings that you configured. If an error appears, then check your settings and update them with the correct settings.
5. Click **Save**.

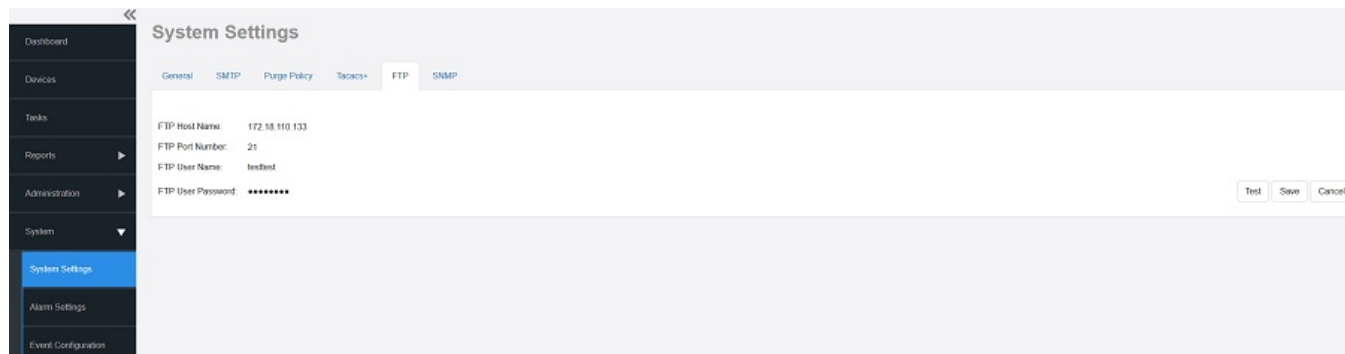

FTP Server Settings

You must configure FTP server settings for your Ruckus devices to communicate with an FTP server.

1. Go to **Administration > System Settings**.

2. Click **FTP** section.

FIGURE 56 Editing FTP Server Settings

3. Enter the FTP parameters:
 - *FTP Host Name* - IP or the host name of the FTP server.
 - *FTP Port Number* - The port number of the FTP service. The default value is 21.
 - *FTP User Name* - Login.
 - *FTP User Password* - Server password.
4. Click **Test** to verify that the software is able to use the FTP server settings that you configured. If an error appears, then check your settings and update them with the correct settings.
5. Click **Save**.

SNMP Server Settings

If you have an SNMP trap receiver on the network, then you can configure the software to send SNMP trap notifications to the server. Enable this feature if you want to automatically receive notifications for ZD, Unleashed, and client events that indicate possible network issues.

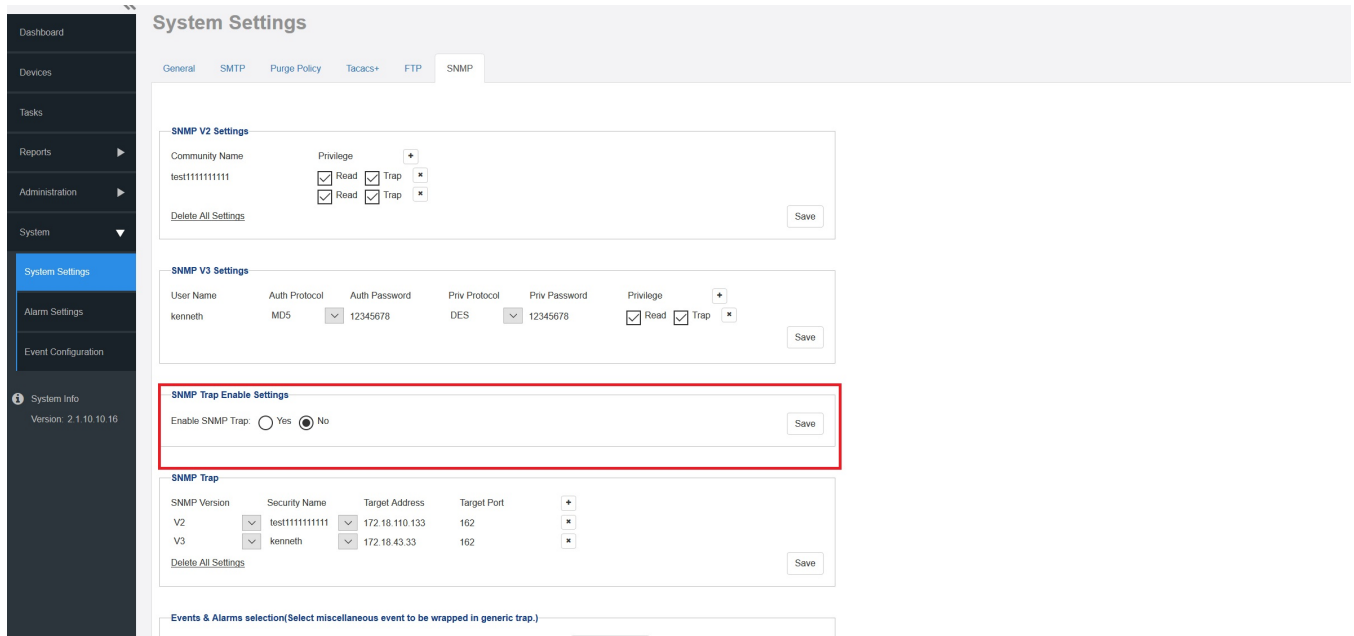

Enabling SNMP Traps

Before you can send SNMP trap notifications, you must enable SNMP trap notifications.

1. Go to **Administer > System Settings**.

2. Click **SNMP Settings**.

FIGURE 57 SNMP Configuring Settings

3. In **Enable SNMP Trap**, click **Yes** or **No**.
4. Click **save**.
5. Continue with Configuring SNMP Settings.

Configuring SNMP Settings

After you enable SNMP trap, you need to configure the SNMP v2/v3 settings, depending on the SNMP version that the SNMP trap receiver is using.

If Your Network Uses SNMPv2

1. Click the **System Settings > SNMP** tab.
2. Under **SNMPv2 Settings**, configure the following settings:
 - a) *Community*: Enter the SNMPv2 community string.
 - b) *Read*: Select this check box to enable SNMP read access.
 - c) *Trap*: Select this check box to send SNMP traps to the trap server on the network.

NOTE

To add another SNMPv2 community string, click the  icon, and then configure the community string and read and trap privileges.

3. Click **Save** to save your changes.

4. Under **SNMP Trap**, configure the following settings:
 - a) *SNMP Version*: Select **V2**.
 - b) *Security Name*: Enter the security name.
 - c) *Target Address*: Enter the IP address of the SNMP trap receiver.
 - d) *Target Port*: Enter the SNMP port number on the SNMP trap receiver.
5. Click **Save** to save your changes.

If Your Network Uses SNMPv3

1. Click the **System Settings > SNMP** tab.
2. Under **SNMP v3 Settings**, configure the following settings:
 - a) *User Name*: Enter a user name between 1 and 31 characters long.
 - b) *Auth Protocol* Select **MD5**, **SHA** or **NONE** authentication method (default is MD5).
 - *MD5* (Message-Digest algorithm 5) is a message hash function with 128-bit output.
 - *SHA* (Secure Hash Algorithm) is a message hash function with 160-bit output.
 - c) *Auth Password*: Enter a passphrase between 8 and 32 characters long.
 - d) *Priv Protocol*: Select **DES**, **AES** or **NONE**.
 - *DES* (Data Encryption Standard), data block cipher.
 - *AES* (Advanced Encryption Standard), data block cipher.
 - *NONE*: No Privacy passphrase is required.
 - e) *Priv Password*: If either **DES** or **AES** is selected, then enter a Privileged Password between 8 and 32 characters long.
 - f) *Read*: Select this check box to enable SNMP read access.
 - g) *Trap*: Select this check box to send SNMP traps to the trap server on the network.

NOTE

To add another SNMP v3 community string, click the  icon, and then configure the community string and read and trap privileges.

3. Click **Save** to save your changes.
4. Under **SNMP Trap**, configure the following settings:
 - a) *SNMP Version*: Select **V3**.
 - b) *Security Name*: Enter the security name.
 - c) *Target Address*: Enter the IP address of the SNMP trap receiver.
 - d) *Target Port*: Enter the SNMP port number on the SNMP trap receiver.
5. Click **Save** to save your changes.

Default Events for Which the Software Sends Trap Notifications

There are several event types for which the software sends trap notifications to the SNMP server that you specified.

The default event types include:

- System administration events
- Mesh events

System

Configuring System Settings

- Configuration events
- Client events
- AP Admin events
- Performance events
- Device status events
- Alarm events

Default **System Admin trap** notifications:

- ZD System Failure Recovered
- Admin restart
- Admin shutdown
- Admin upgrade
- System cold restarted
- System warm restarted

Default **AP Admin trap** notifications:

- AP delete
- AP joined
- AP joined with reason
- AP lost
- AP lost heartbeat

Default **Device status events** trap notifications:

- Connectivity problem
- Device rebooted
- Device recovers from disconnect state
- Firmware successfully written to flash

Setting Events and Alarms for Which the Software Sends Trap Notifications

If you want the software to send trap notifications for non-default events, then you need to enable trap notifications for these events.

1. In the **SNMP** section, scroll down to the **Events & Alarms selection** section.
2. Click the tab names to view the list of events from event types, and then select the check box for each event type that you want the software to send trap notifications.
3. Repeat as required.
4. Click **Save** to save your changes.

Setting User Customized Alarms

Refer to [User-Customized Alarms](#) on page 113 and [Configuring Alarm Settings](#) on page 111 for information about user-customized threshold-crossing alarms.

Alarm Settings

The **Alarms Settings** page allows you to configure email notification for alarms, edit user defined alarms and events. These functionalities are captured under three sections, namely **Email Notification**, **User Customized Alarm** and **Event Selection**.

FIGURE 58 Alarm Settings

The **Email Notification** section displays the users and their respective email addresses to which email notification are sent when alarms are generated. The section also displays the severity level of those alarms which you have opted to be notified to each user along with the time when each user was created to receive the notification.

All the available user defined alarms are displayed under the **User Customized Alarm** section.

The **Event Selection** section displays all the events which triggers the alarm. These events are categorized under the following five tabs.

- System Admin
- Mesh
- Configuration
- Client
- AP Admin
- Performance

Configuring Alarm Settings

1. Go to **System > Alarm Settings**. The **Alarm Settings** page appears.

2. Configure the **Enable Alarm Light** section. When the alarm lights are enabled, they appear on the Help and Logout bar in the upper right corner of the Web interface.
 - To enable the alarm lights (default), select **Yes**.
 - To disable the alarm lights, select **No**.

Click the **Save** button in the **Enable Alarm Light** section.

3. In the **Email Notification** section, configure the email alarm groups, including email addresses to which alarm notifications are sent and alarm severities.
 - To create a new email notification, click **Create** under the **Email Notification** section and then:
 - In **Severity Criteria**, select the check boxes for the alarm severity that you want to send notifications for: options include *Critical*, *Major*, *Minor* and *Warning*.
 - Enter the email addresses to send notifications to; use a semi-colon (;) to separate multiple email addresses.

NOTE

To edit an existing email notification entry, in **Email Addresses**, click **Edit** and then in **Severity Criteria**, select the check boxes for the alarm severity for which you want to send notifications: options include *Critical*, *Major*, *Minor* and *Warning*. Also enter the email addresses to send notifications to; use a semi-colon (;) to separate multiple email addresses. Click the **Save** button in the Email Notification section the changes.

4. From the **Select Groups** tab, select the wireless groups to be monitored from the list so that email notifications are sent for the alarms generated for these devices and click **Save**.
5. From the **Select WLAN Controller** tab, select the device to be monitored from the list so that email notifications are sent for the alarms generated for these devices and click **Save**.
6. From the **Select ICX Switch** tab, select the device to be monitored from the list so that email notifications are sent for the alarms generated for these devices and click **Save**.
7. From the **Select Alarm Type** tab, select the alarm types which you want to generate for the selected devices and click **Save**.
8. In the **User Customized Alarm** section configure the alarm types by assigning a severity level and setting a threshold value to each alarm type.

Among others, these alarms include:

- *AP # of channel changes*: Triggered when the number of channel changes per AP crosses either of the specified thresholds.
- *AP # of clients*: Triggered when the number of clients per AP crosses either of the specified thresholds.
- *AP # of reboot*: Triggered when the number of reboots per AP crosses either of the specified thresholds.
- *AP lost connection*: Triggered when an AP is continuously disconnected for the either of the specified thresholds (numbers of hours).
- *AP traffic*: Triggered when traffic on an AP crosses either of the specified thresholds (traffic in MB).
- *Unleashed Multi-Site Manager server CPU usage*: Triggered when CPU usage on Unleashed Multi-Site Manager crosses either of the specified thresholds (CPU usage percentage).
- *ZD CPU usage*: Triggered when CPU usage on a ZoneDirector crosses either of the specified thresholds (CPU usage percentage).

Click the **Save** button in the User Customized Alarm section.

9. Configure the **Event Selection** section by selecting (enabling) events that trigger alarms. Events are categorized into the following tabs:
 - System Admin
 - Mesh
 - Configuration
 - Client
 - AP Admin
10. Select each tab under the **Event Selection** section, and then select the check boxes for events that trigger alarms. You can also change the severity level that is assigned to each event.
11. Click the **Save** button in the **Event Selection** section.

You have completed configuring the alarm settings.

User-Customized Alarms

The operator can define customized threshold crossing alarms (alerts) for various events crossing operator-defined thresholds. These alarms can be sent as SNMP traps to SNMP servers, and/or via an email to a group or user, and/or to a syslog event. Refer to [Configuring Alarm Settings](#) on page 111 for configuration instructions.

Setting user customized alerts requires defining two thresholds per event type, and then activating the corresponding alarms for the event type.

For instance, if the event type is *AP # of clients* and the thresholds are 100 and 200 clients, then Unleashed Multi-Site Manager can send alarms:

- When the client count goes up to 100 (send *low-threshold alarm set TCA*)
- When the client count goes up to 200 (send *high-threshold alarm set TCA*)
- When the client count goes down to 200 (send *high-threshold alarm clear TCA*)
- When the client count goes down to 100 (send *low-threshold alarm clear TCA*)

NOTE

For any alarms to be sent, the SNMP server information and/or email system information must be configured as described in [Configuring Alarm Settings](#) on page 111 before Unleashed Multi-Site Manager can send the alarms.

Available Alarm Event Types

- *AP # of channel changes* (number of channel changes in the last hour)
- *AP # of clients* (number of concurrently connected clients)
- *AP # of reboot* (number of times in the last hour that the AP has rebooted)
- *AP lost connection* (number of hours the AP has been continuously disconnected)
- *AP traffic* (AP traffic, megabytes for the last hour)
- *Unleashed Multi-Site Manager server CPU usage* (Software CPU usage exceeds the threshold X percent 3 times continuously)
- *ZD CPU usage* (ZoneDirector CPU usage exceeds the threshold X percent 3 times continuously).

NOTE

Unleashed networks do not support the ZD CPU Usage alarm.

Monitoring Alarms

Alarms are a type of event that typically warrants your attention. Alarms are generated by managed access points and ZoneDirector devices and the software server.

Alarms vary in severity. The following are the four alarm severity levels in Unleashed Multi-Site Manager (from highest severity to lowest severity):

- Critical
- Major
- Minor
- Warning

Monitoring Events

Unleashed Multi-Site Manager keeps a record of all events that occur on the server and managed devices.

The Events section displays system events that have been reported by the managed Ruckus devices. The **List of Events** table columns include:

- **Date/Time:** When the event occurred.
- **Event Type:** Ruckus designated event title.
- **Sev:** Severity of the event.
- **Device Name:** Name of the device.
- **Activity:** A description of the event.

Event Configuration

This page displays the configured events, configured ZDs and configured task logs.

NOTE

Events can be configured only for ZD. Unleashed does not support event configuration.

FIGURE 59 Event Configuration

<input type="checkbox"/>	ID	Configuration Name	Created On	Created By
<input type="checkbox"/>	1	Default Event Configuration	May. 04 2018 15:20:50	admin@ruckus.com

The **Event Configuration** tab list all the configured events. The **Configured ZDs** tab displays all existing Zone Director devices. You can filter the displayed out put based on the selection you make from the **Select a ZD view** drop-down. This can be further filtered by creating a raw based filter query based on IP Address, IPV6 Address, Controller name, Model, and Serial Number.

Multiple filter queries can be clubbed by clicking the "+" sign against each query row. Once all your filter queries are entered, click te **Query** button on the bottem right corner of the page to run the query and fetch the result. The result is displayed in the **List of ZDs** section.

FIGURE 60 Filtering Configured ZDs

The screenshot shows the 'Configured ZDs' tab selected. At the top, there are three tabs: 'Event Configuration', 'Configured ZDs', and 'Config Task Log'. Below the tabs is a section titled 'List of ZD Configurations'. It features a 'Group:' dropdown menu set to 'All Devices'. Underneath is a 'Filters' section with a 'Filter Rows Where:' label. The filter is currently set to 'Controller Name' with a dropdown arrow, followed by 'Exactly equals' with another dropdown arrow, and an empty text input field. To the right of the input field are the words 'and' and a '+' sign in a small box. Below the filter section is a 'Query' button. At the bottom of the page, there is a table with the following headers: 'Controller Name', 'IP Address', 'IPv6 Address', 'Model', 'Serial Number', and 'Configuration'. The table body contains the text 'No data available.'

To create a new event configuration, click the **Create a New Event Configuration** button. The poge gets refreshed to display the **New Event Configuration** section.

FIGURE 61 New Event Configuration

The screenshot displays the 'New Event Configuration' interface. At the top, there are tabs for 'Event Configuration', 'Configured ZDs', and 'Config Task Log'. Below these are buttons for 'Create', 'Edit', 'Delete', and 'Assign ZDs'. A table lists existing configurations:

<input type="checkbox"/>	ID	Configuration Name	Created On	Created By
<input type="checkbox"/>	1	Default Event Configuration	May. 04 2018 15:20:50	admin@ruckus.com

Below the table is the 'New Event Configuration' section, which includes a text field for the name and a set of tabs: 'System Admin', 'Mesh', 'Configuration', 'Client', 'AP Admin', and 'Performance'. Under the 'System Admin' tab, a table lists event types with checkboxes:

<input type="checkbox"/>	Event Type	Description
<input type="checkbox"/>		
<input checked="" type="checkbox"/>	ZoneDirector mesh AP uplink dis	Uplink disconnect
<input checked="" type="checkbox"/>	Admin restarted	System restarted
<input checked="" type="checkbox"/>	Admin restart	System is restarted by administrator.
<input checked="" type="checkbox"/>	Admin shutdown	System is shutdown by administrator.
<input checked="" type="checkbox"/>	Admin upgrade	System is upgraded.
<input checked="" type="checkbox"/>	Admin replace cert	SSL certificate is being replaced by administrator.
<input checked="" type="checkbox"/>	Admin replace privatekey	Private key is being replaced by administrator.

Enter a name for the configuration in the **New Event Configuration Name** text field. All available event types are calcified under the **System Admin, Mesh, Configuration, Client, AP Admin** and **Performance** tabs. Make selections as required under these tabs and click the **Save** button on the bottom right corner of the page, to save the new configuration. The newly created configuration will now appear under the **Event Configuration** tab.

The list of task logs are displayed under the **Config Task Log** tab.

FIGURE 62 Task Logs

Configuring Unleashed Multi-Site Manager Behind the NAT Server

You can configuring Unleashed Multi-Site Manager behind the NAT Server

Ensure that the following software requirements are met before installing the software.

- CentOS release 6.5 (64 bit)
- CentOS release 7.1 (64 bit)
- Red Hat Enterprise Linux Server release 6.5 (64 bit)
- Red Hat Enterprise Linux Server release 7.1 (64 bit)

Before installing this version of Unleashed Multi-Site Manager, you must upgrade Openssl and its library to the right Linux version as specified:

- RedHat or CentOS 6.x: Openssl 1.0.1 or later
- RedHat or CentOS 7.x: Openssl 1.0.2 or later

For example, you can issue this command to upgrade Openssl version with Linux:

```
yum upgrade openssl 1.0.2
```

1. Install Unleashed Multi-Site Manager. See the *Installing and Upgrading Unleashed Multi-Site Manager* Unleashed Multi-Site Manager section of the *Unleashed Multi-Site Manager User Guide*
2. Login to the NAT server.

By default, Unleashed Multi-Site Manager uses port 9443 and 22 to bring up the SSH tunnel. Ensure you allow these ports on your firewall and map them to the Unleashed Multi-Site Manager server on your NAT server.

If Unleashed Multi-Site Manager is managing ICX switches, ports 443 and 22 are used to bring up the SSH Tunnel. These ports are not configurable on the switch, so ensure the ports are mapped to Unleashed Multi-Site Manager on the NAT server.

3. Create port forwarding rules: TCP: UMM IP: 9443, TCP: UMM IP: 443 and TCP: UMM IP: 22

FIGURE 63 Sample Port Forwarding Rule for Ports 22 and 9443

Create a new port forwarding rule

The figure displays three sequential screenshots of a 'Create a new port forwarding rule' dialog box. Each screenshot shows a form with the following fields: Application, WAN Port, LAN IP Address, LAN Port, and Protocol. The Protocol is consistently set to TCP. The first screenshot is for UMM SSH (WAN Port 22, LAN Port 22). The second is for UMM SSH Tunnel (WAN Port 9443, LAN Port 9443). The third is for UMM (WAN Port 443, LAN Port 443). All screenshots have a LAN IP Address of 192.168.1.1 and include OK and Cancel buttons.

Configuring Unleashed Multi-Site Manager In Front of NAT Server

You can configure Unleashed Multi-Site Manager in front of the NAT Server

Ensure that the following software requirements are met before installing the software.

- CentOS release 6.5 (64 bit)
- CentOS release 7.1 (64 bit)
- Red Hat Enterprise Linux Server release 6.5 (64 bit)
- Red Hat Enterprise Linux Server release 7.1 (64 bit)

Before installing this version of the software install jemalloc. Follow these steps to install jemalloc:

- Download jemalloc based on your linux version from [http://pkgs.org/download/libjemalloc.so.1\(\)\(64bit\)](http://pkgs.org/download/libjemalloc.so.1()(64bit)).
- Upload jemalloc to the software server and install it with command:

```
rpm -Uvh
jemalloc-3.6.0-1.el6.x86_64.rpm
```

Before installing this version of Unleashed Multi-Site Manager, you must upgrade Openssl and its library to the right Linux version as specified:

- RedHat or CentOS 6.x: Openssl 1.0.1 or later
- RedHat or CentOS 7.x: Openssl 1.0.2 or later

For example, you can issue this command to upgrade Openssl version with Linux:

```
yum upgrade openssl 1.0.2
```

1. Install Unleashed Multi-Site Manager. See the Installing and Upgrading Unleashed Multi-Site Manager section of the *Unleashed Multi-Site Manager User Guide*

2. Login to the NAT server.

By default, Unleashed Multi-Site Manager uses port 9443, 443 and 22 to bring up the SSH tunnel. Ensure you allow these ports on your firewall.

Configuring the 200.6 Unleashed Setup

To allow Unleashed Multi-Site Manager to monitor and manage Unleashed devices, you must enable software management in the Unleashed device and register the device with Unleashed Multi-Site Manager. This procedure is applicable for Unleashed device versions 200.6 and later.

1. Upload the Unleashed license as described in [Uploading a License File](#) on page 78.

There are two types of Unleashed Multi-Site Manager licenses files; one for ZoneDirector and the other for Unleashed. Ensure you select the correct file.

2. Generate and Apply the Unleashed ID: Each unleashed network has an ID which is automatically generated by the system. You can renew this ID by clicking **Generate** from the Unleashed web interface and then apply it to the network. The 'Unleashed ID' is reset during set factory, and overwritten when the configuration is restored (when you choose the restore option as Restore everything). Unleashed Multi-Site Manager uses the 'Unleashed ID' to identify the unleashed network, and whenever the 'Unleashed ID' is renewed or reset, Unleashed Multi-Site Manager regards it as a new unleashed device.

FIGURE 64 Generating Unleashed ID

FIGURE 65 Unleashed - Restore Configuration

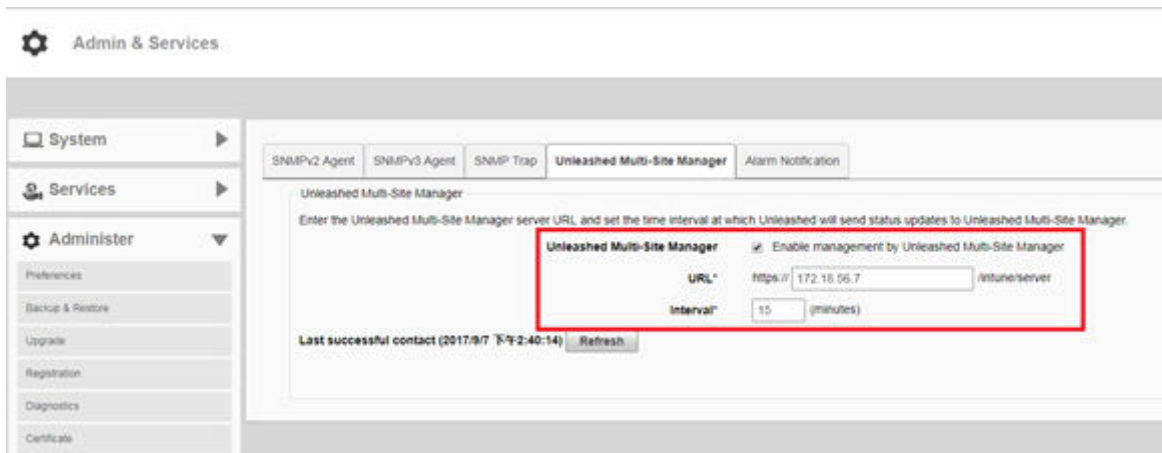

3. Enable software management from Unleashed web interface:
 - a) Go to **Admin & Services > Administer > Network Management > Unleashed Multi-Site Manager Management**.
 - b) Select the **Enable management by Unleashed Multi-Site Manager** check-box.

Configure the following:

- URL: The IP address or URL of the software server.
- Interval: the time interval (in minutes) within which the Unleashed device sends the TR069 information to Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 66 Enabling Unleashed Multi-Site Manager Management

4. Log in to the Unleashed Multi-Site Manager web interface and go to **Devices**. The Unleashed device will be registered and displayed.
5. Login to the Unleashed Multi-Site Manager web interface, and go to **Devices**.

You will see the unleashed devices.

You have successfully set up the Unleashed devices and registered the them for Unleashed Multi-Site Manager to monitor.

Configuring ZoneDirector & 200.5 Unleashed Behind NAT Server

ZoneDirector and 200.5 Unleashed do not support SSH tunnels. Therefore for these devices behind the NAT server, it is recommend to enable the Management Interface, add one 443 port mapping on the NAT server and then configure the external port to the Unleashed Multi-Site Manager.

1. Upload the Unleashed license as described in [Uploading a License File](#) on page 78.

There are two types of Unleashed Multi-Site Manager licenses files; one for ZoneDirector and the other for Unleashed. Ensure you select the correct file.

2. Enable and configure the management interface according to your network from ZoneDirector web interface:

- a) Go to **Configure > System > Network Management**.
- b) In **FlexMaster Management**, select the **Enable IPv4 Management Interface** check-box.

Configure the following:

- IP Address: enter IP address of the software server.
- NetMask: enter the netmask IP address.

FIGURE 67 Enabling and Configuring the Management Interface on ZD

Management Interface

Enable IPv4 Management Interface

IP Address*

Netmask*

Default gateway is connected with this interface

Access VLAN*

3. Enable and configure the management interface according to your network from 200.5 Unleashed web interface:

- a) Go to **Admin & Services > System > IP Setting > Management Interface**.
- b) Select the **Enable management by Unleashed Multi-Site Manager** check-box.

Configure the following:

- URL: The IP address or URL of the software server.
- Interval: the time interval (in minutes) within which the Unleashed device sends the TR069 information to Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 68 Enabling Unleashed Multi-Site Manager Management

Admin & Services

System > Services > Administer

Interval* (minutes)

Last successful contact (2017/8/7 下午2:40:14) Refresh

4. Log in to the NAT server and map the LAN port to 443. Create a port forwarding rule: TCP: management IP: 443

FIGURE 69 Sample Port Mapping

Create a new port forwarding rule ×

Application:	<input type="text"/>
WAN Port:	<input type="text" value="9557"/>
LAN IP Address:	<input type="text" value="172.18.35.6"/>
LAN Port:	<input type="text" value="443"/>
Protocol:	<input type="text" value="TCP"/> ▼

5. Generate and Apply the Unleashed ID: Each unleashed network has an ID which is automatically generated by the system. You can renew this ID by clicking **Generate** from the Unleashed web interface and then apply it to the network. The 'Unleashed ID' is reset during set factory, and overwritten when the configuration is restored (when you choose the restore option as Restore everything). Unleashed Multi-Site Manager uses the 'Unleashed ID' to identify the unleashed network, and whenever the 'Unleashed ID' is renewed or reset, Unleashed Multi-Site Manager regards it as a new unleashed device.

FIGURE 70 Generating Unleashed ID

FIGURE 71 Unleashed - Restore Configuration

6. Enable Unleashed Multi-Site Manager management from Unleashed web interface:
 - a) Go to **Admin & Services > Administer > Network Management > Unleashed Multi-Site Manager Management.**
 - b) Select the **Enable management by Unleashed Multi-Site Manager** check-box.

Configure the following:

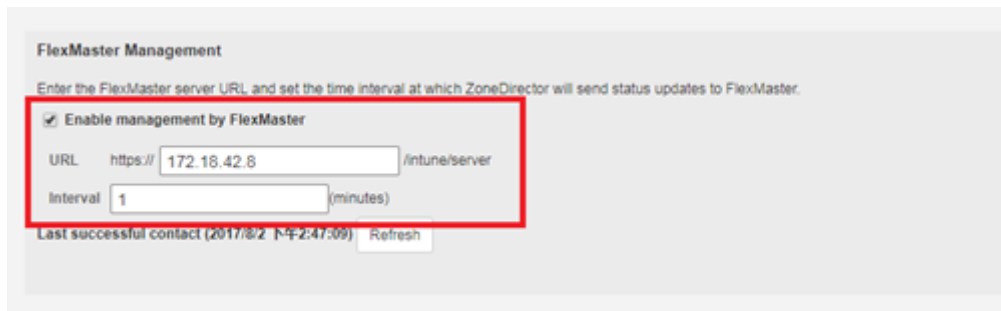

- URL: The IP address or URL of the software server.
- Interval: the time interval (in minutes) within which the Unleashed device sends the TR069 information to Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 72 Enabling Unleashed Multi-Site Manager Management

7. Enable Unleashed Multi-Site Manager management from ZoneDirector web interface:
 - a) Go to **Configure > System > Network Management**.
 - b) In **FlexMaster Management**, select the **Enable management by FlexMaster** check-box.
Configure the following:
 - URL: The IP address or URL of the software server.
 - Interval: the time interval (in minutes) within which the ZoneDirector device sends the TR069 information to the Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 73 Enabling Unleashed Multi-Site Manager Management on ZD

Login to the Unleashed Multi-Site Manager web interface and go to **Devices**. You will see the ZD and Unleashed devices.

8. In the Unleashed Multi-Site Manager web interface, go to **Devices**. Select the device which is behind the NAT server, and click **Edit**. Configure the values.

FIGURE 74 Configuring External Ports

9. Click **Save**. The external port which you configured in step 3 is submitted.

Configuring ZoneDirector & 200.5 Unleashed In Front of the NAT Server

You can configure ZoneDirector & 200.5 Unleashed in front of the NAT Server.

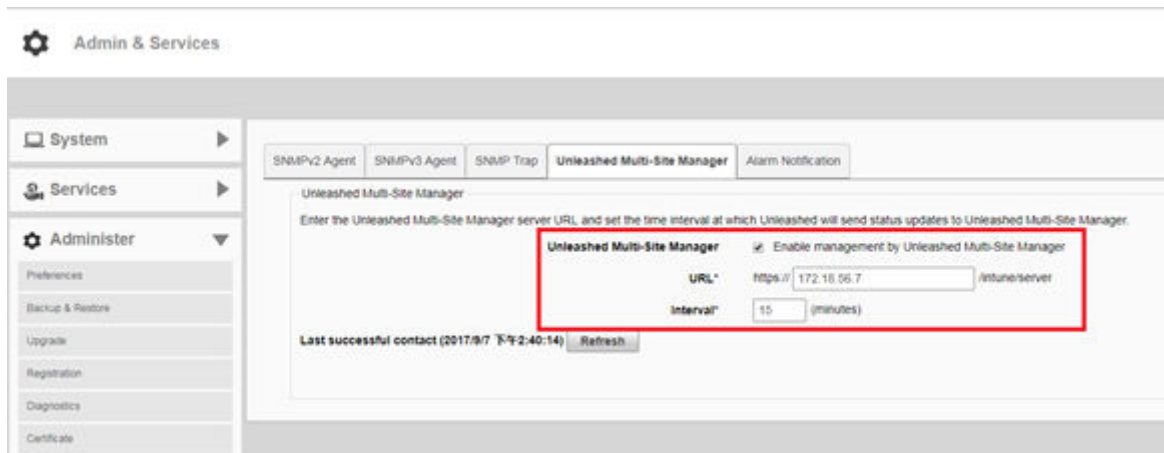

1. Upload the Unleashed license as described in [Uploading a License File](#) on page 78.
There are two types of Unleashed Multi-Site Manager licenses files; one for ZoneDirector and the other for Unleashed. Ensure you select the correct file.

2. Enable and configure the management interface according to your network from 200.5 Unleashed web interface:
 - a) Go to **Admin & Services > Administer > Network Management > Unleashed Multi-Site Manager Management**.
 - b) Select the **Enable management by Unleashed Multi-Site Manager** check-box.

Configure the following:

- URL: The IP address or URL of the software server.
- Interval: the time interval (in minutes) within which the Unleashed device sends the TR069 information to Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 75 Enabling Unleashed Multi-Site Manager Management

3. Enable and configure the management interface according to your network from ZoneDirector web interface:
 - a) Go to **Configure > System > Network Management**.
 - b) In **FlexMaster Management**, select the **Enable Management by FlexMaster** check-box.

Configure the following:

 - URL: The IP address or URL of the software server.
 - Interval: the time interval (in minutes) within which the Unleashed device sends the TR069 information to Unleashed Multi-Site Manager. It is recommended that you configure this interval according to your network capacity.

FIGURE 76 Enabling Unleashed Multi-Site Manager Management on ZD

4. Login to the Unleashed Multi-Site Manager web interface and go to **Devices**. The ZD and 200.5 Unleashed devices will be listed.

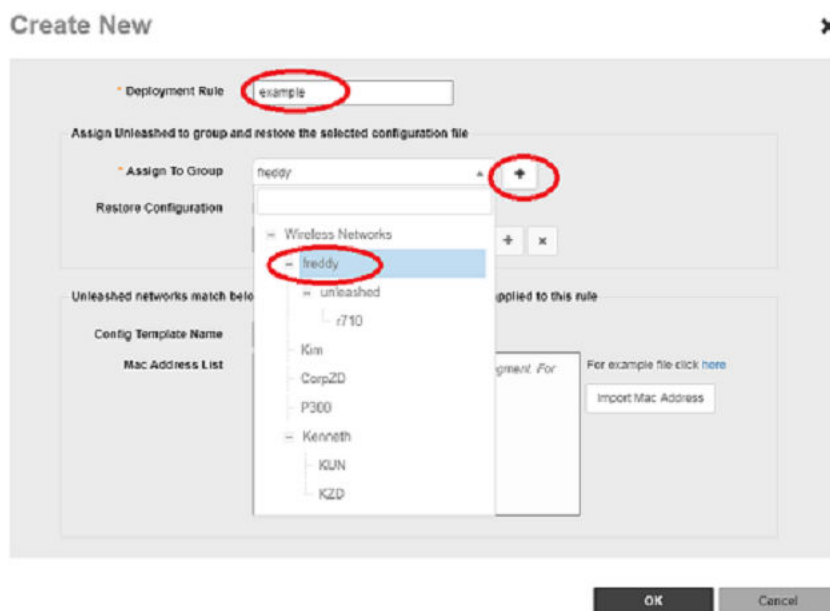

Zero Touch Deployment Setup Example

1. Backup the Unleashed configuration via Unleashed UI or you can register the Unleashed to UMM and backup the Unleashed configuration via UMM backup task and download it to your laptop.

2. Provision the Zero Touch Deployment rule on UMM server.
 - a) Login to UMM WebUI and go to the Unleashed-Zero Touch Deployment page.
 - b) Click the 'Create' Icon to create a new Zero Touch Deployment rule.

- c) Enter the Deployment Rule name and select the Device Group from the **Assign To Group** drop-down menu. Whenever UMM apply this rule, it will move the Unleashed to the selected group automatically. And if your group is not in the list, you can click () icon to add the new group.

- d) Enter the Deployment Rule name and select the Device Group from the **Assign To Group** drop-down menu.
- e) Enable the **Restore Configuration** option and select the configuration file from the drop-down menu or click (+) to upload new **Restore configuration** file.

The screenshot shows a 'Create New' dialog box with the following fields and options:

- Deployment Rule:** An empty text input field.
- Assign Unleashed to group and restore the selected configuration file:**
 - Assign To Group:** A dropdown menu showing 'Wireless Networks' with a '+' button to its right.
 - Restore Configuration:** A checked checkbox labeled 'Select backup file to restore' is circled in red. Below it is a dropdown menu with a '+' button and an 'x' button, both of which are also circled in red.
- Unleashed networks match below Template Name or Mac Address will be applied to this rule:**
 - Config Template Name:** An empty text input field.
 - Mac Address List:** A text area containing the example text '11.11.27.18.74.80' and '22.22.27.18.74.80'. To the right of this area is a link 'For example file click here' and a button 'Import Mac Address'.

At the bottom of the dialog are 'OK' and 'Cancel' buttons.

- f) Match the **Config Template Name** with the **Config Template Name** received from Unleashed and make sure to provision the same 'Config Template Name' on both UMM and Unleashed.
- g) Use the **Mac Address List** to match the rule against Unleashed Master AP and Click **OK** to save the rule..

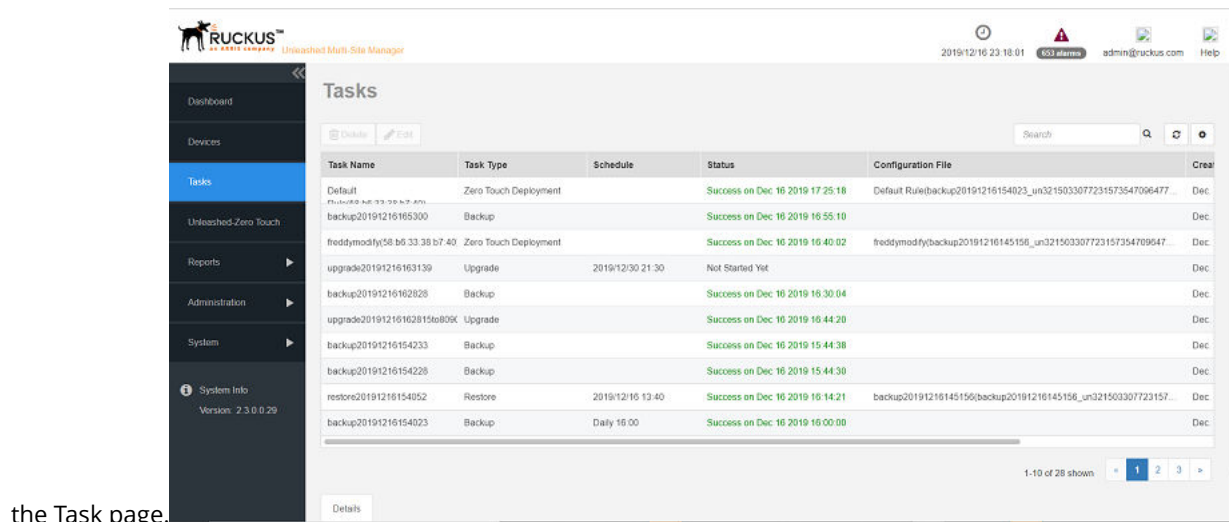

This screenshot shows the same 'Create New' dialog box as above, but with the following changes:

- The **Config Template Name** field now contains the text 'example' and is circled in red.
- The **Mac Address List** text area now contains two lines of text: '11.11.27.18.74.80' and '22.22.27.18.74.80'. Both lines are circled in red.

The 'Restore Configuration' checkbox remains checked. The 'OK' and 'Cancel' buttons are at the bottom.

3. Initiation of Unleashed manually.
 - a) Power up the AP.
 - b) In the **Setup Wizard**, click **UMM Install** and enter the following parameters:
 - **UMM Domain/IP:** the IP of the UMM server.
 - **Config Template Name:** make sure that the name inside the UMM rule matches to the Zero Touch Deployment rule in the UMM server.
 - **System Name:** the name of your Unleashed.
 - c) Click **Next** to connect the Unleashed to the UMM server and the configuration file downloads automatically.
4. Initiate Unleashed AP by DHCP
 - a) Add the following options to the DHCP configured file (etc/dhcp/dhcpd.conf)

```
option space ruckus_info;
option ruckus_info.ummtag code 2 = text;
option ruckus_info.ummiplist code 1 = text;
vendor-option-space ruckus_info;
option ruckus_info.ummiplist "ummtest1.com, 10.223.5.230:9444"; //the UMM IP
option ruckus_info.ummtag "nouprgrade"; // the Config Template Name
```
 - b) Make sure the AP is in set factory status before powering on the AP.
AP receives the **UMM IP** and **Config Template Name** from the DHCP server and the **Zero Touch Deployment** is initiated.
5. Whenever there is an Unleashed match the Zero Touch Deployment rule, UMM creates a Zero Touch Deployment task in the Task page and displays the status of the deployment.
6. Check the status of Zero Touch Deployment in the task page.
Whenever there is an Unleashed match the Zero Touch Deployment rule, UMM creates a Zero Touch Deployment task in

Setting Up Unleashed Multi-Site Manager as a Virtual Machine

You can setup Unleashed Multi-Site Manager as a virtual machine, where, the VM image is a VMWare EXSI image that integrates the software with CentOS 6.10.

Minimum hardware requirements:

- 8 GB memory
- 4*1 processors
- 50 GB hard disk

You can only use VMWare EXSI images to create a VM, and it is recommend to use EXSI version 6.5.

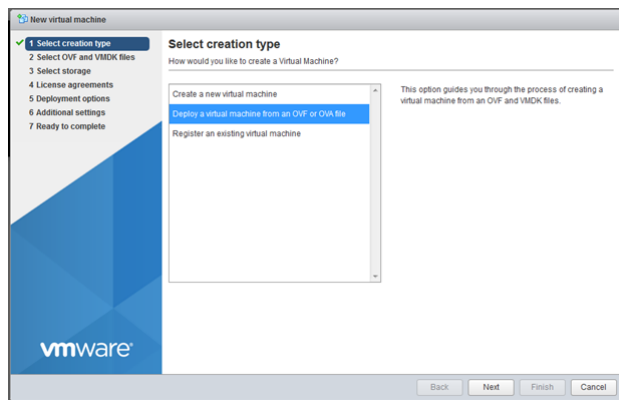

1. Login to the VMware ESXI interface and go to **Virtual Machines**.

FIGURE 77 Registering the VM

2. Click **Create/Register VM**.
The **New virtual machine** page appears.

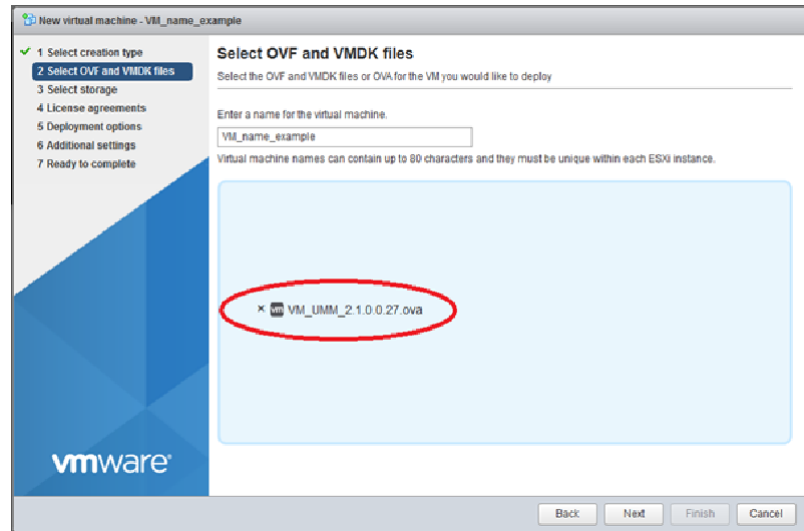

FIGURE 78 Creating a VM

3. Select **Deploy virtual machine from an OVF or OVA file** and click **Next**.

4. Type the name virtual machine and select the VM_UMM_2.2.0.0.40.ova file.

FIGURE 79 Selecting the OVA File

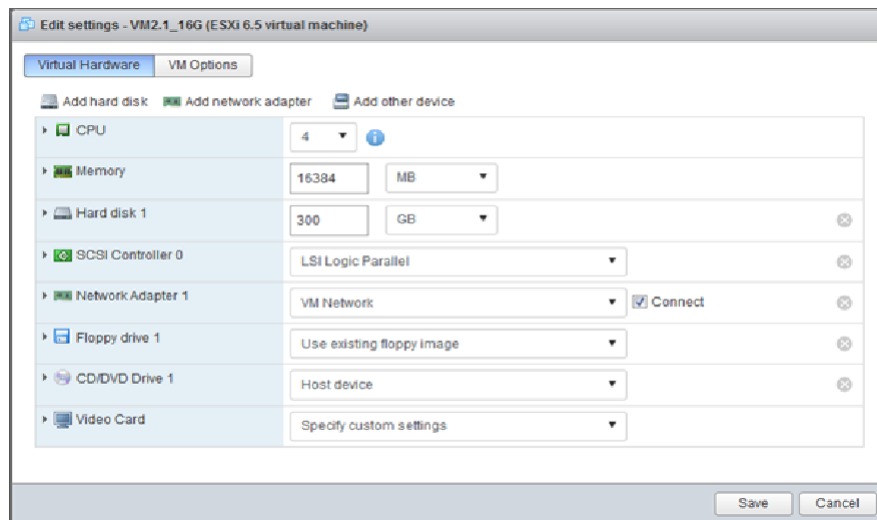

5. Click **Next**.

Continue to click **Next** for the consequent screens, and click **Finish** to complete the VM creation.

After you power off the device, you can edit the VM settings. You can change settings for the CPU, memory and hard disk according to your lab requirement.

FIGURE 80 Editing VM Settings

Appendix

Setting Up Unleashed Multi-Site Manager as a Virtual Machine

6. Power on the VM and wait several minutes to login to Unleashed Multi-Site Manager.

After you login, you can do the following:

- Change the root password for your Linux account. See [Changing the Linux Password](#) on page 145 for more information.
- Change the login credential for Unleashed Multi-Site Manager. See [Changing the Login Information for the Virtual Machine](#) on page 144 for more information.
- Change the login credentials for the database. See [Changing the Login Credentials to Access the Database](#) on page 145 for more information.

7. Using SSH, establish a connection with Unleashed Multi-Site Manager to change the time zone and date. See the following example.

[root@localhost ~]# date

Fri Jun 29 04:14:46 EDT 2018

[root@localhost ~]# tzselect

Please identify a location so that time zone rules can be set correctly.

Please select a continent or ocean.

- 1) Africa
- 2) Americas
- 3) Antarctica
- 4) Arctic Ocean
- 5) Asia
- 6) Atlantic Ocean
- 7) Australia
- 8) Europe
- 9) Indian Ocean
- 10) Pacific Ocean
- 11) none - I want to specify the time zone using the Posix TZ format.

5

Please select a country.

- 1) Afghanistan 18) Israel 35) Palestine
- 2) Armenia 19) Japan 36) Philippines
- 3) Azerbaijan 20) Jordan 37) Qatar
- 4) Bahrain 21) Kazakhstan 38) Russia
- 5) Bangladesh 22) Korea (North) 39) Saudi Arabia
- 6) Bhutan 23) Korea (South) 40) Singapore
- 7) Brunei 24) Kuwait 41) Sri Lanka
- 8) Cambodia 25) Kyrgyzstan 42) Syria
- 9) China 26) Laos 43) Taiwan
- 10) Cyprus 27) Lebanon 44) Tajikistan
- 11) East Timor 28) Macau 45) Thailand
- 12) Georgia 29) Malaysia 46) Turkmenistan
- 13) Hong Kong 30) Mongolia 47) United Arab Emirates
- 14) India 31) Myanmar (Burma) 48) Uzbekistan
- 15) Indonesia 32) Nepal 49) Vietnam
- 16) Iran 33) Oman 50) Yemen
- 17) Iraq 34) Pakistan

9

Please select one of the following time zone regions.

- 1) Beijing Time
- 2) Xinjiang Time

1

The following information has been given:

China

Beijing Time

Therefore TZ='Asia/Shanghai' will be used.

Local time is now: Fri Jun 29 16:14:59 CST 2018.

Universal Time is now: Fri Jun 29 08:14:59 UTC 2018.

Is the above information OK?

- 1) Yes
- 2) No

1

You can make this change permanent for yourself by appending the line
TZ='Asia/Shanghai'; export TZ
to the file '.profile' in your home directory; then log out and log in again.

Here is that TZ value again, this time on standard output so that you
can use the **/usr/bin/tzselect** command in shell scripts:
Asia/Shanghai

[root@localhost ~]# vi /etc/sysconfig/clock //change to ZONE="Asia/Shanghai"

[root@localhost ~]# rm -rf /etc/localtime

[root@localhost ~]# ln -s /usr/share/zoneinfo/Asia/Shanghai /etc/localtime

[root@localhost ~]# cat /etc/sysconfig/clock

ZONE="Asia/Shanghai"

[root@localhost ~]# date -s 7/12/2018

Thu Jul 12 00:00:00 CST 2018

[root@localhost ~]# date -s 11:34:30

Thu Jul 12 11:34:30 CST 2018

[root@localhost ~]# date

Thu Jul 12 11:34:32 CST 2018

8. If you have modified the VM settings (refer Step 6), then you can change the size of the linux hard disk as well. See the following example.

```
[root@localhost ~]# df -h
```

```
Filesystem Size Used Avail Use% Mounted on
/dev/mapper/VolGroup-lv_root 44G 7.5G 35G 19% /
tmpfs 7.8G 0 7.8G 0% /dev/shm
/dev/sda1 485M 32M 428M 7% /boot
```

```
[root@localhost ~]# fdisk -l
```

```
Disk /dev/sda: 322.1 GB, 322122547200 bytes
255 heads, 63 sectors/track, 39162 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disk identifier: 0x00057088

Device Boot Start End Blocks Id System
/dev/sda1 * 1 64 512000 83 Linux
Partition 1 does not end on cylinder boundary.
/dev/sda2 64 6528 51915776 8e Linux LVM
Disk /dev/mapper/VolGroup-lv_root: 47.8 GB, 47789899776 bytes
255 heads, 63 sectors/track, 5810 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disk identifier: 0x00000000

Disk /dev/mapper/VolGroup-lv_swap: 5368 MB, 5368709120 bytes
255 heads, 63 sectors/track, 652 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disk identifier: 0x00000000
```

```
[root@localhost ~]# fdisk /dev/sda
```

```
WARNING: DOS-compatible mode is deprecated. It's strongly recommended to
switch off the mode (command 'c') and change display units to
```

```
sectors (command 'u').
```

/dev/mapper/VolGroup-lv_root 290G 7.6G 268G 3% /
tmpfs 7.8G 0 7.8G 0% /dev/shm
/dev/sda1 485M 32M 428M 7% /boot

```

- Restart Unleashed Multi-Site Manager. Issue the commands as shown in the following example.

```
[root@localhost ~]# cd /home/UMM/
```

```
[root@localhost UMM]# ./restart.sh
```

```
Restarting UMM...
```

After a few minutes, you will be able to login to the Unleashed Multi-Site Manager interface.

Hardware Requirements and Specifications

The amount of memory and CPU power required on the Unleashed Multi-Site Manager server depends on the number of ZoneDirector devices and APs that software is to manage, and on the system configuration.

Refer to the following table as the examples of the minimum recommended RAM and CPU for the hosting computer.

TABLE 11 Recommended hardware specifications

Managed Devices	RAM	CPU	Hard Disk Space	Purge Policy
Up to 40 Unleashed/ZD network with total 2000 APs Up to 100 Unleashed network with 200 AP + 100 ICX switch	16 GB	4 core processor such as 3.30 GHz Intel® Core i5-3550 or equivalent	300 GB	7 days
Up to 200 Unleashed/ZD network with total 10000 APs Up to 1000 Unleashed network with total 2000 APs + 1000 ICX switch	64 GB	32 core processor such as 2 GHz Dell R710 platform with Xeon® E5-2650 or equivalent	1 TB	7 days

Changing the Login Information for the Virtual Machine

You can change the login credentials that you use to login to Unleashed Multi-Site Manager.

- Using SSH, establish a connection with Unleashed Multi-Site Manager.
- Go to `/home/UMM/support_files`.
- Execute the command `/upgradeUser.sh /home/UMM`.
- Enter the old username and password.
- Enter the new username and password.

NOTE

The default Unleashed Multi-Site Manager login credentials are as follows:

- username: admin@ruckus.com
- password: admin

The default Unleashed Multi-Site Manager installation folder is `/home/UMM`.

Changing the Linux Password

You can change the root password for your Linux account.

Follow these steps:

1. Using SSH, establish a connection with Unleashed Multi-Site Manager.
2. Execute the command **passwd root**.
3. Enter the old password.
4. Enter the new password.

NOTE

The default Linux login credentials are as follows:

- a. username: root
- b. password: ruckus

Changing the Login Credentials to Access the Database

You can change the username and password for the Unleashed Multi-Site Manager database.

Follow these steps:

1. Using SSH, establish a connection with Unleashed Multi-Site Manager.
2. Go to `/home/UMM/support_files`.
3. Execute the command **./setDBPassword.sh**.
4. Enter the old username and password.
5. Enter the new username and password.

The default MariaDB password in *admin*.

Configuring ICX Switches

To allow Unleashed Multi-Site Manager to monitor and manage ICX switches, you must enable software management in the switch and register the device with Unleashed Multi-Site Manager.

1. Upload the Unleashed license as described in [Uploading a License File](#) on page 78.

There are three types of Unleashed Multi-Site Manager licenses files; one for ZoneDirector, one for switch and the other for Unleashed. Ensure you select the correct file.

2. Enable Unleashed Multi-Site Manager on the switch:

There are two ways to make an ICX switch aware of the Unleashed Multi-Site Manager's IP address - one is using DHCP option 43, and the other is using manual configuration through ICX commands.

- Manually configuring the Unleashed Multi-Site Manager IP Address on a switch includes issues the **sz active-list <IP address>**. Example:

```
SSH@Freddy-ICX7150-48PF-Router>enable
No password has been assigned yet...
SSH@Freddy-ICX7150-48PF-Router#configure terminal
SSH@Freddy-ICX7150-48PF-Router(config)#sz active-list 10.223.5.230
```

- Configuring DHCP to send Unleashed Multi-Site Manager IP addresses to ICX switches using DHCP Option 43, includes the following steps as shown in the example:
 - Configure DHCP Option 43 on the DHCP server using the RKUS.scg-address to identify the Unleashed Multi-Site Manager IP addresses.

Unleashed Multi-Site Manager IP addresses are sent with 6 as the sub-option value. The switch ignores all other data in DHCP Option 43 if Unleashed Multi-Site Manager IP addresses are present. Example:

```
subnet 192.168.12.0 netmask 255.255.255.0 {
  range 192.168.12.100 192.168.12.199;
  option routers 192.168.12.1;
  option subnet-mask 255.255.255.0;
  option broadcast-address 192.168.12.255;
  option ntp-servers 192.168.11.22;
  class "Ruckus AP" {
    match if option vendor-class-identifier = "Ruckus CPE";
    option vendor-class-identifier "Ruckus CPE";
    default-lease-time 86400;
    vendor-option-space RKUS;
    option RKUS.scg-address "192.168.11.200";
  }
}
```

3. You can view the status of the Unleashed Multi-Site Manager connection using the **show sz status** command.

Example:

```
SSH@Freddy-ICX7150-48PF-Router#show sz status

=====      SZ Agent State Info      =====
Config Status: None      Operation Status: Enabled
State: SZ SSH CONNECTED      Prev State: SZ SSH CONNECTING      Event: NONE

Active List      : 10.223.5.230
DHCP Option 43  : No
DHCP Opt 43 List : None
Passive List     : None
Merged List     : 10.223.5.230
Merged Idx: 0   IP : 10.223.5.230

SZ IP Used      : 10.223.5.230
SZ Query Status :
  Response Received

SSH Tunnel Status - :
  Tunnel Status    : Established
  CLI IP/Port     : 10.223.5.230/40005
  SNMP IP/Port    : 10.223.5.230/30005
  Syslog IP/Port  : 127.0.0.1/6514

Timer Status     : Not Running
```

4. You can use the **sz-disconnect** command to disconnect the ICX switch from the current connection with Unleashed Multi-Site Manager, and initiate a new connection based on the currently available list of Unleashed Multi-Site Manager IP addresses.

Example:

```
ICX# sz disconnect
SZ Disconnect initiated...
```

5. Login to the Unleashed Multi-Site Manager web interface and go to **Devices** and to see the ICX switch within the Switch group.
