Unleashed Multi-Site Manager What's New in Release 2.5

This application note describes the new features available in version 2.5 of RUCKUS Unleashed Multi-Site Manager (UMM). This document assumes familiarity wiht the RUCKUS product line and the features of earlier UMM releases.

1. New Dashboard Elements

UMM 2.5 provides 3 more new dashboard elements - 'Vendor vs Clients', 'Radio vs Clients' and 'Alarm List'.

2. Resetting Unleashed Password

UMM 2.5 allows the administrator to reset the password for managed Unleashed networks in the web interface. It works with Unleashed 200.11 and later release.

3. QR Code for WLANs

UMM 2.5 can download the WLAN QR Code for users, from Unleashed networks. Users can print the QR Code and post it in a public area. Mobile phones can be used to scan the QR Code to access the WLAN without an input SSID/Password.

4. Editing Unleashed Member AP Name / Description / Location

UMM 2.5 has added a flexible button to edit Unleashed member AP details.

5. Other Enhancement

- New public API-UMM 2.5 has added new APIs to manage groups.
- AP role is now displayed
- Capability to search for APs by AP name/'Unleashed system name'/IP in the public API
