

Unleashed Multi-Site Manager What's New in Release 2.8

This application note describes the new features available in version 2.8 of RUCKUS Unleashed Multi-Site Manager (UMM). This document assumes familiarity with the RUCKUS product line and the features of earlier UMM releases.

1. Support Unleashed 200.14

UMM 2.8 works with Unleashed 200.14.

2. UMM Multi-language

From 2.8, UMM allows administer to choose language in UI. UMM 2.8 supports English, Chinese Simplify and Chinese Traditional.

3. End User Suppor

UMM 2.8 provides a new service to Unleashed AP users. UMM administer could enable/disable this service and allow Unleashed AP users to register accounts in UMM to manage their own APs.

4. Unleashed Master AP CPU and Memory monitor

Adding Unleashed Master AP CPU and Memory monitor for Unleashed 200.14 and above.
